KEY TO PRONUNCIATION

Three methods are used to indicate the pronunciation of the words forming the headings of the separate articles:

(1) By dividing the word into syllables, and indicating the syllable or syllables to be accented. This method alone is followed where the pronunciation is entirely obvious. Where accent marks are omitted, the omission indicates that all syllables are given substantially the same value.

(2) Where the pronunciation differs from the spelling, the word is re-spelled phonetically, in addition to the accentuation.

(3) Where the sound values of the vowels are not sufficiently indicated merely by an attempt at phonetic spelling, the following system of diacritical marks is additionally employed to approximate the proper sounds as closely as may be done:

ā , as in <i>fate</i> , or in <i>bare</i> .	cu , a long sound as in Fr. <i>jeûne</i> , =
â , as in <i>alms</i> , Fr. <i>âme</i> , Ger. <i>Bahn</i> = á of Indian names.	Ger. long <i>ö</i> , as in <i>Söhne</i> , <i>Göthe</i> (Goethe).
à , the same sound short or medium, as in Fr. <i>bal</i> , Ger. <i>Mann</i> .	eu , corresponding sound short or medi- um, as in Fr. <i>peu</i> = Ger. <i>ö</i> short.
a , as in <i>fat</i> .	ō , as in <i>note</i> , <i>moan</i> .
â , as in <i>fall</i> .	o , as in <i>not</i> , <i>soft</i> —that is, short or medium.
ɑ , obscure, as in <i>rural</i> , similar to <i>u</i> in <i>but</i> , <i>è</i> in <i>her</i> : common in Indian names.	ö , as in <i>move</i> , <i>two</i> .
ē , as in <i>me</i> = <i>i</i> in <i>machine</i> .	ū , as in <i>tube</i> .
e , as in <i>met</i> .	u , as in <i>tub</i> : similar to <i>è</i> and also to <i>a</i> .
è , as in <i>her</i> .	u , as in <i>bull</i> .
ī , as in <i>pine</i> , or as <i>ei</i> in Ger. <i>Mein</i> .	ü , as in Sc <i>abune</i> = Fr. <i>û</i> as in <i>dû</i> , Ger. <i>ü</i> long as in <i>grün</i> , <i>Bühne</i> .
i , as in <i>pin</i> , also used for the short sound corresponding to ē , as in French and Italian words.	û , the corresponding short or medium sound, as in Fr. <i>but</i> , Ger. <i>Müller</i> .
	oi , as in <i>oil</i> .
	ou , as in <i>pound</i> ; or as <i>au</i> in Ger. <i>Haus</i> .

The consonants, b, d, f, h, j, k, l, m, n, ng, p, sh, t, v, and z, when printed in Roman type, are always given their common English values in the transliteration of foreign words. The letter c is indicated by s or k, as the case may be. For the remaining consonant sounds the following symbols are employed:

ch is always as in <i>rich</i> .	erally much more strongly trilled.
d , nearly as <i>th</i> in <i>this</i> = Sp. <i>d</i> in <i>Madrid</i> , etc.	s , always as in <i>so</i> .
g is always hard, as in <i>go</i> .	th , as <i>th</i> in <i>thin</i> .
h represents the guttural in Scotch <i>loch</i> , Ger. <i>nach</i> , also other similar gutturals.	th , as <i>th</i> in <i>this</i> .
ñ , Fr. nasal <i>n</i> as in <i>bon</i> .	w always consonantal, as in <i>we</i> .
r represents both English <i>r</i> , and <i>r</i> in foreign words, in which it is gen-	x = <i>ks</i> , which are used instead.
	y always consonantal, as in <i>yea</i> (Fr. <i>ligne</i> would be re-written <i>lëny</i>).
	zh , as <i>s</i> in <i>pleasure</i> = Fr. <i>j</i> .

VOLUME III

Clay (klā), the name of various earths, which consist of hydrated silicate of aluminium, with small proportions of the silicates of iron, calcium, magnesium, potassium and sodium. All the varieties are characterized by being firmly coherent, weighty, compact, and hard when dry, but plastic when moist, smooth to touch, not readily diffusible in water, but when mixed not readily subsiding in it. Their tenacity and ductility when moist and their hardness when dry has made them from the earliest times the materials of bricks, tiles, pottery, etc. Of the chief varieties *porcelain-clay*, *kaolin*, or china-clay, a white clay with occasional gray and yellow tones, is the purest. *Potter's clay* and *pipe-clay*, which are similar but less pure, are generally of a yellowish or grayish color, from the presence of iron. Fire-clay is a very refractory variety, always found lying immediately below the coal; it is used for making fire-bricks, crucibles, etc. *Loam* is the same substance mixed with sand, oxide of iron, and various other foreign ingredients. The *boles*, which are of a red or yellow color from the presence of oxide of iron, are distinguished by their conchoidal fracture. The *ochers* are similar to the boles, containing more oxide of iron. Other varieties are *fuller's earth*, *Tripoli*, and *boulder-clay*, the last a hard clay of a dark-brown color, with rounded masses of rock of all sizes embedded in it, the result of glacial action. The distinctive property of clays as ingredients of the soil is their power of absorbing ammonia and other gases and vapors generated on fertile and manured lands; indeed, no soil will long remain fertile unless it has a

fair proportion of clay in its composition. The best wheats are grown on calcareous clays, as also the finest fruits and flowers of the rosaceous kind. See the separate articles on the chief varieties.

Clay, HENRY, statesman, born in Hanover Co., Virginia, in 1777. After acting as clerk in two or three state offices he commenced business in 1797 as a lawyer at Lexington, Kentucky. He soon became famous as a public speaker, and at the age of twenty-six was a member of the Kentucky legislature. In 1806 he was elected to the United States Senate; and in 1811 to the House of Representatives, where he was at once made speaker. In 1814 he proceeded to Europe and acted as one of the commissioners for adjusting the treaty of peace at Ghent between America and Great Britain. In 1825 he was appointed by President Adams, Secretary of State. He was an unsuccessful candidate for the presidency in 1824, 1832 and 1844. He is best known for his endeavors to shut out European influences from America, and in connection with the 'Missouri Compromise of 1820,' restricting slavery to the states south of lat. 36° 30' N.; the Compromise Tariff of 1832, and a compromise in 1850 regarding the admission of California, and establishment of territorial government in New Mexico, Utah, etc. This postponed the slavery contest between the sections of the country for ten years. He died at Washington in 1852. Clay was unquestionably one of the greatest orators America has produced and a splendid party chief, idolized by his followers.

Claymore (klā'mōr), formerly the large two-handed, double-

edged sword of the Scotch Highlanders.

Clay-slate, in geology, a rock consisting of clay which has been hardened and otherwise changed, for the most part extremely fissile and often affording good roofing-slate. In color it varies from greenish or bluish gray to lead color.

Clayton, JOHN MIDDLETON, jurist, born in Sussex Co., Delaware, in 1796. He was educated at Yale, studied law, represented Delaware in the United States Senate 1845-49, and in 1849 was appointed Secretary of State by President Taylor. He negotiated an important treaty with England (see next article). He died in 1856.

Clayton-Bulwer Treaty, a treaty between Britain and the United States concluded in 1850, and having reference to the construction of a ship canal across Nicaragua. Both parties agreed not to erect fortifications here, nor to acquire any part of the Central American territory. This treaty was amended in 1901 by the Hay-Pauncefote treaty.

Cleanthes (klē-an'thes, a Greek Stoic philosopher, born at Assos about 300 B.C. He was a disciple of Zeno for nineteen years, and succeeded him in his school. He died of voluntary starvation at the age of eighty. Only some fragments of his works are extant.

Clear, CAPE, a promontory 400 feet high at the southern extremity of Clear Island, and the most southern point of Ireland, about 7½ miles southeast of Baltimore, County Cork.

Clearance of Vessels (klēr'ans), the examination of vessels by the proper custom-house officers, and the giving of a certificate that the regulations have been duly complied with. Vessels are said to clear inwards or outwards according as they arrive or set sail.

Clearfield (klēr'fēld), a borough, capital of Clearfield Co., Pennsylvania, on the w. branch of the Susquehanna, 40 miles N. of Altoona. It has lumbering, tanning and coaling interests. Pop. 6851.

Clearing House (klēr'ing), an institution connected with banks and railways. In the former case it is an establishment in large cities where there are many banks, to which each bank connected with it sends every day in order to have its business with the other banks adjusted. The sums due by and to the banks among themselves are here set off against each other and the balance paid or received. In London the balance used to be settled in cash or Bank

of England notes. Now, however, the various banking companies and the clearing house itself have accounts at the Bank of England, and the balances are settled by transfers from one account to another. The clearing-house system was introduced by the London city private banking firms in 1775, but the joint-stock companies were in 1854 permitted to share its advantages, and it has been extended to the provincial banks through their London agents. The system has also been adopted in the larger provincial towns, and in New York and other large American cities it is in full operation.—The *Railway Clearing House* is an association instituted to allow the various companies to carry on their traffic over different lines. Thus a passenger can purchase one single ticket which will carry him over lines belonging to several companies, and parcels are conveyed through without additional booking, fresh entries, and consequent delay, the claims of the different companies being adjusted in the clearing house, which is maintained at the common expense.

Clearing-nut (*Strychnos potatorum*), a small tree of the same genus as the nux vomica, common in Indian forests. Its seeds being rubbed on the inside of a vessel containing turbid water speedily precipitate the impurities, this result being due, it is said, to the clarifying effect of the albumen and casein they contain.

Clear'story. See *Clerestory*.

Cleator Moor (klē-ā'tēr mör), a town of England in Cumberland, 4 miles S. E. of Whitehaven, with coal-mines and iron furnaces. Pop. 8302.

Cleavage (klē-vij), the manner or direction in which substances regularly cleave or split. The regular structure of most crystallized bodies becomes manifest as soon as they are broken. Each fragment presents the form of a small polyhedron, and the very dust appears under the microscope an assemblage of minute solids, regularly terminated. The directions in which such bodies thus break up are called their planes of cleavage; and the cleaving is called *basal*, *cubic*, *diagonal*, or *lateral* (or *peritomous*), according as it is parallel to the base of a crystal, to the faces of a cube, to a diagonal plane, or to the lateral planes. In certain rocks again there is a tendency to split along planes which may coincide with the original plane of stratification, but which more frequently cross it at an angle. This tendency is the consequence of the

readjustment by pressure and heat of the components of rocks, which is one of the phases of metamorphism.

Clea'vers, CLIV'ERS, or GOOSE-GRASS (*Galium Aparine*), a common species of the bedstraw genus of plants, with hispid stem, leaves and fruit, common in hedges and among bushes. It is called cleavers from the readiness with which it adheres to one's clothes, and goose-grass because geese are said to be fond of it.

Cleburne (klē'burn), a town, capital of Johnson Co., Texas, 53 miles s. w. of Dallas. It has large railroad shops, cotton compresses, cottonseed oil mills, etc. Pop. 10,364.

Cleckheaton (klek'e-ton), a town of England, County York, West Riding, 10 miles w. of Leeds. The industries include the worsted and machine-card trades, machine making, engineering works, etc. Pop. 12,867.

Cleef (klāf).—(1) JOSEPH VAN, surnamed *the Fool*, born at Antwerp in 1480, one of the most celebrated painters of his time, who in regard to beauty of coloring may challenge comparison with the Italian masters. He died insane in 1529.—(2) JOHN, a painter, born at Rome in 1646, belongs to the Flemish school, of which he is one of the most eminent masters. His works show more breadth of style than skill in coloring. He died in 1716.

Clef (klef; French for *key*), in music, a sign placed on a line of a staff, and which determines the pitch of the staff and the name of the note on its lines. There are three clefs now in use: the

treble or G clef,  written on the

second line; the *mean* or C clef, 

which may be placed on the first, second, third, or fourth lines; and the *bass* or F

clef,  seated on the fourth line. The

mean clef is seldom used in vocal music except in part songs.

Cleg, a name applied to various insects which are troublesome to horses, cattle, and even to man from their blood-sucking propensities. Such are the great horse-fly, gadfly, or breeze (*Tabanus bovinus*, the *Chrysops*, *cæcutiens*, and the *Hæmatopöta pluvialis*).

Clematis (klem'a-tis), a genus of woody climbing plants of

the order Ranunculaceæ. The most common species, *C. Vitalba*, virgin's bower or traveler's joy, is conspicuous in British hedges, first by its copious clusters of white blossoms, and afterwards by its feather-tailed silky tufts attached to the fruits. Among the exotic species in greatest favor with horticulturists are *C. flammula*, which produces abundant panicles of small, white flowers, and has a fine perfume; *C. cirrhosa*, remarkable for its large, greenish-white flowers; and *C. viticella*, with its festooning branches adorned with pink or purple bells. *C. Virginiana* is an American species known by the same name as the English; *C. Jackmanni*, is a well-known garden hybrid. The fruit and leaves of the common clematis are acrid and vesicant.

Clemens (klem'ens), SAMUEL LANGHORNE, humorist, more generally known by his pseudonym 'Mark Twain,' born in Missouri in 1835. He worked for some time as a compositor in Philadelphia and New York, and then in 1851 learned the business of piloting on the Mississippi. He afterwards went to Nevada and California, working in the mines and editing a newspaper in Virginia City. He subsequently engaged in lecturing, edited for a time a paper in Buffalo, and finally married and settled in Hartford, Connecticut, making this his home for the remainder of his life. Losing his fortune by the failure of a publishing firm into which he had entered, he made a tour of the world in 1896-97, giving lectures and readings, and paying the debts of the firm with the proceeds. He early made his mark as a humorist, and is undoubtedly regarded as the greatest humorist of the period. He died in 1910. His best known works of humor are *The Jumping Frog*, etc. (1867); *Roughing it* (1873); *The Innocents Abroad* (1869); *Tom Sawyer* (1876); *A Tramp Abroad* (1880); *The Prince and the Pauper* (1882); *Life on the Mississippi* (1883); and *Huckleberry Finn* (1885).

Clement (kle'ment), properly TITUS FLAVIUS CLEMENS, commonly known as *Clement of Alexandria*, one of the most famous teachers of the Christian Church in the second and the beginning of the third century. He was converted from paganism to Christianity; and after traveling in Greece, Italy, and the East, became presbyter of the church of Alexandria, and teacher of the celebrated school in that city, in which place he succeeded Pantænus, his teacher, and was succeeded by Origen, his pupil. His chief remaining works are the *Protrep-*

tikos, *Paidagōgos*, and *Strōmateis* or *Strōmata* (Patch-work); the first an exhortation to the Greeks to turn to the one true God, the second a work on Christ, the last a collection of brief discussions in chronology, philosophy, poetry, etc. Few of the early Christians had so wide a knowledge of Greek philosophy and literature and it is as a higher philosophic scheme that he mainly discusses Christianity. He was regarded as a saint until Benedict XIV struck him off the calendar.

Clement, CLEMENS ROMANUS, or *Clement of Rome*, one of the 'Apostolic Fathers,' is said to have been the second or the third successor of Peter as bishop of Rome, and the first of the numerous popes named Clement. He is perhaps identical with Consul Flavius Clemens, put to death under Domitian A.D. 95. Various writings are attributed to him, but the only one that can be regarded as genuine is an *Epistle to the Corinthians*, first obtained in a complete form in 1875. It is of importance as exhibiting the first attempt of the Church of Rome to exercise ecclesiastical authority over other churches.

Clement (klā-mān), JACQUES, the assassin of Henry III of France, born in 1567, became a Dominican, and the fanatical tool of the Dukes of Mayenne and Aumale, and the Duchess Montpensier. Having fatally stabbed the king, he was at once killed by the courtiers; but the populace, instigated by the priests, regarded him as a martyr; and Pope Sixtus V even pronounced his panegyric.

Clementi (klā-men'tē), MUZIO, pianist and composer, born at Rome in 1752. As early as his twelfth year he wrote a successful mass for four voices, and had made such progress in the pianoforte that an Englishman, Mr. Beckford, took him to England to complete his studies. He was then engaged as director of the orchestra of the opera in London, and his fame having rapidly increased he went in 1780 to Paris, and in 1781 to Vienna, where he played with Mozart before the emperor. In 1784 he repeated his visit to Paris, but after that remained in England till 1802, when he went back to the continent. He returned in 1810 to England, where he settled down as superintendent of one of the principal musical establishments in London. He died in 1832, and was interred in Westminster Abbey. His most important compositions were his sixty sonatas for the pianoforte and the great collection of studies known as the *Gradus ad Parnassum*, a work

of high educative value. He represented perhaps the highest point of technique of his day, and his influence upon modern execution has led to his being characterized as 'the father of pianoforte playing.'

Cleobulus (kle-o-bū'lus), one of the *seven wise men* of ancient Greece, a native of Lindus, who traveled to Egypt to learn wisdom, and became King of Rhodes. He flourished B.C. 560.

Cleomenes (kle-om'e-nēz), the name of three kings of Sparta, the most distinguished of whom is Cleomenes III, the last of the Heracidae, king from 236 to 220 B.C. He intended to reform Sparta and to restore the institutions of Lycurgus, and therefore put to death the ephori, made a new division of lands, introduced again the old Spartan system of education, made his brother his colleague, and extended the franchise. He was defeated by the allied Macedonians and Achæans at the battle of Sellasia (B.C. 222), and fled to Egypt, where he was supported by Ptolemy Euergetes, but was kept in confinement by the succeeding Ptolemy. He escaped and attempted to raise a revolt, but failing, committed suicide.

Cleon (klē'on), an Athenian demagogue, originally a tanner by trade. He was well known in public before the death of Pericles, and in 427 B.C. distinguished himself by the proposal to put to death the adult males of the revolted Mytileneans and sell the women and children as slaves. In 425 he took Sphacteria from the Spartans; but in 423 and 422 he was violently attacked by Aristophanes in the *Knights* and in the *Wasps*. He was sent, however, in 422 against Brasidas, but allowed himself to be taken unawares, and was slain while attempting to flee.

Cleopatra (klē-o-pā'tra), a Greek queen of Egypt, born B.C. 69, the eldest daughter of Ptolemy Aulētēs. When she was seventeen her father died, leaving her joint-heir to the throne with his eldest son Ptolemy, whom she was to marry—such marriages being common among the Ptolemies. Being deprived of her part in the government (B.C. 49), she won Cæsar to her cause, and was reinstated by his influence. In a second disturbance Ptolemy lost his life and Cæsar proclaimed Cleopatra Queen of Egypt; though she was compelled to take her brother, the younger Ptolemy, then eleven years old, as husband and colleague. Cæsar continued some time at Cleopatra's court, had a son by her named Cæsarion

(afterwards put to death by Augustus), and gave her a magnificent reception when she subsequently visited him at Rome. By poisoning her brother she remained sole possessor of the regal power, took the part of the triumvirs in the civil war at Rome, and after the battle of Philippi sailed to join Antony at Tarsus. Their meeting was celebrated by splendid festivals; she accompanied him to Tyre, and was followed by him on her return to Egypt. After his conquest of Armenia he again returned to her and made his three sons by her, and also Cæsarion, kings. On the commencement of the war between Augustus and Antony the latter lost a whole year in festivals and amusements with Cleopatra at Ephesus, Samos, and Athens, and when at last the fleets met at Actium, Cleopatra suddenly took to flight, with all her ships, and Antony, as if under the influence of frenzy, immediately followed her. They fled to Egypt, and declared to Augustus that if Egypt were left to Cleopatra's children they would thenceforth live in retirement. Augustus, however, demanded Antony's death and advanced on Alexandria. Believing Cleopatra who had taken refuge in her mausoleum, to be treacherous and dead, Antony threw himself on his sword, and shortly afterwards Cleopatra killed herself by applying an asp to her arm to escape the ignominy of being led in a Roman triumph (B.C. 30). With her the dynasty of the Ptolemies ended.

Cleopatra's Needles, the name given to two Egyptian obelisks, formerly at Alexandria, but one of which is now in London, the other in New York. They are made of the rose-red granite of Syene, and were originally erected by the Egyptian king Thothmes III in front of the great temple of Heliopolis, the On of the Scriptures, where Moses was born and brought up. They were taken to Alexandria shortly before the commencement of the Christian era, and after the death of Cleopatra, but possibly in pursuance of a design originated by her. The London obelisk, which stands on the Thames embankment, was presented to the British government in 1820, but was long left uncared for. In 1877-78, however, it was brought to London by the private munificence of Sir Erasmus Wilson, and erected in its place at a cost of some \$50,000. The new York obelisk was presented to the United States by the Khedive of Egypt, and was set up in the Central Park in 1881. Each is about 70 feet high and inscribed with numerous hieroglyphics.

Clepsydra (klep'si-drà), or WATER-CLOCK, an ancient instru-

ment for the measurement of time by the escape of water from a vessel through an orifice. In the older ones the hours were estimated simply by the sinking of the surface of the water, in others the water surface is connected with a dial-plate and hand by a system of weights and floats. In the accompanying figure the float A is attached to the end of a chain which is wound round the spindle B, and has at its other extremity the counterweight C. On water being admitted from the cistern D the float rises, the counter-weight descends and turns the spindle, which again turns the hand that marks the hours.

Clepsydra.

Clerestory (klēr'stō-ri), or CLEAR-STORY, the upper part of the nave in Gothic churches, above the triforium where a triforium is present.

Part of Malmesbury Abbey.

A, Clerestory. B, Triforium. C, Arches of the Nave.

and formed by walls supported on the arches of the nave, and rising above the roof of the side aisles. In these walls windows are inserted for the purpose of increasing the light in the nave.

Clergy (kler'ji; from Greek *klēros*, a lot, through the Latin, *Clericus* and Low Latin *clericia*), the body of ecclesiastical persons, in contradistinction to the *laity*. The Greek word came into use to indicate that this class was to be considered as the particular inheritance and property of God, or else, which is more probable, because it was customary to select by lot those set apart for special religious functions. At first there was no strongly-marked distinction between clergy and laity, but the former soon drew apart, consisting, after the apostolic age, of bishops, priests, and deacons, and in the fourth century of many additional inferior orders, such as subdeacons, acolytes, etc. With the increased complexity of the hierarchy there was a steady accretion of privileges until the burden of these became intolerable to the laity. In England few of these now remain, the clergy being generally regarded as invested with no inherent claim to regard. A clergyman cannot, however, be compelled to serve as juryman, he is exempted from arrest while celebrating divine worship, from acting as bailiff, constable, or like office, from attendance at a court leet; but on the other hand he cannot accept a seat in the House of Commons, engage in trade or farm lands of more than eighty acres without his bishop's consent. The Episcopalians recognize three classes of clergy—bishops, priests and deacons; and generally hold the doctrine of the apostolic succession. Large numbers of Protestants, however, reject this dogma, and believe in the ministry of only one order. The Catholic clergyman, according to the doctrine of the Roman Catholic Church, is endowed in his spiritual character with a supernatural power, which distinguishes him essentially from the layman. *Regular* clergy are those who live according to monastic rule, *secular* clergy those who do not.

Clergy, BENEFIT OF. See *Benefit of Clergy*.

Clerk, JOHN, of Eldin, near Edinburgh, born 1728; died 1812, a naval tactician, for whom is claimed the invention of the maneuver of *breaking the enemy's line*, put forth in an *Essay on Naval Tactics* published in 1790, afterwards employed with signal effect by Howe, St. Vincent, Duncan, and Nelson. His son John, Lord Eldin, born 1757; died 1832, was a distinguished Scottish judge.

Clerk, PARISH, a lay officer of the Church of England, appointed either by the incumbent or the parishion-

ers. It is his duty to lead the responses and assist in public worship, at funerals, etc.

Clermont-de-Lodève (klār-mōŋ-d-lō-dāv), or *Clermont de l'Hérault* (-d-lā-rō), a town of France, dep. of Hérault, 23 miles west by north of Montpellier. Pop. 5187.

Clermont - en - Beauvaisis (klār-mōŋ-tāŋ-bō-vā-sē), or *Clermont de l'Oise* (d-lwäs), a town of France, dep. Oise, 17 miles east by south of Beauvais. Pop. (1906) 4014.

Clermont-Ferrand (klār-mōŋ-fā-rāŋ), a town of France, capital of department Puy-de-Dôme, on a hill at the foot of the volcanic range in which the summit of the Puy is conspicuous. It possessed considerable importance under the Romans, and became a bishop's see at a very early period. It is an antique and gloomy town built of dark, volcanic stone. The most remarkable edifices are the cathedral, a huge, irregular, gloomy pile, and the Church of Notre Dame, founded in 580. It is visited for its mineral waters and has various manufactures, including chemicals, ropes, hats, etc. Pop. 44,113.

Clermont-Tonnerre (klār-mōŋ-ton-nār), the name of a noble French family of whom one of the most celebrated was Count Stanislas, born in 1747. At the breaking out of the revolution of 1789 he endeavored to promote the establishment of a constitutional monarchy, founding with Malouet the Monarchical Club, and with Fontanes the *Journal des Impartiaux*. In 1791 he was charged with assisting the king in his attempt to escape, but was set free on swearing fidelity to the assembly. In 1792, however, he was murdered by the mob at the house of the Countess de Brissac.

Cleveland (klēv'land), a city, the largest of Ohio in population, on the south shore of Lake Erie, 255 miles northeast from Cincinnati. It is the county seat of Cuyahoga Co., and is divided into two parts by the river Cuyahoga. It is beautifully situated, chiefly on an elevated plain above the lake, and for the most part handsomely laid out with streets crossing each other at right angles. The abundance of trees gives it the name of 'The Forest City.' The Cuyahoga is spanned by several bridges, and in particular by the Viaduct, an elevated street and bridge erected at great expense. Two other viaducts cross the river valley, one of them 100 feet high and 3931 long. The city has an area

CLIFF DWELLINGS, WALPI, ARIZONA

The habitations of a race of Indians known as "Cliff Dwellers." The dwellings were built high in the cliffs, often two or more stories high and having many rooms, and are almost inaccessible.

Cleveland

of 33 sq. miles, extending 10 miles along the lake front and 6 miles in depth along the river. In the center of the shopping district is the public square, 10 acres in extent, and containing a statue of Commodore Perry, the hero of the naval battle on Lake Erie. It is surrounded by the chief public buildings, the custom house, postoffice, courthouse, a theater, churches, stores, etc. From it extends Euclid Avenue, with the reputation of being the most beautiful street in the world. It is lined with stately mansions on a gentle eminence several hundred feet back from the street, with before them a park-like stretch of shade trees, lawns, flower-beds and winding walks. It extends to Wade Park, $4\frac{1}{2}$ miles out. A mile farther is the beautiful Lake View Cemetery, in which is a statue of President Garfield. The interesting edifices of the city include a large music hall, an excellent public library, the Western Reserve University, the Case School of Applied Sciences and various others. The chief industries of Cleveland are its various manufactures of iron, the refining of petroleum, woodworking factories and a great variety of others. It is an important railroad center, all the trunk lines between New York and Chicago running through or near it, and other lines terminating in the city. Its lake commerce is very large, it being the greatest receiving point for iron-ore in America, if not in the world, one of the largest lumber markets in the United States, an important coal market, and very closely associated with the petroleum industry of this country. It is also one of the chief shipbuilding centers of the country. Slaughtering and meat-packing are also industries of leading importance. The position of Cleveland on Lake Erie brings it a very large lake commerce, which is greatly added to by its railroad connections. Founded in 1796, and with a population of 1096 in 1830, it had in 1910, 560,663.

Cleveland, a town, capital of Bradley Co., Tennessee, 29 miles N. E. of Chattanooga. It has iron and brass-foundries, woolen and other mills, and mines of galena and baryta. Pop. 5549.

Cleveland, STEPHEN GROVER, 22d and 24th president of the United States, born at Caldwell, New Jersey, in 1837; died in 1908. He settled in Buffalo, and having acquired an excellent position as a lawyer was elected mayor in 1881. His record for honesty and efficiency as mayor brought him in 1882 the Democratic nomination for governor of New York, followed by his elec-

tion; and in 1884 he was nominated for the presidency by the Democratic national convention at Chicago, and was elected on November 4. Civil service reform and tariff reform were advocated by him during his tenure of office, which came to an end in 1889. In 1892 he was again placed in nomination for the presidency by the Democratic party and was a second time elected, his being the first instance of a return to the presidency after an interval of private life. President Cleveland's unflinching honesty and his diligent effort to promote the best interests of the country gave him a high place in public estimation.

Cleves (klēvz; in German *Kleve*), formerly the capital of the dukedom of Cleves, a town in Rhenish Prussia, 70 miles N. W. of Cologne, about a league from the Rhine, with which it is connected by a canal. It has manufactures of tobacco, leather and cottons, and a mineral spring with baths, etc. Pop. 14,684.

Clew Bay, of Ireland, County Mayo, a bay on the west coast containing a vast number of islets, many of them fertile and cultivated.

Cliché (klē'shā), an electrotpe or a stereotype cast from an engraving, especially from a woodcut.

Clichy (clē-shē), a town about 4 miles N. W. of Paris, of which it now forms a suburb. Pop. 41,516.

Click-bettle. See *Elater*.

Clients (klī'entz), in ancient Rome, were citizens of the lower ranks who chose a patron from the higher classes, whose duty it was to advise and assist them, particularly in legal cases, and in general to protect them. The clients, on the other hand, were obliged to portion the daughters of the patron if he had not sufficient fortune; to follow him to the wars; to vote for him if he was candidate for an office, etc. This relation continued till the time of the emperors. The term is now applied to one who engages the services of a lawyer.

Cliff-dwellers, a race or family of Indians, now extinct or varied in habit, who formerly dwelt in recesses of cliffs in the valleys of the Rio Grande and Rio Colorado and its tributaries. Their dwelling-places were so far up the sides of steep cliffs as to be almost inaccessible, many of them being skilfully built of stones in the rock openings. The stones are rudely dressed and laid in clay mortar. A coat of clay being spread on the walls outside and often one of plaster on the

Cliff-dwellers

inside. Many of the houses are small, but where large recesses existed communal dwellings of many rooms were built, not infrequently two, and at times three, stories in height. Many relics of the inhabitants have been found in these edifices, which are supposed to have been built as places of refuge from enemies. How these people lived we cannot tell, as the region is now rainless and necessarily destitute of food plants. It must have been less barren in former times.

Clifford (clif'ford), the name of a very old English family, several members of which have played an important part in history. The founder of the family, WALTER, son of Richard Fitz-Ponce, a Norman baron, acquired the castle of Clifford, in Herefordshire, under Henry II, and hence took the name of Clifford. In 1523 the Cliffords became Earls of Cumberland, but in 1643 this title became extinct.

Clifford, WILLIAM KINGDON, an English mathematician, born in 1845; educated at King's College, London, and at Trinity College, Cambridge, where he was graduated as second wrangler. In 1871 he was appointed professor of applied mathematics at University College, London. In 1876 his health gave way, but was restored by a summer spent in Spain and Algiers, though not permanently, for two years later he again broke down, and died soon afterwards at Madeira, March 3, 1879. In mathematics his teaching and writings are regarded as marking an epoch in the history of the science in England. His *Canonical Dissection of a Riemann's Surface* and his theory of *Liquaternions*, are well-known works.

Clifton (clif'tun), a handsome residential suburb of Bristol, England, with the limits of which it is included. A suspension bridge here crosses the river Avon 245 feet above its bed, uniting the counties of Gloucester and Somerset. There is here a tepid mineral spring which formerly attracted visitors. Pop. 44,400.

Clifton Forge, a town of Alleghany Co., Virginia, 35 miles E. of White Sulphur Springs. It has iron mining and powder-making industries. Pop. 5748.

Climacteric (kli-mak'ter-ik; *annus climactericus*), according to an old theory, a critical period in human life in which some great alteration is supposed to take place in the constitution. The first climacteric is, according to some, the seventh year; the others are multiples of the first, as 14,

21, etc.; 63 is called the grand climacteric.

Climate (cli'mat), the character of the weather or atmospheric phenomena peculiar to every country as respects heat and cold, humidity and dryness, the direction and force of the prevailing winds, the alteration of the seasons, etc., especially as such conditions affect animal and vegetable life. In general, geographical latitude is the principal circumstance to be taken into view in considering the climate of a country, and thus the torrid, temperate, and frigid zones may each be said roughly to have a climate of its own. The highest degree of heat is found in the equatorial regions, and the lowest, or the greatest degree of cold, at the poles. In the former the temperature continues practically the same all the year round, though there may be alternating rainy seasons and dry seasons. The variations in temperature are very considerable in the temperate zones, and increase as we approach the polar circles. The heat of the higher latitudes, especially about 59° or 60°, is, in July, greater than that of countries 10° nearer the equator, and at Tornea, in Lapland, where the sun's rays are very oblique even in summer, the heat is sometimes equal to that of the torrid zone, because the sun is almost always above the horizon. But even in the equatorial regions, and still more in intermediate regions, the temperature is affected by local configuration and circumstances. In the deserts of Africa, for instance, owing to the exceptional radiating power of sandy plains and the absence of aqueous vapor in the atmosphere, the heat is excessive, while in the corresponding latitudes of South America the mountainous character of the country makes the climate more moderate. Altitude above the sea indeed has everywhere the same effect as removal to a greater distance from the equator, and thus in the Andes we may have a tropical climate at the sea-level and an Arctic one on the mountain summits. The winds to which a country is most exposed by its situation have also a great influence on the climate. In the northern hemisphere if north and east winds blow frequently in any region it will be colder, the latitude being the same, than another which is often swept by milder breezes from the south and west. The climate of Southern Europe, for instance, is decidedly affected by the warm south winds which blow from the hot deserts of Africa. The greater or lesser extent of coast-line a country

possesses in proportion to its area has a decided influence on the climate. The almost unvarying temperature of the ocean equalizes in some degree the periodic distribution of heat among the different seasons of the year, and the proximity of a great mass of water moderates, by its action on the atmosphere, the heat of summer and the cold of winter. Hence the more equable temperature of islands and coasts as compared with that of places far inland, and hence the terms *insular climate* and *continental climate*. The British Isles, Tasmania, and New Zealand enjoy a mild or insular climate as compared with, say, Central Russia or Central Asia. Thus it happens that London has a milder winter and a cooler summer than Paris, though the latter is nearly 3° farther south. Similarly, though Warsaw and Amsterdam are almost in the same latitude, the mean annual temperature of the former is 46.48°, while it reaches at the latter 54.4° Fahr. The proximity of large masses of water involves also the presence of much aqueous vapor in the atmosphere, which may be condensed in abundant rains so as to greatly influence the plant-life of a country. Direction of mountain chains, set of ocean currents, and nature of soil are other modifying elements. In exhibiting graphically the chief climate facts of a region various methods may be adopted, but in all the use of *isothermal lines* is one of the most instructive features. These are lines drawn on a map or chart connecting those places which have the same mean annual temperature or same mean summer and mean winter temperature. In this way we may divide the earth into zones of temperature which by no means coincide with the limits of the zones into which the earth is astronomically divided, and when compared with these on a map show interesting and instructive divergences. Geology teaches that vast changes have taken place in the climate of most if not of all countries, the causes of which are not fully understood.

Climax (kli'maks; Greek, *klimax*, a ladder or stairs), a rhetorical figure in which a series of propositions or objects are presented in such a way that the least impressive comes first, and there is a regular gradation from this to the most impressive or final.

Climbing Perch (klim'ing; *Anabas scandens*), a singular fish, type of the family Anabasidae, remarkable for having the pharyngeal bones enlarged and modified into a series

of cells and duplications so that they can retain sufficient water to keep the gills moist and enable the fish to live out of water six days.

The climbing perch of India proceeds long distances overland in search of water when the pools in which it has been living have dried up.

Climbing Perch (*Anabas scandens*).

It is also credited with a power of climbing the rough stems of palm-trees, but as to this latter point authorities disagree.

Climbing Plants, are plants of weak stems which naturally seek support from their surroundings to rise from the ground. Some are twining plants, rising by winding themselves or their tendrils (*cirri*) round the trunks of trees, etc. Such are the honeysuckle and scarlet runner. Others, like the ivy, attach themselves by small roots developed from the stem as they ascend. Some in climbing always twine spirally from right to left, others again always take the opposite direction.

Clincher-built, CLINKER-BUILT (klin'sher, klin'ker), a term in shipbuilding applied to that method whereby the planks are so arranged that the lower edge of the plank above overlies the upper edge of that below it.

Clinical (klin'i-kal) MEDICINE (from the Greek *klinē*, a bed), that department of medicine which teaches how to investigate, at the bedside of the sick, the nature of diseases, to note their course and termination, and to study the effects of the various modes of treatment to which they are subjected. A *clinical lecture* is the instruction which the teacher gives at the bedside of the patient, and a *clinic* the examination of a patient before students by a doctor, who remarks on the nature of the disease and the particular case.

Clinton (klin'tun), a city, capital of Dewitt Co., Illinois, 22 miles s. of Bloomington. It has bridge and ironworks, etc. Pop. 5165.

Clinton, a city of Vermilion Co., Indiana, on the Wabash River, 15 miles N. of Terre Haute. There are coal mines in the vicinity. Pop. 6229.

Clinton, a city, capital of Clinton Co., Iowa, on the Mississippi River; 42 miles above Davenport, and 138 miles by railroad w. of Chicago. The river is crossed by an iron bridge, about 4000 feet long and costing \$600,000. The cars of three lines of railroads pass over

the bridge, making the city a considerable railroad center. It contains large repair shops, foundries, sash and blind factories, sawmills, etc. Pop. 25,577.

Clinton, a city of Worcester Co., Massachusetts, 45 miles N. W. of Boston. It has extensive manufactures of carpets, gingham cloths and wire cloth. Pop. 13,075.

Clinton, a city, capital of Henry Co., Missouri, 39 miles S. W. of Sedalia. It has ironworks, potteries, etc., and exports of live stock. Pop. 4992.

Clinton, DE WITT, lawyer and statesman, born in Orange Co., New York, in 1769; died in 1828. Winning eminence in Democratic politics, he was elected United States Senator in 1801. Mayor of New York in 1803, lieutenant-governor of that state in 1811 and governor in 1817. It was due to his influence that the Erie canal was begun and he lived to see it completed and the prosperity which it produced.

Clinton, SIR HENRY, a British general who served in the Hanoverian war, and was sent to America in 1775 with the rank of major-general, where he distinguished himself in the Battle of Bunker Hill. He died in 1795.

Clio (klī'o), a genus of pteropodous molluscs of which one species, *C. borealis*, is extremely abundant in the northern seas, constituting the principal part of the food of the whale, and hence often called *whale's food*.

Clipper (klip'er), a modern build of sailing ship, having a long, sharp bow, the greatest beam abaft the center, and a great rate of speed.

Clitheroe (klith'e-rō), a municipal borough, England, County Lancaster, 28 miles N. N. W. of Manchester, giving name to a parl. div. of the county. It is the seat of some large cotton-spinning and weaving establishments, paper manufactories, foundries, and large print-works. Pop. 11,414.

Clitoria (kli-tor'i-a), a genus of tropical leguminous plants, mostly climbers, one of which, *C. Ternatea*, with beautiful blue flowers, has long been grown in England.

Clitus (kli'tus), the foster-brother of Alexander the Great. He saved Alexander's life at the Granicus, but was afterwards slain by him in a fit of intoxication, an act for which Alexander always showed the bitterest remorse.

Clive (kliv), ROBERT, Lord Clive and Baron of Plassey, English general and statesman, was born in 1725 in Shropshire. In his nineteenth year he

entered the East India Company's service at Madras as a writer, but in 1747 quitted the civil for the military service. It was a perilous time for British interests in India. The French under Dupleix had gained important privileges

Lord Clive.

and large grants of territory, and in alliance with Chunda Sahib, Nabob of Arcot were threatening the very existence of the British establishments. In 1751 Clive, who had already a reputation for skill and courage, marched on the large city of Arcot with 200 British troops and 300 Sepoys, and took it, although strongly garrisoned, without a blow, withstood a siege by Chunda Sahib for nearly two months, and at last routed the enemy, took possession of important posts, and returned to Madras completely victorious. In 1753 he sailed to England to recover his health, and was received with much honor. Two years later he was back in India, in his governorship of St. David's, from which he was soon summoned to command the expedition sent to Bengal, where the Nabob Suraj-ud-Dowlah had attacked the British, destroyed their factories, taken Calcutta, and suffocated over 120 of his prisoners in the Black Hole. Clive soon took possession of Calcutta and brought Suraj-ud-Dowlah to terms, but having no trust in the loyal intentions of the nabob he resolved to dethrone him. With the help of Meer Jaffier, one of the nabob's officers, he effected his purpose, and in the battle of Plassey completely overthrew Suraj-ud-Dowlah's forces. Meer Jaffier now became the new nabob, and Clive was made Governor of Calcutta. Here he was equally successful against the encroachments of the Dutch, defeating their forces both by sea and

land. Clive now visited England again, where his success was highly applauded without much inquiry as to the means; and in 1761 he was raised to the Irish peerage with the title of Lord Clive, Baron of Plassey. In 1764 fresh troubles in India brought him back, but now as President of Bengal, with command of the troops there. Before his arrival, however, Major Adams had already defeated the Nabob of Oude, and Lord Clive had only the arranging of the treaty by which the company obtained the disposal of all the revenues of Bengal, Bahar, and Orissa. In 1767 he finally returned to England. In 1773 a motion supported by the minister was made in the House of Commons that 'Lord Clive had abused the powers with which he was entrusted,' but it was rejected for a resolution that 'Lord Clive had rendered great and meritorious services to his country.' His health was by this time broken, and in one of his habitual fits of melancholy he put an end to his life, November 22, 1774. Clive was of a reserved temper, although among his intimate friends he could be lively and pleasant. He was always self-directed and secret in his decisions, but inspired those under his command with the utmost confidence, owing to his bravery and presence of mind. In private life he was kind and exceedingly liberal. He married the sister of the astronomer-royal Dr. Maskelyne, by whom he had two sons and three daughters.

Clivers. See *Cleavers*.

Cloaca (klō - a'ka), an underground conduit for drainage, of which the oldest known example is the *Cloaca Maxima*, or great sewer at Rome, built some 2500 years ago. A portion of it is still standing. It is about 13 feet high and as many wide.—The term is also applied to the excrementory cavity in birds, reptiles, many fishes and lower mammalia (Monotremata), formed by the extremity of the intestinal canal, and conveying outwards the fæces, urine, etc.

Clock, an instrument for measuring time and indicating hours, minutes, and usually seconds, by means of hands moving on a dial-plate, and differing from a watch mainly in having the movement of its machinery regulated by a pendulum, and in not being portable. The largest and most typical clocks also differ in having their machinery set in motion by means of a falling weight or weights, the watch wheelwork being moved by the force of an uncoiling spring; but many clocks

also have a spring setting their works in motion. The use of a *horologium*, or hour-teller, was common even among the ancients, but their timepieces were nothing else than sun-dials, hour-glasses, and clepsydræ. In the earlier half of our era we have accounts of several attempts at clock construction: that of Boethius in the 6th century, the clock sent by Harun al Rashid to Charlemagne in 809, that made by Pacificus, Archdeacon of Verona, in the 9th century, and that of Pope Sylvester II in the 10th century. It is doubtful, however, if any of these was a wheel-and-weight clock, and it is probably to the monks that we owe the invention of clocks set in motion by wheels and weights. In the 12th century clocks were made use of in the monasteries, which announced the end of every hour by the sound of a bell put in motion by means of wheels. From this time forward the expression, 'the clock has struck,' is often met with. The hand for marking the time is also made mention of. In the 14th century there are stronger traces of the present system of clockwork. Dante particularly mentions clocks. Richard, Abbot of St. Albans in England, made a clock in 1326 such as had never been heard of till then. It not only indicated the course of the sun and moon, but also the ebb and flood tide. Large clocks on steeples likewise were first made use of in the 14th century. Watches are a much later invention, although they have likewise been said to have been invented as early as the 14th century. A celebrated clock, the construction of which is well known, was set up in Paris for Charles V in 1379, the maker being Henry de Vick, a German. It probably formed a model on which clocks were constructed for nearly 300 years, and until Huyghens applied the pendulum to clockwork as the regulating power, about 1657. The great advantage of the pendulum is that the beats or oscillations of a pendulum all occupy substantially the same time (the time depending on its length), hence its utility in imparting regularity to a time-measurer. The mechanism by which comparative regularity was previously attained, though ingenious and simple, was far less perfect; and the first pendulum escapement, that is, the contrivance by which the pendulum was connected with the clock-work, was also less perfect than others subsequently introduced, especially Graham's *dead-beat* escapement, invented in 1700. (See *Escapement*.) In a watch the balance-wheel

and spring serve the same purpose as the pendulum, and the honor of being the inventor of the balance-spring was contested between Huyghens and the English philosopher Dr. Hooke. Various improvements followed, such as the chronometer escapement, and the addition of a compensation adjustment, by which two metals having unequal rates of expansion and contraction under variations of temperature are combined in the pendulum or the balance-wheel, so that, each metal counteracting the other, the vibrations are isochronous under any change of temperature. This arrangement was perfected by Harrison in 1726, and is especially useful in navigation. The accompanying cut shows the going part of a clock in its simplest form.

Clockwork.

its teeth work the pallets of the anchor K, which swings backward and forward with the pendulum. The wheel D turns once in an hour, the wheel H, 60 times (the pendulum marking seconds), and by means of other wheels, and one axis working inside another, the clock hands and dial show hours, minutes, and seconds. The striking machinery of a clock, or that by which hours, quarters, etc., are sounded, is no necessary part of a clock, and forms indeed a separate portion of the works, usually driven by a separate falling weight, and coming into play at certain times, when there is a temporary connection between the two portions of the clock machinery. See also *Watch*.

Clodius (klō'di-us), PUBLIUS, a notorious public character of ancient Rome, son of Appius Claudius Pulcher, who was consul about 79 B.C. He served in the third Mithridatic war under Sucullus, and filled different high posts in the provinces of the East, where his turbulence was the cause of serious disturbances. Returning to Rome, he became a popular demagogue, was elected tribune in 59 B.C., was the means of procuring Cicero's banishment, and continued to be a ringleader in all the seditions of the time till killed in an encounter between his followers and those of Titus Annius Milo. One of Cicero's orations was written in defense of Milo.

Clog-almanac, an almanac or calendar made by cutting notches or characters on a *clog* or block, generally of wood. The block had generally four sides, three months for each edge. The number of days is marked by notches, while various symbols are used to denote saints' days, the golden number, etc.

Clogher (klō'gēr), a village and old episcopal see of Ireland in County Tyrone, with cathedral and bishop's palace. The see, of which St. Patrick is said to have been the first bishop, is united with that of Armagh. Pop. about 250.

Cloisonné (klwā-son-ā). See *Enamel*.

Cloister (klois'tēr), an arched way or gallery, often forming part of certain portions of monastic and collegiate buildings, usually having a wall of the building on one side, and an open colonnade, or a series of windows with piers and columns adjoining an interior yard or court on the other side. Such galleries were originally intended as places of exercise and recreation, the persons using them being under cover. The term is also used as equivalent to convent or monastery.

Clonakilty (klo-na-kil'ti), a seaport of Ireland, County Cork, with a considerable trade in grain. Pop. 3676.

Clonmel (klon-mel'), a municipal and until 1885, parliamentary borough of Ireland, partly in County Waterford and partly in County Tipperary. It lies in a beautiful valley on both sides of, and on two islands in, the river Suir, and has a jail, barracks, courthouse, etc.; carries on tanning, brewing, and flour-milling, and has a trade in agricultural produce. It was the birthplace of Sterne. Pop. about 10,200.

Clontarf (klon'turf), a town of Ireland, County Dublin, on the northern shore of Dublin Bay. It is a much-frequented watering-place and is historically interesting as the scene of Brian Boromhe's victory over the Danes in 1014. Pop. 5105.

Cloots (klōts), JEAN BAPTISTE, BARON a singular character well known during the revolutionary scenes in France under the appellation of *Anacharsis Cloots*. He was born at Cleves in 1755, and was brought up at Paris. He became possessed of a considerable fortune, which he partly dissipated in fantastic schemes for the union of all peoples and races in one democratic brotherhood. The outbreak of the French revolution afforded him the kind of career he sought. In 1790, Cloots presented himself at the bar of the national assembly, accompanied by a considerable number of enthusiastic followers of various nationalities, English, German, Italian, Spanish, Arabians—or Parisians dressed up as such. He described himself as the orator of the human race, and demanded the right of confederation, which was granted him. His enthusiasm for radical reforms, his hate of Christianity and of royalty, and a gift of 12,000 livres on behalf of the national defense, gained him in Sept., 1792, election to the national convention, in which he voted for the death of Louis XVI in the name of the human race. But becoming an object of suspicion to Robespierre, he was arrested and guillotined March 24, 1794. He met his fate with great indifference.

Cloquet (klo'kwet) a village of Carlton Co., Minnesota, 30 miles w. of Duluth. It has lumber and paper mills, etc. Pop. 7031.

Close Corporation, a corporation which fills up its own vacancies, the election of members not being open to the public.

Close-hauled, in navigation, said of a ship when the general arrangement or trim of the sails is such as to enable her to sail as nearly against the wind as possible.

Closure (klōs'ūr), a rule in British parliamentary procedure, adopted in 1887 by which, at any time after a question has been proposed, a motion may be made with the speaker's or chairman's consent 'That the question be now put,' when the motion is immediately put and decided without debate or amendment. So also if a clause of a bill is under debate a motion that it stand or be added may be put and carried in the same way. The motion must be

supported by more than 100 members and opposed by less than 40, or have the support of 200 members. The introduction of the closure was intended to prevent debates from being too long continued.

Cloth, a fabric formed by interweaving threads or fibers of animal or vegetable origin, as wool, hair, cotton, flax, hemp, etc. Cloth may also be made by *felting* as well as by weaving. See *Cotton*, *Woolen*, *Silk*, etc.

Clothes-moth, the name common to several moths of the genus *Tineā*, whose larvæ are destructive to woollen fabrics, feathers, furs, etc., upon which they feed, using at the same time the material for the construction of the cases in which they assume the chrysalis state.

Clothing (klō'thing), the clothes or dress, that is, the artificial coverings, collectively, which people wear. Nothing is more necessary to comfort than that the body should be kept in nearly a uniform temperature, thus preventing the disturbance of the important excretory functions of the skin by the influence of heat or cold. Hence in a changeable climate the question of clothing becomes of special importance. The chief end proposed by clothing ought to be protection from the cold. A degree of cold amounting to shivering cannot be felt without injury to the health, and the strongest constitution cannot resist the benumbing influence of a sensation of cold constantly present, even though it be so moderate as not to occasion immediate complaint, or to induce the sufferer to seek protection from it. This degree of cold often lays the foundation of the whole host of chronic diseases, foremost among which are found scrofula and consumption. The only kind of dress that can afford the protection required by the changes of temperature to which the cooler or temperate climates are liable is *woolen*. Those who would receive the advantage which the wearing of wool is capable of affording must wear it next to the skin; for it is in this situation only that its health-preserving power can be felt. The great advantages of woollen cloth are briefly these:—the readiness with which it allows the escape of sweat through its texture; its power of preserving the sensation of warmth to the skin under all circumstances; the slowness with which it conducts heat; the softness, lightness, and pliancy of its texture. *Cotton cloth*, though it differs but little from linen, approaches nearer to the nature of woollen, and on that account must be esteemed as the next best sub-

stance of which clothing may be made. *Silk* is the next in point of excellence, but it is very inferior to cotton in every respect. *Linen* possesses the contrary of most of the properties enumerated as excellencies in woolen. It retains the matter of perspiration in its texture, and speedily becomes imbued with it; it gives an unpleasant sensation of cold to the skin; it is very readily saturated with moisture, and it conducts heat too rapidly. Clothes should be so made as to allow the body the full exercise of all its motions. The neglect of this pre-

Clouds differ much in form and character, but are generally classed (following Luke Howard, in his *Essay on Clouds* into three simple or primary forms, viz.: —1. The *cirrus*, so called from its resemblance to a lock of hair, and consisting of fibers which diverge in all directions. Clouds of this description float at a great height, usually from 3 to 5 miles above the earth's surface. Long, streaky forms are called *mare's tails*. 2. The *cumulus* or *heap*, a cloud which assumes the form of dense convex or conical heaps, resting on a flattish base;

Cloud-Cirrus.

Cloud-Cumulus.

Cloud-Stratus.

Cloud-Nimbus.

caution is productive of more mischief than is generally believed, and the misery and suffering arising from it often begin while we are yet in the cradle.

Clotho (klō'thō), in Greek mythology, that one of the three Fates or Parcae whose duty it was to put the wool for the thread of life round the spindle, while that of Lachēsis was to spin it, and that of Atrōpos to cut it when the time had come.

Cloud, a collection of visible vapor or watery particles suspended in the atmosphere at some altitude. They differ from fogs only by their height and less degree of transparency. The average height of clouds is calculated to be $2\frac{1}{2}$ miles, thin and light clouds being much higher than the highest mountains, while thick, heavy clouds often touch low mountains, steeples and even trees.

called also summer-cloud. Under ordinary circumstances these clouds accompany fine weather, especially in the heat of summer, and accompany a brisk wind. Each cumulus cloud is at the top of a column of ascending warm, aqueous vapor. They attain their greatest size early in the afternoon and gradually decrease towards sunset. 3. The *stratus*, so named from its spreading out uniformly in a horizontal layer, which receives all its augmentations of volume from below. It belongs essentially to the night, and is frequently seen on calm summer evenings after sunset ascending from the lower to the higher grounds, and dispersing in the form of a cumulus at sunrise. These three primary forms of clouds are subdivided as follows:—1. The *cirro-cumulus*, composed of a collection of cirri, and spreading itself fre-

Cloud

quently over the sky in the form of beds of delicate snowflakes. 2. The *cirro-stratus* or *wane-cloud*, so called from its being generally seen slowly sinking, and in a state of transformation; when seen in the distance, a collection of these clouds suggests the resemblance of a shoal of fish, and the sky, when thickly mottled with them, is called in popular language a *mackerel sky*. 3. The *cumulo-stratus* or *twain-cloud*, one of the grandest and most beautiful of clouds, and consisting of a collection of large, fleecy clouds overhanging a flat stratum or base. 4. The *nimbus*, *cumulo-cirro-stratus*, or *rain-cloud*, recognizable, according to Mr. Howard, by its fibrous border and uniformly gray aspect. It is a dense cloud spreading out into a crown of cirrus and passing beneath into a shower. It presents one of the least attractive appearances among clouds, but it is only when the dark surface of this cloud forms its background that the splendid phenomenon of the rainbow is exhibited in perfection.

Cloud (klö), St., a town, France, department Seine-et-Oise, 6 miles s. w. from Paris, charmingly situated on the slope of a hill overlooking the river Seine. It is celebrated for its château and its magnificent park, a favorite holiday resort of the Parisians. As the residence of the monarchs of France, St. Cloud is historically interesting. Louis XVI bought the old château and presented it to his brother, the Duke of Orleans, who enlarged and transformed it into a splendid palace, which became the residence of Henrietta, queen of Charles I of England, during her exile. It was sold by Louis Philippe of Orleans to Marie Antoinette, and after the revolution chosen by Napoleon for his residence. It was the summer residence of Napoleon III, and was greatly damaged in the Franco-German War. Pop. 7195.

Cloudberry (cloud'ber-i), or MOUNTAIN BRAMBLE (*Rubus chamæmorus*), a fruit found plentifully in the north of Europe, Asia, and America, of the same genus with the bramble or blackberry. The plant is from 4 to 8 or 10 inches high, with a rather large handsome leaf, indented and serrated at the edges. The flowers are large and white, and the berries, which have a very fine flavor, are orange yellow in color, and about the size of a bramble-berry.

Clough (kluff). ARTHUR HUGH, an English poet, born at Liverpool, 1819. He studied under Dr. Arnold at Rugby, and then at Oxford, where he

Clover

highly distinguished himself. On his return from a tour in America (1852) he was appointed an examiner attached to the educational branch of the privy-council office. He died in 1861, at Florence, while returning from a journey to Greece. His poems, of which the best known are *Bothie of Tober-na-Vuolich*, *Amours de Voyages*, and the *Tragedy of Dipsychus*, were published, along with a memoir, in 1862.

Clove Bark, or CULIL'AWAN BARK, is furnished by a tree of the Molucca Islands (*Cinnamomum Culilawan*). It is in pieces more or less long, almost flat, thick, fibrous, covered with a white epidermis of a reddish-yellow inside, of a nutmeg and clove odor, and of an aromatic and sharp taste. In commerce the name is also given to the bark of the *Myrtus caryophyllata*. It is of a deep-brown color, very thin and hard, and has similar properties to cinnamon.

Clove-gillyflower (klöv-jil'flower), the carnation, or a clove-scented variety of it.

Clover, or TREFOIL (klö'ver, trē'-foil), a name of different species of plants of the genus *Trifolium*, nat. order Leguminosæ. There are about 150 species. Some are weeds, but many species are valued as food for cattle. *T. pratense*, or common red clover, is a biennial, and sometimes, especially on chalky soils, a triennial plant. This is the kind most commonly cultivated, as it yields a larger product than any of the other sorts. *Trifolium repens*, or white clover, is a most valuable plant for pasturage over the whole of Europe, Central Asia, and North America, and has also been introduced into South America. The bee gathers much of its honey from the flowers of this species. *T. hybridum*, alsike, hybrid, or Swedish clover, has been long cultivated in the south of Sweden, and for some time also in other countries; it is strongly recommended for cold, moist, stiff soils. It resembles the common red clover in duration, stature and mode of growth. *T. medium*, perennial red or meadow clover, much resembles the common red, but differs somewhat in habit, and the bright-red flowers are larger and form a less compact head. Its produce is less in quantity, and not so nutritive, as that of the common red. *T. incarnatum*, crimson or Italian clover, is much cultivated in France and Italy and is spreading to other countries. It bears oblong or cylindrical spikes of rich crimson flowers, and is sometimes planted for decorative purposes in flower gar-

dens. The name clover is often applied to plants like medick and melilot, cultivated for the same purpose and belonging to the same natural order, although not of the same genus.

Clover-weevil, a kind of weevil, genus *Apion*, different species of which, or their larvæ, feed on the leaves and seeds of the clover, as also on tares and other leguminous plants. *A. apricans*, of a bluish-black color, and little more than a line in length, is especially destructive.

Cloves (klōvz), a very pungent aromatic spice, the dried flower-buds of *Caryophyllus aromaticus*, a native of the Molucca Islands, belonging to the myrtle tribe, now cultivated in Sumatra, Mauritius, Malacca, Jamaica, etc. The tree is a handsome evergreen from 15 to 30 feet high, with large, elliptical, smooth leaves and numerous purplish flowers on jointed stalks. Every

Clove (*Caryophyllus aromaticus*).

part of the plant abounds in the volatile oil for which the flower-buds are prized. The spice yields a very fragrant odor, and has a bitterish, pungent, and warm taste. It is sometimes employed as a hot and stimulating medicine, but is more frequently used in culinary preparations.

Clovis (klō'vis; from old Ger. *Chlodwig*, mod. Ger. *Ludwig*, Fr. *Louis*), King of the Franks, born 465, succeeded his father Childeric in the year 481, as chief of the warlike tribe of Salian Franks, who inhabited Northern Gaul. In 486 he overthrew the Roman governor at Soissons and occupied the country between the Somme and the Loire. The influence of his wife Clotilda, a Burgundian princess, at length converted him to Christianity, and on Dec. 25, 496, he was baptized with several thousands of his Franks at Rheims, and was saluted by Pope Anastasius as 'most Christian king,' he being ortho-

dox, while most of the western princes were Arians. It now became his object to rid himself by any means of all the other Frankish rulers, in order that he might leave the whole territory of the Franks to his children; and in this purpose he succeeded by treachery and cruelty. He died at Paris, which he had made his capital, on Nov. 27, 511, in the thirtieth year of his reign. In the last year of his reign Clovis had called a council at Orleans, from which are dated the peculiar privileges claimed by the kings of France in opposition to the pope.

Clown, the buffoon or practical jester in pantomime and circus performances. On the old English stage the clown was the privileged laughter-provoker, who, without taking any part in the dramatic development of the piece represented, carried on his improvised jokes and tricks with the actors, often indeed addressing himself directly to the audience instead of confining himself to the scheduled play upon the stage. In Shakespeare's dramas a distinct part is assigned to the clown, who no longer appears as an extempore jester, although the part he plays is to a certain extent in keeping with his traditional functions. He is now confined to the pantomime and the circus, in the former of which he plays a part allied to that of the French *pierrot*.

Cloyne (kloin), a town in Ireland, 16 miles E. by S. of Cork, the seat of a Roman Catholic bishop. From 1638 to 1833 it was the see of a bishop of the Established Church, but in the latter year it was united with Cork and Ross. Pop. about 1400.

Club, a select number of persons in the habit of meeting for the promotion of some common object, as social intercourse, literature, politics, etc. It is a peculiarly English institution, which can scarcely be said to have taken root in any other country except America. The coffee-houses of the 17th and 18th centuries are the best representatives of what is meant by a modern club, while the clubs of that time were commonly nothing but a kind of restaurants or taverns where people resorted to take their meals. But while anybody was free to enter a coffee-house, it was necessary that a person should have been formerly received as a member of a club, according to its regulations, before he was at liberty to enter it. Among the earliest of the London clubs was the Kit-cat Club, formed in the reign of Queen Anne, among whose forty members were dukes, earls, and the leading authors

CLOVIS, KING OF THE FRANKS, BAPTIZED BY REMIGIUS, BISHOP OF RHEIMS, ON CHRISTMAS DAY, 496 A. D.

of the day. Another club formed about the same time was the Beefsteak Club. Originally these two clubs had no pronounced political views, but in the end they began to occupy themselves with politics, the Kitcat Club being Whig, and the Beefsteak Club, Tory. Perhaps the most celebrated club of last century was that which was first called The Club *par excellence*, and numbered among its members Dr. Johnson, Sir Joshua Reynolds, Edmund Burke, Oliver Goldsmith, Edward Gibbon, and others. The most important London political clubs of the present day are the Carlton Club, a sort of headquarters for the Conservative party, and the Reform Club, the building belonging to which stands next to that of the Carlton Club, the great club of the Liberal party. Similar clubs exist also in Edinburgh, Glasgow, and other cities of the kingdom. Some of the London clubs are for ladies as well as gentlemen, and one or two for ladies alone. Clubs are often provided with reading-room and library, smoking-room, billiard-room, coffee-room, dining-room, drawing-room, etc., and also may have a certain number of bedrooms. Besides being convenient for social intercourse, members may obtain their meals in them, served in the best style and at moderate cost. New members are admitted by ballot, and pay a certain entrance fee as well as an annual subscription. The English clubs have been imitated in different countries in Europe, but not with great success, but clubs are widely spread through the United States, even in many comparatively small cities. The large cities are well provided with them, while women's clubs are so numerous that they have long ceased to be an innovation. In France, where clubs were introduced at an early period, they soon became associations purely political in their nature, and had no uniform and regular form, as they were only tolerated during revolutionary epochs. The Club des Jacobins, the Club des Feuillants, the Club des Cordeliers, and the Club de Montrouge, were the most famous clubs of the time of the first French revolution. After the revolutions of 1848 hosts of clubs started into existence in France, Germany, and Italy; but the institution has always failed to take a deep hold on European continental society.

Clubbing, a diseased condition of plants of the cabbage family produced by the larvæ of insects, consisting in the lower part of the stem becoming swollen and misshapen. Plants on ground exhausted by over-cultivation suffer chiefly.

Club'foot (Lat., *talipes*), a congenital distortion of the foot. There are several varieties. Sometimes the foot is twisted inwards (*T. varus*); sometimes the heel is raised and the toes only touch the ground (*T. equinus*); sometimes the foot is twisted outwards (*T. valgus*); or it rests only on the heel (*T. calcaneus*). In most cases the deformity is curable by modern surgery.

Club-hauling, a method of tacking situations by letting go the lee-anchor as soon as the wind is out of the sails, her head being thus brought to the wind, and then cutting the cable and trimming the sails as soon as she pays off.

Club-moss, the common name of the plants of the order Lycopodiaceæ, or more particularly of the genus Lycopodium. See *Lycopods*.

Clue (klö), of a square sail, is the lower corner; and hence *clue-lines* and *clue-garnets*, tackles to truss the clues up to the yard.

Clunes (klöns), a mining town in the Australian colony of Victoria, 120 miles northwest of Melbourne. Pop. 2426.

Cluny (klü-nē), a town of Eastern France, dep. Saône-et-Loire, 11 miles N. W. Macon, pop. 3691. Here was a Benedictine abbey, founded in 910, at one time the most celebrated in France, having 2000 monastic communities directly under its sway in France, Italy, Spain, England, etc., the inmates of which formed the congregation of Cluniac monks. Most of it was destroyed in 1789, and the present town is to some extent built of its *débris* and occupies its site.

Clupeidæ (klö-pē'i-dē), the herring family, the typical genus being *Clupëa*, the herring, a family of fishes which includes the herring, sprat, white-bait, pilchard, etc.

Clusiaceæ. See *Guttiferæ*.

Clustered Column, in architecture, a pier which seems to consist of several columns or shafts clustered together; they are sometimes attached to each other throughout their whole height, and sometimes only at the capital and base.

Clutha (klū'tha), the largest river in New Zealand, in the southern part of the Middle Island. It receives the waters of Lakes Hawea, Wanaka, and Wakatipu, and flows in a S. E. direction, having a length of 150 miles. It is called also Molyneux.

Clyde (klīd), a river of Scotland, which has its sources amid the hills that separate Lanarkshire from the countries of Peebles and Dumfries and forms an extensive estuary or firth before it enters the Irish Sea, at the southern extremity of the island of Bute. From its source to Glasgow, where navigation begins, its length is 70 or 80 miles. Near Lanark it has three celebrated falls—the uppermost, Bonnington Linn, about 30 feet high; the next, Cora Linn, where the water takes three distinct leaps, each about as high; and the lowest, Stonebyres, also three distinct falls, altogether about 80 feet. The Clyde, by artificial deepening, has been made navigable for large vessels up to Glasgow, and is the most valuable river in Scotland for commerce. See *Glasgow*.

Clyde, LORD, Sir Colin Campbell, was born in Glasgow, in 1792, where his father, John McLiver, a native of Mull, worked as a cabinet-maker. His mother's maiden name was Campbell, and she was the daughter of a small proprietor in Islay. By the assistance of his mother's relations he was educated at the High School of Glasgow, and afterwards at the Military Academy, Gosport. In 1808 he received an ensign's

Lord Clyde.

commission in the 9th Regiment of Foot, having previously changed his name to Campbell, at the suggestion of his maternal uncle, an officer in the army. He served in Spain under Sir John Moore and Wellington, being engaged in the battles of Barossa and Vittoria, and having displayed distinguished gallantry at the siege of San Sebastian, where, as well as at the Bidassoa, he was severely wounded. In 1819-25 he was in the West Indies. In 1835 he attained the

rank of lieutenant-colonel. In 1842 he was in China in command of the 98th Regiment, and on the termination of the Chinese war took active service in India, where he acquired such reputation in the second Sikh war as to receive the thanks of Parliament and the title of K.C.B. In 1854 he became major-general, with the command of the Highland Brigade in the Crimean war. His services at the battles of Alma and Balaklava, and during the war generally, were conspicuous, so that on the outbreak of the Indian mutiny he was appointed to the chief command there. Landing at Calcutta on August 29, 1857, he relieved Havelock and Outram at Lucknow, and crushed the rebellion entirely before the end of the year. For his services here Sir Colin received the thanks of both houses of Parliament, was created a peer with the title of Baron Clyde, and had an income of \$10,000 a year allotted him. In 1862 he was made field-marshal. He died August 14, 1863, and was buried in Westminster Abbey.

Clyster (klis'tēr), an injection or enema, a medicated substance introduced into the lower bowel, usually for the purpose of expelling its contents, but sometimes also for the purpose of being retained, as when opium is thus administered in cases of diarrhœa.

Clytemnestra (klit-em-nes'tra), in Greek mythology, daughter of King Tyndareus and Leda, and half-sister of Helen. During the absence of Agamemnon in the war against Troy she bestowed her favors on Ægisthus, and, in connection with him, murdered Agamemnon on his return from Troy, and, together with her paramour, governed Mycenæ for seven years. Her son Orestes killed them both. See *Agamemnon* and *Orestes*.

Cnidus (nī'dus), or GNIDUS, an ancient Greek town in Caria, a province of Asia Minor, a great seat of the worship of Aphroditē (Venus), who had three temples here, in one of which was a famous statue of the goddess by Praxiteles.

Coach (kōch), a general name for all covered carriages drawn by horses and intended for the rapid conveyance of passengers. The earliest carriages appear to have been all open, if we may judge from the figures of Assyrian and Babylonian chariots found on the monuments discovered amid the ruins of Nineveh and Babylon. At Rome both covered and uncovered carriages were in use. After the fall of the Roman Empire they went out of use again, and during the feudal ages the custom was

to ride on horseback, the use of carriages being considered effeminate. They do not appear to have become common till the fifteenth century, and even then were regarded exclusively as vehicles for women and invalids. Later on they became, especially in Germany, part of the appendages of royalty. They seem to have been introduced into England the middle of the sixteenth century, but were long confined to the aristocracy and the wealthy classes. Hackney-coaches were first used in London in 1625. They were then only twenty in number, and were kept at the hotels, where they had to be applied for when wanted. In 1634 coaches waiting to be hired at a particular stand were introduced, and had increased to 200 in 1652, to 800 in 1710, and to 1000 in 1771. Stage-coaches were introduced into England about the same time as hackney-coaches. The first stage-coach in London appears to have run in the seventeenth century, and before the end of the century they were started on three of the principal roads in England. Their speed was at first very moderate, about 3 or 4 miles an hour. They could only run in the summer, and even then their progress was often greatly hindered by floods and by the wretched state of the roads generally. In 1700 it took a week to travel from York to London; in 1754 a body of Manchester merchants started a conveyance, the Flying Coach, of an improved kind, which did the journey to London in the unusually short period of four days and a half. The system of mail-coaches was established in London in 1784 and these continued to be the means of traveling in England until their place was taken by the railways. In the United States the unsettled state of the roads in the colonial period delayed the introduction of coaches and it was late in the eighteenth century before a stage-coach line was started between Philadelphia and New York, the two largest cities, a wagon twice a week, and making three miles an hour, sufficing for all travel at first. In 1766 a coach was put on that made the journey in two days, and was advertised as a 'flying machine.' In 1789 it took a week to travel by stage from New York to Boston, the coaches often sticking fast in the mud.

The manufacture of elegant carriages is a proof of much wealth and mechanical skill in a place, many different workmen being employed in their construction, and both the materials and the workmanship requiring to be of the best. The principal modern varieties of the coach are the following: the barouche, landau, brough-

am, coupé, buggy, britska, berlin, brake, etc., which see under their different heads.

Coach-dog, a short-haired dog of moderate size, and rather handsome shape, white with numerous black spots, kept as an attendant upon carriages, and of no use otherwise. Called also Dalmatian dog.

Coadjutor (kō-a-jō'tor), a Latin term, nearly synonymous in its original meaning with *assistant*. The term is especially applied to an assistant bishop appointed to act for and succeed one who is too old or infirm for duty.

Coagulation (kō-ag-ū-lā'shun), the changing of a fluid into a more or less solid substance, or the separation of a substance from a solution, through the substance becoming more or less solid. Thus, albumin of egg can be dissolved in cold water, but if the solution be warmed, the albumin undergoes a change, separates out in white, flocky masses, and cannot again be redissolved in the water. Coagulation is well exemplified by the 'curding' of milk and 'clotting' of blood.

Coahuila (kō-ā-wē'lā), a state of Mexico, on the frontier of the United States, rich in woods and pastures, and having several silver-mines; area, 63,569 square miles; pop. 296,938.

Coaita (kō'a-ti), *Atēlcs paniscus*, one of the largest of the S. American monkeys, belonging to those known as spider monkeys, black in color, and very docile in captivity.

Coal (kōl), a solid, opaque, inflammable substance, mainly consisting of carbon, found in the earth, largely employed as fuel, and formed from vast masses of vegetable matter deposited through the luxuriant growth of plants in former epochs of the earth's history. In the varieties of coal in common use the combined effects of pressure, heat, and chemical action upon the substance have left few traces of its vegetable origin; but in the sandstones, clays, and shales accompanying the coal the plants to which it principally owes its origin are presented in a fossil state in great profusion, and frequently with their structure so distinctly retained, although replaced by mineral substances, as to enable the microscopist to determine their botanical affinities with existing species. The sigillaria and stigmaria, the lepidodendron, the calamite, and tree-ferns are among the commoner forms of vegetable life in the rocks of the coal formation. Trees of considerable magnitude have also been brought to light, having a recognizable relation to the modern

Courtesy of The J. M. Dodge Co.

HANDLING COAL

Four-ton grab buckets operating on the four-bridge tramways pick up the coal from the hold of lake steamers and deposit it either on the dock or in cars. The four machines can be moved to any part of the dock to which steamers are moored and four ships can be unloaded rapidly at one time. The motive power is electricity.

araucaria. The animal remains found in the coal-measures indicate that some of the rocks have been deposited in fresh water, probably in lakes, while others are obviously of estuarine origin, or have been deposited at the mouths of rivers alternately occupied by fresh and salt-water. The great system of strata in which coal is chiefly found is known as the Carboniferous. There are many varieties of coal, varying considerably in

Section of part of a coal-field, showing a succession of buried trees and land surface; a, sandstones; b, shales; c, coal-seams d, under-clays or soils.

their composition, as *anthracite*, nearly pure carbon, and burning with little flame, much used for furnaces and malt kilns; *bituminous*, a softer and more free burning variety; and *cannel* or 'gas-coal,' which burns readily like a candle, and is much used in gas-making. The terms semianthracite, semibituminous, coking-coal, splint coal, etc., are also applied according to peculiarities. All

varieties agree in containing from 60 to over 90 per cent. of carbon, the other elements being chiefly oxygen and hydrogen, and frequently a small portion of nitrogen. *Lignite* or *brown coal* may contain only 50 per cent. of carbon. For manufacturing purposes coals are generally considered to consist of two parts, the volatile or bituminous portion, which yields the gas used for lighting, and the substance, comparatively fixed, usually known as *coke*, which is obtained by heating the coals in ovens or other close arrangements. About 260,000,000 tons of coal are annually mined in Britain, the value being over \$300,000,000. Large quantities are exported. The British coal-fields, though comparatively extensive (covering about 9000 sq. miles), are far surpassed by those of several other countries, as the United States and China, the former having coal-fields estimated to cover over 190,000 sq. miles; the latter over 200,000 sq. miles. Britain no longer mines the largest quantity, having been far surpassed by the United States. Other countries in which coal is worked are Belgium, France, Germany, Russia, India, N. S. Wales and Canada. China has hitherto mined only a small scale. The annual production of anthracite coal in Pennsylvania is more than 86,000,000 tons of 2240 pounds, valued at the mines at \$198,000,000. In 1910 there were produced of bituminous coal 388,222,868 tons, valued at \$463,654,776; amount of coke manufactured, 37,000,000 tons. This was distributed widely over the country, the greatest producers, after Pennsylvania being Illinois, West Virginia, Ohio, Alabama and Colorado. Recently a very large output of coal has been discovered in Alaska, the value of which is as yet undetermined, though it is believed to hold a vast quantity of coal. The value of the western coal-fields also is far from known and since 1906 very extensive tracts of coal-bearing lands have been withdrawn from settlement, principally in Wyoming, Montana, Colorado, Utah and New Mexico, their beds being largely of lignite. These cover about 50,000,000 acres, and, with those of Alaska, are held by the government as national assets. The mines of Alaska are claimed to be exceedingly rich, both in bituminous and anthracite coal, the beds examined being estimated to contain 15,000,000,000 tons, while there are large districts unexamined. They have not yet been worked, the government keeping them back for public ownership. The chief uses of coal are fuel for domestic purposes, for heating steam-boilers, for making gas, and in metallurgy.

Coal Brass, the iron pyrites found in coal-measures, so named on account of its brassy appearance. Coal containing much pyrites is bad for iron smelting, and it is unpleasant for domestic use on account of the sulphurous acid which it gives off on burning. Coal brass is useful in the manufacture of copperas, and in alkali works.

Coalbrookdale (kōl'brūk-dāl), an English coal and iron producing district in Salop, along the bank of the Severn.

Coaldale, a borough in Schuylkill Co., Pennsylvania, near Tamaqua. It has coal-mining interests. Pop. 5154.

Coal-fish, a species of the cod genus (*Gadus carbonarius*), named from the color of its back. It grows to a length of 2½ feet, and is found in great numbers about the Orkneys and the northern parts of Britain. In Scotland it is generally known as the *sethe* or *seath*.

Coal Gas, the variety of carburetted hydrogen, produced from coal, which is used for common gaslight.

Coaling Stations, stations established at various important points over the ocean, where ships, both of the navy and the mercantile marine, may obtain supplies of coal. The utility of such stations, when properly fortified, as points of refuge, defense, and repair in the event of war can hardly be over-estimated. Britain has very many of them in accordance with the width of its interests, the United States, as yet, comparatively few.

Coalition (kō-a-li'shun), a term used in diplomacy and politics to denote a union between different parties not of the same opinions, but who agree to act together for a particular object. Among states it is understood to mean theoretically something less general in its ends and less deeply founded than an *alliance*.

Coal Measures, the upper division of the carboniferous system, consisting of beds of sandstone, shale, etc., between which are coal-seams.

Coal-plants, such plants as have by their remains formed coal, chiefly allied to the ferns, lycopods, and horse-tails. See *Coal*.

Coal-tar, or GAS-TAR, a substance obtained in the distillation of coal for the manufacture of illuminating gas, a dark-colored more or less viscid mass, consisting principally of oily hydrocarbons. It passes over with the gas into the condensers along with ammonia liquor, but being heavier than the latter, it is easily separated from it when the

whole is allowed to stand. It was formerly of comparatively little use; but in recent years a great number of valuable products have been derived from it by distillation, such as ammonia, naphtha, creasote, carbolic acid and benzene, while it is also the source of the whole series of aniline colors, and other dyes, of alizarine, salicylic acid, etc.

Coamings (kōm'ings), raised frames rather higher than the deck, about the edges of the hatch-openings of a ship, to prevent the water on deck from running down the hatchways.

Coanza (kō-a-n'zā), a large river of Lower Guinea, Africa, entering the Atlantic near 9° 10' S.

Coasting Trade, trade carried on by sea between the ports of the same country. This trade in the United States, owing to the enormous coast-line, is far more extensive than in any other country, especially on Atlantic Ocean and Gulf of Mexico. It is closed to all save citizens and U. S. shipping.

Coast Survey, a scientific department of the United States, for the purpose of making geodetic and hydrographic surveys to determine the coast-line; of making charts of harbors and tide waters, and of the bottom of the ocean along the coast; of indicating positions for the erection of lighthouses; and the making of various meteorological and other observations. It extends its observations to all parts of the globe, as serviceable to navigation.

Coast Mountains, COAST RANGE, a range or series of ranges extending along the west of California at no great distance from the Pacific coast, and rising to the height of 8500 feet.

Coatbridge (kōt'brīj), a town in Scotland, Lanarkshire, 9½ miles east of Glasgow. The district abounds in coal and ironstone, and the place has rapidly grown from a trifling village to a thriving town, supported chiefly by the ironworks, engineering establishments, etc., in the neighborhood. Pop. 36,991.

Coatesville (kōts'vil), a borough of Chester Co., Pennsylvania, 38 miles W. of Philadelphia. It has rolling mills, steel plants, silk and woolen mills, etc. Pop. 11,084.

Coati, or COATI-MONDI (kō'a-ti mun'di), a name of South American plantigrade carnivorous mammals, of the genus *Nasua*, belonging to the Ursidæ or bears, but recalling rather the raccoon or civets, and having a long proboscis or

snout. They feed on worms, insects, and the smaller quadrupeds.

Coat of Arms. See *Arms* and *Heraldry*.

Coat of Mail, a piece of armor in the form of a shirt, consisting of a network of iron or steel rings, or of small laminæ or plates, usually of tempered iron, laid over each other like the scales of a fish, and fastened to a strong linen or leather jacket.

Cobalt (kō'balt; G. *kobalt*, *kobolt*, the same word as *kobold*, a goblin, the demon of the mines, so called by miners because cobalt was troublesome to miners, and at first its value was not known), a metal with the symbol Co, specific gravity 8.5, of a grayish-white color, very brittle, of a fine close grain, compact, but easily reducible to powder. It crystallizes in parallel bundles of needles. It is never found in a pure state, but usually as an oxide, or combined with arsenic or its acid, with sulphur, iron, etc. Its ores are arranged under the following species, viz., *arsenical cobalt*, of a white color, passing to steel gray; its texture is granular, and when heated it exhales the odor of garlic; *gray cobalt*, a compound of cobalt, arsenic, iron and sulphur, of a white color, with a tinge of red; its structure is foliated, and its crystals have a cube for their primitive form; *sulphide of cobalt*, compact and massive in its structure; *oxide of cobalt*, brown or brownish black, generally friable and earthy; *sulphate* and *arsenate of cobalt*, both of a red color, the former soluble in water. The great use of cobalt is to give a permanent blue color to glass and enamels upon metals, porcelain, and earthenwares.

Cobalt, a town of Ontario province, Canada. Pop. (1911) 5629.

Cobalt-blue, a compound of alumina and oxide of cobalt, forming a beautiful and useful pigment.

Cobalt-green, a permanent green pigment prepared by precipitating a mixture of the sulphates of zinc and cobalt with carbonate of sodium and igniting the precipitate.

Coban (kō-vän'), or VERA PAZ, a cathedral city, state of and 90 miles northeast of Guatemala. It is the center of a rich coffee and cane producing region, and a trade in hides, skins, rubber and sarsaparilla. Pop. about 31,000.

Cobbett (kob'bet), WILLIAM, an English writer and politician, was the son of a farmer and publican at Farnham in Surrey, and born there on March 9, 1762. In 1783 he sought his way to London and obtained a situation as copying-clerk to an attorney,

but after nine months he enlisted in the 54th Foot, and shortly after went with the regiment to Nova Scotia. His regular habits and attention to his duties soon brought him promotion, and he was sergeant-major when the regiment four years after returned to England (1791). During his service in the army Cobbett had employed all his spare time in improving his education. He now obtained his discharge, married, and proceeded to America to commence as a political writer. Under the signature of 'Peter Porcupine' he wrote papers and pamphlets of a strongly anti-republican tendency. In June, 1800, he sailed for England, and on his arrival started first the *Porcupine*, a daily paper, which had small success, then the *Weekly Political Register*, which soon acquired a great circulation. *The Register* had started as a Tory paper in support of Pitt, but gradually changed its politics till it became known as the most daring and uncompromising of the government's opponents. Three times heavily fined for libel, Cobbett continued his attacks on the government, in consequence of which he deemed it prudent to retreat to the United States (1817), transmitting his articles regularly, however, for the *Register*. In 1819 he returned to England, and made an unsuccessful attempt to get into Parliament for Coventry. About the same period he commenced a series of papers entitled *Rural Rides*, afterwards reprinted, which contain charming pictures of English country scenery, and are among the best of his productions. In 1824-27 appeared his *History of the Reformation*, in which he vilifies Queen Elizabeth and the leading reformers. On the passing of the Reform Bill in 1832 he was returned as member for Oldham, but was indifferently successful in the house. He died June 18, 1835. Cobbett is also the author of a *Parliamentary History of England from the Conquest to 1803: Advice to Young Men and Women; Village Sermons*, etc. He wrote in a pure and vigorous English style, and his writings contain much useful information, and show a sound judgment wherever the matter did not go beyond his strong practical sense.

Cobden (kob'den), RICHARD, an English politician, the 'apostle of free trade,' born in Sussex in 1804; died at London in 1865. After receiving a very meager education he was taken as an apprentice into a warehouse in London belonging to his uncle, and in this situation he rapidly made up for the defects of his education by his own diligence. In 1830, being left by the failure of his

MUNGOOSE ATTACKING A COBRA

uncle to his own resources, along with some relatives he started a cotton manufactory in Manchester, which in a few years was very successful. His first political writing was a pamphlet on England, Ireland and America, which was followed by another on Russia. In both of these he gave clear utterance to the political views to which he continued through his life rigidly to adhere, advocating non-intervention in the disputes of other nations, and maintaining it to be the only proper object of the foreign policy of England to increase and

Richard Cobden.

strengthen her connections with foreign countries in the way of trade and peaceful intercourse. Having joined the Anti-Corn-Law League, formed in 1838, it was chiefly the extraordinary activity of Cobden, together with Bright and other zealous fellow-workers, which won victory for the movement. In 1841 Cobden entered Parliament as member for Stockport, and after several years of unwearied efforts at last induced Sir Robert Peel, then prime minister, to bring in a bill for the repeal of the corn laws, a measure which became law in 1846. Next year he was chosen member for the W. Riding of York, a constituency which he represented for ten years. His business, once highly prosperous, had suffered while he devoted himself to the agitation, and as a compensation for the loss he had thus sustained a national subscription was made, and a sum of about \$350,000 presented to him. Cobden continued his labors as an advocate of parliamentary reform, economy, and retrenchment, and a policy of non-intervention, in all of which he found a firm and ready ally in Bright, both being strong opponents of the Crimean war. In 1859 he was chosen member for Rochdale, and was offered,

for the second time, a place in the government, but again preferred to keep his independent position. He refused also a baronetcy and several other dignities. His last great work was the commercial treaty which he was the means of bringing about between Britain and France in 1860. During his later years he lived a great deal in retirement.

Cobden Club, an association formed about a year after the death of Mr. Cobden, mainly by the influence of Mr. Bright and Mr. T. B. Potter, for the purpose of encouraging the growth and diffusion of those economical and political principles with which Mr. Cobden's name is associated. The Cobden Club has distributed a vast number of books and pamphlets.

Cobija (kō-bē'hā), or Puerto La Mar, a seaport formerly of Bolivia, now in the territory of Antofagasta, Chile. Its population has fallen off from about 4000 to less than 500.

Coble, or COBBLE (kōb'l), a low, flat-floored boat with a square stern, used in salmon-fishery.

Coblentz (kō'blentz; anciently *Confluentes*, from its situation at the confluence of the Rhine and Moselle), a fortified town of Germany, capital of Rhenish Prussia, finely situated on the left bank of the Rhine in the angle between it and the Moselle, and connected by a pontoon-bridge over the Rhine with the fortress of Ehrenbreitstein, this, along with its other fortifications, rendering it one of the strongest places in Germany, and capable of accommodating 100,000 men. The new part of the town is well built with broad streets and fine squares. The palace of the Elector of Treves is now a Prussian royal residence. Its industries embrace cigars, machinery, champagne-wines, pianos, and it has an important trade in Rhine and Moselle wines. Pop. 53,902.

Cobnut, a large variety of the hazelnut.

Cobourg (kō'burg), a port of Canada, province of Ontario, on Lake Ontario, 69 miles E. by N. of Toronto. It is well built, has sundry manufactures, a good harbor, and an increasing trade. Pop. (1911) 5073.

Cobra di Capello (kō'bra di kap'el-lō; that is, 'snake of the hood'), the Portuguese name of the hooded or spectacled snake *Naja tripudians*, which is found in Southern Asia, a closely allied species (*Naja haje*), also called cobra, or asp, being found in Egypt. It is called spectacled snake from a singular marking on the back of the neck, while its other name

is given from the remarkable manner in which it spreads out its skin on the sides of the neck and head when disturbed or irritated, raising the anterior part of its body so as to appear to stand erect, and expanding its hood. So exceedingly poisonous is its bite that in numerous instances death has followed within a few minutes, and under ordinary circumstances a few hours is the longest term where prompt measures have not been taken. But indeed recovery rarely takes place, though injection of potash into the veins is said to be a remedy. In India thousands of natives lose their lives yearly through cobra bites. Its food consists of small reptiles, birds, frogs, fishes (being an excellent swimmer), etc. Its great enemy is the ichneumon. It is one of the snakes that the snake-charmers perform tricks with.

Coburg (kō'börg), a town of Germany, capital of the duchy of Saxe-Coburg-Gotha, finely situated on the left bank of the Itz, 106 miles E. by N. of Frankfort-on-the-Main. The principal buildings are the palace of the Duke of Saxe-Coburg-Gotha, and on an eminence overhanging the town the ancient castle of the dukes of Coburg, in which are still shown the rooms occupied by Luther during his concealment here, with his bedstead and pulpit. The Duke of Edinburgh has a residence here. Coburg has various manufactures, also extensive breweries. Pop. (1905) 22,489.

Co'burg, a thin fabric of worsted and cotton, or worsted and silk, twilled on one side, for ladies' dresses, intended as a substitute for merino.

Coburg Peninsula, a peninsula on the north coast of Australia in the Northern Territory of Southern Australia.

Cobweb (kōb'web), the web or network spun by spiders to catch their prey.

Coca ((kō'ka), *Erythroxylon Coca*, a South American plant, nat. order Erythroxylæ. The leaf contains a stimulating anæsthetic, and is chewed by the inhabitants of countries on the Pacific side of South America, mixed with finely-powdered chalk. It has effects somewhat similar to those of opium. A small quantity of it enables a person to bear up against fatigue even when receiving less food than usual; and it prevents the difficulty of respiration experienced in climbing high mountains. Used in excess it brings on various disorders, and the desire for it increases so much with indulgence that a confirmed coca-chewer is said never to have been reclaimed. Coca-leaves depend for their

influence on a crystallizable alkaloid called *cocaine* ($C_{16}H_{19}NO_4$), which, besides having effects similar to the leaf, possesses valuable anæsthetic properties, and in recent times has been especially employed to prevent suffering in operations on the eye, having also similar effects when applied to the tongue, larynx, ear, skin, etc.

Cocaine (kō-kān', kō'ka-in). See *Coca*.

Cocceji (kok-sā'yē), HEINRICH FREIHERR VON, a German jurist, born in 1644 at Bremen, studied at Leyden in 1667, and in 1670 in England, at Oxford; was professor of law in various German and Dutch universities. His system of German public law (*Juris Publici Prudentia*) was almost a universal academical text-book. He died in 1719.

Coccinella (kok-si-nel'a), the ladybird genus of insects.

See *Ladybird*.

Coccolite (kok'ō-līt): See *Augite*.

Cocco (ko'kō) Root, the name for the corms of several plants of the genus *Colocasia* (order Araceæ), used as food in tropical America.

Coccosteus (kok-os'te-us), a genus of fossil fishes of the Old Red Sandstone, having small berry-like tubercles studding the plates of their cranial buckler and body. It differs from *Cephalaspis* in having its back and belly both covered with a cuirass.

Cocculus (kok'ū-lus), a genus of East Indian menispermaceous plants, consisting of climbers with heart-shaped leaves and small flowers. The species are generally powerful bitter febrifuges. The fruit of the *Cocculus Indicus* forms a considerable article of commerce, and is sometimes added to malt liquors to give bitterness.

Coccus (kok'us), a genus of insects of the order Hemiptera, family Coccidæ, or scale insects. The males are elongated in their form, have large wings, and are destitute of any obvious means of suction; the females, on the contrary, are of a rounded or oval form, about an eighth of an inch in diameter, have no wings, but possess a beak or sucker, by which they suck up the juices of the plants on which they live. At a certain period of their life the females attach themselves to the plant or tree which they inhabit, and remain thereon immovable during the rest of their existence. In this situation they are impregnated by the male; after which their body increases considerably, in many species losing its original form and as-

suming that of a gall, and, after depositing the eggs, drying up and forming a habitation for the young. Some of these insects are troublesome in gardens, plantations, and hot-houses, while others are of great value. For example, kermes, cochineal, lac-lake, lac-dye, and gum-lac are either the perfect insects dried or the secretions which they form. Kermes consist of the dried females of *Coccus ilicis*, found in great abundance upon a species of oak (*Quercus coccifera*), a native of the Mediterranean basin, and gathered before the eggs are hatched. It was known as a dyestuff in the earliest times, but has partly fallen into disuse since the introduction of cochineal. Cochineal consists of the bodies of the females of the *Coccus cacti*, a native of Mexico, which feeds on various species of cactus, particularly on one called *nopal* (*Opuntia cochinillifera*). See *Cochineal*, *Lac*, and *China Wax*. Spherical bacteria are also called cocci.

Coccyx (kok'siks), in anatomy, an assemblage of small bones constituting the lower extremity of the backbone, consisting of the last four vertebræ, in a rudimentary form, co-ossified. It is triangular in shape, and convexo-concave. It is the homologue in man of the tail in animals.

Cochabamba (kōch-a-bam'ba), a town in the interior of Bolivia, capital of the province of Cochabamba, situated in a fertile valley 8435 feet above the level of the sea, with a good trade and considerable manufactures. Pop. 21,886.—The province has an area of 26,810 sq. miles; pop. 328,163.

Cochin (kō'chin), a seaport of Hindustan, Malabar district, Madras Presidency, on a small island; a picturesque place with many quaint old Dutch buildings. Its harbor, although sometimes inaccessible during the s. w. monsoon, is the best on this coast. Its trade, however, has for some years been declining. Cochin was one of the first places in India visited by Europeans. In 1502 Vasco da Gama established a factory, and soon after Albuquerque built a fort; he also died here in 1524. In 1663 the Dutch took the place, in 1795 the British. Pop. (1901) 19,274. See also next article.

Cochin, a small native state of India, on the s. w. or Malabar coast, connected with the Presidency of Madras, intersected by numerous rapid streams descending from the Western Ghauts. and having several shallow lakes or backwaters along the coast. Chief products: timber and rice. The rajah has to pay

\$100,000 annually to the Indian government. Area, 1361 sq. miles; pop. (1901), 815,200, of whom about 150,000 were Christians, partly belonging to the Jacobite and Nestorian churches established here in early times. The capital is Ernakolam. Formerly Cochin was the capital, a town on the Travancore estuary, within half a mile of the British town of Cochin (which see).

Cochin-China (kō'chin-chī'na), a country forming part of the peninsula of Southeastern Asia, and generally regarded as comprising the whole of Anam (which see) and Lower or French Cochin-China. The latter belonged to Anam till, in 1863, a portion of it was finally ceded to France after a war occasioned by the persecution of French missionaries; other portions were gradually acquired, the territory obtained covering 23,082 sq. miles, with a population of 2,968,529. It is now organized in departments, prefectures, subprefectures and cantons. The northern and eastern parts are hilly, but the rest of the territory consists almost entirely of well-watered, low, alluvial land. In the low and wet grounds much rice is grown. In the more elevated districts are grown tobacco, sugar-cane, maize, indigo and betel. Among the other products are tea, gums, cocoanut oil, silk, spices. The climate is hot and unsuited for Europeans. Industrial arts are as yet limited among the natives. But they excel in the use of wood, of which their temples, pagodas, and tombs are built, being ornamented with elaborate carving. They live in villages adjacent to the rivers, which form almost the only means of communication. The only roads at present existing are those connecting Saïgon, the capital, with the principal towns; a railway of 42 miles connects Saïgon and Mytho. The principal export is rice, mainly to China; cotton and silk are also exported. The export and import trade is mostly carried on by British vessels, while the local trade is chiefly in the hands of the Chinese. The French number only several hundreds. The majority of the inhabitants are Anamese. In their monosyllabic language, their religious tendencies towards Buddhism or the system of Confucius and in their social customs they much resemble the Chinese. —UPPER COCHIN-CHINA is the name sometimes given to the narrow strip of land on the east coast of Anam between the mountains and the sea extending from Tonquin on the north to Champa on the south, or from about 18° to 11° N. See *Anam*.

Cochin-China, a term applied to a variety of the domestic fowl, imported from Cochin-China. It is a large ungainly bird, valuable chiefly owing to its fecundity, eggs being laid even during the winter.

Cochineal (koch'in-ēl), a dyestuff consisting of the dried bodies of the females of a species of insect, the *Coccus cacti* (see *Coccus*), a native of the warmer parts of America, particularly Mexico, and found living on a species of cactus called the cochineal-fig. The insects are softly brushed off, and killed by being placed in ovens or dried in the sun, having then the appearance of small berries or seeds. A pound of cochineal contains about 70,000 of them. The finest cochineal is prepared in Mexico, where it was first discovered, and Guatemala; but Peru, Brazil, Algiers, the East and West Indies, and the Canary Islands have also entered into this industry with more or less success. Cochineal produces crimson and scarlet colors, and is used in making carmine and lake.

Cochineal-fig, a name given to *Opuntia cochinillifera* and two other species of cacti, natives of Mexico and the West Indies, the plants on which the cochineal insect lives. See *Cochineal*.

Cochlea (kok'lē-a), an important part of the internal ear, so called from its shape, which resembles that of a snail-shell.

Cochlearia (kok-lē-ā'ri-a), a genus of cruciferous plants, including the horseradish and common scurvy-grass.

Cock. See *Fowl*.

Cockade (ko-kād'), a plume of cock's feathers, with which the Croats in the service of the French in the seventeenth century adorned their caps. A bow of colored ribbons was adopted for the cockade in France, and during the French revolution the tricolored cockade—red, white and blue—became the national distinction. National cockades are now to be found over all Europe.

Cockatoo (kok-a-tö'), the name of a number of climbing birds belonging to the family of the parrots, or Psittacidae, or regarded as forming a distinct family Plectolophidae or Cacatuidae. They have a large, hard bill; a crest, capable of being raised and lowered at the will of the bird, commonly white, but sometimes yellow, red, or blue; a tail somewhat longer than that of the parrot, and square or rounded; long wings; and, for the most part, a white plumage,

though in some genera the plumage is dark. They are found especially in the Eastern Archipelago and Australia. They live on roots, fruits, grain, insects, etc., and usually congregate in flocks. These

Leadbeater's Cockatoo (*Plectolophus Leadbeateri*).

birds are easily tamed, and when domesticated become very familiar. The sulphur-crested cockatoo (*Plectolophus galerita*) of Australia and Tasmania is a favorite cage-bird. So are the white-crested cockatoo (*P. albus*) and Leadbeater's cockatoo (*P. Leadbeateri*), the pink cockatoo, whose crest is barred with crimson, yellow and white. The Kaka of New Zealand (*Nestor meridionalis*) belongs to this family.

Cockatrice (kok'a-tris), a fabulous monster anciently believed to be hatched from a cock's egg. It is often simply another name for the basilisk. See *Basilisk*.

Cockburn (ko'burn), HENRY DUNDAS, LORD, a distinguished Scottish judge, was the son of Archibald Cockburn, one of the barons of the Court of Exchequer, and born in 1779. He studied for the Scottish bar, and was admitted a member of the Faculty of Advocates in 1800. He attached himself to the Liberal party, rose to eminence in his profession, and became, under Earl Grey, solicitor-general, for Scotland. He was a good example of the blending of wit, law and learning common enough at the old Scots bar. He died in 1854. His *Memorials of His Time* (published in 1856) is an invaluable record of the social history of Scotland. Not less interesting is his life of his friend Lord Jeffrey, published in 1854.

Cockchafer (kok'chā-fer), a species of lamellicorn beetle, genus *Melolontha*, remarkable for the length of its life in the worm or larva state, as well as for the injury it does

Cocker

to vegetation after it has attained its perfect condition. The common cockchafer (*Melolontha vulgaris*) is hatched from an egg which the parent deposits in a hole about 6 inches deep, which she digs for the purpose. At the end of about three months the insect emerges as a small grub or maggot, and feeds on the roots of vegetables in the vicinity with great voracity. When full grown it is over an inch in length; it makes its way underground with ease, and commits great devastation on grass and corn. In the fourth year the insect appears as a perfect coleopterous insect—a beetle over an inch long, of a black color, with a whitish down. It usually emerges from the ground about the beginning of May, from which circumstance the English name *May bug* or *beetle* has been given it. In its perfect state it is very destructive to the leaves of various trees.

Cocker (kok'er), a dog of the spaniel kind, allied to the Blenheim dog, used for raising woodcocks and snipes from their haunts in woods and marshes.

Cocker, EDWARD, an English engraver and teacher of writing and arithmetic in the seventeenth century, born about 1631. His work, *Cocker's Arithmetic*, upon which many succeeding treatises were framed, was published in 1677.

Cockermouth (kok'er-mouth), a town of Cumberland, England, at the mouth of the Cocker, 24 miles S. W. of Carlisle, now giving name to a parl. div. of the county. It has an old ruined castle, supposed to have been built soon after the conquest. Thread and tweeds are manufactured; and there are coal-mines in the neighborhood. Cockermouth was the birthplace of the poet Wordsworth. Pop. 1911. 5203.

Cockfighting, an amusement practised in various countries, first perhaps among the Greeks and Romans. At Athens there were annual cockfights, and among the Romans quails and partridges were also used for this purpose. It was long a favorite sport with the British, and the training, dieting, and breeding of cocks for fighting was the subject of many treatises. It is a favorite sport in the island of Cuba, in the Philippine Islands, and some other localities.

Cock-Lane Ghost, an impudent hoax by which many Londoners were deceived in 1762, consisting in certain knockings heard in the house of a Mr. Parsons, in Cock Lane, Stockwell. Dr. Johnson was among those who believed in the super-

Cockroach

natural character of the manifestations; but it was found out that the knockings were produced by a girl employed by Parsons.

Cockle (kok'l), a name for the bivalve molluscs of the genus *Cardium*, especially *Cardium edule*, common on the sandy shores of the ocean, much used as food. The general characteristics are: shells nearly equilateral and equivalvular; hinge with two small teeth, one on each side near the beak, and two larger remote lateral teeth, one on each side; prominent ribs running from the hinge to the edge of the valve.

Cockle. See *Corn-cockle*.

Cockle Stove, a stove in which the fire-chamber is surrounded by air-currents, which, after being heated sufficiently, are admitted into the apartments to be warmed.

Cockney (kok'ni), a nickname for a London citizen, as to the origin of which there has been much dispute. The word is often, but not always, employed slightly as implying a peculiar limitation of taste or judgment. The epithet is as old at least as the time of Henry II.

Cock of the Plains (*Centrocercus urophasianus*), a large North American species of grouse, inhabiting desolate plains in the western States.

Cock of the Rock (*Rupicola aurantia*), a South American bird of a rich orange color with a beautiful crest, belonging to the manakin family.

Cock of the Woods. See *Capercaillie*.

Cockpit (kok'pit), in a man-of-war, the place where the wounded are dressed in battle or at other times, and where medicines are kept.

Cockroach (kok'röch; *Blatta*), a genus of insects belonging to

Common Cockroach, male and female.

the Orthopterous or straight-winged order, characterized by an oval, elongated,

depressed body, which is smooth on its superior surface. They have parchment-like elytra, and in the female the wings are imperfectly developed. They are nocturnal in their habits, exceedingly agile, and devour provisions of all kinds. Cockroaches, like other orthopterous insects, do not undergo a complete metamorphosis; the larvæ and nymphs resemble the perfect insects, except that they have merely rudiments of wings. The eggs are carried below the abdomen of the female for seven or eight days till she finally attaches them to some solid body by means of a gummy fluid. The species are numerous. The *Blatta orientālis*, or common kitchen cockroach (in England commonly called *black beetle*), was originally brought from Asia to Europe, and thence to America, where it is now common. The *Blatta Americāna*, or American cockroach, grows to be 2 or 3 inches long, including the antennæ. Throughout the southern portion of North America and in the West India Islands this species invades houses and is very troublesome.

Cockscomb (kōks'kōm), a name given to flowering plants of various genera. By gardeners it is properly confined to *Celosia cristata*; but it is popularly applied to *Pedicularis* or lousewort, *Rhinanthus crista-galli* or yellow rattle, as also to *Erythrina crista-galli*.

Cock's-foot, COCK'S-FOOT GRASS, a perennial pasture-grass (*Dactylis glomerata*) of a coarse, harsh, wiry texture, but capable of growing on barren, sandy places, and yielding a valuable food for sheep very early in the spring. It is a native of Europe generally, also of Asia and America. The name has been given to it because of the resemblance of its three-branched panicle to the foot of a fowl.

Cockspur Thorn, the *Cratægus crus-galli*, a North American shrub which has long been cultivated in Britain as a shrubby ornament. There are several varieties, which are admired for their snowy blossoms in May.

Cockswain (kok'swān; colloquially cok'sn), the officer who manages and steers a boat and has the command of the boat's crew.

Cocles. See *Horatius*.

Cocoa (kō'kō), a name given to the ground kernels of the cacao or chocolate tree prepared to be made into a beverage. See *Cacao*.

Cocoanut (kō'kō-nut), or COCONUT, a woody fruit of an oval

shape, from 3 or 4 to 6 or 8 inches in length, covered with a fibrous husk, and lined internally with a white, firm, and fleshy kernel. The tree (*Cocos nucifera*) which produces the cocoanut is a palm, from 40 to 60 feet high. The trunk is straight and naked, and surmounted by a crown of feather-like leaves. The nuts hang from the summit of the tree in clusters of a dozen or more together. The external rind of the nuts has a smooth surface. This encloses an extremely fibrous substance, of considerable thickness, which immediately surrounds the nut. The latter has a thick and hard shell, with three black scars at one end, through one of which the embryo of the future tree pushes its way. This scar may be pierced with a pin; the others are as hard as the rest of the shell. The kernel incloses a considerable quantity of sweet and watery liquid, of a whitish color, which has the name of *milk*. This palm is a native of Africa, the East and West Indies, and South America, and is now grown almost everywhere in tropical countries. Food, clothing, and the means of shelter and protection are all afforded by the cocoanut tree. The kernels are used as food in various modes of dressing, and yield on pressure an oil which is largely imported into various countries. (See *Cocoanut Oil*.) When dried before the oil is expressed they are known as *copra*. The fibrous coat of the nut is made into the well-known cocoanut matting; the coarse yarn obtained from it is called *coir*, which is also used for cordage. The hard shell of the nut is polished and made into a cup or other domestic utensil. The fronds are wrought into baskets, brooms, mats, sacks, and many other useful articles; the trunks are made into boats or furnish timber for the construction of houses. By boring the tree a white, sweetish liquid called *toddy* exudes from the wound, and yields by distillation one of the varieties of the spirit called *arack*. A kind of sugar called *jaggery* is also obtained from the juice by inspissation.

Cocoanut Beetle (*Batocœra rubus*), a large beetle of the family Longicornes, the larvæ of which inhabit cocoanut trees and eat into the stems.

Cocoanut Oil, a solid vegetable fat, largely used in candle-making and in the manufacture of soaps and pomatum. This fat is got by pressure from the albumen of the cocoanut kernel, and is as white as lard, and somewhat firmer. Manila and Ceylon export large quantities of this useful oil.

Cocoa-plum, the fruit of *Chrysobalanus Icaco* family Rosaceæ, which is eaten in the West Indies. It is about the size of a plum, with a sweet and pleasant though somewhat austere pulp.

Cocoon (ko-kön'), the name given to the web or ball spun by caterpillars before passing into the chrysalis state. The valuable product thus obtained from the silkworm is well known.

Cocos (kok'os) ISLANDS. See *Keeling Islands*.

crustaceous and molluscous animals abundant in such situations, and thus attract fleets of fishermen. Few members of the animal creation are more universally serviceable to man than the codfish. Both in its fresh state and when salted and dried it is a substantial and wholesome article of diet; the tongue is considered a delicacy, and the swimming-bladders or *sounds*, besides being highly nutritious, supply, if rightly prepared, an isinglass equal to the best Russian. The oil extracted by heat and pressure from the

Codfish (*Gadus morrhua*).

Cocum (kō'kum) BUTTER, COCUM-OIL, a pale, greenish-yellow solid oil obtained from the seeds of *Garcinia purpurea*, a tree of the same genus with mangosteen, used in India to adulterate ghee or fluid butter. It is sometimes mixed with bear's-grease in pomatums.

Cocytus (kō-kī'tus; from Greek *kō-kuein*, to lament), a river of ancient Epirus. Also, among the ancient Greeks, one of the rivers of the lower world.

Cod (*Gadus*), a genus of well-known soft-finned fishes, of the same family as the haddock, whiting, ling, etc., distinguished by the following characters:—A smooth, oblong, or fusiform body, covered with small, soft scales; ventrals attached beneath the throat; gills large, seven-rayed, and opening laterally; a small beard at the tip of the lower jaw; generally two or three dorsal fins, one or two anal, and one distinct caudal fin. The most interesting species is the *common* or *bank cod* (*G. morrhua*). Though found plentifully on the coasts of other northern regions, as Britain, Scandinavia and Iceland, a stretch of sea near the coast of Newfoundland is the favorite annual resort of countless multitudes of cod, which visit the *Grand Banks* to feed upon the

liver is of great medicinal value, and contributes considerably to the high economic value of the cod. The cod is enormously prolific, the ovaries of each female containing more than 9,000,000 of eggs; but the numbers are kept down by a host of enemies. The spawning season, on the banks of Newfoundland begins about the month of March and terminates in June; but the regular period of fishing does not commence before April on account of the storms, ice and fogs. The season lasts till the end of June, when the cod commence their migrations. The average length of the common cod is about 2½ or 3 feet, and the weight between 30 and 50 lbs., though sometimes cod are caught weighing three times this. The color is a yellowish gray on the back, spotted with yellow and brown; the belly white or red, with golden spots in young individuals. It is caught by lines and hooks.

Cod, CAPE. See *Cape Cod*.

Coda (kō'da), in music, an adjunct to the close of a composition, for the purpose of enforcing the final character of the movement.

Code (kōd), in jurisprudence, is a name given to a systematic collection or digest of laws. The following

are the chief codes which have affected the laws of Europe: The Theodosian Code (*Codex Theodosianus*), a compilation executed in 429 by a commission on behalf of Theodosius the Younger, and promulgated as law throughout the eastern and western empires. The Justinian Code (*Codex Justinianus*), a code compiled in 528, in the reign of the Emperor Justinian, incorporating all the codes, rescripts, edicts previously in use (see *Civil Laws*). The *Code Napoléon*, or *Code Civil*, undertaken under the consulship of Napoleon by the most eminent jurists of France, and published in 1804. The *Code Napoléon* (under which name other four codes of commercial law, criminal law, penal law, and law of procedure, drawn up at the same time, are often included) was a code in the strictest sense, that is, not merely a collection of laws, but a complete and exclusive statement of the law, virtually amounting to a recasting of the laws of the country. In this country one of the most complete codes which has been enacted is that of Louisiana, made after its cession to the United States and superseded by a new one in 1824. In the way of revision of existing law an admirable example is that of the Revised Statutes of the State of New York, which started the inauguration of a widespread reform in jurisprudence, extending to England, India, Australia, and most of the American States. The principal reforms were the abolition of the distinction between legal and equitable practice, and the simplification of procedure in general. Congress has a committee engaged in a codification of United States laws.

Codeine (kō-dē'in; Gr. *kōdeia*, a poppy-head), a crystallizable alkaloid obtained from opium, in which it exists to the amount of 6 or 8 oz. per 100 lbs. It is used to produce sleep and to soothe irritable coughs; and is sometimes the chief remedy in diabetes; dose, $\frac{1}{4}$ grain and upwards to 1 grain. It is a poison in excessive doses.

Codetta (ko-det'a), in music, a short passage which connects one section with another.

Codex (kō'deks), an ancient written book; an important ancient MS., as one of the Scriptures or of some classical writer. A collection of laws was also called *codex*, as *Codex Theodosianus*, *Codex Justinianus* (see *Code*).—*Codex Alexandrinus*. See *Alexandrian Version*.—*Codex Sinaiticus*, a very ancient and valuable manuscript of the Greek Septuagint version of the Old Testament (including the Apocrypha).

the whole of the New Testament, the Epistle of Barnabas, and a part of the Shepherd of Hermas, discovered in the monastery of St. Catherine, on Mount Sinai, by Tischendorf, in 1859, and now at St. Petersburg. It is written on parchment in four columns, in early uncial characters, and bears every mark of being of great antiquity, perhaps even older than the Vatican MS. It is assigned by Tischendorf to the fourth century. The Old Testament is defective, but the New Testament is complete, not a word being wanting, which is the more remarkable inasmuch as it is the only manuscript of the New Testament which is complete, being from this and its early life of the highest value. It has been published in facsimile.—*Codex Vaticanus*, an ancient Greek MS. of the Old and New Testaments, so called from being contained in the Vatican Library at Rome. It is written on thin vellum, in small uncial characters. The manuscript is assigned to the fourth century, and until the discovery of the Sinaitic was regarded as the best manuscript of the Old and New Testaments. The greater part of Genesis in the Old Testament, and the whole of the pastoral epistles and the Revelation in the New Testament are wanting. A facsimile of it was published in 1868.

Codex Medicus, a publication, of a periodical character, containing a list of therapeutic agents, methods of manufacture, etc. There are several now published, some relating to a specialty in medical science and art. The name of the French pharmacopœia.

Codicil (kod'i-sil), in law, a supplement to a will, to be considered as a part of it, either for the purpose of explaining or altering, or of adding to or subtracting from the testator's former disposition. A codicil may not only be written on the same paper or affixed to or folded up with the will, but may be written on a different paper and deposited in a different place. In general the law relating to codicils is the same as that relating to wills, and the same proofs of genuineness must be furnished by signature, and attestation by witnesses. A man may make as many codicils as he pleases, and, if not contradictory, all are equally valid.

Codilla (ko-dil'a), the coarsest part of hemp, which is sorted out by itself; also, the coarsest part of flax.

Codlin (kod'lin), CODLING, a name for several varieties of kitchen apple with large or medium-sized fruit.

Codling-moth, a small moth, the larva of which feeds on the codling apple.

Cod Liver Oil, an oil extracted from the livers of different kinds of cod—the *Gadus morrhua* (common cod) being specified in the pharmacopœia—and allied species. The finest and palest oil is got from fresh and carefully-cleaned liver the oil being extracted either in the cold or by a gentle heat. The darker kinds are got at a higher temperature, and often from the livers in a putrefying state. Only the pale oils are used in medicine; the dark oils are too rank and acrid, and they are only used in dressing leather. Cod-liver oil is a somewhat complex substance, but the main ingredients appear to be olein and margarin. Acetic, butyric and phosphoric acids, iodine, bromine and phosphorus are also present, and to these the oil may owe some of its odor. This oil is now a recognized agent in the treatment of rheumatism, gout, scrofula and especially of consumption, being taken internally and containing a quantity of easily-assimilated nutritive matter.

Codogno (ko-dō'nyō), a town in North Italy, province of Milan, in a fertile district between the Po and Adda, with a large trade in Parmesan cheese. Pop. 10,033.

Codrington (kod'ring-tun), SIR EDWARD, an English admiral, born in Gloucestershire 1770. He entered the navy in 1783, obtained a gold medal for his services at the battle of Trafalgar, and was afterwards actively employed both in the Peninsular and second American wars. In 1827 he commanded the united squadron that overthrew the Turkish fleet in the battle of Navarino. From 1832 to 1837 he was member of Parliament for Devonport. He died in London in 1851.

Codrus (kō'drus), according to Greek legend the last king of Athens. Having learned that the enemies of his country would be victorious, according to the declaration of an oracle, if they did not kill the Athenian king, he voluntarily entered their camp, provoked a quarrel and was slain. The grateful Athenians abolished the royal dignity, substituting that of archon, esteeming no one worthy to be the successor of Codrus.

Coefficient (kō-e-fi'shent), in algebra, a multiplier of a quantity. Thus in the expression $3ax$ we should understand as the coefficient of x , $3a$, and as the coefficient of ax , 3.

Coehorn (kō'horn), MENNO, BARON VAN, a Dutch military

engineer, born 1641; died 1704. Having entered the Dutch military service he distinguished himself by his invention of small mortars, called after him *coehorns*, but more by his eminence as a master of the art of fortification, whence he has been called the Dutch Vauban. He fortified almost all the strong places in Holland.

Coel. See *Aligarh*.

Cœlenterata (sē-len-tēr-ā'ta; Gr. *koilos*, hollow, *enteron*, an intestine), a subkingdom of animals, including those whose alimentary canal communicates freely with the general cavity of the body ('the somatic cavity'). The body is essentially composed of two layers or membranes, an outer layer or 'ectoderm' and an inner layer or 'endoderm.' No circulatory organs exist, and in most there are no traces of a nervous system. Peculiar stinging organs or 'thread-cells' are usually, if not always, present, and in most cases there is a radiate or starlike arrangement of the organs, which is especially perceptible in the tentacles, which are in most instances placed round the mouth. Distinct reproductive organs exist in all, but multiplication also takes place by fission and budding. The Cœlenterata are divided into two great sections, the Actinozoa and the Hydrozoa, and include the medusas, corals, sea-anemones, etc. They are nearly all marine animals.

Cœlestin (sē-les'tin). See *Celestine*.

Cœle-Syria (sē'le sir'i-a; that is, 'Hollow Syria'), the large valley lying between the Lebanon and Anti-Lebanon mountain ranges in Syria. Near its center are the ruins of Baalbek.

Cœnobite (sēn'a-bit). See *Anchorite*.

Coethen, or KOTHEN (keu'ten), a town of Germany, formerly capital of the duchy of Anhalt-Coethen, now forming part of the duchy of Anhalt, 80 miles s. w. Berlin. The ducal castle is now occupied as a gymnasium and otherwise. Beet-root sugar is a staple article of manufacture and commerce. Pop. 22,083.

Coffee (kof'ē), is the seed of an evergreen shrub which is cultivated in hot climates, and is a native of Abyssinia and of Arabia. This shrub (*Coffea Arabica*) is from 15 to 20 feet in height, and belongs to the Rubiaceæ. The leaves are green, glossy on the upper surface, and the flowers are white and sweet-scented. The fruit is of an oval shape, about the size of a cherry, and of

a dark-red color when ripe. Each of these contains two cells, and each cell a single seed, which is the coffee as we see it before it undergoes the process of

Coffee Plant (*Coffea Arabica*).

roasting. Great attention is paid to the culture of coffee in Arabia. The trees are raised from seed sown in nurseries and afterwards planted out in moist and shady situations, on sloping grounds or at the foot of mountains. Care is taken to conduct little rills of water to their roots, which at certain seasons require to be kept constantly moist. When the fruit has attained its maturity cloths are placed under the trees, and upon these the laborers shake it down. They afterwards spread the berries on mats, and expose them to the sun to dry. The husk is then broken off by large and heavy rollers of wood or iron. When the coffee has been thus cleared of its husk it is again dried in the sun, and, finally winnowed with a large fan, for the purpose of clearing it from the pieces of husks with which it is intermingled. A pound of coffee is generally more than the produce of one tree; but a tree in great vigor will produce 3 or 4 lbs. The best coffee is imported from Mocha, on the Red Sea. It is packed in large bales, each containing a number of smaller bales, and when good appears fresh and of a greenish-olive color. Next in quality to the Mocha coffee may perhaps be ranked that of Southern India and that of Ceylon, which is strong and well flavored. Java and Central America also produce large quantities of excellent coffee, and Mexico, in one district a crop which ranks with Mocha. Brazilian coffee, though produced much more abundantly than any other, varies very greatly in quality, though its best does not take rank with some of those mentioned. Liberian coffee is esteemed by many. Of the best Mocha coffee grown in the province of Yemen little or none is said to reach the Western markets. Arabia itself, Syria and Egypt consume fully two-thirds, and the remainder is exclusively absorbed by Turkish or Armenian buyers. The only other coffee which holds a first rank in Eastern opinion is that of Abyssinia. Then comes

the produce of India, which those accustomed to the Yemenite variety are said to consider hardly drinkable. American coffee holds in the judgment of all Orientals the very last rank. The Dutch were the first to extend the cultivation of coffee beyond the countries to which it is native. About 1690 some coffee seeds were brought to Java, where they were planted and produced fruit. By 1718 the Dutch planters of Surinam had entered on the cultivation of coffee with success, and ten years after it was introduced from that colony by the English into Jamaica, and by the French into Martinique. It was not till 1774 that the planters of Brazil, now the greatest producers of coffee in the world, commenced its cultivation. Coffee as an article of diet is of but comparatively recent introduction. To the Greeks and Romans it was wholly unknown. From Arabia it passed to Egypt and Turkey, whence it was introduced into England by a Turkey merchant named Edwards in 1652, whose Greek servant, named Pasqua, first opened a coffee-house in London. In 1671 an Armenian named Pascal set up a coffee-house in Paris. In Great Britain much less is drunk than on the continent of Europe or in the United States and Canada, tea being the British national beverage, while coffee is the favorite American beverage. The excellence of coffee depends in a great measure on the skill and attention exercised in roasting it. If it be too little roasted it is devoid of flavor, and if too much it becomes acrid, and has a disagreeable, burned taste. Coffee is used in the form either of an infusion or decoction, of which the former is decidedly preferable, both as regards flavor and strength. The fine aromatic oil which produces the flavor and strength of coffee is lost by boiling. The best mode is to pour boiling water through the coffee in a biggin or strainer, which is found to extract nearly all the strength; or to pour boiling water upon it and set it upon the fire, not to exceed ten minutes. Prepared in either way it is fine and strong. In the Asiatic mode of preparing coffee the beans are pounded, not ground; and though the Turks and Arabs boil the coffee, they boil each cup by itself and only for a moment, so that the effect is much the same as that of infusion. In Arabia some additional spicing, generally of saffron or some aromatic seeds, is considered indispensable; but neither Turks nor Arabians use sugar or cream with coffee. Since the middle of the eighteenth century both the culture and consumption of coffee have continually increased. The prin-

cipal supply of the United States is derived from Brazil, which furnishes 75 per cent. of the whole import. It is known in commerce as 'Rio.' Coffee acts as a nervous stimulant, a property which it owes mainly to the alkaloid caffeine (which see). It thus promotes cheerfulness and removes languor, and also aids digestion; but in some constitutions it induces sleeplessness headache, and nervous tremblings, particularly after over-indulgence.

Coffee-bug, *Lecanium coffeæ*, an insect of the Coccus family, very destructive in coffee plantations.

Coffer (koff'èr), in architecture, a sunk panel or compartment in a ceiling of an ornamental character, and usually enriched with moldings, and having a rose, pomegranate, etc., in the center.

Coffer-dam, a temporary wooden enclosure formed in water in order to obtain a firm and dry foundation for bridges, piers, etc. It is usually formed of two or more rows of piles driven close together, with clay packed in between the rows.

Coffeyville, a city in Montgomery Co., Kansas, on the Verdigris River, 19 miles S. of Independence. It has lumber and flour mills, brick and iron works, etc. Pop. 12,687.

Coffin (kof'in), the chest or box in which a dead body is enclosed for burial. Coffins were used by the ancients mostly to receive the bodies of persons of distinction. Among the Romans it was formerly the almost universal custom to consume the bodies with fire, and deposit the ashes in urns. In Egypt coffins seem to have been used in ancient times universally. They were of stone, earthenware, glass, wood, etc. A sort of ancient coffin is known as a *sarcophagus*. Coffins among Christians were introduced with the custom of burying. (See *Burial*.) Modern coffins are usually made of wood.

Coffin, SIR ISAAC, admiral, born in Boston, Massachusetts, in 1759; died in 1839; entered the British navy when 14 years old under Sir John Montague, becoming commander in 1782. During the Revolution he remained loyal to the mother country. He founded the famous Coffin School, Nantucket, Mass., 'to be a perpetual tree of knowledge in this sterile spot.' In January, 1899, the foundation was valued at \$50,000, and it was decided to allow an emergency fund to accumulate.

Cognac (kon-yák), a town in France, dep. Charente, and near the river Charente, 22 miles W. Angoulême,

pleasantly situated on a hill, crowned by the remains of an old castle. It is famous for the brandy which bears its name, and which is exported to all parts of the world. Pop. 18,389.

Cognates (kog'nāts), relations by the mother's side. See *Ag-nates*.

Cognizance (kog'ni-zans, kon'izans), in heraldry, a crest, coat of arms, or similar badge of distinction appertaining to a person or family; in law, judicial or formal notice or acknowledgment of a fact.

Cognomen (kog-nō'men), the hereditary family name (such as Cicero, Cato, etc.) among the ancient Romans. The other two names generally borne by every well-born Roman, viz. the *prænomen* and *nomen* (as in Marcus Tullius Cicero), served to denote the individual (Marcus), and the *gens* (Tullius) or clan to which his family belonged.

Cognovit (kog-nō'vit), in law, is a written confession given by the defendant that the action of the plaintiff is just, or that he has no available defense.

Cog-wheel, a wheel with cogs or teets.

Coheir, COHEIRESS (kō-ar', kō-ār'es), a joint heir or heiress, one who succeeds to an inheritance that is to be divided among two or more.

Coheleth. See *Ecclesiastes*.

Cohesion (kō-hē'shun), the force by which the various particles of the same material are kept in contact, forming one continuous mass. Its action is seen in a solid mass of matter, the parts of which cohere with a certain force which resists any mechanical action that would tend to separate them. In different bodies it is exerted with different degrees of strength, and it is measured by the force necessary to pull them asunder. Cohesion acts at insensible distances, or between particles in contact, and is thus distinguished from the attraction of gravitation. It unites particles into a single mass, and that without producing any change of properties, and is thus distinguished from *adhesion*, which takes place between different masses or substances; and from chemical attraction or affinity, which unites particles of a different kind together and produces a new substance. Hardness, softness, tenacity, elasticity, malleability and ductility are to be considered as modifications of cohesion. The great antagonist of cohesion is heat.

Cohesion Figures, a class of figures produced by the attraction of liquids for other liquids or solids with which they are in contact, and divided into *surface*, *submersion*, *breath*, and *electric cohesion figures*. Thus a drop of an independent liquid, as oil or alcohol, will spread itself out on the surface of water always in a definite figure, but differing with each fluid dropped on the water. *Breath figures* are produced by putting a drop of the liquid to be examined on a slip of mica, and breathing on it, when each fluid takes a distinct characteristic shape. *Electric cohesion figures* are produced by electrifying drops of various liquids placed on a plate of glass.

Cohobation (kō-hō-bā'shun), the repeated distillation of the same liquid from the same materials.

Cohoes (ko-hōz'), a city of Albany County, New York, on the west bank of the Hudson River, at the mouth of the Mohawk, with great water-power derived from the Mohawk falls. There are large cotton and other mills. Pop. 24,709.

Cohort (kō'hort). See *Legion*.

Cohune Oil (ko-hön'), a product of the kernel of *Attalēa funifēra*, a palm-tree found in S. America. It resembles cocoanut oil, but is more oleaginous, burning, it is said, twice as long.

Coimbatore (ko-im-ba-tōr'), a town of Hindustan, Madras Presidency, capital of district to which it gives name, situated on the river Noyil, with wide streets, abundant water, and a healthy climate. Pop. 53,080.—The district has an area of 7860 square miles. It is fertile, producing sugar, cotton, rice, and tobacco; and well watered by several rivers.

Coimbra (ko-im'brá), a city of Portugal, province of Beira, partly on a hill, partly on low ground, on the river Mondego, 115 miles N. N. E. Lisbon. It is a bishop's see, and contains an old and a new cathedral, a hospital, and a university, which is the only one in the kingdom. The city has also a college of arts. Manufactures: linen, pottery, articles of horn. The environs produce oil, wine, lemons and oranges of excellent quantity. Pop. 18,144.

Coin (ko-ēn'), a town of Spain, Andalusia, province of and 21 miles w. of Malaga, on a gentle declivity facing the north. In the neighborhood are quarries of marble. Pop. 12,326.

Coinage (koin-aj), COINS. See *Coining*, *Money*, *Numismatics*, *Currency*.

Coining (koin'ing), the art of converting pieces of metal into current coins for the purposes of commerce, usually performed in a government establishment called a *mint*. It is one of the prerogatives of the supreme power in all states, and counterfeiting or otherwise tampering with the coin is severely punished. In the United States the Bureau of the Mint was established as a division of the Treasury Department in 1873. It has charge of the coinage for the government and makes assays of precious metals for private owners. The process of converting the precious metals into coins is an interesting one. The rolling machines through which the ingots are passed are adjustable, the space between the rollers being governed by the operator. About two hundred ingots are run through per hour on each pair of rollers. When the rolling is completed the strip of metal is about six feet long. As it is impossible to roll perfectly true it is necessary to 'draw' these strips, after being softened by annealing. The drawing benches resemble long tables, with a bench on either side, at one end of which is an iron box secured to the table. In this are fastened two perpendicular steel cylinders. These are at the same distance apart that the thickness of the strip is required to be. It is drawn between the cylinders, which reduces the whole to an equal thickness. These strips are now taken to the cutting machines, each of which will cut 225 planchets per minute. The press used consists of a vertical steel punch. From a strip worth \$1100 about \$800 of planchets will be cut. These are then removed to the adjusting room, where they are adjusted. After inspection they are weighed on very accurate scales. If a planchet is too heavy, but near the weight, it is filed off at the edges; if too heavy for filing, it is thrown aside with the light ones to be remelted. The planchets, after being adjusted, are taken to the coining and milling rooms, and are passed through the milling machine. They are fed to this machine through an upright tube, and as they descend are caught upon the edge of a revolving wheel and carried about a quarter of a revolution, during which the edge is compressed and forced up. By this apparatus 560 half-dimes can be milled in a minute: for large pieces the average is 120. The massive but delicate coining presses coin from 80 to 100 pieces

ELECTRIC COINING PRESS, U. S. MINT, PHILADELPHIA

Woman feeding planchets to brass tubes from the bottom of which they are carried to the steel dies which form the coins.

Coir

a minute. These presses do their work in a perfect manner. After being stamped the coins are taken to the coiner's room. The light and heavy coins are kept separate in coining, and when delivered to the treasurer they are mixed in such proportions as to give him full weight in every delivery. By law, the deviation from the standard weight, in delivering to him, must not exceed three pennyweights in one thousand double eagles. The coinage of the United States mints since the organization of the government has amounted to nearly 6,000,000,000 pieces, valued at over \$4,000,000,000.

Coir (koir), cocoanut fiber, fiber from the husk of the nut, from which are manufactured matting, bagging, ropes and cables. Coir cordage, from lasting well in salt-water, as also from its lightness, strength, and elasticity, is preferable in many respects to ropes of hemp. Mats and matting are now largely made of coir, which is also used in coarse brushes, for stuffing purposes, etc.

Coire (kwär), or CHUR (hör), the capital of the Swiss canton of the Grisons, on the rivers Plessur and Rhine. It is irregularly built, and possesses many houses in the ancient style of architecture. Not far from Coire the Rhine begins to be navigable for small vessels. Pop. 11,718.

Coix, a genus of grasses. See *Job's Tears*.

Coke (kōk), the carbonaceous residue of coal which has been heated in an oven or retort, or in any way by which little air is admitted, until all volatile matter has been expelled. The simplest method of producing coke is based on the preparation of wood charcoal, the coal being arranged in heaps which are smothered with clay or coal-dust, and then set on fire, sufficient air being admitted to keep the mass at the proper temperature for decomposition without wasting the coke. After the volatile portions are got rid of, the heap is allowed to cool, or is extinguished with water, and the coke is then ready. Methods of heating the coal in close or open ovens until the gaseous and fluid products are driven off are also commonly used. Gas-coke is that which remains in the retorts after the gas has been given off. Good oven-coke has an iron-gray color, submetallic luster, is hard, and somewhat vesicular; but gas-coke has rather a slagged and cindery look, and is more porous. Coke contains about 90 per cent. of carbon, and is used where a strong heat is

Coke

wanted without smoke and flame, and it is accordingly largely consumed in drying malt and similar purposes. It used to be burned regularly in locomotive-engines, but raw coal is now commonly substituted. The largest quantities are consumed in smelting operations.

Coke, SIR EDWARD, an eminent English lawyer, was the son of a Norfolkshire gentleman and was born in 1551. After finishing his education at Cambridge he went to London, and entered the Inner Temple. His reputation and practice rapidly increased. He was chosen recorder of the cities of Norwich and of Coventry, knight of the shire of his county, and, in spite of the rivalry of Bacon, attorney-general. As such he conducted the prosecutions for the crown in all great state cases, notably those

Sir Edward Coke.

of Essex and Sir Walter Raleigh, which Coke conducted with great rancour and asperity. In 1613 he became Chief-justice of the Court of King's Bench; but his rough temper and staunch support of constitutional liberties brought him into disfavor with King James and his courtiers. In 1621 he was committed to the Tower, and soon after expelled from the privy-council. In 1628 he was chosen member for Buckinghamshire, and greatly distinguished himself by his vindication of the rights of the Commons, and by the proposing and framing the famous Petition of Rights. This was the last of his public acts. On the dissolution of the Parliament he retired to his seat in Buckinghamshire, where he died, September, 1634. His principal works are *Reports*, from 1600 to 1615; *Institutes of the Laws of England*, in four parts; the first of which contains the celebrated commentary on *Littleton's Tenures*

(‘Coke upon Littleton’); *A Treatise of Bail and Mainprise; Complete Copyholder*.

Col (French, *neck*), an elevated mountain pass between two higher summits. The name is used principally in those parts of the Alps where French is commonly spoken.

Cola. See *Kola*.

Colander (kol’an-der), a vessel with a bottom perforated with little holes for straining liquors.

Colberg (kol’berg), or KOLBERG, a Prussian fortified seaport in Pomerania, on the river Persante, 1 mile from the sea, with a good shipping trade and well-frequented baths. Formerly a regular fortress, it has often been held against strong armies. Pop. 20,200.

Colbert (kol-bār), JEAN BAPTISTE, a celebrated French minister of finances, born at Rheims in 1619. After serving in various subordinate departments Colbert was made intendant, and at length comptroller-general of the finances. His task was a difficult one. He found disorder and corruption everywhere. The state was the prey of the farmers-general, and at the same time maintained only by their aid. The people were obliged to pay 90,000,000 livres of taxes, of which the king received scarcely 35,000,000, the revenues were anticipated for two years, and the treasury empty. Colbert at once commanded a system of stringent reforms, abolishing useless offices, retracting burdensome privileges, diminishing salaries, and distributing and collecting the taxes by improved methods till he had reduced them almost to one-half. To his talents, activity, and enlarged views the development and rapid progress of industry and commerce in France were largely due. He constructed the Canal of Languedoc; declared Marseilles and Dunkirk free ports; granted premiums on goods exported and imported; regulated the tolls; established insurance offices; made uniform laws for the regulation of commerce, labored to render the pursuit of it well esteemed, and invited the nobility to engage in it. The French colonies in Canada, Martinique, etc., showed new signs of life; new colonies were established in Cayenne and Madagascar, and to support these Colbert created a considerable naval force. Under the protection and in the house of the minister (1663) the Academy of Inscriptions was founded. Three years afterwards he founded the Academy of Sciences, and in 1671 the Academy of Architecture. He enlarged the Royal Library and the

Garden of Plants and built an observatory in which he employed Huyghens and Cassini. He began the measurement of the meridian in France, and sent men of science to Cayenne. After having conferred the greatest benefits on his country he died in 1683, out of favor with the king and the people.

Colburn (kol’burn), ZERAH, ‘the calculating boy,’ born in Vermont, in 1804; died in 1840. Before his sixth year he began to manifest wonderful powers of arithmetical computation, and in public exhibitions astounded learned mathematicians by the rapidity and accuracy of his processes, but the faculty left him when he grew up. After acting as a teacher and itinerant preacher, he was latterly professor of languages at Norwich University, Vermont. Others besides him have possessed this remarkable faculty, which indicates powers in the brain little understood.

Colchester (kol’ches-ter), a borough and river-port of England, County Essex, 51 miles N. E. by E. London, mostly situate on the summit and sides of an eminence rising from the river Colne; well built and amply supplied with water. It has a good coasting trade and employs a great number of small craft in the oyster-fishery. It is a place of high antiquity, there being no place in the kingdom where so great a quantity and variety of Roman remains have been found as here. It is supposed to be the *Camalodunum* of the Romans, and was called *Colne Ceaster*, from its situation on the Colne, by the Anglo-Saxons. Pop. (1911) 43,463.

Colchester, a town (township) of Vermont. The town includes Colchester and Winooski villages. Pop. 6450.

Colchicine (kol’chi-sin), an alkaloid obtained from colchicum, used for the alleviation or cure of gout and rheumatism. It acts as an emetic, diuretic, and cholagogue cathartic, and in large doses as a narcotico-acrid poison.

Colchicum (kol’chi-kum), a genus of plants, order Melanthaceæ, allied to the lilies. The *Colchicum autumnale*, or meadow saffron, is a bulbous-rooted, stemless, perennial plant, which grows in various parts of Europe. From a small corm or bulb buried about 6 inches deep, and covered with a brittle brown skin, there rises in the early autumn a tuft of flowers having much the appearance of crocuses, flesh-colored, white, or even variegated. They soon wither, and the plant disappears till the succeeding spring, when some broad

leaves are thrown up by each corm along with a triangular oblong seed-vessel. The plant is acrid and poisonous, and cattle are injured by eating it, but it yields a medicine valuable in gout and rheumatism. See *Colchicine*.

Colchis (kol'kis), the ancient name of a region at the eastern extremity of the Black Sea, resting on the Caucasus, famous in Greek mythology as the destination of the Argonauts, and the native country of Medea.

Colcothar (kol'kō-thar), an impure brownish-red oxide of iron, which forms a durable color, but is most used in polishing glass and metals.

Cold, the absence of sensible heat, especially such a want of heat as causes some discomfort or uneasiness. The temperature in which man and other animals live is generally below the natural heat of the body, but this is easily kept up in ordinary cases by means of the food taken in and digested. A high degree of cold, however, produces bodily depression, and is a frequent source of disease, or even of death. For the ailment called *a cold*, see *Catarrh*.

Cold-blooded Animals, a term applied to those animals, such as reptiles, the temperature of whose blood ranges from the freezing-point, or near it, to 90° Fahr., in accordance with that of the surrounding medium.

Cold Cream, is a white, semisolid, unctuous ointment for dermal application to soothe irritated, excoriated, roughened, or abraded skin and softening hard, harsh, or dry skin. It is composed of spermaceti, expressed oil of olives, white wax, oil of rose, sodium borate and water. The first three ingredients are melted together carefully by the aid of gentle heat, the oil of rose and water are made into rosewater, and with the aid of the sodium borate the two liquids are mixed together and stirred until cold. With it may be incorporated medicinal and coloring substances.

Cold Storage, a method of preserving perishable food materials by keeping them in a low temperature until needed for consumption. This is done by the aid of freezing machines similar in principle to those used in making artificial ice and by which the temperature can be reduced to and kept at the requisite degree. Cold storage warehouses are in use in all our principal cities, in which fruits and meats are kept for long periods, while the unsold material of one

market day can be kept unspoiled for another. In transporting perishable material by ship or car the same process is used. Meats thus kept need to be used quickly after being thawed out, since they spoil more rapidly than in their original state, and in some cases they prove injurious from unseen putrefactive changes.

Coldstream, a village of Scotland in Berwickshire, on the Tweed. When General Monk quartered here in 1659-60 he raised an infantry regiment, which is called *the Coldstream Guards*.

Coldwater (kold'wa-ter), a city, capital of Branch Co., Michigan, 55 miles w. of Adrian. Has manufactures of leather, furniture, cement, etc., and a State school for orphans. Pop. 5945.

Cold-water Cure. See *Hydrotherapy*.

Cold Wave, the name given in the United States to spells of severe depression of temperature, as that of hot wave is given to the opposite condition. Cold waves are due to persistent winds from the northwest, which spread over the country the chill conditions of the great plains and mountain ranges of Western Canada. They usually continue for three or more days, and while bringing severe freezing weather, are attended with clear skies.

Cole, THOMAS, a landscape painter. He was born in England in 1801, but was taken quite young to America, where he died in 1848. Among his works are the *Voyage of Life*, *Course of Empire*, *Hunter's Return*, *Views in the White Mountains*, etc.

Colebrooke (kōl'brūk), HENRY THOMAS, an Oriental scholar, born at London in 1765; died there in 1837. He became professor of Sanskrit at Calcutta and director of the Bengal Asiatic Society. His translations from the Sanskrit and his essays on Hindu subjects are valuable contributions to Oriental scholarship.

Colenso (kō-len'sō), JOHN WILLIAM, Bishop of Natal, born in 1814; educated at Cambridge; assistant-master at Harrow, till 1842; appointed in 1853 first Bishop of Natal, South Africa. He published treatises on algebra and arithmetic which have been popular text-books in schools and colleges. His work on the Pentateuch and Book of Joshua, which called in question the historical accuracy of these books, involved the author in a conflict with his ecclesiastical superiors, and he was deposed by the Bishop of

Cape Town. But the decisions of the privy-council and Court of Chancery were in his favor, and he continued to officiate as bishop. He died in 1883.

Coleoptera (kō-lē-op'te-ra; Greek *koleos*, a sheath, and *pteron*, a wing), an order of insects, commonly known as *beetles*. They have

One of the Coleoptera
(*Cicindela campestris*)

a, Head. b, Thorax. c, Abdomen. d d, Elytra. e e, Wings. f f, Antennæ.

four wings, of which the two superior (*elytra*) are not suited to flight, but form a covering and protection to the two inferior, and are of a hard and horny or parchment-like nature. The inferior wings, when not in use, are folded

transversely under the superior. The coleoptera undergo a perfect metamorphosis. The larva generally resembles a short, thick worm with six legs and a scaly head and mouth.

Coleraine (kōl-rān'), a town of Ireland, county of Londonderry, on both sides of the river Bann, 47 miles N. W. of Belfast. Its trade, chiefly in linen, agricultural produce and provisions, is considerable. There are extensive salmon fisheries. Pop. about 7000.

Coleridge (kōl'rij), HARTLEY, eldest son of Samuel Coleridge, was born at Clevedon, near Bristol, on September 19, 1796. In 1815 he went to Oxford, where, three years after, he took his degree with high honors. Unfortunately he had contracted a propensity for drinking, and was deprived, on account of his intemperate habits, of a fellowship he had obtained from Oriel College. He then left Oxford and took up his residence at London, but later he resided in the lake country, where he occupied himself with literary composition. In verse, his sonnets, and in prose his biographies (*Worthies of Yorkshire and Lancashire* and *Life of Massinger*) are the most important of his works. He died January 6, 1849. His life was written by his brother, DERWENT, born 1800; died 1883. In 1841-64 he was the principal of St. Mark's College, Chelsea, in 1864-80 rector of Hanwell.

Coleridge, SAMUEL TAYLOR, a celebrated English poet and philosopher, was born October 21, 1772, at Ottery St. Mary, Devonshire, of which place his father was vicar. Sent to school at Christ's Church Hospital, to which he had obtained a representation,

young Coleridge took little interest in the ordinary sports of childhood, and was noted for a dreamy, abstracted manner, though he made considerable progress in classical studies, and was known even at that early age as a devourer of metaphysical and theological works. From Christ's Church he went with a scholarship to Jesus College, Cambridge, where he remained for two years, but without achieving much distinction. At this time, too, his ultra-radical and rationalistic opinions made the idea of academic preferment hopeless, and perhaps it was partly to escape the difficulties and perplexities gathering about his future that Coleridge suddenly quitted Cambridge and enlisted in the 15th Dragoons. Rescued by his friends from this position, he took up his residence at Bristol with two congenial spirits, Robert Southey, who had just been obliged to quit Oxford for his Unitarian opinions, and Lovell, a young Quaker. The three conceived a project of emigrating to America, and establishing a pantisocracy, as they termed it, or community in which all should be equal, on the banks of the Susquehanna. This scheme, however, never became anything more than a theory, and was finally disposed of when, in 1785, the three friends married three sisters, the Misses Fricket of Bristol. Coleridge about this time started a periodical, the *Watchman*, which did not live beyond the ninth number. In 1796 he took a cottage at Nether Stowey, in Somersetshire, where soothed and supported by the companionship of Wordsworth, who came to reside at Allfoxden, he wrote much of his best poetry, in particular the *Ancient Mariner*, and the first part of *Christabel*. While residing at Nether Stowey he used to officiate in a Unitarian chapel at Taunton, and in 1798 received an invitation to take the charge of a congregation of this denomination at Shrewsbury, where, however, he did nothing further than preach the probation sermon. An annuity bestowed on him by some friends (the Wedgewoods) furnished him with the means of making a tour to Germany, where he studied at the University of Göttingen. In 1800 he returned to England and took up his residence beside Southey at Keswick, while Wordsworth lived at Grasmere in the same neighborhood. From this fact, and a certain common vein in their poetry, arose the epithet of 'Lake School' applied to their works. About 1804 Coleridge went to Malta to reëstablish his health, seriously impaired by opium-eating. In 1806 he returned to

England, and after ten years of somewhat desultory literary work as lecturer, contributor to periodicals, etc., Coleridge in a sort took refuge from the world in the house of his friend Mr. Gillman at Highgate, London. Here he passed the rest of his days, holding weekly conversaziones in which he poured himself forth in eloquent monologues, being by general consent one of the most wonderful talkers of the time. His views on religious and political subjects had now become mainly orthodox and conservative, and a great work on the *Logos*, which should reconcile reason and faith, was one of the dreams of his later years. But Coleridge had long been incapable of concentrating his energies on anything, and of the many years he spent in the leisure and quietness of Highgate nothing remains but the *Table Talk* and the fragmentary notes and criticism gathered together, and edited by his nephew, valuable enough of their kind, but less than might have been expected of Coleridge. He died July 25, 1834. The dreamy and transcendental character of Coleridge's poetry eminently exhibits the man. In his best moments he has a fine sublimity of thought and expression not surpassed by Milton; but he is often turgid and verbose. As a critic, especially of Shakespeare, Coleridge's work is of the highest rank, combining a comprehensive grasp of large critical principles and a singularly subtle insight into details. Coleridge's poetical works include *The Ancient Mariner*, *Christabel* (incomplete), *Remorse*, a tragedy, *Kubla Khan*, a translation of Schiller's *Wallenstein*, etc.; his prose works, *Biographia Literaria*, *The Friend*, *The Statesman's Manual*, *Aids to Reflection*, *On the Constitution of Church and State*, etc. Posthumously were published specimens of his *Table Talk*, *Literary Remains*, etc.

Coleseed (kōl'sēd), a name for a variety of cabbage (*Brassica Napus*) and its seed, which is made into oil-cake for feeding cattle.

Colet (kol'et), JOHN, an eminent divine, dean of St. Paul's, and founder of St. Paul's School, London, born in 1466; died in 1519.

Colfax (kol'faks). SCHUYLER, statesman, born at New York in 1823; died in 1885. About 1845 he established at South Bend, Indiana, a weekly paper, the *St. Joseph Valley Register*, an organ of the Whig party, which he edited for many years. He was elected to Congress in 1854 and in 1863 was made Speaker of the House, being afterwards twice reelected to the same position. In

1868 he received the Republican nomination for the vice-presidency and was elected. Vice-President with President Grant. He served one term in this office.

Colewort. See *Cabbage*.

Colibri (kol'i-bri), a name for various species of humming-bird.

Colic (kol'ik; from *colon*, a portion of the large intestine), a painful disorder of the bowels, usually of a spasmodic character, unaccompanied by diarrhœa, and presenting itself in various forms. When the pain is accompanied with a vomiting of bile or with obstinate costiveness it is called a *bilious colic*; if with windy distension, it takes the name of *flatulent* or *windy colic*; if with heat and inflammation, it takes the name of *inflammatory colic*, or *enteritis*. There are many other varieties of this complaint, some of which are peculiar to certain occupations or districts, as the *painters' colic* (see *Lead Poisoning*), the *Devonshire colic*.

Coligny (kol-in-yē), GASPARD DE, a renowned Huguenot chief of France, born in 1517, distinguished himself under Francis I and Henry II, who made him in 1552 Admiral of France. After the death of Henry II Coligny took the Protestant side in the religious strifes of the time, and became the head of the Huguenot party. He was generally unfortunate in the battles he fought, but speedily repaired his defeats by prudence and good management. When peace was made Coligny was received with apparent favor at court. But this was only a blind; and on the night of St. Bartholomew's (Aug. 24, 1572) Coligny was basely slaughtered, and his corpse given up to the outrages of the mob.

Colima (kō-lē'mā), a town of Mexico, capital of the state of same name, situated in a fertile plain encircled by hills above, which rises the lofty volcano of Colima. Pop. 20,698. On the coast about 30 miles s. s. w. of the city is the port, Puerto de Colima, or Manzanillo. The state has an area of 2272 miles; pop. 65,115.

Coliseum (kol-i-sē'um). See *Colosseum*.

Coll, an island on the west coast of Scotland, off Mull, County Argyre, one of the Hebrides, about 12 miles long and from 3 to 3½ miles broad. A great portion of it is moor, incapable of cultivation; but there are some tracts of light and sandy soil which are tolerably productive. Gaelic is universally spoken. Pop. 643.

Collation (kol-lā'shun), a comparison of one copy or thing

of a like kind with another, especially manuscripts and editions of books.—In canon law, the presentation of a clergyman to a benefice by a bishop who has the right of patronage. In such a case the combination of the act of presentation and institution constitute *collation*.

Collect (kol'lect), a term applied to certain short prayers in the liturgies of various churches. Some of the collects of the English Church are taken from the old Roman Missal, and are supposed to have been written by St. Jerome. Others are still more ancient; while a few have been added after the Reformation. There is a collect for every Sunday in the year, and a corresponding epistle and gospel.

College (kol'ej; Latin, *collegium*), in a general sense, a body or society of persons invested with certain powers and rights, performing certain duties, or engaged in some common employment or pursuit. In Great Britain and America some societies of physicians are called colleges. So, also, there are colleges of surgeons, a college of heralds, etc. The most familiar application of the term college, however, is to a society of persons engaged in the pursuits of literature, including the professors, lecturers, or other officers, and the students. As applied to an educational institution the name is somewhat loosely used. The higher class of colleges are those in which the students engage in study for the purpose of taking a degree in arts, medicine, or other subjects, and are connected with, or have more or less the character of universities. The early history of these institutions is somewhat obscure; the probability is that they were originally founded in the various universities of the middle ages, with similar objects and from the same charitable motives. Hotels or boarding-houses were provided (principally by the religious orders, for the benefit of those of their own fraternity), in which the scholars lived under a certain superintendence, and the endowment of these hostels by charitable persons for the support of poor scholars completed the foundation of a college. Out of this has developed the modern English college as seen at Oxford and Cambridge, where each college, though a member or component part of the university, is a separate establishment whose fellows, tutors, and students live together under a particular head, called *master*, *principal*, *warden*, etc., of the college. In the United States and Germany the college is practically one with the university, the latter body performing all the func-

tions alike, of teaching, examining, degree-conferring, etc.

Collie (kol'i), a variety of dog especially common in Scotland, though now popular among American dog-fanciers, and from its intelligence of much use to shepherds. It is of medium size and varies much in coloring, black and white being common, and black with tan-colored legs, muzzle, etc., being highly esteemed. The head is somewhat fox-shaped, the ears erect, but with drooping points, the tail rather long, bushy and with a pronounced curl.

Collier (kol'yer), JEREMY, an English divine and political writer, born in 1650. He was educated at Cambridge, and having entered into orders obtained the rectory of Ampton in Suffolk in 1659. He was a zealous opponent of the Revolution of 1688, and was repeatedly imprisoned for his political writings. He is chiefly remembered now for his *Short View of the Immorality and Profaneness of the English Stage*—a work of considerable merit which is said to have effected a decided reform in the sentiments and language of the theater. He died in 1726.

Collier, JOHN PAYNE, an English Shakesperian critic, born in London in 1789; died in 1883. He became known as a critical essayist on old English dramatic literature, and was editor of the new edition of *Dodsley's Old Plays* in 1825. In 1831 his best work, the *History of English Dramatic Poetry*, was published. In 1842-44 he published an annotated edition of Shakespeare in 8 vols.; in 1844 *Shakespeare's Library*. Subsequently he published several editions of Shakespeare, and an excellent edition of Spenser (5 vols., 1862). He made himself notorious by claiming that he possessed a copy of the 2d Folio Shakespeare, 1632, with many marginal emendations and annotations written in the middle of the seventeenth century, though, as was discovered, these notes were fabrications, probably by himself.

Collimation (kol-i-mā'shun), LINE OF, in an astronomical

instrument, such as a telescope or transit instrument, the straight line which passes through the center of the object-glass and intersects at right angles a system of spider-threads placed at

Collimation.

the focus of the eyepiece. The proper adjustment of the line of collimation of the instrument is necessary to accurate observation of the time at which movements of the heavenly bodies take place.

Collimators (kol-i-mā'tors), two small, subsidiary telescopes used for collimating astronomical instruments; that is, for adjusting the line of collimation, and for determining the collimation error.

Collin'. See *Kollin*.

Collingwood (kol'ing-wud), CUTHBERT, LORD, an English naval commander, born at Newcastle-upon-Tyne in 1750. He entered the royal navy in 1761, and took part as flag-captain on board the *Barfleur* in Lord Howe's victory of June 1, 1794, commanded the *Excellent* during the battle off Cape St. Vincent on the 14th of February in that year, and was made rear-admiral of the white in 1799. But his most distinguished service was at Trafalgar, where his skill and resolution drew warm praise from Nelson. On the latter's death Collingwood as senior officer took command of the fleet, and gave proof of his judgment and nautical skill in his dispositions for the preservation of the captured vessels. For his services here he was elevated to the rank of baron. He died, while cruising off Minorca in the *Ville de Paris*, on March 7, 1810. His memoirs and correspondence have been published.

Collingwood, a manufacturing town and port of Ontario, Canada, on Georgian Bay, 95 miles N. N. W. of Toronto. Pop. 7077.

Collins (kol'ins), ANTHONY, an English deistical writer, born in 1676; died in 1729. He was a friend of Locke, who described him as a man who had 'an estate in the country, a library in town, and friends everywhere.' His chief works are *Discourse of Free Thinking*; *Philosophical Inquiry Concerning Human Liberty*; *Discourse on the Grounds and Reasons of the Christian Religion*; *Literal Scheme of Prophecy Considered*.

Collins, WILLIAM, an English poet, was born in 1721 at Chichester. While studying at Oxford he wrote his *Oriental Eclogues*, the moderate success of which encouraged him to try a literary career in London. In 1746 he published his *Odes*, containing pieces which now rank among the finest lyrics in the language. Disappointed with the reception his poems met with, and unstrung by irregular habits and excitement, he fell into a nervous melancholy,

from which he never quite recovered. He died in 1759.

Collins, WILLIAM, an English painter, noted for his landscapes and domestic scenes, born in London in 1787, and elected Royal Academician in 1820. He died in 1847.

Collins, WILLIAM WILKIE, son of the preceding, born in London in 1824. He was educated for the bar, but turned aside to literature, in which he especially distinguished himself as a novelist of great dramatic and constructive power. Among his best known works are *Antonina* (1850), *Basil* (1852), *The Woman in White* (1860), *The Moonstone* (1868), *The New Magdalen* (1873), *The Evil Genius* (1886), etc. He died in 1889.

Collinsville, a city in Madison Co., Illinois, 12 miles E. N. E. of St. Louis. It has zinc works, coal mines, brickworks, etc. Pop. 7478.

Collision (kol-izh'un), in maritime affairs, the shock of two ships coming into violent contact, whereby one or both may suffer more or less injury. Collision may happen without blame being imputable to either party, as where the loss is occasioned by a storm, in which case the misfortune must be borne by the party on whom it happens to light. Or a collision may arise where both parties are to blame—where there has been a want of due diligence or skill on both sides; in which case neither party has an action against the other. Thirdly, it may happen by the misconduct of the suffering party only and then the rule is that the sufferer must bear his own burden. Finally it may have been the fault of the ship which ran the other down, and in that case the injured party would be entitled to an entire compensation from the other. Strict laws and regulations to prevent collisions have been laid down, which contain rules concerning lights, and sailing and steering rules. By the rule of the road at sea, if two sailing ships are approaching each other end on, or nearly so, the helms of both must be put to port, so that each may pass on the port side of the other; in crossing so as to involve risk of collision the sailing ship with the wind on the port side shall keep out of the way of the ship with the wind on the starboard, but if they have both the wind on the same side the ship which is to windward shall keep out of the way of the one that has it to leeward. If a steamship and a sailing ship are approaching, so as to involve collision the former must keep out of the way of the latter.

If one vessel is overtaking another she must keep out of the way of the last-named vessel.

Collodion (ko-lō'di-on), a substance prepared by dissolving pyroxiline (guncotton) in ether, or in a mixture of ether and alcohol, which forms a useful substitute for adhesive plaster in the case of slight wounds. When the fluid solution is applied to the cut or wound it immediately dries into a semitransparent, tenacious film, which adheres firmly to the part, and under it the wound or abrasion heals without inflammation. In a slightly modified form collodion is also employed as the basis of a photographic process called the *collodion process*. See *Photography*.

Colloids (kol'oids), non-crystallizable substances such as gelatine, gum, etc. See *Dialysis*.

Collot d'Herbois (kol-ō dār-bwä), JEAN MARIE, a leader in the French revolution, born in 1750. On the outbreak of the revolution he soon became prominent as a leader of the Mountain or extreme party. After filling several missions he was sent by Robespierre along with Fouché to Lyons in 1793, with almost unlimited powers, and was guilty of the most flagrant enormities. Returning to Paris he became a determined opponent of Robespierre, and being chosen president of the Convention (July 19, 1794), contributed to his fall. A few weeks after he was banished to Cayenne, where he died in 1796.

Collusion (ko-lū'shun), in law, a secret agreement between opposing litigants to obtain a particular judicial decision on a preconcerted statement of facts, whether true or false, to the injury of a third party. Collusion, when proved to exist, nullifies the judgment obtained through it.

Collyrium (kol-lir'i-um), an eye-salve or eyewash, a remedy for disorders of the eyes.

Colman (kōl'man), GEORGE, an English dramatic writer and theatrical manager, born at Florence in 1733. Among his pieces are *Polly Honeycombe*, *The Jealous Wife*, and *The Clandestine Marriage*, which was written in conjunction with Garrick. From 1777 he conducted the little theater in the Haymarket, London, till paralysis rendered him helpless in 1790. He died in 1794.

Colman, GEORGE ('the Younger'), son of the preceding, was born in London in 1762; died there in 1836. He was entered as a student in the Temple, but soon left legal studies for

dramatic and general literature. He assisted his father as director of the Haymarket Theater, and succeeded him as its patentee. Most of his dramas were well received, and some of them still keep the stage, as *John Bull*, *The Heir-at-law*, *Poor Gentleman* and *Love Laughs at Locksmiths*.

Colmar, or KOLMAR (kōl'mär), a city of Germany, in Upper Alsace, formerly in the French department of Haut Rhin, 39 miles s. s. w. Strasburg. It has manufactures of printed goods, calicoes, silks, etc., besides cotton-mills, tanneries, etc. It was united to France in 1697 by the Peace of Ryswick, and surrendered to Germany by the Treaty of Versailles, February 26, 1871. Pop. (1905) 41,582.

Colne (kōln), a town of England, in the county of and 31 miles s. e. of the town of Lancaster. The chief manufactures are cotton and woolen goods. Pop. 25,693.

Colocasia (kol-ō-kā'si-a), a genus of plants, nat. order Araceæ, the leaves and tubers of which are acrid. The latter contain much starchy matter, and they are used as food in the south of Europe after the acrid matter is separated by washing or boiling. *C. esculenta*, *C. macrorhiza*, and others furnish the taro of the Pacific islands. See *Cocco Root*.

Colocynth (kol'ō-sinth), the fruit of *Cucumis* (or *Citrullus Colocynthus*), a species of cucumber, the dried and powdered pulp of which is the colocynth of the shops. It is used in medicine as an aperient. The essential principle, which is of an extremely bitter nature, is called *colocynthin*.

Colocza. See *Kaloeza*.

Cologne (ko-lōn'), German, *Köln* (keuln), a city of Rhenish Prussia, on the left bank of the Rhine, forming, in connection with Deutz, which serves as a tête-du-pont on the opposite side of the river (across which is a bridge of boats and an iron railway and general traffic bridge), a fortress of the first rank. The old fortifications, dating from the middle ages, are being, or have been recently, swept away, new works being constructed in accordance with the principles of modern fortification. The town itself has been improved and extended, and streets once dark and filthy have been opened up or otherwise improved, but Cologne is still irregularly built and largely in the antique style. There are many fine old buildings as well as excellent modern ones; the churches in particular are interesting.

Cologne

The most important edifice of all is the cathedral, begun in 1248, one of the finest and largest Gothic structures in Europe. It was completed only in the nineteenth century, there being expended on it in 1828-84 over \$5,000,000. It is in the form of a cross; its entire length is about 445 feet; breadth, 200 feet; height to ridge of roof, 202 feet; height of the two western towers, between which is a grand portal, 520 feet, being thus among the highest edifices in the

Treaty of Lunéville in 1801, and restored to Prussia in 1814. Pop. (1910) 516,167.

Cologne Earth, a kind of ocher, of a deep-brown color, transparent, and durable in water-color painting. It is an earthly variety of lignite or partially fossilized wood.

Cologne Water, *AQUA COLOGNIENSIS*, *EAU DE COLOGNE*, *SPIRITUS ODORATUS*, is a yellowish liquid perfume composed of spirits of wine, oil of lavender, oil of rosemary,

Cologne, showing Cathedral and Church of St. Martin

world. The council-house, museum, and Gross St. Martin Church with its imposing tower should also be mentioned. The manufactures embrace sugar, tobacco, glue, carpets, leather, machinery, chemicals, pianos, and the celebrated *eau de Cologne*. The trade by river and railway is very great.—Cologne is of pre-Christian origin, and was originally called *Oppidum Ubiorum*, being the chief town of the Ubii, a German nation. The Romans made it a colony A.D. 51, and called it *Colonia Agrippina* (whence the name *Cologne*). It was annexed to the German Empire in 870, and became one of the most powerful and wealthy cities of the Hanseatic League, but latterly it declined. In 1792 it ceased to be a free city. It was taken by the French in 1794, ceded to them by the

essence of lemon, and oil of cinnamon.

Cologne Yellow, a pigment consisting of 2 parts yellow chromate of lead, 1 of sulphate of lead, and 7 of sulphate of lime or gypsum. It is prepared by precipitating a mixture of nitrate of lead and nitrate of lime with sulphate of soda and chromate of potash.

Colombia (*kō-lōm'bē-ä*), *REPUBLIC OF*, formerly called New Granada, a republic of South America, consisting of eight departments or states, named as follows: Antioquia, Bolivar, Boyacá, Cauca, Cundinamarca, Magdalena, Santandear and Tolima. The population in 1904 was 3,916,000. The chief towns are Bogotá, capital; Medellin, and Cartagena. The territory of the republic formerly included the Isthmus of

Panamá, but Panamá declared its independence in November, 1903, and there is much disputed boundary territory in the inland regions towards the south and east. The area is estimated officially at 504,773 square miles, but many consider this much too large. According to surface conformation, the country may be divided into the elevated region of the Cordilleras in the west, and that of the low-lying lands in the east. The former occupies the greater portion of the country, and presents a richly-diversified surface, being formed chiefly of three mountain chains which stretch north and south in a nearly parallel direction, inclosing between them the valleys of the rivers Cauca and Magdalena. These, the two great navigable rivers of the country, flow northwards, joining their waters about 120 miles from their embouchure in the Caribbean Sea. In the central ridge is the culminating point of Colombia, the volcano of Tolima, 18,315 feet high. The low lands of the east form a transitional region between the plains of North Brazil and the llanos of the Orinoco region, the drainage being carried to the Amazon and Orinoco. The chief coast indentations are small and dangerously exposed bays. The climate is naturally as varied as the surface of the country, but over a great part of the republic it is very hot. At Cartagena, on the Caribbean Sea, and on the Pacific coast, yellow fever is endemic at some places; while on the elevated country, as the Plain of Bogotá, 8000 feet above the sea, the climate is perfectly salubrious, and the temperature seems that of eternal spring. The flora is rich and luxuriant. A great apart of the country is still covered with virgin forests, which yield excellent building-wood. Peruvian bark, cacoutchouc, vanilla, etc. The fauna include the jaguar, puma, tapir, armadillo, sloth, various species of deer, and the gigantic condor. The mineral wealth is various and abundant, though still imperfectly explored. It comprises coal, gold, silver (both now largely worked by foreign companies), emeralds and salt. Industry is at a very low stage. Maize, bananas, and plantains are the chief articles of food. Tobacco and coffee are cultivated and exported. Sugar-cane is also grown. Manufactures can scarcely be said to exist. Panamá hats, mats, and coarse cotton cloths being almost the only articles that can be mentioned in this class. Chief ports are Barranquilla, Cartagena and Santa Marta, none important. The possession of the Isthmus of Panamá and the small line of

railway (48 miles long) which runs between Panamá on the Pacific and Colon on the Atlantic once gave Colombia considerable commercial importance, but this has ceased with the secession of Panamá and its conversion into an independent republic. (See *Panamá*.)

The foreign trade is chiefly with Britain and the United States. The exports are mainly precious metals, hides, coffee, tobacco, etc.; the imports, manufactured goods. The exports and imports together are usually about \$20,000,000 to \$25,000,000. There are several short lines of railway. The money standard is the *peso* or dollar, nominal value \$1.—By the constitution, as amended in 1886, the executive power is vested in a president elected for six years, the legislative power in a congress of two houses—the Senate and the House of Representatives. The former consists of 24 representatives, 3 from each department, and 6 members nominated by the president; the latter of representatives elected for four years, one for every 50,000 inhabitants. The revenue is generally under the expenditure and the finances are in an unsatisfactory state. New Granada was discovered by Alonso de Ojeda in 1499; it was visited by Columbus on his fourth voyage, in 1502. The first Spanish settlement was made in 1510 at Santa Maria in the Gulf of Darien, and the whole country was formed into a province under a captain-general in 1547. New Granada declared its independence of Spain in 1811, and after eleven years of warfare succeeded with the help of Venezuela in effecting its liberation. Both states then united with Ecuador, also freed from the Spanish domination, to form the first republic of Colombia; but internal dissensions arising, the three states again separated in 1831, forming three independent republics, which have had a very troubled existence. In 1861 the states forming New Granada by agreement adopted a new constitution, the republic henceforth to be called the United States of Colombia. This title was retained till, by the new constitution adopted in 1886, the state ceased to be a federal republic and became a unitary republic with the name of Republic of Colombia. In 1903 the department of Panamá seceded.

Colombo (kō-lōm'bō), a seaport town, the capital of Ceylon, on the southwest coast, and about 70 miles west by south of Kandy, with which it is connected by railway. It is a pleasant town with an extensive fort, within which are some of the best houses, and which occupies a projecting point of

land. On the north side of the fort, on the margin of the sea, is the Pettah or Black Town, inhabited chiefly by Singhalese, while in the environs are most of the houses occupied by the English. The public buildings comprise the government offices, government house, supreme court, museum, etc. Through the construction of a breakwater and other works there is now excellent harbor accommodation, and numerous vessels call here. Pop. 158,228.

Colombo. See *Calumba*.

Colon (kō'lun; Gr. *kōlon*), the middle portion of the large intestine, or that which lies between the cæcum and the rectum or terminal portion. In man it is about 4½ feet long, and forms a series of pouches in which the digested food is for a time detained. It is itself believed to have some digestive power.

Co'lon, a punctuation mark, consisting of two dots, one above the other, thus : used to mark a pause in the sense that sometimes might also be indicated by a full stop. It also indicates a connection between a preceding phrase and a following one, and is used preceding a quotation.

Colon', formerly ASPINWALL, a seaport of Panamá, on Manzanillo Island, on the north side of the Isthmus of Panamá, at the Atlantic extremity of the interoceanic railway, and near that of the Panamá Canal. Established in connection with the railway, it had an important transit trade before the canal was begun, and since then the place has been entirely transformed, a new town with wide and regular streets having been built on a tract of land reclaimed by the Canal Company. There is extensive harbor accommodation. Pop. estimated at 3,000 in 1908.

Colon, a town of Cuba, province of Matanzas, 40 miles S. E. from Cardenas. It is in a sugar-growing region. Pop. 7124.

Colonel (kér'nel), the commander of a regiment, whether of horse, foot, or artillery. Any rank above a colonel constitutes the bearer of it a general officer. In the British service the rank of colonel is honorary, except in the artillery and engineers, and is usually bestowed upon officers of superior rank and princes of the blood. In the German, Austrian and Russian armies, when the regiments are very large, the colonelcies are mostly honorary posts, held by royal or distinguished persons. In the United States army a colonel is the chief commander of a regi-

ment of troops, ranking below a brigadier-general, and above a lieutenant-colonel.

Colonna (ko-lon'a), an Italian family that had become important as early as the eighth century. Its fame during the middle ages eclipsed that of every other Roman family except the great rival house of the Orsini. The Colonna family is at present represented by several branches, the Colonna-Sciarra, Colonna-Stigliano, etc. It played an important part in the affairs of Europe, became allied to the greatest houses of Italy, Spain and Germany, and has furnished many celebrated warriors, popes, and cardinals.

Colon'na, CAPE (ancient *Sunium*), the southern extremity of Attica, Greece. Its summit is crowned by the ruins of a temple of Athena 269 feet above the sea, of which sixteen columns of white marble are still standing.

Colon'na, VITTORIA, the most renowned poetess of Italy, was the daughter of Fabrizio Colonna, high-constable of Naples, and born in 1490. At the age of seventeen she was married to Ferdinand, Marquis of Pescara, the companion of her youth, who became one of the distinguished men of his age. They lived in the happiest union, and when her husband died of wounds received at the battle of Pavia (1525), Vittoria sought consolation in solitude and in poetry. All her poems were devoted to the memory of her husband. She died at Rome in 1547. Her most celebrated work is the *Rime Spirituali*, 1538. They are considered among the happiest imitations of Petrarca.

Colonnade (kol-o-nād'), in architecture, any series or range of columns placed at certain intervals from each other. When surrounding the building on the exterior the colonnade is called a *peristyle*; when projecting beyond the line of the building it is called a *portico*.

Colony (kol'ō-ni), a settlement formed in one country by the inhabitants of another. Colonies may either be formed in dependence on the mother country or in independence. In the latter case the name of colony is retained only in a historical sense. Properly, perhaps, the term should be limited to a settlement which carries on a direct cultivation of the soil, as in the Dominion of Canada or Australia; such settlements as those of the British in Hindustan or Malta being the mere superposition on the natives of a ruling race which takes little or no part in the general industry of the

country. The motives which lead to the formation of colonies, and the manner of their formation, are various. Sometimes the ambition of extending territory and the desire of increasing wealth have been the chief impulses in colonization; but colonies may now be said to have become a necessity for the redundant population of European states. Among ancient nations the principal promoters of colonization were the Phœnicians, the Greeks, and the Romans; the greatest colonizers in modern times have been the English and the Spaniards, next to whom may be reckoned the Portuguese, the Dutch, and the French. The Germans have latterly contributed largely to the tide of emigration, particularly in the direction of America; but they have done little directly as colonizers.

The Phœnician colonies were partly caused by political dissensions and redundant population, but were chiefly commercial, serving as entrepôts and ports of repair for Phœnician commerce along the coasts of Africa and Spain, in the latter of which they numbered, according to Strabo, more than two hundred. But it was in Africa that the most famous arose, Carthage, the greatest colonizing state of the ancient world. The Greek colonies, which were widely spread in Asia Minor and the islands of the Mediterranean, the coasts of Macedonia and Thrace, in South Italy and Sicily, were commonly independent, and frequently soon surpassed the mother states in power and importance. The colonies of Rome were chiefly military, and while the empire lasted were all in strict subordination to the central government. As the Roman power declined the remains of its colonies amalgamated with the peoples among whom they were placed, thus forming in countries where they were sufficiently strong what are known as the Latin races, with languages (Spanish, Portuguese, French and Italian) which are merely modifications of the old Roman tongue. Before America and the way by sea to the East Indies were discovered, the only colonies belonging to European states were those of the Genoese, Pisans, and Venetians in the Levant and the Black Sea, flourishing establishments on which the mercantile greatness of Italy in those days was largely built.

The Portuguese were the first great colonizers among modern states. In 1419 they discovered Madeira, the Azores, and the Cape Verd Islands; the Congo and the Cape of Good Hope followed; and before the century was out Vasco de Gama had landed at Calicut

on the Malabar coast of India. The first Portuguese colonies were garrisons along the coasts where they traded: Mozambique and Sofala on the east coast of Africa, Ormuz and Muscat in the Persian Gulf, Goa and Damao on the west coast of India. Colonies were established in Ceylon in 1505, in the Moluccas in 1510. Brazil was discovered in 1499, and this magnificent possession fell to Portugal, and was colonized about 1530. Bad government at home and the subjection of the country to Spain caused the loss of most of the Portuguese colonies. The Portuguese now possess several territories in Asia, at Goa, Damao and Diu, India; Macao, China; and some islands in the Indian Archipelago. In Africa they possess the Cape Verd and other islands; settlements in Senegambia, Guinea, Mozambique, Sofala, Angola, Benguela, Mossamedes, its colonies in Africa covering an area of nearly 800,000 sq. miles.

Soon after the Portuguese the Spaniards commenced the work of colonization. In 1492 Christopher Columbus discovered for Spain the principal islands of the West Indies and Haiti, or San Domingo, Porto Rico, Jamaica and Cuba were soon colonized. Before the middle of the sixteenth century Mexico, Ecuador, Venezuela, New Granada, Peru and Chile were subdued, and Spain took the first rank among the colonizing powers of Europe. But the Spaniards never really attempted to develop the industrial resources of the subject countries. The pursuit of mining for gold or silver occupied the colonists almost exclusively, and the enslaved natives were driven to work themselves to death in the mines. Cities were founded, at first along the coasts, for the sake of commerce and as military posts; afterwards also in the interior, in particular in the vicinity of the mines, as Vera Cruz, Cumana, Porto Bello, Cartagena, Valencia, Caracas; Acapulco and Panamá on the coast of the Pacific; Lima, Concepcion and Buenos Ayres. The colonial intercourse with Spain was confined to the single port of Seville, afterwards to that of Cadiz, from which two squadrons started annually—the *galleons*, about twelve in number, for Porto Bello; and the fleet, of fifteen large vessels, for Vera Cruz. When the power of Spain declined, the colonies soon took the opportunity to declare their independence, and thus were formed the republics of Mexico, Venezuela, Colombia, Ecuador, Peru, Bolivia, Argentina, Chile, etc. Its remaining colonies, Cuba, Porto Rico, and the Philippine Islands, were taken by the United States as a result of the war of 1898, Cuba becoming an inde-

pendent republic. The Ladrone group was transferred to Germany with the exception of Guam, held by the United States. The colonies of Spain are now confined to about 250,000 sq. miles in Africa and some small islands.

The hate of Philip II, who prohibited Dutch vessels from the port of Lisbon, forced the people of Holland to import directly from India or lose the large carrying trade they had acquired. Several companies were soon formed, and in 1602 they were united into one, the Dutch East India Company, with a monopoly of the East India trade and sovereign powers over all conquests and colonies in India. The Dutch now rapidly deprived the Portuguese of nearly all their East Indian territories, settled a colony at the Cape of Good Hope (1650), established a West India Company, made extensive conquests in Brazil (1623-60), which were soon lost, and more permanent ones on some of the smaller West India Islands, as San Eustatia, Curaçoa, Saba, etc. The growing power of the British and the loss of Holland's independence during the Napoleonic wars were heavy blows to the colonial power of the nation. But the Dutch still possess numerous colonies in the East Indies, among which the more important are Java, Sumatra, Dutch Borneo, the Molucca Islands, and part of New Guinea, also several small islands in the West Indies and Surinam.

No colonizing power of Europe has had a career of such uniform prosperity as Great Britain. The English attempts at colonization began nearly at the same time with the Dutch. After many fruitless attempts to find a northeast or northwest passage to the East Indies, English vessels found their way round the Cape of Good Hope to the East Indies in 1591. The East India Company was established in 1600. English commerce with India, however, was not at first important, and they possessed only single factories on the continent up till the beginning of the 18th century. The ruin of the Mogul Empire in India after the death of Aurengzebe (1707) afforded the opportunity for the growth of British power, as the British and French were compelled to interfere in the contentions of the native princes and governors. The French appeared at first to maintain the superiority; but the British in turn got the upper hand, and the victory of Clive at Plassey in 1756 laid the foundation of an exclusive British sovereignty in India. By the middle of the next century the British territory embraced, with the exception of a few dependent states, near-

ly the whole of India, this vast territory being still under the government of the East India Company—a mercantile company, controlled by Parliament, but exercising many important functions of sovereignty.

The discoveries of the Cabots, following soon after the voyages of Columbus, gave the English crown a claim to North America, which, though allowed to lie dormant for nearly a century, was never relinquished, and which, in the reign of James I, led to the beginning of colonization on a large scale. Raleigh's settlement on Roanoke Island (North Carolina) in 1585 proved a failure, but in 1607 the colonists sent out by the London Company to Chesapeake Bay founded Jamestown, on the James River, in Virginia. The next great settlement was that of the Pilgrim Fathers, who landed December 21, 1620, in Massachusetts Bay. The colonization of New Hampshire, Maine, New Jersey, Connecticut, Rhode Island, soon followed. In the State of New York and the Hudson River territory the British found the Dutch already in possession; but in 1664 they seized the colony of New Amsterdam by force, changing its name to New York in honor of James, Duke of York. Pennsylvania was founded by William Penn. and colonized with Quakers in 1682; Maryland in 1631 by a party from Virginia; Carolina in 1670 and Georgia in 1732 by colonies from England. Colonies were early established in the West India Islands, including Barbadoes, half of St. Christopher's (1625), and soon after many smaller islands. Newfoundland was taken possession of in 1583, colonized in 1621 and 1633. Canada was surrendered to Britain at the Peace of Paris in 1763. In 1764 began the disputes between Britain and its North American colonies, which terminated with the acknowledgment of the independence of the United States, Canada still remaining a British dependency.

Australia was discovered in the beginning of the seventeenth century. The first Australasian settlements of Britain were penal colonies. New South Wales, discovered in 1770, was established as a penal colony in 1788; Tasmania (Van Diemen's Land), discovered by Tasman in 1642, followed in 1803; West Australia, also first used as a penal settlement, became a free colony in 1829; Victoria (Port Philip) was colonized in 1835; and made an independent colony under its present name in 1851; South Australia was settled in 1836; New Zealand, discovered by Tasman in 1642, began to be used for whale-fishery about

1790, was settled in 1839, and made a colony in 1840. In 1851 the discovery of the abundance of gold in Victoria gave a great impetus to the prosperity of the Australian colonies. In 1874 the Fiji Islands, and in 1884 part of New Guinea, were annexed as crown colonies. In South Africa Cape Colony, first settled by the Dutch in 1652, became an English colony in 1814. The latest annexations in this quarter are Griqualand West (1880), Transkei (1875-84), Bechuanaland (1885), and Orange River and Transvaal colonies (1900-01). Further north, on the west coast, are the crown colonies—Lagos, the Niger Districts, the Gold Coast, Gambia and Sierra Leone—all, except Lagos, which was acquired in 1861, ancient possessions of the British crown. On the east is the extensive protectorate of British East Africa, extending to the Victoria Nyanza and beyond it, including the native state of Uganda; also a district south of the Gulf of Aden. British East Africa adjoins on the north the Egyptian Soudan, captured by Lord Kitchener from the Arabs in 1898, and now with Egypt, practically under British control. In Europe, Great Britain has a few colonies acquired for military reasons—Gibraltar in 1704; Malta and Gozzo, 1800; Cyprus, 1871.

It is estimated that the existing British colonies and dependencies embrace about one-sixth of the land surface of the globe and nearly the same proportion of its population. See *Britain*.

According to their government relations with the crown the British colonies are arranged under three heads:—(1) Crown colonies, in which the crown has the entire control of legislation, while the administration is carried on by public officers under the control of the home government. (2) Colonies possessing representative institutions but not responsible government, in which the crown has no more than a veto on legislation, but the home government retains the control of public officers. (3) Colonies possessing representative institutions and responsible government, in which the crown has only a veto on legislation, and the home government has no control over any officer except the governor. All colonies are, however, disabled from such acts of independent sovereignty as the initiative in war, alliances, and diplomacy generally.

France was somewhat late in establishing colonies. Between 1627 and 1636 the West Indian Islands of St. Christopher's, Guadeloupe, and Martinique were colonized by private persons. Champlain was the pioneer of the French in the explora-

tion of the North American continent, and founded Quebec in 1608. Colbert purchased several West India Islands, as Martinique, Guadeloupe, St. Lucia, etc., and sent out colonists in 1664 to Cayenne. In 1670 the East India Company formed by Colbert founded Pondicherry, which became the capital of extensive possessions in the East Indies. At the beginning of the eighteenth century France had extensive settlements in Canada, Nova Scotia and Newfoundland, the most flourishing of the West India Islands, and she seemed to have a prosperous career before her in India. In time, however, the rival interests of British and French colonists brought about a conflict which terminated in the loss of Canada and other North American possessions, as well as many of the West India Islands, while the dominion of India passed into the hands of the British. The chief colonial possessions of France at present are: in India, Pondicherry, and a few other small territories; Cochin-China, Tonquin, and the protectorates of Anam and Cambodia in Southeastern Asia; in America, Martinique, Guadeloupe, St. Bartholomew, French Guiana, and two small islands off the west of Newfoundland; in Oceania, New Caledonia, the Loyalty and Marquesas Islands, etc., in Africa, Algeria, Tunis, Senegambia, island of Réunion the protectorate of Madagascar, and a vast region in the Sahara and the Soudan, extending to the Atlantic between lat. 10° and 20° and to the Gulf of Guinea; also the large district of French Congo, between the Congo Free State and the Atlantic. The total colonial empire of France is estimated at over 4,000,000 square miles. Algeria is now officially a French department.

Of recent years Germany has made an effort to take rank as a colonial power, and has acquired in Africa the territories of Damaraland and Luderitzland to the northward of Cape Colony, the Cameroons District, on the Gulf of Guinea, and the large district of German East Africa, formerly claimed by the Sultan of Zanzibar; also in the Pacific a portion of New Guinea, now called Kaiser Wilhelm's Land, the Bismarck Archipelago. In 1911 a large district, constituting part of French Congo, was transferred to Germany, in settlement of a dispute about the French influence in Morocco. Italy attempted to take part in the partition of Africa among the European powers, but had an unfortunate experience. In 1882 it erected into a colony a coaling station held by it on the Red Sea, in 1885 oc-

cupied Massowah, and in 1889 combined its colonial territory under the name of Eritria. This lay along the Red Sea coast of Abyssinia and the whole of that ancient kingdom came to be looked upon as under an Italian protectorate. But there was a rude awakening in 1895 when an Italian force which had penetrated Abyssinia was attacked at Adowa and completely defeated. As a result the independence of Abyssinia was acknowledged, but Italy still held Eritria, and added to it a larger district in Somaliland, in the extreme eastern section of Africa. It seized on Tripoli, a Turkish possession, in 1911, a war ensuing between the Italians and the Turks and Arabs. Denmark, the remaining colonizing country of Europe, possesses Iceland, Greenland and the Faroe Islands, ancient acquisitions, though of little value; also a few small islands in the West Indies, which on more than one occasion she has offered to sell to the United States.

Colophon (kol'o-fon), an ancient Greek city of Asia Minor, about 8 miles N. of Ephesus, one of the places claimed as the birthplace of Homer. Here dwelt Mimnermus, the elegiac poet, and some other men of eminence.

Col'ophon, the device or imprint at work, which in old books frequently stated the name of the author as well as the printer's name, along with the date and place of publication, most of which information is now put in the title-page.

Colophony (kol-of'o-ni), the dark resin obtained by distilling turpentine.

Colorado (kol-o-rä'dō), one of the United States of America, situated in the central belt of states in the Rocky Mountains, between lat. 37° and 41° N., and lon. 102° and 109° W., and containing an area of 103,948 sq. miles. The western and central portions of its area are occupied by an intricate plexus of wild and irregular ranges inclosing valleys known as 'parks,' most of which are fertile, well wooded, and of a mild climate. These 'parks' are apparently the basins of former lakes upheaved and deprived of their waters by volcanic agency, with their original shape and situation at the foot of high mountains undisturbed, while their lowest depths are from 6000 to 9000 feet above the level of the sea. These parks are generally small, but a few of them are larger than some entire states of the Union. A large number of the moun-

tains are over 14,000 feet high, including Pike's Peak, Long's Peak, and others. The eastern section of the state is a great plain well adapted for pasture.

The rivers include the Arkansas, South Platte, Grand River, etc.; some of them remarkable for the grandeur of their cañons. (See illustration under *Arizona*, vol. i). Among wild animals are the grizzly, the black and the brown bear, prairie-wolf, buffalo, several kinds of deer, big-horn sheep, etc. There are extensive forests. The rainfall is small and of the arable lands in the state a great portion require irrigation. As a result agriculture is not much developed, the grain production being small. Orchard fruits are in some parts brought to an unusual degree of perfection. In general, cattle and sheep grazing are the leading pursuits of the rural population.

The climate is dry and healthy. The chief wealth of Colorado consists of its minerals, principally gold and silver. These were developed until Colorado led the states in their production, the yield of these two metals in 1897 being valued at \$47,078,535, more than one-third the total yield of the country. For many years after 1873 the output of silver was greater than that of gold; in 1892 it was six times as much; but in 1898 the gold was estimated at \$24,000,000, the silver at \$14,250,000. In 1910 the gold yield was stated at \$20,408,641; that of silver (commercial value) about \$5,000,000. Iron, copper and lead are mined, iron being widely diffused and coal very plentiful. Other minerals are manganese, petroleum, cement and fire-clay.

The public school system is good, and there is a state university. Colorado was little known previous to 1859; it was organized as a territory in 1861, and admitted as a state in 1876. The state capital is Denver, which in 1870 had a population of 4759, and in 1910, 213,381. Leadville is the next in importance. Pop. of the state in 1870, 39,864; in 1910, 799,024.

Colorado, a name of two rivers of the United States.—(1) The WESTERN COLORADO, or RIO COLORADO, formed by the junction of the Green and Grand Rivers, at about lat. 38° N.; lon. 110° W., in Utah. It flows southwest and south through Arizona, and between Arizona and Nevada and California, and after a total course, including Green River, of about 1200 miles, falls into the Gulf of California. Among the most wonderful natural objects in North America is the Grand Cañon of the Colorado, between lon. 112° and 115° W. Here the river flows

between walls of rock which are nearly vertical, and are in some places 6000 feet high. This cañon is more than 300 miles long. (2) A river in Texas which rises in the northwest part of the state, flows generally southeast and after a course of about 900 miles falls into the Gulf of Mexico at the town of Matagorda.

Colorado Springs, a city of El Paso Co., Colorado, 75 miles s. of Denver, near Pike's Peak and at an elevation of 6000 feet. It is surrounded by beautiful scenery, has a delightful climate, and is a pleasant summer resort. Pop. 29,078.

Colorimeter (kol-o-rim'e-tēr), an instrument for measur-

Grand Cañon of the Colorado.

Colorado Beetle, an American species of beetle (*Chrysomēla*, or *Polygramma*, or *Doryphora decemlineata*), nearly half an inch in length, almost oval, of a yellowish color marked with black spots and blotches, and on the elytra with ten

ing the depth of color in a liquid by comparison with a standard liquid of the same tint.

Colossæ (kol-os'sē), an ancient city of Asia Minor, in Phrygia, on the Lycus, a branch of the Mæander. It was the seat of one of the early churches of Asia to whom the apostle Paul wrote about 62 or 63 A.D.

Colosseum (kol-o-sē'um), a name given to the Flavian Amphitheater in Rome, a large edifice for gladiatorial combats, fights of wild beasts, and similar sports. It was begun by Vespasian, and finished by Titus 80 A.D. The outline of the Colosseum is elliptical, the exterior length of the building being 620 and its breadth 513 feet; it is pierced with eighty openings or vomitaria in the ground story, over which are superimposed three other stories, the whole rising perpendicularly to the height of 160 feet. Although two-thirds of the original building have disappeared, it is still a wonderful structure.

Colossus (ko-los'us), in sculpture, a statue of enormous magni-

Colorado Beetle (*Chrysomēla decemlineata*).

1, Part of leaf with eggs of the insect. 2, Caterpillar. 3, Pupa. 4, Perfect insect. (All nat. size.)

black longitudinal stripes. The wings are of a blood-red color. It works great havoc among the potato crops, and is popularly known as the Potato Bug.

INTERIOR OF THE COLOSSEUM AT ROME

tude. The Asiatics, the Egyptians, and in particular the Greeks have excelled in these works. The most celebrated Egyptian colossus was the vocal statue of Memnon in the plain of Thebes, supposed to be identical with the most northerly of two existing colossi (60 feet high) on the west bank of the Nile. Among the colossi of Greece the most celebrated was the Colossus of Rhodes, a brass statue of Apollo 70 cubits high, esteemed one of the wonders of the world, erected at the port of Rhodes by Chares, 290 or 288 B.C. It was thrown down by an earthquake about 224 B.C. The statue was in ruins for nearly nine centuries, when the Saracens, taking Rhodes, sold the metal, weighing 720,900 lbs., to a Jew, about 653 A.D. There is no authority for the popularly-received statement that it bestrode the harbor mouth and that the Rhodian vessels could pass under its legs. Among the colossi of Phidias were the Olympian Zeus and the Athena of the Parthenon; the former 60 ft. high and the latter 40. The most famous of the Roman colossi were the Jupiter of the Capitol, the Apollo of the Palatine Library, and the statue of Nero, 110 or 120 ft. high, and from which the contiguous amphitheater derived its name of Colosseum. Recently rock-cut statues have been measured at Bamian on the road between Cabul and Balkh, the largest being 173 ft. high and the second 120 ft.

Among modern works of this nature is the colossus of San Carlo Borromeo, at Arona, in the Milanese territory, 60 ft. in height; the 'Bavaria' at Munich, 65 ft. high; the statue of Hermann or Arminius near Detmold, erected in 1875, 90 ft. in height to the point of the up-raised sword, which itself is 24 ft. in length; the height of the figure to the point of the helmet being 55 ft.; the statue of Germania, erected in 1883 near Rüdeshelm, a figure 34 ft. high, placed on an elaborately sculptured pedestal over 81 ft. high; and Bartholdi's statue of Liberty presented to the United States by the French nation, and which measures 104 ft., or to the extremity of the torch in the hand of the figure 138 ft. It is erected in New York harbor on a pedestal 114 ft., is constructed for a lighthouse with one of the most powerful fixed lights in the world, and stands 317 ft. above mean tide.

Colostrum (ko-lo's'trum), the first milk of mammalia secreted after giving birth to young. It differs in composition from ordinary milk; has a purgative action, and serves to clear the bowels of infants of the me-

conium or fæcal matter which they contain at birth.

Color (kul'ér), the name given to distinguish the various sensations that lights of various rates of vibration give to the eye. As in the case with many of the words that denote our sensations, the word *color* is also applied to the properties of bodies that cause them to emit the light that thus affects our senses. The molecular constitution of a body determines the character and number of the light vibrations it returns to the eye, and so gives to each body its own characteristic color; hence the term color is used to denote that in respect of which bodies have a different appearance to the eye independently of their form.

Ordinary white light (the light which comes from an incandescent solid or liquid) when transmitted through triangular prisms of glass or other media differing in dispersive power from the atmosphere is shown to consist of a number of colored lights, which, meeting the eye, together produce the sensation of white light. (See *Spectrum* and *Light*.) The colors thus shown are usually said to be seven—red, orange, yellow, green, blue, indigo, violet; although in reality there is an enormous, if not an infinite, number of perfectly distinct colors in light. The seven colors are frequently called the primary colors, and other tints and shades are producible by mixing them; but in a stricter sense the primary colors are three in number, namely, red, green and violet (or blue). These three colors or kinds of light cannot be resolved into any others. In the scientific sense of the word white and black are not considered colors, a white body reflecting and a black body absorbing all the rays of light without separating them, whereas the colors proper are due to separation of the rays of light by partial absorption and reflection or by refraction. If a body absorbs every other kind of light and reflects or transmits red light only, it will appear of a red color; if it absorbs every kind except blue rays, it will appear blue; and so on. If more than one kind of light be transmitted or reflected the object will appear of a color compounded of these different rays of light.

In art the term color is applied to that combination or modification of tints which produces a particular and desired effect in painting. The colors of the spectrum have to be distinguished from color used in reference to *pigments*. The pigments red, blue and yellow, regarded

in the arts as the primary colors, produce effects, when mixed, very different from those produced by admixture of the corresponding spectrum colors. These three pigment colors form other colors thus: red and yellow make orange, yellow and blue make green, and red and blue make purple; but red, blue and yellow cannot be produced by any combination of the other colors.—*Local colors* are those which are natural to a particular object in a picture, and by which it is distinguished from other objects.—*Neutral colors*, those in which the hue is broken by partaking of the reflected colors of the objects which surround them.—*Positive colors*, those which are unbroken by such accidents as affect neutral objects.—*Complementary colors*, colors which together make white; thus any of the primary colors is complementary to the other two.—*Subjective or accidental colors*, the imaginary complementary colors seen after fixing the eye for a short time on a bright-colored object, and then turning it suddenly to a white or light-colored surface.

Colors in heraldry are *azure*, blue; *gules*, red; *sable*, black; *vert*, green; *purpure*, purple; *tenné* or *tawny*, orange; and *murrey* or *sanguine*, dark crimson. (See *Heraldry*.) Military colors are the flags or ensigns of a regiment. See *Colors, Military*.

Color-blindness, total or partial incapability of distinguishing colors. Color-blindness has been divided into three grades: (a) Inability to discern any color, so that light and shade, or black and white, are the only variations perceived. (b) Inability to distinguish the nicer shades of the more composite colors, as browns, grays, and neutral tints. (c) Inability to distinguish between the primary colors, red, blue and yellow, or between them and their secondaries, green, purple, orange and brown. Red is the color which the color-blind are most commonly unable to distinguish, while yellow is the most easily recognized. Color-blindness occurs in eyes whose power of vision, as to form and distance, is quite perfect, and may exist unknown to the person affected by it. This defect is common, especially among men. The cause of it in almost every case which has been carefully investigated has been found to be seated in the sensorium, not in the visual apparatus. It will be easily understood that those whose eyesight is thus defective are disqualified for holding various positions.

Color Printing, the art of producing pictures, designs, cards, etc., in various colors by means of lithography, printing from metal blocks, etc. The ordinary methods are: (1) the chromo-lithographic, in which a tracing of the original picture, or the like, is first made, and a copy transferred to as many stones as there are colors in the original, every color requiring a separate stone. The drawing of each stone is made to fit in, or *register*, with the preceding one, and as the paper passes through the machine an additional color is added every time, and thus the picture is built up color upon color (each being allowed to dry before the next is put on) until it is completed. Some chromos or oleographs may have as many as 25 or 30 printings or colors. (2) Block or surface color printing is specially adapted for book illustrations or similar work where nicety of detail or rapidity of production is required. As in chromo-lithography various printings are necessary; but these, while producing similar effects, are reduced in number by a method of printing several tints of the same color at one operation. Each block, which is usually of zinc and prepared in the usual way, is capable of producing three or more gradations of the same color; the darkest shade from the normal surface, lighter shades being got from parts which have been bitten or corroded in an almost imperceptible degree—the deepest corrosions giving, of course the lightest shade. When all the tints of one color are thus printed from one block and at one operation, a second block with gradations, in the same way, is used, registering as in chromo-lithography, and so on until the picture is finished.

Colors, MILITARY, the banners or flags of regiments of infantry, on which are borne the devices, distinctions, badge and motto of the regiment, and its number, in gold characters. The colors of a regiment are always saluted with the utmost respect by a guard, and it is customary for officers on the staff to salute colors when they are borne past at a review. The banners of regiments of dragoons are called *guidons*, and those of other cavalry regiments *standards*. To capture the colors of a regiment in battle is regarded as an honorable feat.

Color-sergeant, a non-commissioned officer who ranks higher and receives better pay than an ordinary sergeant, and who, in addition

to discharging all the ordinary duties of a sergeant, attends the colors in the field or near headquarters. There is one color-sergeant to each regiment of infantry or brigade of artillery.

Colporteur (kol-por-teur'), a French term now naturalized in the United States, and appropriated to a class of men always, or most commonly, subsidized by societies or associations with the view of disseminating religious literature by carrying about publications for sale, generally at reduced rates.

Colton (kōl'ton), CHARLES CALEB, an English writer, born 1780; died by his own hand at Fontainebleau, 1832. He held the united living of Kew and Petersham, but was eccentric in his manners, extravagant in his habits, and irremediably addicted to gambling and its attendant vices. Bewildered by his pecuniary obligations, he fled to the United States, and after a sojourn there of some years took up his abode in Paris, where he acquired a fortune of \$125,000 by gambling, which was soon dissipated. Through apprehension of a surgical operation he committed suicide. He wrote several satirical poems, *Hypocrisy*, *Napoleon*, etc.; but his most remarkable work is *Lacon, or Many Things in Few Words*.

Colt's-foot, *Tussilāgo Farfāra*, a weed of the order Compositæ, the leaves of which were once much employed as a remedy for asthma and coughs. The name is given from the leaf somewhat resembling the foot of a colt, being broad and heart-shaped; the flowers are yellow.

Colt's Revolver. See *Revolver*.

Coluber (kol'ū-bēr), a genus of non-venomous serpents, which includes, besides several N. American snakes the *Coluber Æsculapii*, common in the neighborhood of Rome, and regarded as the serpent which was sacred to Æsculapius, the god of medicine. To the same family belongs the common ringed snake of Britain (*Tropidonōtus natrix*), which attains a length of 3 or 4 feet.

Columba (ko-lum'ba). See *Calumba*.

Colum'ba, ST., a native of Ireland (Gartan in Donegal), born in 521; died in 597. In 545 he founded the monastery of Derry, and subsequently established many churches in Ireland. About 563 he landed in the island of Hy, now called Iona, and founded a church. About 565 he went on a mission of conversion among the northern Picts, and traversed the whole of Northern Scotland

preaching the Christian faith and founding monasteries, all of which he made subject to that which he had set up on the island of Hy. The Columban church was in some points of doctrine and ceremonial opposed to that of Rome, to which it owed no allegiance. Shortly before his death he revisited Ireland. There is a well-known life of St. Columba, *Vita Sancti Columbæ* written by St. Adamnan, Abbot of Iona.

Columbanus (kol-um-bā'nus), SAINT, or SAINT COLUMBAN, a missionary and reformer of monastic life, born in Ireland apparently about 540, became a monk in the Irish monastery of Benchor (Bangor), went through England to France with twelve other monks to preach Christianity, and founded the monasteries of Annegray, Luxeuil (590), and Fontaine in Burgundy. His rule, which was adopted in latter times by many monasteries in France, commands blind obedience, silence, fasting, prayers and labor, much more severe than the Benedictine rule, and punishes the smallest offenses of the monks with stripes. He retained also the old ecclesiastical customs of the Irish, among which is the celebration of Easter at a different time from the Roman Church. He appears to have remained at Luxeuil for nearly twenty years. He then went among the heathen Alemanni, and preached Christianity in Switzerland. About 612 he passed into Lombardy, and founded the monastery of Bobbio, in which he died in 615. His writings comprise his monastic rule, sermons, some poems and ecclesiastical treatises. His life was written by Abbot Jonas, a successor in the abbacy of Bobbio.

Columbarium (kol-um-bā'ri-um), in Roman antiquities, a place of sepulture for the ashes of the dead after the custom of burning the dead had been introduced. Columbaria consisted of arched and square-headed recesses formed in walls in which the cinerary urns were deposited, and were so named from the resemblance between these recesses and those formed for the doves to build their nests in a dove-cot.

Columbia (kō-lum'bi-a), the capital of South Carolina, situated on an elevated plain on the left bank of the Congaree, 130 miles N. W. of Charleston. It is regularly laid out, and contains some fine public buildings, including the state-house. Among the educational institutions are the South Carolina University, founded in 1804, and a Presbyterian college. It has important cotton, car, machine and iron industries, and a trade in cotton. The city was set on fire while

Columbia

occupied by General Sherman's army in 1865 and a large part of it burned. It was made the State capital in 1796. Pop. 26,319.

Columbia, a city, capital of Boone Co., Missouri, 125 miles w. by N. of St. Louis. It is the seat of the University of Missouri, founded in 1841, has also a State agricultural college and other educational institutions. There is here a government experiment station, flouring and other mills, etc. Pop. 9662.

Columbia, a city of Lancaster Co., Pennsylvania, on the east bank of the Susquehanna River, 81 miles w. of Philadelphia. It is an important trade center and shipping point, and contains iron furnaces, rolling mills and various other industrial establishments. Pop. 11,454.

Columbia, a town, capital of Maury Co., Tennessee, on Duck River, 47 miles s. of Nashville. It has cotton and flour mills and other manufactures, and extensive phosphate interests. It is the seat of a national arsenal. Pop. 5754.

Columbia, DISTRICT OF, a small tract of country on the east bank of the Potomac River, about 120 miles from its mouth, surrounded on three sides by Maryland, and forming a neutral district for the seat of the national government. It has an area of 64 square miles; was formed into a territory in 1871; and contains the city of Washington, which has been the national capital since 1800. Georgetown, a former city, is now part of Washington. As originally laid out, the district was 10 miles square, including a small area in Virginia; but this section was retroceded in 1864 and only the Maryland section retained. The affairs of the district and of Washington are administered by three commissioners directly under Congress. Pop. 331,069.

Columbia University, an educational institution in New York City, established in 1746, and giving courses of instruction in literature, divinity, science, medicine, law, etc. It was removed in 1896 to a plot of ground in the northern section of the city, where, on an area of about 17½ acres, large and commodious buildings have been erected. Its classes number about 6000 students and its library contains nearly 500,000 volumes.

Columbia River, or OREGON, a river of the United States, flowing into the Pacific Ocean, and rising at the base of the Rocky Mountains in British Columbia. It has a very winding course, partly in British Co-

lumbia, but mainly in the United States, where it receives two large tributaries, Clark River and Snake River. Farther down it turns abruptly to the west and forms the boundary between the States of Washington and Oregon. It drains an area of 298,000 square miles, and has a length of about 1400 miles.

Columbian Exposition, an international display created by act of Congress of April 25, 1890, providing for celebrating the 400th anniversary of the discovery of America by Columbus by holding an international exhibition of arts, industries, manufactures, etc., in Chicago, Illinois, October 12, 1892. The President and State governors and prominent civil and military dignitaries participated in imposing ceremonials, dedicating the grounds and buildings, but the exhibition was not formally opened until 1893, the great architectural work needed causing delay. The estimated cost of the buildings, etc., was over \$33,000,000, and the exhibition in every respect a brilliant one; the buildings were covered with a white coating which gave the impression of marble, and the grouping of the structures was very artistic. Nearly every nation of the world sent exhibits and it was very largely attended, the receipts being over \$28,000,000. The Fine Arts building was preserved as a permanent memorial, and here is installed the Field Columbian Museum.

Columbus, a city, capital of Muscogee Co., Georgia, situated at the head of navigation on the Chattahoochee River, 100 miles s. s. w. of Atlanta. The river furnishes extensive water power and some of the largest cotton mills of the south are located here. There are also extensive ironworks and other industries and a large trade in cotton, the annual receipts exceeding 150,000 bales. Pop. 20,554.

Columbus, a city, the capital of Ohio, in Franklin County, on the east bank of the Scioto, near the center of the State. It contains some notable public buildings. The capitol is a large and imposing building built of gray limestone in the simple Doric style. Other buildings are the Ohio State University, deaf and dumb institution, institution for the blind, lunatic asylum, penitentiary, Roman Catholic cathedral, etc. Educational institutions include the Columbus Medical College, Starling Medical College, Ohio Agricultural College, Columbus Art Institute, etc. There is a very extensive trade, and the manufactures are important and varied. Pop. 181,511.

Columbus

Columbus, a city, capital of Bartholomew Co., Indiana, on the White River, east branch, 41 miles s. by E. of Indianapolis. Its industries include tanneries, furniture and agricultural implement works, etc. Pop. 8813.

Columbus, a city of Mississippi, on the Tombigbee River, which is navigable to this place. It has large cotton, cottonseed-oil, and other mills, and several collegiate institutions, including the Mississippi Industrial Institute. Pop. 8988.

Columbus, a city, capital of Platte Co., Nebraska, 194 miles w. of Omaha. It has lumbering and other interests. Pop. 5014.

Colum'bus, CHRISTOPHER (in Spanish, *Christoval Colon*; in Italian, *Christoforo Colombo*, which is his real name), was born in Genoese territory in 1435 or 1436; died at Valladolid, Spain, in 1506. His father, Domenico Colombo, a poor wool-comber, gave him a careful education. He appears to have gone to sea at an early age and to have navigated all parts of the Mediterranean and some of the coasts beyond the Straits of Gibraltar. In 1470 we find him at Lisbon, where he married the daughter of Bartolommeo de Palestrello, a distinguished navigator. He had gradually come to the conclusion that there were unknown lands belonging to Eastern Asia separated from Europe by the Atlantic. While the Portuguese were seeking to reach India by a southeast course around Africa he was convinced that there must be a shorter way by the west. He applied in vain to Genoa for assistance, and equally fruitless were his endeavors to interest John II of Portugal in the enterprise. He then determined to apply to the Spanish court; and after many disappointments he induced Ferdinand and Isabella to equip and man three vessels for a voyage of discovery. It was early in the morning of Friday, on August 3, 1492, that Columbus set sail from the port of Palos, and after sailing for two months the expedition narrowly escaped failure. The variation of the needle so alarmed the crews that they were on the point of breaking out into open mutiny, and he was obliged to promise that he would turn back if three more days brought no discovery. On the third day (Oct. 12, 1492) the island of Guanahani or San Salvador was sighted, which Columbus believed to belong to Eastern Asia and to be connected with India—a belief which he carried with him to his grave. Hence the mistaken name of *Indians* applied to the natives of America, and that of *West*

Indies applied to the group of islands of which Guanahani forms one. On landing Columbus threw himself upon his knees and kissed the earth, returning thanks to God. The natives collected round him in silent astonishment, and his men, ashamed of their disobedience and distrust, threw themselves at his feet, begging his forgiveness. Columbus, drawing his sword planted the royal standard, and in the name of his sovereigns took possession of the country, which, in memory of his preservation, he called *San Salvador*. He then sailed in search of other lands, and discovered Cuba, St. Domingo, and several other of the West India Islands. Being so far successful, he built a fort at Hispaniola, Hayti, left some of his men there, and set out on his return to Europe, where he was received with almost royal honors. In 1493 he set out on his second great voyage from Cadiz, with three large ships of heavy burden and fourteen caravels, carrying 1500 men. He discovered the island of Dominica, and afterwards Mariagalante, Guadaloupe and Porto Rico, and at length arrived at Hispaniola. Finding the colony destroyed, he built a fortified town, which he called, in honor of the queen, *Isabella*. He then left the island in order to make new discoveries, visited Jamaica, and returning after a voyage of five months, worn down with fatigue, found to his great joy that his brother Bartolommeo had arrived at Isabella with provisions and other supplies for the colony. Meanwhile a general dissatisfaction had broken out among his companions, who, instead of the expected treasures, had found hardships and labor. This and news of calumnies being set on foot against him at home induced him to return to Spain, where his presence and probably also the treasure he brought silenced his enemies. In May, 1498, he sailed with six vessels on his third voyage. Three of his vessels he sent direct to Hispaniola; with the three others he took a more southerly direction, and having discovered Trinidad and the continent of America, returned to Hispaniola. His colony had now been removed from Isabella, according to his orders, to the other side of the island, and a new fortress erected called St. Domingo. Columbus found the colony in a state of confusion, but soon restored tranquillity. His enemies, in the meantime, endeavored to convince his sovereigns that his plan was to make himself independent, and Columbus was not only displaced, but Francisco de Bobadilla, a new governor who had come from Spain, even sent him to that country in

chains. On his arrival (in 1500) orders were sent directing him to be set at liberty and inviting him to court, but for his injurious treatment he never got redress, though great promises were made. After some time he was able to set out on his fourth and last voyage (1502) in four slender vessels supplied by the court. In this expedition he was accompanied by his brother Bartolommeo and his son Hernando. He encountered every imaginable disaster from storms and shipwreck, and returned to Spain, sick and exhausted, in 1504. The death of the queen soon followed, and he urged in vain on Ferdinand the fulfillment of his promises; but after two years of illness, humiliations and despondency, Columbus died at Valladolid. His remains were transported, according to his will, to the city of St. Domingo, but on the cession of Hispaniola to the French they were removed in January, 1796, to the cathedral of Havana in Cuba. In 1899 they were removed, with much ceremony to Granada, Spain, though there is some question as to these being the correct remains.

Columella (kol-u-mel'a), LUCIUS JUNIUS MODERATUS, a Roman writer on agriculture; born at Cadiz in Spain; lived about the middle of the first century after Christ. and wrote twelve books, which are still extant, one of which, on gardening (*De Re Rustica*), is in verse.

Column (kol'um; Latin, *columna*), in architecture, a round pillar, a cylindrical solid body set upright and primarily intended to support some superincumbent weight. A column has as its most essential portion a long

classical architecture columns have commonly to support an *entablature* consisting of three divisions, the *architrave*, *frieze* and *cornice*, adorned with moldings, etc. The accompanying cut will illustrate these and other terms. Columns are distinguished by the names of the styles of architecture to which they belong; thus there are Hindu, Egyptian, Grecian, Roman and Gothic

Column (Tuscan order), illustrating the terms applied to the several parts.

Sections of Gothic Columns. 1-4, South Gothic. 5-12, North Gothic.

solid body, called a *shaft*, set vertically on a *stylobate* or on a congeries of moldings which forms its *base*, the shaft being surmounted by a more or less bulky mass which forms its *capital*. In

columns. In classic architecture they are further distinguished by the name of the order to which they belong, as Doric, Ionic, Corinthian, Composite or Tuscan columns. They may also be characterized by some peculiarity of position, of construction, of form, or of ornament, as attached, twisted, cabled, etc., columns. Columns are chiefly used in the construction or adornment of buildings. They

have also been used, however, singly for various purposes, especially for monuments. See *Corinthian*, *Doric*, *Ionic*, *Gothic*, etc.

Column, in military tactics, a formation of troops drawn up in deep files, showing a small front; as distinguished from *line*, which is extended in front and thin in depth. They are said to be close or open, according to the intervals between the battalions, regiments, etc., of which they are composed. Sometimes the name column is given to the small army, especially when actively engaged.

Colure (ko-lūr'), in astronomy, one of two great circles which divide the ecliptic into four equal parts. One passes through the solstitial and the other through the equinoctial points of the ecliptic.

Colymbus (ko-lim'bus), the diver genus of birds, giving name to the family Colymbidæ, which includes also the Grebes.

Colza Oil (kol'za), an oil much employed for burning in lamps, and for many other purposes. It is expressed from the seeds of *Brassica campestris olcifera*, and from allied plants of the cabbage family. It is yellowish brown, and has little or no smell. It becomes thick and solid only at very low temperatures.

Coma (kō'ma), in medicine, a state of complete insensibility, resulting from various diseases, as apoplexy; from narcotics, as opium; from accident or injury to the brain; or from excessive cold. When accompanied with delirium and the person's eyes are wide open, it is called *coma vigil*.

Coma, the luminous, nebulous, hair-like substance surrounding the nucleus of a comet.

Coma Berenices, BERENICE'S HAIR, a small constellation of the northern hemisphere containing about forty stars visible to the naked eye, situated between Boötes and the tail of Leo.

Comacchio (ko-mak'ki-ō), a fortified town, Italy, province of Ferrara, amid unhealthy marshes, about 2 miles from the Adriatic, with productive fisheries. It is the seat of a bishopric. Pop. 7944.

Comana (ko-ma'na), an ancient city of Cappadocia, celebrated in antiquity as the seat of the solemn worship of Ma (the moon goddess). Its site has not been identified.

Comanches (kō-man'chez), an American Indian tribe formerly roaming through Texas and part

of Mexico. They were excellent horsemen, and extremely warlike, but their numbers are now insignificant. Some of them have been collected on a reservation in the western part of the former Indian Territory, now Oklahoma.

Comayagua (kō-mā-yä'gwä), a town of Central America, in Honduras, the capital of a department of the same name, situated on the southern border of the plateau of Comayagua, about midway between the two oceans. It is a bishop's see and has a cathedral. Pop. about 8000.

Comb, an instrument with teeth, made of tortoise-shell, ivory, horn, wood, bone, metal, or other material, used for dressing the hair, and by women for keeping the hair in its place when dressed. Combs have been used from the earliest times by rude as well as by civilized races.

Combaconum (kom-ba-kō'num), a town of Hindustan, presidency of Madras, district of Tanjore. It was the ancient capital of the Chola dynasty, and is one of the most ancient and sacred towns in the presidency. It has a great many well-endowed Hindu temples, a government college, courts, etc. A brisk trade is carried on with visitors and pilgrims. Pop. 59,623.

Combat, TRIAL BY. See *Battle*, *Wager of*.

Combe (kōm), ANDREW, a noted physician and medical author, born at Edinburgh in 1797; died in 1847. He was educated at the Edinburgh High School and afterwards for the medical profession at the university there. In 1822 he commenced practice at Edinburgh, and had considerable success. In 1838 he was appointed one of the physicians extraordinary to the queen in Scotland. His chief works are: *Observations on Mental Derangement* (1831), *Principles of Physiology* (1834), *Physiology of Digestion* (1836), and *A Treatise on the Physiological and Moral Management of Infancy* (1840). Like his brother George, he was a zealous phrenologist.

Combe, GEORGE, brother of the foregoing, was born in 1788, at Edinburgh; died at Moore Park, Surrey, in 1858. He was bred to the law, and in 1812 was admitted a member of the Society of Writers to the Signet. He was the first to introduce the doctrines of phrenology into Great Britain; and visited Germany and America lecturing on his favorite science. He was also a zealous promoter of the cause of popular education and social progress; and was among the first to advocate compulsory education and the establishment of a

board of health. Besides the *Constitution of Man*, published in 1828, and which has had an enormous circulation, he is the author of *A System of Phrenology* (1825); *Lectures on Popular Education* (1833); *Moral Philosophy* (1840); *The Life and Correspondence* of his brother, Dr. Andrew Combe (1850); *Principles of Criminal Legislation and Prison Discipline Investigated* (1854); and the *Relation between Science and Religion* (1857).

Combe, WILLIAM. See *Coombe*, William.

Combermere (kom' bér-mēr), SIR STAPLETON STAPLETON-COTTON, VISCOUNT, an English general, born in 1773; died in 1865. He entered the army in 1790, and took part in the Mysore war against Tippoo Saib in 1798 and 1799. He served with distinction through the Peninsular war, and was commander of the allied cavalry after 1810. In 1814 he was created Baron Combermere. In 1825 he was appointed commander-in-chief in India. He was latterly Constable of the Tower, and a field-marshal.

Combination. See *Permutations and Combinations*.

Combretaceæ (kom-bre-tā'se-ē), an order of shrubby or arborescent polypetalous exogens, tropical shrubs or trees, with leaves destitute of stipules, and long, slender stamens. Some of them are astringent and used for tanning (myrobolans), and the kernels of others are eatable. They are chiefly valued for their brightly-colored, showy flowers, especially in the genus *Combretum*.

Combustion (kom-bust'yun), the operation of fire on inflammable substances; or the union of an inflammable substance with oxygen or some other supporter of combustion, attended with heat and in most instances with light. In consequence of the combination of the carbon in fuel with the oxygen of the air being the universal method of getting heat and light, and as when the action takes place the fuel is said to burn or undergo combustion, the latter term has been extended to those cases in which other bodies than carbon—for example, phosphorus, sulphur, metals, etc.—burn in the air or in other substances than air—for example chlorine. Though the action between the gas and the more solid material, as coal, wood, charcoal, of whose combination combustion is the result, is mutual, the one having as much to do with the process as the other, yet the former, as oxygen, chlorine, iodine, and the com-

pounds which they form with each other and with nitrogen, have received the name of supporters of combustion, while to the latter the term combustibles has been assigned.

Spontaneous Combustion is the ignition of a body by the internal development of heat without the application of fire. It not infrequently takes place among heaps of rags, wool and cotton when sodden with oil; hay and straw when damp or moistened with water; and coal in the bunkers of vessels. In the first case the oil rapidly combines with the oxygen of the air, this being accompanied with great heat; in the second case the heat is produced by a kind of fermentation; in the third by the pyrites of the coal rapidly absorbing and combining with the oxygen of the air. The term is also applied to the extraordinary alleged phenomenon of the human body being reduced to ashes without the direct application of fire. It is said to have occurred in the aged and persons that were fat and hard drinkers; but most chemists reject the theory and altogether discredit it.

Comedietta (k o m-ē-di-et'a), a dramatic composition of the comedy class, but not so much elaborated.

Comedy (kom'e-di), a dramatic composition of a light and amusing class, its characters being represented as in the circumstances or meeting with the incidents of ordinary life; distinguished from *tragedy* by its sprightliness, and the termination of its plot or intrigue being happy; and from *farce* by its greater refinement and moderation, and by more of probability and less of burlesque. See *Drama*.

Comenius (k ō-m ā' n i- u s), JOHANN AMOS, a Moravian educational reformer, born in 1592; died in 1671. He was chosen bishop of the Moravian Brethern, and suffered much in the persecutions of that body. He was the author of upwards of ninety works, the most important of which are *Janua Linguarum Reserata* (1631) and *Orbis Sensualium Rictus* (1658). His high reputation brought him invitations from England, Sweden and Hungary to aid in organizing public instruction; and the above works have been frequently translated and imitated.

Comets (kom'ets). certain celestial bodies which appear at occasional intervals, moving through the heavens in paths which seem to correspond with parabolic curves, or in a few instances in elliptical orbits of great eccentricity. The former, after being visible from the earth for a shorter or

longer time, disappear into space apparently never to return; the latter return to us periodically. Some comets are only visible by the aid of the telescope, while others can be seen by the naked eye. In the latter case they usually appear like stars accompanied with a train of light, sometimes short and sometimes extending over half the sky, mostly single and more or less curved, but sometimes forked. In a comet which appeared in 1744 the train was divided into several branches, spreading out from the head like a fan. The train is not stationary relatively to the head, but is subject to remarkable movements. The direction in which it points is always opposite to the sun, and as the comet passes its perihelion the train changes its apparent position with extraordinary velocity. The head of the comet is itself of different degrees of luminosity, there being usually a central core, called the *nucleus*, of greater brilliancy than the surrounding envelope, called the *coma*.

Comets were long regarded as supernatural objects, and usually as portents of impending calamity. Tycho Brahe was the first who expressed a rational opinion on the subject, coming to the conclusion that the comet of 1577 was a heavenly body at a greater distance from the earth than that of the moon. The general law of the motion of bodies, as well as his own observation on the comet of 1680, led Newton to conclude that the orbits of the comets must, like those of the planets, be ellipses, having the sun in one focus, but far more eccentric; and having their *aphelions*, or greater distances from the sun, far remote in the regions of space. This idea was taken up by Halley, who collated the observations which had been made of all the twenty-four comets of which notice had been taken previous to 1680. The results were very interesting. With but few exceptions the comets had passed within less than the earth's shortest distance from the sun, some of them within less than one-third of it, and the average about one-half. Out of the number, too, nearly two-thirds had had their motions retrograde, or moved in the opposite direction to the planets. While Halley was engaged on these comparisons and deductions the comet of 1682 made its appearance, and he found that there was a wonderful resemblance between it and three other comets that he found recorded—the comets of 1456, of 1531 and of 1607. The times of the appearance of these comets had been at very nearly regular intervals, the average period being

between seventy-five and seventy-six years. Their distances from the sun, when in *perihelion*, or when nearest to that luminary, had been nearly the same, being nearly six-tenths of that of the earth, and not varying more than one-sixtieth from each other. The inclination of their orbits to that of the earth had also been nearly the same, between 17° and 18° ; and their motions had all been retrograde. Putting these facts together, Halley concluded that the comets of 1456, 1531, 1607 and 1682 were reappearances of one and the same comet, which revolved in an elliptic orbit round the sun, performing its circuit in a period varying from a little more than seventy-six years to a little less than seventy-five; or having, as far as the observations had been carried, a variation of about fifteen months in the absolute duration of its year measured according to that of the earth. For this variation in the time of its revolution Halley accounted upon the supposition that the form of its orbit had been altered by the attraction of the remote planets Jupiter and Saturn as it passed near to them; and thence he concluded that the period of its next appearance would be lengthened, but that it would certainly reappear in 1758 or early in 1759. As the time of its expected reappearance approached, Clairaut calculated that it would be retarded 100 days by the attraction of Saturn, and 518 by that of Jupiter, so that it would not come to the perihelion, or point of its orbit nearest the sun, till April 13, 1759. It actually reached its perihelion on March 13, 1759, being thirty days earlier than he had calculated. Along with the period of this comet and its perihelion distance, the magnitude and form of its path were also calculated. Estimating the mean distance of the earth from the sun at 95,000,000 miles (the number which was at that time considered as the true one), the mean distance of the comet was calculated to be 1,705,250,000 miles; its greatest distance from the sun, 3,355,400,000; its least distance, 55,100,000; and the transverse or largest diameter of its orbit, 3,410,500,000. This comet, therefore, is a body belonging to the solar system, and quite beyond the attraction of any body which does not belong to that system; and as this is determined of one comet, analogy points it out as being the case with them all. In 1835 it again returned, being first seen at Rome, August 5, and from that time continued to be observed till the end of the year in Europe, and through a great part of spring in 1836 in the southern hemisphere. It returned again

in 1910, but on this occasion had lost most of its brilliancy and was barely observable with the naked eye, much to the disappointment of those who had been awaiting its return with expectations of a striking spectacle.

The comet denominated *Encke's comet*, which has made repeated appearances, was first observed in 1818, and was identified with a comet observed in 1786, also with a comet discovered in 1795 by Miss Herschel in the constellation Cygnus, and with another seen in 1805. Its orbit is an ellipse of comparatively small dimensions, wholly within the orbit of Jupiter; its period is 1260 days, or about three years and three-tenths. It has been frequently observed since. Another comet, the history of which is of the utmost importance in the latest theories regarding the connection of these bodies and the periodic showers of shooting-stars, is one known as Biela's comet, discovered in 1826. It revolved about the sun in about $6\frac{3}{4}$ years, and was identified as the same comet which was observed in 1772 and in 1806. Its returns were noted in 1832, 1839 and 1845. In 1846 it divided into two, returned double in 1852, but has not since been seen, the supposition being that it has been dissipated, and that it was represented by a great shower of meteors that were seen in Nov. 1872. One of the most remarkable comets of recent times was that known as Donati's, discovered by Dr. Donati, of Florence, in 1858. It was very brilliant in the autumn of that year, and on October 18th was near coming into collision with Venus. The year 1881 was remarkable for the number of comets recorded. During that year no fewer than seven comets, including the well-known short-period comet Encke's were observed.

The paths in which comets move are not, like those of the planets, all nearly in the same plane as the orbit of the earth, but are inclined to that orbit at all angles. Leaving out the small planets that have recently been discovered, all the others are contained within a zone extending only 7° on each side of the earth's orbit; and, with the exception of Mercury (by far the smallest of the *old* planets), they are within half that space. But the orbit of the comets are at all possible angles; and the number increases with the angle, so that they approximate to an equal distribution in all directions round the sun as a center. Taking all the orbits of which the inclinations have been ascertained, it has been found that of every hundred the inclinations are as follows: from 0° to 30° , 26; 30° to 50° , 27;

50° to 80° , 39; and 80° to 90° , 8. The comets that have been observed have made their passages through very different parts of the solar system; 24 have passed within the orbit of Mercury, 47 within that of Venus, 58 within that of the Earth, 73 within that of Mars, and the whole within that of Jupiter. Of a hundred or thereabouts, mentioned by Lalande, about one-half have moved from west to east, in the same direction as the planets, and the other half in the opposite direction. The direct and retrograde ones do not appear to follow each other according to any law that has been discovered. From 1299 to 1532 all that are mentioned were retrograde; and five that were observed from 1771 to 1780 were all direct.

That the comets are formed of matter of some sort or other we know from the dense and opaque appearance of their nucleus, as well as from the action of the planets upon them; but as their action upon the planets has not been great, or even perceptible, we are led to the conclusion that they are not bodies of the same density or magnitude as even the smallest and rarest of the planets. They are probably groups of meteoric masses, varying in size. One theory of the nature of comets is that these bodies were ejected millions of years ago from the interior of suns, or planets in a sunlike state. When a comet is viewed through a telescope of considerable power there appears a dense nucleus in the center of the luminous and apparently vaporous matter of which the external parts are composed; and the opacity of this nucleus varies in different comets. On its first appearance, and again when it recedes, the luminous part of the comet is faint and does not extend far from the nucleus; but as it moves on towards the perihelion the brightness increases, and the luminous matter lengthens into a train, which, in some cases, has extended across a fourth of the entire circumference of the heaven. The most remarkable discovery of recent times regarding comets is the identity of the course of some of them with the orbit of certain showers of shooting stars. This was first demonstrated by the Italian astronomer Schiaparelli, who proved the agreement between the orbit of the great comet of 1862 and that of the star-shower seen annually about August 9th and 10th. It has since been demonstrated that every meteoric stream follows in the train of some comet large or small, which either exists now or has been dissipated, as Biela's comet was, leaving only its meteoric trail to show where it once traveled; and that every comet is

followed or preceded by a train of meteors, extending over a greater or less portion of the comet's orbit according to the age of the comet. See *Biela's Donati's* and *Halley's comet*.

Comfrey (com'frē), a name given to several European and Asiatic plants of the genus *Symphytum*, nat. order Boraginaceæ. The common comfrey, *S. officināle*, is found on the banks of rivers and ditches. Its root abounds in mucilage, which is useful in irritations of the throat, intestines and bladder.

Comines (ko-men'), PHILIPPE DE. See *Commines*.

Comiso (kō-mē'sō), a town of Sicily, province. Syracuse, 13 miles w. of Ragusa. Pop. 21,873.

Comitia (kō-mish'i-a), with the Romans, the assemblies of the people in which such public business was transacted as the election of magistrates, the passing of laws, etc. These were of three kinds: (1) The *comitia curiata*, or assemblies of the patrician houses or *populus* in wards or *curiæ*. (2) The *comitia centuriata*, or assemblies of the whole Roman people, including patricians, clients, and plebeians in divisions called *centuries*. These assemblies are said to have been instituted by King Servius Tullius as a counterpoise to the powers of the *comitia curiata*. After the institution of the *centuriata* the functions of the *curiata* were almost confined to the election of priests, and the confirmation of dignities imposed by the people. The *centuriata* had the election of consuls, the deciding on war, the acceptance or rejection of laws, etc. (3) The *comitia tributa*, or assemblies of the plebeian tribes only. The *tributa* were instituted not long after the expulsion of the kings, and originally transacted matters pertaining to the plebeians.

Comity of Nations (*comitas gentium*), a phrase adopted in international law to denote that kind of courtesy by which the laws and institutions of one state or country are recognized and given effect to by the government of another.

Comma (kom'a), in punctuation, the point [.] denoting the shortest pause in reading, and separating a sentence into divisions or members according to the construction.—In music, a comma is the smallest enharmonic interval, being the difference between a major and a minor tone, and expressed by the ratio 80:81.

Commander (kom-an'dēr), a chief; the officer of an army or any division of it. The office of *commander-in-chief* is the highest staff ap-

pointment in the army. In foreign armies title is sometimes not commander-in-chief, but field-marshal commander-in-chief, the difference being that the former is appointed by patent for life, while the latter is appointed by a letter of service, and holds office only during the pleasure of the sovereign. In the United States the President is declared by the Constitution to be commander-in-chief of the army and navy. In the navy, a commander ranks a lieutenant. In matters of etiquette he ranks with a lieutenant-colonel in the army.

Commandeering (kom-an-dēr'ing), a term used by the Boers in the British-Boer war to designate the seizing of supplies, cattle, etc.

Commandery (kom-an'de-ri), a term used in several senses in connection with some of the military and religious orders. Among several orders of knights, as the Templars, Hospitalers, etc., it was a district under the control of a member of the order (called commander or preceptor), who received the income of estates belonging to knights within that district, and expended part for his own use and accounted for the rest; now more especially applied to a manor belonging to the priory of the Knights Hospitalers or Knights of St. John of Jerusalem. In certain religious orders, as those of St. Bernard and St. Anthony, it was the district under the authority of a dignitary called a commander.

Commandite (kom-män-dēt), a term used in France, a partnership *en commandite* being one in which a person may advance capital without taking an active part in the management of the business, and be exempt from responsibility for more than he put into it; much the same as limited liability.

Commandments. See *Decalogue*.

Commencement (kom-ens'ment), in the universities and colleges of the United States, also in that of Cambridge, England, the day when bachelors and masters of arts and doctors receive their degrees.

Commendam (kom-en'dam), the administrative or provisional management of a benefice during a vacancy. The person entrusted with the management was called *commendator*. The grant of ecclesiastical livings in this way gave rise to great abuses. In England the term was applied to a living retained by a bishop after he had ceased to be an encumbent. By 6 and 7 Wil-

liam IV the holding of livings *in commendam* was, for the future, abolished.

Commensal (kom-en'sal; L. *con.* and *mensa*, a table), a mess-mate; applied in zoology to animals who live on or in other animals for part or the whole of their life, simply sharing the food of their host without being parasitic on him: thus the peacocks live within the cavity of shellfish, and find their food in the water introduced for the benefit of their host.

Commensurable (kom-en'sur-a-bl), an appellation given to such quantities or magnitudes as can be measured by one and the same common measure. *Commensurable numbers* are such as can be measured or divided by some other number without any remainder; such are 12 and 18, as being measured by 6 or 3.

Commentary (kom'en-târ-i), a term used (1) in the same sense as *memoirs*, for a narrative of particular transactions or events, as the *Commentaries* of Cæsar. (2) A series or collection of comments or annotations. These may either be in the form of detached notes or may be embodied in a series of remarks written and printed in a connected form.

Commentry (kom-män-trē), a town of France, dep. of Allier, 8 miles S. E. of Montluçon, in the midst of a vast coal-field, to which the town owes its prosperity. Pop. 7581.

Commerce (kom'êrs), the interchange of goods, merchandise, or property of any kind between countries or communities; trade; traffic. The commerce of the United States has grown greatly within recent years, reaching a total in the fiscal year 1910-11 of \$3,590,000,000. The exports exceeded the imports by \$530,000,000. The manufactured goods exported reached the high total of \$910,000,000.

Commerce and Labor, Department of, an executive department of the United States government, founded in Feb., 1903, forming the ninth department, and having charge of the commercial and industrial interests of the country. Its head official is a member of the President's Cabinet.

Commerce, CHAMBER OF, a board chosen from among the merchants and traders of a city to protect the interests of commerce; to lay before the legislature the views of their members on matters affecting commerce; to furnish statistics as to the staple trade of the locality; and to attain by combination advantages which could not be reached by private enterprise, etc. These

associations originated in France early in the eighteenth century. Nearly all large cities in the United States have chambers of commerce.

Commercial Law (kom-êr'shal; or the *law merchant*), the law which regulates commercial affairs among the merchants of different countries, or among merchants generally. It is derived from the different maritime codes of mediæval Europe, the imperial code of Rome, international law, and the custom of merchants. Lord Mansfield (1704-93) was the first great exponent of commercial law in Britain. In this country the term is applied to that system of laws which refers to mercantile contracts, and is based upon the custom of merchants. The principal subjects embraced within it are the laws of shipping, including that of marine insurance; the law of negotiable bills of exchange and promissory notes; and the law of sales.

Commercial Travelers, salesmen who travel in the interest of trading houses or manufactories. Formerly merchants from smaller towns sought the large cities to make purchases, and do so yet to some extent, but competition in business has led to the custom of sending traveling agents to the smaller dealers to solicit their trade. 'Drummer' is the familiar name for these agents in the United States; 'bagman' or 'rider' in England.

Commercial Treaties, treaties entered into between two countries for the purpose of improving and extending their commercial relations; each country engaging to abolish, to reduce to an agreed rate or otherwise modify the duties on articles of production and manufacture imported from the one country into the other. They are usually for a limited period, but may be renewed and modified according to altering conditions. In these treaties the phrase, 'most favored nation,' implies concessions equal to the most favorable granted under any similar treaty. The first treaty of commerce made by England with any foreign nation was entered into with the Flemings in 1272; the second was with Portugal and Spain in 1308. A measure to establish reciprocity of trade between the United States and Canada was passed by the Congress of the United States in 1911, but was rejected by Canada. Treaties of like nature have been negotiated with most of the American and a number of the European nations.

Commercy (kom-êr-sē), a town of France, dep. Meuse, on the Meuse, 21 miles E. of Bar-le-Duc. Pop. (1906) 5622.

Commination

Commination (kom-i-nā'shun), a n office in the liturgy of the Church of England, appointed to be read on Ash Wednesday or on the first day of Lent, containing a recital of God's anger and threatenings towards sinners.

Communes, or COMINES (kō-mēn), two towns, one in France, the other in Belgium, on opposite sides of the Lys, 8 miles N. of Lille. Anciently they formed a single town, which was fortified and had a castle, in which Philip de Communes was born. Pop. of French Communes, 8000; of Belgian Communes, 6000.

Communes (kō-mēn), PHILIPPE DE, French writer and statesman, born in 1445 at Communes; died in 1509. He became confidential adviser of Charles the Bold, Duke of Burgundy, but in 1472 he passed into the service of Louis XI, who loaded him with marks of favor. After the death of Charles the Bold Louis took possession of the duchy of Burgundy, sent Communes there, and soon after appointed him ambassador to Florence. He was afterwards sent by Louis to Savoy, for the purpose of seizing the young Duke Philibert, and of placing him entirely under the guardianship of the king, his uncle. In 1483 Louis XI died, and next year Communes attended Charles VIII in his invasion of Italy, and served him in a diplomatic capacity. Soon after that date he began to write his *Memoirs*, valuable as contributions to the history of his times. The first edition was published at Paris between 1523 and 1528. He relates in them the events which occurred during his life, and in most of which he had an active share, in lively, natural language, and displays everywhere a correct judgment, acute observation, and a profound knowledge of men and things.

Commissariat (kom-i-sā'ri-at), the department of an army whose duties consist in supplying transport, provisions, forage, camp equipage, etc., to the troops; also, the body of officers in that department. In the British army the commissariat and transport are under the Ordnance Store Department, with two commissaries-general and a number of deputy-commissaries-general, assistant commissaries-general, etc. In the United States army the Subsistence Department has one brigadier-general (commissary-general of subsistence), two colonels, three lieutenant-colonels, eight majors and twelve captains.

Commissary (kom'i-sar-i).—1. As an ecclesiastical term, an officer of a bishop who exercises spiritual jurisdiction in remote parts of

a diocese, or one entrusted with the performance of the duties in the bishop's absence. 2. In the army a term applied to officers charged with furnishing provisions, etc., for its use.

Com'missary-court, in Scotland, a sheriff or county court which decrees and confirms executors to deceased persons leaving personal property in Scotland, and discharges relative incidental functions.

Commission (ko-mish'un), a formal act of trust; a warrant by which any trust is held or authority exercised.—A written document, investing a person with an office or certain authority.—A certificate issued by authority by which a military officer is constituted; as, a captain's *commission*.—A body of persons joined in an office of trust, or their appointment; as, a building *commission*.—Brokerage, allowance, or compensation made to a factor, agent, etc., for transacting the business of another; as one per cent. *commission* on sales.—*Commission of bankruptcy*, a commission appointed to investigate the facts relative to an alleged bankruptcy, and to secure all available assets and effects for the creditors concerned.

A *commission merchant* is one who sells goods on behalf of another, being paid by a certain percentage which is called his *commission*.—*Putting a ship in commission* is fitting her out for service after she has been laid up.

Commission, City Government

by, a method of municipal government adopted originally in Galveston, and since applied successfully in Des Moines and many other American cities. Its purpose is to conduct the business affairs of cities on business principles and to do away with the system of political control and patronage. Usually five prominent business men of the city are elected as heads of the several municipal departments, and the management of affairs put under their care, the citizens retaining the right of recall of these officials from office if they prove incompetent or dishonest. The system, when fully tried, has proved desirable financially and otherwise and a marked improvement over the old method.

Commissioners of Highways,

officers having certain powers and duties concerning the highways within the limits of their jurisdiction. In some of the States they are county officers, and their jurisdiction is co-extensive with the county. In others they are town or township officers. They have power to establish,

repair or vacate highways, and it is their duty to cause them to be kept in good order.

Commissure (kom'i-sūr), in anatomy, a joining or union of two parts, as the sutures of the *corpus callosum* or *great commissure* of the brain.

Committee (kom-it'ē), one or more persons elected or appointed to attend to any matter or business referred to them either by a legislative body, or by a court, or by any corporation, or by any society or collective body of men acting together. In Parliament or Congress, when a committee consists of the whole members of the body acting in a different capacity from that which usually belongs to them it is called a *committee of the whole house*, the business of which is conducted under somewhat different regulations from those under which the business of the house when not in committee is carried on. Familiar examples are *committees of supply* and *committees of ways and means*.—*Standing committees* are such as continue during the existence of the legislative body, and to these are committed all matters that fall within the purposes of their appointment, as the committee of elections or of privileges, etc.—*Select committees* are appointed to consider and report on particular subjects.—When the House of Representatives resolves itself into the committee of the whole house the speaker leaves the chair, which is occupied by one of the members, denominated the Chairman of Committee.

Committee of Public Safety

(*Comité du Salut Public*), a body elected by the French Convention (April 6, 1793) from among its own members, at first having very limited powers conferred upon it—that of supervising the executive and of accelerating its actions. Subsequently, however, its powers became extended; all the executive authority passed into its hands, and the ministers became merely its scribes. It was at first composed of nine, but was increased to twelve members, viz.: Robespierre, Danton, Couthon, Saint-Just, Prieur, Robert-Lindet, Héroult de Séchelles, Jean-Bon Saint-André, Barrère, Carnot, Collot d'Herbois and Billaud Varennes. The severe government of this body is known as the Reign of Terror, which ended with the execution of Robespierre and his associates in July, 1794. During the commune (March to May, 1871), a similar committee was established in Paris.

Commodore (kom'ō-dōr), in the British navy, an officer, generally a captain, holding a temporary commission with a rank between that of captain and admiral, who commands a ship or detachment of ships in the absence of an admiral. They are of two kinds—one having a captain under him in the same ship, and the other without a captain. The former has the rank, pay, and allowance of a rear-admiral, the latter the pay and allowance of a captain, with a special allowance as the admiralty may direct. They both carry distinguishing pennants. In the United States the title of commodore was occasionally given by courtesy to captains in the navy in former wars, as in the case of Commodore Perry, but it was not made an official title until the time of the Civil war, and it was abolished again in 1900, all the commodores now recognized being those on the retired list. The title is also given by courtesy to the senior captain of a line of merchant vessels, and also to the president of a yachting club.

Commodus (kom'ō-dus), L. ÆLIUS AURELIUS, a Roman emperor, son of Marcus Aurelius, was born in A.D. 161; killed in 192. He succeeded his father in 180, and gave early proofs of his cruel and voluptuous character. He gave himself up to the lowest society and the most shameless habits. He used to fight in the circus like a gladiator, and caused himself to be worshiped as Hercules. One of his concubines, whom he intended to put to death, administered poison to him; but it operated too slowly, and he was strangled by a favorite athlete.

Common (kom'un), in law, 'a profit which a man hath in the land of another.' There are certain rights of common which are recognized by the common law, namely, of *pasture*, of *piscary* or fishing, of *estovers* or cutting wood, and of *turbary* or of digging turf. But the phrase usually means the right of pasturing cattle, horses, etc., in a certain field, or within a certain territory. These rights have been mostly determined by prescription or immemorial usage. In Scotland a common is a piece of ground of which there is no superior, but the land is the land of the community generally.

Common Carriers. See *Carrier*.

Common Council, the council of a city or corporate town, empowered to make by-laws for the government of the citizens. The common councils sometimes consist of two

houses, chambers, or courts, and sometimes form only one. In the American cities the city council is generally composed of two branches, called, respectively, select and common. They are elected by the people.

Com'moner, in Britain, a term applied to all citizens except the hereditary nobility.

Common Law, the unwritten law, the law that receives its binding force from immemorial usage and universal reception, in distinction from the written or statute law; sometimes from the civil or canon law; and occasionally from the *lex mercatoria*, or commercial and maritime jurisprudence. It consists of that body of rules, principles, and customs which have been received from former times, and by which courts have been guided in their judicial decisions. The evidence of this law is to be found in the reports of those decisions and the records of the courts. Some of these rules may have originated in edicts or statutes which are now lost, or in the terms and conditions of particular grants or charters; but it is quite certain that many of them originated in judicial decisions founded on natural justice and equity, or on local customs. It is contrasted with (1) the statute law contained in legislative acts; (2) equity, which is also an accretion of judicial decisions, but formed by a new tribunal, which first appeared when the common law had reached its full growth; and (3) the civil law inherited by modern Europe from the Roman Empire. Wherever statute law, however, runs counter to common law, the latter is entirely overruled; but common law, on the other hand, asserts its preëminence where equity is opposed to it.

Common Pleas, in law, pleas brought by private persons against private persons, or by the government, when the cause of action is of a civil nature. In many States of the United States a court having jurisdiction generally in civil actions. In England the Court of Common Pleas is now merged in the High Court of Justice.

Common Prayer, Book of, the liturgy or public form of prayer prescribed by the Church of England to be used in all churches and chapels, and which the clergy are to use under a certain penalty. The Book of Common Prayer is used also by the English-speaking Episcopal churches in Scotland, Ireland, America, and the colonies, as well as by some non-episcopal bodies, with or without certain alterations. It dates from the reign of Ed-

ward VI; was published in 1549, and again with some changes in 1552. Some slight alterations were made upon it when it was adopted in the reign of Elizabeth. In the reign of James I, and finally soon after the Restoration, it underwent new revisions. The Book of Common Prayer of the Protestant Episcopal Church in America was ratified, after several revisions of the English book, in 1789, and was in general use until the adoption of the 'Standard' at the General Convention, Baltimore, Maryland, in 1892. This was published Easter, 1893, and is now in general use.

Commons, HOUSE OF. See *Britain* and *Parliament*.

Common Schools, a term used in the United States as equivalent to primary or elementary schools. They are supported by taxation and the rent or sale of school-lands.

Common Time, in music, is that in which every bar contains an even number of subdivisions, such as two minims, four quavers, or their equivalents. It is of two kinds, simple and compound. Simple common time is that which includes four beats in a bar, or any division of that number, or square of the number or its divisions. Compound common time includes two or four beats of three crochets or quavers to each beat.

Commonwealth (kom'un-welth), the whole body of people in a state; the body politic. In English history the name given to the form of government established after the death of Charles I, and which lasted until the restoration of Charles II (1649-59).

Communalism (kom'ū-nal-izm), the theory of government by communes or corporations of towns and districts, adopted by the advanced republicans of France and elsewhere. The doctrine is that every commune, or at least every important city commune, as Paris, Marseilles, Lyons, etc., should be a kind of independent state in itself, and France merely a federation of such states. This system must not be confounded with *Communism*, with which however, it is naturally and historically allied, though the two are perfectly distinct in principle.

Commune (kom'ūn), a small territorial district in France, being one of the subordinate divisions into which that country is parceled out; the name is also given to similar divisions in some other countries, as Belgium. In the country a commune sometimes embraces a number of villages, while some large cities are divided into a number of

communes. In either case each commune is governed by an officer called a mayor.

Commune of Paris. —1. A revolutionary committee which took the place of the municipality of Paris in the French revolution of 1789, and soon usurped the supreme authority in the state. Among its chiefs were some of the most violent of the demagogues, such as Hébert, Danton and Robespierre. 2. The name adopted by the ultraradical party in Paris brought once more into prominence by the events of the Franco-German war, more immediately by the siege of Paris (Oct., 1870, to Jan., 1871). They ruled over Paris for a brief period after the evacuation of the German troops, and had to be suppressed by troops collected by the National Assembly of France. Much bloodshed and wanton destruction of property took place before the rising was put down by M. Thiers' government.

Communion (ko-mun'yun), the act of partaking with others of the sacramental symbols in the Lord's Supper. See *Lord's Supper*.

Communism (kom'ū-nizm), the economic system or theory which upholds the absorption of all proprietary rights in a common interest, an equitable division of labor, and the formation of a fund for the supply of all the wants of the community; the doctrine of a community of property, or the negation of individual rights in property. No communistic society has as yet been successful. Robert Owen made several experiments in modified communism, but they failed. St. Simon, Fourier and Proudhon have been the chief exponents of the system in France. Socialism (*q. v.*) is succeeding communism as an economic system.

Commutator (kom-ū-tā'tor), a piece of apparatus used in connection with many electrical instruments for reversing the current from the battery without the necessity of changing the arrangement of the conductors from the poles.

Comne'ni, an extinct family of sovereigns, statesmen, generals and authors, said to be of Italian origin, to which belonged, from 1057 to 1185, six emperors of the East—Isaac I, Alexis I, John II, Manuel I, Alexis II and Andronicus I. When the Crusaders had overturned the throne of the Comneni in Constantinople a prince of that house founded an independent state at Trebizond in Asia Minor, where he was governor (1204). The last sovereign of this house was David Comnenus (1461).

A remarkable member of the family was the Princess Anna Comnena. See *Anna Comnena*.

Como (kō'mō; anciently *Comum*), capital of the province of Como, in the north of Italy (Lombardy), 24 miles N. N. W. of Milan, in a delightful valley at the S. W. extremity of Lake Como. It has a splendid marble cathedral dating from the fourteenth century, the old church of S. Fedele of the tenth century, the town-hall finished in 1215, the fine theater built in 1813. Here were born Pliny the elder and younger, and Volta the natural philosopher. Pop. 34,272.—The province of Como has an area of 1049 square miles. Pop. 576,275.

Como, LAKE OF (*Lago di Como*, anciently *Lacus Larius*), a lake in the north of Italy, at the foot of the Alps, fed and drained by the river Adda, which carries its surplus waters to the Po. It extends from southwest to northeast 30 miles, giving off towards the middle, at the promontory where stands Bellaggio, a branch running for about 13 miles southeast to Lecco, called the Lake of Lecco; greatest width 2½ miles, greatest depth 1929 feet. It is celebrated for the beautiful scenery of its shores, which are covered with handsome villas, gardens, and vineyards, mountains rising behind to the height of 7000 feet. Trout and other fish abound in the lake.

Comorin (kom'ō-rin), a cape forming the southern extremity of Hindustan (lat. 8° 4' N., lon. 77° 35' E.) and consisting of a low, sandy point.

Comoro Islands (kom'ō-rō), a volcanic group in the Indian Ocean, between the northern extremity of Madagascar and the continent of Africa. They are four in number: Great Comoro, Mohilla, Johanna and Mayotta; total area, about 760 sq. miles; pop. 82,000. The people are nominally Mohammedans, and are akin to the mixed races of Zanzibar. They have large flocks and herds; and the coast lands are very fertile, abounding in tropical grains and fruits. Mayotta has belonged to France since 1843, and in 1886 the others became a French possession.

Companies (kum'pā-nēs), JOINT-STOCK. See *Joint-stock Companies* and *Partnership*.

Companion (kum-pan'yun), a raised hatch or cover to the cabin stair of a merchant vessel.—*Companion Ladder*, the steps or ladder by which persons ascend to and descend from the 'quarter-deck.

Company (kum'pā-ni), in military language, a subdivision of an infantry regiment or battalion, cor-

responding to a troop of cavalry or a battery of artillery, consisting of from 60 to 100 men and commanded by a captain.

Comparative Anatomy. See *Anatomy*.

Comparison (k o m - p a r' i - sun), DEGREES OF, in grammar, inflections of adjectives or adverbs to express degrees of the original quality, usually divided into positive, comparative, and superlative; as *strong*, *stronger*, *strongest*, *glorious*, *more glorious*, *most glorious*.

Compass (kum'pas), an instrument used to indicate the magnetic meridian or the position of objects with respect to that meridian, and employed especially on ships, and by surveyors and travelers. Its origin is unknown, but it is supposed to have been brought from China to Europe about the middle of the thirteenth century. As now generally used it consists of three parts: namely, the box, the card or fly, and the needle—the latter being the really

ceptacle hung within a wooden one by two concentric rings called gimbals, so fixed by the cross centers to the box that the inner one, or compass-box, shall retain a horizontal position in all motions

Compass Card.

Ship's Compass.

a b, Needle. *c c*, Box. *d d*, Inner gimbal. *f f*, Outer gimbal. *i*, Pivot upon which the card is placed. *m*, Reflector. *r r*, Card. *t t*, *u u*, Supporting pivots.

essential part, and consisting of a small magnet so suspended that it may be able to move freely in a horizontal direction. The box, which contains the card and needle, is, in the case of the common *mariner's compass*, a circular brass re-

of the ship. The circular card is divided into thirty-two equal parts by lines drawn from the center to the circumference, called points or rhumbs; the intervals between the points are also divided into halves and quarters, and the whole circumference into equal parts or degrees, 360 of which complete the circle; and, consequently, the distance or angle comprehended between any two rhumbs is equal to $11\frac{1}{4}^{\circ}$. The four principal are called cardinal points: viz. North, South, East and West. The names of the rest are compounded of these. The needle is a small bar of magnetized steel. It is fixed on the under side of the card, and in the center is placed a conical socket, which is poised on an upright, pointed pin fixed in the bottom of the box; so that the card, hanging on the pin, turns freely round its center, and one of the points, by the property of the needle, will always be directed towards the north pole. The needle, however, is liable to a certain deviation owing to the magnetism of the ship itself, and this is especially strong in iron ships. (See *Deviation*.) To obviate this defect Sir W. Thomson has invented a compass, having a number of needles arranged in a particular manner instead of one. In this compass quadrantal errors are corrected by means of two iron globes fixed on opposite sides of the binnacle; while the various components of the ship's magnetic force are neutralized by a series of bar-magnets so arranged as to act as correctors. In the compass used by land-surveyors and others the needle is not fixed to the card, but plays alone, the card being drawn on the bottom of the box.

Compasses (kum pa-ses), or **PAIR OF COMPASSES**, a mathematical instrument used for the describing of circles, measuring lines, etc. They consist simply of two pointed legs, movable on a joint or pivot, and are used for measuring and transferring distances. For describing circles the lower end of one of the legs is removed and its place supplied by a holder for a pencil or pen.—*Hair Compasses* are compasses having a spring tending to keep the legs apart, and a finely threaded screw by which the spring can be compressed or relaxed with the utmost nicety, and the distance of the legs regulated to a hair's breadth.—*Bow Compasses* are compasses having the two legs united by a bow passing through one of them, the distance between the legs being adjusted by means of a screw and nut.—*Proportional Compasses* are compasses used for reducing or enlarging drawings, having the legs crossing so as to present a pair on each side of a common pivot. By means of a slit in the legs, and the movable pivot, the relative distances between the points at the respective ends may be adjusted at pleasure in the required proportion.

Compass Plant (*Silphium laciniatum*), a composite plant growing in the prairies of the Mississippi Valley, and remarkable from the fact that its erect radical leaves stand so that their edges point almost exactly north and south, especially in midsummer. This is said to be due to the action of light, and to depend on the leaves having an equal number of stomata on either face.

Compensation (kom-pen-sā'shun), **BALANCE, PENDULUM**, a balance-wheel or a pendulum so constructed as to counteract the tendency of variations of temperature to produce variations in the rate of vibration or oscillation. This may be accomplished in various ways, as by bars formed of two or more metals of different expansibilities, so that the expansion of one counteracts the expansion of another. They are used to produce perfect equality of motion in the balances of watches and chronometers and the pendulums of clocks.

Compiègne (kōn-pe-ain), a French town, dep. Oise, on the left bank of the Oise, 45 miles N. N. E. of Paris. It has a splendid château, built by St. Louis, rebuilt by Louis XIV, and improved by Louis XV, Louis XVI, and Napoleon I. It was the autumn resort of the court of Napoleon III. In 1430 Joan of Arc was taken prisoner here by the English. Pop. 14,052.

Complexion (kom-plek'shun), the color or hue of the skin, particularly of the face. The color depends partly on pigment in the deep cells of the epidermis and partly on the blood supply. The nature and color of the hair seem closely connected with the complexion, and these combined are important distinguishing marks of different races. See *Ethnology*.

Compline (kom'plin), the last of the daily canonical hours in the Roman Catholic breviary; the complement of the Vespers or evening office.

Compositæ (kom-pos'i-tē), the largest known nat. order of plants, containing over 12,000 described species of herbs or shrubs distributed all over the world. The flowers (generally called *florets*) are numerous (with few exceptions) and sessile, forming a close head on the dilated top of the receptacle; and surrounded by an involucre of whorled bracts. The flowers are monopetalous, and the order is divided into three natural groups from the form of the corolla; (1) *Tubulifloræ*, in which it is tubular, with five, rarely four, teeth; (2) *Labiatifloræ*, in which it is divided into two lips; and (3) *Ligulifloræ*, in which it is slit or ligulate. The stamens are inserted on the corolla, and their anthers are united into a tube (syngenesious). The style is two-cleft at the apex. The fruit is dry and seed-like. The head of numerous florets was called by the older botanists a compound flower, hence the name. Many are common weeds, like the daisy, dandelion, thistle, etc.; many are cultivated in gardens, such as the asters, marigold, etc.; others have some economic or medicinal value, as chicory, artichoke, chamomile, lettuce, wormwood, arnica, etc.

Composite

(kom'pos-it) **ORDER**, in architecture the last of the five orders; so called because the capital belonging to it is composed out of those of the other orders, borrowing a quarter-round from the Tuscan and Doric, a row of leaves from the Corinthian, and volutes from

*Composite Order.

the Ionic. Its cornice has simple moldings or dentils. It is called also the *Roman* or the *Italic* order.

Composition (kom-pō-zish'un), an arrangement which a bankrupt or person in pecuniary difficulties makes with his creditors, and by which he arranges to pay them a certain proportion only of the debts due. See *Bankrupt*.

Composition of Forces and

Motions, in mechanics, the union or assemblage of several forces or motions that are oblique to one another into an equivalent force or motion in another direction. Thus two forces acting in the directions of the adjacent sides of a parallelogram compose one force acting in the direction of the diagonal, and if the lengths of the adjacent sides represent also the magnitudes of the forces, the diagonal will represent the magnitude of the compound force or *resultant*.

Compostella (kom-pos-tel'a). See *Santiago-de-Compostella*.

Compostel'la, ORDER OF ST. JAMES OF, an order of Spanish knights formed in the twelfth century to protect the Christian pilgrims who flocked in vast numbers to Santiago-de-Compostella, where the relics of St. James were preserved. In time they attained great wealth, thereby exciting the jealousy of the crown, which succeeded in securing the grand-mastership in 1522, whereupon the order rapidly declined.

Composts (kom'posts), in agriculture, are mixtures of various fertilizing substances. See *Manure*.

Compound Animals, animals, many of which by no means belong to the lowest types, in which individuals, distinct as regards many of the functions of life, are yet connected by some part of their frame so as to form a united whole. Such are the polyzoa and some of the ascidia.

Compound Blowpipe, or OXY-HYDROGEN BLOWPIPE. See *Blowpipe*.

Compounding (kom-pound'ing) OF FELONY, the accepting of a consideration for forbearing to prosecute; or the agreeing to receive one's goods again from a thief on condition of not prosecuting. This is an offense punishable by fine and imprisonment.

Compound Radical. See *Chemistry*.

Compressed Air (kom-prest'), atmospheric air compressed by means of pumps, etc., and used in driving stationary and locomotive engines, and excavating machines; as also

in working pneumatic despatch tubes, railway brakes, etc. Large railroad tunnels have been excavated by the use of compressed air motors, such as Hoosac tunnel and the Mount Cenis and others in the Alps. In these cases the air was compressed by the aid of external water-power and conveyed by tubes to the rock drills within the tunnels. Without the aid of this source of power these enterprises would have been practically impossible, at least before the time of the electric motor.

Compressibility (kom-pres-i-bil'i-ti), the property of bodies in virtue of which they may be pressed into smaller bulk. All bodies are probably compressible, though the liquids are but slightly so. The gases are exceedingly compressible, and may be liquefied by pressure and cold combined. Those bodies which occupy their former space when the pressure is removed are called elastic.

Compurgation (kom-pur-gā'shun), a mode of defense allowed by the Anglo-Saxon law in England, and common to most of the Teutonic tribes. The accused was permitted to call a certain number (usually twelve) of men, called compurgators, who joined their oaths to his in testimony to his innocence. They were persons taken from the neighborhood, or otherwise known to the accused, and acted rather in the character of jurymen than that of witnesses, for they swore to their belief, not to what they knew; that is, on the accused making oath of his innocence they swore that they believed he was speaking the truth. Compurgation in the ecclesiastical courts was not abolished till the reign of Elizabeth.

Comstock Lode (kom'stok), formerly an extremely rich metallic lode in the western part of the State of Nevada, on the eastern slope of the Virginia Mountains. To it belonged the Big Bonanza and other mines, which have yielded gold and silver to the value of over \$300,000,000.

Comte (kont), ISIDORE AUGUSTE MARIE FRANÇOIS XAVIER, founder of the 'positive' system of philosophy, was born at Montpellier in 1798; died at Paris 1857. His family were zealous Catholics and royalists. He was educated at the école Polytechnique, and embraced enthusiastically the socialist tenets of St. Simon. As one of his most distinguished pupils he was employed, in 1820, to draw up a formula of the doctrines professed by the St. Simonian school, which he accordingly accomplished in his *Système de Politique Po-*

sitive. This work did not, however, meet with the approbation of St. Simon, who asserted that Comte had made a very important omission by overlooking the religious or sentimental part of human nature. In 1826 Comte commenced a course of lectures on positive philosophy but only four lectures were given when he became deranged in mind, and did not recover till the end of 1827. In 1830 he commenced the publication of his *Cours de Philosophie Positive*, which was completed in six volumes in 1842, and was freely translated into English and condensed by Harriet Martineau (two vols. 1853). (See *Positive Philosophy*.) Some aspersions on his superiors at the École Polytechnique, where he held the posts of teacher and examiner, led to his dismissal, and some English friends subscribed a temporary subsidy; and at a later period M. Littré organized a general subsidy, which afforded him a moderate degree of comfort in his later years. In 1845 he made the acquaintance of Clotilde de Vaux, who seems to have inspired him with a depth and tenderness of moral and æsthetic feeling before unknown in him. This appears in his second great work, *Positive Polity* (1851-54); the *Positivist Catechism* (1852); and his last work, *Subjective Synthesis* (1855). In his *Religion of Humanity* he himself assumed the office of high-priest, performing marriage and funeral rites on behalf of the disciples who had been induced to adopt this system. These, however, were never very numerous; and as a practical faith his system is now stationary, though as a philosophy of knowledge it is widely accepted. His works have been made known to English readers mainly by Mr. G. H. Lewes' *Comte's Philosophy of the Sciences* and Miss Martineau's translation above mentioned.

Comus (kō'mus), in the later Greek mythology, the god of revelry, feasting, and nocturnal entertainments, generally represented as a drunken youth. Milton's Comus is a creation of his own.

Comyn (kom'in), JOHN, Lord of Badenoch, was one of the commissioners sent to confer about the marriage of the Maid of Norway to Prince Edward of England. On the competition for the Scotch throne in 1291 Comyn put in a claim as a descendant of Donald Bane. The date of his death is uncertain, but he was alive in 1299.—His son, JOHN COMYN, called the 'Red Comyn,' was chosen one of the three guardians of Scotland, and defeated the English at Roslin in 1302. He submitted to Edward I in 1304, and was killed by

Bruce in the Convent of the Minorites at Dumfries in 1306.

Con, an Italian preposition signifying *with*, and of frequent occurrence in musical phraseology; *con amore*, with feeling; *con brio*, brilliantly; *con gusto*, with taste, etc.

Conacre (kon'ā-kēr, kon-ā'kēr), a term applied to a system common in Ireland, of underletting a portion of a farm for a single crop, the rent being paid to the farmer in money or in labor.

Concan (kon'kan), a maritime subdivision of Hindustan, in the presidency of Bombay. It consists of a long belt of sea-coast, stretching from north to south for about 220 miles, with an average breadth of 35 miles, and bounded on the east by the Western Ghauts. It includes the town and island of Bombay. Area about 12,500 sq. miles; pop. 3,035,654.

Concarneau (kōn-kär-nō), a seaport, France, dep. Finistère, on an island in the bay of La Forêt. Has sardine and pilchard fisheries; a zoölogical laboratory, connected with the college of France; is much visited by artists. Pop. 7887.

Concave (kon'kāv), hollow and curved or rounded, as the inner surface of a spherical body. A surface is *concave* when straight lines drawn from point to point in it fall between the surface and the spectator; and *convex* when the surface comes between him and such lines.

Concentration (kon-sen-trā'shun), in chemistry, the act of increasing the strength of solutions. This is effected in different ways; by evaporating off the solvent, as is done in the separation of salt from sea-water; by distilling off the more volatile liquid, as in the rectification of spirit of wine; by the use of low temperatures, as, in the purification of benzol; by difference of fusibility, as in Pattinson's process for desilvering lead.

Concepcion (kon-sep-se-ōn'), a seaport of Chile, capital of a province of the same name, on the right bank of the Biobio, 7½ miles from its mouth, a well-built town, with a cathedral. Its port at Talcahuano, a small town on the Bay of Concepcion, about 8 miles distant, is one of the best in Chile. Concepcion was founded in 1550, and has suffered much from earthquakes and attacks by the Araucanians. Pop. 55,458. There are towns of the same name in Paraguay and Uruguay, of 10,000 to 12,000 each, and others of smaller size in Latin America.

Conception (con-sep'shun), the act or power of conceiving in the mind; in philosophy, that mental act or combination of acts by which an absent object of perception is brought before the mind by the imagination.

Conception, IMMACULATE, in the Roman Catholic Church, the doctrine that the Virgin Mary was born without the stain of original sin. This doctrine came into favor in the twelfth century, when, however, it was opposed by St. Bernard, and it afterwards became a subject of vehement controversy between the Scotists, who supported, and the Thomists, who opposed it. In 1708 Clement XI appointed a festival to be celebrated throughout the church in honor of the immaculate conception. Since that time it was received in the Roman Church as an opinion, but not as an article of faith until the year 1854, when the pope issued a bull which makes the immaculate conception a point of faith.

Conceptualism (k o n-sep'tū-al-izm), in metaphysics, a doctrine in some sense intermediate between realism and nominalism. Conceptualism assigns to universals an existence which may be called logical or psychological, that is, independent of single objects, but dependent upon the mind of the thinking subject, in which they are as notions or conceptions.

Concert (kon'sert, a public or private musical entertainment, at which a number of vocalists or instrumentalists, or both, perform singly or combined.

Concertina (kon-ser-tē'na), a musical instrument invented by Professor Wheatstone, the principle of which is similar to that of the accordion. It is composed of a bellows, with two faces or ends, generally polygonal in shape, on which are placed the various stops or studs, by the action of which air is admitted to the free metallic reeds which produce the sounds. In the English concertina the compass is three octaves and three notes. The German concertina is an inferior instrument.

Concerto (kon-cher'tō), in music, a kind of composition, usually in a symphonic form, written for one principal instrument, with accompaniments for a full orchestra.

Concert Pitch. See *Pitch*.

Concession (kon-sesh'un), a permission conceded by a government to a person or company to do certain things: specially applied to grants of land, of privileges or immunities in connection with certain enter-

prises, such as mining, the construction of railways, canals, or the like, usually subject to fixed conditions and limitations.

Conch (kongk), a marine shell, especially a large spiral shell of a trumpet shape, and which may be blown as a trumpet, as in the practice in Hindustan and some of the Pacific islands.

Conchifera (kon-kif'è-ra), Lamarck's name for that large class of acephalous molluscs which have shells consisting of two pieces, commonly known as *bivalves* (oyster, mussel, etc.).

Conchology (kon-kol'o-gi), the science of shells, that department of zoölogy which treats of the nature, formation and classification of the shells with which the bodies of many mollusca are protected; or the word may be used also to include a knowledge of the animals themselves, in which case it is equivalent to *malacology*. In systems of conchology shells are usually divided into three orders, univalves, bivalves and multivalves, according to the number of pieces of which they are composed. See *Mollusca*.

Conclave (kon'klāv), the place where the cardinals assemble for the election of the pope; also the electoral assembly of the cardinals themselves, Pope Gregory X, whose election had been delayed for three years, established in the council at Lyons (1274) the regulations of the conclave. The cardinals are shut up together in a particular suite of apartments in the palace where the pontiff dies, and they are supposed to have no communication with the outside world during the period of the election. The companion, either lay or clerical, whom the cardinal is allowed to take with him into the conclave during the election of a pope is called a *conclavist*. The office is one of great delicacy and trust.

Concord (kon'kord), in music, the combination of two or more sounds pleasing to the ear. Concords are the octave, the fifth, third and sixth. The two first are called *perfect*, because as concords they are not liable to any alteration by sharps or flats. The two last are called *imperfect*, as being alterable.

Concord (kon'kord), a village of Massachusetts, on the Concord River, 20 miles W. N. W. of Boston. It has a state reformatory and manufactures of harness, rubber, etc., and is a large railroad center. It was the birthplace of Emerson, Hawthorne, Thoreau, Miss Alcott, and other eminent writers, and is historically famous as

CONCRETE FACTORY IN COURSE OF CONSTRUCTION

MODERN CONCRETE FACTORY BUILDING

The Thomson Meter Factory in Brooklyn. This method of construction makes it possible to secure the maximum of light and ventilation with strength and decorative effect. The upper view shows the method of constructing this type of building.

the scene of the first fight between the British and Americans in the Revolution, shortly after the firing on the militia at Lexington. Pop. 6421.

Concord, a city, the capital of New Hampshire and of Merrimack Co., on the Merrimack River, 73 miles W. N. W. of Boston. It has interesting public edifices, and large manufactures, having water-power in abundance. Its products include cotton and woolen goods, wagons, machinery, and various others. There are quarries of fine granite in the vicinity, which are extensively worked. Pop. 21,497.

Concord, a city, capital of Cabarrus Co., North Carolina, 21 miles N. E. of Charlotte. Has ironworks and manufactures of cotton sheetings, plaids, etc. The Scotia Seminary (colored) is located here. Pop. 8715.

Concordance (kon-kord'ans), a book in which the principal words used in any work or number of works, as the Scriptures, Shakespere, Milton, Tennyson, Homer, etc., are arranged alphabetically, and the book, chapter and verse, or act, scene, line, or other subdivision in which each word occurs are noted; designed to assist an inquirer in finding any passage by means of any leading word which he can recollect, or to show the character of the language and style of any writer. Some of the most approved concordances in English are those of the Bible by Cruden, Butterworth, Brown and Taylor. Of non-biblical concordances, that of Mary Cowden Clarke to Shakespere deserves especially to be mentioned.

Concordat (kon-kor'dat), a convention between the pope, as head of the Roman Catholic Church, and any secular government, for the settling of ecclesiastical relations. One of the most important of the earlier concordats, that of Worms, called also the *Calixtine Concordat*, made in 1122, between Pope Calixtus II and the Emperor Henry V, has been regarded as the fundamental law of the church in Germany. Another celebrated concordat was that agreed upon between Cardinal Gonsalvi, in the name of Pius VII, and Napoleon in July, 1801. By it the head of the state had the nomination of bishops to the vacant sees; the clergy became subject in temporal matters to the civil power; all immunities, ecclesiastical courts, and jurisdictions were abolished in France, and even the regulations of the public worship and religious ceremonies and the pastoral addresses of the clergy were placed under the control of the secular authorities. Most of these

provisions remain in France at the present day. Since the middle of the eighteenth century concordats have generally been adverse to the power of the popes.

Concrete (kon'krēt), a technical term in logic, applied to an object as it exists in nature, invested with all its attributes, or to the notion of such an object. Concrete is opposite to abstract. The names of individuals are concrete; those of classes, abstract. A concrete name is a name which stands for a thing; an abstract name is a name which stands for the attribute of a thing.

Con'crete, a composition used in building, consisting of hydraulic or other mortar mixed with gravel or stone chippings about the size of a nut. It is used extensively in building under water, for example, to form the bottom of a canal or sluice, or the foundation of any structures raised in the sea; and it is also frequently used to make a bed for asphalt pavements, or to form foundations for buildings of any kind. It has also come extensively into use as the material with which the walls of houses are built, the concrete being firmly rammed into molds of the requisite shape, and then allowed to set. In large buildings a material known as *reinforced concrete* has come into use, the reinforcement consisting of strong steel rods around which the concrete is poured and which add very greatly to its strength. Many very large buildings have been erected in this manner, and the use of concrete as a building material is rapidly growing.

Concretions (kon-krē'shuns), MOR-BID, in animal economy, hard substances that occasionally make their appearance in different parts of the body, as well in the solids as in those cavities destined to contain fluids. They are usually named according to the parts of the body in which they occur, as *pinical, salivary, pancreatic, hepatic, pulmonary, urinary* concretions, etc. Their composition is equally various, but the most common constituents are phosphates, urates, or other salts, in combination with mucus, albumen, fibrin, and other organic matter. See *Calculus*.

Concubinage (kon-kū'bi-nāj), sexual cohabitation of a man without legal marriage. It was permitted among the ancient Hebrews and the Greeks without limitation; but among the Romans in the case of unmarried men concubinage was limited by the Lex Julia and Lex Papia Poppæa to a single concubine of mean descent.

Concurrent Jurisdiction (kon-kur'-ent), the jurisdiction of differ-

ent courts authorized to take cognizance of the same kind of case. In criminal cases the court which first takes up a case has the right of prevention, that is, of deciding upon that case exclusive of the other courts which but for that right would have been equally entitled to take cognizance of it. In civil cases it lies with the suitor to bring his cause before any court he pleases which is competent to take it up.

Concussion of the Brain (kon-kush'-un),

a term applied to certain injuries of the brain resulting from blows and falls, though unattended with fracture of the skull. Stupor or insensibility, sickness, impeded respiration, and irregular pulse are the first symptoms, and though these may subside there is always for a time more or less risk of serious inflammation of the brain setting in.

Condamine, CHARLES MARIE DE LA. See *La Condamine*.

Condé (kōn-dā), town and fortress of France, dep. Nord, at the confluence of the Hayne and Scheldt. It gave their title to the Condé family. Pop. (1906) 2701.—For another Condé see *Condé-sur-Noireau*.

Condé, LOUIS DE BOURBON, founder of the house of, born in 1530; killed after battle of Jarnac, 1569. See *Bourbon*.

Condé, LOUIS DE BOURBON, PRINCE OF (the *Great Condé*), a famous general, born in 1621. In 1641 he married a niece of Cardinal Richelieu. His defeat of the Spanish at Rocroi, in 1643, was followed, in 1645, by his defeat of Mercy at Nordlingen, and by his capture of Dunkirk in 1646, the year in which he inherited his father's title. During the troubles of the Fronde he at first took the side of the court; but believing himself to be ill requited by Mazarin he put himself at the head of the faction of the *Petits Maîtres*, and was imprisoned for a year by Mazarin (1650). On his release he at once put himself at the head of a new Fronde, entered upon negotiations with Spain, and, his attack on Paris being indecisive, retired to the Netherlands, where he was appointed generalissimo of the Spanish armies. In this capacity he unsuccessfully besieged Arras in 1654; but he was more fortunate at Valenciennes in 1656, and at Cambrai in 1657. In 1658 he was defeated before Dunkirk by Turenne, but was restored to his rank in France after the peace of 1659. In 1668 he accomplished the reduction of Franche Comté in three weeks; and in 1674 he defeated the Prince of Orange at Senef. His successes

over Montecuculi in Alsace in 1675 closed his military career. Four years later he retired to Chantilly, near Paris, and died at Fontainebleau in 1687.

Condé, LOUIS JOSEPH DE BOURBON, PRINCE OF, born at Chantilly in 1736; only son of the Duke of Bourbon and the Princess of Hesse-Rheinfels. He distinguished himself in the Seven Years' war, and in 1762 defeated the Prince of Brunswick at Johannisberg. On the outbreak of the revolution in 1789 he emigrated, and in 1792 formed, at Worms, a corps of emigrant nobility, which first joined the Austrian, and, in 1795, the English service. In 1797 he entered the Russian service, but in 1800, after the separation of Russia from the coalition, reentered for a time the English army. He lived in England till 1813, returned to Paris in 1814, received various honors, and attended the king in his flight to Ghent. On his return he was appointed president of a bureau of the chamber of peers, but soon after retired to Chantilly. He died at Paris in 1818.

Condensation (kon-den-sā'shun), in chemistry and physics, the act of reducing a gas or vapor to a liquid or solid form. *Surface condensation*, a mode of condensing steam by bringing it in contact with cold metallic surfaces in place of by injecting cold water.

Condensed Milk (kon-denst'), milk preserved by evaporating part of its moisture, mixing with refined powdered sugar, and packing in air-tight cans hermetically sealed; the sugar may also be omitted.

Condenser (kon-den'ser), a syringe by which air is compressed into a receiver. Also a vessel in which aqueous or other vapors are condensed by cooling into the liquid form.

Condensing Steam-Engine. See *Steam-engine*.

Condé-sur-Noireau (kōn-dā-sür-nwä-rō), a town of France, dep. Calvados, at the confluence of the Noireau and Drouance. Chief manufacture, cotton. Pop. 5709.

Condillac (kōn-dē-yāk), ÉTIENNE BONNOT DE, a French philosopher born in 1715. His *Essai sur l'Origine des Connaissances Humaines* (1746), in large part a polemic against abstract methods of philosophizing, struck the keynote of his system, and his *Traité des Systèmes* (1749) continued the condemnation of all systems not evolved from experience, from sensation. In 1754 appeared his *Traité des Sensations*, and

ROCK-CRUSHING PLANT FOR CONCRETE MATERIAL

The upper machine crushes the large rock to about the size of egg coal, delivering it to the rotary screen which is just being lowered into place. This screens out dust and small pieces, delivering the broken stone to the smaller crusher below, which breaks it to concrete size.

in 1755 his *Traité des Animaux*, a criticism on Buffon. The sagacity and clearness of his writings led to his appointment as tutor to the nephew of Louis XV, the infant Duke of Parma, for whom he wrote in 1755 his *Cours d'Etudes*, including a grammar, an *Art d'Ecrire*, an *Art de Reasonner*, an *Art de Penser*, and a general history. His work *Le Commerce et le Gouvernement* appeared in the same year as the *Wealth of Nations* (1776), and was no unworthy companion to it. In 1768 he was elected to the Academy. He died shortly after the publication of his *Logie* in 1780, his *Langue des Calculs* being published posthumously in 1798.

Conditional Immortality (condish'-un-al), a doctrine held by certain religious sects, which hold that immortality is dependent upon certain conditions of belief and conduct, and replace the tenet of future punishment by that of annihilation. This doctrine has been advanced at intervals from ancient times, and in our day it has many advocates.

Conditioned and Unconditioned, in philosophy, terms introduced by Sir William Hamilton. The Unconditioned is regarded by Sir William Hamilton as a genus including two species: the Infinite, or the unconditionally unlimited, and the Absolute or the unconditionally limited; and the thesis which he maintains and expounds, and which forms one of the leading doctrines of his philosophical system, is that the Unconditioned, as thus explained, is entirely unthinkable. The mind is confined, in point of knowledge though not of faith, to the limited and conditioned—the Conditioned being the mean between two unconditionates, mutually exclusive and equally inconceivable, but of which, on the principles of contradiction and excluded middle, *one must be admitted as necessary*. Thus infinite space is inconceivable by us, while at the same time it is equally impossible to us to conceive of space as finite; yet one of these must be admitted necessary, and our conception is in some sense a mean between the inconceivables. The doctrine was applied by Mansel to determine the limits of religious thought.

Condom (kon-dōn), a town of S. W. France, dep. Gers, on a height above the Baïse. It has a dilapidated cathedral, now the parish church. A considerable trade is carried on. Pop. (1906) 4046.

Condonation (kon-dō-nā'shun), in law, forgiveness of in-

jury. In an action for divorce on the ground of adultery it is a legal plea in defense.

Condor (kon'dor; Spanish name, from Peruvian *cuntur*), a South American bird, the *Sarcorhamphus gryphus*, one of the largest of the Vulturidæ or vulturine birds. In its essential features it resembles the common vultures, differing from them mainly in the large cartilaginous caruncle which surmounts its beak, and in the large size of its oval and longitudinal nostrils placed almost at the extremity of the cere. Despite the many stories of its gigantic proportions,

Condor (*Sarcorhamphus gryphus*).

Humboldt met with no specimens whose wings exceeded 9 feet in expanse, though it has occasionally been known to attain an expanse of 14 feet. It is found in greatest numbers in the Andes chain frequenting regions from 10,000 to 15,000 feet above the level of the sea, where they breed, depositing their two white eggs on the bare rock. They are generally to be seen in groups of three or four, and only descend to the plains under stress of hunger, when they will successfully attack sheep, goats, deer and bullocks. They prefer carrion, however, and, when they have opportunity, gorge themselves until they become incapable of rising from the ground, and so become a prey to the Indians. The king-vulture (*S. Papa*) is another bird of the same genus.

Condorcet (kon-dor-sā). MARIE JEAN ANTOINE NICOLAS DE CARITAT, MARQUIS DE, an eminent French writer, born in 1743. At the age of twenty-one he presented to the Academy of Sciences an *Essai sur le Calcul Intégral*, and in 1767 his *Mémoire sur le Problème des Trois Points* appeared, both being afterwards united under the title of *Essais d'Analyse*. The merit of this work gained for him in 1769 a seat in the Academy of Sciences, of which, after the publication of his *Eloges des Académiciens morts avant 1699* (1773), he was appointed perpetual secretary (1777). In

1777 his *Theory of Comets* gained the prize offered by the Academy of Berlin; he enriched the *Transactions* of many learned societies; and took an active part in the *Encyclopédie*. During the troubles of the first French revolution his sympathies were strongly engaged on the side of the people. By the city of Paris he was elected deputy to the legislative assembly, of which he was soon appointed secretary, and in February, 1792, president. On the trial of Louis he was in favor of the severest sentence not capital; at the same time he proposed to abolish capital punishments, except in case of crimes against the state. The fall of the Girondist party, May 31, 1793, prevented the constitution which Condorcet had drawn up from being accepted, and as he freely criticised the constitution which took its place he was denounced as being an accomplice of Brissot. Madame Verney, a woman of noble feelings, secreted him for eight months, during which he wrote his *Esquisse d'un Tableau Historique des Progrès de l'Esprit Humain*. Lest he should endanger her safety, however, he left the house secretly in opposition to her wishes, fled from Paris, and wandered about till arrested and thrown into prison, where, March 28, 1794, he was found dead on the floor, having apparently swallowed poison.

Condottieri (kōn-dō-tē-ā-rē), an Italian name given to the captains of those bands of mercenary soldiers who, in the fourteenth and fifteenth centuries, hired themselves out to carry on the petty wars of the Italian states. Montreal d'Albarno, a gentleman of Provence, was the first to give definite organization to a lawless band of this kind, and many of them attained a considerable size and power. One of the most noted was the company of Sforza Attendolo, whose son made himself Duke of Milan. For the most part, these mercenaries were good soldiers and splendidly equipped, but rapacious and cruel to all but their own class.

Conduction. See *Heat*.

Conductor (kon-duk'tur), or LIGHTNING-CONDUCTOR, an instrument by means of which either the electricity of the clouds, the cause of lightning, is conducted without explosion into the earth, or the lightning itself is received and conducted quietly into the earth or water without injuring buildings, ships, etc. It was invented by Benjamin Franklin about 1752, and met with speedy general adoption. It usually consists of a stout iron rod with one or more points at the top, the lower end being metalli-

cally connected with thick strips of copper which are carried into the ground to a considerable depth and terminated, if possible, in water or in wet earth. Various other forms of conductors have been introduced, such as are shown in the accompanying cut, where *a* is a conductor

Lightning-conductor.

a b e, Various forms of Rods. *c d f*, Various forms of Tips. *g h i*, Various forms of Attachments.

consisting of metallic strips joined together, *b* a conductor of copper wires intertwined with iron rods, *e* a conductor consisting of a metallic strip forming a tube with spiral flanges. Various kinds of tips are also in use, as will be seen in the cut, *d* being formed of several metals enclosed the one within the other, the most fusible being outside; *g*, *h*, *i* show how in some cases successive sections of rods are connected.

Conduit (kon'dit), a line of pipes or an underground channel of some kind for the conveyance of water, electric wires, etc.

Condyle (kon'dil; Gr. *kondylos*), in anatomy, a protuberance on the end of a bone serving to form an articulation with another bone; more especially applied to the prominence of the occipital bone for articulation with the spine.

Condy's Fluid, a preparation of permanganate of potash which is largely used as a deodorizer and disinfectant in fevers, etc. It is also employed as a gargle in diphtheria and other throat affections, and is especially valuable for cleansing ulcers and sores.

Cone (kōn), as used in geometry, generally means a right circular cone, which may be defined as the solid figure traced out when a right-angled triangle is made to revolve round one of the sides that contain the right angle. A more comprehensive definition may be given as follows:—Let a straight line be held fixed at one point, and let any other point of the line be made to describe any closed curve which does not cut itself: the solid figure traced out is a cone. When the curve which the second point describes is a circle, the cone is a right

circular cone. The cubical content of a right circular cone is one-third of that of a cylinder on the same base and of the same altitude, and is therefore found by multiplying the area of the base by the altitude, and taking one-third of the product. See also *Conic Sections*.

Cone, in botany, a dry compound fruit, consisting of many open scales, each with two seeds at the base, as in the conifers; a strobilus.

Conegliano (ko-nel-yü'nō), a town of Italy, province of Treviso, 28 miles N. of Venice. It has a castle and cathedral with paintings by Cima da Conegliano. Manufactures: silk and woolen cloths. Pop. 5880.

Cone-shell. See *Conus*.

Conessi-bark (kon-es'si), the bark of *Wrightia antidysenterica*, an apocynaceous plant of India, used as a tonic, a febrifuge, and an astringent in diarrhœa.

Coney Island, a small island 9 miles southeast of New York, at the west end of Long Island, a favorite summer bathing resort, having a fine beach, splendid hotels, and numerous other attractions and accommodations for visitors.

Confederate States, the name given to the eleven Southern States of the American Union which attempted to secede on the election of Abraham Lincoln, the Republican candidate, to the presidency in November, 1860, thus leading to the great Civil war which lasted till 1865. See *United States*.

Confederation (kōn-fed'ēr-ā-shun). THE GERMANIC. See *Germany*.

Confederation of the Rhine,

the league of Germanic states formed by Napoleon Bonaparte in 1806, and including Bavaria, Wurtemberg, Baden, Hesse-Darmstadt, the Kingdom of Westphalia, etc. It extended over 125,160 sq. miles, and comprised 14,608,877 inhabitants. The princes undertook to raise collectively a large body of troops in event of war, and established a diet at Frankfort; but the failure of Napoleon's Russian campaign of 1812 shook the structure, and the league soon after broke up. It was succeeded by a new league, the Germanic Confederation.

Conference (kōn'fêr-ens), (1) a meeting of the representatives of different foreign countries for the discussion of some question. (2) A meeting between delegates of the two houses of a legislative body called to dis-

cuss the provisions of a bill with regard to which they are disagreed, with the object of effecting an agreement between them. (3) The annual meeting of the Methodist Episcopal Church for deliberation on its affairs.

Confervaceæ (kōn-fer-vā'se-ē), a family of marine or fresh-water algæ having green fronds which are composed of articulated filaments simple or branched.

The cells are shortish and cylindrical, and they are reproduced not by conjugation, but by zoöspores formed from the cell-contents and furnished with two or four cilia. The typical genus *Conferva* is found, either attached to various bodies or floating swollen up with bubbles of gas, in dense masses on ponds. The well-known marine delicacy, laver (*Porphyra laciniata* and *P. vulgāris*), with the green laver (*Ulva latissima*), belongs to this tribe of plants.

Conferva (*Cladophora nuda*). a, branched filament magnified.

Confession (kōn-fesh'un), a term sometimes applied to a profession of faith; for instance, the Confession of Augsburg. It sometimes also signifies a religious sect; as the three Christian confessions—the Roman Catholic, the Lutheran and the Calvinistic, *Confiteor* (I acknowledge) is the confession which the Catholic priests make before the altar when beginning mass or public worship.

Confession, AURICULAR (a w-rik'ū-lar), in the strictest sense, the disclosure of sins to the priest at the confessional, with a view to obtain absolution for them. The person confessing is allowed to conceal no sin of consequence which he remembers to have committed, and the father confessor is bound to perpetual secrecy. The practice of a public acknowledgment of great sins was altered by Pope Leo the Great, in 450, into a secret one before the priest, and the fourth general Lateran council (1215) ordained that every one of the faithful, of both sexes, come to years of discretion, should privately confess all their sins at least once a year to their own pastor, an ordination still binding on members of the Roman Catholic Church. Confession is a part of the sacrament of penance.

Confessional (kōn-fesh'un-al), in Roman Catholic churches and chapels, a kind of enclosed seat in which the priest sits to hear

Confession of Augsburg

persons confess their sins. The confessional is often not unlike a sentry-box, the priest sitting within and the penitent

Confessional, Cathedral of St. Gudule, Brussels. kneeling without and speaking through an aperture. Many confessionals are in three divisions or compartments, the center, which is for the reception of the priest, being closed half-way up by a dwarf door, and having a seat within it. The side compartments, which communicate with the center by grated apertures, are for the penitents.

Confession of Augsburg. See *Augsburg Confession*.

Confession of Faith, a statement of religious beliefs, a kind of elaborate creed. (See *Creed*.) What is most distinctively known by this name is the document prepared by the Assembly of Divines which met at Westminster in obedience to an ordinance of Parliament issued June 12, 1643. The whole number of the assembly amounted to 174 members, mostly Puritans, thirty-two being members of Parliament. There were also six Scottish commissioners appointed to consult and deliberate, but not to vote. One of the chief results of the deliberations was the framing of the Confession of Faith, which, on the return of the Scottish commissioners, was adopted by the Assembly of the Church of Scotland, August 27, 1647.

Confidential Communication,

in law, a communication made by one person to another which the latter cannot be compelled to give in evidence as a witness. Generally all communications made between a client and his agent, between the agent and the counsel in a suit, or between the several parties to a suit, are treated as confidential. The privilege of confidentiality does not extend to disclosures made to a medical adviser, and

in England it has been decided also that confessions made to a priest are not to be treated as confidential.

Confirmation (kon-fér-mā'shun), the ceremony of laying on of hands by a bishop in the admission of baptized persons to the enjoyment of Christian privileges, the person confirmed then taking upon himself the baptismal vows made in his name. It is practised in the Greek, Roman Catholic, Lutheran and English churches. In the Roman Catholic churches a delay of 7 years is interposed after baptism, in the Lutheran from 13 to 16, and in the English Church from 14 to 18, though in the latter there is no fixed period.

Confiscation (kon-fis-kā'shun), the act of condemning as forfeited, and adjudging to the public treasury, the goods of a criminal in part punishment of a crime.

Conformable (kon-for'ma-bl), in geology, lying in parallel or nearly parallel planes, and having the same dip and changes of dip:

Conformable Strata *a* and *b*, Unconformable at *c*.

said of strata, the opposite term from *unconformable*.

Confucius (kon-fūsh'yus), or KONG-FU-TSE (signifying, 'the teacher, Kong'), the famous Chinese sage, born about 550 B.C. in the province of Shantung, then belonging in part to the small vassal kingdom of Lu. His father, Shuhliang-heih, who was of royal descent, died three years later, and the boy was reared in comparative poverty by his mother, Chingtsai. At the age of seventeen he was made inspector of corn-markets, at nineteen he married, and after about four years of domesticity, in which a son and two daughters were born him, he commenced his career as a teacher. In 517 B.C. he was induced by two members of one of the principal houses in Lu, who had joined his band of disciples, to visit the capital with them, where he had interviews with Lao-tze, the founder of Taouism. Though temporarily driven from Lu to Tsi by a revolution, he soon returned thither with an increasing following, and at the age of fifty-two was made chief magistrate of the city of Chung-too. So striking a reformation was effected by him that he was chosen

Confucius

for higher posts, became minister of crime, and with the aid of two powerful disciples elevated the state of Lu to a leading position in the kingdom. Its marquis, however, soon after gave himself up to debauchery, and Confucius became a wanderer in many states for thirteen years. In 483 he returned to Lu, but would not take office. The deaths of his favorite disciples Yen Hwin and Tze-lu in 481 and 478 did much to bring about his own, which took place in the latter year. Confucius left no work detailing his moral and social system, but the five canonical books of Confucianism are the *Yih-king*, the *Shu-king*, the *Shi-king*, the *Le-king* and the *Chun-t sien*, with which are grouped the 'Four Books,' by disciples of Confucius, the *Ta-hëo* or 'Great Study,' the *Chung-Yung* or 'Invariable Mean,' the *Tun-yu* or 'Philosophical Dialogues,' and the *Hi-tse*, written by Meng-tse or Mencius. The teaching of Confucius has had, and still has, an immense influence in China, though he can hardly be said to have founded either a religion or a philosophy. All his teachings was devoted to practical morality and to the duties of man in this world in relation to his fellowmen; in it was summed up the wisdom acquired by his own insight and experience, and that derived from the teaching of the sages of antiquity. It is doubtful if he had any real belief in a personal god.

Congé d'Elire (kōn-zhā dā-lër), the Norman French for 'leave to elect,' designates the sovereign's license authorizing the dean and chapter of a vacant see in England to proceed with a new election. Though nominally choosing their bishop, yet the dean and chapter are bound to elect, within a certain time, such person as the crown shall recommend, otherwise they incur the penalties of a *præmunire*.

Conger-eel (kong'gër), a genus of marine eels characterized by a long dorsal fin beginning near the nape of the neck, immediately above the origin of the pectoral fins, and by having the upper jaw longer than the lower. The best-known member of this genus is the *Conger vulgâris*, sometimes as thick as a man's thigh, frequently attaining a length of 10 feet and more than 100 lbs. in weight. It is pale brown above, grayish white below, with whitish dorsal and anal fins fringed with black. Its flesh is eaten, but is somewhat coarse.

Congestion (kon-jest'yun), in medicine signifies an excessive accumulation of blood in an organ, which thereby becomes disordered. Among the causes of congestion are the different

periods of development of the human body, each of which renders some particular organ unusually active; diseased conditions; and the accidental exertions of certain organs. Again, if the current of blood to one organ is checked the blood tends to accumulate in another; and the vessels which bring back the blood to the heart—that is, the veins—are sometimes obstructed, as by external pressure, by tumors, etc. Congestion sometimes lasts a short time only; but if not early cured, and its return, which would otherwise be frequent, prevented, it is only the beginning of other diseases. Sometimes it terminates in bleeding, which is a remedy for it; sometimes it increases into inflammation; sometimes it becomes a chronic disease, that is, the blood accumulates for a long time and expands the veins, the expansion becomes permanent, and dropsy may result.

Congleton (kon'g'l-tun), a market town of England, Cheshire, in a deep valley on the Dane, 22 miles s. of Manchester. It has cotton and silk manufactures, the latter forming the principal industry. Pop. (1911) 11,310.

Conglomerate (k on -glom'er-ât), a term applied by geologists to rocks consisting mostly of water-worn pebbles connected together by a matrix of siliceous, calcareous, or other cement, often called also *plum-pudding stone*.

Congo (kon'gō), or ZAIRES, one of the great rivers of the world, in Southern Africa, having its embouchure in the South Atlantic. The mouth of the river was known to the Portuguese in 1485, but the lower part of its course was first explored by an English expedition under Captain Tuckey, which, in 1816, ascended it for about 172 miles. In 1867, however, Livingstone discovered a considerable river called the Chambezi, rising in the Chibalé Hills, and having followed it to Lake Bangweolo traced it thence as the Luapula to Lake Moero, and thence again as the Lualaba to Nyangwe. From this point its exploration was taken up in 1876-77 by Stanley, who proved its identity with the Congo. It carries more water to the ocean than the Mississippi, its volume being next to that of the Amazon. Its total length is perhaps 3000 miles. Its chief tributaries are the Aruwimi and the Mobangi from the right, and the Ikelemba and Kwa from the left, which latter represents the collected waters of immense rivers from the south, such as the Kassai, the Kwango, etc. It is navigable for about 110 miles from its mouth, after which the navigation is interrupted by cataracts. See next article.

Congo Free State, a state recently founded on the river Congo, in Central South Africa, stretching by a kind of narrow neck of territory to the river's mouth, but expanding inland so as to cover an immense area, mainly lying south of the river. The obvious advantages of the Congo as a waterway in opening up the continent led to the formation at Brussels in 1878 of a Comité d'Études du Haut Congo, under the patronage of Leopold II, having as its aim the internationalization and development of the Congo area. Under its auspices Stanley returned in 1879 (see preceding article) to open up the river and form a free state under European auspices. He established a first station at Vivi, the limit of maritime navigation, 110 miles above the mouth of the river, constructed roads past the Yellala and Livingstone cataracts, and hauled steamers up to the higher reaches of the Congo, where in 1882 the station of Leopoldville was formed on Stanley Pool. Of the 223 miles between Vivi and Leopoldville only 88 are navigable water; but from the latter station to Stanley Falls the Congo itself is continuously navigable for 1000 miles, to which its great affluents already explored add no fewer than 5000 miles of serviceable waterway. Above the Stanley Falls station (destroyed by Arab slave-dealers in November 1886) the river is again navigable for a distance of 385 miles to Nyangwe, which is about 1300 miles from the Chambezi sources. The work having been thus initiated by Stanley, and the feasibility of the project made manifest, the association in 1884-85 entered into treaties with all the European powers and the United States for the recognition of its sovereign power. The boundaries of the new CONGO FREE STATE were settled at the same time, it being agreed that the basin of the Congo and its tributaries should be free to all nations, that no duties should be levied on imports, and that the slave trade should be suppressed. The central government was at Brussels, consisting of the King of Belgium as sovereign, and three departmental chiefs. Railways have been constructed around the lower rapids and elsewhere along the stream, so that there is now continuous communication by rail and water from the river's mouth to Kalengwe Falls, a distance of 2500 miles. Rubber is the leading commercial product of the state, coffee and cacao are successfully grown, and ivory, copal and palm oil and kernels are of importance. The minerals include tin, gold, platinum, iron, coal and palladium. The cruel exploitation

of the natives in the collection of rubber led in the early twentieth century to indignant protests from travelers and others, and in 1908 King Leopold transferred the control of the state to the Belgian government. As a result the Free State ceased to exist, it being annexed to Belgium as a colony of that kingdom. Promises of reform in the administration have been made. The exports at present forming the staple of trade are palm-oil, caoutchouc, ivory, orchilla, copal, groundnuts, camwood, wax, etc. Area estimated at 920,000 sq. miles; pop. 14,000,000 to 30,000,000.

Congo Pea. See *Pigeon Pea*.

Congregationalists (k o n-gre-gā'-shun-al-ists), formerly called Independents, a Christian sect claiming to continue the primitive form of church government; founded by the moderate party among the Brownists and Barrowists early in the seventeenth century. Under the English Commonwealth they rapidly developed, and though they suffered after the Restoration, in common with their rivals the Presbyterians, they speedily recovered after the Revolution, and soon outstripped the latter sect so far as England was concerned. The name Independent, as it was frequently adopted by other bodies with which they had no sympathy, was discarded in favor of the name of Congregational Brethren, which appeared to express a leading feature in their polity. This is the government of each congregation by all the members of that congregation, and not, as in the Presbyterian Church, by a session of the pastor and ruling elders only. In the United States they are found chiefly in the New England.

Congregations (k o n-gre-gā'shuns), in the papal government, meetings or committees, consisting of cardinals and officers of the pope, to administer the various departments, secular and spiritual, of the papal dominion, *e.g.*, the congregation of the Holy Office (Inquisition), the congregation of the Index, etc. Congregation also signifies a society of several convents of the same rule, which together form an organized corporation, hold chapters and elect superiors.

Congress (kong'gres), in international politics, a meeting of the rulers or representatives of several states, with a view of adjusting disputes between different governments.

Congress, the name given to the legislative assembly of the United States of America, consisting of

two houses—a Senate and a House of Representatives. The Senate consists of two members elected by the legislature of each state for a period of six years, one-third of whom are elected every two years. The Representatives in the lower house are elected by the people of the several states every two years, and their number varies in each state in proportion to the population as determined by the decennial census. The united body of senators and representatives for the two years during which the representatives hold their seats is called one Congress. See *United States*.

Congressional Apportionment, the number of people appointed by act of Congress to be represented by one Representative in Congress. The number fixed in the Constitution was 30,000 with the provision that each State should have at least one Representative. This number was increased at each successive census, in order that the membership of the House should not become unwieldly large. The successive ratios since the formation of the government have been as follows:

1789–1792 based on the Constitution	30,000
1792–1803 based on Census of 1790,	33,000
1803–1813 “ “ 1800,	33,000
1813–1823 “ “ 1810,	35,000
1823–1833 “ “ 1820,	40,000
1833–1843 “ “ 1830,	47,700
1843–1853 “ “ 1840,	70,680
1853–1863 “ “ 1850,	93,420
1863–1873 “ “ 1860,	127,381
1873–1883 “ “ 1870,	131,625
1883–1893 “ “ 1880,	151,912
1893–1903 “ “ 1890,	173,901
1903–1913 “ “ 1900,	194,182
1913–1923 “ “ 1910,	211,877

The change under the 1910 census increases the membership of the House from 391 to 435, Arizona and New Mexico, which were admitted in 1912, each being given one Representative.

Congressional Library (kong-gresh'-un-al), the library of the United States Congress, established in 1800. It now numbers nearly two million books and pamphlets, exclusive of maps, charts, photographs, etc. Copies of every work published and copyrighted in the United States must be sent to it, and it contains large numbers of duplicates. In 1897 it was removed from the Capitol to a magnificent building erected for it in the vicinity.

Congressman-at-large, a member of the United States House of Representatives who is elected by the voters of a whole state instead of by districts.

Congreve (kon'grēv), WILLIAM, an English dramatist, born 1670, educated at Kilkenny, and at Trinity College, Dublin, from which he entered the Middle Temple, London. A novel entitled the *Incognita*, under the pseudonym of Cleophil, was followed, at the age of twenty-one, by his comedy of the *Old Bachelor*, the success of which procured for him the patronage of Lord Halifax, who made him a commissioner for licensing hackney-coaches; soon after gave him a place in the pipe office; and finally conferred on him a very lucrative place in the customs. He afterwards received an additional sinecure in the appointment of secretary to the island of Jamaica. His next play, the *Double Dealer*, was less successful; his third comedy, *Love for Love*, and his tragedy *The Mourning Bride* (1679), were both popular; but after the cold reception of his *Way of the World* in 1700, he ceased altogether to write for the stage. He, however, continued to write occasional verses on public subjects; and in 1710 published a collection of his plays and poems, which he dedicated to his early patron, Lord Halifax, to whose person and party he remained attached in all fortunes. He died in 1729. His plays belong to the artificial school of comedy, which aimed rather at the production of a sustained flow of wit than at the precise delineation of character.

Congreve, SIR WILLIAM, inventor of the Congreve rocket, was born in England in 1772, and entered the army, from which he retired in 1816 with the rank of lieutenant-colonel of artillery and entered the House of Commons. He invented the rocket about 1804. It was first used in active service in the attack on Boulogne, 1806, and on Copenhagen, 1807. He took out patents also for the manufacture of gunpowder and of bank-note paper, and wrote treatises on the mounting of naval ordnance and on the hydro-pneumatic lock. He died at Toulouse in 1828.

Congreve Rocket. See *Rocket*.

Coni, or CU'NEO (kö'nā-ō), a town of North Italy, capital of the province of Coni, charmingly situated on a hill, at the confluence of the Stura and the Gesso, 47 miles s. Turin. Formerly all merchandise passing from the seaport of Nice to Lombardy, Switzerland and Germany went by this route, but the railway has confined its trade to Turin and neighboring towns. It has manufactures of silks and woolens. Pop. 27,065.

Conia, CONIINE, CICUTINE (C₈H₁₇N), a volatile alkaloid, the active

THE OPENING OF CONGRESS

This photograph shows the House of Representatives at the opening of the session. Speaker Champ Clark is in the chair.

poisonous principle of *Conium maculatum* (spotted hemlock), nat. order Umbelliferae. It exists in all parts of the plant, but especially in the not quite ripe seed. When pure it is a colorless, oily liquid, specific gravity 0.878, changing by exposure to air to a brown fluid, and ultimately to a resinous, bitter mass, insoluble in water but soluble in alcohol, and when purified yielding a jelly with a butyric odor. It has a nauseous taste and very disagreeable odor, sharp and choking when strong, but in small quantity like the odor of mice. It is exceedingly poisonous, appearing to cause death by inducing paralysis of the muscles used in respiration. It is antispasmodic and relaxant.

Conic Sections (kon'ik), three curves, the hyperbola, the parabola, and the ellipse, so called because they are formed by the intersection of the surface of a cone with planes that cut the cone in various directions. If the cutting-plane be parallel to the axis the curve formed is the hyperbola (1); if parallel to the slope of the cone the curve is a parabola (2);

Conic Sections.

if passing through both sides of the cone obliquely the section is an ellipse (3). A section perpendicular to the axis of the cone forms a circle (4), which may also be considered one of the conic sections. A perpendicular plane through the apex gives a triangle (5).

Conidia (kon-id'i-a), in botany, the simple, dustlike, asexual reproductive cells produced on some lichens and fungi, as in the potato-blight.

Coniferæ (kō-nif'e-rē), the pines, firs, and their allies, a natural order of gymnospermous exogens, the essential character of which consists in the manner in which the ovules, not enclosed in an ovary, receive directly the action of the pollen without the intervention of a stigma. The ovules in these plants are borne on scales or modified

leaves, which are spread out, not folded, and generally grouped in such a manner as to form a cone composed of a greater or smaller number of these leaves, of which only a portion may be fertile and bear ovules. The disposition of the ovules in relation to these scales permits of a division of the Coniferæ into three distinct families or tribes. In the *Cupressineæ*, which include the juniper, cypress, etc., the cones are formed of simple scales, each of which bears towards the base of its superior surface the ovules erect and sessile. The second family, *Abietineæ*, has, in place of simple scales, scales actually double or formed of two parts: the lower one usually designated the bract; the other bearing at its base the ovules reversed. This family includes the pines, firs and larches, the araucarias, wellingtonias, dammaras, etc. In these two families the ovules are completely covered by the scales which constitute the cones, which unite after fecundation and enclose the seed till their maturity. In the *Tarineæ*, which constitute the third family, the scales are short, imperfect, and partly sterile, and neither cover the ovules at the period of fecundation nor at that of maturation. The ovules are usually set in the same manner as in the *Cupressineæ*. The yew, the ginkgo, etc., belong to this family. The Coniferæ are found in large forests in the north of Europe and America, and are of great importance as timber trees. They abound also in resinous juices and yield turpentine, pitch, tar, succinic acid, etc. The leaves are usually alternate, and awl or needle shaped, the naked flowers are monœcious or diœcious, the male flowers being in deciduous catkins, the female in cones.

Coniine (kō'nī-in). See *Conia*.

Conirostres (kō-ni-ros'trēs), in ornithology, a subdivision of the order Insectores or Passeres, consisting of genera having a stout, conical beak. The best-known genera are the larks, tits, finches, sparrows, gold-finches, linnets, bullfinches, crossbills, starlings, crows and birds of paradise.

Conium (kō-nī'um), a genus of umbelliferous plants. See *Hemlock*.

Conjeveram (kon-ie-ver-um'), a town of Hindustan, presidency of Madras, district of Chingleput. It stands in a valley, is irregularly built, and from 5 to 6 miles long. It possesses two famous pagodas dedicated to Vishnu and Siva, and the inhabitants are mostly Brahmans. The name 'Benares of the South' has been sometimes given to it. Cottons are manufactured in the town,

in which there is a large Free Church of Scotland mission school. Pop. 46,164.

Conjugal Rights (kɒnˈjʊɡəl), in law, the right which husband and wife have to each other's society, comfort and affection. A suit for restitution of conjugal rights is competent by either party.

Conjunction (kɒn-jʊŋkˈʃʊn), in grammar a connective indeclinable particle serving to unite words, sentences, or clauses of a sentence, and indicating their relation to one another. They are classifiable into two main groups: (1) Coördinating conjunctions, joining independent propositions, and subdivisible into copulative, disjunctive, adversative and illative conjunctions. (2) Subordinating conjunctions, linking a dependent or modifying clause to the principal sentence. The only active influence which the conjunction can be said to exercise grammatically in a sentence is in respect of the mood of the verb following it in dependent sentences, the rule being to employ the subjunctive where futurity and contingency are implied, the indicative where they are not.

Conjunction, in astronomy, the position of two of the heavenly bodies, such as two planets, or the sun and a planet, when they have the same longitude (are in the same direction from the earth). When it is simply said that a planet is *in conjunction*, conjunction with the sun is to be understood. *Superior conjunction* and *inferior conjunction* are terms used of the planets whose orbits are nearer to the sun than that of the earth, according as the sun is between us and them or they between us and the sun.

Conjunctiva (kɒn-jʊŋk-tɪˈvə), the mucous membrane which lines the inner surface of the eyelids and is continued over the forepart of the globe of the eye.

Conjuring (kɒnˈjɜːrɪŋ). See *Leg-erdemain*.

Conkling (kɒŋkˈlɪŋ). ROSCOE, lawyer, orator and political leader, born at Albany, New York, 1829; admitted to the bar in 1850, and in politics from that time, taking up his residence in Utica. He was in Congress 1859-63 and 1865-67, and United States Senator 1867-81, when he angrily resigned on account of disagreement with President Garfield on the question of political appointments to office. He failed to obtain a reelection. Died 1888.

Connaught (kɒnˈnɑːt), the smallest of the four provinces of Ireland, situated between Leinster and

the Atlantic; area, 6862 square miles. Its west coast is much broken up by numerous bays and inlets, and is thickly studded with islands. The central parts are comparatively level and of limestone formation, while the surrounding and picturesque mountains are formed of sandstone, clay-slate, granite and quartz. A large proportion of the province is bog, and, generally, it is the least fertile of all the provinces. It is divided into five counties—Galway, Mayo, Roscommon, Leitrim and Sligo. Pop. 646,932.

Conneaut (kɒn-e-ət'), a town of Ash-tabula Co., Ohio, 2 miles from Lake Erie, 68 miles N. E. of Cleveland. It has a good harbor on Conneaut Creek, and manufactures of iron, leather, tin-plate, etc. Pop. 8319.

Connecticut (kɒn-netˈi-kʊt), a river of New England, the west branch of which forms by treaty the boundary between the United States and Canada to lat. 45° N. It rises on the north border of New Hampshire; forms the boundary between Vermont and New Hampshire, passes through the west part of Massachusetts and the central part of Connecticut, and falls into Long Island Sound. It is navigable for vessels drawing from 8 to 10 feet for about 300 miles from its mouth, subsidiary canals, however, being required above Hartford; total length, 450 miles.

Connecticut, one of the thirteen original States of the American Union; bounded by New York, Massachusetts, Rhode Island and Long Island Sound; length, east to west, about 95 miles; greatest breadth, north to south, about 72 miles; area, 4965 sq. miles. It contains several distinct ranges of hills, but none of them have any great elevation. Its principal river is the Connecticut, which divides it into two nearly equal parts. The coast is indented with numerous bays and creeks, which furnish many harbors. Its minerals comprise iron, copper, lead, cobalt, plumbago, marble, freestone, porcelain-clay and coal. Lime is produced in large quantities, and there is abundance of building-stone. The soil is in general better suited for grazing than tillage, abounding in fine meadows. But where agriculture is practised there are ample crops of Indian corn, rye, wheat, oats, barley, buckwheat, potatoes, etc.; and fruits, particularly apples, flourish. The manufactures consist chiefly of woolen, cotton and silk goods, metal goods, paper, clocks, hats and caps, leather goods, pottery-ware, glass and machinery, firearms, sewing-machines, soap, candles, bricks, carriages, etc. The principal exports consist of agricultural

CONNECTICUT

Scale of Miles
0 5 10 15 20

The Race

produce and manufactures. The foreign commerce is nearly all carried on through New York and Boston, but there is a considerable coasting trade, and a large amount of tonnage engaged in the cod-fisheries. Fish-culture has received special attention, many millions of shad ova and young salmon having been introduced into the rivers. The number of miles of railway in operation is over 1000. The chief educational institution is Yale College, one of the most celebrated in the States. Connecticut is divided into eight counties; the seat of government is Hartford. The State at first consisted of two colonies—Connecticut, with its seat of government at Hartford; and New Haven, with capital of same name. Connecticut was settled in 1633 by emigrants from Massachusetts, Hartford was settled by English in 1635, the Dutch having previously built a fort there. The colony of New Haven was settled by English in 1638, and the two colonies were united under the name of Connecticut, in 1665. Pop. 1,114,756.

Connellsville (kon'els-vil), a town of Fayette Co., Pennsylvania, 53 miles S. S. E. of Pittsburgh. Its manufacture of coke is the largest in the United States; also has iron and various other manufactures. Pop. 12,845.

Connemara (k o n-n ē-m a'ra), 'the Bays of the Ocean'), a boggy and mountainous district occupying the west portion of County Galway, Ireland; about 30 miles in length and 15 to 20 miles in breadth. Its coasts are very broken, and there are numerous small lakes. It is subdivided into Connemara proper in the west, Jar-Connaught in the south, and Joyce country in the north.

Conning Tower, an armored enclosure in a battleship, in which the commander may stand during a naval engagement, and from which he can direct the movements of ship and men. It has openings through which the enemy's ships can be seen.

Conoid (kō'noid), in geometry, a solid formed by the revolution of a conic section about its axis. Thus the solid resulting from a parabola is a parabolic conoid or paraboloid; if a hyperbola, a hyperbolic conoid or hyperboloid, etc.

Conon (kō'non), an Athenian who had the command of a fleet in 413 B.C. to prevent the Corinthians from relieving Syracuse then at war with Athens, and who, after various services, succeeded Alcibiades in 406. When the Athenian fleet was surprised and Athens captured by Lysander in 405, Conon

escaped to Cyprus, and afterwards joined the Persians against the Spartans, being appointed to the command of a Persian fleet in 397. In 394, with Pharnabazus he defeated the Spartan admiral, Pisander of Cnidus, and in 393 returned to Athens to restore the walls and fortifications. But having been sent by the Athenians to counteract the effects of Spartan diplomacy upon the Persians, he was thrown by the latter into prison. Time of death uncertain.

Connersville (kon'ers-vil), a city of Fayette Co., Indiana, 22 miles S. W. of Richmond. Axles, wagons, flour, furniture, etc., are produced. Pop. 7738.

Conquest (kong'kwest), in feudal law, a name applied to purchase or any other means of acquiring property than by the common course of inheritance.

Conrad II (kon'rad), King of Germany and Emperor of the Romans, reigned from 1024 to 1039, and is regarded as the true founder of the Franconian or Salic line. On his election he proclaimed a *God's Truce* in order to attempt certain reforms in the kingdom; but his attention was too distracted between Italy and Germany for him to do more than repress some of the more marked evils of the feudal system.

Conrad III, King of Germany and emperor from 1138 to 1152, was the founder of the Suabian dynasty of Hohenstaufen. During the struggle with his rival Henry the Proud the factions of Guelf and Ghibeline, named from the war-cries of the respective parties, came into existence. Conrad, persuaded by St. Bernard, took part in the second crusade, from 1147 to 1149. His marriage with a Greek princess led to his adoption of the double-headed eagle now appearing on the Austrian arms. He was succeeded by his nephew Frederick Barbarossa.

Consalvi (kon-sāl'vē), ERCOLE, cardinal and prime minister of Pope Pius VII, born in 1757. He became secretary of Cardinal Chiaramonti and when his patron was elected pope (Pius VII) became one of the first cardinals, and afterwards secretary of state. In this capacity he concluded the famous concordat with Napoleon in 1801. In 1806 he went into retirement, but in 1814 became papal minister at the Congress of Vienna, and up till the death of Pius VII he remained at the head of Roman political and ecclesiastical affairs. He died in 1824.

Consanguinity (kon-sang-kwin'i-ti), the relation of persons descended from the same ancestor.

Conscience

It is either lineal or collateral—lineal between father and son, grandfather and grandson, and all persons in the direct line of ancestry and descent, from one another; collateral between brothers, cousins, and other kinsmen descended from a common ancestor, but not from one another.

Conscience (kon'shens), that power or faculty, or combination of faculties, which decides on the rightness and wrongness of actions; otherwise called the *Moral Sense*. Whewell defines it as 'the reason, employed about questions of right and wrong, and accompanied with the sentiments of approbation and condemnation, which, by the nature of man, cling inextricably to his apprehension of right or wrong.' See *Ethics*.

Conscience (kōn-syāns), HENDRIK, a Flemish novelist, born at Antwerp in 1812; died in 1883. Having educated himself, he taught for a short time in a school, and then served in the army for six years. He was for a time tutor in Flemish to the royal princes, and from 1868 conservator of the Wiertz Museum at Brussels. His novels, some of which have been translated into English, are partly based on the history of his country, partly pictures of everyday Flemish life. They include *The Lion of Flanders*; *Jakob van Artevelde*; *Batavia*; *Wooden Clara*; *Blind Rosa*; *The Poor Nobleman*; *The Young Doctor*; *Maternal Love*, etc. He also wrote a *History of Belgium*.

Consciousness (kon'shus-nes), a term used in various senses, most commonly perhaps to denote the mind's knowledge or cognizance of its own action.

Conscription (kon-skrip'shun), the enlisting of the inhabitants of a country capable of bearing arms, by a compulsory levy, at the pleasure of the government, being thus distinguished from *recruiting*, or voluntary enlistment. The word and the system were both introduced into France in 1798 by a law which declared that every Frenchman was a soldier, and bound to defend the country when in danger. Excepting in times of danger it provided that the army should be formed by voluntary enrolment or by *conscription*. The conscription included all Frenchmen from twenty years of age complete to twenty-five years complete. On the restoration of the Bourbons conscription was abolished. It was, however, reënacted, and continued through the Second Empire to form the mode of recruitment in France. An army bill,

Consequential Damages

passed by the National Assembly in 1872, affirms the universal liability to conscription, but allows certain exceptions and postponements. The term of service is fixed at five years in the active army, four years in the reserve of the active army, five years in the territorial army, and six years in its reserve—the total length of military service being thus twenty years. Universal liability to military service is also the law in Germany, Italy and Austria. In Germany the total length of service is twelve years. Twelve years' service is also the period in Austria. The Russian army has long been partly raised by conscription, and by a law which came into force in 1872 an annual conscription was established, to which all men who have completed their twenty-first year, and are not physically incapacitated, are liable. The men have to serve in the active army six years, after which they pass into the reserve for another nine years, during which they are liable to active service only in time of war. In Great Britain a small militia obtained, if necessary, by conscription is usually kept up in time of peace, but the regular army and navy are recruited by voluntary enlistment. In the United States conscription was resorted to on several occasions during the Civil war, on one occasion leading to a severe riot in New York. Since that war only voluntary enlistment has existed.

Consecration (kon-se-krā'shun), the dedication with certain rites or ceremonies of a person or thing to the service of God; especially (1) the ordination of a bishop or archbishop, which requires the coöperation of at least three bishops; (2) the dedication of a church to God's service, which is practised in the Anglican and Roman Catholic churches and is performed by a bishop; (3) the act of the priest in celebrating the eucharist by which the elements are solemnly dedicated to their sacred purpose.

Consent (kon-sent'), in law, is understood to be a free and deliberate act of a rational being. It is invalidated by any undue means—intimidation, improper influence, or imposition—used to obtain it. Idiots, pupils, etc., cannot give legal consent; neither can persons in a state of absolute drunkenness, though partial intoxication will not afford legal ground for annulling a contract.

Consequential Damages (kon-se-kw en'-shal), in law, are such losses or damages as arise out of a man's act, for which,

according to a fundamental principle in law, he is answerable if he could have avoided them. The same law applies to railways and corporations generally, as determined in numerous cases.

Conservation of Energy. See *Energy*.

Conservation of Natural Re-

sources. The great and heedless waste of the extensive natural treasures of the United States, especially the forests, has led within recent years to a concerted action for their conservation for the benefit of future generations. The first national movement in this direction was made by President Roosevelt in 1908, when he called a convention of State governors to consider what could be done for the preservation of our great natural wealth. The result of this movement was the formation of a National Conservation Commission, under the chairmanship of Gifford Pinchot, chief-forester, to take measures for this purpose. In December, 1908, Canada and Mexico were invited to take part in the movement, and in February, 1909, letters were sent to 45 nations, inviting their concurrence with the idea of calling a World Conservation Conference to consider in what way the vast natural resources of the world could best be conserved for man's benefit. Steps for the preservation and judicious handling of the American forests had previously been taken, by the withdrawal of public forest areas from exploitation and their conversion into national forests, the total area thus withdrawn to July 1, 1910, being 192,931,197 acres. A Bureau of Forestry was created in 1905, having control of these great wooded reserves. At present these forests yield an annual timber crop worth on the ground about \$10,000,000, and furnish forage for cattle, horses, sheep and goats worth as much more to Western stockmen, while their yielding value is increasing instead of diminishing. In addition are State forests aggregating several millions of acres, yielding a profitable lumber supply and conserving the headwaters of many streams. These waters are being largely utilized in the West, by the building of irrigation dams, for the development into fertile farming lands of vast tracts of formerly arid and barren soils. Conservation has also been extended to streams yielding water-power, which have been widely withdrawn from private exploitation and retained as government property for the future benefit of the people at large. Similar steps have been taken in regard to the great area of coal lands in

the western government domain, including the extensive coal beds recently discovered in Alaska. These have been withdrawn from private use, with the expectation that they can be handled in a way to yield a large income to the government and thus be made a source of national aggrandizement. In 1910 President Taft withdrew from settlement, under an act of Congress of that year, 43,568,895 acres of public lands, of which 35,073,164 were coal sites (not including the coal lands withdrawn in Alaska), the others petroleum, phosphate and water-power sites. While these may be reopened to settlement, it will be with the provision that the ownership of settlers will be confined to the surface, the mineral deposits underground being reserved for national use.

Conservatives (k o n-sér'va-tivz), in British politics the party that substantially corresponds to what used to be the Tory party, taking the opposite side to the *Liberals*. The name came into use about the time of the passing of the Reform Act of 1832 and is often used as implying greater enlightenment or liberality than *Tory*.

Conservatory (k o n-sér'va-to-ri), a name given on the European continent to a systematic school of musical instruction. Conservatories were originally benevolent establishments attached to hospitals, or other charitable or religious institutions. In Naples there were formerly three conservatories for boys; in Venice four for girls; the Neapolitan group being reduced in 1818 to a single establishment under the name Royal College of Music. In Milan a conservatory was established in 1808. In France the musical school established in connection with the Opéra received its final organization in 1795 under the name of *Conservatoire de musique*. Among its teachers have been Méhul, Cherubini, Grétry, Boieldieu, etc. The Conservatorium, founded at Leipzig in 1842 under the auspices of Mendelssohn, is perhaps the most influential in Germany, though of late years other schools have pressed closely upon it. Institutions of the same description exist in Warsaw, Prague, Munich, Berlin and Vienna, and the term has been adopted in the United States and the British dominions.

Conservatory, in gardening, a term generally applied by gardeners to plant-houses, in which the plants are raised in a bed or border without the use of pots, the building being frequently attached to a mansion. The principles of their construction are

Conserve

in all respects the same as for the greenhouse, with the single difference that the plants are in the free soil, and grow from the floor instead of being in pots placed on shelves or stages. This distinction, however, is often disregarded, 'conservatory' being restricted to the private hothouse.

Conserve (kon'serv), a form of medicine in which flowers, herbs, fruits, roots, are preserved as nearly as possible in their natural fresh state.

Conshohocken (con-shō-hock'en), a town of Pennsylvania, on the Schuylkill River, 13 miles N. W. of Philadelphia. It has iron manufactories, woolen and cotton mills, and other industries. Pop. 7480.

Consideration (kon-sid-ēr-ā'shun), in law, the reason or substantial ground which induces a party to enter into a contract; the equivalent for something given, done, or suffered. It may be either expressed or implied, that is, where justice requires it and the law implies it.

Consignment (kon-sin'ment), a mercantile term which means either the sending of goods to a factor or agent for sale, or the goods so sent. The term is chiefly used in relation to foreign trade. The receivers of consignments have usually to keep magazines and stores, for the use of which their consigners are charged. The profits of a consigning agency often compare favorably with the occasionally larger but much less safe profits of original ventures. The consigning trade is protected by special laws. In most countries a consigner can claim his goods and collect all outstanding debts for goods sold on his account by a consignee who has suspended payment.

Consistory (kon'sis-tor-i), the highest council of state in the papal government. The name is also applied to the court of every diocesan bishop, held in their cathedral churches for the trial of ecclesiastical causes arising within the diocese. In the English Church the consistory is held by the bishop's chancellor or commissary and by archdeacons and their officials either in the cathedral church or other convenient place in the diocese.

Consolato del Mare (It., lit. 'the consulate of the sea'), an ancient code of maritime law, supposed to be a compilation of the law and trading customs of various Italian cities, as Venice, Genoa, Pisa and Amalfi, together with those of the cities with which they traded, as Barcelona, Marseilles, etc. It has formed the basis

Conspiracy

of most of the subsequent compilations of maritime laws.

Console (kon'sōl), in architecture, a projecting ornament or bracket having for its contour generally a curve of contrary flexure. It is em-

Cornice supported by Consoles, A A.

ployed to support a cornice, bust, vase, or the like, but is frequently used merely as an ornament.

Consols (kon'solz), or CONSOLIDATED ANNUITIES, a public stock forming the greater portion of the national debt of Great Britain. It was formed in 1751 by an act consolidating several separate stocks bearing interest at 3 per cent. into one general stock. At the period when the consolidation took place the principal of the funds united amounted to £9,137,821; but through the addition of other loans it has increased so much that now, after considerable reductions, it still amounts to more than half of the national debt. The interest of about £5,000,000 is payable in Dublin, that of the remainder in London.

Consonance (kon'sō-nans), in music, an agreeable accord of sounds, such as the third, fifth, and octave. See *Concord*.

Consonant (kon'sō-nant; L. *con*, with, *sonare*, to sound), a letter so named as being sounded only in connection with a vowel, though some consonants have hardly any sound even when united with a vowel, serving merely to determine the manner of beginning or ending the vowel sounds; as in *ap*, *pa*, *at*, *ta*. In uttering a consonant there is greater or less contact of some parts of the organs of speech; in uttering a vowel there is a want of such contact, the vocal passage being open, though variously modified. They are classed as *liquids*, *mutes*, *sibilants*, *labials*, *dentals*, *palatals*, *gutturals*, etc.

Conspiracy (kon-spir'a-si), in law, an offense ranked as a misdemeanor, and punishable by imprisonment and hard labor. It is constituted

by a combination between several persons to carry into effect any purpose injurious either to individuals, particular classes, or the community at large. When the conspiracy leads to any overt act of an unlawful kind, the offense becomes felony.

Constable (kun'sta-bl; Fr. *connétable*; Old Fr. *conestable*; Lat. *comes stabuli*, 'count of the stable'), an officer of high rank in several of the mediæval monarchies. Among the Franks, after the *major domus*, or mayor of the palace, had become king, the *comes stabuli* became the first dignitary of the crown, commander-in-chief of the armies, and highest judge in military affairs. The *connétable*, however, acquired so much power that Louis XIII in 1627 abolished the office entirely. Napoleon reëstablished it, but it vanished with his downfall. In England the office of *lord high constable* was created by William the Conqueror, and became hereditary in two different families, as annexed to the earldom of Hereford. After the attainer of Stafford, however, lord high constables were appointed only to officiate on special occasions. The office of lord high constable of Scotland, expressly reserved in the treaty of union, is hereditary in the noble family of Errol.

In the common modern acceptance of the term constables are police officers in towns, counties, etc., having as their duties the repression of felonies, the keeping of the peace, the execution of legal warrants, etc. In case of special disturbance a certain number of private citizens may be sworn in as *special constables*. In the United States a constable is usually the acting bailiff of a justice of the peace, serving writs, executing judgments, making distrainments, etc.

Constable, ARCHIBALD, a Scottish publisher, born in 1774; died in 1827. He was the original publisher of the *Edinburgh Review* and of Scott's novels, and his failure in 1826 involved Scott heavily, the life of the famous novelist being given through a strenuous effort to meet the claims of creditors.

Constable, HENRY, a poet of the Elizabethan era, born in 1556, educated at Cambridge. His chief work was his book of sonnets, *Diana*, published in 1592, when few sonnets in the Italian form had been written. He was probably the author also of the *Forest of Fancy* (1579), attributed to Chettle. Suspected of treason against Elizabeth, he was compelled to leave the country in 1595, and on his return in 1601 was confined in the Tower for three years. Date of his death is unknown.

Constable, JOHN, an English landscape painter, born in 1776. He was employed in the business of his father, a wealthy miller, for some years, but entered as a student of the Royal Academy in 1799. It was not till 1814, twelve years after he had begun to exhibit pictures, that he succeeded in getting any of them sold. In 1819 his *View on the River Stour* procured him admission as an associate of the Academy. From this period his reputation widely extended itself, both over Britain and the continent, and for some of his works exhibited at the Louvre he received a gold medal from the King of France. He died in 1837. His careful studies of landscape in respect of tone were of great influence in art, especially in France, which derived its best landscape work from him.

Constance (kon'stans), a town of Germany, in Baden, on the south bank of the Lake of Constance, at the outflow of the Rhine into the Lower Lake or Untersee, its chief edifices being a magnificent cathedral, several churches, the Kaufhaus (merchant-house), an ancient palace, a grand-ducal residence, several convents, a theater, etc. The town has various branches of industry and a considerable trade. It was once a flourishing imperial city much larger than at present. Pop. 24,818.

Constance, COUNCIL OF, a special council of the Church of Rome, held between 1414 and 1418. The German emperor, the pope, 26 princes, 140 counts, more than 20 cardinals, 7 patriarchs, 20 archbishops, 91 bishops, 600 other clerical dignitaries and doctors, and about 4000 priests, were present at this assembly, which condemned to death Huss and Jerome of Prague, deposed the rival popes John XXIII, Gregory XII, and Benedict XIV, and elected Martin V to the papal chair.

Constance, LAKE OF (anc. *Lacus Brigantinus*; Ger. *Bodensee*), a lake of Central Europe in which Switzerland, Baden, Württemberg, Bavaria, and Austria meet; forming a reservoir in the course of the Rhine; length N. W. to S. E. 42 miles, greatest breadth about 8 miles; area 207 sq. miles; greatest depth (between Friedrichshafen and Uttwil) 838 ft.; 1283 ft. above sea-level. At its N. W. extremity the lake divides into two branches or arms, each about 14 miles in length; the north, called the Überlingersee, after the town of Überlingen, on its north bank; the south the Zellersee or Untersee, in which is the fertile island of Reichenau, belonging to Baden, about 3 miles long and 1½ broad. The lake, which is of a

dark-green hue, is subject to sudden risings, the causes of which are unknown. It freezes in severe winters only. The traffic on it is considerable, there being numerous steamers. The shores are fertile, but not remarkably picturesque.

Constant (kōn-stān), BENJAMIN, portrait painter, was born at Paris in 1845. He studied in the École des Beaux Arts and under Cabanel. He exhibited with growing distinction, at successive salons, from that of 1860 with his *Hamlet*, his *Samson* in 1872, his *Scenes from Algiers* in 1873-74, his great historical painting of *Mohammed II in 1453* in the exposition of 1878, and in 1885 a large Oriental subject, as melodramatic as possible, with splendid rendering of the human figure and strong effects of color. His noble picture of *Justinian* is in the Metropolitan Art Museum, New York. He was decorated with the cross of the Legion of Honor in 1872, and was a member of the French Academy of Fine Arts. He died in 1902.

Constant de Rebecque (kōn-stān-d-ré-bek),

HENRI BENJAMIN, born at Lausanne in 1767; a prominent French liberal politician. During the revolution he distinguished himself by his works upon politics and on revolutionary subjects, and was elected to the office of tribune; but his speeches and writings rendered him odious to the First Consul, and he was dismissed in 1802. He died in 1830.

Constantia (kon-stan'ti-a), a small district in Cape Colony a few miles from Cape Town, celebrated for its wine, made from vines brought originally from Persia and the Rhine, esteemed the best liqueur wine after Tokay, and owing its special properties largely to the soil.

Constantina (kon-stān-tē'nā), a town of Spain, 40 miles N. N. E. of Seville. Argentiferous lead mines are in the vicinity. Pop. 9687.

Constantine (kon-stān-tēn'), a town in Algeria, capital of a province of same name, on a rocky peninsula, 1968 ft. above the sea, and accessible only on one side. It is surrounded by walls, and the only edifice deserving notice is the palace of the bey, now the residence of the French governor. Both within the town and in the vicinity Roman remains abound, the town having been built by the emperor whose name it bears, on the site of Cirta, the capital of the Numidian kings. The manufactures consist chiefly of woolen and linen goods; the trade is in corn, linen, and wax. Pop. of town (1906) 46,806.

Constantine (kon'stan-tēn), CAIUS FLAVIUS VALERIUS AURELIUS CLAUDIUS, Roman emperor, surnamed the *Great*, son of the Emperor Constantius Chlorus, was born A.D. 274. When Constantine's father was associated in the government by Diocletian, the son was retained at court as a hostage, but after Diocletian and Maximian had laid down the reins of government, Constantine fled to Britain, to his father, to escape from Galerius. After the death of his father he was chosen emperor by the soldiery, in the year 306, and took possession of the countries which had been subject to his father, namely, Gaul, Spain, and Britain. He more than once defeated the Franks who had obtained a

Constantine.

footing in Gaul and drove them across the Rhine; and then directed his arms against Maxentius, who had joined Maximian against him. In the campaign in Italy he saw, it is said, the vision of a flaming cross in the heavens, beneath the sun, bearing the inscription, '*In hoc signo vinces.*' Under the standard of the cross, therefore, he vanquished the army of Maxentius under the walls of Rome, and entered the city in triumph. In 313, together with his son-in-law, the eastern emperor, Licinius, he published the memorable edict of toleration in favor of the Christians, and subsequently declared Christianity the religion of the state. Licinius, becoming jealous of his fame, twice took up arms against him, but was on each occasion defeated, and finally put to death. Thus in 323 Constantine became the sole head of the Roman Empire. His internal administration was marked by a wise spirit of reform, and by many humane concessions with regard to

Constantine

slaves, accused persons, widows, etc. In 329 he laid the foundation of a new capital of the empire, at Byzantium, which was called after him Constantinople, and soon rivaled Rome herself. In 332 he fought successfully against the Goths, relieved the empire of a disgraceful tribute which his predecessors had paid to these barbarians, and secured his frontier upon the Danube. In 337 he was taken ill near Nicomedia, was baptized, and died after a reign of thirty-one years, leaving his empire between his three sons, Constantine, Constantius, and Constans. Some of the martyrologists have counted him among the saints, and fix the 20th of May as his festival. The Greeks and Russians observe it upon the 21st of the same month.

Constantinople

Constantinople (k o n-stan-ti-nō'pl; 'city of Constantine,' called by the Turks *Stamboul*, from the Greek *eis tēn polin*, into the city), a celebrated city of Turkey in Europe, capital of the Turkish Empire, situated on a promontory jutting into the Sea of Marmora, having the Golden Horn, an inlet of the latter, on the north and the Bosphorus on the east. The city proper is thus surrounded by water on all sides excepting the west, where is an ancient and lofty double wall of 4 miles in length, stretching across the promontory. On the opposite side of the Golden Horn are Galata, Pera, and other suburbs, while on the Asiatic side of the Bosphorus entrance is Skutari. Occupying the extreme point of the promontory on which

Section of Santa Sophia, Constantinople.

Constantine, PAULOVITCH, Grand-prince of Russia, second son of Paul I. born in 1779. He distinguished himself in 1799 under Suwarroff, and at Austerlitz in 1805; and in 1812, 1813 and 1814 attended his brother, the Emperor Alexander, in all his campaigns. He was afterwards employed in superintending the affairs of the new Kingdom of Poland, and was successively made military governor and generalissimo of the Polish troops. On the decease of his brother in 1825 he was proclaimed emperor at St. Petersburg, in his absence, but as he adhered to a previous renunciation of claim to the throne, his younger brother, Nicholas, became Alexander's successor. He died in 1831, execrated by the Poles as one of their most barbarous oppressors.

the city stands is the Seraglio or palace of the sultan, which, with its buildings, pavilions, gardens, and groves, includes a large space. At the principal entrance is a large and lofty gate, called Bab Humayum, 'the high door' or 'sublime porte,' from which has been derived the well-known diplomatic phrase. Of the 300 mosques, the most remarkable are the royal mosques, of which there are about fifteen, esteemed the finest in the world. First among these is the mosque of St. Sophia, the most ancient existing Christian church, converted in 1453 into a mosque on the capture of the city by the Turks. Another magnificent mosque is that of Soliman: after which are those of the Sultana Valide, built by the mother of Mohammed IV, and of Sultan Achmet, the most conspicuous object in the city

Constantinople

Constantinople

when viewed from the Sea of Marmora. The streets are mostly extremely narrow, dark, dirty, and ill paved, and exceedingly crooked and tortuous, but there has been a certain opening up and improvement within recent years owing to the construction of tramways and the railway to Adrianople, which runs along the shore of the Sea of Marmora and past the Seraglio to the entrance of the Golden Horn. The numerous covered and uncovered bazaars are severally allotted to particular trades and merchandise. Constantinople has but one remarkable square, called the

long, and a little more than half a mile broad at the widest part. Among the imports are corn, timber, cotton stuffs, and other manufactured goods. The exports consist of silk, carpets, hides, wool, goats' hair, valonia, etc.—The suburb GALATA is the principal seat of foreign commerce. Here are situated the arsenals, the dock-yard, the artillery barracks, etc., extending along the Bosphorus for nearly $1\frac{1}{2}$ miles. It is an ancient place.—PERA occupies the more elevated portion of the promontory of which Galata forms the maritime part. Both it and Galata have

now much of the appearance of modern European towns.—TOPHANEH is situate a little further up the Bosphorus than Galata, of which it forms a continuation. It has a government foundry and arsenal for cannon.—Constantinople occupies the site of the ancient Byzantium, and was named after Constantine the Great, who rebuilt it about A.D. 330. It was taken in 1204 by the Crusaders, who retained it till 1261; and by the Turks under Mohammed II, May 29, 1453—an event which completed the extinction of the Byzantine Empire. See *Byzantine Empire* and *Byzantium*. Pop. (estimated) 1,125,000.

Constantinople, GENERAL COUNCILS

OF. These include the second, fifth, sixth, the Trullan, and the eighth. The second was convoked by Theodosius the Great, in 381, to put down the enemies of the Nicene Creed, who had already been restrained by his decrees. The fifth general council was held by the Emperor Justinian in 553, to decide the dispute of the Three Chapters, or three doctrines of the Bishops Theodore of Mop-

At-Meidan, occupying the site of the ancient *Hippodrome*. There are about 130 public baths in the city, mostly of marble, of plain exterior, but handsome and commodious within. The numerous cemeteries, mostly outside the western wall, have become vast forests, extending for miles round the city and its suburbs. The few manufactures are chiefly confined to articles in morocco leather, saddlery, tobacco-pipes, fez caps, arms, perfumes, gold and silver embroideries, etc. The foreign commerce is considerable. The harbor, the Golden Horn, which more resembles a large river than a harbor, is deep, well sheltered and capable of containing 1200 large ships, which may load and unload alongside the quays. It is about 6 miles

suestia, Theodore, and Ibas of Edessa, who were suspected of Nestorianism, and declared heretics by the council. The sixth council, held 680-681, condemned the doctrines of the Monothelites, and declared their leaders heretics. As these two councils made no new ecclesiastical laws, the Emperor Justinian II, in 692, again summoned a general council, which, because it was held in the Trullan Palace, was called the *Trullan Council*. It instituted rigid laws for the clergy, among them those fixing the rank of the patriarchs and the permission of marriage to priests, which were so offensive to the Latin Church that she rejected all the decrees of this council; but in the Greek Church they are still valid. The

eighth general council (869-870) declared against the Iconoclasts, deposed Photius, and confirmed St. Ignatius in the see of Constantinople. This council is not recognized by the Greek Church.

Constellations (k o n-s tel-lā'shuns) are the groups into which astronomers have divided the fixed stars, and which have received names for convenience of description and reference. It is plain that the union of several stars into a constellation, to which the name of some animal, person, or inanimate object is given, must be entirely arbitrary, since the several points (the stars) may be united in a hundred different ways, just as imagination directs. The grouping adopted by the Egyptians was accordingly modified by the Greeks, though they retained the Ram, the Bull, the Dog, etc.; and the Greek constellations were again modified by the Romans and again by the Arabians. At various times, also, Christianity has endeavored to supplant the pagan system, the Venerable Bede having given the names of the twelve apostles to the signs of the zodiac, and Judas Schillerius having, in 1627, applied Scripture names to all the constellations. Weigelius, a professor of Jena, even grouped the stars upon a heraldic basis, introducing the arms of all the princes of Europe among the constellations. The old constellations have, however, been for the most part retained. Ptolemy enumerated forty-eight constellations, which are still called the *Ptolemaean*. They are the following:—1. The twelve signs of the zodiac (see *Zodiac*). 2. Twenty-one constellations found in the northern hemisphere—the Great Bear (*Ursa Major*), the Little Bear (*Ursa Minor*), Perseus, the Dragon, Cepheus, Cassiopeia, Andromeda, Pegasus, Equulus (Horse's Head), the Triangle, the Wagoner (*Auriga*), Boötes, the Northern Crown (*Corona Borealis*), Ophiuchus, the Serpent (*Serpentarius*), Hercules, the Arrow (*Sagitta*), the Lyre, the Swan (*Cygnus*), the Dolphin, the Eagle (*Aquila*). 3. Fifteen constellations in the southern hemisphere—Orion, the Whale (*Cetus*), Eridanus, the Hare (*Lepus*), the Great Dog (*Canis Major*), the Little Dog (*Canis Minor*), Hydra, the Cup (*Crater*), the Crow (*Corvus*), the Centaur, the Wolf (*Lupus*), the Altar (*Ara*), the Southern Fish (*Piscis Australis*), the Argo, the Southern Crown (*Corona Australis*). Others were subsequently added, this being especially rendered necessary by the increased navigation of the southern hemisphere, and now the different groups of stars have come to be associated with all sorts of animals

and objects, including the Camelopard, the Fly, the Air-pump, the Compasses, etc. The different stars of a constellation are marked by Greek letters, α denoting those of the first magnitude, β those of the second, and so on. Stars of the sixth magnitude are the smallest visible to the naked eye. Several stars have also particular names.

Constipation (kon-sti-pā'shun), the undue retention of the fæces. Its immediate effects are disordered appetite, a dry, coated or clammy tongue, thirst, or a disagreeable taste in the mouth, dullness, giddiness, or pain in the head, torpor, irritability and despondency. Its less immediate effects are cutaneous affections, dyspepsia, colic, hysteria, hæmorrhoids, etc. In most cases it is produced by indigestible food, astringent and stimulating drinks, sedentary habits, excessive indulgence in sleep, etc. The immediate use of purgatives, followed by strict attention to regimen, is in many cases all that is necessary.

Constituent Assembly (kon-stit'-ū-ent), a name given to the first convention of the delegates of the French nation (1789-91) to distinguish it from the legislative assembly of 1791. It drew up and obtained the acceptance of the first of the famous revolutionary constitutions. The Constituent Assembly of 1848 had a similar aim.

Constitution (kon-sti-tū'shun), the fundamental law of a state, whether it be a written instrument of a certain date, as that of the United States of America, or an aggregate of laws and usages which have been formed in the course of ages, like the English constitution. The ideal constitution is that established by a free sovereign people for their own regulation, though the expediency of other forms at various stages of national development cannot but be recognized. The chief of these are:—1. Constitutions granted by the plenary power of absolute monarchs, or *constitutions octroyées*, such as Louis XVIII's *Charte*. 2. Those formed by contract between a ruler and his people, the contract being mutually binding—a class under which, in a great degree, the British constitution must be placed. 3. Those formed by a compact between different sovereign powers, such as the constitutions of the German Empire, of the United Provinces of Holland, and of the Swiss Confederation. 4. Those made by the people of a country or state for their own government, as in the United States.

In regard to political principles, constitutions are:—1. Democratic, when the

fundamental law guarantees to every citizen equal rights, protection, and participation, direct or indirect, in the government, such as the constitutions of the United States and of some cantons of Switzerland. 2. Aristocratic, when the constitution recognizes privileged classes as the nobility and clergy, and entrusts the government entirely to them, or allows them a very disproportionate share in it. Such a constitution was that of Venice, and such at one time those of some Swiss cantons, for instance, Bern. 3. Of a mixed character. To this latter division belong some monarchical constitutions, which recognize the existence of a king whose power is modified by other branches of government of a more or less popular cast. The British constitution belongs to this division.

Constitution, in the Roman Church, a decree of the pope in matters of doctrine. In France, however, this name has been applied, by way of eminence, to the famous bull *Unigenitus* (which see).

Constitutions, APOSTOLIC. See *Apostolic*.

Constitutions of Clarendon.

See *Clarendon*.

Consubstantial (k o n-sub-stan'shal; Lat. *consubstantialis*), an equivalent for the Greek term *homousios*, the true signification of which disturbed the religious world early in the fourth century, as it was supposed to affect the orthodoxy of Christians regarding the Trinity, according as it might be understood rightly or the contrary. The Athanasians, or Trinitarians at the Council of Nice in 325, gave it the meaning indicated in the Nicene Creed, 'Of one substance with the Father' (applied to Christ).

Consubstantiation (kon-sub-stan-she-ā'shun; otherwise *Impanation*), the mystical union of the body of Christ with the sacramental elements, according to the Lutherans and others, who maintain that, after the consecration of the elements, the body and blood of Christ are substantially present with the substance of the bread and wine.

Consuetudinary Law (kon-swē-tu'-di-na-ri), in contradistinction to statutory or written law, is that law which is derived by immemorial custom from remote antiquity. See *Common Law*.

Consul (kon'sul), a name originally given to the two highest magistrates in the republic of Rome. After King Tarquinius Superbus had been ex-

pelled by the joint efforts of the patricians and plebeians (509 B.C.), two consuls (*consules*) were placed at the head of the senate, the body in whose hands was the administration of the republic. These officers were annually elected, at first only from the patricians; at a later period (366 B.C.) also from the plebeians. In order to be eligible to the consulship, the candidate was to be forty-five years of age, and must have passed through the inferior offices of quæstor, ædile, and prætor, and he was required by law to be in Rome at the time of the election. All these laws, however, were disregarded at various junctures in Roman history. The insignia of the consuls were a staff of ivory with an eagle at its head, a toga bordered with purple (*toga prætexta*), which under the emperors was embroidered; an ornamental chair (*sella curulis*), and twelve *lictors*, who, with *fascæ* and axes, preceded them. In the beginning of the republic the authority of the consuls was almost as great as that of the preceding kings. They could declare war, conclude peace, make alliances, and even order a citizen to be put to death; but their powers were gradually curtailed, especially by the establishment of the tribunes of the people, early in the fifth century. But they still stood at the head of the whole republic; all officers were under them, the tribunes of the people only excepted; they convoked the senate, proposed what they thought fit, and executed the laws. In times of emergency they received unlimited power, and could even sentence to death without trial, levy troops, and make war without the resolve of the people first obtained. Under the emperors the consular dignity sunk to a shadow, and became merely honorary. The last consul at Rome was Theodorus Paulinus (A.D. 536).

In France the name of *consul* was temporarily adopted for the chief magistrates after the revolution. The directorial government (third constitution) having been abolished by the revolution of the 18th Brumaire, of the year VIII (Nov. 9, 1799), a provisional consular government, consisting of Bonaparte, Siéyès, and Roger Ducos, established the fourth constitution, proclaimed Dec. 15, by which France was declared a republic under a government of *consuls*. Three elective consuls (Bonaparte, Cambacérès, Lebrun) had almost uncontrolled executive authority, while the legislative power was in the hands of the tribunate and the legislative assembly; a conservative senate was also elected. But as early as Aug. 2, 1802, Bonaparte was proclaimed First Consul for life, and thus the constitution of

Consumption

France became again practically monarchical. On April 10, 1804, he was proclaimed emperor, and even the nominal consulate ended.

At present *consuls* are officials appointed by the government of one country to attend to its commercial interests in seaports or other towns of another country. The duties of a consul, generally speaking, are to promote the trade of the country he represents; to give advice and assistance when called upon to his fellow-subjects; to uphold their lawful interests and privileges if any attempt be made to injure them; to transmit reports of trade to his own government, to authenticate certain documents, etc. They are generally of three ranks: *consuls-general*, *consuls*, and *vice-consuls*.

Consumption (k o n - s u m ' s h u n), or **PHTHISIS** (th ē ' s i s; Gr. *phthiō*, to consume), now usually known as *tuberculosis* (which see), is a disease indicated by emaciation, debility, cough, hectic fever, and purulent expectoration. The predisposing causes are very variable—hereditary taint, scrofulous diathesis, syphilis, smallpox, etc.; exposure to fumes and dusty air in certain trades; violent passions and excess of various kinds, sudden lowering of the temperature of the body, etc. The more immediate or occasional causes are pneumonic inflammation proceeding to supuration, catarrh, asthma, and tubercles in the lungs, the last of which is by far the most general. The incipient symptoms usually vary with the cause of the disease; but when it arises from tubercles it is usually marked by a short, dry cough, that becomes habitual, but from which nothing is spit up for some time except a frothy mucus. The breathing is at the same time somewhat impeded, the body becomes gradually leaner, and great languor, with indolence, dejection, and loss of appetite, prevails. At a later stage the cough becomes more troublesome, particularly by night, and is attended with an expectoration, the matter of which assumes a greenish color and purulent appearance, being on many occasions streaked with blood. In some cases a more severe degree of blood-spitting attends, and the patient spits up a considerable quantity of florid, frothy blood. At a more advanced period of the disease a pain is sometimes felt on one side in so high a degree as to prevent the person from lying comfortably on that side; but it more frequently happens that it is felt only on making a full inspiration, or coughing. At the first commencement of the disease the pulse is often natural, but

Consumption

it afterwards becomes full, hard, and frequent. At the same time the face flushes, particularly after eating, the palms of the hands and soles of the feet are affected with burning heat; the respiration is difficult and laborious; evening exacerbations become obvious, and by degrees the fever assumes the hectic form with remittent exacerbations twice every day, at noon and evening. From the first appearance of the hectic symptoms the urine is high colored, and deposits a copious brauny, red sediment. At this time the patient is usually costive; but in the more advanced stages a diarrhea often comes on, colliquative sweats likewise break out, and these alternate with each other, and induce great debility. Some days before death the extremities become cold. In some cases a delirium precedes that event. The morbid appearance most frequently to be met with on the dissection of those who die of phthisis is the existence of tubercles in the cellular substance of the lungs, most usually at the upper and back part; but, in some instances, occupying the outer part, and forming adhesions to the pleura. In some cases life has been protracted till not one-twentieth part of the lungs appeared, on dissection, fit for performing their function. The left lobe is oftener affected than the right. The diet in this disorder should be nutritious, but not heating or difficult of digestion. Milk, especially that of the ass; farinaceous vegetables; acescent fruits; animal soups; and, above all, cod-liver oil, etc., are usually given. It is also of the utmost importance to see that the digestive organs are in proper working order. Removal to an equable climate or to a pure and mild air may arrest the disease in its incipient stage, and open-air treatment has of late proved highly beneficial, the patients sleeping exposed to the outer air even in severe winter weather. The disease is now ascribed to the tubercle bacillus, a bacterial germ, which may attack any part of the body, but is most dreaded in its attacks on the lungs. In 1890 Dr. Koch devised a serum for use as an inoculation remedy which he named tuberculin, but the efficiency of which is slight. Several other tuberculins have also failed. Tubercule vaccines are now being tried. The best treatment is cold, fresh air continuously and highly nutritious, easily digested diet.

Consumption, in political economy, all use or expenditure of the products of industry or of things having an exchangeable value. It is usually characterized as productive or

unproductive, according as it does or does not conduce to the efficiency of a producer and to further production. Thus wealth in the form of machinery is consumed productively by wear and tear in the processes of production; and, similarly, wealth expended in improving land is productively consumed; but the wealth expended in the maintenance of an operative artiste is, from the ordinary point of view, unproductively consumed. The classification, however, is not of a very definite kind, the distinction lying, for the most part, in the degree of directness and obviousness with which the act of consumption is related to production. Hence in the case of the operative artiste it is sometimes urged that the recreative benefit conferred upon the community tends indirectly to increase efficiency in production, and that from this point of view the artiste consumes productively. So the expenditure of wealth in war, or in preparations for war, usually classed as unproductive, may be really productive consumption, as tending to the assurance of the producer in the stability of the commercial conditions. The perfect characterization of an act of consumption as productive or unproductive involves the consideration of elements of a frequently incommensurable kind, and the rough practical economic test has to be employed with some amount of reservation. Consumption is the end of all production; and as the demand of the consumer determines the employment of the various coefficients of production, land, labor and capital, it is urged by many later economists that the scientific treatment of economics should proceed from consumption to production, instead of from production to consumption in accordance with the method of the older economists. Too much stress may be laid upon this method, but the consideration of economic problems from the standpoint of the consumer is of advantage, as giving the social need, rather than the producer's profit, the prior claim upon the attention.

Contact Action. See *Catalysis*.

Contagion (kon-tā'jun), the communication of disease by contact direct or indirect. A distinction has sometimes been made between *contagion*, as the communication of disease strictly by contact, and *infection*, as communication of disease by the miasmata, exhalations or germs which one body gives out and the other receives. There is little doubt that excessively minute disease germs proceed from the breath, the perspiration or other excretions of a

diseased person, and are capable of propagating the disease in another person; but much remains to be learned concerning the action of these. *Antiseptics*, or *disinfectants*, are used to destroy the poisonous particles, such as formaldehyde, carbolic acid, sulphur, permanganate of potash, chlorine gas, etc.

Contagious Diseases (Animals)

Act, an act of the British Parliament passed in consequence of the ravages of the disease known as *Rinderpest* or cattle-plague, which broke out in 1865. Commissioners were appointed to investigate the subject, and in 1869 an act (subsequently amended by acts in 1878, 1884 and 1886) was passed enforcing regulations for preventing the introduction and spread of contagious diseases.

In the United States similar acts were made to stamp out pleuro-pneumonia, or lung plague, which caused much loss among neat-cattle. Kentucky, Indiana, Illinois and Missouri suffered largely from this disease, but it has been completely stamped out by the Bureau of Animal Industry. The symptoms of lung plague are fever, dry muzzle, accelerated pulse and respiration, depression, cough and indications of pleurisy and pneumonia. In about 50 per cent. of the cases death occurs in from one to two weeks from its attack; of the remainder about one-half become chronic and recover. No therapeutics that has been tried has been found of any value, so governments have made regulations to quarantine infected and suspected animals, and for the slaughter of those regarded as dangerous to healthy animals. The United States freed itself from pleuro-pneumonia by enforcing these measures. It is estimated that the loss caused by this disease reached several million dollars in this country, while in Britain the annual loss for some years amounted to over \$10,000,000. It does not affect human beings. See *Rinderpest*.

Contango (kon-tang'gō), in stock-jobbing, a sum of money paid to a seller for accommodating a buyer, by carrying the engagement to pay the price of shares bought over to the next account day. In reality, contango is interest paid for the loan of money for the interval between account days. The price at which the bargain is entered is called the making-up price.

Contarini (kon-tā-rē'nē), a noble family of Venice which furnished seven doges to the State, besides several men of note.

Contempt (k o n - t e m t'), an offense against the dignity, order, or authority of a court or legislative assembly. Contempts committed out of court may be punished by fine or imprisonment, contempts done before court are usually punished in a summary way by commitment or fine. The power of vindicating their authority against contempt is incident to all superior courts.

Continent (k o n ' t i - n e n t), a connected tract of land of great extent, forming a sort of whole by itself, as Europe, Asia, Africa, North and South America; or we may speak of the Eastern and Western continents, Europe, Asia and Africa being regarded as one, and North and South America another. Australia, from its size, is often regarded as a continent, while Europe and Asia, regarded as a single body of land, are frequently spoken of as a continent under the name of Eurasia.

Continental System (k o n - t i - n e n ' - t ā l), a plan devised by Napoleon to exclude Britain from intercourse with the continent of Europe. It began with the decree of Berlin of November 21, 1806, by which the British Islands were declared to be in a state of blockade; all commerce, intercourse and correspondence were prohibited; every Briton found in France, or a country occupied by French troops, was declared a prisoner of war; all property belonging to Britons, fair prize, and all trade in goods from Britain or British colonies entirely prohibited. Britain replied by orders in council prohibiting trade with French ports, and declaring all harbors of France and her allies subjected to the same restrictions as if they were closely blockaded. Further decrees on the part of France, of a still more stringent kind, declared all vessels of whatever flag, which had been searched by a British vessel or paid duty to Britain, denationalized, and directing the burning of all British goods, etc. These decrees caused great annoyance, and gave rise to much smuggling, till annulled at the fall of Napoleon, 1814.

Contingent (k o n - t i n ' j e n t), the name often given to the quota of troops which is to be furnished by each member of a number of states composing a confederation.

Continuity (k o n - t i - n ū ' i - t i), LAW OF, an important principle in the investigation of the laws of motion and change in general. It may be enunciated thus: nothing passes from one state to another without passing through all the intermediate states.

Contorniati (k o n - t o r - n i - ā ' t i; It.), ancient medals or medallions in bronze, having a curved furrow (*contorno*) on each side, supposed to have been struck in the days of Constantine the Great and his successors, and to have formed tickets of admission to the public games of the circus of Rome and of Constantinople.

Contour (k o n ' t ō r), an outline. In geodesy *contours*, or *contour lines*, are lines or levels carried along the surface of a country or district at a uniform height above the sea-level, and then laid down on a map or plan, so that an approximately true outline of its contour is presented, the degree of accuracy depending on the number of lines or levels taken between the sea-level and the highest point in the region.

Contraband (k o n ' t r a - b a n d), in commerce, all goods and wares exported from or imported into any country, against the laws of said country. There are, also, a number of articles termed *contraband of war* which neutrals may be prevented, by one belligerent, from carrying to another. These generally include not only arms and munitions of war, but all the articles out of which they may be made. In recent times even provisions in certain cases have been considered contraband of war.

Contrabasso (k o n - t r a - b a s ' s o), the Italian name, now usually employed by musicians of all nationalities to designate the largest instrument of the violin kind (called sometimes the *double bass*), with three strings usually tuned in fourths. Its compass is from the lower A of the bass clef to tenor F. In Germany a fourth string is used, which gives it a range of three notes lower.

Contract (k o n ' t r a k t), in law, an agreement or covenant between two or more persons, in which each party binds himself to do or forbear some act, and each acquires a right to what the other promises. Contracts may be in express terms or implied from the acts of the parties; they may be verbal or written, and at common law both forms are binding; but by statute law a promise must be in writing. To be valid, a contract must be entered into by parties legally competent; that is, of sound mind and of full age. The act contracted for must not be contrary to law or public policy. Thus, an agreement to do injury to another or a contract not to marry at all (except in the case of a widow) is void. The contract must be founded on a consideration either of money or some act whereby an undoubted advan-

tage accrues to the party sued. Lastly, the contract is voidable if obtained by fraud, mistake, or compulsion.

Contract, ORIGINAL or SOCIAL, in politics, that which is supposed to exist from the beginning between the sovereign power and the subject. Such a contract is evidently a mere supposition, having no historical foundation in any annals which have been preserved.

Contractility (kon-trak-til'i-ti), the power which certain tissues in animals and plants have during life, of shortening themselves. It may be either voluntary or involuntary.

Contractions (k o n-trak'shuns), abbreviations employed with the view of saving labor in writing, and also in former times with the view of saving parchment in extending MS. copies of works, deeds, etc. Contraction takes place in several modes, as by elision; writing a smaller letter above the word contracted; running two or more letters into one character; by symbols representing syllables or words; by initial letters; thus: *recd.* for *received*; *qam* for *quam*; *Mr.* for *Master*; & for *et*; *p* for *per*; *S.P.Q.R.* for *Senatus populusque Romanus*. When the contraction consists of the initial letter, syllable, or syllables of a word, as *ult.* for *ultimo*, it is more correctly termed an *abbreviation*. See *Abbreviations*.

Contralto (kon-tral'tō), in music, the highest voice of a male adult, or the lowest of a woman or a boy, called also the *Alto*, or when possessed by a man *Counter-tenor*. It is next below the treble and above the tenor, its easy range being from tenor G to treble C.

Contrate-wheel (kon'trāt), a wheel having the teeth projecting perpendicularly to the plane of the wheel.

Contravallation (k o n-t ra-val-lā'shun), in fortification, a line formed in the same manner as the line of circumvallation, to defend the besiegers against the enterprises of the garrison.

Contrayerva (kon-tra-yer'va), the aromatic, bitterish root of *Dorstenia Contrajerva*, a plant of the nettle family, imported from tropical America, and used as a stimulant and tonic.

Controller (kon-trō'ler), a public officer appointed, to control, oversee, or verify the accounts of other officers.

Contumacy (kon'tū-ma-si), in law, disobedience of the or-

ders of a court; the offense of non-appearance when summoned judicially.

Conus (kō'nus), a genus of gasteropodous molluscs, the type of the family Conidæ or cone-shells, so named from the conical form of the shell. They are found in the southern and tropical seas.

Convales'cent Hospitals, hospitals intermediate between ordinary hospitals and the homes of the patients, established in order that those who have been successfully treated may be fully restored to health and strength before going back to their former unsanitary surroundings.

Convallaria (kon-va-lā'ri-a), a genus of plants, nat. order Liliaceæ, the only species being the lily-of-the-valley. Convallamarin and convallarin are two glucosides obtained from the plant and are used in functional affections of the heart and in cardiac dropsy for their stimulating effect on the heart.

Convection of Heat, the transfer-ence of heat by means of the upward motions of the particles of a liquid or gas which is heated from beneath. See *Heat*.

Convent (kon'vent), a religious house inhabited by a society of monks or nuns. See *Monastery*.

Conventicle (kon-ven'ti-kl), a private assembly or meeting for the exercise of religion. Historically, the term was specially applied to meetings of petty sects and dissenters in the statutes of the time of Charles II.

Convention (kon-ven'shun; Latin, *conventio*, a meeting), a formal or statutory assembly, particularly of delegates or representatives, for discussing civil or political matters. In Great Britain the name *Convention Parliament* is given to the assembling of Parliament without the king's writ; as in 1660, when Charles II was restored, and in 1688, when the throne was left vacant by the flight of James II.—*National Convention*, in French history, the name given to that body which met after the legislative assembly had pronounced the suspension of the royal functions (September, 1792), and proclaimed the republic at its first sitting.

Conversano (kon-ver-sā'nō), a town in South Italy, province of Bari, 18 miles S. E. of Bari, with a fine cathedral, and a trade in wine, oil, almonds, flax and cotton. Pop. 13,685.

Conversazione (-sat-si-ō'ne), a reception, usually on a large scale and in the evening, at which the company move about, converse with

Conversion

their acquaintances, partake of tea, coffee, or other refreshments, and often have objects of art, science, or general interest set out for their inspection.

Conversion (kon-vér'shun), a term in logic. A proposition is *converted* when the predicate is put in the place of the subject, and the subject in place of the predicate; as, 'no A is B' ('no virtuous man is a rebel'), the converse of which is 'no B is A' ('no rebel is a virtuous man'). Simple conversion, however, in this manner is not always logical. In the case of universal affirmatives, for example, 'all A are B' (say, 'all men are animals'), the simple converse 'all B are A' ('all animals are men') would not be true.

Converter (kon-vér'tèr), the vessel used in the Bessemer steel-making process which holds the molten iron or carbide of iron which is to be converted into steel.

Convex (kon'veks; Latin *convexus*, vaulted, arched), rising in a circular or rounded form; the contrary to *concave* (which see). Thus the inside of a watch-glass is concave, the outer surface convex.

Convex Lens. See *Lens*.

Conveyancing (kon-vā'an-sing), the practice of drawing deeds, leases, or other writings (*conveyances*) for transferring the title to property from one person to another, of investigating the title of the vendors and purchasers of property, and of framing those multifarious deeds and contracts which govern and define the rights and liabilities of families and individuals. The business of conveyancing is carried on by barristers, solicitors, and members of the legal profession generally.

Convict (kon'vict), the general term for a person who has been found guilty of a serious offense and sentenced to penal servitude, such servitude consisting at times of forced labor on some public work. In England transportation was formerly the equivalent punishment.

Convocation (k o n-vō-kā'shun), an assembly of the clergy of England, belonging either to the province of Canterbury or to that of York, to consult on ecclesiastical matters. From the fact that the province of Canterbury is by much the more influential of the two provinces into which England is ecclesiastically divided, the convocation of the province of Canterbury is often spoken of as *the* convocation, as if there were only one. In former times convocations had the power of enacting

canons; but this power was virtually abolished by the statutes of Henry VIII and Elizabeth.

Convolvulaceæ (kon-vol-vū-lā'se-ē), a natural order of plants comprising about 700 species largely consisting of climbers. Some of them have valuable properties. Jalap is derived from the *Exogonium* or *Ipomœa purga*, an inhabitant of Mexico.

Convolvulus (kon-vol'vū-lus), a genus of plants, type of the nat. order Convolvulaceæ, consisting of slender twining herbs with milky juice, bell-shaped flowers, and five free stamens. Some species are commonly known as bind-weeds (*C. arvensis*); others are cultivated in gardens. *C. tricolor*, or minor convolvulus, with its large flowers of violet blue, with white and yellow center, is a familiar species. Scammony is obtained from the root of the *Convolvulus Scammonia*, a native of Syria; the liqueur *noyau* from *C. dissectus*. Some species, like the *C. Batatas*, or sweet-potato, have tuberous and fleshy roots capable of being used as food. *Convolvulus Jalapa* was long considered as yielding the true jalap of commerce. This is now known to be procured from *Exogonium* or *Ipomœa purga*, an allied plant, found in the mountainous regions of Mexico.

Convoy (kon-voi), a fleet of merchantmen under the protection of a ship or ships of war, or the ship or ships appointed to conduct and defend them from attack and capture by an enemy. In military language it is used for *escort*.

Convulsion (kon-vul'shun), a violent, involuntary, spasmodic muscular contraction or series of contractions, with alternate relaxations. Convulsions are universal or partial, and have obtained different names according to the parts affected, or the symptoms. The muscles principally affected in all species of convulsions are those immediately under the direction of the will, as those of the eyelids, eye, face, jaws, neck, superior and inferior extremities. Convulsions are produced commonly by irritation of some part of the brain or spinal cord, such as the general convulsions in inflammation of the brain membranes or of the nerves themselves. Children of a nervous temperament are often the subjects of convulsions during dentition, particularly when accompanied by a disordered state of the bowels or the presence of worms.

Convulsionists (k o n-vul'shun-ists), CONVULSIONARIES, those fanatics of the eighteenth century in France who had or affected to have convulsions, produced by religious im-

Convulsionists

pulses. The name was first applied to fanatics who exhibited varied seizures at the tomb of a Jansenist at St. Médard, some jumping, some barking, and others mewing like a cat. A number of them were imprisoned, but this had little effect.

Conway (kon'wā), or ABERCONWAY, a town and very ancient borough of North Wales, in Carnarvonshire, about 13 miles E. N. E. of Bangor, at the mouth of the Conway. It is notable for its old castle built by Edward I, a suspension bridge built by Telford, and a tubular railway bridge by Stephenson. Pop. 5242.—The river Conway has a course of about 30 miles through much romantic scenery.

Conway, HENRY SEYMOUR, an English field-marshal, born in 1720, second son of the first Lord Conway. He was aide-de-camp to the Duke of Cumberland at Culloden in 1746, commanded as lieutenant-general in Germany in 1761, was Secretary of State in the Whig cabinet 1761-68, was made commander-in-chief of the army in 1782, and moved in Parliament to cease hostilities against the United States. In allusion to this Burke said, 'All England, all America, joined in his applause.' He died in 1795.

Conway, MONCURE DANIEL, author and preacher, born in Stafford Co., Virginia, in 1832; died in 1907. He entered the Methodist ministry in 1849, but afterwards became a distinguished Unitarian pastor and an earnest antislavery advocate. He became pastor of a congregation in London in 1863. He wrote *The Golden Hour*, *Demonology and Devil Lore*, *The Wandering Jew*, *Pine and Palm*, *Life of Thomas Paine*, etc.

Cony, CONEY (kō'ni), an old name for the rabbit: used also in the English version of the Bible as a translation of a Hebrew word probably meaning the *Hyrax Syriacus*, a rabbit-like animal common in Syria and Palestine, inhabiting clefts of rocks. See *Hyrax*.

Conyza (kō-nī'za), a genus of plants, nat. order Compositæ, annual or perennial herbs, scattered over the warmer regions of the earth, a few being found in temperate countries. None possess properties of any value. In England *C. squarrosa* is called *fleabane* because of its supposed property, when powdered and sprinkled, of driving away fleas.

Cooch-Behar, or KUCH-BEHAR' (köch-be-här'), a native state in India, in political relation with the government of Bengal. It forms a level plain of triangular shape, intersected by numerous rivers, and is entirely surrounded by British territory.

The greater portion of the soil is fertile and well cultivated. Area, 1307 sq. miles; pop. 567,037.—The chief town, COOCH-BEHAR, contains some handsome public buildings and a splendid new palace of the maharajah. Pop. 12,000.

Cook, ELIZA, an English poetess, born in London in 1818; died in 1889. She was early a contributor of the *New Monthly Magazine*, the *Metropolitan*, and the *Literary Gazette*; and in 1838 published a collection of poems. She afterwards wrote many poems and songs. Some of which were highly popular, and for several years published a weekly periodical, *Eliza Cook's Journal*.

Cook, JAMES, a famous British navigator, born in Yorkshire in 1728, of parents not above the rank of peasantry. He was at first apprenticed to a shopkeeper; but acquiring a love for the sea, he became a sailor. In 1755 he entered the royal navy, and four years later as sailing-master of the *Mercury*

Captain Cook.

performed valuable services in surveying the St. Lawrence River and the coast of Newfoundland. Some observations on a solar eclipse, communicated to the Royal Society, brought him into notice, and he was appointed commander of a scientific expedition to the Pacific, with the rank of lieutenant in the navy. During this expedition he successively visited Tahiti, New Zealand, discovered New South Wales, and returned by the Cape of Good Hope to Britain in 1771. In 1772 Captain Cook, now raised to the rank of a commander in the navy, com-

manded a second expedition to the Pacific and Southern Oceans, which resulted, like the former, in many interesting observations and discoveries. He returned to Britain in 1774. Two years later he again set out on an expedition to ascertain the possibility of a northwest passage. On this voyage he explored the western coast of North America, and discovered the Sandwich Islands, on one of which, Hawaii, he was killed by the natives, February 14, 1779. Captain Cook wrote and published a complete account of his second voyage of discovery, and an unfinished one of the third voyage, afterwards completed and published by Captain James King.

Cooke, JAY, banker, born at Sandusky, Ohio, in 1821; died in 1905. He engaged in the banking business at Philadelphia in 1842 and established a new firm in 1861, which did a large and useful business as a government agent in placing war-loans. It subsequently financed the Northern Pacific Railroad, this leading to the failure of the firm in 1873, the first event in the great financial panic of that year. The later success of the Northern Pacific Railroad restored Mr. Cooke's wealth.

Cooke, JOHN ESTEN, author, born at Winchester, Virginia, in 1830; died in 1886. His works include *The Virginia Comedians*, *Larry of Eagle's Nest*, *The Last of the Forests*, *Hammer and Rapier*, also *History of Virginia*, *Life of Robert E. Lee*, etc.

Cooke, ROSE TERRY, authoress, born at West Hartford, Connecticut, in 1827; died in 1892. She wrote *Somebody's Neighbors*, *Huckleberries*, *Poems by Rose Terry*, etc., most of her writings being short tales of much power and literary merit.

Cookery (kuk'e-ri), the preparation of food so as to render it more palatable and more digestible. The art is of great importance, not only for comfort, but also for health. Food is mainly prepared by submitting it to the action of fire as by roasting, boiling, stewing, etc. Each of these processes develops a different flavor in food, but they result alike in rendering the tissues, both of animal and vegetable food, softer and much more easily dealt with by the digestive organs. The art of cookery was carried to considerable perfection among some of the ancient nations, as for instance the Egyptians, Persians, and Athenians. Extravagance and luxury at table were notable features of Roman life under the empire. Among moderns the Italians were the first to reach a high degree of art in this department. Their

cooking, like that of the ancient Romans, is distinguished by a free use of oil. Italian cookery seems to have been transplanted by the princesses of the House of Medici to France, and was carried there to perhaps the highest degree of perfection; even yet the skill and resource which the French cook shows in dealing often with very slight materials is a highly creditable feature in the domestic economy of the nation. No other people seems to have equaled the French in this art.

Cook's Inlet, an inlet of the North Pacific Ocean, running into the territory of Alaska for about 150 miles; explored by Captain Cook in 1778.

Cook's Islands, a name of the Hervey Islands, given to them because discovered by Captain Cook. See *Hervey Islands*.

Cook's Strait, the channel which separates the two principal islands of New Zealand, discovered by Captain Cook in 1770.

Cookstown (kuk's'toun), a town of Ireland, County Tyrone, 10 miles north of Dungannon; has manufactures of linen and large trade in flax. Pop. 3531.

Coolers (köl'ers), WATER, vessels of porous, unglazed earthenware, in which a liquid can be kept cool by constantly exuding through the substance of the ware and evaporating from the outer surface of the vessel.

Coolie (kö'lē; Tamil, *kuli*), a name in Hindustan for a day laborer, also extended to those of some other eastern countries. Many of these have been introduced into the West Indies, Mauritius, and other places, their passage being paid for them on their agreeing to serve for a term of years. The first coolie emigrants appear to have been those sent to British Guiana from Calcutta in 1839 to supply the want of labor felt after the abolition of slavery. The coolies employed in Guiana are chiefly from India.

Cooley (kö'lē), THOMAS M., jurist, born at Attica, New York, in 1824. He removed to Michigan in 1843, studied law, and in 1859 became professor of law in Michigan University. He was a justice of the Supreme Court of Michigan in 1864; chief justice in 1867; retired from the bench in 1885, and was appointed by President Cleveland on the Interstate Commerce Commission, of which he was chairman. He resigned in 1891 and died in 1898. He ranked among the highest of constitutional jurists and was the author of

numerous legal works, chiefly based on the Constitution of the United States.

Coomassie (kō-mas'sē), a town of West Africa, capital of Ashantee, 130 miles north of Cape Coast Castle. It was taken and burned by Sir Garnet Wolseley, at the head of the English expedition sent against the Ashantees in 1874. Pop. about 30,000.

Coombe (kōm), WILLIAM, born at Bristol in 1741; died in 1823, author of several popular works, including the *Diaboliad*; the *Devil upon Two Sticks in England*, a continuation and imitation of Le Sage's novel, but far inferior in spirit and graphic delineation to the original; the *Tour of Dr. Syntax in Search of the Picturesque*; the *History of Johnny Quæ Genus*; *English Dance of Death*, etc., all accompanied by Rowlandson's prints, to which they owe most of their value.

Coomie (kō'mē), a present in place of customs-duty, demanded by the kings and chiefs at parts of the West African coast for permission to trade with the natives.

Coomptah (kōm'ta), a town of India on the sea-coast, in the presidency of Bombay, about 330 miles S. S. E. of Bombay. It has an open roadstead and a large cotton trade. Pop. 10,629.

Cooper (kup'er), SIR ASTLEY PASTON, an English surgeon, was born in Norfolkshire in 1768; died in 1841. He studied medicine in London, and attended the lectures of John Hunter. After visiting Paris in 1794 he was appointed professor of anatomy at Surgeon's Hall, and in 1800 head surgeon of Guy's Hospital. He became a very eminent surgeon. In 1822 appeared his great work on *Dislocations and Fractures*. Shortly afterwards he became president of the Royal College of Surgeons, and honors and titles of every kind poured in on him.

Cooper, JAMES FENIMORE, an American novelist, born at Burlington, New Jersey, in 1789, studied at Yale College, and entered the American navy as a midshipman at the age of sixteen. In 1821 appeared the novel of *Precaution*, the first production of his pen. Though successful, it gave no scope for his peculiar powers, and it was not till the production of the *Spy* and the *Pioneers* that he began to take a high place among contemporary novelists. After that came a steady flow of novels dealing with life on the sea and in the backwoods, most of which, like the *Pilot*, *Red Rover*, *Waterwitch*, *Pathfinder*, *Deerslayer* and *Last of the*

Mohicans, are familiar names to the novel-reading public. After visiting Europe and serving as consul for the United States at Lyons for three years, Cooper returned to America, where he died at Cooperstown, New York, in 1851. Besides his novels he wrote a history of the United States Navy and some volumes descriptive of his travels.

Cooper, PETER, an American inventor, manufacturer, and philanthropist, born in 1791; died in 1883. He started life with few advantages, being almost self-educated; but by dint of energy, perseverance, sagacity and integrity, accumulated a large fortune. He carried on the manufacture of glue and isinglass for over fifty years, and was also connected with the iron manufacture, the railways (he designed and built the first American locomotive), and the telegraphs of the United States. The 'Cooper Union' in New York was established by him to furnish a free education in art and practical science. It comprises day classes, in which women are instructed in drawing, painting and other branches of art; evening classes, in which young men and women are taught art, engineering, chemistry, mathematics, etc.; free reading-room and library, etc.

Coöperative Societies (kō-op'er-ā-tiv), are associations of individuals for mutual assistance in industrial or commercial objects. One form of coöperative societies is that of an association of men belonging to some trade or industry for the purpose of carrying it on entirely by their own efforts, and thus securing all the profits of their labors to themselves; but much more common associations are those the object of which is to provide the members, and sometimes also the general public, with the ordinary household necessities, at as near as possible the prime cost. Associations of the former kind are thus associations for production, those of the latter for distribution, by means of what are commonly known as *Coöperative Stores*. Coöperative societies of the latter kind have been established very widely in Great Britain, one of the first and most successful of them being the Rochdale Equitable Pioneers' Society. This, like others, is conducted on the principle of dividing the surplus profits among the members alone in proportion to their purchases, after a certain fixed percentage has been deducted for interest on the capital subscribed. This society commenced in 1844 with only seventeen members; it has now 6000 or 7000, and sells goods annually to the value of

more than \$1,300,000. A striking feature in connection with the societies in the North of England, where they are very numerous and flourishing, is the formation of an association of coöperative societies, The North of England Co-operative Wholesale Society, for the purpose of making their purchases on as large a scale as possible, so as to increase the profits. There are now in Great Britain about 1300 societies, with sales amounting to \$150,000,000 a year. Similar associations have been formed for the benefit of other than the working classes, such as clergymen, lawyers, medical practitioners, officers in the army and navy, members of the civil service, etc. The *Civil Service Supply Association of London* is the most extensive of these, and has been very successful, the annual sales amounting to about \$8,500,000. Manufacturing associations of all kinds have been tried on the European continent, but neither there nor in Britain have they, on the whole, been very successful. In these societies, generally called Working Men's Associations, the shareholders are usually also the workmen, and the surplus profits are divided among them as workmen after they have received the fixed percentage as shareholders, and in some cases also among the workmen who are not shareholders, if there are any such. In Germany there are societies for the purchase of raw materials, manufacturing associations, societies of united shops, and coöperative stores. In the United States coöperation has as yet chiefly taken the form of building-loan associations for providing the members with houses of their own, productive and distributive societies having made slow progress. See also *Building Societies* and *Friendly Societies*.

Cooper's Creek, or the BARCOO, called by the latter name chiefly in its upper course, the largest inland river of Australia, which rises in Queensland by two branches, the Thomson and Victoria (or Barcoo), and flows southwest to Lake Eyre.

Coördinates (kō-or'di-nāts), in geometry, a term applied to lines, to which points under consideration are referred, and by means of which their position is determined. Coördinates either determine the position of a point in space or in a plane which is understood to contain all the figure under consideration. They determine position by straight lines only, or by a straight line and angles; in the latter case they are called *polar* coördinates. When coördinates are at right angles

to each other they are called *rectangular* coördinates, and when they make any other angle with each other they are called *oblique* coördinates. In the fig. OX OY are two fixed lines at right angles to each other, and P is a point whose position is to be determined.

Coördinates.

If we know ON and OR we can easily find the position of P , of which ON OR are called the coördinates.

Coorg (kōrg), or KURG, an ancient principality now a province in Southern Hindustan, lying between Mysore on the east and northeast and the districts of South Canara and Malabar on the west; area, 1583 sq. miles. The country has a healthy climate and yields coffee, spices, timber, etc. The capital is Merkara. Pop. 180,607.

Coos (kō-os). See *Cos*.

Coosy (kō'si), a river of Northern Bengal, which rises among the Nepaul Himalayas, flows in a southerly direction, and falls into the Ganges after a course of 325 miles.

Coot (kōt), a grallatorial bird of the rail family (Rallidæ), frequenting lakes and ponds. The common coot (*Fulica atra*) has a bald forehead, a black body, and lobated toes, and is about 15 inches in length. The nests, which are very large, strong, and compact, are composed of reeds and rank water-herbage, built sometimes near the water's edge, and sometimes on small islets at some distance from the shore. Should the nest be set adrift by a rise of water, the female coot seems in no wise disturbed, but sits composedly on her eggs until it is stranded. The coot of India, China and Japan is said to be identical with that of Europe, but the North American coot is now recognized as a distinct species, and has received the name of *F. Wilsoni*.

Copaiba, COPAIVA (ko-pā'ba, ko-pā'-va), the name of a balsam and an oil. The balsam is a liquid resinous juice flowing from incisions made in the stem of a plant, *Copaifera officinalis* (nat. order Leguminosæ), and several other species of the genus, growing in Brazil, Peru, etc. It consists of several resins dissolved in a volatile oil. The resins are partly acid and partly neutral; the oil is clear, colorless and has an aromatic odor. It is used in

medicine, especially in affections of the mucous membranes (as those of the urino-genital organs).

Copaiba Plant (*Copaifera officinalis*).

Copais (ko-pā'is), or **TOPOLIAS**, a lake or marsh of Greece in Bœotia, enclosed by mountains on every side, and forming a shallow expansion of the river Cephissus some twenty miles broad, the water having numerous subterranean outlets to the sea. In 1881 a French company was formed for draining the lake or marsh, and thus redeeming some 62,000 acres of land. Operations were commenced in 1881, and the drainage was completed before the end of the century.

Copal (kō'pal) is a gum-resin yielded by different trees in Africa, South America, India and Australia, and differing considerably in quality in its several varieties; but in general it is hard, shining, transparent, and citron-colored. When dissolved in alcohol or turpentine it makes a beautiful and very durable varnish. Indian copal, known in England as *gum animé*, is produced by *Vateria Indica*; Madagascar copal from *Hymenæa verrucōso*; Brazilian copal from several species of *Hymenæa* and *Icica*, and from *Trachylobium martianum*. A substance called *fossil copal* or *copolin* is found in some places. It resembles copal resin in color and odor.

Copalche Bark (kō-pa'l'chā). the bark of the *Strychnos pseudoquina* (order Euphorbiacæ), a native of Brazil. The name is also given to the bark of *Croton pseudo-china* (order Loganiacæ) of Mexico. It resembles cascarilla bark in its properties.

Copan (kō-pan'), an ancient ruined city of Honduras, Central America, on the Copan River, with some remarkable remains of Indian origin.

Coparcenary (kō-pa'r'se-na-ri). in law, partnership in inheritance; joint heirship in which each is entitled to a distinct share of the benefits, while the property remains undivided.

Copartnership. See *Partnership*.

Cope (kōp), a sacerdotal vestment, resembling a sleeveless cloak with a hood reaching from the shoulders to the feet, worn on solemn occasions.

COPE.

A, Probably Dr. Robert Langton, Queen's Coll. Oxon. 1, Cope. B, Figure from Pugin's Glossary. 222, Cope.

and particularly in processions, by the pope and other bishops as well as by priests. It was one of the vestments retained at the Reformation in the Anglican Church.

Cope, CHARLES WEST, an English painter, born in 1811, studied at the Royal Academy and in Italy, and first exhibited at the academy in 1831. In 1843 he gained a prize of £300 for his picture *The First Trial by Jury*; in 1844, by his fresco the *Meeting of Jacob and Rachael*, he secured the commission for one of six frescoes for the House of Lords, producing accordingly *Edward the Black Prince receiving the Order of the Garter*. He executed eight frescoes from English history of the seventeenth century for the House of Lords, while his other works were numerous, the subjects being historical, romantic, or domestic. He also produced *Last Days of Cardinal Wolsey*, *Departure of the Pilgrim Fathers*, *L'Allegro and Il Penseroso*, *Milton's Dream*, *Shylock and Jessica*, *Ann Page and Slender*, *Lear and Cordelia*. He became A.R.A. in 1844 and R.A. in 1848, but retired in 1883, and died in 1890.

Cope, EDWARD DRINKER, an eminent naturalist, born at Philadelphia, Pennsylvania, in 1840; died in 1897. He was professor of natural history at

Haverford College 1864-67, and for many years palæontologist to the United States Territorial Surveys. In 1884 he was appointed curator of the National Museum in Washington, in 1891 became professor of geology in the University of Pennsylvania, and in 1896 was president of the American Association for the Advancement of Science. He gave special attention to comparative anatomy and did excellent work in the systematic arrangement of the fishes and batrachians and some groups of reptiles and mammals. He discovered and described over 1000 species of fossil vertebrata and made extensive explorations in the fossil-bearing strata of the western United States and elsewhere. He made important contributions to the theory of evolution, writing *Origin of the Fittest* and *Primary Factors of Organic Evolution*, also many works and papers on systematic anatomy and descriptions of the Cretaceous and Tertiary Vertebrates. His *Extinct Vertebrata of the Eocene Formations of Wyoming* describes some of the most remarkable types of mammalia ever discovered. He purchased the *American Naturalist* in 1891 and edited it till his death.

Copeck (kō'pek; *kopeika*, a lance), a Russian copper coin, so called from the impression of St. George bearing a lance, the hundredth part of a silver rouble, or about the eightieth part of a paper rouble. It is equal in value to about three-fourths of a cent.

Copenhagen (kō-pen-hā'gen; Danish *Kjöbenhavn*, merchants' haven), the capital of Denmark, on the Sound, the larger and older portion of it on the east side of the Island of Zealand, a smaller portion on the north point of the island of Amager, with a branch of the sea forming the harbor between them. The old fortifications, which formerly separated the city from its extensive suburbs, have been leveled and converted into promenades, and a modern system of fortifications constructed on a grand scale, far beyond the site of the old town and embracing canals to flood the approaches to the city. These convert it into a great stronghold. The city is mostly well built, principally of brick. The chief buildings are the royal palace of Rosenborg with many antiques and precious articles; the Amalienborg, consisting, properly speaking, of four palaces, one of them the usual residence of the sovereign; the palace of Charlottenborg, now the repository of the Academy of Arts; the Royal Library, containing 550,000 volumes and 25,000 manuscripts;

Thorwaldsen's Museum, containing a great many of the sculptor's works; the university buildings, the Vor Frue Kirke, the arsenal, etc. The university, founded by Christian I in 1478, has over 2000 students, and a library of 300,000 volumes. The museum of Northern antiquities and the ethnographic museum, founded in 1892, are unrivaled of their kind. The harbor is safe and commodious. Copenhagen is the principal station of the Danish fleet and the center of the commerce of Denmark. It carries on an active trade with Norway, Sweden, Russia and Germany, and in particular with Britain, the principal exports being grain, butter, cheese, beef, pork, cattle, horses, hides, etc. It has foundries and machine-works, extensive shipyards, woolen and cotton mills, porcelain works, breweries, distilleries, etc., and produces also watches, clocks, pianofortes, etc. Sugar-refining and tanning are carried on. Copenhagen is first mentioned as a fishing hamlet in 1043. In 1443 it was made the capital of Denmark. It has occasionally suffered much from fires and from hostile attacks, the most disastrous being the bombardment by the British from the 2d to the 5th of September, 1807. In 1801 the Danish fleet was here defeated by Sir Hyde Parker and Nelson. The environs in some parts are very fine. Pop. with suburbs, in 1900, 476,806.

Copepoda (ko-pep'o-da), an order of minute entomostracous fresh-water and marine crustacea, so named because their five pairs of feet are mostly used for swimming (Gr. *kopē*, an oar).

Copernicus (ko-per'ni-kus), or KOPERNICK, NICHOLAS, astronomer, born at Thorn, then in Poland, in 1473, his family being supposed to have come originally from Westphalia. He first studied medicine at Cracow, and afterwards devoted himself to mathematics and astronomy, and in 1500 taught mathematics at Rome with great success. Returning to his own country, he was made canon in the cathedral of Frauenburg, and began to work out his new system of astronomy. Doubting that the motions of the heavenly bodies could be confused and so complicated as the Ptolemaic system (which see) made them, he was induced to consider the simpler hypothesis that the sun was the center round which the earth and the other planets revolve. Besides this fundamental truth Copernicus anticipated, for he can scarcely be said to have proved, many other of the principal facts of astronomical science, such

as the motion of the earth round its axis, the immense distance of the stars which made their apparent position the same from any part of the earth's orbit, etc. His general theory also enabled him to explain for the first time many of the important phenomena of nature, such as the variations of the seasons and the precession of the equinoxes. The great work in which Copernicus explained his theory, *De Orbium Cælestium Revolutionibus* ('On the Revolutions of the Celestial Orbs'), was completed in 1530, and published at Nuremberg in 1543. He was not excommunicated on account of it. He died at Frauenburg in 1543.

Copiapó (kō-pe-a-pō'), the name of a river, a town and a seaport of Chile. The river flows west from the Andes to the Pacific, and has a course of 120 miles. About 30 miles from the sea is the town of Copiapó, or San Francisco de la Selva, the center of an important mining district. Pop. 9301. The seaport, Porto Copiapó, stands at the mouth of the river, and has about 1200 inhabitants.

Coping (kō'ping), the top or upper covering of a wall made to project and slope so as to carry the rain-water clear of the wall.

Copley (kop'lē), JOHN SINGLETON, a self-taught and distinguished painter, born in 1737 at Boston, Massachusetts; died in London in 1815, where he had settled in 1776, acquiring a reputation as a historical painter. He was elected a member of the Royal Academy in 1779. His most celebrated picture is the *Death of Lord Chatham*, now in the National Gallery. His son became Lord Lyndhurst.

Coppee (kop-pā'), HENRY, author, born at Savannah, Georgia, in 1821, was graduated at West Point in 1845. He served in the army through the Mexican war, resigning in 1855 and becoming professor of English literature in the University of Pennsylvania. He was president of Lehigh University 1866-75, afterwards professor of history there, and in 1874 was made a regent of the Smithsonian Institution. He wrote *Elements of Logic*, *Elements of Rhetoric*, *Conquest of Spain by the Arab-Moors*, etc. Died in 1895.

Copper (kop'er), one of the most anciently known metals, deriving its name from *Cyprus*, large supplies having in Greek and Roman times come from that island. It is a metal of a pale-red color tinged with yellow; chemical symbol Cu, atomic weight 63.2. Next to gold, silver and platinum it is

the most ductile and malleable of metals; it is more elastic than any metal except steel, and the most sonorous of all except aluminium. Its conducting power for heat and electricity is inferior only to that of silver. It has a distinct odor and an unpleasant, metallic taste. It is not altered by water, but tarnishes by exposure to the air, and becomes covered with a green carbonate. It occurs native in branched pieces, dendritic, in thin plates, and rarely in regular crystals, in the primitive and older secondary rocks. Blocks of native copper have sometimes been obtained weighing many tons. Its ores are numerous and abundant. Of these, several contain sulphur and iron or other metal, such as copper glance or vitreous copper (Cu_2S); gray copper or Fahlerz, one of the most abundant and important ores; and copper pyrites or yellow copper ore (Cu_2FeS_4), another abundant ore. The red oxide of copper (Cu_2O) forms crystals of a fine red color, and is used for coloring glass. There are two native carbonates, the blue and the green, the latter being the beautiful mineral *malachite*, the former also known as blue malachite. *Blue vitriol* is a sulphate, and is used for dyeing and preparing pigments, as are various other copper compounds. *Verdigris* is an acetate. The arsenite of copper is the pigment *Scheele's green*. *Schweinfurth green* is another copper pigment. All the compounds of copper are poisonous. It is found in most European countries, in Australia and Japan, in Africa and in America, the United States being much the greatest producer. Of the world's total yield of 863,638 metric tons in 1910, the United States produced 492,675, the great yields being in Arizona, Montana and Michigan. Recently very rich deposits, as yet little worked, have been discovered in Alaska.

Copper is extracted from its ores either by the dry or the wet process. For the former, what is known as the Welsh process is most common in the Cornwall mines of Great Britain, and may be described. It consists in alternately roasting the ore, and then smelting it in a furnace with a suitable slag, until impure or *blister copper* is obtained. Before this stage is reached a metallic compound of copper, sulphur and iron has been produced, technically known as *matt*, *regulus*, or *coarse metal*, and subsequently a tolerably pure sulphide of copper called *fine metal*. The blister copper is refined by burning off the sulphur, arsenic, and other volatile impurities, and by melting it along with wood charcoal and stirring it with a

wooden pole. The quality is then tested, and, if found satisfactory, the copper is cast into ingots. In extracting the metal from pyrites by the wet process, the ore is first roasted to get rid of the larger proportion of sulphur, then the calcined residue, still containing sulphur, is mixed with common salt, ground and heated in ovens. The copper is thus converted into chloride, part of which volatilizes, but is condensed, along with arsenic and other substances, by passage through flues and water-condensers. After some hours the calcined mixture is raked out of the ovens, cooled, and transferred to tanks, where it is exhausted by successive treatment with water. The solution, containing chloride of copper, sulphate and chloride of sodium, and iron salts, is next heated along with scrap-iron. Copper precipitates in the form of a ruddy, lustrous, tolerably compact mass, with a crystalline appearance, and mixed with metallic iron and oxide. The larger pieces of iron are picked out, the precipitate washed and drained, and then rendered compact by heating in a furnace. A slag containing the oxide of iron forms, and the copper, when judged sufficiently pure, is run into molds. Afterwards this crude metal is refined and toughened in the usual way, and the slags are employed as in the Welsh process. Some of the alloys of copper, especially those containing tin and zinc, are of considerable importance, *e. g.*, *bronze*, an alloy of copper with about 8 to 10 per cent. of tin; *bell-metal* composed of 80 parts of copper and 20 of tin; British bronze coinage, copper 95, tin 4, zinc 1. Copper is applied to a great many useful purposes. In sheets it is used for sheathing the bottoms of ships, covering roofs and domes, the constructing of boilers and stills of a large size, etc. It is also used in electrotyping and engraving, for various household utensils and fittings; but its use for household utensils is by no means free from danger on account of the action of acids on it, which produces verdigris. As it is one of the best conductors of electricity, it is now largely employed for this purpose, especially in conducting the powerful currents used in power transmission.

Copperas (kop'e-ras), sulphate of iron, or green vitriol ($\text{FeSO}_4 \cdot 7\text{H}_2\text{O}$), a salt of a peculiar astringent taste and of a fine green color. When exposed to the air it assumes a brownish hue. It is much used in dyeing black and in making ink, and in medicine as a tonic. The copperas of commerce is

usually made by the decomposition of iron pyrites.

Copper-fastened, said of a ship and other metal-work in her bottom are made of copper and not iron.

Copper Glance (Cu_2S), a copper ore of a lead or iron-gray color. It consists of 81 copper and 19 sulphur, and abounds in Cornwall, England, and in many European countries.

Copperhead, a venomous North American serpent, the *Trigonocephalus contortrix* of the rattlesnake family. It is known locally as 'red adder,' 'copper-belly' and 'cotton-mouth.'

Cop'pering, sheathing a ship's bottom with thin sheets of copper, to prevent the shipworm eating into the planks, or to keep shells and weeds from accumulating on the surface, and so retarding a vessel in her sailing.

Coppermine River (kop'er-min), a river of British North America, which falls, after a course of about 250 miles, into the Arctic Ocean, in lat. 68° N.; long. 116° W.

Copper-nickel, or KUPFERNICKEL, an alloy of nickel and arsenic, containing about 60 of the former and 40 of the latter, of copper color, found in the mines of Westphalia.

Copper-plate, a polished plate of copper on which the lines of some drawing or design are engraved or etched to be printed from; also a print or impression from such a plate.

Copper Pyrites (pi-rí'tēz), or yellow copper ore, a double sulphide of copper and iron composed in equal parts of copper, sulphur and iron. It occurs mostly in primary and metamorphic rocks, and is the chief copper ore of England.

Coppice (kop'is), or COPSE WOOD, a wood in which the trees are cut over periodically as they attain a certain size. In Britain many forest trees, and in particular the oak, the chestnut, the ash, the birch and the maple, are dealt with in this way. The period for cutting varies with the soil and the tree. The oak usually requires from fifteen to twenty-five years' growth, while the willow is cut regularly every year. The term is also used in a general sense for a wood of small growth, or consisting of underwood and brushwood.

Copra (kop'ra), the dried kernel of the cocoanut, from which the oil has not been expressed, a consid-

erable article of commerce in many of the Pacific islands.

Coprolites (kop'rō-līts), the term originally applied to the fossil excrements of extinct animals, chiefly lizards or sauroid fishes. They resemble oblong pebbles, and are found mostly in the Lias and Coal Measures. They consist chiefly of phosphates of calcium and magnesium, and the carbonates of the same metals, and organic matter, and as the fertilizing properties of these are well known, coprolites have been largely used as a manure. For this purpose they are reduced to powder and used as ground bones, or treated with sulphuric acid, so as to form superphosphate of lime.

Copse. See *Coppice*.

Coptis (kop'tis), a small genus of plants, nat. order Ranunculaceæ, two species of which, *C. trifolia* (gold thread), found in Canada and the northern parts of the United States, and *C. tecta* of Assam, yield a bitter tonic used medicinally.

Copts (kopts), a name given to the Christian descendants of the ancient Egyptian race, belonging mostly to the Jacobite or Monophysite sect. Reduced by a long course of oppression and misrule to a state of degradation, the number and national character of the Copts have greatly declined. At present they do not amount to more than perhaps 350,000. Their costume resembles that of the Moslems, but they are very generally in the habit of wearing a black turban for distinction's sake. In various other respects they resemble the Moslem, and they practise circumcision and abhor the flesh of swine. The women go out with veiled faces like the Moslem women. There are schools for the male children, but very few of the females are taught to read. Confession is required of all. Fasting holds a prominent place in the life of the Copt, who is, indeed, required to fast (that is, to abstain from all animal food except fish) during the greater part of every year. The head of the Coptic Church is the Patriarch of Alexandria, who is also head of the Abyssinian Church. He is regarded as the successor of St. Mark, by whom the Copts believe that Christianity was introduced among them. They are very strict and exclusive in their religion, but a great number have latterly changed their early faith. The Copts are quiet and industrious, have a good capacity for business, but are said to be servile and crafty. The Coptic scribes form a close guild.

What is called the *Coptic language* is no longer spoken, Arabic having taken its place. It is still used, however, in a formal way in their religious services. It is regarded as the direct descendant of the ancient sacred language of the Egyptians. There is a tolerably abundant Coptic Christian literature, chiefly lives of saints, homilies, etc. It is written in what is substantially the Greek alphabet, with some additional letters.

Copy (kop'i), a writing, picture, etc., made in direct imitation of another. Of late years photography has been much used in copying paintings, engravings, maps, etc. Lithography is frequently used in multiplying copies of writings, such as circulars, and such contrivances as the gelatine pad and the papyograph are also in common use. A copy of a work of art made by the artist himself is called a *replica* or *doublette*, and a reproduction of a piece of sculpture in plaster a *cast*.

Copyhold (kop'i-höld), in English law a tenure of land by copy from the court rolls belonging to a manor. Copyhold property cannot be now created, for the foundation on which it rests is that the property has been possessed time out of mind by copy of court roll, and that the tenements are within the manor. In 1858 Parliament passed a law which enables either the lord or tenant of any copyhold lands to compel enfranchisement of the land and convert it into freehold, either in consideration of a fixed sum or of an annual rent.

Copyright (kop'i-rīt) denotes the property which an author has in his literary works, or which any other person has acquired by purchase, and which consists of the exclusive right of publication; or the right which a designer, engraver, painter, draughtsman, photographer or sculptor has in his designs, engravings, paintings, etc. In the case of encyclopædias, reviews, magazines, and other periodical works, the copyright is vested in the proprietors as if they were the authors. It is, of course, quite competent to the authors of such articles to reserve the right of publishing them in a separate form. Dramatic and musical compositions are subject to the same copyright as books. The exclusive right of performing dramatic and musical compositions not printed or of causing them to be performed belongs to the author or his assignees under the same rules of copyright as those relating to books. Lectures and public speeches are the property of the

author and cannot be published without his consent, unless they are lectures delivered on any public endowment or foundation. Letters are the property of the writer, and the receiver has no right of publishing them without the writer's consent. Any person pirating a copyright work is liable to a special action, and all copies of pirated works become the property of the proprietor of the copyright. In European countries copyright is generally for the author's life, and a varying period thereafter—twenty, thirty, or even fifty years. In England the term is for forty-two years, or till the author's death if he be alive at the expiration of that period, and for seven years subsequently to his heirs. In the United States it extends for twenty-eight years, with privilege of renewal for fourteen years under the old law. The new law passed in 1909 extends the term of renewal to twenty-eight years.

A copyright may exist in a translation or in part of a work (as in notes or additional matter), with an exclusive right to the whole; but a *bona fide* abridgment of a book is not considered in Britain and America a violation of the original copyright. So a person may use fair quotation if by its application he makes it a part of his own work, but cannot take the whole or a large part of a work under the pretense of quotation.

International copyright pertains to mutual arrangements as to copyright by several nations. In Sept., 1885, an international conference met at Bern, and articles of an International Copyright Union were signed by the representatives of the various powers (Britain, France, Germany, Italy, Belgium, Spain, Switzerland, etc.), in the following year, the main principle of the scheme being that each state should accord to the subjects of the other states the same advantages as it accords its own. In the United States previously to 1891 no foreigner could procure a copyright. In that year Congress passed an international copyright act, extending the right of copyright to foreign authors whose countries extended the same privilege to citizens of the United States, with the proviso that the works, copyrighted must be manufactured in this country. Under the law of 1909 books printed in foreign languages are freed from this restriction and an ad-interim period of 30 days is allowed to manufacture an English work in this country, after a copy of said work is deposited in the copyright office, which must be within 30 days after publication abroad.

Coquelin (kok-lap), BÉNOÎT CONSTANT, a French actor, born at Boulogne-sur-Mer in 1841; died in 1909. He made a successful first appearance in 1860 at the Théâtre Français and quickly rose to the head of his profession, excelling in light comedy and melodrama.

Coquetta Bark (ko-ket'a), a name given to the bark of *Cinchona lancifolia*, which contains quinine.

Coquillanut (ko-kwil'la), the seed of the piassava or piscaba palm (*Attalœa funifœra*), one of the cocoanut group, a native of Brazil. The nuts are 3 or 4 inches long, oval, of a rich brown color and very hard, and are used in turnery for making umbrella-handles, etc.

Coquimbo (ko-kim'bö), or LA SERENA, a town of Chile, capital of the province of Coquimbo, stands near the sea, on a river of the same name. It is the see of a bishop. Pop. 16,161.—PORTO COQUIMBO, the port of the above, from which it is distant 7 miles to the S. W., has smelting works and a large export trade, chiefly in copper and the precious metals. Pop. 6270.—The province is rich in copper, silver, gold, and other metals, and is mountainous. Pop. 165,000.

Coquito (kō-kē'tō), the *Jubœa spectabilis*, a very beautiful palm of Chile, allied to the cocoanut palm, growing to the height of 40 to 50 feet, and yielding a rich, sweet sap which when boiled is called palm-honey.

Coracias. See *Rollers*.

Coracle (kor'a-kl), a small boat or canoe of oval form and made of wickerwork covered with skins. It was used by the ancient Britons, and something similar is still in use among Welsh fishermen and on the Irish lakes.

Coracoid Bone (kor'a-koid), a bone in birds joining the sternum and shoulder-bone, and giving support to the wing. In mammals it is represented by the *coracoid process* of the scapula.

Coral (kor'al), the name applied to the calcareous, stony structures secreted by many of the *Actinozoa* (sea-anemones, etc.) which form one of the divisions of the cœlenterate zoophytes, and also applied to the animals themselves. Two kinds of corals are distinguished by naturalists, *sclerodermic* and *sclerobasic*, or those in which the calcareous skeleton is developed in the walls of the body, as in the reef-building corals, and those in which (as in

the red coral of commerce) the skeleton is external or cuticular. Reproduction takes place by ova, but chiefly by budding, the new individual remaining in organic union with the old. The coral masses grow not merely by the multiplication of individuals, but by the in-

crease in height of each of the latter, which, as they grow, become divided transversely by partitions. The animal, distended with ova, collapses on their discharge, and thus becomes too small for the cup which it formerly occupied; it cuts off the waste space by a horizontal layer of coral, and the repetition of this process gradually adds to the height of the mass. It is in this way that the coral reefs and islands, occurring in such abundance in the Pacific, the Indian Ocean, and the Red Sea, are built up—works of such stupendous and astonishing bulk when compared with the tiny creatures that produce them.

reef the *barrier* reef, and *atoll* or *lagoon* reef. According to Darwin's theory, the latter two are merely developments of the first. The fringing reef on the margin, say, of a South Sea island (see *a* in the figure) is the work of corals living near the shore. This island is supposed gradually to subside into the sea, but so slowly as to allow the coral polyps, which cannot exist at a greater depth than between 20 and 30 fathoms from the surface, to add to the height of the reef and keep themselves always at the same level. Thus, in the course of time, as the island sinks in the constantly receding margin, the coral formation will no longer be a fringing reef, but will stand out at sea, with water on all sides betwixt it and the island. In this way the barrier reef is formed (as in *b*). But should the island con-

tinue to sink till it disappears altogether, the reef is then left as a huge circle enclosing a lagoon and constituting the atoll (*c*). By accretions of various kinds this finally rises above the surface of the sea, is taken possession of by a tropical vegetation, and at length becomes the habitation of man. Darwin's theory is by many not considered satisfactory, however, and these offer an explanation of the formation of the coral reefs without the process of subsidence.

The coral of commerce is the production of various polyps, and is of different colors and internal structure. The red, pink, and black sorts are the most highly prized. The red coral has a branching, shrub-like form, and, with other kinds, is found abundantly in the Mediterranean. The coral fishery, as it is called, is carried on in various parts of the Mediterranean, the principal localities being the southwest coast of Corsica, where the finest quality is found, the coast of South Italy, and the north coast of Africa (Algeria and Tunis). The raw coral is wrought chiefly in Leghorn, Genoa and Naples. The coral is brought up from the bottom by means of network bags with wide meshes, attached to crossbeams of wood that are let down from a vessel by a line. Italy takes the leading part both in fishing for coral and in its preparation for the market. Coral is capable of taking a good polish, but is not susceptible of receiving the finer execution of a gem. In composition it consists chiefly of carbonate of lime.

Coral Fishes, a name given to several fishes of different

Formation of Coral Reefs, according to Darwin.

crease in height of each of the latter, which, as they grow, become divided transversely by partitions. The animal, distended with ova, collapses on their discharge, and thus becomes too small for the cup which it formerly occupied; it cuts off the waste space by a horizontal layer of coral, and the repetition of this process gradually adds to the height of the mass. It is in this way that the coral reefs and islands, occurring in such abundance in the Pacific, the Indian Ocean, and the Red Sea, are built up—works of such stupendous and astonishing bulk when compared with the tiny creatures that produce them.

STRUCTURE OF CORAL REEFS.

1, Fringing-reef; 2, Barrier-reefs; 3, Atoll; *a*, Sea-level; *b*, Coral-reefs; *c*, Primitive land; *d*, Portion of sea within the reef, forming a channel or lagoon.

These coral reefs appear under three principal types, namely the *fringing*

CHARLOTTE CORDAY

Never was there a more excusable act of murder than that of the monster Marat, the leader of the Reign of Terror, by the knife of the devoted maiden Charlotte Corday. She boldly avowed her guilt and its purpose, and suffered death by the guillotine, July 17, 1793.

genera, belonging to the *Chætodontidæ*. They are found in all tropical seas, especially about coral reefs, and are all brilliantly colored. The most important is the *Holocanthus imperator*, the 'emperor of Japan,' which measures about 15 inches in length, and is the most esteemed of all the Indo-Pacific fishes.

Coralline (kor'al-in), a term popularly applied both to seaweed with rigid, calcareous fronds and to many of the zoöphytes.

Coralline, an orange-red color, prepared by the action of ammonia at about 300° Fahr. upon rosolic acid, or upon the washed residue of the action of a mixture of sulphuric, oxalic, and carbolic acids. It is used for dyeing silk, and is also printed upon cotton.

Coral Rag, in geology, the highest member of the middle Oölitic series—a variety of limestone containing an abundance of petrified corals, occurring in some parts of England.

Coral Root. See *Dentaria*.

Coral Sea, part of the Pacific on the northeast of Australia, between it and the Solomon Islands and the New Hebrides.

Coral Snake, a genus of small venomous snakes of the same family as the cobra. The typical species is found in woods and thickets in South America.

Coral-tree, trees and shrubs of the genus *Erythrina*, natives of Africa and America, with trifoliate leaves and beautiful scarlet spikes of papilionaceous flowers.

Coranach. See *Coronach*.

Cor Anglais (kor-än-glä; French, 'English horn'), a wind instrument of the reed kind, similar to the oboe, and possessing a compass of like extent, but of lower pitch. Its compass is from F fourth line in the bass to B flat above the treble staff.

Coraopolis (kor-a-op'u-lis), a town of Allegheny Co., Pennsylvania, 10 miles N. W. of Pittsburgh. It is in a petroleum and natural gas district. Pop. 5252.

Corato (kō-rā'tō), a town of S. Italy; province Bari. Pop. 41,573.

Corbeil (kor-bāy), a town of France, dep. Seine-et-Oise, where the Essenne enters the Seine; various manufactures. Pop. 9756.

Corbel (kor'bel), in architecture, a piece of stone, wood, or iron projecting from the vertical face of a wall, to support some superincumbent mass. Corbels are of a great variety of forms and are ornamented in many ways. They are sometimes used in rows to support a projecting course called a *corbel-table*.

Corbel, Castor Church, Northamptonshire.

Corbel-table.

Corbie Steps (kor'bi), in architecture, steps into which the sides of gables from the eaves to the apex are broken. They are common in old Scotch architecture, into which they were probably introduced from France.

Corchorus (kor'ko-rus), the genus of plants to which jute belongs, order Tiliaceæ (the lime-tree). They are herbs or small shrubs with serrated leaves and small, yellow flowers. See *Jute*.

Corcoran (kor'kō-ran), WILLIAM WILSON, banker, born in Georgetown, District of Columbia, in 1798. He engaged in the banking business, accumulated a large fortune. Retiring from business in 1854, plans of benevolence engaged him till his death in 1889. His charities are estimated to exceed \$5,000,000. He founded the Corcoran Art Gallery at Washington, a beautiful white marble temple containing splendid oil paintings.

Cordage (kor'dāj), this word signifies all sizes of twine and rope in its comprehensive sense, though in stricter usage it is confined to ropes and cables from half an inch diameter upwards. The materials used in making cordage are hemp, flax, manila, jute, and other plant fibers.

Corday D'Armans (kōr-dā-dār-mān), MARIE ANNE CHARLOTTE, commonly called Charlotte Corday, was born in Normandy in 1768, of a family which counted the poet Corneille among its ancestors. Her lover, an officer in the garrison of Caen, was accused by Marat as a con-

spirator against the republic, and assassinated by villains hired for that purpose. This, as well as a deep-rooted hatred against all oppressors, determined Charlotte Corday to free her country from Marat. Having obtained an interview with Marat at his own house, she plunged her dagger into his bosom, and gave herself up to the attendants, who rushed in at his cries. When tried for murder before the revolutionary tribunals, her air was dignified and her replies firm. In spite of the fervid eloquence of her advocate's defense, she was condemned to the guillotine, and was executed on July 17, 1793.

Cordele (kor-dēl), a town of Crisp Co., Georgia, 9 miles s. of Vienna. It is in a timber and agricultural district and has machine shops and manufactures of cottonseed-oil and carriages. Pop. 5883.

Cordeliers (kor'de-lēr z), originally an order of Franciscan monks who wore as part of their dress a girdle of knotted cords; afterwards the name given to a society of Jacobins, to which the names of Marat, Danton and Camille Desmoulins gave some reputation. The club lasted from 1792 to 1794, and took its name from their place of meeting.

Cord-grass, *Spartina stricta*, a British grass, very tough, and used for making ropes.

Cordiceps (kor'di-seps), a genus of fungi, some of which are found on dead leaves and branches, while others are remarkable for growing on the larvæ of insects, which they latterly kill.

Cordilleras (kor-dil-yā'rāz), a Spanish name given to the great chains of the Andes and of Mexico.

Cordite (kor'dīt), an explosive composed of guncotton, nitroglycerin and mineral jelly. While in a plastic state it is pressed through a die in the form of a cord and wound upon reels to dry. Various thicknesses are made to suit different sized guns. Its two explosive ingredients, which separately are dangerous to handle, are almost harmless when combined.

Cordon (kor'don), in a military sense, troops so disposed as to present an uninterrupted line of communication, so as to preserve an area either from hostile invasion or from contagious diseases. In the latter sense it is called a *sanitary cordon*.

Cordova (kor-dō-va), an ancient Spanish city on the Guadalquivir, in Andalusia, capital of a province of the same name. A part of the

town is of Roman, a part of Moorish origin; the streets are narrow, crooked and dirty; the principal square, however, is distinguished for its size and the beauty of its colonnade. The cathedral is a splendid building, originally a mosque, erected in the eighth century by King Abderahman. The town is well supplied with schools, hospitals, and other institutions. It has always carried on considerable trade; and under the Moors the leather exclusively manufactured there (cordovan) was exported in all directions. Cordova, which was founded by the Romans, became the capital of Arabian Spain and the center of Arabian splendor and science under the Caliphs of the West. At that time it is said to have had a pop. of 1,000,000. With the decay of the Moorish empire it fell into the hands of Ferdinand III of Castile. Present pop. 58,275.—The province includes the fertile and beautiful valley of the Guadalquivir and the mountains of Sierra Morena. Area, 5188 square miles; pop. 455,859.

Cor'dova, a town of the Argentine Republic, capital of province of same name. It occupies a beautiful and well-sheltered site in the valley of the Primero, and has railways to Rosario and Tucuman. Pop. about 50,000.—The province has an area of 54,000 sq. miles, and a pop. of 419,072.

Cor'dovan, a fine leather which took its name from the city of Cordova, where it was manufactured in large quantities. Much is now made in Northern Africa and the Levant.

Corduroy (kor'dō-roi), a thick cotton stuff corded or ribbed on the surface.—*Corduroy road*, in the United States, a road constructed with logs laid together over swamps or marshy places for carriages to pass over.

Cord-wood, wood cut and piled for sale by the cord, in distinction from long wood; properly, wood cut to the length of 4 feet; but in this respect the practice is not uniform.

Corea, or KOREA (ko-rē'a), a former kingdom of Asia, consisting chiefly of a peninsula lying northeast of China, bounded n. by Manchuria, e. by the Sea of Japan, s. by a narrow sea which parts it from the Japanese Islands, and w. by the Yellow Sea. It is called by the natives Tsiotsien (Cho-sen), and by the Japanese Korai, whence its European name. Pop. vaguely estimated at 8,000,000 to 15,000,000; area about 80,000 square miles. Söul, or Seoul, is the capital. The peninsula is traversed through its length by a mountain range, abrupt and precipitous on the east, but

forming a gentle slope on the west side, which, being watered by the principal rivers of the country, is exceedingly fertile. In the north the only grain that can be grown is barley; but in the south, wheat, cotton, rice, millet and hemp are grown extensively. The ginseng root is a production greatly valued in China and Japan. The domestic animals are oxen, pigs, goats, dogs and

Russia, Japan made this country a base of operations, established a protectorate over it, and soon after the close of hostilities practically annexed it in November, 1905, by making the Korean government accede to the protocol of a treaty transferring all diplomatic business from Seoul to Tokio, and setting up a Japanese governor-general's office in the Korean capitol. The annexation was completed

Korean Hats.

cats, and a small race of horses. Oxen only are used for agricultural labors, the horse being reserved expressly for the saddle. Tigers, panthers, foxes, wolves and sables are abundant. The manufactures are, generally speaking, rude, and mostly confined to tissues of hemp and cotton, silk, paper and pottery. The peninsula abounds in minerals, gold, silver, iron, copper, lead and coal, and the natives show much artistic skill in the art of working metals.

The early records of Corea carry us back to 1122 B.C. Within recent years, while practically independent, it has been tributary to China, while Japan claimed rights there arising from ancient conquests. These conflicting claims led to war between Japan and China in 1894, the result being that Corea was released from Chinese suzerainty. In her war with

in August, 1910, the Korean king being dethroned and the country reduced to the status of a province of Japan. As such it was given its ancient name of Cho-sen ('Land of Morning Calm').

Corelli (ko-rel-ē), MARIE, novelist, of Italian and Scotch (Highland) parentage, born 1864; adopted in infancy by Charles Mackay, the English song-writer. Was educated in a convent in France. With excellent musical ability, she composed an opera when only 13, and later produced several notable melodies. Turning to novelistic composition, a curious psychological experience of her own caused her to write *A Romance of Two Worlds*, in 1886. It attained instant success, and henceforth she devoted herself to literature. *Vendetta*, *Thelma*, *Ardath*, *Soul of Lilith*, *Sorrows of Satan*, *Jane*, and many other

works of great popularity were produced. Her works are deeply tinged with mystical and psychical views.

Corfu (kor'fö; anciently *Corcy'ra*), a Greek island in the Mediterranean, the most northerly of the Ionian Islands, at the mouth of the Adriatic, near the coast of Albania, about 40 miles long, and from 15 to 20 wide; square miles, 227. The surface rises at one point to the height of 3000 feet, the scenery is beautiful, the climate pleasant and healthy, the soil fertile. Oranges,

Coriaria (kor-i-ä'ri-a), a genus of plants, type of a small natural order of polypetalous exogens. *Coriaria myrtifolia* is a shrub inhabiting the south of Europe and employed by dyers for staining black, and also used in tanning, and hence called tanner's sumach.

Corigliano (ko-rël-yë-ä'nō), a town of South Italy, province of Cosenza, on a hill above the right bank of the Corigliano, near the site of the ancient Sybaris, of which no vestiges remain. Pop. 13,272.

citrons, grapes, honey, wax, oil and salt are abundant. A Corinthian colony settled in the island in the eighth century B.C. The Venetians possessed Corfu from 1386 to 1797, the British from 1815 to 1864. Pop. 99,571.—CORFU, the capital, is finely situated on a promontory, which terminates in a huge insulated rock crowned by the citadel; the streets are Italian in style; chief edifices, the cathedral, government palace, and Ionian Academy. There is a good harbor and considerable trade. Pop. 18,581.

Coriander (kor-i-an'dër; *Coriandrum sativum*), an umbelliferous plant, native of Italy, and cultivated in other parts of Europe. The whole plant has an unpleasant smell, but the fruit, improperly called seed, is very agreeable and aromatic when dry. It is used as a carminative and aromatic in medicine, and as an ingredient in cookery and confectionery.

Coringa (kō-rin'ga), a seaport in Hindustan, in the Godavari District, presidency of Madras. It had once a great trade. Pop. 4397.

Corinna (kō-rin'a), an ancient Greek poetess of Tanagra, in Bœotia, contemporary with Pindar (about 500 B.C.), whom she is said to have conquered five times at musical contests. Only a few fragments of her songs have come down to us.

Corinth (kor'inth) a once celebrated city upon the isthmus of the same name which unites Peloponnesus with Northern Greece. It was renowned among the cities of Greece, commanded by its advantageous position a most important transit trade, and possessed all the splendor which wealth and luxury could create, while its citadel, the Acrocorinthus, nearly 2000 feet high, rendered it a strong fortress. Only a few ruins remain to attest its ancient mag-

nificence. It had two harbors, Lechæum on the west side of the isthmus, on what is now the Gulf of Corinth or Lepanto, and Cenchreæ, on the Gulf of Athens or Ægina (anc. *Saronic Gulf*). Near Corinth were held the Isthmian games. Besides being one of the most magnificent, it was also one of the most voluptuous cities of Greece. After many political vicissitudes Corinth became the head of the Achæan League, and was conquered and destroyed by the Roman consul Mummius, 146 B.C. Julius Cæsar, about a hundred years later, rebuilt it; but its commerce could not be restored, though it became a place of note and importance. St. Paul lived here a year and a half, and two of his epistles are addressed to the Corinthians (see below).—*New Corinth* is a village on the shore of the gulf, several miles N. W. from the site of ancient Corinth; it is the seat of an archbishop. Pop. 4300.

Corinth, GULF OF, or GULF OF LE-PANTO, a beautiful inlet of the Mediterranean, about 80 miles long, between the Peloponnesus and Northern Greece.

Corinth, ISTHMUS OF, the isthmus which connects the Morea (Peloponnesus) with Northern Greece, varying in width from 4 to 8 miles. A canal, begun in 1882 and about 4 miles long, was opened on August 6, 1893, across the isthmus, and now enables vessels to sail from the Archipelago to the Adriatic without rounding Cape Matapan.

Corinthian Order (kō-rin'thi-an), that order of

Corinthian Order. common in Greece before the time of Alexander the Great;

Grecian architecture of which the most characteristic feature is the column, which is adorned with beautifully carved acanthus leaves, but varies considerably in minor details. The capital of the column is generally fluted, with a fillet between the flutings, and stands upon a base. The entablature is variously decorated, especially the cornice; the frieze may be quite plain, or sculptured with foliage and animals. The Corinthian order was not very

among the Romans it was much employed.

Corinthians, EPISTLES TO THE, two epistles addressed to the church at Corinth about A.D. 57 or 58, which have been admitted as genuine writings of St. Paul by even the most critical assailants of the New Testament canon. They are most instructive from the insight which they furnish into the character of St. Paul himself, and the constitution, parties, and heresies of the apostolic church.

Coriolanus (kō-r-i-o-lā'nus), the name given to an ancient Roman, Caius, or more properly Cneius, Marcius, because the city of Coriōli, the capital of the kingdom of the Volsci, was taken almost solely by his exertions. He was subsequently banished for seeking to deprive the plebeians of their hard-earned privileges, and in particular of the tribuneship; and seeking revenge, he took refuge among the Volsci, the bitterest enemies of Rome, and prevailed upon them to go to war with her. The Volscian army, after making itself master of the cities of Latium, was pitched in sight of Rome before troops could be raised for the defense. The Roman senate made unavailing overtures for peace, till at length the tears of Veturia his mother, and Volumnia his wife, when they appeared at the head of the Roman matrons, induced Coriolanus to withdraw his army from before Rome. He was afterwards assassinated in a tumult while attempting to justify his conduct. The story of Coriolanus, which is now regarded as legendary, forms the subject of one of Shakespere's plays.

Cork (kork), a city in the south of Ireland, capital of the county of Cork, situated on the river Lee. It is 15 miles from the sea, and besides an upper harbor at the city itself, and quays extending over four miles in length, there is a lower harbor at Queenstown, 11 miles below the town. The entrance, deep and narrow, is strongly fortified on each side. Cork is the third city in Ireland, and exports great quantities of grain, butter, bacon, hams, eggs and live stock. The principal industries are tanning, distilling, brewing, and the making of tweeds and friezes. There are also iron foundries and yards for the building of iron ships. The principal buildings are the Protestant and Roman Catholic cathedrals, exchange, custom-house, chamber of commerce, courthouse, Queen's College, etc. There is a naval dockyard at Haulbowline, an island within Cork harbor. Pop.

Cork

76,122.—The COUNTY is the most southerly and the largest in Ireland, having an area of 2890 square miles, of which less than a fourth is under crops. The west part is mountainous, the north and east very fertile. The coast is indented with numerous bays and inlets, of which the more important are Bantry Bay, Kinsale and Cork harbors. The climate is remarkably mild, though moist. The county is watered by the Bandon, Lee and Blackwater. Cattle, sheep, pigs and quantities of butter are exported. The fisheries are important. The county has seven political divisions, each sending a member to Parliament. The county town is Cork; other towns are Queens-town, Fermey, Youghal, Bandon, Mal-low and Kinsale. Pop. 404,611.

Cork, is the external bark of a species of oak (*Quercus suber*) which grows in Spain, Portugal and other southern parts of Europe and in the north of Africa, and is distinguished by the great thickness and sponginess of its bark, and by the leaves being evergreen, oblong, somewhat oval, downy underneath, and waved. The outer bark falls off of itself if let alone, but for commercial purposes it is stripped off when judged sufficiently matured, this being when the tree has reached the age of from fifteen to thirty years. In the course of eight or nine years, or even less, the same tree will yield another supply of cork of better quality, and the removal of this outer bark is said to be beneficial, the trees thus stripped reaching the age of 150 years or more. The bark is removed by a kind of ax, parallel cuts being carried round the tree transversely and united by others in a longitudinal direction, so as to produce oblong sheets of bark. Care must be taken not to cut into the inner bark, or the tree would be killed. The pieces of cork are flattened out by heat or by weights, and are slightly charred on the surface to close the pores. Cork is light, impervious to water, and by pressure can be greatly reduced in bulk, returning again to its original size. These qualities render it peculiarly serviceable for the stopping of vessels of different kinds, for floats, buoys, swimming-belts or jackets, artificial limbs, etc. Corks for bottles are cut either by hand or by means of a machine. The best corks are cut across the grain.

Cork, EARL OF. See *Boyle*.

Cork, FOSSIL, a kind of mineral, a species of asbestos.

Corking-pin, a pin of a large size, formerly used for fixing a lady's head-dress.

Cormorant

Corleone (kor-là-ō'nà), a town of Sicily, 22 miles south of Palermo. Pop. 14,803.

Corliss (kor'lis), GEORGE HENRY, inventor, was born in Easton, New York, in 1817. The construction of stationary steam engines has been revolutionized by his improvements, he having invented many ingenious devices. A single engine made by him moved all the machinery in the Centennial Exhibition of 1876. He died in 1888.

Corm (korm), the dilated basis of the stem in monocotyledonous plants, which intervenes between the roots and the first buds, and forms the reproductive portion of the stem of such plants. It differs from a bulb in being solid and from a tuber in its oval figure. Examples are the so-called 'root' of the arum and that of the crocus.

Cormorant (kor'mō-rant) from French. *cormoran*, L. *corvus marinus*, a sea-crow), the name of several large web-footed birds of the pelican family, or forming a family by themselves. They have a longish and strongly-hooked bill, long neck, short wings, and rather long, rounded tail; all

Harris' Cormorant (*Nauopterus Harrisii*).

the toes are united by a web, and, though excellent swimmers, they are able to perch on trees; color generally black or

dark. The common cormorant of Europe (*Phalacrocorax carbo*) is larger than a goose, but with smaller wings. It occupies cliffs by the sea, feeds on fish, and is extremely voracious. It dives and swims with great power, and pursues

Common Cormorant (*Phalacrocorax carbo*.)

its prey beneath the surface of the water, often to a great depth. Among the Chinese cormorants have long been trained to fish for man. At first a ring is placed on the lower part of the bird's neck to prevent it swallowing the prey, and in time it learns to deliver the fish to its master without such a precaution being necessary. Another European cormorant is the green cormorant or shag (*P. graculus*). It is smaller than the common cormorant. Both these species are found on the eastern coasts of America, and there are various other American as well as Australian species.

Cormus (kor'mus). See *Bulb*.

Corn (Fr. *corne*, L. *cornu*, a horn), a hardened portion of the cuticle of the foot, appearing as a sort of distinct growth, resulting from pressure or rubbing. Corns are generally found on the outside of the toes, but sometimes between them, on the sides of the foot, or even on the ball. They appear at first as small, dark points in the hardened skin, and in this state stimulants or escharotics, as nitrate of silver (lunar caustic), are recommended, but must be used with great care. Perhaps the most efficacious remedy for corns is the application of glacial acetic acid night and morning, or relieving the pressure by means of a small tuft of cotton placed around the corn.

Corn, is the generic term for all kinds of grain used for making bread, and is applied specifically to the principal breadstuff; in England to wheat, in

the United States generally to maize, and frequently in Scotland to oats.

Corn, INDIAN. See *Maize*.

Cornaceæ (kor-na'se-ē), a natural order of polypetalous exogens, consisting of about 100 species, one of them being the common European dogwood. Several plants of this order are of service as tonics and for the cure of ague, and in America the bark of the *Cornus florida* is sometimes used as a substitute for Peruvian bark. See also *Cornel*.

Corn Aphides, aphides infesting the ears of corn, barley, oats and other grain, and sucking their juices, as the *Aphis granaria*, or wheat aphid. See *Aphis*.

Corn-beetle, the *Cucujus testaceus*, a minute beetle, the larva of which is often very destructive to stores of grain, particularly of wheat, in granaries.

Cornbrash, a local name in England for a rubbly limestone, forming a soil extensively cultivated in Wiltshire for the growth of corn. The term is used by geologists to indicate the strata which yield the soil, the highest member of the lower oolite.

Corn-cockle, a well-known weed (*Agrostemma Githago*), nat, order Caryophyllaceæ, with large entire, purple flowers, very troublesome among crops of grain. Its seeds are said to be poisonous to poultry, swine, etc.

Corn-crake, or LANDRAIL (*Crex pratensis*), is a species of bird of the order Gallæ or Waders, and of the family Rallidæ or rails. The crakes differ from the rails proper (*Rallus*) in having the bill shorter. The common crake of Britain is of a reddish-brown color. It lives in fields and meadows, and nestles and runs among the long grass. The name is expressive of its cry. It feeds on worms and insects. It is a bird of passage, frequenting the northern parts of Europe during summer, and the southern, including the Mediterranean coasts of Africa, in winter.

Cornea (kor-nē-a), one of the coats of the eye, a transparent membrane in the forefront of it. See *Eye*.

Corneille (kor-nā-yè), PIERRE, the father of French tragedy and classical comedy, was born at Rouen in 1606, at which place his father was advocate-general. He began his dramatic career with comedy, and a series of vigorous dramas, *Mélite* (1629), *Clitandre*, *La Veuve*, *La Suivante*, etc., announced the advent of a dramatist of

a high order. In 1635 he entered the field of tragedy with *Medea*; but it was not till the appearance of his next work, the famous *Cid*, that Corneille's claim to a place among the great tragic poets was recognized. The *Cid* was an imitation of a Spanish drama, and though gravely defective in the improbabilities of the plot and other respects, achieved an immense success by a certain sublimity of sentiment and loftiness of ideal, which are the native characteristics of Corneille's poetry. After the *Cid* there appeared in rapid succession *Horace* (1639); *Cinna* (1639), his masterpiece, according to Voltaire; and *Polyeucte* (1640), works which show Corneille's genius at its best. Many of his later pieces exhibit a marked decline. Besides his dramas he wrote some elegies, sonnets, epistles, etc., as well as three prose essays on dramatic poetry. As a dramatist his merits are loftiness of sentiment and conception, admirably expressed in a bold and heroic style of versification and language. But in this constant straining after a heroic ideal he was apt to fall into a declamatory and inflated style. He died in 1684.

Corneille, THOMAS, brother of the preceding, was born at Rouen in 1625. They had married two sisters, and lived in the same house in the utmost harmony. Thomas began with comedies, which were imitations of the Spanish school, and were received with even greater applause than those of his brother. The first was *Les Engagements du Hasard* (1647). His best tragedy is *Ariane* (1672). He is a dramatist of very secondary rank, laborious and cultivated, but wanting in original power. He died in 1709.

Cornel (kor'nel), or CORNELIAN TREE (*Cornus mascula*) a species of dogwood, a tree or shrub of the order Cornaceæ, distinguished by the hardness of its wood, a native of Asia and the south of Europe, and cultivated as an ornamental plant and for its fruit in the north. One of the finest species, the round-leaved Cornel, *C. circinata*, is an American shrub, 5 to 10 feet high, common from Virginia to Canada. *C. florida*, the American dogwood, is a handsome tree 20 to 30 feet high.

Cornelia (kor-nē'li-a), the daughter of Scipio Africanus the elder, married Tiberius Sempronius Gracchus, censor B.C. 169, by whom she was the mother of the two famous tribunes Tiberius and Caius Gracchus.

Cornelian (kor-nē'li-an), or CARNELIAN, a gem of a light-red or flesh color. It consists of silica along

with minute quantities of the oxides of iron, aluminium, and sometimes of other metals, and is used for seals, bracelets, necklaces and other articles.

Cornelius (kor-nē'li-us), PETER VON, a German painter, born at Düsseldorf in 1787; died in 1867. He early exhibited a taste for art, and studied the great masters, especially Raphael. In 1811 he went to Rome, where, in conjunction with Overbeck, Veit and other associates, he may be said to have founded a new school of German art, and revived fresco painting in imitation of Michael Angelo and Raphael. He left Rome in 1819 for Düsseldorf, where he had been appointed director of the academy, but he soon settled in Munich to give his whole attention to the painting of the Glyptothek and the Ludwigskirche there. In these two great works he was assisted by his Munich pupils. In 1833 he made another visit to Rome, and in 1839 he visited Paris. In 1841 he was invited to Berlin by Frederick William IV, who entrusted him with the painting of the royal mausoleum or Campo Santo. The most celebrated cartoon in this series is the *Four Riders of the Apocalypse*. The series consists of twelve paintings, which have been engraved. Cornelius, a true representative of modern German thought, introduced into art a metaphysical and subjective element which is easily liable to be abused; and in his work grandeur of conception and elevation of tone have to make up for the want of the finest natural effects.

Cornelius Nepos, a Roman author of the first century B.C., the contemporary of Cicero and Catullus. The only extant work attributed to him is a collection of short biographies, probably an abridgment of a work written by Nepos. These biographies have long been a favorite school-book, and popular editions of them are very numerous.

Cornell (kor'nel), EZRA, an inventor, born at Westchester Landing, New York, in 1807. He aided Morse in laying the first telegraph line and subsequently acquired great wealth, largely through his connection with the telegraph business. He founded at Ithaca, New York, the university known by his name. Died in 1874.—His son ALONZO B. CORNELL, born at Ithaca, New York, in 1832, engaged in the telegraph business, became a prominent member of the Republican party, was surveyor of the port of New York, 1869-72, was repeatedly chosen Speaker of the New York Assembly, and in 1879 was elected

Governor of the State of New York. Died in 1904.

Cornell University, an educational institution at Ithaca, New York, was established in 1867 with funds furnished from the income of 990,000 acres of public land allotted by congress to the State for this purpose, and with a foundation of \$500,000 presented by Ezra Cornell. This has been much augmented by subsequent donations. There are five general courses, including classics, literature and philosophy, science, engineering, architecture, agriculture, etc. The medical school is in New York City. Women are admitted on the same terms as men.

Cornet (kor'net), a wind-instrument of former times, originally

CORNET-A-PISTONS.
1, Ordinary-shape. 2, Circular shape.

curvilinear or serpentine in form and increasing in diameter from the mouthpiece to the lower end. The modern *cornet-à-pistons*, or *corno-pean*, is a kind of keyed bugle which has a very agreeable tone, and is much used in orchestras and military bands. Several forms of it are in use.

Cornet, formerly the lowest rank of commissioned officer in a regiment of cavalry in the British army, corresponding with the rank of ensign in the infantry. In 1871 this rank was abolished, that of sublieutenant taking its place.

Corneto (kor-nā'tō), a cathedral town of Italy, province Rome, on a lofty and precipitous volcanic ridge, 10 miles north of Civita Vecchia. Its old walls and its palaces and other edifices present a picturesque appearance. The ancient Tarquinii stood about a mile from Corneto; from the tombs in its necropolis a vast variety of Etruscan relics have been obtained. Pop. 5440.

Corn-fly, a name common to several insects of the family Muscidae, from the injury their larvæ inflict on growing crops.

Corn-husking, CORN-SHUCKING, an assemblage, in former times, of friends and neighbors at the house of an American farmer to assist him in stripping the husks or shucks from his Indian corn.

Corning (korn'ing), a city of Steuben Co., New York, on the

Chemung River, 17 miles w. n. w. of Elmira. Coal is mined in the vicinity and it has large glass, iron and other works, and an extensive trade in coal, lumber, etc. Pop. 13,730.

Cornish (kor'nish) ENGINE, a single-acting steam engine used for pumping water. The pump-rods appended to one end of the beam are loaded so as by their gravity to have sufficient force to raise the water, and the downstroke of the steam piston at the other end of the beam is used to raise them.

Cornish Language, a Celtic dialect spoken in Cornwall, which died out in the eighteenth century, though isolated words or terms are still in use, and some fragments of literature are still extant. It is allied to the Welsh and Breton. See *Celts*.

Corn Laws, a name commonly given to certain statutes passed to protect the agricultural interests in Britain. The first form of interference by legislative enactment with the corn trade in England, beginning soon after the conquest, was the prohibition of exportation, an expedient in those times to prevent scarcity in a sudden emergency. The exportation of grain was prohibited in the reign of Edward III in 1360-61. Calais and other appointed ports being excepted. This provision was relaxed by a statute of Richard II in 1394, by which exportation was permitted from all ports not excepted by royal proclamation. In 1436, under Henry VI. the exportation of grain was permitted without license whenever the price of wheat did not exceed 6s. 8d. per quarter, and barley 3s. 4d. In 1463 a statute of Edward IV prohibited importation until the price exceeded the limit at which exportation was permitted. This was the beginning of protection, properly so called. At the restoration of Charles II duties were imposed both on exportation and importation, while the old principle of a standard price, beyond which exportation was prohibited, was retained. At the Revolution a new policy still more favorable to the agricultural interest was adopted.

By a statute of William and Mary, a bounty was granted on the exportation of corn, and the duties on exportation were abolished. The amount of the bounty was 5s. for every quarter of wheat exported while the price was at or under 48s., with corresponding prices for other grains. The exportation of grain reached its highest point about 1750. From this period the country, which had always been normally a grain-exporting country, began, on account of

the increase of population and expansion of mechanical industries, to fall off in this respect, and in 1778 became permanently a grain-importing country. From this time the main efforts of the agricultural interest, largely represented in the Parliament and the ruling classes of the kingdom, were concentrated on obtaining the imposition of prohibitory duties on foreign grain. In 1804, for instance, in case the price of corn was below 63s. a prohibitory duty of 24s. 3d. was to be laid on what was imported; if between 63s. and 66s., a duty of 2s. 6d.; and only when the price had risen as high as 66s. per quarter was the foreign grain allowed to pass at a nominal duty of 6d. With variations of more or less importance this sliding scale of prohibitory duties continued in force till 1846, when Sir Robert Peel, influenced by the corn law repeal agitation, and more especially by the Anti-Corn Law League, headed by Cobden and Bright, carried a measure repealing the duty on imported corn, except a nominal sum of 1s. per quarter, which also in 1869 was done away with, thus leaving the importation of corn entirely free.

Corn Marigold (*Chrysanthemum so-gētum*), a common weed in British cornfields, of a rich orange color.

Corn-moth, a small moth, the *Tinēa granella*, the larva of which is exceedingly destructive to corn sheaves in the field, and to stored grain, from eating into the grains. Salt, frequent turning, and many expedients are employed to destroy the eggs.

Corno, MONTE. See *Gran Sasso*.

Corn Salad, *Valerianella olitoria* and other species of the same genus, order Valerianaceæ, is extremely easy of cultivation, and can be obtained in the very first days of spring. *V. olitoria*, called also lamb's lettuce, is a weak, succulent herb 6 to 12 inches high, used as a salad in early spring.

Corn Sawfly (*Cephus pygmæus*), an insect the larvæ of which prey upon wheat and other cereals. The female deposits her eggs in the stalk, where the larvæ live upon the interior of the straw and the nutritive juices of the plant.

Corn-thrips, a minute species of thrips, the *Thrips eere-ālium*, which does much mischief to grain crops, insinuating itself between the chaff and the unripe seed, and causing the latter to shrivel by sucking the juice. It is barely a line long.

Cornucopia (kor-nū-kō'pi-a; *L. Cornu Copia*, 'horn of plenty'), a wreathed horn filled to overflowing with fruit, flowers and grain; used as the symbol of plenty.

Cornus (kor'nus), a genus of plants, of the nat. order Cornaceæ (which see).

Cornwall (korn'wal), a maritime county of England, forming the southwestern extremity of the island, bounded E. by Devonshire, and surrounded on all other sides by the sea; area, 1350 sq. miles or 868,167 acres. The coastline is much broken. Between the north and south coasts is the promontory of Land's End, terminating in granite cliffs about 60 feet high. Some of the other cliffs exceed 400 ft. in height. At Land's End terminate the hills of the Devonian Range, their highest summit in Cornwall being Brown Willy, 1368 feet. Granite and old red sandstone are the chief rocks. The rivers are numerous, but short. Much of the area, especially in the elevated districts, is barren moorland. About a fifth is under the plow. The chief wealth of the county is in its minerals, especially its mines of copper and tin, though the value of both has diminished. Several mines exceed 350 fathoms in depth. In the Botallack copper mine, a few miles north of Land's End, the workings are carried below the sea. In addition to tin and copper there are, in comparatively small quantities, silver, lead, zinc, iron, manganese, antimony, cobalt and bismuth. There are also valuable deposits of kaolin or china-clay. There are no manufactures, but the fisheries, particularly of pilchard and mackerel, are valuable. Cornwall, with the Scilly Isles, seems to have been the Cassiterides or Tin Islands of antiquity. The natives long maintained their independence against the Saxons, and their country was spoken of as West Wales. Their language also long continued to be Celtic. (See *Cornish Language*.) The chief towns are Bodmin (county town), Penzance, Truro and Falmouth (with Penryn). The county gives the title Duke of Cornwall to the eldest son of the sovereign of Great Britain, and forms a royal duchy, the revenues of which belong to the Prince of Wales for the time being. The dukedom was created for the Black Prince in 1337. Pop. (1911) 328,131.

Cornwall, a port and manufacturing town of Canada, province Ontario, on the north side of the St. Lawrence, 67 miles above Montreal. Pop. 6598.

Cornwallis (korn'wal-is), CHARLES, MARQUIS OF, son of the first Earl Cornwallis, born in 1738. Educated at Eton and Cambridge, he served in 1761 as an aide-de-camp in the Seven Years' war; was made colonel of foot in 1766, and finally general. On the outbreak of the American war he sailed with his regiment, served with distinction under Howe and Clinton, and in 1780 was left in independent com-

Lord Cornwallis.

mand in South Carolina with 1000 men. He defeated Gen. Gates at Camden, 1780, and fought Gen. Greene at Guilford in 1781, but six months afterwards was besieged in Yorktown and compelled to surrender, October 17, 1781. This disaster brought an end to the war. In 1786 Lord Cornwallis went to India with the double appointment of commander-in-chief and governor-general, invaded Mysore in 1791, and obliged Tip-poo Saib to surrender much territory. Having returned to Britain, he was created a marquis (1794), appointed lord-lieutenant of Ireland, and again in 1805 governor-general of India. He died the following year.

Corn-weevil (-wē'vl), a destructive insect which preys upon stored corn. There are various species: order Coleoptera, family Curculionidæ, genus *Calandra*. The *Calandra granaria* is a slender beetle of a dark-chestnut color about one-eighth of an inch long. It bores a hole and deposits its egg inside of the grain, which is afterwards eaten to the husk by the grub.

Coro (kō'ro), a seaport town of Venezuela, at one time a flourishing place, but now much decayed. Pop. 9500.

Corocore (kor'a-kōr), a boat of the Indian Archipelago of various forms. That used in Celebes is propelled by oars, and is often manned with sixty men. Others, as those used in the Moluccas, are masted vessels.

Corody, CORRODY (kor'o-di), an allowance of meat, drink or clothing, anciently due to the king from an abbey or other religious house, for the sustenance of such of his servants as he thought good to place there for maintenance. Corodies were also retained by the private founders of religious houses and even granted to benefactors, and consisted in the right of sending a certain number of persons to be boarded at an abbey.

Corolla (kō-rol'a), in botany, the portion of the flower inside the calyx; the inner floral envelope. The

corolla surrounds the parts of fructification and is composed of leaves called petals. When there are several free leaves it is called a *polypetalous* corolla, as in the rose; but when the petals are united by the margins into a continuous structure it is called *monopetalous*, or more correctly *gamopetalous*. It may generally be distinguished from the calyx by the fineness of its texture and the gayness of its colors; but there are many exceptions.

Corollary (kor'o-la-ri; in Latin *corollarium*), in mathematics, a collateral conclusion, following from a proposition demonstrated.

Corollifloræ (kor-ol-i-flō'rē), one of the great subdivisions of exogenous plants, distinguished by the corolla being gamopetalous, inserted below the ovary, and by the stamens being inserted on the corolla. The primrose, health, gentian, verbenæ, etc., are included in this division.

Coromandel Coast (kor - ō-man'del; *Cholomandala*), the east coast of the Indian Peninsula, Madras Presidency, or that portion of it between Palk Strait and the river Pennar. It is open, sandy, and has no secure harbors, and the surf renders landing difficult and often impossible except to the native catamaran.

a a, Many petaled or leaved Corollas. *b b*, Single petaled or leaved Corollas.

Coromandel Wood, the wood of *Diospyros hirsuta*, a tree found in Ceylon. Its ground color is chocolate brown, with black stripes and marks; it is hard, turns well, and makes very handsome furniture.

Corona (kō-rō'na; L. 'a crown')— (1) In astronomy, a halo or luminous circle round one of the heavenly bodies; specifically the portion of the aureola observed during total eclipses of the sun, which lies outside the chromosphere or region of colored prominences. It is supposed to be an outer portion of the solar atmosphere of exceeding rarity. (2) In botany, an appendage of the corolla in some flowers, coming, as it were, between the corolla and the stamens, well seen in the cup of the daffodil. (3) In architecture, the lower member of the projecting part of a cornice.

Coro'na Austrā'lis (the 'southern crown'), one of Ptolemy's southern constellations, containing twelve stars.

Coro'na Borea'lis (the 'northern crown'), one of Ptolemy's northern constellations, containing twenty-one stars.

Coronach (kor'ō-nah), or CORANACH, a dirge or lamentation for the dead formerly customary among the Celts of Scotland and Ireland.

Coronado (kor-o-nā'do), VASQUEZ DE, a Spanish explorer, born at Salamanca, about 1510. He went to Mexico and in 1540 was put in command of an expedition to the north, with the hope of discovering and conquering a rich kingdom in that direction. Coronado went as far north as Kansas, but failed in all his hopes and became insane from disappointment, dying about 1542.

Coronation (kor-ō-nā'shun), the placing of the crown on a monarch's head with solemn rites and ceremonies. Part of the ceremony usually consists in the oath which the monarch takes, that he will govern justly, will always consult the real welfare of his people, and will conscientiously observe the fundamental laws of the state. In England kings have been anointed and crowned in Westminster Abbey, even to the latest times, with great splendor. The form of the coronation oath settled after the revolution of 1688 remained unchanged until 1910, when it was decided in Parliament to rescind, in the coming coronation of George V, the portion reflecting on the Roman Catholic

faith. The Archbishop of Canterbury puts the oath to the sovereign, who swears to govern according to the statutes of Parliament, to cause law and justice in mercy to be executed, and to maintain the Protestant religion.

Coronellidæ (kor-o-nel'i-dē), a widely-spread family of non-venomous serpents. It includes several genera, as *Psammophylax* and *Coronella*. *Coronella lavis*, the smooth snake, is a native of Britain.

Coroner (kor'ō-nēr), an official whose chief duty is to inquire into the cause of the death of persons killed or dying suddenly. The coroner's examination is made in all cases with the aid of a jury, in sight of the body, and at the place where the death happened. If the body is not found he cannot sit. In the United States coroners are elected or appointed. They have no defined responsibility, except in cases of crime, where they can cause arrests.

Coronet (kor'ō-net), such a variety of crown as is worn by princes and noblemen. The coronet of a British duke is adorned with strawberry leaves; that of a marquis has leaves with

CORONETS
1, Of a Duke. 2, Of a Marquis. 3, Of an Earl.
4, Of a Viscount. 5, Of a Baron.

pearls interposed; that of an earl raises the pearls above the leaves; that of a viscount is surrounded with pearls only; that of a baron has only six pearls.

Corot (kō-rō), JEAN-BAPTISTE-CAMILLE, a French artist, born at Paris in 1796; died in 1875; studied under Michallon and Victor Bertin and afterwards in Italy. He exhibited for the first time in the salon in 1827, but some years elapsed before the high qualities of his work were recognized. The fortune which he inherited from his father enabled him, however, to follow out the bent of his

genius, and the last twenty-five years of his life were a continuous triumph. He frequently painted figure subjects, including the large sacred pictures, the *Flight into Egypt* and the *Baptism of Christ*; but his most characteristic and successful work was in landscape. His woodland scenes, painted for the most part at dawn or twilight in a scheme of pale greens and silvery grays, show a singularly subtle feeling for this phase of nature, and are undoubtedly among the most important contributions of the last century to landscape art.

Corozonuts (ko-rō'zō-); the seeds of a tropical American palm, the *Phytelëphas macrocarpa*, whose hardened albumen, under the name of vegetable ivory, is used for small articles of turnery-ware.

Corporal (kor'pō-ral; French, *caporal*, from L. *caput*, the head, the corporal being formerly a superior officer), a petty officer in the American and British armies ranking just above the ordinary private and below the sergeant. He has charge of one of the squads of the company, places and relieves sentinels, etc.

Corporation (kor-pō-rā'shun), in law, a civil or political body in which are vested certain rights or privileges with a view to their preservation in perpetual succession. A corporation may consist of one person only and his successors, when it is called *sole* (the sovereign of Britain for example); or of a number of persons, when it is called *aggregate*. When a corporation is vested in a single person, that person is looked upon in regard to the rights of the corporation as holding a representative or official position, and these rights belong to and are transmitted by him in virtue of this position, and not as natural rights. In like manner the rights and powers of an aggregate corporation do not consist of the natural rights of the members, but of the rights held and duly exercised by the terms of the corporation. Corporations may be either public or private. An instance of the former is a municipal corporation under the management of the State or the United States government. Private corporations do not fulfill any function of public government. They may be either ecclesiastical or lay. Ecclesiastical corporations are created to enable religious societies to manage with greater facility their temporal concerns. Lay corporations are private corporations not under immediate control of some religious body.

Corporation Tax, a section of the United States

tariff law of 1909 providing for the taxation of every corporation, joint-stock company and assurance company organized and doing business in the United States, the tax being one per cent. upon all the net income over \$5000. This is a national tax, its proceeds forming a part of the national revenue. In 1910 these were over \$26,000,000. The law, as sustained by the Supreme Court, gives the government the right to investigate the books of corporations.

Corps (kōr; French for body), a word often used as a military and a political term.—A *corps d'armée*, or *army corps*, one of the largest divisions of an army.—*Corps diplomatique*, the body of ministers or diplomatic characters.—*Corps législatif* (kōr lā-zhis-lā-tēf), the lower house of the French legislature in 1857-70. Its members were elected for six years in the proportion of 1 to 35,000 electors.

Corpulence (kor'pū-lens), an unwieldy state of the human body due to the excessive deposition of fat. It is promoted by a diet too rich in fat-forming materials, fats, starch and sugars, bodily inactivity, tranquillity of mind, etc. There is, however, a diseased state of the system which, independently of all these influences, will increase the production and deposition of fat. If corpulence is excessive it becomes troublesome and at length dangerous. In curing corpulency due attention must be paid to the regulating of the diet, exercise and sleep of the individual. Especial attention must be given to the kind of diet. Avoid all kinds of fat-forming food, such as fat, cream, butter, sugar, potatoes, farinaceous food and malt liquors, and indeed alcoholic liquors of all kinds. Little bread should be eaten; a moderate increase in animal foods, lean beef, fish, fowl, eggs, is allowed; green vegetables and fresh fruit may be eaten. Regular exercise to suit the person's powers should be engaged in. A noted instance of corpulency is Daniel Lambert, who weighed over 50 stone, or more than 700 lbs. Moderate corpulence may be quite consistent with health.

Corpus Christi (kor'pus kris'ti; 'body of Christ'), the consecrated host at the Lord's Supper, which, according to the doctrines of the Roman Catholic Church, is changed by the act of consecration into the real body of Christ. This doctrine caused the adoration of the consecrated host, and hence the Roman Catholic Church has ordained for the host a particular festival, called the *Corpus Christi feast*. This

was instituted in 1264 by Pope Urban IV by a bull, in which he appointed the Thursday of the week after Pentecost for the celebration of the Corpus Christi festival throughout Christendom.

Corpus Christi, a city, capital of Nueces Co., Texas, on Corpus Christi Bay, at the mouth of Nueces River, 200 miles s. w. of Galveston. Oysters and turtles are canned and largely shipped, and it has an ice plant, planing mills, etc. Pop. 8222.

Corpuscles (k o r'pus-ls, kor'pus-kls), the minutest particles of substance, such as the electrons supposed to constitute the atom, and the flying particles in the Lesage hypothesis of gravitation. (See next article.) A name also applied to two kinds of minute solid bodies constituting an integral part of blood.

Corpuscular Theory of Light

(kor-pus'kū-lar), the theory which explained the phenomena of light by supposing that a luminous body emits excessively minute particles of matter, corpuscles as they were called, which striking the eye produce the sensation of light. Newton held the corpuscular theory, and supported it with great ingenuity. This theory has long been displaced by the *undulatory theory* (which see).

Corpus Juris (kor'pus jū'ris; 'body of law') is a name given to certain collections of laws. The name of Corpus Juris Civilis ('body of civil law') in particular was bestowed in the twelfth century upon the general body of legal works drawn up at the orders of Justinian, viz. the Institutes, Pandects, Code and Novels; together with the collections bearing on the feudal law appended to them. With the canonical or papal laws the same mode of proceeding has been adopted, and the Corpus Juris Canonici compiled.

Corral (kor-al'), a yard or stockade for cattle.

Correction of the Press,

the correction of printed matter before publication. The first impression taken from the types is called a *proof*, and almost always contains some errors. In correcting proofs for the printer the following signs are used:—When a wrong word or letter occurs, a line is drawn through it, and the proper word or letter written on the margin opposite. If a clause, word, or letter is omitted, a caret (Λ) is marked at the place, and the omission is written on the margin. If a superfluous letter or word occurs, the pen is drawn through it, and the character , signifying *dele*

(delete, or take out), written in the margin. Where words are improperly joined, a caret is written at the place where the separation should be made, and the mark # written in the margin. When syllables or words are improperly separated, they are joined by horizontal parentheses, as du ty. These parentheses are to be made in the margin as well as at the break. This sign is also used where there is too much space in one or more parts of a line. A tick-mark (√) also means to lessen space. When words are transposed, they are to be connected by a curved line, as not is when set up for 'is not,' and the mark *tr.* (transpose) is to be written in the margin. When a letter is turned, a line is drawn

under it, and the mark 9, made in the margin. When punctuation is omitted, or requires to be altered, a caret is put at the place, and the comma or period, etc., is placed in the margin, with a stroke behind it, as / . If a mark of quotation or superior letter has been omitted, the caret is made as before,

and a mark of this sort √√ or √ placed in the margin. Words which are to be printed in italics are marked beneath with a single line; as, office (*office*), if in small capitals, with two lines, as Greece (GREECE); if in full capitals, with three, as James (JAMES).

Where these marks are used in correction, the abbreviations *ital.*, *small caps.*, or *caps.*, should be written in the margin. Where a word printed in italics is to be altered to roman letters, a line is to be drawn under it, and the word *rom.* written in the margin. Where a corrector, after altering a word, changes his mind, and prefers to let it stand, dots are placed under the word in the proof, and the word *stet* (let it stand) written in the margin. When two paragraphs are desired to be joined, the end of the one and the beginning of the other paragraph are connected by a curved line ~, and the words *run in* written in the margin. Where a new paragraph is desired to be made, the mark ¶ is inserted at the place, and the word *par.* written in the margin. The corrections should always be written on the margin of the proof so as to ensure notice by the printer; and when these are numerous or intricate, connect them by a line drawn from the place where they are to be made.

Correggio (kor-rej'ō), ANTONIO ALLEGRI, an Italian painter, born at Correggio, near Modena, in 1494. Little is known of his life, which was very retired. Almost the only anecdote told of him is that on seeing the St. Cecilia of Raphael he exclaimed 'Anch'io son pittore' (I also am a painter), but this is doubtful. Correggio is unrivaled in chiaroscuro and in the grace and rounding of his figures. Among his best pictures are *Night*, in which the chief light is the glory beaming from the infant Saviour; the *St. Jerome*; the *Marriage of St. Catherine*; several *Madonnas*, one of them (called *La Zingarella*, or the *Gipsy Girl*) said to represent his wife; the *Penitent Magdalene*; the altar-pieces of St. Francis, St. George and St. Sebastian; *Christ in the Garden of Olives*; the fresco of the *Ascension* in the Church of St. John, Parma; the *Assumption of the Virgin* in the cathedral of the same city; the *Ecce Homo* and *Cupid, Mercury and Venus*, both in the National Gallery, London. He died in 1534.

Correlation of Physical Forces,

a term introduced by Mr. Grove to denote what may more properly be called the convertibility of the various forms of energy. The energy, for instance, which a bullet in rapid motion possesses, is converted into heat when it strikes the target, the bullet being then warm to the touch. So heat may again be converted into *kinetic energy*, that is, the form of energy possessed by a moving body; for instance, through the intermediation of a steam engine. Heat is also directly converted into electricity, and electricity into heat. In connection with this doctrine that of the conservation of energy ought also to be studied.

Corrèze (kor-rāz), an inland department of France, formed from part of the former province of Limousin, and deriving its name from the river Corrèze, by which it is traversed; area, 2273 square miles; capital, Tulle. It belongs almost entirely to the basin of the Garonne. Except in a few valleys the soil is far from fertile, heaths occupying a great extent of surface, and agriculture being in a very backward state. Pop. 317,430.

Corrib, LOUGH (loh kor'ib), a large lake in Ireland, mostly in County Galway, partly also in County Mayo, about 23 miles in length, and varying from 2 to 6 miles in breadth. It receives the drainage of Lough Mask through a subterranean channel, its own waters being carried by Galway River to

Galway Bay. It has some fine scenery on its northern and western shores, contains numerous islands, and, next to Lough Neagh, is the largest lake in Ireland.

Corridor (kor'i-dor; Italian and Spanish), in architecture, a gallery or long aisle leading to several chambers at a distance from each other, sometimes wholly enclosed, sometimes open on one side. In fortification, *corridor* signifies the same as *covert-way*.

Corrientes (kor-rē-ān'tās), a town of the Argentine Republic, capital of the province of same name, on the Paraná, near its confluence with the Paraguay, 390 miles N. of Buenos Ayres. It is well placed to serve as an entrepôt of goods between the upper parts of the Paraguay and the Paraná and the seaports on the La Plata. Pop. 30,172. Pop. of province, 299,479.

Corrievrekin. See *Corryvreckan*.

Corrigan (kor'i-gan), MICHAEL AUGUSTINE, archbishop, born at Newark, New Jersey, in 1839; died in 1902. He was graduated at the American College at Rome in 1863, became Roman Catholic bishop of Newark in 1873, was made an archbishop in 1880, and succeeded Cardinal McCloskey as Archbishop of New York in 1885.

Corrobory (kor'o-bo-ri), a dance engaged in by Australian natives in which the performers, with shields in their hands, circle round a fire.

Corrody. See *Corody*.

Corrosives (ko-rō'sivs; Lat. *corrodere*, to eat away), in surgery, substances which eat away whatever part of the body they are applied to; such are glacial acetic acid, burned alum, white precipitate of mercury, red precipitate of mercury, butter of antimony, hydrochloric acid, sulphuric acid, corrosive sublimate, etc.

Corrosive Sublimate, bichloride of mercury (HgCl_2), a white, crystalline solid, an acrid poison of great virulence. The stomach-pump and emetics are the surest preventives of its deleterious effects when accidentally swallowed, if used immediately; after a time the corrosive action of the chemical on the stomach may result in rupture thereof if an instrument be inserted or emetic attempted. White of egg is very serviceable in counteracting corrosive action on the stomach. It is a powerful antiseptic.

Corrugated Iron (k o r' ū-gā-ted), sheet-iron strengthened by being bent into parallel

furrows. It is largely used for roofing, and when dipped in melted zinc, to give it a thin coating thereof, is commonly known as *galvanized iron*.

Corruption of Blood. See *Attainder*.

Corryvreckan (kor-rē-vrek'an), a place on the west coast of Scotland.

Corry (kor'ri), a city of Erie Co., Pennsylvania, 37 miles S. E. of Erie. It has locomotive works, machine shops, tanneries, etc., is in a petroleum region, and contains a State fish-hatchery. Pop. 5991.

Corsac (kor'sak) or **CORSAK** (*Vulpes corsac*), a species of yellowish fox or dog found in Central Asia, Siberia and India. It is gregarious, prowls by day, burrows, and lives on birds and eggs.

Corsairs (kor'sārs), the Anglicized form of the term used in the south of Europe to denote those pirates who sailed from Algiers, Tunis, Tripoli, and the ports of Morocco.

Corselet (kors'let). (1) a cuirass or armor to protect the body from injury, worn formerly by pikemen, generally of leather, and pistolproof. (2) The part of a winged insect which answers to the breast of other animals.

Corset (kor'set), a piece of under-clothing worn, usually by women, to give shape to the body, consisting of a sort of closely-fitting jacket, usually stiffened by strips of steel, whale-bone or other means, and tightened by a lace. The materials of which it is made should be smooth and elastic, and it should be especially fitted for the individual wearer, as no two human figures are precisely alike. It should be remembered, also, that corsets are meant to preserve a good figure, not to make one, and any forcible compression of the shape, especially on young persons, will only end in destroying natural grace of movement and in serious injury to the health.

Corsica (kor'si-ka; French, *Corse*), an island in the Mediterranean, forming the French department of same name. It is separated from the island of Sardinia, on the south, by the Strait of Bonifacio, about 10 miles wide; length, N. to S., 110 miles; breadth, near its center, 53 miles; area, 3377 square miles. The east coast is almost unbroken, but on the west coast a number of deep bays follow in rapid succession. The interior is traversed by a mountain chain, the culminating point of which, according to the latest surveys,

is Monte Cinto, 8891 feet high, Monte Rotondo coming next, 8775 feet high. From the east and west side of the chain numerous streams flow to opposite sides of the coast, generally mere torrents. With the exception of some marshy districts on the east coast, the climate is excellent. There are fine forests containing pines, oaks, beeches, chestnuts and cork-trees, and the mountain scenery is splendid. In the plains and numerous valleys the soil is generally fertile; but agriculture is in a backward state. Mules, goats, horses, cattle and sheep, and among wild animals the boar, the fox and the deer are common. There are good fisheries. In minerals Corsica is not rich. The chief exports are wine, brandy, olive-oil, chestnuts, fruit and fish. The chief towns, Ajaccio and Bastia, are connected by railway. The island was first colonized by the Phœnicians, from whom it got the name of Cynos. The Romans afterwards gave it that of Corsica. From the Romans it passed to the Goths, and from them to the Saracens, and in the fifteenth century to the Genoese. France had the rights of the Genoese ceded to her, after Paoli had virtually made Corsica independent, and entered on forcible possession of it in 1768. An insurrection in 1794, headed by General Paoli and assisted by the British, for a time restored the island to independence; but in 1796 it again fell under the dominion of France. It is notable as the birthplace of Napoleon. Pop. (1906) 291,360.

Corsicana (kor-si-ka'na), a city, capital of Navarro Co., Texas, 53 miles S. S. E. of Dallas. There are oil-wells in its vicinity and it is an important shipping and manufacturing place. Here is a State orphan asylum. Pop. 9749.

Corsned (kors'ned; Anglo-Saxon), formerly a piece of bread consecrated by exorcism, to be swallowed by any person suspected of a crime. If guilty, it was expected that the swallower would fall into convulsions, or turn deadly pale, and that the bread would find no passage. If innocent, it was believed the morsel would turn to nourishment.

Corso (kor'sō), an Italian term given to a leading street or fashionable carriage-drive.

Cort, HENRY, the inventor of the processes of puddling and rolling iron, born at Lancaster, England, in 1740. He commenced business at Gosport, Hampshire; erected ironworks, and studied with great success methods of improving the process of manufacturing iron. By the

unfortunate selection of a partner he was involved in a complication of lawsuits, and finally ruined. In 1794, however, he received a pension of £200 a year from the British government. He died in 1800.

Cortelyou (kor'tel-yū), **G E O R G E** **BRUCE**, cabinet official, was born at New York in 1862; was graduated at the State Normal School, became a law reporter in 1883 and a school principal in 1885. He entered public service in 1889, became successively private secretary to various officials, and was made stenographer to President Cleveland in 1895, assistant secretary to President McKinley in 1898, and secretary in 1900. He was continued in this position by President Roosevelt, and was chosen by him in 1903 as the first secretary of the new department of Commerce and Labor. In 1905 he was appointed Postmaster-General and in 1907 Secretary of the Treasury, thus holding three secretaryships in the Roosevelt cabinets. In 1909 he became president of the Consolidated Gas Company, of New York.

Cortes (kor'tes), the old assembly of the estates in Spain and Portugal. In early times the king was very dependent upon them, especially in the kingdom of Aragon. When the kingdoms of Aragon and Castile were united under Ferdinand and Isabella the crown succeeded in rendering itself more independent of the estates, and in 1538 Charles abolished the assembly of the estates in Castile altogether. Gradually the popular liberties were encroached upon, and the cortes at length were convened only for the purpose of homage or ceremony, or when a question regarding the succession arose. In 1800 Napoleon revived the cortes for his own ends. The present cortes of Spain are composed of a senate and congress equal in authority, and having the power along with the king to make laws. (See *Spain*.) The Portuguese cortes is coeval with the monarchy, and has had a history very similar to that of the Spanish.

Cortez, or **CORTES** (kor'tās, kor'tez) **FERNANDO**, or **HERNAN**, the conqueror of Mexico, was born in 1485 at Medellin, in Estremadura; died near Seville in 1547. He went to the West Indies in 1504, where Velasquez, Governor of Cuba, under whom he had greatly distinguished himself, gave him the command of a fleet, which was sent on a voyage of discovery. Cortez quitted Santiago de Cuba in 1518, with eleven vessels, about 700 Spaniards, eighteen horses and ten small field-pieces. He landed on the shore of the Gulf of

Mexico, where he caused his vessels to be burned, in order that his soldiers might have no other resource than their own valor. Having induced the Totonacs and Tlaxcalans to become his allies, he marched towards Mexico, where he was amicably received; but, having seized Montezuma, the Aztec monarch, and treated the people with great cruelty,

Fernando Cortez.

they finally became hostile and attacked the invaders. After a desperate struggle, in which 100,000 Mexicans are said to have perished, the city was taken, and soon after the whole country was subjugated. In 1528 Cortez returned to Spain; but two years after he was again sent out to Mexico, where he remained for ten years, discovering meanwhile the peninsula of California. He returned once more to Spain, where, notwithstanding his great services, he was coldly received and neglected. After taking part in an expedition to Algiers in 1541 he passed the remainder of his days in solitude. He left a character eminent for bravery and ability, but infamous for perfidy and cruelty.

Cortland (kort'land), a city, capital of Cortland Co., New York, 36 miles S. of Syracuse. It has a State normal school and various factories, including machine shops, wire works, wallpaper, silks and piano factories, etc. Pop. 11,504.

Cortona (kor-tō'na), a city of Italy, 13 miles S. E. of Florence. It is a place of great antiquity, is partly surrounded by cyclopean walls, and has in its museum a great variety of Etruscan and Roman relics. Its cathedral contains fine works of art. Pop. 3667.

Cortona (kor-tō'na), **PIETRO DI**, properly *Pietro Berretini*, a painter and architect, was born at Cortona in 1596; died in 1669. Pope Ur-

ban VIII employed him to decorate a chapel in the church of St. Bibiena, and also to execute the frescoes of the grand salon of the Barberini Palace. Many churches of Rome were decorated by him; and at Florence he adorned the Pitti Palace for the Grand-duke Ferdinand II. His easel pictures, although of less value than his larger works, are held in great estimation. As an architect he did some important work in church restoration.

Coruna (ko-rö'nyá). See *Corunna*.

Corundum (ko-run'dum), the earth alumina, as found native in a crystalline state. In hardness it is next to the diamond. The amethyst, ruby, sapphire and topaz are considered as varieties of this mineral, which is found in India and China, and is most usually in the form of a six-sided prism or six-sided pyramid. It is nearly pure anhydrous alumina (Al_2O_3), and its specific gravity is nearly four times that of water. Its color is various—green, blue or red, inclining to gray, due to traces of iron, copper, etc. Emery is a variety of corundum.

Corunna (kō-run'na; Spanish, *Coruña*), a seaport of Spain, in the province of the same name in Galicia, on the northwest coast, on a peninsula at the entrance of the Bay of Betanzos. It consists of an upper and a lower town, the former built on the E. side of a small peninsula, and the latter on the isthmus connecting the peninsula with the mainland. The harbor, which is well protected, is deep, spacious and safe, and many improvements have lately been made. Cattle form the chief export. There is a government tobacco factory employing 3000 women and girls. There is a lighthouse, 92 feet high, called the Tower of Hercules, and supposed to be of Roman construction. Corunna was the port of departure of the Spanish Armada (1588), and the scene of the repulse of the French and the death of Sir John Moore (1809). Pop. 43,971. See map at *Ferrol*.—The province is hilly, and its inhabitants chiefly engaged in agriculture and fishing. Area, 3051 sq. miles; pop. 653,556.

Corvée (kor'vā), in feudal law, an obligation on the inhabitants of a district to perform certain services, as the repair of roads, etc., for the sovereign or the feudal lord. In France this system was not finally abolished until 1792.

Corvette (kor-vet'), a vessel of war, barque or ship-rigged, having

a flush deck, with no quarter-deck and only one tier of guns; but the term is now somewhat loosely used. Vessels of this class are now called cruisers.

Corvey, or KORVEI (kor'vī), a formerly renowned Benedictine abbey near Höxter in the Prussian province of Westphalia, founded in 816, an early center of German civilization. Wittekind, the historiographer of the convent; Bruno, known afterwards as Pope Gregory IV, and many other learned men were educated here. To its library belonged the only MS. of the first six books of the *Annals* of Tacitus, discovered here in 1514. The abbey, or castle of Corvey, as it is now called, has a rich and extensive library; but the ancient collection of the Benedictines is no longer in existence.

Corvidæ (kor'vi-dē), the crows, a family of conirostral birds, in which the bill is strong, of conical shape, more or less compressed, and the gape straight. The nostrils are covered with stiff, bristle-like feathers directed forwards. The family includes the common crow, rook, raven, magpie, jay, jackdaw, nutcracker, Cornish chough, etc.

Corvi'nus, MATTHIAS. See *Matthias Corvinus*.

Corvo (kor'vō), the smallest and most northerly of the Azore Islands. Pop. about 1000.

Corwin (kor'win), THOMAS, statesman and orator; born in Bourbon Co., Kentucky, in 1794; died in 1865. He won celebrity as lawyer and orator; was elected to Congress in 1830; supported Harrison for the presidency in 1840; and was elected governor of Ohio. He represented Ohio in the United States Senate, 1845-50, and in the latter year, was appointed Secretary of the Treasury by President Fillmore. He was Minister to Mexico 1861-64.

Cor'yat, THOMAS, an eccentric English traveler, born in 1577; died at Surat India, in 1617. His wanderings, a great part on foot, were through Europe, Asia Minor, Persia, India, etc. His travels were published under such curious titles as *Coryat's Crudities*, *Coryat's Crambe or Colwort Twice Sodden*, etc. He acted as a sort of butt or foil to the wits with whom he associated in London.

Corybantes (kor-i-ban'tez), frantic priests of Cybele, who celebrated the mysteries with orgiastic dances to the sound of drum and cymbal.

Corymb (kor'imb), in botany, that form of inflorescence in which the flowers, each on its own pedicel of different lengths, are so arranged along a common axis as to form a flat broad mass of flowers with a convex or level top, as in the hawthorn and candytuft.

Corymb.

Corypha (kor'i-fa), a genus of palms, including the fan-palm, gebang palm and taliput.

Coryphæna (kor-i-fē'na), **CORYPHENE**, a genus of fishes of the mackerel family (Scomberidæ). The body is elongated, compressed, covered with small scales, and the dorsal fin extends the whole length of the back, or nearly so. The dolphin of the ancients is the *C. hippūris*. All the species, natives of the sea of warm climates, are very rapid in their motions, and very voracious. They are of brilliant colors, and are objects of admiration to every voyager.

Coryphæus (kor-i-fē'us), the leader of the chorus in the Greek drama. His functions were often as wide as those of our stage-manager, conductor and ballet-master. The name *coryphée* is now applied to a ballet-dancer.

Coryphodon (kor-i-fō-don), a genus of extinct Ungulata, forming a link between the elephants and tapirs, having the ridges of its molar teeth developed into points: found in the Eocene formations of England and France.

Cos, now called STANCHIO or STANKO, an island in the Ægæan Sea, on the coast of Asia Minor; area, 95 square miles; pop. 10,000. It was the birth-place of Hippocrates, and had anciently a celebrated temple of Æsculapius. In Cos was manufactured a fine, semitransparent kind of silk, much valued by the ancients. Cos is also the name of the principal town, a decayed seaport. The island yields grain, wine, silk, cotton, citrons, etc.

Cosel. See *Kosel*.

Coseley (kōz'li), an urban sanitary district of West Staffordshire, 11 miles N. of Birmingham. It has extensive iron and other manufactures. Pop. (1911) 22,841.

Cosenza (ko-sen'tsā), an episcopal city of Southern Italy, capital of province of Cosenza or Calabria Citeriore, 150 miles S. E. Naples; pop. 21,240. It has manufactures of silk, pottery and

cutlery; the environs are beautiful, and produce abundance of corn, fruit, oil, wine and silk.

Coshering (kosh'er-ing), or **COSH-ERY**, an old feudal custom in Ireland by which the lord of the soil had the right to lodge and feast himself at a tenant's house.

Coshocton (ko-shok'ton), a town, capital of Coshocton Co., Ohio, 26 miles N. of Zanesville. It has numerous manufactories and is an important shipping point for coal, grain, flour, wool, etc. Pop. 9603.

Cosmas (k o s' m a s), surnamed **INDICOPLEUSTES** ('the Indian navigator'), an Alexandrian merchant and traveler of the sixth century; afterwards a monk. He wrote several geographical and theological works, the most important of which extant is the *Christian Topography*. The author tries to prove that the earth is a parallelogram bounded by walls, which meet and form the vaulted roof which we call the sky.

Cosmetics (kos-met'iks; from Gr. *kos-meō*, I ornament or beautify), external preparations for rendering the skin soft, pure and white, or for beautifying and improving the complexion. To these may be added preparations for preserving or beautifying the teeth, and those which are applied to the hair.

Cosmism (kos'mizm), that system of philosophy, based on the doctrine of evolution, enunciated by Mr. Herbert Spencer and his school; a phase of positivism.

Cosmogony (koz - mog' ō - ni; Greek, *kosmos*, world, and *gonē*, generation), a theory of the origin or formation of the universe. Such theories may be comprehended under three classes:—1. The first represents the world as eternal, in form as well as substance. 2. The matter of the world is eternal, but not its form. 3. The matter and form of the universe are ascribed to the direct agency of a spiritual cause; the world had a beginning, and shall have an end. Aristotle appears to have embraced the first theory; but the theory which considers the *matter* of the universe eternal, but not its *form*, was the prevailing one among the ancients, who, starting from the principle that nothing could be made out of nothing, could not admit the creation of matter, yet did not believe that the world had been always in its present state. The prior state of the world, subject to a constant succession of uncertain movements which chance afterwards made regular, they called *chaos*. The Phœnicians, Babylonians, and also Egyptians seem to have adhered to

this theory. One form of this theory is the atomic theory as taught by Leucippus, Epicurus and Lucretius. According to it, atoms or indivisible particles existed from eternity, moving at hazard, and producing, by their constant meeting, a variety of substances. After having given rise to an immense variety of combinations they produced the present organization of bodies. The third theory of cosmogony makes God, or some deity, the Creator of the world out of nothing. This is an ancient and widely-spread theory, and is that taught in the book of Genesis. Anaxagoras was the first among the Greeks who taught that God created the universe from nothing. The Romans generally adopted this theory, notwithstanding the efforts of Lucretius to establish the doctrine of Epicurus.

Cosmos (koz'mos), order or harmony, and hence the universe as an orderly and beautiful system. In this sense it has been adopted by Humboldt as the title of his celebrated work, which describes the nature of the heavens as well as the physical phenomena of the earth.

Cosne (kōn), a town of France, dep. Nièvre, 31 miles N. N. W. of Nevers, on the Loire. Pop. 8437.

Cossacks (kos'aks; *Casacks*), tribes who inhabit the southern and eastern parts of Russia, paying no taxes, but performing instead the duty of soldiers. Nearly all of them belong to the Græco-Russian Church, to which they are strongly attached, and to the observances of which they are particularly attentive. They must be divided into two principal classes, both on account of their descent and their present condition—the Cossacks of Little Russia and those of the Don. Both classes, and especially those of the Don, have collateral branches, distributed as Cossacks of the Azoff, of the Danube, of the Black Sea, of the Caucasus, of the Ural, of Orenberg, of Siberia, of the Chinese frontiers and of Astrakhan. Writers are not agreed as to the origin of this people and of their name, but they are believed to be a mixed Caucasian and Tatar race. In personal appearance the Cossacks bear a close resemblance to the Russians, but are of a more slender make, and have features which are decidedly more handsome and expressive. Originally their government formed a kind of democracy, at the head of which was a chief or hetman of their own choice; while under him was a long series of officers, with jurisdictions of greater or less extent, partly civil and partly military, all so arranged as to be able on any emergency

to furnish the largest military array on the shortest notice. The democratical part of the constitution has gradually disappeared under Russian domination. The title of chief hetman is now vested in the heir-apparent to the throne, and all the subordinate hetmans and other officers are appointed by the crown. Care, however, has been taken not to interfere with any arrangements which foster the military spirit of the Cossacks. Each Cossack is liable to military service from the age of eighteen to fifty, and is obliged to furnish his own horse. They furnish the empire with one of the most valuable elements in its national army, forming a first-rate irregular cavalry, and rendering excellent service as scouts and skirmishers. In 1570 they built their principal 'stanitza' and rendezvous, called Tcherkask, on the Don, not far above its mouth. As it was rendered unhealthy by the overflowing of the island on which it stood, New Tcherkask was founded in 1801 some miles from the old city, to which nearly all the inhabitants removed. This forms the capital of the country of the Don Cossacks, which constitutes a government of Russia, and has an area of 61,900 sq. miles and a population of 2,648,049. It has a military organization of its own.

Cossimbazar (k o s-i m-bä-zär'), a decayed town in Moorshedabad district, Bengal. It was one of the earliest settlements of the East India Company, and was formerly a place of great importance.

Cossipur (k o s-i-pur'), a northern suburb of Calcutta, the site of an important gun factory. Pop. about 15,000.

Costa (kos'ta), SIR MICHAEL, musical composer and conductor, born at Naples of an old Spanish family in 1810; died in 1884. In 1828 he went to England, and in 1839 became a naturalized British subject. He was conductor of the Philharmonic Society, the Sacred Harmonic Society, Her Majesty's Opera, the Händel Festivals, etc. His chief works are the opera *Don Carlos* and the oratorios *Eli* and *Naaman*. He was knighted in 1869.

Costa Rica (kos'ta ri'ka), the most southern state of the republics of Central America; bounded N. by Nicaragua, E. and N. by the Caribbean Sea; E. by Panamá; and S. and W. by the Pacific. The area is 21,495 sq. miles, including some disputed territories on the northern frontier. The country is intersected diagonally by the primary range or cordillera of the isthmus, which throws off numerous spurs on either side. The principal range con-

GROUP OF COSSACKS

tains several lofty eminences (the highest 11,740 feet) and volcanoes, both active and extinct or dormant. Costa Rica is said to contain some rich gold-mines; at present, however, they are not worked to any great extent. Silver and copper are also found. The country is extremely fertile. Coffee, rice, maize, etc., are raised on the tableland in the interior; and cacao, vanilla, sugar, tobacco, bananas, etc., are cultivated in the low coast-regions. Coffee forms the most important product. The forests are valuable, and remarkable for their hardwood timber. The capital is San José, and the two established ports are Punta Arenas, on the Pacific side and Porto Limon, on the Caribbean Sea. It has been an independent state since 1821, from 1824 to 1839 forming a part of the Central American Confederation, but subsequently became separate. Another Confederation was formed in 1872, but did not long continue. In 1912 there were over 400 miles of railway and 1200 miles of telegraph lines. The finances are in some disorder, and education is at a low ebb. The sum of exports and imports amounts to about \$15,000,000. Pop. 331,340, mostly of Spanish descent.

Costello (kos-tel'ō). DUDLEY, novelist and journalist, born in Ireland in 1803; died at London in 1865. A constant contributor to many journals and magazines, and author of several popular works of fiction, etc.—His sister, LOUISA STUART COSTELLO, born in 1815; died in 1870; published two romances, entitled *The Queen Mother* (1841) and *Clara Fane* (1848), a poem called *The Lay of the Stork* (1856), and various historical and descriptive works.

Coster (kos'ter). LAURENS (called *Janszoon*, that is, *son of John*), whose name is connected with the origin of printing, was born in Haarlem in 1370 or 1371; died about 1440. He was sacristan (*Koster*) of the parochial church at Haarlem, and from this office he derived his surname. According to a statement first found in Junius' *Batavia* (1588), he was the original inventor of movable types, and on this ground the Dutch have erected statues in his honor. But in 1870 a Dutchman, Dr. Van der Linde, professed to have demolished the claims of Haarlem to the invention of printing, and to have established that Holland, like other countries, was indebted for it to the Mayence school. This conclusion has been rejected by Mr. J. H. Hessels, who, on carefully investigating the matter, thinks it highly probable that Coster was the inventor. Among Amer-

ican printers Gutenberg is credited with the invention. See *Fust*, *Gutenberg* and *Schöffer*.

Costmary (kost'ma-ri; from L. *costos*, an aromatic plant, and *Mary*, the Virgin), or ALECOST (*Balsamita vulgāris*), a composite herbaceous plant, a hardy perennial, a native of Italy, introduced into Britain in 1568, and common in almost every rural garden. It was formerly put into ale to give it an aromatic flavor, hence the name *Alecost*.

Costs, in law, are the expenses incurred by the plaintiff and defendant. As a rule, these are paid by the loser in a suit, but there are always *extrajudicial* expenses incurred by both parties, which each has to pay whatever be the issue of the suit. In criminal cases the party accused may have his expenses if the court thinks the accusation unreasonable.

In matrimonial suits, the wife, whether petitioner or respondent, is generally entitled to her costs from the husband.

Costume (kos'tūm), the style of attire characteristic of an individual, community, class, or people; the modes of clothing and personal adornment which prevail in any period or country.—*Costume balls*, also called *fancy dress balls*, are entertainments at which the guests adopt a style of dress different from the one usually worn. It may be one which was worn at another period, or one worn in another country, or a modern dress worn by some particular class of society. A favorite plan is to make up as some well-known character in history or literature.

Côte-d'Or (kōt-dōr), that is, hill or hillside of gold, from the excellence of its vintages, a chain of hills in the east of France, height from 1400 to 1800 feet.

Côte-d'Or, an inland and eastern department of France, part of the old province of Burgundy, having Dijon as its capital. It is watered by the Seine, the Saône, and their affluents, and derives its name from the Côte-d'Or hills (see above), which traverse it from N. E. to S. W. Area, 3382 sq. miles. The vineyards of the eastern slopes of the Côte-d'Or produce the celebrated wines of Upper Burgundy. Iron, coal, marble, etc., are found. Pop. (1906) 357,959.

Côtes-du-Nord (kōt-dü-nōr), a maritime department in the north of France, forming part of ancient Brittany; capital Briec. Area, 2659 sq. miles. The coast extends about 150 miles, and the herring, pilchard and mackerel fishing is actively pursued. One of the main branches of industry is the

rearing of cattle and horses. In manufacturing industries the principal branch is the spinning of flax and hemp and the weaving of linen and sailcloth. Among the minerals are iron, lead and granite. Pop. 611,506.

Coteswold (or COTTESWOLD) HILLS. See *Cotswold Hills*.

Cöthen. See *Coethen*.

Cothur'nus. See *Buskin*.

Cotidal Lines (kō-tī'dal), a system of lines on a globe or chart marking the places where high water occurs at the same instant.

Cotillion (kō-til'yun), a brisk dance of French origin performed by eight persons together, resembling the quadrille, which superseded it. The name is now given to a dance which often winds up a ball, and which is danced with any number of dancers and with a great variety of figures, the pairs of dancers following in this the leading pair, and partners being successively changed.

Cotingas (kō-tin'gas), a family of tropical American birds, some of which have splendid plumage, or are otherwise remarkable. See *Bell-bird*, *Umbrella-bird*.

Coto (kō'tō), the reddish-brown, aromatic and slightly bitter bark of *Palicourea densiflora*, order Rubiaceæ, a tree of South America imported into Europe and used as a remedy in diarrhea and profuse sweating.

Cotoneaster (kot-on-e-as'ter), a genus of small trees or trailing shrubs, nat. order Rosaceæ. *C. vulgāris* is a British species, having rose-colored petals and the margins of the calyx downy. The other species are natives of the south of Europe and the mountains of India. They are all adapted for shrubberies.

Cotopaxi (kō-tō-paks'i), the most remarkable volcanic mountain of the Andes, in Ecuador, about 60 miles N. E. of Chimborazo; lat. 0° 43' S.; lon. 78° 40' W.; altitude 19,500 feet. It is the most beautiful of the colossal summits of the Andes, being a perfectly symmetrical truncated cone, presenting a uniform unfurrowed field of snow of resplendent brightness. Several terrific eruptions of it occurred in the course of the eighteenth and the beginning of the nineteenth century.

Cotrone (kō-trō'na), a seaport of Southern Italy, province of Catanzaro, on the site of the ancient Croton. It has a cathedral, is defended by a citadel and otherwise fortified. Pop. 7917.

Cotswold Hills (kots'wöld), a range of hills in England, County Gloucester, which they traverse N. to S. for upwards of 50 miles; extreme elevation near Cheltenham, 1134 feet. The *Cotswold sheep* are a breed of sheep remarkable for the length of their wool, formerly peculiar to the counties of Gloucester, Hereford, and Worcester.

Cotta (kot'ta), JOHANN FRIEDRICH, BARON VON, an eminent bookseller of Germany, born in 1764; died in 1832. He began business at Tübingen, but in 1811 removed to Stuttgart. He was the publisher for many great writers in Germany, including Goethe, Schiller, Wieland, Richter, Uhland, Fichte, Hegel, the Humboldts, and others.

Cottabus (kot'a-bus), an ancient Greek game, which consisted in throwing wine from cups without spilling, into little basins of metal, suspended in a particular manner or floating in water.

Cottage (kot'aj), a small country residence or detached suburban house, adapted to a moderate scale of living, yet with all due attention of neatness, comfort and refinement.

Cottbus. See *Kottbus*.

Cottier Tenure (kot'i-er ten'ūr), a system of tenure according to which laborers rent small portions of land directly from the owner, or from a farmer, often giving personal service as part of the rent, and holding by annual tenancy.

Cottin (kot-an), SOPHIE RISTAUD, better known by the name of *Madame Cottin*, a French novelist, born in 1773; died in 1807. In 1790 she married M. Cottin, a banker of Bordeaux, who died in 1793, and thenceforth she followed literature. Her best-known work is *Elizabeth, or the Exiles of Siberia*; other novels are *Claire d'Albe*, *Malvina*, *Amélie* and *Mathilde*.

Cottle (kot'l), JOSEPH, a bookseller and publisher of Bristol, England, and the author of some now almost completely forgotten poems, was born in 1774; died in 1853. He was a generous friend to Coleridge and Southey in their early days, and wrote an interesting volume of recollections of those authors.

Cotton (kot'n), the name given to the soft cellular hairs which encircle the seeds of plants of the genus *Gossypium*, nat. order Malvaceæ. The genus is indigenous to both the Old and the New World, and the plants are now cultivated all over the world within the limits of 30° north and south of the equator. All the species are perennial

COTTON PICKER

Reproduced by permission of the Philadelphia Museums.

COTTON PLATFORM AND COMPRESSOR

Experts have for many years been seeking a machine for picking cotton. The one illustrated above is an ingenious device which propels itself, picks the cotton, and stores it in the bags at the rear. In the lower view the machine seen in the background presses the cotton into bales, which are bound with steel tape.

shrubs, though in cultivation they are sometimes treated as if they were annuals. They have alternate stalked and lobed leaves, large yellow flowers, and a three or five celled capsule, which, when ripe, bursts open through the middle of the cell, liberating the numerous black seeds covered with the beautiful filamentous cotton. The North American cotton is produced by *Gossypium barbadense*, and two well-marked varieties are cultivated, the long-staple cotton, which has a fine, soft, silky fiber nearly 2 inches long, and the short-stapled cotton, which has a fiber little over 1 inch long adhering closely to the seed. The long-staple variety, known as Sea Island cotton, holds the first place in the market. It is grown in some of the southern United States, especially on islands bordering the coast. The cotton grown in South America is obtained from *G. Peruvianum*, called also kidney cotton. The indigenous Indian species is *G. herbaceum*, which yields a short-stapled cotton. It is grown throughout the Mediterranean region as well as in Asia. The mode of cultivating cotton is usually as follows:—The seeds are sown in the spring in drills of about a yard in width, the plant appearing above ground in about eight days afterwards. The rows of young plants are then carefully weeded and hoed, a process which requires to be repeated at two or three subsequent periods. No hoeing takes place after the flowering has commenced, from which a period of seventy days generally elapses till the ripening of the seed. To prevent the luster of the cotton wool from being tarnished, the pods must not remain ungathered longer than eight days after coming to maturity. The cotton-wool is collected by picking with the fingers the flakes from the pods, and then spreading out to dry, an operation which requires to be thoroughly performed. A machine has recently been invented which is asserted to pick cotton satisfactorily. The cotton then comes to be separated from the seeds, a process formerly effected by manual labor, but which has long been done by the cotton-gin. After being cleansed from the seeds, the cotton-wool is formed into bales, and is ready for delivery to the manufacturer.

Cotton has been cultivated in India and the adjacent islands from time immemorial. It was known in Egypt in the sixth century before the Christian era, but was then probably imported from India. It was not till a comparatively late period that the nations of the West became acquainted with this useful commodity, and even then it appears only to have been used as an article of the great-

est luxury. The introduction of the cotton-shrub into Europe dates from the ninth century, and was first effected by the Spanish Moors, who planted it in the plains of Valencia. Cotton manufactories were shortly afterwards established at Cordova, Granada and Seville; and by the fourteenth century the cotton stuffs manufactured in the kingdom of Granada had come to be regarded as superior in quality to those of Syria. About the fourteenth century cotton thread began to be imported into England by the Venetians and Genoese. In China the cot-

Herbaceous Cotton Plant (*Gossypium herbaceum*).

ton-shrub was known at a very early period, but it does not appear to have been turned to any account as an article of manufacture till the sixth century of the Christian era, nor was it extensively used for that purpose till nearly the middle of the fourteenth century. In the New World the manufacture of cotton cloth appears to have been well understood by the Mexicans and Peruvians long before the advent of Europeans. It was planted by the English colonists of Virginia in 1621, but only as an experiment, and the amount produced was long very small, the crop amounting only to about 2,000,000 lbs. in 1791. In the following year the cotton-gin was invented, and the rapidity with which the fiber could be removed from the seed led to a rapid and great increase, the United States becoming in the following century the great producer of cotton. The cotton-plant is chiefly cultivated for the fiber growing upon the seed, but the seed itself has proved commercially valuable. Formerly a waste product, it now forms an essential part of the crop's value, yielding large quantities of cottonseed-oil and oil-cake. The fiber from the inner bark also

shows possibilities of importance, being little inferior to jute, and much resembling it. Although cotton is a tropical plant, its cultivation is conducted most successfully in the temperate zone. The conditions most favorable to its growth and development are six months exemption from frost, moderate rainfall during growth, and while maturing abundant sunshine with little moisture. The Southern States of this country supply these conditions better than elsewhere, and they have no competitor in the quantity and few in the quality of the fiber produced. The amount grown enormously exceeds that of any other part of the world. The yield ranges from one-fourth of a bale of 500 lbs. to two bales per acre. If the lint alone is removed from the land, cotton is the least exhausting of the various crops of the United States. The quantity of cotton grown in the United States for the year preceding the census of 1900, as given therein, was 9,345,391 bales of a total gross weight of 4,672,695,500 lbs. In 1911 the crop reached the great total of 13,868,837 bales, the largest ever grown.

Cotton, CHARLES, an English writer, born in 1630; died in 1687. He lived the life of a country gentleman, being a great angler and skilled in horticulture. His works are numerous, including *Scarronides, or Virgil Travestie, Instructions how to Angle for a Trout and Grayling in a Clear Stream*, a supplement to his friend Izaak Walton's *Compleat Angler*; *Poems on Various Occasions*; translations of Montaigne's *Essays*, Corneille's *Horace*, etc. He wrote well both in poetry and prose.

Cotton, SIR ROBERT BRUCE, an English antiquary and collector of literary relics; born in 1570; died in 1631. He assisted Camden in his labors on the *Britannia*; and was made a baronet in 1611. He wrote numerous antiquarian pamphlets, but he is chiefly remembered for the magnificent library of ancient charters, records and other MSS. which he collected, and which passed to his heir intact, and was acquired by the nation in 1706. After being partially destroyed by fire in 1731, it was placed in the British Museum in 1757.

Cotton-gin, a machine employed in the production of cotton-fiber, it being adapted to remove the lint from the seed to which it clings. When this has been done there remains of the product as gathered about one-third in weight of clean cotton, fitted for manufacture, and two-thirds of seed, of value for the oil it contains. Originally the work of separating the lint from the seed

was a slow and difficult process, it being done by hand, a good day's work for a man being a few pounds of lint. The result was that American cotton could not compete with that of India and the West Indies, and very little was raised until after the invention of the cotton-gin. In India and China a crude and simple machine has long been used as a substitute for hand labor. It is called the 'churka' and is known in Italy as the 'manganello', and consists of two wooden rollers fixed in a frame and revolving in contact with each other, the cotton being drawn between them and the seed excluded. Various efforts have been made to improve this machine, which is still largely used in India, but it is impossible to clean cotton rapidly by this means, and gins have been introduced into the principal cotton districts to replace it. The cotton-gin (the word 'gin' being a contraction for 'engine') was invented in 1792, by Eli Whitney, a native of Connecticut, then living in Savannah, Georgia, as a tutor in the house of Mrs. Greene, the widow of General Greene of Revolutionary fame. His mechanical ingenuity was so evident that Mrs. Greene suggested to him the desirability of attempting to produce a cotton-cleaning machine for the benefit of the planters of the State. Whitney soon devised a machine, simple in principle, but effective in action. It is still in use throughout the South, improved but its principle unchanged. It consists of a grid or grating of parallel wires, set so close together that the cotton can easily pass between them but the seeds cannot. A set of circular saws, with sharp teeth, are so arranged that the teeth pass between the wires and when in revolution catch the fiber, tearing it loose from the seeds and pulling it between the wires, while the seeds slide down into a receptacle below. An additional necessary feature is a revolving brush which sweeps the cotton from the saw teeth and keeps them clean. Such is, in brief, the principle of the famous cotton-gin, which has been worth hundreds of millions of dollars to the planters of the South.

The effect of this machine on the cotton industry of the South was remarkable. In 1792, when Whitney's machine was produced, the United States produced only 500,000 pounds of cotton and all the cotton raised could have been grown on a field of a few hundred acres. In 1800 the crop was 18,000,000 pounds: ten years later it was 80,000,000 pounds: in 1830 a million bales. It has varied in late years from 10,000,000 to 16,000,000 bales. This great development would have

Reproduced by permission of The Philadelphia Museum.

COTTON GINNING

In this process, the seed is removed from the raw cotton.

Cotton-gin

been impossible without Whitney's invention, which, however, was pirated, he receiving little benefit from it. The action of the machine, it must be said, is very hurtful to the fiber, it being in this way a wasteful and costly apparatus. This injury was especially great with the long-stapled cotton, the fibers of which were found to be more or less cut, or 'nepped', by the tearing action of the saws. To prevent this another American invention, the Macarthy gin, has come into use for cleaning the long-stapled Sea Island, Egyptian and Brazilian cotton. In this the fiber is drawn by a leather roller between a metal plate called the 'doctor', fixed tangentially to the roller, and a blade called the 'beater', which moves up and down in a plane immediately behind and parallel to the fixed plate. As the cotton is drawn through by the roller, the seeds are forced out by the action of the movable plate, which acts vertically in some machines and horizontally in others. Attempts have been made to improve both the saw and the roller machines, in the one case to prevent injury to the staple, in the other to add to the rapidity of the cleaning process. One of these is the 'needle' saw-gin, an invention intended to prevent the fiber from being cut. It consists of steel wire set in block tin, with the bottom of the teeth rounded or made smooth. On the other hand the Macarthy gin has been developed into a double action machine, with two movable blades or beaters. Also the 'knife roller' gin, the 'lockjaw' gin, and others have appeared as rivals to the saw-gin. The machine which will clean the largest quantity in the shortest space of time is naturally preferred, unless the injury to the staple is such as to reduce its market value. The production of the most efficient cotton-cleaning machinery is, therefore, of importance alike to the planter and the manufacturer. Until recent years the ginning was done on the plantations. Nearly the whole of it is now done in public ginneries with steam power and much more rapid production. The saw-gin is five times as fast as the roller-gin in its operation and is used throughout the Southern States except in the region of Sea Island cotton.

Cotton-grass, the popular name of *Eriophorum*, order Cyperaceæ or sedges. Several species occur in the United States and in Great Britain, in moory or boggy places, and the white, cottony substance they produce is used for stuffing pillows, etc.

Cotton-picker, MECHANICAL. Cotton has hitherto been

Cotton-spinning

picked by hand, the negroes of the South being employed. This method has long been unsatisfactory, for various reasons, and various efforts to produce a mechanical cotton-picker have been made. One tested in 1910 proved very satisfactory. It was operated by a gasoline motor, and picked the cotton by mechanical fingers, performing its work thoroughly and without injury to the plant or the unopened balls, and at a cost much below that of hand-picking. It is the invention of Angus Campbell, a Scotchman.

Cottonseed Oil, a valuable oil expressed from the seeds of the cotton-plant, used as an adulterant or as a substitute for various other oils. The oil-cake of cottonseed is a valuable cattle-feeding substance.

Cotton-spinning, a term employed to describe in the aggregate all the operations involved in transforming raw cotton into yarn. The word 'spinning' has also a more limited signification, being used to denote the concluding process of the series. The following affords a general notion of the nature and order of the successive operations carried on in the manufacture of cotton yarn.—(1) *Mixing*, the blending of different varieties of raw cotton, in order to secure economical production, uniform quality and color, and an even thread in any desired degree. (2) *The willowing, scratching, or blowing*, an operation which cleans the cotton and prepares it in the form of a continuous lap or rolled sheet for the next process. (3) *Carding*, an operation in which the material is treated in its individual fibers, which are taken from the lap, further cleansed, and laid in a position approximately parallel to each other, forming a thin film, which is afterwards condensed into a sliver—a round, untwisted strand of cotton. (4) *Drawing*, the drawing out of several slivers to the dimensions of one, so as to render the new sliver more uniform in thickness, and to place the fibers more perfectly in parallel order. (5) *Slubbing*, the further drawing or attenuation of the sliver, and slightly twisting it in order to preserve its cohesion and rounded form. (6) *Intermediate or second slubbing*, a repetition of the former operation and further attenuation, not necessary in the production of coarse yarns. (7) *Roving*, a continuation of the preceding, its principal object being still further to attenuate the sliver, and give it a slight additional twist. (8) *Spinning*, which completes the extension and twisting of the yarn. This is accomplished either with the throstle or the mule. By means of the former machine the yarn receives

a hard twist, which renders it tough and strong. By means of the latter yarns of less strength are produced, such as warps of light fabrics and wefts of all kinds. (See *Thread* and *Weaving*.) Up to the middle of the last century the only method of spinning known was that by the hand-wheel, or the still more primitive distaff and spindle. In 1767 a poor weaver of the name of Hargreaves, residing at Stanhill, in Lancashire, England, invented a machine for spinning cotton, which he named a *spinning-jenny*. It consisted at first of eight spindles, turned by a horizontal wheel, but was afterwards greatly extended and improved so as to have the vertical substituted for the horizontal wheel, and give motion to from fifty to eighty spindles. In 1769 Arkwright, originally a barber's apprentice, took out a patent for spinning by rollers. From the circumstances of the mill erected by Arkwright at Cromford, in Derbyshire, being driven by water-power, his machine received the name of the *water-frame*, and the thread spun on it that of *water-twist*. The next important invention in cotton-spinning was that of the *mule*, introduced by Mr. Samuel Crompton, of Bolton, in 1775, and so called from its combining the principle of the spinning-jenny of Hargreaves with the roller-spinning of Arkwright. Numerous improvements in cotton-spinning have been introduced up to the present day, but they are all modifications of the original inventions. Among these is the *throstle*, an extension and simplification of the original spinning-frame, introduced about the year 1810. The first machines set up in the United States were at East Bridgewater, Mass., in 1786, by two Scotchmen. In 1812 Francis C. Lowell introduced the Cartwright power-loom at Lowell, Mass., which is now the largest cotton-manufacturing center in America. There are also extensive mills in active operation in Alabama, Georgia and other Southern States.

Cotton-worm, a caterpillar which feeds on the leaves of the cotton-plants, in such multitudes as to cause serious mischief. It changes into a pale, reddish-green moth.

Cottus, a genus of fishes. See *Bull-head*.

Coturnix. See *Quail*.

Cotyledons (kot-i-lē'dons), the seed-leaves or seed-lobes of the embryo plant, forming, together with the radicle and plumule, the embryo, which exists in every seed capable of germination. Some plants have only one cotyle-

don, and are accordingly termed *monocotyledonous*; others have two, and are *dicotyledonous*. These differences are accompanied by remarkable differences in the structure of the stems, leaves and blossoms, which form the basis for the

COTYLEDONS.

- 1, Monocotyledon (seed of *Arum maculatum*).
2, Dicotyledon (seed of *Papaver Rhæas*). 3, Polycotyledon (seed of *Pinus sylvestris*).

division of flowering plants into two great classes. The embryo plant of the Coniferæ has many (three to twelve) cotyledons, and is called *polycotyledonous*. The cotyledons contain a supply of food for the use of the germinating plant. In some plants the store is very large, and in germination the seed-leaves remain under the ground, as in the pea and oak; in others the store is not so large, and the seed-leaves appear above ground and perform the functions of true leaves; while there is a large class of seeds where the embryo is very small, and the food is stored up around it, as in wheat and the buttercup.

Couchant (kouch'ant), in heraldry, said of a beast lying down with the head raised.

Couch Grass (QUITCH, or QUICK) (*Triticum repens*), a perennial grass, which is propagated both by seed and by its creeping root-stock, and is one of the most common and troublesome weeds of agriculture. When it first appears above ground its blade is readily eaten by sheep. The roots are readily eaten by pigs, and when cleaned and boiled or steamed become a farinaceous and nutritious food for cows and horses. It is the grass eaten by dogs as an emetic.

Couching (kouch'ing), an old operation for cataract, which consisted in passing a needle into the eye, and with it pushing the lens out of its place to leave the pupil of the eye clear.

Coucy (kö-sē), RENAUD, CHATELAIN DE, an old French poet, born about 1160; killed at Acre in 1191. His songs are distinguished by great warmth of passion. He is the hero of a celebrated romance of the thirteenth century.

Coues (kows), ELLIOTT, naturalist, was born at Portsmouth, New Hampshire, in 1842; died in 1899. He became a doctor and served as such in the army

from 1862 to 1881, also holding official positions in the northern boundary survey and the geological survey of the territories. He was professor of anatomy in the National Medical College at Washington 1877-87, and in 1883 of biology in Virginia Agricultural College. His works include *Key to North American Birds* and various other works on birds, *Fur-Bearing Animals*, *Biogen*, *Expedition of Lewis and Clark*, etc.

Cougar (kō'gär), a voracious quadruped of the cat kind, inhabiting most parts of America—*Felis concolor*. Its color is a uniform fawn or reddish brown, without spots or markings of any kind. It may attain a length of 9 feet, inclusive of the tail. In habits it is stealthy and cowardly, and seldom or never attacks man. It is by some called the puma or red tiger, and is one of the most destructive of all the animals of America, particularly in the warmer climates, where it carries off fowls, dogs, cats and other domestic animals.

Cough (kof), a sudden and forcible expiration immediately preceded by closure of the glottis or narrowed portion of the box of the windpipe. The force for the action is obtained by a deep breath, then follows the closure of the glottis, succeeded by the expiratory effort forcing open the glottis. The action is performed by the expiratory muscles, that is, the abdominal muscles, by whose contraction the diaphragm is forced up, and the muscles of the chest, by which the ribs are pulled down. The cavity of the chest being thus diminished, air is driven out of the lungs. The object of the cough is usually to expel any foreign material in the lungs or air tubes. The offending material may be there present as the result of inflammation, catarrh, etc. It may also have gained entrance by inspiration. Thus, the irritating material may be merely some food or drink which has slipped into the larynx, or it may be dust, etc., in the air inhaled, and the cough is the means of expelling the intruder. But cough may also be produced when there is no irritating material present. The larynx or windpipe may be in an inflamed and irritable condition, in which state even the entrance of cold air will excite coughing. Moreover, cough may be produced by irritation of nerves, distant from the lungs and air passages, by what is called reflex action. Thus, irritation of the stomach, irritation connected with the ear, irritation of certain nerves by pressure of growths, etc., may produce cough, when the respiratory organs are not directly affected at all. Irritation at the back of the throat, as of

the tickling by a long uvula, and so on, also produces it. A catarrhal cough is generally considered unimportant, particularly if there be no fever connected with it. But every cough lasting longer than two or three days is suspicious and ought to be medically treated.

Coulisse (kö-lis'), one of the side scenes of the stage in a theater, or the space included between the side scenes; properly one of the grooved pieces of wood, etc., in which a flat scene moves.

Coulomb (kö-lön), CHARLES AUGUSTIN DE, French physicist, born in 1736 at Angoulême; died in 1806. His fame rests chiefly on his discoveries in electricity and magnetism, and on his invention of the torsion balance.

Coulomb, or AMPERE-SECOND, is the working unit of electrical energy. When a current having the strength of 1 ampere passes through a 1-ohm-resistance conductor in 1 second of time it constitutes a coulomb. Named after C. A. Coulomb (see preceding article).

Coumarin (kö'ma-rin), a vegetable proximate principle, obtained from the *Dipterix odorata*, or Tonka bean, sweet woodruff, sweet-scented vernal grass, melilot, etc. It has a pleasant, aromatic odor, and a burning taste; and is used in perfumery, in medicine, and to give flavor to certain varieties of Swiss cheese.

Council (koun'sil; Lat. *concilium*), an assembly met for deliberation, or to give advice. The term specially applies to an assembly of the representatives of independent churches, convened for deliberation and the enactment of canons or ecclesiastical laws. The four general or ecumenical councils recognized by all churches are: (1) the Council of Nice, in 325, by which the dogma respecting the Son of God was settled; (2) that of Constantinople, 381, by which the doctrine concerning the Holy Ghost was decided; (3) that of Ephesus, 431; and (4) that of Chalcedon, 451, in which last two the doctrine of the union of the divine and human nature in Christ was more precisely determined. Among the principal Latin councils are that of Clermont (1096), in the reign of Urban II, in which the first crusade was resolved upon; the Council of Constance, the most numerous of all the councils, held in 1414, which pronounced the condemnation of John Huss (1415), and Jerome of Prague (1416); the Council of Basel, in 1431, which intended a reformation, if not in the doctrines, yet in the constitution and dis-

cipline of the church; and the Council of Trent, which began its session in 1545, and labored chiefly to confirm the doctrines of the Catholic Church against the Protestants. On December 8, 1869, an ecumenical council, summoned by a bull of Pope Pius IX, assembled at Rome. This council adopted a Decree or *Constitutio de Fide*, and a *Constitutio de Ecclesia*, the most important article of which latter declares the infallibility of the pope when speaking *ex cathedrâ*.

Council, AULIC. See *Aulic*.

Council, PRIVY. See *Privy-council*.

Council and Session, LORDS OF, the supreme judges of the highest court of Scotland. See *Session*, *Court of*.

Council Bluffs, a city and important manufacturing and distributing center, capital of Pottawattamie County, Iowa, on the left bank of the Missouri, opposite Omaha City, with which it is connected by a bridge 2750 feet in length and 50 feet above high water. The name is derived from a council held here with the Indians in 1804. Pop. 29,292.

Council of Ten, a secret tribunal of the old Venetian republic, formed in 1310 and continued till the fall of the republic in 1797. It virtually ruled the state, secretly decreeing the death of those whom it had reason to fear.

Council of War, an assembly of officers of high rank called to consult with the commander-in-chief of an army, or admiral of a fleet, on matters of supreme importance.

Counsel (koun'sel), or COUNSELOR, a person retained by a client to plead his cause in a court of judicature. (See *Barrister* and *Advocate*.) The term counsel is used as a plural for a number of legal counselors engaged together in a case.—*Queen's* or *King's Counsel*, are English barristers appointed counsel to the crown, on the nomination of the lord-chancellor, and taking precedence over ordinary barristers. They have the privilege of wearing a silk gown as their professional robe, that of other barristers being of wool.

Count (kount; Latin *comes*, *comitis*, a companion) appears to have been first used, as a title of dignity, in the reign of the Roman emperor Constantine (fourth century), meaning originally the companion of a prince or high dignitary. After the fall of the Roman power the title was retained; and under Charlemagne it denoted equally a military or

civil employment. About the end of the fifteenth century, in Germany, and under the last princes of the Merovingian race in France, the title appears to have become hereditary in certain families. The German title *Graf* corresponds to the title *Count* in other countries of Europe. In modern times the custom of styling all the sons of a count also counts makes this designation very common, and the rank little more than nominal. In point of rank, the English earls are considered as corresponding to the continental counts, an earl's wife being styled a *countess*.

Count, in law, a declaration or indictment, an independent part of which, if it stood alone, would constitute a ground of action.

Counterfoil (koun'tér-foil), a kind of complementary and easily detached portion of a document, such as a bank check or draft, which is retained by the person giving the document, and on which is written a memorandum of the main particulars contained in the principal document.

Counter-irritant, in medicine a substance employed to produce an artificial or secondary disease, in order to relieve another or primary one. The term is more specifically applied to such irritating substances as, when applied to the skin, redden or blister it, or produce pustules, purulent issues, etc. The commonest counter-irritants are such as mustard, turpentine, cantharides or Spanish flies, croton-oil and the cautery.

Counterpoint (koun'tér-point), in music, a term equivalent to harmony, or the writing of a carefully planned accompanying part; or that branch of the art which, a musical thought being given, teaches the development of it, by extension or embellishment, by transposition, repetition or imitation throughout the different parts. Counterpoint is divided into *simple*, *florid* or *figurate* and *double*. *Simple counterpoint* is a composition in two or more parts, the notes of each part being equal in value to those of the corresponding part or parts and concords. In *florid counterpoint*, two or more notes are written against each note of the subject, or *canto fermo*, and discords are admissible. *Double counterpoint* is an inversion of the parts, so that the base may become the subject, and the subject the base, etc., thus producing new melodies and new harmonies.

Counterscarp (koun'tér-skarp), in fortification, the exterior talus or slope of the ditch, or the

talus that supports the earth of the covered way. It often signifies the whole covered way, with its parapet and glacis.

Countersign (-sīn), a private signal, word, or phrase given to soldiers on guard, with orders to let no man pass unless he first give that sign; a military watchword.

Coun'tertenor (-ten-or), in music one of the middle parts between the tenor and the treble; high tenor. It is the highest male adult voice, having its easy compass from tenor G to treble C, and music for it is written on the alto or C clef on the middle line of the staff. The lowest voices of females and boys have about the same register, and are sometimes inaccurately called countertenor. The correct term is *alto* or *contralto*.

Count Palatine (pal'a-tīn), in England, formerly the superior of a county, who exercised regal prerogatives within his county, in virtue of which he had his own courts of law, appointed judges and law officers, and could pardon murders, treasons and felonies. All writs and judicial processes proceeded in his name, while the king's writs were of no avail within the palatinate. The Earl of Chester, the Bishop of Durham and the Duke of Lancaster were the Counts Palatine of England, the corresponding counties being called *counties palatine*.

Country Dance (kun'tri dāns), a rustic dance of English origin, in which many couples can take part. The performers are arranged face to face, the gentlemen on one side and the ladies on the other, and go through certain prescribed figures.

County (koun'ti), originally a district of a country subject to a *count* or earl. The county in the United States has developed from the English county of the seventeenth century; but the organization of county administration has been thoroughly decentralized by the radical extension of popular election for all classes of officials. The principal county authority is the locally-elected county board, organized in various ways. Every county also has a sheriff and usually other elective officers, such as prosecuting attorney, treasurer, clerk and coroners. In many states there are county registers of deeds, auditors, assessors, school commissioners and surveyors. County administration varies in different states.

County Courts, are an ancient institution in England. Their jurisdiction was formerly very restricted, but they have had extensive

powers conferred on them by recent acts of Parliament. In the United States there is a regular court in each county, presided over by a judge elected by the people or appointed by the governor and senate.

County Palatine, a county under a count palatine.

See *Count Palatine*.

Coup (kō; French, a blow), a term used in various connections to convey the idea of promptness and force. —*Coup de main*, a prompt, vigorous and successful attack. —*Coup d'état*, a sudden decisive blow in politics; a stroke of policy; specifically, an exertion of prerogative to alter the laws or the constitution of a country without the consent or concurrence of the people expressed through their representatives, especially when such exertion is supported by armed force. —*Coup de soleil*. See *Sun-stroke*.

Coupé (kō-pā), a four-wheeled carriage carrying two inside, with a seat for the driver outside.

Couple (kup'l), in dynamics, two equal and parallel forces acting in different directions and applied to the same body. The distance between their lines of action is called the *arm* of the couple, and the product of one of the two equal forces by this arm is called the moment of the couple.

Couplet (kup'let), two verses or lines of poetry of equal length and rhythm, often embodying an idea of the nature of an aphorism.

Coupling (kup'ling), in machinery, a contrivance for connecting one portion of a system of shafting with another, and of which there are various forms. A common form is the flange or plate coupling, which consists of two flanges separately fitted on to the two contiguous ends of the lengths of shaft to be connected, and firmly secured together by screws. The most useful kinds of couplings are those that are adjustable, or can be readily put on and off. —The term is also applied to an organ register, by which two or more rows of keys can be connected by a mechanism, so that they can be played together. It is also applied to methods and art of attaching railroad cars together.

Flange Coupling.

Coupon (kō'pon; from Fr. *couper*, to cut), an interest certificate printed at the bottom of transferable bonds, and so called because it is cut off or detached and given up when a pay-

ment is made. Also one of a series of tickets which binds the issuer to make certain payments, perform some service, or give value for certain amounts at different periods, in consideration of money received.

Courbevoie (körb-vvä), a town of France, department Seine, on the left bank of the Seine, 5 miles N. W. of Paris, well built, with large barracks; pop. 29,339.

Courcelles (kör-säl), a village of Alsace-Lorraine, 4 miles S. E. of Metz; scene of a German victory over the French under Bazaine, August 14, 1870.

Courier (kör'i-ër), a bearer of special despatches, whether public or private; also an attendant on a party traveling abroad, whose especial duty is to make all arrangements at hotels and on the journey.

Courland (kur'land; German, *Kurland*), a government in Russia, bounded N. by Livonia and the Gulf of Riga, W. the Baltic, S. Kovno, and E. by Vitebsk; area, 10,535 square miles; pop. 714,200. In the neighborhood of Mittau, the capital, the surface is diversified by hills of very moderate height; but elsewhere, and particularly towards the coast, it is flat and contains extensive sandy tracts, often covered with heaths and morasses. About two-fifths of the whole government is occupied by woodland. The peasantry are for the most part Letts; the more wealthy and intelligent classes Teutons, the prevailing religion being Lutheran. The territory was subjected to Poland in 1561, conquered by Charles XII of Sweden in 1701, and was merged in Russia in 1795.

Courser (kör'ser), or **COURIER** (*Cursorius*), a genus of grallatorial birds belonging to the plover tribe. They are found chiefly in Africa, but one species, the cream-colored courser (*Cursorius Isabellinus*) has been met with in Britain.

Coursing (kör-sing), a kind of sport in which hares are hunted by greyhounds, which follow the game by sight instead of by scent. Meetings are held in various localities, at which dogs are entered for a variety of stakes, as horses are at a race meeting. When a hare is started it is allowed a certain advance on the dogs, which are then let loose from the 'slips' or cords held by the 'slipper' and fastened to the dogs' collars. A judge keeps his eye on the dogs, and notes what are called 'points,' the victory being adjudged to the dog which makes the most 'points.'

Court (kört). (1) All the surroundings of a sovereign in his legal state; the body of persons who compose the household of, or attend on, a sovereign. *Presentation at Court* is a formal introduction of persons of some eminence or social standing to the British sovereign on certain state occasions appointed for the purpose. They have to appear in the regulation 'court dress.' (2) A tribunal of justice; the hall, chamber, or place where justice is administered, or the persons (judges) assembled for hearing and deciding causes, civil, criminal, military, naval, or ecclesiastical. Courts may be classified in various ways. A common distinction is into *courts of record* and *not of record*; the first being those the judicial proceedings of which are enrolled in records. They may also be divided into courts of *original jurisdiction* and courts of *appeal*, or of *appellate jurisdiction*, *inferior* and *superior* courts, etc. Articles on the different courts will be found under such separate headings as *Chancery*, *Common Pleas*, *Exchequer*, *Supreme Court*, etc.

Court-baron, in England, a court composed of the freeholders of a manor, presided over by the lord of the manor or his steward. These courts have long fallen into disuse.

Court de Gébelin (kör-d-zhä-blän). ANTOINE, a French writer, born in 1725; died in 1784. He published, in 1773 and 1774, *Le Monde Primitif Analyisé et Comparé avec le Monde Moderne*, which, after nine volumes had appeared, remained unfinished. Its vast plan embraces dissertations on mythology, grammar, origin of language, history, etc. He also published *Lettres Historiques et Apologétiques en Faveur de la Religion Réformée*.

Courtesy (kur'tè-si). **TENURE BY**, in English law, is where a man marries a woman seized of an estate of inheritance, and has by her issue capable of inheriting her estate. In this case, on the death of his wife he holds the lands for his life, as tenant by courtesy.

Courtesy Title, a title assumed by an individual or given to him by popular consent, to which he has no valid claim. When a British nobleman has several titles it is usual to give one of his inferior titles to his eldest son. Thus, the eldest son of the Duke of Bedford is *Marquis* of Tavistock, and the Duke of Buccleuch's eldest son is *Earl* of Dalkeith. The younger sons of noblemen have the courtesy title of *Lord* prefixed to their names, as *Lord William Lennox*. In Scotland, the eldest son of a

viscount or baron has the courtesy title of *Master*, as the *Master* of Lovat, eldest son of Lord Lovat.

Court Fool. See *Jester*.

Court Hand, the old Gothic or Saxon hand or manner of writing used in records and judicial proceedings, and distinguished from the modern or Italian style.

Court-martial, a court consisting of military or naval officers, for the trial of military or naval offenses.

Court of Arbitration, a court established at The Hague, Netherlands, by the Peace Convention of 1899. Its membership now includes distinguished legal authorities of all the civilized nations of the world. Since its establishment several important questions have been submitted to and decided by it, possible hostilities being thus avoided. See *Arbitration*.

Court of Claims, in the United States, created by act of Congress in 1855, has jurisdiction to hear and determine all claims founded upon any act of Congress, or on any regulation of any executive department, or upon any contract, express, or implied, with the government of the United States; and all claims referred to it by either house of Congress. The court holds one session annually. Members of Congress are prohibited from practising in this court.

Court of Commerce, a court established by act of Congress, in 1910, before which suits can be brought to set aside, annual, or suspend any order of the Interstate Commerce Commission. Such an order can be suspended only upon notice and after hearing before the court, except where its action would cause irreparable damage to the plaintiff.

Court of Love, in the chivalric ages, a court composed of knights, poets and ladies, who discussed and gave decisions on subtle questions of love and gallantry. The first of these courts was probably established in Provence about the twelfth century. They reached their highest splendor in France, under Charles VI, through the influence of his consort Isabella of Bavaria, whose court was established in 1380. An attempted revival was made under Louis XIV by Cardinal Richelieu.

Courtrai (kôr-trā; Flemish, *Kortryk*), a fortified town, Belgium, 26 miles south of Bruges, on the Lys.

Here, in 1302, the 'battle of spurs' between the French and Flemings, took place. It is well built, and contains many handsome streets. Pop. 34,564.

Cousin (kô-zan), VICTOR, a French philosopher and writer, founder of the so-called Eclectic school of philosophy, was born at Paris in 1792; died at Cannes in 1867. He was educated at the Lycée Charlemagne, and entered the École Normale, then newly instituted, in 1811. His mind was directed towards philosophy under Laromiguière, Royer-Collard, and Maine de Biran. In 1815 Royer-Collard, returning to political life, recommended Victor Cousin as his successor, and he became deputy-professor of philosophy at the Sorbonne. He had also an appointment at the Lycée Napoléon, or Collège Henri IV, and at the École Normale. In the free discussions (*conférences*) which followed his prelections he became, by the influence his eloquence exercised over his pupils, the founder of a school which, while assuming an eclectic development, was originally based on the dogmatic teaching of the Scottish school. In 1817 he visited Germany, and became acquainted with the writings of Kant, Fichte, Jacobi and Schelling, by whose opinions his own were thenceforth modified. He lost his position as public teacher on political grounds in 1822, and did not resume teaching till 1828, when he shared with Guizot and Villemain an unexampled popularity, due partly to political feeling. After the July revolution (1830) he entered the Council of Public Instruction, to which he presented valuable reports on the state of public education in Germany and Holland. In the cabinet of Thiers in 1840 he accepted the office of minister of public instruction, and was created a peer of France. The revolution of 1848 brought his public career to a close. The head and founder of the modern school of eclecticism in France, he borrowed from many sources. His eclecticism was based on the principle that every system, however erroneous, which has anywhere commended assent, contains some elements of truth, by which its acceptance may be explained, and that it is the business of philosophical criticism to discover and combine these scattered elements of truth. The following are among his works:—*Fragments Philosophiques* (1826); *Nouveaux Fragments Philosophiques* (1828); *Cours de Philosophie Morale* (1840-41); *Cours de l'Histoire de la Philosophie* (1828); *Histoire de la Philosophie au dix-huitième Siècle* (1829); *De la Métaphysique d'Aristote* (1838); *Philosophie*

Scholastique (1840) ; *Du Vrai, de Beau et du Bien* (1854), etc.

Cousins (kuz'ns), SAMUEL, an English engraver, born in 1801; died in 1887. He engraved plates after Lawrence, Landseer, Reynolds, Millais, Leslie, Eastlake, Ward, etc. He was elected a Royal Academician Engraver in 1855, and when this class was abolished he became an Academician proper.

Coutances (kö-täns), a town of Northern France, dep. Manche, on a hill about 4 miles from the sea, with which it communicates by a canal. It has a fine old cathedral crowning the hill on which the town stands. Pop. (1906) 6089.

Couthon (kö-tön), GEORGES, a noted French revolutionist, was born in 1756, and was bred to the profession of a lawyer. Some time after the revolution he was chosen a member of the national assembly, and allying himself with Robespierre aided and abetted the latter in all his atrocities. On the downfall of Robespierre's party Couthon shared, along with him and St. Just, in the decree of arrest, and was guillotined, July 28, 1794.

Couvade (kö-väd'), a singular custom prevalent in ancient as well as modern times among some of the primitive races in all parts of the world. After the birth of a child the father takes to bed, and receives the food and compliments usually given elsewhere to the mother. The custom was observed, according to Diodorus, among the Corsicans; and Strabo notices it among the Spanish Basques, by whom, as well as by the Gascons, it is still to some extent practised. Travelers from Marco Polo downwards have met with a somewhat similar custom among the Chinese, the Dyaks of Borneo, the negroes, the aboriginal tribes of North and South America, etc.

Covenant (kov'en-ant), in law, an agreement between two or more parties in writing, signed, sealed and delivered, whereby they agree to do, or not to do, some specified act. In theology, the promises of God as revealed in the Scriptures, conditional on certain terms on the part of man, as obedience, repentance, faith, etc.

Covenant, in Scotch history, the name given to a bond or oath drawn up by the Scottish reformers, and signed in 1557, and to the similar document or Confession of Faith drawn up in 1581, in which all the errors of popery were explicitly abjured. The letter was subscribed by James VI and his council, and all his subjects were

required to attach their subscription to it. It was again subscribed in 1590 and 1596. The subscription was renewed in 1638, and the subscribers engaged by oath to maintain religion in the same state as it was in 1580, and to reject all innovations introduced since that time. The *Solemn League and Covenant* was a solemn contract entered into between the General Assembly of the Church of Scotland and commissioners from the English Parliament in 1643, having for its object a uniformity of doctrine, worship and discipline throughout Scotland, England and Ireland, according to the word of God and the example of the best reformed churches. In 1662 it was abjured by act of Parliament, both in England and Scotland.

Covenanters (k u v'en-a-nters), in Scottish history, the name given to the party which struggled for religious liberty from 1637 on to the revolution; but more especially applied to the insurgents, who, after the passing of the act of 1662 denouncing the Solemn League and Covenant as a seditious oath (see above article), took up arms in defense of the Presbyterian form of church government. The Presbyterian ministers who refused to acknowledge the bishops were ejected from their parishes and gathered round them crowds of their people on the hillsides, or any lonely spot, to attend their ministrations. These meetings, called 'conventicles,' were denounced as seditious, and to frequent them or to hold communication with those frequenting them was forbidden on pain of death. The unwarrantable severity with which the recusants were treated provoked them to take up arms in defense of their opinions. The first outbreaks took place in the hill country on the borders of Ayr and Lanark shires. Here at Drumclog, a farm near Loudon Hill, a conventicle was attacked by a body of dragoons under Graham of Claverhouse, but were successful in defeating their assailants (1679). The murder of Archbishop Sharp on Magus Moor, and this defeat, alarmed the government, which sent a large body of troops under the command of the Duke of Monmouth to put down the insurgents, who had increased in number rapidly. The two armies met at Bothwell Bridge, where the Covenanters were totally defeated (June 22, 1679). In consequence of the rebellious protest called the *Sanguhar Declaration*, put forth in 1680 by Cameron, Cargill and others, as representing the more irreconcilable of the Covenanters (known as Cameronians), and a subsequent proclamation in 1684,

the government proceeded to more severe measures. An oath was now required of all who would free themselves of suspicion of complicity with the Covenanters; and the dragoons who were sent out to hunt down the rebels were empowered to kill anyone who refused to take the oath. During this 'killing time,' as it was called, the sufferings of the Covenanters were extreme; but notwithstanding the great numbers who were put to death, their fanatic spirit seemed only to grow stronger. Even after the accession of William some of the extreme Covenanters refused to acknowledge him, owing to his acceptance of episcopacy in England, and formed the earliest dissenting sect in Scotland. See *Cameron (Richard)*, and *Reformed Presbyterians*.

Covent Garden (k u v' ent; that is, *convent garden*), a market place in London, which formerly consisted of the garden belonging to the abbot and monks of Westminster. In 1831 the present market buildings were erected by the Duke of Bedford, the proprietor of the ground.—CONVENT GARDEN THEATER sprang out of one in Lincoln's-Inn-Fields, through a patent granted to Sir W. Davenant in 1662. It is associated with the names of Kemble, Siddons, Macready, etc.

Coventry (k u v' en - tri), a city of England, county of Warwick, 85 miles northwest of London. It was formerly surrounded with lofty walls and had twelve gates, and was the see of a bishop early conjoined with Lichfield. Parliaments were convened here by the earlier monarchs of England, several of whom occasionally resided in the place. Pageants and processions were celebrated in old times with great magnificence, and a remnant of these still exists in the processional show in honor of Lady Godiva. (See *Godiva*.) There are still a few narrow and irregular streets, lined with houses in the style of the fifteenth and sixteenth centuries. There are several fine churches. Coventry is the center of the ribbon trade, and silk-dyeing, watchmaking, and art metal work are staple lines of business. Pop. 106,377.

Coventry, a city of Kent Co., Rhode Island, 18 miles s. w. of Providence. It has manufactures of zinc and textile goods. Pop. 5848.

Cove of Cork. See *Queenstown*.

Coverdale (kov'er-dāl), MILES, the earliest translator of the Bible into English, was born in Yorkshire in 1487; died in 1568. He was educated at Cambridge and was ordained priest in 1514. He was led some years

afterwards to embrace the reformed doctrines, and, having gone abroad, assisted Tindall in his translation of the Bible. In 1535 his own translation of the Scriptures appeared, with a dedication to Henry VIII. Coverdale was almoner to Queen Catharine Parr, and officiated at her funeral. In 1551, during the reign of Edward VI, he was appointed Bishop of Exeter, but was ejected on the accession of Mary, and thrown into prison. After two years' confinement he was liberated, and proceeded first to Denmark, and subsequently to Geneva, where he was employed in preparing the Geneva translation of the Scriptures. On the accession of Elizabeth he returned to England, and held for a short time the rectory of St. Magnus, London Bridge.

Covered Way (kov'erd wā), a space of ground on the edge of the ditch round the works of a fortification between the counterscarp and the glacis, affording a safe communication round all the works.

Coverture (kov'ér-tūr), a legal term applied to the position of a woman during marriage, because she is under the cover or protection of her husband.

Covilha (ko-vil'yā), a town of Portugal, province of Beira, on the s. e. slope of the Serra da Estrella. In the neighborhood there are noted sulphurous baths. Pop. 15,469.

Covington (kuv'ing-tun), a city of Kentucky, on the s. bank of the Ohio River, opposite Cincinnati, of which it is virtually a suburb, being closely connected by means of bridges and ferries. It has a large general trade and manufacturing business, its industries including many cigar and tobacco factories, wagon works, glass works, etc. Pop. 53,270.

Cow (kou), the general term applied to the females of the genus *Bos* or ox, the most valuable to man of all the ruminating animals. Among the best breeds of dairy cows in Britain are the Devonshire, the Ayrshire, the short-horn, the polled Angue or Aberdeenshire, the Jersey and the Alderney. Many examples of the best breeds have been imported to the United States and have greatly improved the milch cows of this country. See *Ox*.

Cowbane (kou'bān), or water-hemlock, *Cicuta virōsa*, a perennial, umbelliferous, aquatic plant, producing an erect, hollow, much-branched, striated stem, 3 or 4 feet high, furnished with dissected leaves. It is highly poisonous.

Cowberry

Cowberry, the *Vaccinium Vitis idæa*, the red whortleberry, a procumbent shrub of high moorlands in Europe, Asia and North America. It has evergreen, box-like leaves, and produces a red acid berry used for jellies and preserves. Named cowberry because in parts of Scotland the berries are used to thicken milk by being rubbed on the inside of milk-pails.

Cowboys, a term first used during the American Revolution, applied to a band of Tories who infested the neutral ground of Westchester County, New York, stealing cattle from both parties and doing other mischief. It has been used of recent years to designate the skilled horsemen who have charge of the cattle on the great ranges of the West. Many of them enlisted in the Rough Rider regiments of the Spanish war and proved daring soldiers.

Cow-bunting, the *Molothrus pecõris*, an American bird about the size of the European sky-lark, and belonging to the family Sturnidæ, or starlings. It drops its eggs into the nests of other birds to be hatched by them, but has never been known to drop more than one egg into the same nest. It is migratory, spending its winters regularly in the lower parts of North and South Carolina and Georgia, and appearing in Pennsylvania about the end of March. These

Young Cow-bunting fed by female Yellow-throat.

birds often frequent corn and rice fields in company with the red-winged troopials, but are more commonly found accompanying the cattle, feeding on seeds, worms, etc.

Cowdees. Same as *Kauri* (resin).

Cowell (kou'el), an English jurist, born in 1554; died in 1611. Author of a law dictionary, 1607, and *Institutiones Juris Anglicani*.

Cowen (kou'en), FREDERICK HYMEN, musical composer, born at Kingston, Jamaica, in 1852. Among his works are *Rose Maiden*, *St. Ursula* and *Sleeping Beauty*, cantatas; *Pauline*, opera; *The Deluge*, oratorio; and many popular songs.

Cowes (kouz), a seaport town and watering place in Hampshire, England, on the north coast of the Isle of Wight, at the mouth of the river Medina. It is well known as a yachting port. Pop. 9635.—EAST COWES, on the opposite side of the river, is connected with it by a steam ferry and floating bridge. Pop. 4660.

Cowgrass. See *Cowpea*.

Cowitch, or COWHAGE (kou'ich, kou'-aj; Hind, *ki w a n c h*), the hairs of the pods of leguminous plants, genus *Mucûna*, natives of the East and West Indies. The pod is covered with a thick coating of short, stiff, brittle, brown hairs, the points of which are finely serrated. They easily penetrate the skin, and produce an intolerable itching. They are employed medicinally (being taken in honey or syrup) as a mechanical vermifuge.

Cowley (kou'li), ABRAHAM, an English poet of great celebrity in his day, was born at London in 1618; died in 1667. He published his first volume, *Poetic Blossoms*, at the age of fifteen. He entered Trinity College, Cambridge, in 1636, but was ejected as a royalist in 1643, and removed to St. John's College, Oxford. He engaged actively in the royal cause, and when the queen was obliged to quit England, Cowley accompanied her. He was absent from his native country nearly ten years, and it was principally through him that the correspondence was maintained between the king and queen. On the restoration he returned with the other royalists, and obtained the lease of a farm at Chertsey, held under the queen, by which his income was about £300 per annum. Cowley's poems have failed to maintain their ancient popularity, but he still holds a high position as a prose writer and as an essayist. He took a considerable interest in science, and was one of the founders of the Royal Society. His chief works are: *Love's Riddle*, a pastoral comedy; *Davideis*, a scriptural epic; *Naufragium Jocularis*; *The Mistress*, a collection of love verses; *Pindarique Odes*, *Liber Plantarum*, etc.

Cowloon (kou'lön), KOWLOON, or KAULUN, a peninsula at the mouth of the Canton River, directly opposite to the island of Hong-Kong, to which crown colony it belongs.

Cow-parsnip, an umbelliferous plant, genus *Heracleum*, one species of which, *H. Sphondylium*, found in moist woods and meadows in England, grows to the height of 4 or 5 feet, and is used to feed to pigs. Siberian cow-parsnip (*H. gigantëum*) is grown in gar-

dens and shrubberies, reaching the height of 10 or 12 feet. *H. lanatum* is a common United States species.

Cowpea, COWGRASS, *Trifolium medium*, a variety of clover cultivated in England and some parts of the United States for the same purpose as the common red clover (*T. pratense*).

Cowper (kö'për or kou'për), WILLIAM, an English poet, born at Berkhamstead in 1731; died at East Dereham, in Norfolk, in 1800. He was the son of a clergyman; lost his mother at the age of six, and was, when ten years of age, removed from a country school to that of Westminster, which he left at eighteen with a fair reputation for classical learning, and a horror of the school discipline, which he afterwards expressed in his *Tirocinium*. He was then apprenticed for three years to a solicitor, where he had for a fellow clerk Mr., afterwards Lord Thurlow. At the expiration of his apprenticeship he took chambers in the Middle Temple, and in 1754 was called to the bar. The interest of his family procured for him the post of clerk to the House of Lords; but having to appear for examination at the bar of the house, his nervousness was such that on the very day appointed for the examination he resigned the office, and soon after became insane. From December, 1763, to June, 1765, he remained under the care of Dr. Cotton at St. Albans. The skill and humanity of that gentleman restored him to health, and he retired to Huntingdon. Here he made the acquaintance of the Rev. Mr. and Mrs. Unwin, whose kindness, particularly that of the latter, seemed to have the most soothing and beneficial influence on him. On the death of Mr. Unwin, in 1767, he removed with Mrs. Unwin to Olney, the residence of the Rev. John Newton, who also became an intimate friend and exercised a powerful influence over his mind and conduct. Newton had resolved on publishing a volume of hymns, and secured the co-operation of Cowper in composing them, but before their publication in 1776 he had been again attacked by his constitutional malady, by which, for ten years from 1773, his mind, with occasional intervals of recovery, was continually clouded. In 1776, by Mrs. Unwin's advice he commenced a poem on the *Progress of Error*, which he followed by three other poems, *Truth*, *Table Talk* and *Expostulation*; these with several others were published in a volume in 1782. Another female friend, Lady Austen, suggested the *Task*, which, together with *Tirocinium*, formed a second volume in 1785. *The History of John Gilpin* is also

due to the suggestion of Lady Austen. The translation of *Homer*, begun in 1784, occupied him for the next six years, and was published in 1791. He removed during its progress, in 1786, from Olney to Weston. In the beginning of 1794 he was again attacked with madness, which was aggravated by the death of Mrs. Unwin in 1796. The revisal of his *Homer*, and the composition of some short pieces, occupied the latter years of his life. He is considered among the best of English descriptive poets, and is one of the most easy and elegant of letter-writers.

Cowpox, the vaccine disease which appears on the teats of the cow, in the form of vesicles of a blue color, approaching to livid. These vesicles are elevated at the margin and depressed at the center; they are surrounded with inflammation and contain a limpid fluid. This fluid or virus is capable of communicating genuine cowpox to the human subject, and of protecting against smallpox either completely or, at least, against the virulent form of the disease. See *Vaccination*.

Cowrie-pine (kou'ri). See *Kauri*.

Cowrie-shell, a small gasteropodous shell, the *Cypræa moneta*, used for coin in some parts of Africa and in many parts of Southern Asia. The beauty of the cowrie-shells has procured them a place among ornaments, and they have been in demand among civilized and uncivilized nations since prehistoric times. The shells used as currency occur principally in the Philippine Islands. They vary in value in different localities. In India 6000 to 7000 are equal to a rupee, while in the interior of Africa 200 are worth 16c. The name is also given to other shells of the genus *Cypræa*.

Cowslip (kou'slip), the popular name of several varieties of *Primula veris*, order Primulaceæ, a fragrant and pretty wildflower found in pastures and meadows. It has umbels of small, buff-yellow, scented flowers on short pedicels. Its flowers possess sedative properties, and have been used as an anodyne, a sort of wine being prepared from them.

Cow-trees, a name of various trees having an abundance of milky juice, especially *Brosimum Galactodendron*, a South American tree, order Artocarpaceæ (breadfruit), which, when wounded, yields a rich, milky, nutritious juice in such abundance as to render it an important article of food. This fluid resembles in appearance and quality the milk of the cow. The tree is common in Venezuela, growing to the height of

100 feet. The leaves are leathery, about 1 foot long, and 3 or 4 inches broad. In British Guiana the name is given to the Hya-hya (*Tabernæmonvāna utilis*), a large, much-branched tree belonging to the Apocynaceæ; in the country of the Rio Negro to *Collophōra*, a tree of the same family; and in Pará to a species of *Mimūsops*.

Cox, DAVID, an English landscape painter, born in 1783, in Birmingham; died at Harborne near Birmingham, in 1859. He was for several years engaged as scene-painter for various provincial and London theatres, and during a considerable portion of his early life he had to teach his art for a subsistence. After residing in London, Hereford, etc., he returned to Birmingham in 1841. His works are chiefly of English landscape, and in water-colors, a department which constituted his peculiar forte. His pictures are now very highly valued. In later life he painted a great deal in oil. He published a work on *Landscape Painting and Effect in Water-colors*.

Cox, SIR GEORGE W., an English writer, born in 1827; held some curacies in Devonshire, and afterwards became vicar of Bekesborne, Kent, and Scrayingham, York. He published works on Greek history, the *Mythology of the Aryan Nations*, etc. Died in 1902.

Cox, KENYON, figure painter, born at Warren, Ohio, in 1856. He became noted as an illustrator, his designs for Rossetti's poem, *The Blessed Damsel*, being highly commended. His paintings include *Jacob Wrestling with the Angel*, *Vision of Moonrise*, etc.

Cox, PALMER, artist, was born at Granby, Canada, in 1840. He lived in San Francisco 1863-75, afterwards in New York. He originated the *Brownie Books*, with their quaint and humorous illustrations. He has written *How Columbus found America*, *Queer People with Paws and Claws*, etc.

Coxie (kok'sē), or COXCIE, MICHEL J. VAN, a Flemish painter, born about 1500; died in 1592. He traveled to Rome, where he remained several years attracted by the works of Raphael. Here he executed several paintings in fresco and many other pieces. For Philip II of Spain he executed an admirable copy of Van Eyck's altar-piece at Ghent. His works are now rare.

Coxswain. See *Cocksawin*.

Coyote (koi-ōt', koi-ō'tā), the American prairie-wolf (*Canis oehrōpus* or *Lyeisus latrans*). It is native to the plains west of the Mississippi, and is

a small species, though considerably larger than the fox. It is found as far south as Costa Rica.

Coypel (kwā-pel), NOEL, a French painter, born in 1628 or 1629; died in 1707, at Paris. He adorned the old Louvre and the Tuileries, and painted some fine pictures for the council hall of Versailles.—His son ANTOINE (1661-1721) was highly distinguished both as a painter and an engraver.

Coypou, COYPU (koi'pö), the native rodent mammal, the *Myopotāmus coypus*, about the size of and considerably resembling a beaver. Its limbs are short, its tail in part bare and scaly, and it swims with great ease, its hind feet being webbed. It inhabits burrows by the banks of streams. It is valued for its fur (called *nutria* fur). Length when full grown, about 2 feet 6 inches.

Coysevox (k w ā s-v ō), ANTOINE, a French sculptor, born in 1640; died in 1720. Among his best works are an equestrian statue of Louis XIV; a statue of Cardinal Mazarin; the tomb of Colbert; the group of *Castor and Pollux*; the *Sitting Venus*; *Nymph of the Shell*; *Hamadryad*; *Faun with the Flute*; and *Pegasus and Mercury*.

Cozumel (kō-sū-mel'), an island in the Caribbean Sea, off the coast of Yucatan.

Cozzens (kuz'en-z), FREDERICK SWARTWOUT, author, born in New York in 1778; died in 1869. He is especially known for his *Sparrowgrass Papers*, and wrote other works in prose and verse.

Crab, a popular name for all the ten-footed, short-tailed crustaceans constituting the suborder Brachyura, order Decapoda, comprising many genera, distinguished from the lobster and other macrurous or long-tailed decapods by the shortness of their tail, which is folded under the body. The head and breast are united, forming the cephalothorax, and the whole is covered with a strong carapace. The mouth has several pairs of strong jaws, in addition to which the stomach has its internal surface studded with hard projections for the purpose of grinding the food. The stomach is popularly called the 'sand-bag'; a little behind it is the heart, which propels a colorless lymph (the blood) to the gills ('dead man's fingers'). The liver is the soft, rich, yellow substance usually called the *fat* of the crab. Crabs 'molt,' or throw off their calcareous covering, periodically. The first pair of limbs is not used for locomotion, but is furnished with strong

claws or pinchers. The eyes are compound, with hexagonal facets, and are pedunculated, elongated and movable. Like most individuals of the class, they easily lose their claws, which are as readily renewed. They generally live on decaying animal matter, though others live on vegetable substances, as the racer-crabs of the West Indies, which suck the

folk, in 1754; died at Trowbridge, Wilts, in 1832. Having been educated for the medical profession, he settled as a surgeon and apothecary in his native village, but soon finding his practice insufficient to afford him a livelihood, he resolved to try his fortune as littérateur in London. He obtained the friendship and assistance of Burke, published his poem the *Library*,

Common Edible or Blue Crab (*Cancer pagurus*).

juice of the sugar-cane. Most inhabit the sea, others fresh water, and some the land, only going to the sea to spawn. Of the crabs, several species are highly esteemed as an article of food, and the fishery constitutes an important trade on many coasts. The common large edible crab (*Cancer pagurus*) is common on our shores, and is much sought after. See also *Hermit-crab*, *Land-crab*, *Pea-crab*.

Crab, a name given to various machines, especially to a kind of portable windlass or machine for raising weights, etc. Crabs are much used in building operations for raising stones or other weights, and in loading and discharging vessels.

Crab-apple (*Pyrus Malus*), a small wild, very sour variety of the apple; also any sour or uncultivated species or variety. See *Apple*.

Crabbe (krab), GEORGE, an English poet, born at Aldborough, Suff-

and soon after entered the church. He was appointed domestic chaplain to the Duke of Rutland, and afterwards obtained ample preferment. In 1783 appeared the *Village*, which was followed two years afterwards by the *Newspaper*. The *Parish Register* appeared in 1807. The *Borough* appeared in 1810, and was followed, in 1812, by *Tales in Verse*, and in 1819 by *Tales of the Hall*. The later years of Crabbe's life were spent in the peaceful discharge of his professional duties at Trowbridge in Wiltshire, a living which he had received in 1814. His poems are all characterized by homely truthfulness, simplicity and pathos.

Cracklin (krak'lin), a species of chinaware which is ornamented by a network of small cracks in all directions. The ware receives the small cracks in the kiln, with the effect that the glaze or enamel which is afterwards applied appears to be cracked all over.

Cracovienne (kra-kō-vi-en'), a favorite dance of the Polish peasantry. The music is written in $\frac{2}{4}$ time.

Cracow (krā'kō), the old capital of Poland, in 1815-46 capital of a republic of the same name now forming part of Austrian Galicia, is situated on the left bank of the Vistula, where it becomes navigable, and consists of Cracow proper, or the old city, and several suburbs. It is the see of a bishop, is well built and regularly fortified. The cathedral, a fine old Gothic edifice, contains monuments of many Polish kings, of Kosciusko, etc. The university was founded in 1364, but gradually fell into decay, and was reorganized in 1817. It has a library of 350,000 volumes. On a hill near the town stands the monument of Kosciusko, 120 feet high. Pop. 91,310 (30,000 being Jews).

Craddock, CHARLES EGBERT, pseudonym of Mary N. Murfree (q. v.)

Cradle of Liberty, a name often given to Faneuil Hall, Boston, from the fact that, before the Revolution, the meetings of patriots were held here.

Crag (krag), in geology a local name in England for shelly deposits in Norfolk and Suffolk, usually of gravel and sand, of the older Pliocene period, subdivided into three members—viz., the Upper or *Mammaliferous Crag*, the *Red Crag* and the Lower or *Coralline Crag*.

Crag and Tail, CRAIG AND TAIL, in geology a name applied to a hill formation common in Britain, in which a bold and precipitous front is presented to the west or north-west, while the opposite side is formed of a sloping declivity. The rock on which Edinburgh Castle stands, with its 'tail' gradually sloping down to Holyrood, presents a fine example. This phenomenon is due probably to the currents of the 'drift' or glacial epoch.

Craig (kräg), JOHN, a Scottish reformer, born in 1512; died in 1600. He became Knox's colleague in Edinburgh, refused to publish the banns between Mary and Bothwell, assisted in drawing up the *Second Book of Discipline*, and compiled the *National Covenant* signed by the king in 1580.

Craig, SIR THOMAS, a Scottish writer on jurisprudence, was probably born in the year 1538; died in 1608. He was educated at the University of St. Andrews, and afterwards repaired to France, where he studied civil and canon law. He returned about the year 1561, and was placed at the head of the crimi-

nal judicature of the country as justice depute. He is now chiefly remembered by his *Treatise on Feudal Law*.

Craik (kräk), DINAH MARIA, an English novelist, born at Stoke-upon-Trent in 1826, her father's name being Mulock. She became the wife of George Lillie Craik (a nephew of the subject of next article) in 1865. She published a volume of poems under the title of *Thirty Years*; many essays and papers on ethical and domestic subjects; books for young people, and about twenty-four novels, the best of which are: *John Halifax, Gentleman*; *A Life for a Life*, *Agatha's Husband* and *The Woman's Kingdom*. She died in 1887.

Craik, GEORGE LILLIE, a miscellaneous writer, who was born in Fifehire in 1799, and died at Belfast, June 25, 1866. He was an extensive contributor to the *Penny Cyclopædia* in the departments of history and biography. His first independent work of any importance was his *Pursuit of Knowledge under Difficulties* (1830-31). Other works were: *Romance of the Peerage*; *Spenser and his Poetry*; *History of Literature and Learning in England*, afterwards recast into *History of English Literature and the English Language*; *History of English Commerce*; *English of Shakspeare*; *Bacon, his Writings and Philosophy*; etc. In 1849 he was appointed professor of English literature in Queen's College, Belfast, an appointment which he held till his death.

Crail (kräl), a royal and parliamentary burgh and seaport of Scotland, in Fifehire. It is a very ancient burgh, and has remains of a priory college and ruins of an old castle once a royal residence. Pop. 1145.

Crake. See *Corncrake*.

Crambe, a genus of cruciferous plants, natives of Europe and Asia. They are perennial herbs, with stout, branched stems and broad leaves. One species, *C. maritima*, known as sea-kale, is a native of the sandy and shingly coasts of Britain.

Cramp (kramp), a variety of spasm, or sudden, involuntary and painful contraction of a muscle or muscles. It is usually caused by sudden change of temperature, as in bathing, exposure to cold, over-exertion of the muscles, rheumatism or the bringing into action of muscles unaccustomed to exercise. See also *Writer's Cramp*.

Cranach, KRANACH (krá'náh), LUCAS, a German painter born in 1472; died in 1553. He was patronized by Frederick of Saxony, and

Cranberry

accompanied him in his pilgrimage to Jerusalem. On the commencement of the Reformation movement he became the intimate friend of Luther and Melancthon, whose portraits, as taken by him, are among the most interesting memorials of the age. His works, chiefly portraits and historical subjects, are numerous and much prized.—His son LUCAS (died 1586) also gained great distinction as a painter.

Cranberry (kran'bér-ī), the fruit of *Oxycoccus palustris*, nat. order Vacciniaceæ (whortleberries), a native of Europe, North Asia and North America. It is also called *Mossberry* or *Moorberry*, as it grows only on peatbogs or swampy land, usually among masses of sphagnum. The berry, when ripe, is globose and dark red, and a little more than $\frac{1}{4}$ inch in diameter. These berries form a sauce of exquisite flavor, and are used for tarts. The American cranberry, a native of Canada and the United States is the *O. macrocarpus*. It has larger berries than the European species, and is extensively cultivated in some localities. *Vaccinium Vitis idæa*, the cowberry, is often called the cranberry in Scotland.

Cranbrook (kran'brūk), a small town of England, County Kent, 40 miles S. E. of London, where the first woolen manufactory in England was established by the Flemings in the reign of Edward III. Pop. 13,689.

Crane (krān), the common name of birds of the genus *Grus*, order Grallæ, or Grallatores. They are generally of considerable size, and remarkable for their long necks and stilt-like legs, which eminently fit them for living in marshes and situations subject to inundations, where they usually seek their food. This is partly of vegetable matter, but they also devour insects, worms, frogs, lizards, reptiles, small fish and the spawn of various aquatic animals. They build their nests among bushes or upon tussocks in marshes, and lay but two eggs. Cranes annually migrate to distant regions, and perform voyages astonishing for their great length. The common crane (*Grus cinerea*) has the general plumage ash-gray, the throat black, the rump ornamented with long, stiff and curled feathers, the head with bristly feathers; legs black; length about 4 feet. It inhabits Europe, Asia and the north of Africa. The crowned crane (*G. pavonina*, or *Balcarica pavonina*) has the general plumage bluish ash-gray, the tail and primary quills black, the wing-coverts pure white; the head is crowned with a tuft of slender yellow

Crane-fly

feathers, which can be spread out at pleasure. It inhabits North and West Africa. The demoiselle crane (*Anthropoides virgo*) is so called from the elegance of its form. It is ash-gray, and

Crowned Crane (*Balearica pavonina*).

the head is adorned with two tufts of feathers formed by a prolongation of the ear-coverts. Its habitat is Africa and the south of Europe. Among North American species are the whooping crane (*G. Americana*), a larger species than the common crane, and the brown or sand-hill crane (*G. Canadensis*).

Crane, a machine for raising great weights and depositing them at some distance from their original place: for example, raising bales from the hold of a ship and depositing them on the quay. Cranes are generally constructed on the principle of the wheel and axle, cog-wheel, or wheel and pinion. A very efficient wheel-and-pinion crane much used on quays consists of a jib or transverse beam, inclined to the vertical at an angle of from 40° to 50°, which, by means of a collar, turns on a vertical shaft. The upper end of the jib carries a fixed pulley, and the lower end a cylinder, which is put in motion by a wheel and pinion. The weight is made fast to a rope or chain which passes over the pulley and is wound round the cylinder.

Crane, HYDRAULIC. See *Hydraulic Crane*.

Crane, STEPHEN, author, born at Newark, New Jersey, in 1870; died at Baden, in 1900. He was educated at Lafayette College and Syracuse University. When twenty-three he wrote *The Red Badge of Courage*, a naturalistic battle description, which made him famous in England and America. His later work was as correspondent of the Græco-Turkish war and the Cuban filibusters.

Crane-fly, a genus of two-winged (dipterous) insects (*Tip-*

ūla), remarkable for the length of their legs. *Tipula oleracēa* is the well-known Daddy-long-legs, whose larva is very destructive to the roots of grain crops, etc.

Crane's-bill, the typical genus of the order Geraniaceæ. Many species are American plants; some are mere weeds, others extremely showy. See *Geranium*.

Cranganore (kran'ga-nōr), a town in Hindustan, presidency of Madras, state of Cochin, on the Malabar coast. Pop. 9475. It is the traditional field of St. Thomas' labors in India. Jews have been settled here since the fourth century; and it is certain the Syrian church was established before the ninth.

Craniology (krā-ni-ol'ō-gi), the science which investigates the structure and capacity of the skull in various animals. It is sometimes also used as synonymous with *phrenology*. See *Phrenology*.

Cranium (crā'ni-um). See *Skull*.

Crank, an iron axis with the end bent like an elbow, serving as a handle for communicating circular motion; as, the *crank* of a grindstone; or for changing circular into longitudinal motion, as in some sawmills, or longitudinal into circular motion, as in a steam engine. The single crank (1)

1, Single Crank. 2, Double Crank. 3, Bell Crank.

can only be used on the end of an axis. The double crank (2) is employed when it is necessary that the axis should be extended on both sides of the point at which the reciprocating motion is applied. An exemplification of this arrangement is afforded by the machinery of steamboats. The bellcrank (3), so called from its being much used in bell-hanging, is for a totally different purpose to the others, being used merely to change the direction of motion, as from a horizontal to a vertical line.

Cranmer (kran'mēr). THOMAS, Archbishop of Canterbury, and famous for the part he played in the English reformation during the reign of

Henry VIII; born at Aslockton, Notts, in 1489; executed by burning at Oxford in 1556. He entered as a student of Jesus College, Cambridge, in 1503, took the degree of M.A., obtained a fellowship, and in 1523 was chosen reader of theological lectures in his college, and examiner of candidates for degrees in divinity. An opinion which he gave on the question of Henry VIII's proposed divorce from Catharine brought him under the favorable notice of the king. Cranmer was called to court, made a king's chaplain, and commanded to write a treatise on the subject of the divorce. In 1530 he was sent abroad with others to collect the opinions of the divines and canonists of France, Italy and Germany, on the validity of the king's marriage. At Rome he presented his treatise to the pope, but his mission was fruitless. In January, 1533, he was appointed Archbishop of Canterbury. Soon after he set the papal authority at defiance by pronouncing sentences of divorce between Henry and Catharine, and confirming the king's marriage with Anne Boleyn. The pope threatened excommunication, and an act of Parliament was immediately passed for abolishing the pope's supremacy, and declaring the king chief head of the Church of England. The archbishop zealously promoted the cause of the Reformation; and through his means the Bible was translated and read in churches, and monastic institutions were vigorously suppressed. In 1536 he pandered to Henry's passions by promoting the divorce of Anne Boleyn. This and other services secured him in the king's favor, who appointed him by will one of the council of regency to Edward VI. By his instrumentality the liturgy was drawn up and established by act of Parliament, and articles of religion were compiled, the validity of which was enforced by royal authority, and for which infallibility was claimed. The exclusion of the Princess Mary from the crown, by the will of her brother, was a measure in which Cranmer joined the partisans of Lady Jane Grey, apparently in opposition to his own judgment. With others who had been most active in Lady Jane's favor he was sent to the Tower on the accession of Mary. He was tried on charges of blasphemy, perjury, incontinence and heresy, and was sentenced to be degraded and deprived of office. After these flattering promises were made, which induced him to sign a recantation of his alleged errors, and become, in fact, a Catholic convert. But when he was brought into

St. Mary's Church, Oxford, to read his recantation in public, instead of confessing the justness of his sentence, and submitting to it in silence or imploring mercy, he calmly acknowledged that the fear of death had made him belie his conscience; and declared that nothing could afford him consolation but the prospect of extenuating his guilt by encountering, as a Protestant penitent, with firmness and resignation, the fiery torments which awaited him. He was immediately hurried to the stake, where he behaved with the resolution of a martyr.

Crannogs (kran'ogs), the name given in Ireland and Scotland to the platforms supported by piles in lakes, which were in use as dwelling-places and places of refuge among the old Celts. See *Lake Dwellings*.

Crantara (kran'ta-ra; Gael, *crean-tarigh*), the fiery cross, an ancient Gaelic rallying symbol, the neglect of which implied infamy.

Cranston (krans'ton), a town (township) of Providence Co., Rhode Island, w. of Narragansett Bay. Contains several manufacturing villages, reform schools, State prison, etc. Pop. 21,107.

Crape (krāp), a light, transparent stuff, like gauze, made of raw silk, gummed and twisted on the mill, woven without crossing, and much used in mourning and dressmaking.

Crashaw (kra'shə), RICHARD, an English poet, born in London in 1613; died in 1649; educated at the Charterhouse and at Cambridge. In 1637 he became a fellow of Peterhouse, and having been admitted to orders was noted as an eloquent and powerful preacher. In 1644 he was ejected from his fellowship by the Parliamentarians, and proceeded to Paris, where he became a convert to the Roman Catholic faith, and was appointed to a canonry at Loretto. *Epigrammata Sacra* appeared in 1634; *Steps to the Temple, Sacred Poems, with other Delights of the Muses*, was published in London in 1646; and a posthumous volume appeared at Paris in 1652, under the title *Carmen Deo Nostro*. Crashaw displays considerable poetic genius in the treatment of religious subjects, and though his works are now almost forgotten, they are said to have furnished hints to both Milton and Pope.

Crassulaceæ (k r a s-u-l ā's e-ē), the houseleek family, a nat. order of polypetalous exogens. It consists of succulent plants, with herbaceous or shrubby stems, and annual or

perennial roots, growing in hot, dry, exposed places in the more temperate parts of the world, but chiefly South Africa. Many species of *Crassula*, *Sempervivum*, *Sedum*, etc., are cultivated in green-houses for the beauty of their flowers. The genus *Sedum* is the most largely represented in the United States.

Crassus (cras'us), MARCUS LICINIUS, the Roman triumvir, surnamed *Dives* (the rich), on account of his vast riches, was born about B.C. 115; died in B.C. 53. He took part with Sulla in the Civil war; and as prætor, in B.C. 71, he defeated Spartacus and the revolted slaves at Rhegium. In B.C. 70 he was elected consul, having Pompey as his colleague; and in B.C. 60 Cæsar, Pompey and Crassus formed the first triumvirate. Five years later he again became consul, and obtaining Syria for his province he made war on the Parthians, but was defeated and slain. It is said that when his head was sent to Orodes, the Parthian king, he caused melted gold to be poured into the mouth, in scorn of his notorious love of wealth.

Cratægus (k r a-t ē' g u s), the hawthorn genus of plants.

Crater (krā'tēr), the orifice or mouth of a volcano. Craters may be central or lateral, and there may be several subsidiary ones, which may shift their places, or become merged by subsidence into others.

Cratinus (kra-tī'nus), an Athenian comic poet to whom the invention of satirical comedy is attributed; died in B.C. 422 at the age of 97. Some fragments of his works remain.

Cravat (kra-vat'), a neckcloth; an article of silk, muslin, or other material worn by men about the neck; so called from Fr. *Cravate*, a Croat, because this piece of dress was adopted in the eleventh century from the Croats who entered the French service. Towards the end of the eighteenth and the beginning of the nineteenth century the cravat attained an incredible degree of extravagance, but common sense at last brought in the simpler style of neckties that has since prevailed.

Crawfish, or CRAYFISH (k r a' f i s h, krā'fish), a name of various crustaceous animals, the common crawfish being *Astacus fluviatilis*, the river lobster, a macrurous (long-tailed), ten-footed crustacean, resembling the lobster in appearance and habits. It inhabits the fresh waters of Europe and the north of Asia, and is common in some of the streams of England. It lurks under stones or in holes in the

banks. Its food consists of small molluscs or fishes, the larvæ of insects, and almost any sort of animal matter. In

The Common Crawfish (*Astacus fluviatilis*), viewed from below. *a*, Antennules; *b*, Large antennæ; *c*, Eyes; *d*, Opening of auditory sac; *e*, Last pair of foot-jaws; *f*, One of the great chelæ; *g*, Fifth thoracic limb; *h*, Swimmerets; *i*, The last pair of swimmerets; *j*, The opening of the anus below the telson.

the United States crawfish of the genus *Astacus* and *Cambarus* occur. Some of them by their burrowing habits injure mill-dams and the levees of the Mississippi.

Crawford (krā'furd). FRANCIS MARION, son of the following, was born in Italy in 1854, and studied philosophy and languages at Cambridge, Heidelberg, Karlsruhe and Rome before embarking in fiction, in which he was both prolific and highly successful. His first novel, *Mr. Isaacs*, attracted much attention and was followed by numerous others. He also did some good historical work. He died in 1909.

Crawford, THOMAS, sculptor, was born in New York city, in 1814; died in 1857. His most famous works comprise *Orpheus* and *Cerberus*,

Adam and Eve, *Hebe and Ganymede*, *Mercury and Psyche* and *Dancing Jenny*. He performed important works for the National government and the State of Virginia.

Crawford, WILLIAM HARRIS, statesman, was born in Amherst Co., Virginia, in 1772. His life was spent in Georgia, where he was admitted to the bar in 1798. He became politically prominent and was elected United States Senator from Georgia in 1807 by the Democratic party. He was appointed Minister to France in 1813, became Secretary of War in 1815 and Secretary of the Treasury in 1816, retaining this position until 1825. In 1824 he was nominated for the presidency by a Congressional caucus, his competitors being Jackson, Adams and Clay. He was defeated, receiving 41 electoral votes. He was afterwards a circuit judge in Georgia, and died in 1834.

Crawfordsville (krā'furdz-vil), a city of Indiana, 28 miles s. of Lafayette. It is the seat of Wabash College, founded 1832, and has iron, carriage and other manufactures. Pop. 9371.

Crayon (krā'un), a colored pencil obtained from certain mineral substances in their natural state, but more commonly manufactured from a fine paste of chalk or pipe-clay colored with various pigments, and consolidated by means of gum, wax, etc. A kind of *crayon painting* (or *pastel painting*) is practised to some extent, the coloring matter in a soft state being rubbed on with the finger.

Cream (krēm), the yellowish, thick oily layer which forms at the surface when new milk is allowed to remain at rest. When it is agitated or churned butter is formed.

Creamery, a factory for the production of butter. Such factories, often run on the coöperative principle, are widely distributed in the United States. Here the cream from many farms is received and worked into butter by the aid of improved machinery, managed by skilled operators. In some cases the milk is received and the cream separated by centrifugal machines. In others the milk is skimmed at home and only the cream sent. The creamery product is better and more uniform than that usually made on farms and is produced with greater economy.

Cream of Tartar, or POTASSIUM BITARTRATE ($\text{KH}_2\text{C}_4\text{H}_4\text{O}_6$), exists in grapes, tamarinds, and other foods. It is prepared from the crystalline crust (crude tartar or

argol) deposited on the vessels in which grape juice has been fermented. The argol is dissolved by boiling with water, the mixture filtered, and the cream of tartar allowed to crystallize out. The commercial product usually contains a small percentage of calcium tartrate.

Creasote (krĕ'a-sōt), a substance discovered by Relchenbach about 1831 in wood-tar, from which it is separated by a tedious process. It is generally obtained, however, from the products of the destructive distillation of wood. In a pure state it is oily, heavy, colorless, has a sweetish, burning taste and a strong smell of peat smoke or smoked meat. It is a powerful antiseptic. Wood treated with it is not subject to dry-rot or other disease. It has been used in surgery and medicine with great success. Also spelled creosote.

Creasy (krĕ'si), SIR EDWARD SHEPHERD, English historian, was born at Bexley, Kent, in 1812; died in 1878. He was educated at Eton, and at King's College, Cambridge, of which he was elected a fellow in 1834. He was called to the bar at Lincoln's Inn in 1837, and was for about twenty years a member of the home circuit. In 1840 he was appointed professor of history at the London University, and in 1860 was made chief-justice of Ceylon, receiving at the same time the honor of knighthood. His principal works are: *The Rise and Progress of the British Constitution* and *The Fifteen Decisive Battles of the World*.

Creationism (krĕ-ā'shun-i z m), the doctrine that a soul is specially created for each human foetus as soon as it is formed in the womb; opposed to *Traducianism*, which teaches that the souls of children as well as their bodies are begotten by reproduction from the substance of the parents; and to *Infusionism*, which holds that souls are preëxistent, and that a soul is divinely infused into each human foetus as soon as it is formed by generation. Many theologians, however, regard the mode of the soul's coming into being as a part of the mystery which envelops the whole subject of the existence and transmission of life. The term *Creationism* has also recently been applied to that theory of the origin of man which is opposed to Evolution.

Crébillon (krā-bē-yōn), PROSPER JOLYOT DE, a French writer of tragedy, was born at Dijon in 1674; died in 1762. His first play, *La Mort des Enfants de Brutus*, was rejected by the actors; but his next productions, *Idoménée* (1705) and *Atrée* (1707), were successful. These were followed by

Rhadamiste (1711). *Xerxes* (1714), and *Semiramis* (1717). At the age of seventy-six he wrote the *Triumvirate, or the Death of Cicero*, which was brought upon the stage in his eighty-first year.—His son CLAUDE PROSPER, born in 1707; died in 1797; was in high repute for his wit and his writings. His chief works are: *Le Sopha*, *La Hazard du Coin du Feu*, and *Les Egarements du Cœur et de l'Esprit*, all of a licentious cast.

Crèche (krāsh), a public nursery for the children of poor women who have to work out during the day, where for a small payment they are nursed and fed during the day, remaining with their parents at night. These institutions were first started in Paris in 1844; they were soon afterwards introduced into Great Britain, and are now common in large towns. Similar institutions are called day nurseries in the United States.

Crécy, or CRESSY (krā-sē, kres'si), a small town of France, in the department of Somme, 9 miles north of Abbeville and 100 north of Paris; pop. 1748. It is celebrated on account of a battle fought here, August 26, 1346, between the English and French. Edward III and his son, the Black Prince, were both engaged, and the French were defeated with great slaughter, 30,000 foot and 1200 horse being left dead on the field, among whom were the King of Bohemia, the Count of Alençon, Louis, Count of Flanders, with many others of the French nobility.

Credence (crĕ'dens), a small table by the side of the altar or communion-table on which the bread and wine are placed before they are consecrated.

Credit (kred'it), in economics, is the postponement agreed on by the parties of the payment of a debt to a future day. It implies confidence of the creditor in the debtor; and a 'credit system' is one of general confidence of people in each other's honesty, solvency, and resources. By means of a credit system a comparatively small stock of money can be made to do duty for carrying on a number of different transactions; but it is indispensable for every good system of credit that money must be instantly available when required, and this principle applies to every species of transaction where postponed payment is concerned. Public credit is the confidence which men entertain in the ability and disposition of a nation to make good its engagements with its creditors; or the estimation in which individuals hold the public promises of payment, whether

such promises are expressed or implied. The term is also applied to the general credit of individuals in a nation; when merchants and others are wealthy and punctual in fulfilling engagements; or when they transact business with honor and fidelity; or when transfers of property are made with ease. So we speak of the credit of a bank when general confidence is placed in its ability to redeem its notes, and the credit of a mercantile house rests on its supposed ability and probity, which induce men to trust to its engagements. When the public credit is questionable it raises the premium on loans.

Credit, LETTER OF, an order given by bankers or others at one place to enable a person to receive money from their agents at another place.

Crédit Foncier (krā-dē fon-syā), a peculiar mode of raising money on land in France, the peculiarity of which is that the advance must not exceed one-half of the value of the property pledged or hypothecated, and that the repayment of the loan is by an annuity terminable at a certain date. Several companies have been established by the French government with the privilege of making such loans.

Crédit Mobilier (krā-dē mō bēl-yā), a scheme which originated in France in 1852, its objects being to undertake trading enterprises of all kinds on the principle of limited liability, to buy up existing trading companies, and to carry on the business of bankers and stock-jobbers.—CREDIT MOBILIER OF AMERICA was chartered in Pennsylvania, in 1859, for a general loan and contract business. The charter was purchased in 1867 by a company formed for the construction of the Union Pacific R. R., and a congressional investigation showed that a number of congressmen were private owners of the stock. As the railroad had been assisted by grants of land by Congress it was considered highly improper for members to have a pecuniary interest in such a concern. The expulsion of one senator was recommended, and two representatives were censured.

Creed (krēd), a summary of belief, from the Latin *credo* (I believe), with which the Apostles' and Nicene Creeds begin. These two creeds, together with the Athanasian Creed, are the most ancient authoritative Christian creeds, though numerous ancient formularies of faith are preserved in the writings of the early fathers, Irenæus, Origen, Tertullian, etc., which agree in substance, though with some diversity of ex-

pression. The Nicene Creed was so called from being adopted as the creed of the church at the Council of Nicæa or Nice, 325 A.D., though its terms were subsequently somewhat altered. The Apostles' Creed probably dates from the end of the fourth century; but there is no evidence of its being accepted in its present form till the middle of the eighth. The Athanasian Creed was certainly not drawn up by St. Athanasius, as there is no sufficient evidence for its existence before the end of the eighth or beginning of the ninth century. In addition to these three creeds, the Roman Catholic Church has the creed of Pius IV, put forth in 1564, and consisting of the Nicene Creed with additional articles adopted by the Council of Trent, to which is now added a profession of belief in the definitions of the Vatican Council. The English Church adopts as 'thoroughly to be received and believed' the three ancient creeds, which as part of her liturgy may be read in the Book of Common Prayer, but does not consider any of them to be inspired. Besides these creeds, there are numerous Confessions of Faith, which have been adopted by different churches and sects. The Thirty-nine Articles of the Book of Common Prayer form a confession of faith for the Anglican Church. The creed of the Church of Scotland and other Presbyterian churches is contained in the Confession of Faith, drawn up by the Westminster Assembly of Divines, and completed in 1646.

Creedmoor (krēd'mör), a station on the Long Island railway, 11 miles east of the city of New York. It is much frequented by riflemen for target practice.

Creek (krēk), a small inlet, bay, or cove; a recess in the shore of the sea or of a river. In America and Australia the term is often applied to a small river, an affluent of a larger one.

Creeks, American Indians formerly in Georgia and Alabama, but now residing in Eastern Oklahoma. The number of warriors used to amount to about 6000, but altogether the tribe does not now exceed 9300. They have made considerable progress in agriculture, and raise horses, cattle, fowls, and hogs, and cultivate tobacco, rice, and corn.

Creepers (crē'pers), a family (Certhiadae) of birds which strongly resemble the woodpeckers in their habit of creeping on the stems of trees with the aid of the strong quills which project from the tail feathers, and of securing their insect food by an exsertile tongue. The common creeper (*Certhia familiāris*) is European, but is

represented by American species. It is a pretty and interesting little bird, which builds its nest usually in holes or crevices of trees. The wall-creeper (*Tichodroma muraria*) of Southern Europe searches for its insect food on rocks. The family is found in all parts of the world.

Crefeld. See *Krefeld*.

Crema (krā'ma), a fortified city of Northern Italy, province Cremona, on the Serio, 25 miles E. S. E. of Milan; pop. 8027. It contains a cathedral, picture gallery, etc.

Cremation (krē-mā'shun), the burning of the bodies of the dead, a practice which was frequent in ancient times instead of burial, and which has recently been advocated on hygienic grounds by many scientific men in Europe and America on account of the dangers to the living caused by the presence of graveyards and cemeteries. Various methods of cremation have been proposed, the great difficulty being to consume the body without permitting the escape of noxious exhalations, and without mingling the ashes with foreign substances. In Siemens' process, a modification of a plan of Sir Henry Thompson, this is successfully accomplished. Cremation societies have been instituted in every European country, and in many of the American States.

Crematory (krē'ma-to-ri), a building in which cremation is practised. It contains a furnace heated to a very high temperature, into which the body is introduced and converted to ashes.

Cremnitz. See *Kremnitz*.

Cremona (krē-mō'na), a city of Italy, capital of province of same name, on the left bank of the Po, 47 miles S. E. by E. of Milan. It is surrounded by walls and wet ditches, its circumference being nearly five miles. The most remarkable edifice is the cathedral, begun in 1107 and completed about 1491. Close by, and connected with the cathedral, is the Torazzo, one of the loftiest and most beautiful towers in Italy. Cremona is the seat of a bishopric, and has considerable manufactures of silk, wool, cotton, etc. It was at one time celebrated for its violins, especially those made by Antonio Stradivari, Joseph Guarnerius, and members of the Amati family. Pop. 39,344. The province has an area of 695 square miles and a population of 327,802.

Crenelle (krē-nel), an embrasure in an embattled parapet or

breastwork. The adjective *crenellated* is applied in architecture to a kind of embattled or indented molding of frequent occurrence in buildings of the Norman style.

Creole (krē'ōl; Spanish, *criollo*) is the name which was originally given to all the descendants of Spaniards born in America and the West Indies. It is now used in a wider sense to signify the descendants of Europeans of any nation born in South America and the West Indies, as well as in some other localities. *Creole dialects* are those jargons which originated from the mixture of different languages in the West Indies, Southern United States, etc., and are spoken by the descendants of the slaves. According to the European language which prevails in a Creole dialect it is called *French creole*, *Spanish creole*, etc.

Creosote. See *Creasote*.

Crescendo (kre-she'n'dō), or **CRES.** (Italian), a musical term signifying that the notes of the passage over which it is placed are to be gradually swelled. Crescendo passages are marked  signifying piano to forte; the corresponding mark  diminuendo, or decrescendo, marking the transition from forte to piano.

Crescent (kres'ent; Lat. *crecens*, growing), an emblem representing the moon in her horned state. This emblem is of very high antiquity, being that of the Greek goddess Artemis or Diana. It is found on medals of many ancient cities, particularly of Byzantium, from whence it is supposed to have been borrowed by the Ottomans. Since their establishment in Europe it has been the universal emblem of their empire. The crescent has given name to a Turkish order of knighthood from the form of the badge, instituted by Selim, Sultan of Turkey, in 1801.

Crescentiaceæ (kre-sen-ti-ā'se-ē), a small family of corollifloral dicotyledons, of which the genus *Crescentia*, the calabash-tree, is the type.

Crespi (kres'pi), GIUSEPPE MARIA, an Italian painter of the Bolognese school, born at Bologna in 1665; died in 1747. He had many scholars, among whom were his two sons Antonio and Luigi Crespi. The latter distinguished himself by his writings on painting. Crespi is also known as an engraver.

Cress, the name of several species of plants, most of them of the natural order Cruciferae. Water-cress, or *Nasturtium officinale*, is used as a salad, and is valued in medicine for its antiscorbutic qualities. The leaves have a moderately

pungent taste. It grows on the brinks of rivulets and in moist grounds. Common garden cress is the *Lepidium sativum*; Normandy cress *Barbarea præcox*; winter cress, *B. vulgaris*; Indian cress, *Tropæolum majus*; bitter cress, *Cardamine pratensis* (cuckoo-flower).

Cresselle (kre-sel'; Fr. *crecelle*), a wooden rattle used in some Roman Catholic countries during Passion Week instead of bells to give notice of divine worship.

Cresset (kres'et), a name which appears to have been given in the middle ages and later indifferently to the fixed candlesticks in great halls and churches, to the great lights used as beacons and otherwise, and to lamps or firepans suspended on pivots and carried on poles in processions, municipal and military watches, etc.

Cressy. See *Crécy*.

Crest (krest; Latin, *crista*), in ancient armor, the plume or tuft of feathers, or the like, affixed to the top of the helmet. In heraldry the crest is

Crest on a wreath.

a figure originally intended to represent the ornament of the helmet, but is now generally placed upon a wreath, coronet, or cap of maintenance, above both helmet and shield. The crest is considered a greater criterion of nobility than the coat of arms itself, and it is now commonly a piece of the arms.

Creston (kres'ton), a city, capital of Union Co., Iowa, 103 miles E. by S. of Council Bluffs. It has stockyards, machine shops, carworks, etc. Pop. 6924.

Creswick (kres'ik), THOMAS, an English landscape painter, born in 1811; died in 1869. He was elected an associate of the Royal Academy in 1842, and a member in 1851. His first pictures were admitted into the Academy exhibition when he was in his seventeenth year, and his success was afterwards continuous. Among his great works are *England, London Road a Hundred Years Ago*, and the *Weald of Kent*.

Cretaceous (krē-tā'shus; or CHALK), in geology the upper strata of the Secondary series, immediately below the Tertiary series, and superincumbent on the Oölite system. This group is common to Europe, and also to a part of Asia. It consists of chalk resting upon arenaceous and argillaceous deposits, which are also regarded as part of the system. It has been divided into two parts—the *Upper*, consisting entirely of chalk or marl, and

subdivided into the *upper* or *soft chalk*, containing many flint and chert nodules; the *lower* or *harder chalk*, with fewer flints; and the *chalk marl*; and the *Lower*, consisting of sands and clay, and subdivided into the *upper greensand*;

A Cretaceous Bird (*Hesperornis regalis*).

gault, a bluish, tenacious clay; and the *lower greensand*. Palæontologists have suggested another division founded on the fossil remains found in the system, in accordance with which the upper greensand and gault are transferred to the upper series, and the lower greensand and Wealden beds and Hastings sands constitute the lower.

Crete (krēt). See *Candia*.

Cretinism (krēt'in-izm), a form of idiocy associated with a peculiar condition of the body, occurring in Switzerland and other mountainous countries. Cretins are usually affected with goiter, and are usually the offspring of goiterous parents. They are ill grown and stunted, with swollen bellies. The skin is coarse, head large, the nose sunken and flattened at the bridge, the lips thick, chin protruding, mouth wide and gaping, the tongue large. The countenance is dull and heavy; there is general muscular weakness and slowness of sensibility. Associated with these are feebleness or want of intellect, varying in degree from absolute vacuity to a certain power of acquiring a little knowl-

edge; sometimes deafness and dumbness, perhaps squinting and blindness. Careful treatment under a physician by means of thyroid extract usually restores the victim almost to normal. The treatment must be almost continuous throughout life, associated with good food, cleanliness, exercise, etc.

Cretonne (krē-ton'), a cotton cloth with various textures of surface, printed on one side with pictorial and other patterns, and used for curtains, covering furniture, etc.

Creuse (kreuz), an inland department of France comprising the greater part of the old province of Marche; area, 2150 square miles. It derives its name from the river Creuse, which rises in it, and traverses it diagonally in a northwest direction, afterwards flowing on to join the Vienne. The surface is generally rugged, and the soil, which is thin and rests upon granitic rocks, is by no means fertile. Pop. (1906) 274,094.

Creuzer (kroi'tsēr), GEORG FRIEDRICH a German philologist and archæologist, born in 1771; died in 1858. For nearly forty-five years he filled the chair of philology and ancient history at Heidelberg. He wrote on the mythology of Greece and other nations, on Greek history and literature, Roman antiquities, etc.

Creuzot (kreu-zō), LE, a town of Eastern France, dep. Saône-et-Loire, 14 miles from Autun, with extensive ironworks, the most complete in France. The mining of coals, the smelting of iron, and the manufacture of machinery give employment to about 15,000 workmen in the town and vicinity, the greater number being employed at the works of Schneider & Co. Pop. 17,955.

Crewe (krö), a municipal town of England, in Cheshire, 21 miles S. E. Chester, an important railway center and the seat of enormous manufactories of railway material. It is a modern town, well laid out, and chiefly inhabited by people connected with the railways. It has a commodious market hall, a corn exchange, mechanics' institution, town-hall, etc. Pop. 44,970.

Crewel-work (krö'el), work executed with the needle, and consisting of designs sewed in colored silk or woolen threads on a basis of unbleached cotton or linen, toweling, or the like.

Crewkerne (krö'kèrn), a town of England, in Somersetshire, 16 miles S. E. of Taunton; manufactures sailcloth. Pop. 3939.

Cribbage (krib'āj), a favorite English game at cards played with the whole pack. It may be played by two, three, or four persons; and when by two, five or six cards may be dealt to each. Five-card cribbage played by two persons is the most scientific game. Sixty-one points make the game; there are no tricks and no trumps, the object being to make *pairs*, *fifteens*, *sequences*, or the *go*, or prevent the adversary from doing the same. Court cards and tens count ten each, and all the rest count for the number of 'pips' upon them. Every *pair*, that is, every couple of cards of the same value belonging to different suits (two aces, two fours, two kings, etc.), counts two; and when there are three or four similar cards, as many pairs are counted as there are different combinations of the cards taken two at a time. Every combination of cards, the united pips of which make up fifteen, counts two. A sequence consists of three or more cards of any suit following one another in rank, and counts one for each card. When the player whose turn it is to play cannot play a card without going beyond thirty-one, the other player scores one for having been the nearest to thirty-one. This is called scoring one for 'the go.' The remaining cards after thirty-one, or the next point to it, is made are thrown up, and each player's cards are counted. When all the cards in a hand, either with or without the turn-up card, are of one suit, or when all the cards in the crib, with the turn-up card, are of one suit, it is called a *flush*, and counts one for each card. When the turn-up card is a knave the dealer scores two ('two for his heels'). When a knave of the same suit with the turn-up card is found in the hand of either player, the player in whose hand it is scores one ('one for his nob').

Crichton (krī'ton), JAMES, surnamed the *Admirable*, a Scottish celebrity, son of Robert Crichton, lord-advocate, was born in 1560; died about 1585. He was educated at the University of St. Andrews, and, according to the current accounts of him, before his twentieth year had run through the whole circle of the sciences, could speak and write to perfection ten different languages, and was equally distinguished for his skill in riding, fencing, singing and playing upon all sorts of instruments. He visited Paris, Genoa, Venice, Padua, etc., challenging all scholars to learned disputations, vanquishing doctors of the universities, and disarming the most famous swordsmen of the time in fencing. He was latterly tutor to a son of the

Duke of Mantua, and is said to have been stabbed to the heart in a dastardly manner by his pupil. The story of his achievements seems to be rather highly colored; but he was extravagantly praised by Aldus Manutius, the printer of Venice, by whom he was well known. He left some Latin poems, which are said to be possessed of no remarkable quality.

Cricket (krik'et), an insect of the genus *Gryllus*, or *Acheta* of some naturalists, order Orthoptera. There are several species. The house-cricket is the *Acheta* (*Gryllus*) *domestica*; the field-cricket is the *Acheta* (*Gryllus*) *campestris*; the mole-cricket is the *Gryllo-talpa vulgaris*. The house-cricket of Europe is about an inch long, with antennæ of about an inch and a half, of a pale yellowish color mixed with brown. By the friction of the peculiarly formed wing-covers the males produce that stridulous sound of which these insects are so well known, and which has become associated with ideas of cheerful domestic comfort. They live in holes and crevices near fireplaces or in other warm situations, whence they come out at night to feed on crumbs and other fragments of food. The field-cricket makes a similar noise. The house-cricket has been introduced into the United States, and there are several species of field-cricket there also. See also *Mole-cricket*.

Cricket, a favorite open-air game played with bats, balls, and wickets on a piece of smooth green-sward. It is played by two opposite sets or sides of players, generally numbering eleven each. Two *wickets* of three *stumps* each are pitched fronting each other at a distance of about 22 yards apart, the stumps being upright rods stuck in the ground, and projecting 27 inches. On the top of each set of stumps are placed two small pieces of wood called *bails*. After the rival sides have tossed for the choice of either taking the bat or fielding, two men are sent to the wickets bat in hand. The opposite or fielding side are all simultaneously engaged; one (the bowler) being stationed behind one wicket for the purpose of bowling his ball against the opposite wicket, where his coadjutor (the wicket-keeper) stands ready to catch the ball should it pass near him; the other fielders are placed in such parts of the field as is judged most favorable for stopping the ball after it has been struck by the batsman or missed by the wicket-keeper. It is the object of the batsman to prevent the ball delivered by the bowler reaching his wicket either by merely stopping it with his bat or by driving it away to a distant part of the

field. Should the ball be driven any distance the two batsmen run across and exchange wickets, and continue to do so as long as there is no risk in being 'run out,' that is, of having the stumps struck by the ball while they are out of their position near the wickets. Each time the batsmen run between the wickets is counted as a 'run,' and is marked to the credit of the striker of the ball. If the batsman allows the ball to carry away a bail or a stump, if he knocks down any part of his own wicket, if any part of his person stops a ball that would have otherwise reached his wicket, or if he strikes a ball so that it is caught by one of the opposite party before it reaches the ground, he is 'out,' that is, he gives up his bat to one of his own side; and so the game goes on until all the men on one side have played and been put out. This constitutes what is called an 'innings.' The other players now take the bat and try to defend their wickets and make runs as their rivals did. Generally after two innings each have been played by the contestants the game comes to an end, that side being the victors who can score the greatest number of runs. It is the national game of England, as baseball is of the United States.

Cricklade (krik'lād), a town of England, County Wilts, on the Thames and the Severn Canal, 42 miles N. of Salisbury; pop. 5830. Cricklade now gives name to the northern parliamentary division of Wiltshire.

Crieff (krēf), a town of Scotland, County Perth, beautifully situated on a slope above the Earn, backed by lofty hills and crags. The principal manufacture is woollens (shirtings, blankets, tweeds, etc.). Pop. 5208.

Crillon (krē-yōn), LOUIS DES BALBES DE BERTON DE, a great French warrior of the sixteenth century, born in 1541; died in 1615. He won distinction in five successive reigns—those of Henry II, Francis II, Charles IX, Henry III. and, above all, in that of Henry IV. He distinguished himself at the capture of Calais, and in the battles of Dreux, Jarnac, and Moncontour (1569), against the Huguenots, and in the naval battle of Lepanto against the Turks. The massacre of St. Bartholomew was reprobated by him. He fought for Henry at Ivry against the Catholic League.

Crime (krīm), a term used to indicate sometimes a violation of the higher moral law, sometimes more specifically the violation of a certain group of the laws formulated by a nation. This group properly comprises in its scheme all offenses endangering the wel-

CRICKET

The view shows a game of cricket in progress on the grounds of the Germantown Cricket Club, one of the oldest and best known cricket clubs in this country. The batter is seen bending over with bat in position to defend his wicket and ready to receive the ball.

fare of the community, as distinct from civil or private injuries, which are as between person and person, and terminate with the compensation of the injured. Hence from the legal point of view crime is sometimes defined as an offense punishable by law directly, as opposed to an offense which the law punishes indirectly by granting damages to the person wronged. (See *Criminal Law*.) Whether used in the legal or the moral sense crime implies freedom of will, the power of distinguishing between right and wrong, and a fulfilled intention. Hence, though the theoretic rule of common law is that all infraction of law is criminal and penal, it is held that young children, madmen, and idiots cannot commit crimes.

Crimea (kri-mē'a), THE (Russ, *Krim*, anc. *Chersonēsus Taurica*), a peninsula of Southern Russia, government of Taurida, to the mainland of which it is attached by the Isthmus of Perekop; area, 10,000 sq. miles. On the west and south it is washed by the Black Sea, and on the east by the Sea of Azof, a portion of which, shut off from the rest by a long and narrow strip of land, forms the Sivash or Putrid Sea. Three-fourths of the Crimea belongs to the region of steppes, but the other part, confined entirely to the south, and stretching along the coast from west to east, abounds in beautiful mountain scenery. Here the valleys looking southward are luxuriant with vines and olive and mulberry plantations, while the northern slope gives a large yield in cereals and fruits. The climate, however, is unequal, and in winter is severe. The chief stream is the Salghir. Others of some importance are the Tchernaya and the Alma. The most important of the productions, besides those already mentioned, are tobacco, of which a large quantity of excellent quality is produced, flax and hemp. The forests are of limited extent. There are large numbers of fine-wooled sheep, and horned cattle and horses are reared in large numbers. Pop. est. at 450,000. The chief town and port is Sebastopol. The country was anciently associated with the Cimmerians, and in later times with various Greek settlements and minor kingdoms. After being for some time a dependency on Rome, it was overrun by successive bodies of barbarians, and in 1237 fell into the hands of the Mongols under Genghis Khan. About 1261 the Genoese were permitted to occupy and fortify Kaffa, and they rapidly extended their power in the formation of other settlements. They were expelled, however, in 1475 by Mahomet II, who made it a dependent khanate. In 1783 the Russians took pos-

session of the country; and with the view of overawing the Turks the great naval arsenal of Sebastopol, occupying the most commanding position in the Black Sea, was begun by Catharine II in 1786. Its military resources were steadily developed up to the time of the Anglo-French campaign (see *Crimean war*) of 1854, when it was occupied by the allies.

Crimean War (kri-mē'an), the struggle between England, France and Turkey on the one hand, and Russia on the other, to prevent the undue preponderance of Russia in the east of Europe; 1854 to 1856. The old plans for the extension of Russian power conceived by Catharine II and Potemkin were resuscitated by Nicholas I, who, believing that he had secured himself from interference on the part of Austria and Prussia, and that an Anglo-French alliance was impossible, prepared to carry them into action. Servia, Bosnia, Bulgaria, and the principalities of the Danube were to become Russian protectorates, and Constantinople was to be provisionally occupied by Russian troops. The first markedly aggressive step—the demand by Russia for a protectorate over the Greek Church throughout the Turkish empire—brought matters to a crisis. An ultimatum presented by Menschikoff in May, 1853, was rejected by the Porte; the Russians occupied the Danubian principalities; and war was declared by the Porte in October, 1853, by France and England in 1854, and by Sardinia in 1855. A French and English fleet entered the Baltic and captured Bomarsund and one of the Aland Islands, and in the south the allies landed at Varna, under Lord Raglan and Marshal St. Arnaud as commanders-in-chief. While the allies were making preparations Prussia and Austria demanded the evacuation of the Danubian principalities, and on this evacuation being ordered by Nicholas, 'for strategic reasons,' the principalities were provisionally occupied by the Austrians. It soon became obvious that the Crimea must be the seat of the war, and 50,000 French and English troops with 6000 Turks were landed at Eupatoria (September, 1854). Five days later the battle of Alma was won by the allies (September 20th), and the march continued towards the south side of Sebastopol. Soon after St. Arnaud died and was succeeded by Canrobert. The siege of Sebastopol was commenced by a grand attack which proved a failure, and the Russians under Liprandi retaliated by attacking the English at Balaklava (October 25), but were defeated with heavy loss. It was at this battle that the famous, but useless, charge

was made by the Light Brigade. A second attack at Inkerman was again repulsed by the allies, but the siege works made slow progress during the winter, in which the ill-supplied troops suffered great privations. The death of Nicholas and succession of Alexander II. in March, 1855, brought no change of policy. Canrobert resigned in favor of Pélissier; and shortly after an unsuccessful attack on those parts of the fortification known as the Malakhoff and Redan Lord Raglan died, and was succeeded by Simpson. The bombardment was continued, and in September the French successfully stormed the Malakhoff, the simultaneous attack on the Redan by the British proving a failure. The Russians, however, then withdrew from the city to the north forts and the allies took possession. The chief subsequent event was the capture of Kars, in Asia, by the Russians, after a splendid defense by the Turks under General Williams. By this time, however, the allies had practical possession of the Crimea, and overtures of peace were gladly accepted. A treaty was accordingly concluded at Paris on April 27, 1856, by which the independence of the Ottoman Empire was guaranteed. See *Paris, Treaty of*.

Criminal Law (krim'i-nal), the law relating to crimes.

The general theory of the common law is that all wrongs are divisible into two species: first, civil or private wrongs or *torts*; secondly, criminal or public wrongs. The former are to be redressed by private suits or remedies instituted by the parties injured. The latter are redressed by the State acting in its sovereign capacity. The general description of the private wrongs is that they comprehend those injuries which affect the rights and property of the individual, and terminate there; that of public wrongs or offenses being that they comprehend such acts as injure, not merely individuals, but the community at large, by endangering the peace, the comfort, the good order, the policy, and even the existence of society. In the first, therefore, so far as the law is concerned, the compensation of the individual whose rights have been infringed is held to be a sufficient atonement; but in the second class of offenses it is demanded that the offender make satisfaction to the community as acting prejudicially to its welfare. The exact boundaries between these classes are not, however, always, easy to be discerned, even in theory; for there are few private wrongs which do not exert an influence beyond the individual whom they directly injure. The divisions, *torts* and crimes, are thus

not necessarily mutually exclusive, cases sometimes occurring in which the person injured obtains damages, while at the same time the criminal is subjected to punishment, not as against the individual, but as against the State. It is, moreover, obvious that legal criminality is not in any strict sense the measure of the morality of actions, though the legal enactment tends to enforce itself as a moral law. In large part it is only an approximate expression of the current sense of justice, this expression being both aided and hindered by the historical and constantly reflexive character of legal method. The basis of the criminal law of Great Britain is to be found in a series of loose definitions and descriptions, of which many, and those among the more important, date from the thirteenth century. The irregular superstructure reared upon these consists mainly of parliamentary enactments which originated in the eighteenth century. The laws as formulated, however, in any country, by no means always represent the law as interpreted, the whole system being further complicated by a mass of judicial comments and particular constructions. Thus, while there is a statutory division of crimes into treasons, felonies, and misdemeanors, the distinctions between them are so uncertain that it is possible to regard the first head as merely the isolation of a subcase of felony; while in respect of the second and third classes, the distinction can only be clearly marked by an enumeration of the crimes arbitrarily assigned to each in the common law and judges' decisions. Even in severity of punishment a misdemeanor may rank as high as a felony. The aim of criminal law as at present constituted is both retributive and preventive—in its former aspect being based upon the primitive passion of retaliation, in the latter primarily upon the fundamental instinct of self-preservation. The prevention of crime may, however, be effected in a threefold manner: by imposing a penalty which shall operate by fear to deter men from committing crimes, or by rendering it physically impossible for a man of known criminal tendency to repeat an offense, or by the reformation of the criminal. With the higher evolution of society the principle of retaliation has fallen into theoretical disrepute, though still a practical legal factor; and the problems of penology are made to turn almost exclusively upon the principle of prevention in these three aspects, and especially in the last two. In the several States of the Union the doctrine of the English common law is incorporated in the statute laws, as to

the classification of the crime and its effects, but the punishment is measured by special statutory enactment. In most of the States the power of pardoning a criminal is vested in the governor; in Pennsylvania, by constitutional provision, a Board of Pardons can make recommendations to the governor for pardons. This is the custom also in Massachusetts.

Crimp, an agent who for a commission supplies ships with seamen just before sailing, the term being applied especially to low characters who decoy sailors by treating them, advancing money to them, and giving them goods on credit, etc., till they have them in their power, frequently getting them shipped off in a drunken state after all their money is spent. They also keep an outlook for emigrants, and take them to low lodging houses in which they themselves are interested.

Crimson (krim'zn), a rich, deep-red color, a red that owes its characteristic tint to a certain admixture of blue.

Crinoidea (kri-noi'de-a; Gr. *krinon*, a lily), the encrinites or sea-lilies, an order of Echinodermata, consisting of animals attached during the whole or a portion of their lives to the sea-bottom by means of a calcareous jointed stem, from the top of which radiate feather-like, flexible appendages or arms, in the center of which is the mouth. Though comparatively few in number now, they lived in immense numbers in former days, many carboniferous limestones being almost entirely made up of their calcareous columns and joints.

Crinoline (krin'ō-lin, -lin; French, from Latin *crinis*, hair), properly a kind of fabric made chiefly of horse-hair, but afterwards generally applied to a kind of petticoat supported by steel hoops, and intended to distend or give a certain set to the skirt of a lady's dress. Hooped skirts (farthingales or fardingales), supported by whalebone, were worn in England in the time of Queen Elizabeth and James I. and the fashion was again introduced in the time of George II. The crinoline proper came into common use about 1856, being worn by women generally and sometimes proving by its portentous dimensions a source of much inconvenience and no little danger. The immense bell-shaped crinolines happily fell into disuse about 1866. Crinoline wire was for years a leading branch in the steel trade. A horse-hair and cotton fabric used as a material for making ladies' bonnets is also called crinoline.

Crinum (kri'num), a genus of handsome plants of the order Amaryllidaceæ, with strap-shaped leaves and a solid scape bearing an umbel of many rosy, fragrant flowers. There are numerous species found in Asia, Australia, South America and certain parts of Africa, and interesting hybrids have been produced by our gardeners. The *Crinum Asiaticum* has a bulb above ground, which is a powerful emetic, and is used by the natives to produce vomiting after poison has been taken.

Crio-sphinx (Gr. *krios*, a ram), a sphinx with the head of a ram, as distinguished from the *andro-sphinx* or human-headed sphinx, and

Crio-sphinx.

the *hieraco-sphinx* with the head of a hawk.

Cripple Creek, a mining town, capital of Teller Co., Colorado. It is the business center of the exceedingly rich Cripple Creek gold mining district, which has yielded as much as \$30,000,000 in a year. Pop. 6206.

Crisis (kri'sis; from the Greek *krinein*, to decide), in medicine, the turning-point in a disease at which a decided change for the better or the worse takes place. In regular fevers the crisis takes place on regular days, which are called *critical days* (the 7th, 14th, and 21st); sometimes, however, a little sooner or later, according to the climate and the constitution of the patient. The word *crisis* is also figuratively used for a decisive point in any important affair or business, for instance, in politics and commerce. Commercial crises have been in an especial degree the subjects of study at the hands of economists, with the result of establishing a curious periodicity in their recurrence. The commercial cycle apparently completes itself in about ten years, the earlier portion of the period being attended with improving trade, and a considerable inflation of credit and followed by failures and distrust.

Crisp, CHARLES FREDERICK, statesman, was born in Sheffield, England, of American parents, in 1845. After service in the Confederate army he studied law; was solicitor-general and

judge in Georgia. He was elected to Congress from Georgia in 1882, and was Speaker of the House 1891-95. He died in 1896.

Crispi (kris'pi), FRANCESCO, an Italian statesman, born at Ribera, Sicily, in 1819; died in 1901. He joined the 1848 revolutionists at Palermo, and had to flee to France. In 1859 he organized the successful movement under which Garibaldi conquered Sicily. In the new Italian kingdom he was successively deputy minister and prime minister in 1887-90 and in 1894-96, resigning in 1896 in consequence of the Italian disasters in Abyssinia.

Criticism (krit'i-sizm), THE HIGHER. The determination of the literary value of books and writings, as opposed to the lower or textual criticism, in which is considered the history of writings as the work of penman or printer. In the higher criticism internal instead of external evidence is employed, the object being to trace literary form, construction and method, unity, date, probable authorship, and indications of later editing. It has been recently applied to the study of the Old Testament, especially by German writers, with important results, though different opinions have been reached by the two classes of critics, those who deny and those who maintain the existence of a supernatural element in the Scriptures.

Crittenden (krit'en-den), JOHN JORDAN, statesman, born in Woodford Co., Kentucky, in 1787. He studied law, became distinguished as an advocate, and was elected to the United States Senate in 1817 and again in 1835. President Harrison appointed him attorney-general in 1841, he was reëlected to the Senate in 1843, was attorney-general in the Fillmore cabinet, and senator again 1855-61. He opposed the repeal of the Missouri Compromise, and in 1861, through his influence, the State of Kentucky remained in the Union. He died in 1863.

Croatia (kro-ā'shi-a), a country which forms, along with Slavonia and the 'Military Frontiers,' a province or administrative division in the southwest of the Austrian dominions in the Hungarian portion of the monarchy, partly bounded by the Adriatic; total area, 16,773 sq. miles. Its surface is irregular, the Alps extending into it, and culminating at the height of 4400 feet. The Drave and the Save divide between them the whole drainage system. In the north, on low, sunny slopes, the vine is successfully cultivated; the olive, mulberry and fig thrive well on

the coast. The south is generally unfertile, and in many parts almost sterile. The principal crops are barley and oats; but the whole country is more pastoral than arable. The inhabitants are Croats and Serbs, with a mixture of Germans, Hungarians, Jews and Gypsies. About three-fourths of the population are Catholics, the rest belonging chiefly to the Greek Church. The chief towns are Agram, Warasdin and Karlstadt. Pop. 1901, 2,416,304. In 640 the Croats, a tribe from the Carpathians, settled in Croatia, and gave their name to the country. It long maintained a sort of independent existence, but in 1309 it was incorporated with Hungary.

Crochet (krō-shā'), a species of knitting performed with a small hook, of ivory, steel, or wood, the material used being woolen, cotton, or silk thread. Various fancy articles, such as antimacassars, doyleys, etc., are made in crochet-work.

Crocidolite (kro-sid'o-līt), an ornamental stone, a sort of fibrous quartz, now brought in considerable quantities from Cape Colony and made into articles of jewelry.

Crocin (krō'sin), a coloring matter obtained from the fruit of *Gardenia grandiflora*, Chinese yellow pods, which is largely used in China for dyeing silk, wool and other fabrics yellow.

Crocket (krok'et), in Gothic architecture, an ornament, usually in imitation of curved and bent foliage, but sometimes of animals, placed on the angles of the sides of pinnacles, canopies, gables, etc. The name is also given to one of the terminal snags on a stag's horn.

Crockett, DAVID, an American hunter, born in Tennessee in 1789. He became noted for his adventures and eccentric habits; was a member of Congress 1827-31; joined the Texans in the revolt against the Mexicans, and was among the patriots who were killed in the 'Massacre of the Alamo' in 1836.

Crockett, SAMUEL RUTHERFORD, a Scotch novelist, born near New Galloway in 1859. He became a Free Church minister in 1886, but resigned in 1895 to devote himself to literature. He won fame by *The Stickit Minister* and *The Raiders*, and afterwards wrote *Men of the Moss Hags*, *Lochinvar*, *The Standard Bearer*, *The Red Axe*, etc.

Crocodile (krok'ō-dīl), a genus, family, and order of saurian reptiles, comprising the largest living forms of reptiles. The characters of the

order Crocodilia are as follows:—The skin is covered with square bony plates; the tail is long and compressed laterally. The four feet are short, and there are five toes on each of the two forefeet, and four on each of the two hind feet, the latter more or less webbed; the limbs are feeble. The jaws are long and

Crocodile (*Crocodylus Niloticus* or *vulgāris*).

their gape of enormous width. The nostrils are at the extremity of the snout, and capable of being closed to prevent ingress of water. The heart is four-chambered. The most ancient forms of the group were the *Teleosaurus*, from the Lias and Oölite, and the *Streptospondylus*, from the Lias. Oölitic and Wealden strata. The families now existing are the *Alligatoridæ*, *Crocodylidæ* and *Gavialidæ*. The alligators are all New World forms. (See *Alligator*.) The gavial proper (*Gavialis Gangeticus*) is confined to the East Indies. (See *Gavial*.) The *Crocodylidæ*, to which family the crocodile belongs, have unequal teeth and no abdominal plates, and the cervical and dorsal plates are distinct for the most part. The crocodile of the Nile (*Crocodylus vulgāris*) is the best known member of the order; another species (*C. palustris*) is met with in South Asia, Sunda and the Moluccas. There is also a species in tropical America. The crocodile is formidable from its great size and strength, but on shore its shortness of limb, great length of body, and difficulty of turning enable men and animals readily to escape pursuit. In the water it is active and formidable. It is exclusively carnivorous, and always prefers its food in a state of putrefaction. In Egypt it is no longer found except in the upper or more southern parts, where the heat is greatest and the population least numerous. Crocodiles are still common enough in the river Senegal, the Congo, Niger, etc. They grow sometimes to a length of 30 feet, and apparently live to a vast age.

Crocoisite (krō'koi-zīt), a mineral, a native form of lead chromate, or red-lead ore. In it chromium was first discovered.

Crocus (krō'kus), a genus of plants of the order Iridaceæ or Iris, forming one of the most common ornaments of our gardens. Most of the species are natives of the south of Europe and the Levant; and three grow wild in Britain. They may be divided, according to their period of flowering, into *vernal* and *autumnal*. Among the vernal crocuses may be mentioned the white and purple *C. vernus*; *C. versicolor*, distinguished by the yellow tube of its flower bearded with hairs, and its sweet scent; *C. biflorus*, the Scotch crocus, with beautiful penciled sepals, and clear or bluish-white petals. Among the autumnal species are *C. nudiflorus* and *C. sativus*, whose long, reddish-orange, drooping stigmas when dried form *saffron*. See *Saffron*.

Crœsus (krē'sus), the last king of Lydia, son of Alyattes, whom he succeeded in 560 B.C., and extended the empire from the northern and western coasts of Asia Minor to the Halys on the east and Mount Taurus on the south, including the Greek colonies of the mainland. His riches, obtained chiefly from mines and the gold-dust of the river Pactolus, were greater than those of any king before him, so that his wealth became proverbial. Having entered upon war with Cyrus, he was taken prisoner in his capital, Sardis (B.C. 546). The date of his death is unknown, but he survived his captor, and is referred to in the reign of Cambyses.

Croft, WILLIAM, an English musical composer, born in 1677. He was organist in the chapel royal, and published *Musica Sacra, or Select Anthems*, etc. Died in 1727.

Crofter (krof'tér), a petty farmer renting a few acres of land, with sometimes the right of grazing his cattle in common on a piece of rough pasture. Crofters are numerous in the Highlands and in the Western Islands of Scotland, as well as in some other localities. From many districts they have been removed owing to their holdings being absorbed in sheep farms or deer forests, and they are now mainly congregated on the seashore, where they partly maintain themselves by fishing.

Croker (krō'ker). JOHN WILSON, an English writer and politician, born at Galway, in 1780. He was educated in Cork, and at Trinity College, Dublin, and called to the Irish bar in 1802. In 1803 he published anonymously; *Familiar Epistles on the Irish Stage*, and in 1805, an *Intercepted Letter from China*, both clever satires. In 1808 he entered Parliament as member

for Downpatrick. He was appointed in 1809 to the post of secretary to the admiralty, which he retained till the reign of William IV. The Reform Bill was strenuously opposed by him, and on the passing of that measure in 1832 he withdrew from public life. He was one of the founders of the *Quarterly Review*, and one of its ablest contributors, though his articles display frequent malevolence. His other writings include an edition of Boswell's *Life of Johnson*; *Ulm and Trafalgar* and *Talavera*, two poems; *Stories from the History of England*, from which Sir Walter Scott derived his idea of *Tales of a Grandfather*; and editions of the *Suffolk Papers*, *Lady Hervey's Letters*, *Lord Hervey's Memoirs* and *Walpole's Letters*. He died in 1857.

Croker, THOMAS CROFTON, a collector of folklore, born at Cork in 1798. While in a merchant's office in Cork he commenced the collection of the songs and legends current among the peasantry of the south of Ireland. In 1819 an appointment in the admiralty was obtained for him, and he retired with a pension in 1850. His best-known work is his *Fairy Legends and Traditions of the South of Ireland* (1825). He died in 1854.

Croll, JAMES, an English physicist, born in 1821; died in 1890. Self-trained in science, he was on the Scotch geological survey 1867-81. He wrote *Climate and Time*, *Stellar Evolution*, *The Philosophical Bases of Evolution*, etc.

Croly (krō'li), GEORGE, author and preacher, born at Dublin in 1780; studied at Trinity College, Dublin; was appointed to a small curacy in Ireland, but resigned it and became a prominent figure in London journalism and letters. His separate literary works comprise: *Paris in 1815*, a poem; the *Angel of the World*, a tale; *Catiline*, a tragedy; *Pride shall have a Fall*, a comedy, 1824; *Salathiel*, a romance; etc. He is also the author of several biographical and other works; and numerous sermons. In 1835 he was made rector of St. Stephen's, Wallbrook. As a preacher he was deservedly popular. He died in 1860.

Cromarty (krom'ar-ti), a seaport of Scotland, at the extremity of the peninsula which separates the Moray from the Cromarty Firth, 16 miles N. E. of Inverness. It was the birthplace of Hugh Miller. Pop. 1242. —The county of Cromarty consists of a large number of detached portions scattered over the county of Ross with which they are practically merged. The total

area is about 220,800 acres. See *Ross and Cromarty*.

Cromarty Firth, an inlet of the sea running into the united county of Ross and Cromarty in a southwesterly direction; length, about 18 miles; average breadth, 2 to 5 miles. It affords excellent shelter for shipping. On its shores are the towns of Cromarty, Invergordon and Dingwall.

Cromdale (krom'dāl), a village of Scotland on the east bank of the Spey, Inverness-shire, the scene of the fight of May 1, 1690, in which a small body of the adherents of James II was defeated by those of William III, celebrated in the ballad *The Haughs of Cromdale*.

Crome (krōm), JOHN, an English artist, son of a Norwich weaver; born in 1769. During the greater part of his life he was a teacher of drawing. In 1805 he founded the Norwich Society of Artists, of which he became president as well as chief contributor to its annual exhibitions. He excelled in depicting the scenery of his native county, and especially in his handling of trees; and his high place among British landscape painters is now universally acknowledged. He died in 1821. He is sometimes called 'Old Crome' to distinguish him from his son, Bernay Crome, also an artist.

Cromer (krō'mer), a small seaport and bathing place of England, County Norfolk, 21 miles N. of Norwich. The old town is now submerged, the sea constantly making fresh encroachments. Pop. (parish) 4074.

Cromlech (krom'lek), an ancient monument consisting of two or more columns of unhewn stone supporting a large tabular block so as to form a rectangular chamber, beneath the floor of which is sometimes found a cist en-

Cromlech at Lanyon, Cornwall.

closing a skeleton and relics. Sometimes the cromlech was encircled by ring of standing-stones, as in the case of the Standing-stones of Stennis, in Orkney; and sometimes it was itself buried beneath a large mound of earth. See *Dolmen*.

Crompton (kromp'tun), SAMUEL, inventor of the mule-jenny; born near Bolton, England, in 1753. He

early displayed a turn for mechanics, and when only twenty-one years of age invented his machine for spinning cotton, which was called a *mule*, from its combining the principles of Hargreave's spinning-jenny and Arkwright's roller-frame, both invented a few years previously. The mule shared in the odium excited among the Lancashire hand-weavers against these machines, and for a time Crompton was obliged to conceal his invention. He afterwards brought it again into work; but was unable to prevent others from profiting by it at his expense. Various improvements were introduced from time to time on the mule, but the original principle, as devised by Crompton, remained the same. The sum of £5000, voted to him by Parliament in 1812, was almost all the remuneration which he received for an invention which contributed so essentially to the development of British manufactures. He died in 1827.

Cromwell (krom'wel), OLIVER, Lord-protector of the Commonwealth of England, Scotland and Ireland, was born at Huntingdon April 25, 1599. His father, Robert Cromwell, who represented the borough of Huntingdon in the Parliament of 1593, was a younger son of Sir Henry Cromwell, who was knighted by Queen Elizabeth;

Oliver Cromwell.

and Sir Henry again was a son of Sir Richard Williams, a nephew of Thomas Cromwell, Earl of Essex, whose name he took. Oliver's mother was a daughter of William Steward, of Ely, and could trace her descent back to Alexander, lord-steward of Scotland, the founder of the house of Stuart. The first really authentic fact in his biography is his leaving school at Huntingdon and entering Sidney-Sussex College, Cambridge,

April 23, 1616. On the death of his father in 1617 he returned home, and in 1620 married Elizabeth, daughter of Sir James Bouchier. In 1628 he was member of parliament for the borough of Huntingdon, to which he returned on the dissolution in 1629. In 1631 he went with his family to a farm which he had taken at St. Ives; and in 1636 to Ely, where he had inherited a property worth nearly £500 a year. During the Short and Long Parliaments he represented Cambridge, his influence gradually increasing. In the summer of 1642 he was actively engaged in raising and drilling volunteers for the parliamentary party, in view of the impending struggle with the king. He served as captain and colonel in the earlier part of the war, doing good service with his troop of horse at Edgehill; and it was his energy and ability which made the Eastern Association the most efficient of those formed for mutual defense. At the battle of Winceby (1643) he led the van, narrowly escaping death, and in the following year he led the victorious left at Marston Moor, deciding the result of the battle. A few months later he was present at the second battle of Newbury, and his action being fettered by the timidity of Manchester, he impeached the conduct of the earl. As the result of this disagreement Sir Thomas Fairfax was made lord-general, while Cromwell, notwithstanding the Self-denying Ordinance, was placed under him, with the command of the cavalry and the rank of lieutenant-general. As the result of the discipline introduced by Cromwell, the decisive victory of Naseby was gained in 1645, and Leicester, Taunton, Bridgewater, Bristol, Devizes, Winchester and Dartmouth fell into the hands of the Parliament. On the occasion of the surrender of Charles by the Scottish army in 1646 Cromwell was one of the commissioners, and in the distribution of rewards for services received £2500 a year from the estates of the Marquis of Worcester. Though at first supporting Parliament in its wish to disband the army, which refused to lay down its arms till the freedom of the nation was established, he afterwards saw reason to decide in favor of the latter course. Hastily suppressing the Welsh rising, he marched against the Scottish royalists, whom he defeated with a much inferior force at Preston (August 17, 1648). Then followed the tragedy of the king's execution. Cromwell's name standing third in order in the death-warrant. Affairs in Ireland demanding his presence, he was appointed lord-

lieutenant and commander-in-chief; and by making a terrible example of Drogheda (September, 1649), crushed the royalist party in that country within six months. Resigning the command to Ireton, he undertook, at the request of the Parliament, a similar expedition against Scotland, where Charles II had been proclaimed king. With an army greatly reduced by sickness he saved himself from almost inevitable disaster by the splendid victory at Dunbar (September 3, 1650), and a year later put an end to the struggle by his total defeat of the royalists at Worcester (September 3, 1651). For these services he was rewarded with an estate of £4000 a year, besides other honors.

He already exerted a weighty influence in the supreme direction of affairs, being instrumental in restoring the continental relations of England, which had been almost entirely dissolved, and regulating them so as to promote the interests of commerce. The Navigation Act, from which may be dated the rise of the naval power of England, was framed upon his suggestion, and passed in 1651. The Rump Parliament, as the remnant of the Long Parliament was called, had become worse than useless, and on April 20, 1653, Cromwell, with 300 soldiers, dispersed that body. He then summoned a council of state, consisting mainly of his principal officers, which finally chose a Parliament of persons selected from the three kingdoms, nicknamed *Barebone's Parliament*, or the *Little Parliament*. Fifteen months after a new annual Parliament was chosen; but Cromwell soon prevailed on this body, who were totally incapable of governing, to place the charge of the commonwealth in his hands. The chief power now devolving again upon the council of officers (December 12, 1653), they declared Oliver Cromwell sole governor of the commonwealth, under the name of *Lord-protector*, with an assistant council of twenty-one men. The new protector behaved with dignity and firmness. Despite the innumerable difficulties which beset him from adverse Parliaments, insurgent royalists, and mutinous republicans, the early months of his rule established favorable treaties with Holland, Sweden, Portugal, Denmark and France. In September, 1656, he called a new Parliament, which undertook the revival of the constitution and offered Cromwell the title of king. On his refusal he was again installed at Lord-protector, but with his powers now legally defined. Early in the following year, however, he peremptorily dissolved the house, which

had rejected the authority of the second chamber. Abroad his influence still increased, reaching its full height after the victory of Dunkirk in June, 1658. But his masterly administration was not effected without severe strain, and upon the death of his favorite daughter, Elizabeth Claypole, in the beginning of August, 1658, his health began to fail him. Towards the end of the month he was confined to his room from a tertian fever, and on September 3, 1658, died at Whitehall, in the sixtieth year of his age. He was buried in King Henry VII's Chapel, in Westminster Abbey, but after the Restoration his body was taken up and hanged at Tyburn, the head being fixed on a pole at Westminster Abbey, and the rest of the remains buried under the gallows.—Great as a general, Cromwell was still greater as a civil ruler. He lived in a simple and retired way, like a private man, and was abstemious, temperate, indefatigably industrious, and exact in his official duties. He possessed extraordinary penetration and knowledge of human nature; and devised the boldest plans with a quickness equaled only by the decision with which he executed them. No obstacle deterred him; and he was never at a loss for expedients. Cool and reserved, he patiently waited for the favorable moment, and never failed to make use of it. In his religious views he was a tolerant Calvinist. He was about 5 ft. 10 in. in height, his body 'well compact and strong,' and his head and face, though wanting in refinement, were impressive in their unmistakable strength.

He had appointed his eldest son, RICHARD, his successor; but the republican and religious fanaticism of the army and officers, with Fleetwood at their head, compelled Richard to dissolve Parliament; and a few days after he voluntarily abdicated the protectorship, April 22, 1659. His brother HENRY, who from 1654 had governed Ireland in tranquillity, followed the example of Richard, and died in privacy in England. At the Restoration Richard went to the continent until 1680, when he assumed the name of *Clark*, and passed the remainder of his days in tranquil seclusion at Cheshunt, Hertfordshire. He died in 1712, at the age of eighty-six.—The last of the family was OLIVER CROMWELL, great-grandson of Henry Cromwell, son of the protector. He was a London solicitor, and clerk to St. Thomas' Hospital. He succeeded to the estate of Theobalds, which descended to him through the children of Richard Cromwell, and died at Cheshunt Park in 1821, aged seventy-

nine. He wrote the *Memoirs of the Protector and his Sons*, illustrated by Family Papers, 1820.

Cromwell, THOMAS, Earl of Essex, son of a blacksmith at Putney, in Surrey; born about the year 1490. In his youth he was employed as clerk to the English factory at Antwerp; in 1510 went to Rome; and on his return to England became confidential servant of Cardinal Wolsey, about 1525. On his master's disgrace in 1529 Cromwell defended him with great spirit in the House of Commons, of which he was then a member; and effectually opposed the articles of treason brought against Wolsey. After the cardinal's death he was taken into the king's service, was knighted and made privy-councilor, and in 1534 became principal secretary of state and master of the rolls. In 1535 he was appointed visitor-general of all the monasteries in England in order to suppress them, his services being rewarded by the post of lord-keeper of the privy seal, and the title of Baron Cromwell of Okeham. On the abolition of the pope's supremacy he was created king's vicar-general, and used all his influence to promote the Reformation. He was made chief-justice itinerant of the forests beyond Trent, Knight of the Garter, and finally, in 1539, lord high chamberlain, and the following year Earl of Essex. He at length fell into disgrace with the king for the part he took in promoting his marriage with Anne of Cleves; and others of his political schemes failing, he was arrested on a charge of treason, and beheaded on Tower Hill, July 28, 1540.

Cronstadt (k r o n' stăt; Hungarian, *Brassó*), a town of Austria, in Transylvania, after Hermannstadt the principal seat of the industry and trade of the province, lying in a mountainous but well-wooded and romantic district near its southeast corner. Pop. 31,689.

Cronstadt, a maritime fortress of Russia, about 20 miles w. of St. Petersburg, in the narrowest part of the Gulf of Finland, opposite to the mouth of the Neva, on a long, narrow, rocky island, forming both by its position and the strength of its fortifications, the bulwark of the capital, and being also the most important naval station of the empire. Cronstadt used to be the commercial port of St. Petersburg, but since the construction of a canal giving large vessels direct access to the capital it has lost this position. Pop. 59,539.

Cronus (krō'nus), in ancient Greek mythology, a son of Uranus and Ge (Heaven and Earth), and youngest of the Titans. He received the government of the world after Uranus was deprived of it, and was in turn deposed by Zeus. Cronus was considered by the Romans as identical with their Saturnus.

Crook (kryk), GEORGE, soldier, born near Dayton, Ohio, in 1828; died in 1890. He was graduated at West Point in 1852, was promoted captain in 1861, and became a brigadier-general of volunteers about September, 1862. He commanded an army corps under Sheridan in the Shenandoah campaign of 1864 and was breveted brigadier-general in the regular army. After the Civil war he served with great distinction in the Indian wars, and was one of the chief agents in subduing the bloodthirsty Apaches. He was breveted major-general in 1865 and made chief cavalry commander in the army, and was raised to the full rank of major-general in 1888.

Crookes (krooks), SIR WILLIAM, an eminent English physicist, born at London in 1832. He was educated at the Royal College of Chemistry. He discovered the metal thallium, invented the radiometer, and by his researches with the Crookes vacuum tube opened the way to great advances in science. He published works on chemistry, dyeing, and metallurgy, in 1859 became editor of the *Chemical News*, and in 1864 of the *Quarterly Journal of Science*. He became a leading advocate of Spiritualism, was knighted in 1897, and was president of the British Association in 1898.

Crookston (c r u k s'tun), capital of Polk Co., Minnesota, 300 miles N. W. of St. Paul. It has lumber and wagon works, etc. Pop. 7559.

Croquet (krō-kā'), an open-air game played with balls, mallets, hoops and pegs on a level area, which should be at least 30 yards long by 20 wide. The iron hoops (shaped like the inverted letter U) and fixed with their two ends in the ground, arranged in a somewhat zigzag manner over the ground; they are usually ten in number. The posts or pegs (two in number) are placed at the near and far end of the field, respectively, marking the starting and turning points. The game may be played by any number of persons up to eight, either individually or arranged in couples or in sides. The object of the players is to drive with the mallets the balls belonging to their own side through the hoops and against the posts in a certain order,

and to prevent the balls of their opponents from completing the journey before their own by playing them against those of the enemy, and driving them as far as possible from the hoop or post to be played for, the player or players whose balls first complete the course claiming the victory.

Crosier (krō'zher), the staff borne by some of the higher dignitaries in the Roman Catholic and other churches, and probably the oldest of the insignia of the episcopal dignity. The original form of the staff resembled a shepherd's crook, but from the middle of the fourteenth century the archbishops began to carry, sometimes in addition to the pastoral crook, sometimes instead of it, a crosier terminating in a cross or double cross. The crosier is carried by bishops and archbishops themselves only in procession and when pronouncing benediction; on all other occasions it is carried before them by a priest. At Rome the right of bearing the crosier is peculiar to the pope himself, his crosier being in the form of a triple cross. The crosier or *dikanion* used in the Greek Church originally consisted of a simple staff ending in a large knob. At a later period it terminated in a ball (representing the world) with a cross above and two serpents twined round the upper part of the staff. The staff used in the Armenian Church is headed with a serpent in the form of a crook.

Cross (krās), one straight body laid at any angle across another, or a symbol of similar shape. Among the ancients a piece of wood fastened across a tree or upright post formed a cross, on which were executed criminals of the worst class. It had, therefore, a place analogous to that of the modern gallows as an instrument of infamous punishment until it acquired honor from the crucifixion of Christ. The custom of making the sign of the cross in memory of Christ may be traced to the third century. Constantine had crosses erected in public places, palaces, and churches, and adopted it, according to a legend, as the device for a banner (*labarum*) in consequence of a dream representing it as the symbol of victory. In his time also Christians painted it at the entrance of their houses as a sign of their faith, and subsequently the churches were for the most part built in the form of a cross. It did not, however, become an object of adoration until after the alleged discovery of the true cross by the Empress Helena (A.D. 326). Its adoption as the Christian symbol may

be held to connect itself with the fact that it was used emblematically long before the Christian era, in the same way that traces of belief in a trinity, in a war in heaven, in a paradise, a flood, a Babel, an immaculate conception, and remission by the shedding of blood are to be found diffused among widely sun-dered peoples. The general meaning attached to the sign appears to have been that of life and regeneration. Since its adoption by Christianity it has under-

FORMS OF CROSSES.

1, *Cross of Calvary*, a cross on three steps. 2, *Latin Cross*, a cross the transverse beam of which is placed at one-third of the distance from the top of the perpendicular portion, supposed to be the form of cross on which Christ suffered. 3, *Tau Cross* (so called from being formed like the Greek letter *t*, *tau*), or cross of St. Anthony, one of the most ancient forms of the cross. 4, *Cross of Lorraine*. 5, *Patriarchal Cross*. 6, *St. Andrew's Cross*, the form of cross on which St. Andrew, the national saint of Scotland, is said to have suffered. 7, *Greek Cross*, or cross of St. George, the national saint of England, the red cross which appears on British flags. 8, *Papal Cross*. 9, *Cross nowy quadrat*, that is, having a square expansion in the center. 10, *Maltese Cross*, formed of four arrow-heads meeting at the points; the badge of the Knights of Malta. 11, *Cross fourchée* or forked. 12, *Cross pattée* or *formée*. 13, *Cross potent* or *Jerusalem Cross*. 14, *Cross fleury*, from the fleurs de lis at its ends.

gone many modifications of shape, and has been employed in a variety of ways for ornaments, badges, heraldic bearings, etc. After the introduction of the cross into the military ensigns of the Crusaders its use in heraldry became frequent, and its form was varied more than that of any other heraldic ordinary, some of the varieties being of great beauty. The name cross is also given to various architectural structures, of which a cross in stone was a prominent feature; thus we have market crosses, preaching crosses, monumental crosses, etc. The principal forms of the cross as a device or symbol are shown in the accompanying cut.

Cross, EXALTATION OF THE, a Catholic festival celebrated on the 14th of September in honor of the recovery of a portion of the true cross from the Persians by Heraclius (628 A.D.) and its erection on Mount Calvary.

Cross, INVENTION OF THE (the finding of the cross), a phrase chiefly used in connection with the Catholic festival in honor of the finding of the cross by the Empress Helena (326 A.D.), celebrated on the 3d of May.

Cross, VICTORIA. See *Victoria Cross*.

Crossbar Shot, shots with iron bars crossing through them, sometimes standing out 6 or 8 inches at both sides, formerly used for destroying rigging, palisading, etc.

Crossbearer (*porte-croix*, *crueiger*), in the Roman Catholic Church, the chaplain of an archbishop or a primate, who bears a cross before him on solemn occasions.

Cross'bill (*Loxia*), a genus of birds of the finch family, deriving their name from a peculiarity of their bill, the mandibles of which are curved at the tips, so as to cross each other, sometimes on the one side and sometimes on the other. The form of the bill enables them to extract with ease the seeds of the pine, their usual food, from underneath the scales of the cones. They build and also breed at all seasons of the year, in December, as in March, April, or May. The common crossbill (*Loxia curvirostra*) is found in the northern countries of Europe. It is from 6 to 6½ inches in length. The male has a red plumage, the female is of a yellowish-green color. The *Loxia pityopsittacus*, or parrot crossbill, is another European species. Two species of crossbill inhabit Canada and the northern States. *Loxia Americana*, and *Curvirostra leucoptera*, or white-winged crossbill.

Crossbow, or ARBALIST, formerly a very common weapon for shooting, consisting of a bow fastened athwart a stock. The bow, which was often of steel, was usually bent by a lever windlass, or other mechanical contrivance, the missile usually consisting of a square-headed bolt or quarrel, but occasionally of short arrows, stones, and leaden bullets. Though largely used on the European continent, the crossbow was superseded at an early period in England by the more efficient longbow, from which twelve arrows could be despatched per minute to three bolts of the crossbow.

Cross-breeding, the breeding together of animals of different races or stocks. See *Breeding*.

Cross-days, the three days preceding the feast of the Ascension.

Crosse, ANDREW, an English physician and scientist, born in 1784; died in 1855. He passed the greater part of his life experimenting in electricity. In 1816 he asserted that by electricity it was possible to communicate one's thoughts instantaneously to persons in the most distant parts of the earth, but he never appears to have attempted to demonstrate the fact by actual experiment. Among other things he applied electricity in the production of crystals, discovered a process of purifying salt water by electricity, and also made some curious discoveries relative to the effects of positive and negative electricity on vegetation.

Cross-examination, the examination of a witness called by one party by the opposite party or his counsel.

Cross-fertilization, in botany, the fertilization of the ovule of one flower by the pollen of another, usually effected by the agency of insects, the action of the wind, water, etc. See *Botany*.

Crossopterygidæ (-rij'i-dē), a suborder of ganoid fossil and recent fishes, so called from the fin-rays of the paired fins being arranged so as to form a fringe (Gr. *krossoi*) round a central lobe. The living *Polypterus* and *Ceratodus* belong to this group.

Cross-staff, an instrument used by surveyors consisting of a staff carrying a brass circle divided into four equal parts by two lines intersecting each other at right angles. At the extremity of each line perpendicular sights are fixed, the instrument being used in taking offsets.

Cross-stone, a name given to the minerals *harmotome*, a hydrated silicate of barium and aluminium, and *staurolite*, a silicate of iron and aluminium, in both of which the crystals cross each other. Harmotome, however, has by some mineralogists been called *staurolite*. The name cross-stone is sometimes also given to chiasolite, because of the occasional dark markings on the summits of the crystals.

Crosstrees, in ships, certain pieces of timber at the upper ends of the lower and top masts, athwart

which they are laid, to sustain the frame of the tops in the one, and extend the topgallant shrouds on the other.

▲ ▲, Crosstrees.

Crotalaria (krō-ta-lär'-i-a), a genus of leguminous plants, all natives of warm climates, but some of them long cultivated in hot-houses. *C. juncēa* is the sunn-hemp plant.

Crotalidæ (k r ō-tal'i-dē), a family of serpents including some of the most dangerous, above all the rattlesnakes.

Crotch (kroch), WIL-

LIAM, a musical composer, born at Norwich, England, in 1775. As a child he showed astonishing precocity, and at the age of twenty-two was appointed professor of music at Oxford University, with the degree of Doctor of Music. In 1822 he became principal of the Royal Academy of Music. He died in 1847. He left a large number of compositions, more especially for the organ, piano, and voice, and three technical treatises.

Crochet. See *Music*.

Croton (krō'ton), a genus of herbaceous plants, shrubs and trees, order Euphorbiaceæ, comprehending a great number of species, many of which possess important medical properties. The more remarkable species are *C. Cascarilla*, a native of the West Indies and

Croton Tiglium.

Florida, which yields the cascarilla bark, a valuable aromatic tonic; *C. laccifērum*, a native of the East Indies, said to furnish the finest of all the sorts of lac; *C. Tiglium*, an inhabitant of the East

Indies, from the seeds of which croton oil is extracted (see *Croton oil*); and *C. Draco*, a Mexican plant, which yields a red, resinous substance used in making varnish. *C. Pseudo-china*, the copalche plant, yields the bark of that name, but *C. balsamifērum*, *C. aromaticum*, and *C. thurifērum* are merely aromatic.

Croton, CROTO'NA (the modern COTRONE), in ancient geography, a Greek republic in Magna Græcia of South Italy, famous for its *athletæ*, among whom the chief was Milo. It is still more celebrated as the city where Pythagoras taught between 540 and 530 B.C.

Croton Oil, a vegetable oil expressed from the seeds of the *Croton Tiglium*. It is so strongly purgative that one drop is a full dose, and half a drop will sometimes produce a powerful effect, and it should never be used except by the direction of an experienced physician. When applied externally it causes irritations and suppuration, and thus it is used as a counter-irritant in neuralgia, etc.

Croton River, a small stream which flows into the Hudson above Sing Sing, and from which water is obtained for New York city. The first Croton aqueduct, 38 miles long, was constructed 1837-42. It proving inadequate, larger dams were built and a new reservoir opened in 1890. Of the aqueduct 33.12 miles long, 29.63 miles are a continuous rock tunnel lined with brick and stone masonry. These aqueducts have a supply capacity of about 400,000,000 gallons daily.

Crottles (krot'els), a popular name of various species of lichens collected for dyeing purposes, and distinguished as black, brown, white, etc., crottles. Under it are included *Parmelia physodes*, *P. caperata*, *P. saxatilis*, *Sticta pulmonaria*, and *Levanōra pallescens*.

Croup (kröp). Two diseases are commonly confounded under the term 'croup,' one a simple and, if promptly treated, a readily subdued disease, the other most fatal. The former is simple inflammation of the inner lining membrane of the larynx—the box of the windpipe—or of the windpipe itself, or of both. It is common in children, and as the air-passage of children is narrow, the swelling produced by the inflammation so diminishes the space that difficult breathing, hoarseness of voice, and a cough like a muffled bark are quickly produced, while the breathing sounds loud and harsh. The other disease is diphtheria of the larynx or wind-

pipe, or both, in which a false membrane is formed which lines the air-passages, and so narrows them. Croup frequently proves fatal by suffocation, induced either by spasm affecting the glottis or by a quantity of matter blocking up the air-passages. The earliest symptoms should be noted, and the treatment in the absence of immediate medical advice should consist in the application of hot poultices to the upper part of the chest, while at the same time the child is made to inhale the steam from hot water. Hot drinks are beneficial, and the bowels should be freely opened.

Crousaz (krö-zä), JEAN PIERRE DE, a Swiss mathematician and philosopher, born in 1663; died in 1748 or 1750. His chief works are: *Système des Réflexions, ou nouvel Essai de Logique*; *Traité du Beau*; *De l'Education des Enfants*; *Traité de l'Esprit Humain*, etc.; also an examination of Pope's *Essay on Man*.

Crow (krō; *Corvus*), a genus of birds, type of the family Corvidæ. It includes, in Europe, the carrion-crow, the hooded or Royston crow, the raven, the rook, and the jackdaw, the last three of which are described under their respective heads. The carrion-crow, or simply the crow (*C. corone*), is 18 or 19 inches in length, and about 36 between the tips of the wings. Its plumage is compact and glossy blue-black with some greenish reflections. Its favorite food is carrion of all kinds; but it also preys upon small quadrupeds, young birds, frogs, lizards, etc., and is a confirmed robber of the nests of game birds and poultry. It is not gregarious, being generally met with either solitary or in pairs. It builds a large, isolated nest, with from four to six eggs, generally of a bluish-green with blotches of brown. The carrion-crow is easily tamed, and may be taught to articulate words. The American crow (*C. Americanus*) is similar to the foregoing, but is smaller and less robust, and is somewhat gregarious. This crow is common in all parts of the United States, and is deemed a great nuisance by farmers from preying on their corn. The fish-crow (*C. ossifragus*), another American crow, resembling the preceding but smaller, is abundant in the coast districts of the Southern States. Its favorite food is fish, but it also eats all kinds of garbage, mollusca, etc. In winter its food is chiefly fruit, and it is then fat and considered good eating. The hooded, Royston, or gray-backed crow (*C. cornix*) is somewhat larger than the rook. Its head, wings, and tail are black, but less bright

than in the rook; the rest of the body is a dull smoke-gray. Its food is similar to that of the carrion-crow, and it builds a similar nest. Indeed, the distinctness of the species *C. corone* and *C. cornix* has been called in question, as they interbreed freely together, and the young of the same nest present more or less resemblance to the one or the other parent. All the crows are highly sagacious.

Crowberry, or CRAKEBERRY (*Empetrum nigrum*), a plant resembling the heaths, and bearing a jet-black berry, common in all the northern parts of Europe, Asia, and North America. The berries, which have a slight acid taste and are sometimes eaten, afford a purple dye. The red crowberry (*E. rubrum*), which has a red fruit, grows in the neighborhood of the Straits of Magellan.

Crow-blackbird, the name of certain American birds of the genus *Quiscalus*, family Sturnidæ or starlings. The great crow-blackbird (*Q. major*), found in the Southern States, Mexico, and the West Indies, is 16 inches long, and of a glossy black plumage. The female is of a light-brown above and whitish beneath. The purple grackle, lesser or common crow-blackbird (*Q. versicolor*), is similar in color to the preceding, but smaller. They reach the middle states of America from the south in flocks in the latter part of March, and build in April in the tall pines or cedars. On their first arrival they feed upon insects, but afterwards commit great ravages upon the young corn. In November they fly southward again.

Crow'foot. See *Ranunculus*.

Crowland, or CROYLAND (kroil'land), a town in England, county of Lincoln, 8½ miles north of Peterborough. Pop. (1911) 2683. Its chief points of interest are the curious ancient triangular bridge at the confluence of the Welland and the Nene, and the ruins of an abbey founded in 716 by Ethelbald. Ingulphus was abbot of Crowland from 1075 till 1109.

Crown (kroun), a circular ornament for the head. As now used the name is limited to the headdress worn by royal personages as a badge of sovereignty, but it was formerly used to include the wreaths or garlands worn by the ancients upon special occasions. Thus, among the Greeks and Romans, crowns made of grass, flowers, twigs of laurel, oak, olive, parsley, etc., and later of gold, were made use of as honors in

athletic contests, as rewards for military valor, and at feasts, funerals, etc. It is, however, with the eastern diadem rather than with the classic corona that the crown as a symbol of royalty is connected; indeed, it was only introduced as such a symbol by Alexander the Great, who followed the Persian usage. Antony wore a crown in Egypt, and the Roman emperors also wore crowns of various forms, from the plain golden fillet to the radiated or rayed crown. In modern states they were also of various forms until heralds devised a regular series to

CROWNS

1, Crown of England. 2, Russian Crown. 3, French Crown. 4, Austrian Crown. 5, Imperial Crown (Charlemagne's).

mark the grades of rank from the imperial crown to the baron's coronet. The English crown has been gradually built up from the plain circlet with four trefoil heads worn by William the Conqueror. This form was elaborated and jeweled, and finally arched in with jeweled bands surmounted by the cross and scepter. As at present existing the crown of England is a gold circle, adorned with pearls and precious stones, having alternately four Maltese crosses and four fleur-de-lis. From the top of the crosses rise imperial arches, closing under a mound and cross. The whole covers a crimson velvet cap with an ermine border. The crown of Charlemagne, which is preserved in the imperial treasury of Vienna, is composed of eight plates of gold, four large and four small, connected by hinges. The large plates are studded with precious stones, the front one being surmounted with a cross; the smaller ones, placed alternately with these, are ornamented with enamels representing Solomon, David, Hezekiah and Isaiah, and Christ seated between two flaming seraphim. The Austrian crown is a sort of cleft tiara, having in the middle a semicircle of gold supporting

a mound and cross; the tiara rests on a circle with pendants like those of a miter. The royal crown of France is a circle ornamented with eight fleur-de-lis, from which rise as many quarter-circles closing under a double fleur-de-lis. The triple crown of the popes is more commonly called the tiara.

Crown, a silver coin, value five shillings (\$1.20), current in Britain, though now scarce, none having been coined (except a few in 1887) since 1851. In 1847 and 1848 some pattern crowns were struck with a gold center, but the experiment was carried on further.

Crown-glass, the hardest and most colorless kind of window-glass, made almost entirely of sand and alkali and a little lime, and used in connection with flint-glass for optical instruments in order to destroy the disagreeable effect of the aberration of colors.

Crown Imperial. See *Fritillary*.

Crown Lands, the lands belonging to the British crown. These are now surrendered to the country at the beginning of every sovereign's reign in return for an allowance (the Civil List) fixed at a certain amount for the reign by Parliament. They are placed under commissioners, and the revenue derived from them becomes part of the consolidated fund. See *Civil List*.

Crown-wheel, a wheel with cogs or teeth set at right angles to its plane, the wheel in certain watches that drives the balance.

Croydon (kroi'dun), a municipal and parliamentary borough of England, in County Surrey, 10 miles s. of London, of which it is practically a suburb, near the sources of the Wandle, and near the Banstead Downs. The town, which is a favorite residence of merchants and business men, retired tradesmen, etc., is surrounded by fine villas, mansions and pleasure grounds. It is a place of ancient origin, but from its recent rapid increase is almost entirely new. Of special interest are the remains of the ancient palace, long a residence of the Archbishops of Canterbury. Pop. (1911) 169,559.

Crozet Islands (krō'zet), a group of four uninhabited islands in the South Indian Ocean, between Kerguelen and Prince Edward Islands. They are all of volcanic origin, and the most easterly of them, East Island, has peaks exceeding 4000 feet. The largest, Possession Island, is about 20 miles long by 10 broad.

Crozier. See *Crosier*.

Crucian Carp (krösh'yan karp), a thick, broad fish, of a deep-yellow color, the *Cyprinus carassius*, differing from the common carp in having no barbules at its mouth, inhabiting lakes, ponds and sluggish rivers in the north of Europe and Asia.

Crucible (krö'si-bl), a vessel employed to hold substances which are to be submitted to a high temperature without collecting the volatile products of the action. It is usually of a conical, circular, or triangular shape, closed at the bottom and open to the top, and is made of various materials, such as fire-clay, platinum, a mixture of fire-clay and plumbago, porcelain, etc.

Cruciferae (krö-sif'e-rē), a very extensive nat. order of dicotyledonous plants, consisting of herbs which all have flowers with six stamens, two of which are short, and four sepals and petals, the spreading limbs of which forms a Maltese cross, whence their name. The fruit is a pod with a membranous placenta dividing it into two cells. The mustard, watercress, turnip, cabbage, scurvy-grass, radish, horse-radish, etc., belong to this family. They have nearly all a volatile acidity dispersed through every part, from which they have their peculiar odor and sharp taste and their stimulant and antiscorbutic qualities. None are really poisonous. Some are found in our gardens because of their beauty or fragrance, as the wall flower, stock, candytuft, etc.

Crucifix (krö'si-fiks), a cross bearing the figure of Christ. As a rule, the figures on the most ancient crucifixes were not carved, but were engraved on gold, silver, or iron crosses. At a later period they were painted on wood, and it is only in the ninth century, in the pontificate of Leo III, that the figure of Christ appears carved upon the cross in bas-relief. Originally the body was represented clothed in a tunic reaching to the feet; afterwards the clothing was removed with the exception of a cloth round the loins. Until the eleventh century Christ is represented alive; since that period he has been represented as dead. In the earlier crucifixes, also, the number of nails by which Christ is fixed to the cross is four, one through each hand and each foot, while in the more modern ones one foot is laid above the other and a single nail driven through both. Many crucifixes bear also the superscription in an abbreviated form, and accessory symbols and figures.

Crucifixion (krö-si-fik'shun), a mode of inflicting capital punishment, by affixing criminals to a wooden cross, formerly widely practised, but now chiefly confined to the Mohammedans. Different kinds of crosses were employed, especially that consisting of two beams at right angles and the St. Andrew's cross.

Cruden (krö'den), ALEXANDER, compiler of the *Concordance to the Scriptures*, was born at Aberdeen in 1701. He took the degree of M.A. at Marischal College, and in 1722 proceeded to London, where he was employed as tutor. He afterwards opened a bookseller's shop under the Royal Exchange, and in 1735 was appointed bookseller to Queen Caroline. His great work appeared in 1737, under the title of *A Complete Concordance of the Holy Scriptures of the Old and New Testaments*. In a pecuniary point of view it was not at first successful, and the embarrassments to which it reduced him unsettled his reason and led to his confinement at Bethnal Green. He was again temporarily confined in 1753. He died in Islington in 1770. Three editions of the *Concordance* appeared in his lifetime, and he was also the author of *A Scripture Dictionary, or Guide to the Holy Scriptures* and *The History and Excellency of the Scriptures*.

Cruelty to Animals. See *Animals*, *Cruelty to*.

Cruelty to Children, Prevention of. The fact that defenseless children are often grossly maltreated by inhuman parents and others under whose care they fall has led to the formation of societies and to legislation for their protection. The first of these societies was formed in New York and is still the largest and most influential. Then they spread to the other large American cities. Liverpool in 1883 and London in 1884 were the first to follow in England, and legislation has been passed in both countries to aid those engaged in this benevolent work.

Cruikshank (k r u k'shank), GEORGE, the greatest of English pictorial satirists after Hogarth, born at London in 1792, of Scottish extraction. His father, Isaac Cruikshank, was an engraver of theatrical portraits, prints for cheap books, and caricatures in the manner of Rowlandson and Gillray. From early childhood George Cruikshank was trained to assist in preparing his father's plates. The earliest of his drawings known is dated 1799, when he was

only seven years of age, and when fifteen he was comparatively distinguished. His first occupation was designing illustrations for children's books and popular songs. He began early also as a political satirist, contributing plates regularly in 1811 to the *Scourge*, in 1814 illustrating *Dr. Syntax's Life of Napoleon*, and doing much work of the kind for Hone, the publisher. His best productions of this period are his drawings of the *Cato Street Conspiracy* and of the trial of Queen Caroline, the *Political Showman*, and the *Political House that Jack Built*. In 1821 and the succeeding years appeared his illustrations of such popular books as Pierce Egan's *Tom and Jerry*, Maxwell's *History of the Irish Rebellion*, Grimm's *Fairy Tales*, *Peter Schlemihl*, *Baron Munchhausen*, Defoe's *History of the Plague*, Scott's *Demnology and Witchcraft*, the *Ingoldsby Legends*, etc., the artist showing especial excellence in ghostly and fairy subjects. In 1837 he commenced in *Bentley's Miscellany* his famous series of etchings on steel illustrative of Dickens' *Oliver Twist*, followed two years later by those for Ainsworth's *Jack Sheppard*, and then by those for *Windsor Castle* and the *Tower of London*. Having connected himself with the temperance movement he produced the *Bottle*, a powerful and popular series of designs, but marking clearly the limits of his art. His temperance connection and his absurd claims to having suggested the idea of Dickens' *Oliver Twist* undermined his artistic reputation. Poorly paid for work by which others profited, he was finally obliged to part with the vast collection of his works, and in 1866 £50 a year was settled on him from the Royal Academy's Turner Annuities. He latterly turned his attention to oil-painting, his most noteworthy pictures being *Tam o' Shanter*, *Disturbing a Congregation*, and *The Worship of Bacchus*. He died in 1878.

Cruiser (krö'sér), a war vessel smaller in size and lower in strength than a battleship, but usually superior in speed. These form an important part of modern navies. They may be armored or unarmored. At the time of the Spanish war there were only two armored cruisers in the U. S. navy, the *New York* and the *Brooklyn*, but since then they have been considerably added to, much larger vessels being built, capable of excellent service in the event of war, as efficient aids to the battleships.

Cruive (kröv), a trap for fish, especially salmon, consisting of a sort of hedge of stakes on a tidal river or the sea-beach. When the tide flows

the fish swim over the wattles, but are left by the ebb.

Crusades (krö-sāds'), the wars carried on by the Christian nations of the West, from the end of the eleventh till the latter half of the thirteenth century, for the conquest of Palestine. They were called *Crusades* because the warriors wore the sign of the cross. The antagonism between the Christian and Moham-medan nations had been intensified by the possession of the Holy Land by the Turks and by their treatment of pilgrims to Jerusalem; and the first strenuous appeal was assured of response alike from the pious, the adventurous, and the greedy. The immediate cause of the *first Crusade* was the preaching of Peter of Amiens, or Peter the Hermit, who in 1093 had joined other pilgrims on a journey to Jerusalem. On his return he gave Pope Urban II a description of the unhappy situation of Christians in the East, and presented a petition for assistance from the Patriarch of Jerusalem. The statements of the pope at the Councils of Piacenza and Clermont in 1095 produced a profound sensation throughout Europe, and in 1096 several armies set out in different divisions, most of which, being ignorant of military discipline and unprovided with necessities, were destroyed before reaching Constantinople, which had been chosen for their place of meeting. A well-conducted regular army, however, of 80,000 men was headed by Godfrey of Bouillon; Hugh of Vermandois, brother to Philip, King of France; Baldwin, brother of Godfrey; Robert II of Flanders; Robert II of Normandy, brother of William II, King of England; Raymond of Toulouse; and other warriors. They traversed Germany, Hungary, and the Byzantine Empire, passed over into Asia Minor, conquered Nicæa in June, 1097, and shortly after, on July 4th, fought the first pitched battle at Dorylæum, being completely victorious after a severe contest. They then marched through Asia Minor upon Antioch, which, with the exception of the citadel, fell into their hands by treachery in June, 1098. Surrounded in turn by a Turkish army, they were soon reduced to pitiable straits, but succeeded in routing their besiegers on June 28. After remaining nearly a year in the neighborhood of Antioch they began, in May, 1099, their march against Jerusalem, the siege of which they commenced in June. Their numbers were now reduced to little more than 20,000 men; but after a fierce struggle the town was taken by storm on July 15th, and Godfrey of Bouillon was chosen King of Jerusalem, or, as he pre-

ferred to term himself, Protector of the Holy Sepulcher. At his death in 1100 he was succeeded by his brother Baldwin, who had in the earlier part of the Crusade established himself in Edessa, and made himself ruler of an extensive territory stretching over the Armenian mountains and the plain of Mesopotamia.

The *second* great and regularly conducted Crusade was occasioned by the loss of Edessa, which the Saracens conquered in December, 1144. Fearing still graver losses, Pope Eugenius III, seconded by Bernard of Clairvaux, exhorted the German emperor, Conrad III, and the King of France, Louis VII, to defend the cross. Both these monarchs obeyed, and in 1147 led large forces to the East, but returned in 1149 without having accomplished anything.

The *third* Crusade was undertaken after the capture of Jerusalem by Saladin in 1187, the monarchs Frederick I (Barbarossa) of Germany, Philip Augustus of France, and Richard I (Cœur de Lion) of England, leading their armies in person. Frederick, marching by way of the Danube and crossing from Gallipoli, defeated the Turks at Philomelium (now Finiminum), and penetrated to Seleucia, but was drowned in the Selef. His son Frederick led the small remains to Acre and took part in the siege, but after his death in 1191 the German army dwindled away. The other monarchs—Richard and Philip Augustus—had in the meantime met at Vezelai in June, 1190, and agreed to unite their forces at Messina in Sicily, where they spent six months at the end of 1190 and beginning of 1191. Philip joined the other Crusaders before Acre on April 13, 1191; but Richard, whose fleet was separated by a storm, went to Cyprus, and, dispossessing Isaac Comnenus, made himself king. It was not till the 8th of June that he reached Acre, which surrendered a month later. Jealousies, however, arose between the monarchs, and within a few weeks after the fall of Acre the French king returned to Europe. Richard, now sole leader of the expedition, defeated Saladin and occupied Jaffa or Joppa; but having twice vainly set out with the design of besieging Jerusalem, he concluded (September 2, 1192) a truce of three years and three months with Saladin, who agreed that pilgrims should be free to visit the Holy Sepulcher, and that the whole sea-coast from Tyre to Jaffa (including the important fortress of Acre) should belong to the Crusaders.

The *fourth* Crusade was set on foot by Pope Innocent III, who commissioned Fulk of Neuilly to preach it in 1198.

Among its chief promoters was Godfrey of Villehardouin; Seneschal of Champagne; Baldwin, Count of Flanders and Hainaut; Dandolo, the aged Doge of Venice; and the Marquis of Montferrat, who was chosen leader. The Crusaders assembled at Venice in the spring of 1202, but were diverted from their original purpose first by the capture of the Dalmatian town of Zara, and then by the expedition which ended in the sack of Constantinople and the establishment of a Latin empire there (1204).

The *fifth* Crusade, undertaken by Andreas of Hungary in 1217, and shared in by John of Brienne, to whom the title of King of Jerusalem was given, had little other result than the temporary occupation of the Nile delta.

The *sixth* Crusade, that of Frederick II, Emperor of Germany, was undertaken at the instance of Popes Honorius III and Gregory IX. On arriving he entered into negotiations with the Sultan of Egypt, and without any fighting recovered for himself, as heir of John of Brienne, the Kingdom of Judea, on the condition of tolerating in his kingdom the Mohammedan worship. He then concluded a useless truce of ten years, got himself crowned at Jerusalem, and returned in 1229.

The *seventh* and *eighth* Crusades were led by St. Louis of France (Louis IX) in person. This prince was resolved to strike a blow at Mohammedanism in Egypt. He took Damietta in June, 1249, and marched up the Nile, but was compelled to retreat, and finally to surrender with his whole army. He recovered his liberty by the surrender of Damietta, returned to Palestine, and in 1254, on the death of his mother, to France. The second expedition of Louis was still more disastrous in its results than the first. He landed his army in 1270 on the northern coast of Africa; but he himself and a large number of his knights died before Tunis, and the majority of the French Crusaders returned home. A crusading army under Prince Edward of England (afterwards Edward I), originally intended to coöperate with that of Louis, landed at Acre in 1271, but little was effected beyond a new truce for ten years (1272). For nineteen years longer the Christians in Palestine held with great difficulty the remnants of the Latin kingdom there. But Tyre and Berytus (Beyrout) were successively snatched from them, and finally the capture of Acre by the Sultan of Egypt in 1291 put an end to the kingdom founded by the Crusaders.

Despite their want of success, however,

the Crusades were of considerable indirect value in that by these joint enterprises the European nations became more connected with each other, the class of citizens increased in influence, partly because the nobility suffered by extravagant contributions to the Crusades, and partly because a more intimate commercial intercourse greatly augmented the wealth of the cities, and a number of arts and sciences, till then unknown in Europe, were introduced.

Crusado. See *Cruzado*.

Crusca, ACCADEMIA DELLA. See *Academy*.

Crustacea (kr ŭ s-t ā' s h e-a), one of the primary branches into which is divided the great group of Articulate or Annulose animals. The body is divided into head, thorax and abdomen, of which the two former are united into a single mass, cephalothorax, covered with a shield or carapace, and the abdomen usually presents the appearance of a tail. In some—the sandhopper, wood-louse, etc.—the head is partially distinct from the thorax. The Crustacea breathe by branchiæ or gills, or by membranous vesicles, or by the general surface; and the body is composed of a series of rings more or less distinct. They possess the faculty of reproducing lost parts in an eminent degree. The integument is chitinous (see *Chitin*) and remains elastic in some, as the Isopods, throughout life. But in the majority it is calcified or transformed into a hard shell, prisms of carbonate of lime being deposited in the outer layer. It consists of a great number of distinct pieces connected together by portions of the epidermic envelope, just as among the higher animals certain bones are connected together by cartilages. Several species, if not all, molt or cast these outer skeletons or shells in the progress of growth; this is the case with crabs, crayfish, etc. The general grouping of the Crustacea is sometimes based upon the successive metamorphoses which the higher Crustaceans undergo before reaching the adult form. Thus, the first stage of the lobster embryo is that of a minute object with three pairs of limbs, known as the Nauplius form; in the second, or Zoëa stage, the cephalothorax is provided with anterior, posterior, and lateral spines; the final form being reached by a series of moltings. But for practical purposes the Crustacea may be considered as ranging themselves under four subclasses: the Cirripedia, the Entomostraca, the Podophthalmia, and the Edri-

ophthalmia. Of these the Cirripedia are represented by the barnacles; the Entomostraca by the cyclops, daphnia, etc.; the Podophthalmia by the shrimps, prawns, lobsters, etc.; the Edriophthalmia by the fish-lice, wood-lice, beachfleas, etc. Besides the orders comprised under these classes there are, however, several groups, such as the Merostomata and the Trilobites, which lie between the Crustaceans and the Insects, and are as yet unattached to either.

Crutched Friars (krucht), an order of friars established at Bologna in 1169, and so named from their adopting the cross as their special symbol. It originally formed the head of their distinctive staff; afterwards they wore it in red cloth on the back and breast of their blue habit.

Cruz, SANTA. See *Santa Cruz*.

Cruzado (kr ŭ -z a'dō), a Portuguese coin. The old cruzado, or cruzado-velho, is worth 400 reis, or about 43 cents; the new cruzado, cruzado-novo or pinto, dating from 1722, is worth 480 reis, or about 50 cents.

Crwth (krŭth), a Welsh name for a kind of violin with six strings, formerly much used in Wales. Four of the strings were played on by a bow, and two were struck or twitched by the thumb. Its general length was 22 inches, and its thickness 1½ inches.

Cryolite, or KRYOLITE (krī'ō-lit), a mineral, a native fluoride of aluminium and sodium, found at Evigtok, in Greenland, whence it is exported. It is of a pale grayish white or yellowish brown, occurs in masses of a foliated structure, and has a vitreous luster. It has been employed as a source of aluminium, and in the manufacture of a hard porcelainous glass of great beauty. In addition to the Evigtok deposit cryolite has been discovered in the Ural Mountains.

Cryophorus (krī-of'ō-rus; Gr. *kryos*, cold), an instrument for showing the diminution of temperature in water by its own evaporation. Wollaston's cryophorus consists of two glass globes united by a moderately wide glass tube. Water is poured in and boiled to expel the air, and while boiling the apparatus is hermetically sealed. When it is to be used the water is made to

Crwth.—Carl Engel's Musical Instruments.

run into one of the globes, and the other is buried in a freezing mixture. The aqueous vapor in the globe being thus condensed, a vacuum is produced, fresh vapor rises from the water in the other globe, which is again condensed, and this proceeds continuously till the water remaining in the globe has been, by the evaporation, cooled to the freezing point.

Crypt (kript), originally a subterranean cell or cave, especially one constructed for sepulture. From the usage of these by the early Christians crypt came to signify a church underground or the lower story of a cathedral or church. It is usually set apart for monumental purposes, but is sometimes used as a chapel. The crypt is a common feature of cathedrals, being always at the east end, under the chancel or apse. The largest in England is that of Canterbury Cathedral; that of Glasgow Cathedral, formerly used as a separate church, is one of the most perfect pieces of architecture in Britain.

Cryptogamous Plants (krip-tog'a-mus), CRYTOGAMIA, the botanical division embracing the lower classes of plants having no evident flowers or in which the reproductive organs are obscure. They propagate by spores. They are divided into cellular and vascular cryptogams, the former comprising the algæ, fungi, lichens, charas, liverworts and mosses; the latter the ferns, horsetails, moonworts, rhizocarps and lycopods.

Cryptography (krip-tog'ra-fi), the art of writing in secret characters or cipher, or with sympathetic ink. The simplest method consists in choosing for every letter of the alphabet some sign, or another letter or group of letters. Thus the letter of Charles I to the Earl of Glamorgan with respect to the Catholics of Ireland was composed in an alphabet of 24 strokes variously placed about a line. The names in the records of the Clan-na-Gael Society were, according to the *Times* newspaper, written in a cipher formed by taking in each case the letter previous to that intended; and the cipher devised by Lord Bacon consisted in an alphabet formed by different arrangements of the letters *a* and *b* in groups of five. All these methods, however, are easily deciphered by experts, as also is that employed by the Earl of Argyle in his plot against James II. in which the words of the letter were set down at concerted distances, the intervals being filled up with misleading words. The art of cryptography has much developed in more recent times, and ciphers of great intricacy

are frequently used. Even the more complex, however, present, as a rule, but little difficulty to an expert.

Crypton (krip'ton), a new element discovered in June, 1898, by Prof. Ramsey, with Lord Rayleigh, joint discoverers of argon. It was obtained from the atmosphere, in which it exists in the proportion of 1 to 20,000. Spectrum: chief lines, green and yellow, the latter being nearly coincident with the helium yellow line, D 3.

Crystal (kris'tal), in chemistry and mineralogy, any body which, by the mutual attraction of its particles, has assumed the form of some one of the regular geometric solids, being bounded by a certain number of plane surfaces. The chemist procures crystals either by fusing the bodies by heat and then allowing them gradually to cool, or by dissolving them in a fluid and then

Forms of Crystals.

abstracting the fluid by slow evaporation. The method of describing and classifying crystals now universally adopted is based upon certain imaginary lines drawn through the crystal, and called its *axes*. The classes are as follows: 1st, The *monometric, regular, or cubic system (a)*, in which the axes are equal and at right angles to one another. 2d, The *square prismatic or dimetric system (b)*, in which the axes are at right angles to each other, and while two are equal, the third is longer or shorter. 3d, The *right prismatic, rhombic, or trimetric system (d)*, in which the axes are at right angles to each other, but all are of different lengths. 4th, The *hexagonal or rhombohedral system (c)*, which has four axes, three in one plane inclined to each other at 60°, the fourth perpendicular to this plane. 5th, The *monoclinic or oblique system (e)*, in which two axes are at right angles and the third is inclined to their plane. 6th, The *diclinic or doubly oblique system (f)*, in which two axes are at right angles, the third oblique to both. 7th, The *triclinic system (g)*, in which the three axes are inclined to each other at any angle other than a right angle. A crystal consists of three parts. 1st. Plane surfaces, called faces, which are said to be similar when they are equal

to one another and similarly situated; dissimilar, when they are unequal or have a different position. 2d. Edges, formed by the meeting of two faces. They are said to be similar when formed by similar faces; dissimilar, by dissimilar faces. Equal edges are formed when the faces are inclined at the same angle to one another; unequal when they are inclined at different angles. 3d. Solid angles, formed by the meeting of three or more faces; and in this case also there are similar and dissimilar, equal and unequal solid angles according as they are formed by similar or dissimilar faces, and equal or unequal angled edges. The angles of crystals are measured by an instrument called the goniometer.

Crystalline Rocks (kris'ta - līn), rocks of a crystalline texture, such as granite, believed to have acquired this character by the action of heat and pressure.

Crystalloid (kris'ta-loid). See *Dialysis*.

Crystallomancy (kris-tal'lo-man-si), a mode of divining by means of a transparent body, as a precious stone, crystal globe, etc. The operator first muttered over it certain formulas of prayer, and then gave the crystal (a beryl was preferred) into the hands of a young man or virgin, who received an answer from the spirits within the crystal.

Crystal Palace, a notable building erected in 1852-54 at Sydenham, near London, from the materials, and in part after the design and originally designed as a great educational museum of art, natural history, ethnology, etc. It is composed entirely of glass and iron, and consists of a long and lofty nave intersected at regular distances by three transepts, of which the central is 384 feet long, 120 feet wide, and 168 feet interior height. It lies in about 200 acres of ground, excellently laid out for recreation, and possesses many permanent attractions apart from the annual round of concerts, flower-shows, pyrotechnical displays, etc. Chief among its attractions is the collection of casts of architectural ornaments and sculpture, arranged in the Egyptian, Greek, Roman, Alhambra, Byzantine, Mediæval, Renaissance and Italian Courts.

Csaba (chà'bà), a town of Hungary, about 110 miles s. e. of Budapest, near the White Körös. Pop. 37,547.

Csongrad (chon'grád), an active market town of Hungary, at the junction of the Körös with the Theiss, 72 miles s. e. of Budapest. Trade, cattle,

cereals, wines, etc. Pop. 22,619.

Ctenoid (ten'oid), applied to the scales of fishes when jagged or pectinated on the edge like the teeth of a comb, as in the perch, flounder and turbot.

Ctenophora (ten-of'o-ra), an order of marine animals belonging to the subkingdom Cœlenterata, definable as transparent, oceanic, gelatinous Actinozoa, swimming by means of *ctenophores*, or parallel rows of cilia disposed in comb-like plates. They develop no coral. *Pleurobrachia* (or *Cydippe*) may be taken as the type of the order, which includes the Beroidæ, the Cestum or Venus' girdle, etc.

Ctesias (tē'she-as), a Greek historian of about 400 B.C., contemporary with Xenophon and partly with Herodotus. He was a physician, and lived for seventeen years at the court of Persia. He wrote a *History of Persia*, of which little remains.

Cuba (kū'ba), the largest and most western of the West India Islands, lying at the entrance to the Gulf of Mexico; about 130 miles from Florida and Yucatan. Its length is 750 miles, the breadth varying from 20 to over 120 miles; area 45,881 miles. It formed the richest and most important colony belonging to Spain, but was wrested from that country by the United States in the war of 1898. The island probably had its origin in volcanic action, the Copper Mountains, which run its entire length, clearly demonstrating this. Pico Turquinos is the highest summit, being 7750 feet. From the base of this chain of highland the land expands into meadows with numerous lagoons and swamps. The rivers are small and unnavigable. Good harbors abound with deep water at Havana, Matanzas, Puerto Principe, Santiago, etc.

The climate in the hilly districts is generally healthful and agreeable, but the lowlands are sickly and generally hot. The maximum temperature seldom exceeds 88° F., but the heat is constant, the mean temperature in the lowlands being 78°. The climate is moist, the rainfall being about 90 inches; yet some portions of the interior require irrigation. There are occasional hurricanes and earthquakes. Rain often descends in torrents from July to September, but no snow is known to fall on the highest mountains, though frost occurs occasionally. The most valuable domestic animals are the ox, horse and pig, which form a large proportion of the wealth of the island; the sheep, goat and mule are inferior in

quality and number. The sylvan birds are numerous and in great variety, birds of prey are but few, and snakes and reptiles are not very plentiful. The shores abound in turtle, and alligators are found in the deep gulfs and bays.

Cuba is rich in minerals; those worked are mostly iron and copper. Of the former a large quantity is exported to the United States for admixture with the native ores. Bitumen is plentiful as a liquid and also in a plastic, resinous state. Gold, silver, coal and marble are found in the hilly country. Forests of mahogany, rosewood, cedar, ebony, fustic, palms, etc., abound on the mountains. Large crops of tobacco, sugar, rice, maize, bananas, cotton, coffee, yams and all tropical fruits, together with immense herds of cattle, are raised. Tobacco forms the leading export, sugar having much fallen off by the competition of the beet-sugars of continental Europe and the unsettled state of the island. The sum of exports and imports amounts to about \$250,000,000, the exports being very largely to the United States. The manufacture of sugar, molasses, rum and cigars forms the principal industries. Over 2500 miles of railway are in operation, and 5000 miles of telegraph. The Roman Catholic religion was established by the Spanish law; education was made compulsory in 1880, but was not impartially carried out. There are 860 public schools, beside a few schools in the towns and a university at Havana. None of the aboriginal race remain, and but few of the indigenous mammals; of the latter are two species of aguti and an opossum.

Cuba was discovered in October, 1492, by Columbus, and colonized in 1511 by the Spaniards. Hernando, the governor, cruelly treated the natives, an inoffensive race who had received their oppressors with great hospitality, and by 1553 the entire race became extinct. In 1553 the French destroyed Havana; it was rebuilt and strongly fortified in 1554. In 1624 Cuba was taken by the Dutch, but was soon restored to Spain. From 1650 to 1700 ravaged by filibusters, who in 1688 plundered and destroyed Puerto Principe. After 1700 Cuba prospered greatly. The English, with American colonists, captured Havana in 1762, but in 1763 exchanged it for other possessions. It then became a center of the slave trade. Negro insurrections occurred in 1844-48, and over 10,000 negroes were slain in the latter year.

In 1868 commenced an insurrectionary attempt at independence which continued until 1878, and in 1895 another rebellion

broke out. In April, 1898, war was declared by the United States against Spain, and in the struggle that ensued Cuba was freed from the dominion of Spain, the United States holding it until it would establish a satisfactory government of its own. This was accomplished in May, 1902, and the United States troops and officials were withdrawn. In 1906 a rebellious disturbance caused the United States to resume a temporary control of the island, but in 1908, a stable republican government being formed, the American troops were withdrawn. Pop. (1907). 2,048,980; principal cities, Havana (297,159), Santiago (45,470), and Matanzas (36,009).

Cubeb (kū'beb), the dried unripe fruit of *Cubēba officinālis*, or *Piper Cubēba*, a native of Java and other East India isles, order Piperaceæ.

Cube Root (kūb rōt), the number or quantity which, multiplied into itself and then into the product produces the cube; or which, twice multiplied into itself, produces the number of which it is the root: as 2 is the cube root of 8, because twice 2 are 4, and twice 4 are 8.

Cubespar, an anhydrous sulphate of lime.

Cubic Foot, of any substance, so much of it as is contained in a cube whose side is 1 foot.

Cubic Niter, or CHILE SALTPETER, the nitrate of sodium found chiefly in the rainless district of Tarapacá in Chile, where it occurs for the most part mixed with other salts, sand and clay. It crystallizes in obtuse-angled rhombohedra, not in cubes, and is used in considerable quantities both as a dressing for grass and mixed in artificial manures. It has also been used as a source of nitric acid, and after double decomposition with chloride of potassium has been employed in the manufacture of gunpowder.

Cubit (kū'bit), in the mensuration of the ancients, a long measure, equal to the length of a man's arm from the elbow to the tip of the fingers, or, say, equal to 18 inches.

Cucking-stool (kuk'ing stōl), a kind of chair formerly used as an instrument of punishment. Scolds, cheating bakers or brewers, and other petty offenders were placed in it, usually at their own doors, to be hooted at and pelted by the mob. It has been frequently confounded with the ducking-stool.

Cuckoo (kū'kō; genus *Cucūlus*), a scansorial or climbing bird, the type of the family Cuculidæ. The note from which it derives its name is a

love-call used only in the mating season. The greater number of species belonging to the genus are confined to hot countries, more especially India and Africa, though some are summer visitants of colder climates. In America no true cuckoos are found, the genus *Coccyzus*, to which the so-called American cuckoo belongs, differing very essentially from them in its habits. The species best known in Europe, the *Cuculus canorus*, is a bird about the size of a small pigeon, though the length of the tail gives it at a little distance a strong resemblance to a hawk. The adult bird is ashy gray, with a white breast barred across with narrow lines of grayish black; tail spotted and barred with white; bill black, touched at the gape with yellow; eyes and feet yellow. It appears in England about the middle of April, and in May begins to deposit its eggs in the nests of other species, giving the preference to those of the hedge-sparrow, meadow-pipit, or pied wagtail. The young cuckoo ejects from the nest its young companions, and monopolizes the attentions of its foster-parents, which feed it for about five weeks after it is fledged. The young birds do not leave the country until the end of August or even September; but the adult birds commence their flight southward in July or latest early in August. Their food consists chiefly of cockchafers, moths, dragon-flies and caterpillars, though young cuckoos will sometimes eat berries. There appears to be a curious preponderance of male as compared with female birds, a low estimate putting the ratio at about five to one.

Cuckoo-flower, or **LADY'S-SMOCK** (*Cardamine pratensis*), a common and pretty meadow plant, order Cruciferae, with pale lilac or white flowers. *C. pratensis* is abundant in Britain, and is found in swamps N. of New York; blossoms in April or May, presenting a very pleasing appearance. It possesses antiscorbutic properties.

Cuckoo-pint, the *Arum maculatum*, popularly known also by the names of 'lords-and-ladies' or 'common wake-robin.' See *Arum*.

Cuckoo-spit, a froth or spume found on plants, being a secretion formed by the larvæ of a small homopterous insect (*Aphrophora spumaria*).

Cuculidæ (ku-kū'li-dē), the systematic name of the cuckoo family. See *Cuckoo*.

Cucumber (kū'kum-ber), the fruit of *Cucumis sativus*, or the plant itself, belonging to the Cucurbitaceæ or gourd order, and supposed to have been originally imported into Europe from

the Levant. Though grown in England in the fourteenth century, it did not become generally used until after the reign of Henry VIII. It is now a common table vegetable in the United States. It is an annual with rough, trailing stems, large, angular leaves, and yellow male and female flowers set in the axils of the leafstalks. Other species of the cucumber genus are *Cucumis Melo*, the common melon, and the watermelon, *C. Citrullus*.

Cucumber-tree (*Magnolia acuminata*), a fine American forest tree, so named from the appearance of its fruit.

Cucurbit (kū-kur'bit). See *Alembic*.

Curcurbita (kū-kur'bi-ta), the typical genus of the order Cucurbitaceæ. The pompion or pumpkin gourd is *C. Pepo*.

Cucurbitaceæ (kū-kur-bi-tā'se-ē), the gourd order, consisting of large herbaceous plants, annual or perennial, with alternate leaves palmately veined and scabrous, and unisexual flowers. The corolla is monopetalous, regular, and with five lobes; the petals are usually either yellow, white, or green, and deeply veined; the fruit fleshy and succulent. The stems are scabrous, and the general habit is climbing or trailing, by means of tendrils. The order contains at least fifty-six genera and about 300 known species, abounds in useful or remarkable plants, including the melon, gourd, cucumber, colocynth, bryony, etc. They are natives of both hemispheres, chiefly within the tropics. The annuals, however, are commonly grown in our gardens.

Cudbear (kud-bār), a purple or violet colored powder used in dyeing violet-purple and crimson, prepared from the *Lecanora tartarica* and other lichens growing on rocks in Sweden, Scotland, etc. The color, however, is somewhat fugitive, and in Britain it is used chiefly to give strength and brilliancy to the indigo blues. There is little essential difference between cudbear and archil. It is also used to give a crimson color to pharmaceutical preparations.

Cudbear Plant.
(*Lecanora tartarea*).

Cuddalore (kud-da-lōr'), or **KUDALUR**, a maritime town in Hindustan, presidency of Madras and district of South Arcot, 86 miles S. of Madras. It was formerly a place of great strength and importance, and still carries on a large land trade with Madras in indigo, oils and sugar. It

also exports grain and rice. Pop. 52,216.

Cuddapah (kud'dä-pä), or KADAPA, a district and town of Hindustan, presidency of Madras. The district, of which the area is 8745 sq. miles, is traversed N. to S. by the Eastern Ghauts, and watered by the Pennar and its affluents. The forests contain much valuable timber, and the minerals include iron ore, lead, copper, diamonds, etc. Agriculture is in a flourishing condition, grain, cotton and indigo being largely grown. Pop. 1,291,267.—The town lies on a small river of same name, an affluent of the Pennar, 140 miles N. W. of Madras. It exports indigo and cotton. Pop. 16,432.

Cudweed (kud'wēd), the popular name in Britain for certain plants covered with a cottony pubescence, and belonging to the genera *Gnaphalium*. *G. polycephalum*, the cottonweed, is common in fields in the United States.

Cudworth (kud'wūth), RALPH, an English divine and philosopher, born in 1617. He took his degree and fellowship at Cambridge in 1639; in 1644 was chosen master of Clare Hall; in the following year regius professor of Hebrew; and in 1654 master of Christ's College, Cambridge, where he spent the rest of his life. In 1678 he published his *True Intellectual System of the Universe, wherein all the Reason and Philosophy of Atheism is Confuted, and its Impossibility Demonstrated* (folio)—a work of an exceedingly erudite kind, though tediously discursive in argument. He died in 1688.

Cuenca (kwān'ka), a city of Spain, in New Castile, capital of Cuenca province, 85 miles E. S. E. Madrid. Pop. 10,756. It was built by the Moors, stands on a craggy hill, and has a remarkable cathedral. It was formerly celebrated for its art manufactures. Pop. of the province, 249,696; area, 6636 square miles.

Cuenca, a town of Ecuador, next to Quito the most important in the country, with a cathedral and university. It has extensive sugar refineries, potteries and woolen factories. Pop. (1908 estimate) 30,000.

Cueva (kwā'vá), JUAN DE LA, a Spanish poet, born about the middle of the sixteenth century. His works comprise several tragedies, a heroic poem, a large number of lyrics and ballads, and the first Spanish didactic poem—on the *Art of Poetry*. No details are known of his life.

Cufic (kū'fik), a term derived from the town of Cufa or Kufa in

the pashalic of Bagdad, and applied to a certain class of Arabic written characters. The Cufic characters were the written characters of Arabian alphabet in use from about the sixth century of the Christian era until about the eleventh. They are said to have been invented at Cufa, and were in use at the time of the composition of the Koran. They were succeeded by the Neskhi characters, which are still in use. Under the name of *Cufic coins* are comprehended the ancient coins of the Mohammedan princes, which have been found in modern times to be important for illustrating the history of the East. They are of gold (*dinar*), silver (*dirhem*), and brass (*fals*), but the silver coins are most frequent, and numbers of them have been discovered on the shores of the Baltic, and in the central provinces of European Russia.

Cuirass (kwi-ras'), an article of defensive armor, protecting the body both before and behind, and composed of leather, metal, or other materials variously worked. It was in common use throughout Europe in the fourteenth century. In England it fell into disuse in the time of Charles II, and in France a little later. It was reintroduced by Napoleon I, and the achievements of his cuirassiers led to its adoption for regiments of heavy cavalry in most European armies. See *Arms and Armor*.

Cuir-bouilly (k wēr-bö-i-li), leather softened by boiling, then impressed with ornaments, used for shields, girdles, sword-sheaths, coffers, purses, shoes, and many other articles; also, in the sixteenth century, for hangings for rooms gilded and painted, and, when heightened by gold or silver, known as *cuir doré* or *cuir argenté*.

Cuishes, or CUISSSES (kwish'es, kwis'ez), defensive armor for the thighs, originally of buff leather, which was gradually superseded by plate iron or steel. Cuishes were introduced into England about the middle of the fourteenth century.

Cujas (kü-zhas), JACQUES, or CUIJUS, a distinguished French jurist, born about 1520; long professor of law at Bourges; died in 1590. He owed his reputation to the light shed by him on Roman law. He was the founder of the historical legal school, if not of scientific jurisprudence.

Culdees (kul'dēz), a religious order which at an early period had establishments in many parts of Great Britain and Ireland, but are especially spoken of in Scotland. The name is of uncertain etymology; but is probably

from Celtic words meaning 'attendant of God.' It first appears in the eighth century, and the Culdees distinctively so called seem to have been anchorites living under their own abbots and for long remaining independent of Rome. Otherwise archaeologists have discovered no essential point either of faith, ritual or constitution in which they differed from the other clergy of the western church.

Culicidæ (kū-li'si-dā), a subfamily of dipterous insects, family Tipulidæ. The genus *Culex* comprehends the common gnat and the mosquito.

Culilawan Bark (kū-lil'a-wan), a valuable aromatic, pungent bark, derived from *Cinnamomum Culilawan*, a tree of the Moluccas, useful in indigestion, diarrhea, etc. Called also clove-bark.

Cullen (kul'len), a parliamentary and royal burgh and seaport of Scotland, county of Banff. Pop. 4089.

Cullen, WILLIAM, physician and medical writer, born at Hamilton, Lanarkshire, in 1710. In 1740 he took the degree of M.D., was appointed in 1746 lecturer on chemistry at the University of Glasgow, and in 1751 regius professor of medicine. In 1756 he was invited to take the chemical professorship in the University of Edinburgh, and in 1760 was made lecturer on the *materia medica* there. In 1773, he succeeded Dr. Gregory in the chair of the practice of physic. His death took place in 1790. His principal works are: *Lectures on the Materia Medica*, *Synopsis Nosologiæ Methodicæ*, and *First Lines of the Practice of Physic*.

Cullera (kūl-yā'rā), a town of Spain, province and 25 miles S. by E. of Valencia. Pop. 11,947.

Culloden Moor (kū-lī-o-d'ēn), a heath in Scotland, 4 miles E. of Inverness, celebrated for the victory obtained April 27, 1746, by the Duke of Cumberland over Prince Charles Edward Stuart (the Pretender) and his adherents. The battle was the last fought on British soil, and the termination of the attempts of the Stuart family to recover the throne of England.

Culm. See *Kulm*.

Culm, in botany, the jointed and usually hollow stem of grasses, generally herbaceous, but woody and tree-like in the bamboo.

Culmination (kul-mi-nā'shun), in astronomy, the passing of a star through the meridian, because it has at that moment reached the highest point (*culmen*) of its apparent path in the sky. Two culminations take place

in the course of the day, one above and the other below the pole.

Cultivator (kul'ti-vā-tur), an agricultural implement with long, strong, broad-pointed iron teeth or tines, for tearing up or loosening the soil; also called a horse-hoe.

Culverin (kul'vēr-in), a long and slender cannon used in the sixteenth century. It generally carried a ball of about 18 lbs.; the demiculverin carried one of about half that weight.

Cumæ (kū'mē), a very ancient city of Italy, in Campania, the oldest colony of the Greeks in Italy, founded about 1030 B.C. by colonists from Chalcis, in Eubœa, and from Cyme (Greek, *Kumē*) in Asia Minor. It founded Naples (Neapolis), and in Sicily Zancle or Messina. In 420 B.C. Cumæ was taken by the Campanians, and with them came under the power of Rome (345 B.C.) It was destroyed A.D. 1207, and a few ruins only now exist.

Cumaná (kō-ma-nā), a town of Venezuela. It is the oldest European city in the New World, having been founded in 1523. It lies near the mouth of the Gulf of Cariaco, and has a good roadstead in Cumana Bay, with a trade in cacao, sugar, tobacco, etc. Pop. 12,051.

Cumberland (kum'bēr-land), the extreme northwestern county of England. Area, 1876 sq. miles. There is great variety of surface in different parts. Two ranges of mountains may be traced—one towards the north, to which belongs the ridge called Cross-fell (2892 ft.); and the other to the southwest, of which the highest peak is Skiddaw (3058 ft.). The two largest rivers are the Eden and the Derwent. The county embraces part of the 'Lake Country' of England. Cumberland is rich in minerals, including lead, gypsum, zinc and especially coal and rich hematite iron-ore. In the western division of the county there are a great many blast-furnaces, and works for the manufacture of steel and finished iron. The principal crops raised are oats, barley, wheat and turnips, but the bulk of the enclosed lands is sown in clover and grass. The rearing of cattle and sheep and dairy farming are engaged in to a considerable extent. Carlisle is the county town; the other principal towns are the seaports Whitehaven, Workington and Maryport; and the inland towns Penrith, Cockermouth and Keswick. Pop. (1911) 265,780.

Cumberland, a town of Providence Co., Rhode Island, in the northeast of the State. It manu-

Cumberland

factures cotton, horseshoes, etc., and is in a mineral-bearing region. Pop. 10,107.

Cumberland, a city, the capital of Allegheny County, Maryland, on the Potomac, 179 miles by rail from Baltimore. It is on the edge of the great coal basin of the same name, and iron is also largely worked in the vicinity, while there are extensive iron and other manufactures. Pop. 21,839.

Cumberland, a river of the United States which runs through Kentucky and Tennessee into the Ohio, having a course of about 600 miles, navigable for steamboats to Nashville, near 200 miles.

Cumberland, **RICHARD**, a notable dramatic writer, born at Cambridge, England, in 1732. After studying at Westminster and Cambridge he became private secretary to Lord Halifax, who bestowed on him a few years later a clerkship of reports in the office of trade and plantations. After one or two failures in writing for the stage, his *West Indian*, brought out by Garrick in 1771, proved eminently successful, and it was followed by the less popular *Fashionable Lover*, *The Cholerick Man*, *The Note of Hand* and *The Battle of Hastings*. In 1775 he became secretary to the board of trade, and in 1780 was employed on a mission to Lisbon and Madrid, but failing to satisfy the ministry was compelled to retire. In addition he wrote several novels, poems, etc. He also edited the *London Review*. He died in 1811.

Cumberland, **WILLIAM AUGUSTUS, DUKE OF**, second son of George II of England, born in 1721. At the battle of Dettingen he was wounded when fighting at the side of his father, and though unsuccessful at Fontenoy, where he had the command of the allied army, he rose in reputation by somewhat brutally subduing the insurrection in Scotland caused by the landing of Charles Edward Stuart in 1745. In 1747 Cumberland was defeated by Marshal Saxe at Lafeld, and in 1757 he lost the battle of Hastenbeck, against D'Estrées, and concluded the convention at Closterseven, by which 40,000 English soldiers were disarmed and disbanded, and Hanover placed at the mercy of the French. He then retired in disgrace from his public offices, and took no active part in affairs. He died in 1765.

Cumberland Gap, a narrow pass, age about 500 feet wide through the Cumberland Mountains between Kentucky and Tennessee and at the western extremity of Virginia.

It was the scene of important military incidents during the Civil war.

Cumberland Mountains, in Tennessee, part of a range of the Appalachian system, rarely exceeding 2000 feet in height.

Cumberland Presbyterians, a small American sect, so named from their origin in Cumberland County, Tennessee, founded early in the nineteenth century, and holding Calvinistic doctrines, except regarding predestination. They have about 1500 churches, with 100,000 members, including 18,000 colored membership.

Cumbrae, or **CUMBRAY** (kum-brā'), the GREATER and LESSER, two Scottish islands in the Firth of Clyde, belonging to the county of Bute. They are both small, the only town being Millport, a seaside resort.

Cumbria (kum'bri-a), an ancient British principality, comprising, besides part of Cumberland, the Scotch districts Galloway, Kyle, Carrick, Cunningham and Strathclyde, its capital being Alclud or Dumbarton. It was possibly at one time the chief seat of the (legendary) kingdom of Arthur, and in the sixth century was an important and powerful kingdom. It speedily, however, fell under Saxon domination, and early in the eleventh century was given by Edmund of Wessex to Malcolm of Scotland to be held as a fief of the crown of England. The name still survives in Cumberland.

Cumbrian Mountains (kum'-bri-an), a range of hills in England, occupying parts of the counties of Cumberland, Westmoreland, and North Lancashire. The mountains rise with steep acclivities, enclosing in some parts narrow but well-cultivated valleys, with numerous picturesque lakes, this being the English 'Lake Country' so much frequented by tourists.

Cumin, or **CUM'MIN** (kum'in), an umbelliferous plant (*Cuminum Cymīnum*) which grows wild in Egypt and Syria, and is largely cultivated in Sicily and Malta, whence it is exported. The fruit, called cumin seeds, is of a light-brown color, with an aromatic smell and caraway-like taste, and possesses stimulating and carminative properties.

Cumming (kum'ing). **JOHN**, born in 1810 at Aberdeen, where he graduated. At the age of twenty-two he became minister of the Scotch Church, Crown Court, Covent Garden, London, where he labored for half a century, publishing during that period

Cumming

over two hundred works. He had a high reputation as an orator, but he was most widely known latterly in connection with his prophecies of the speedy coming of the end of all things. His most popular works were: *The Great Tribulation*, *The Redemption Draweth Nigh*, *Apocalyptic Sketches* and *Voices of the Night*. Died in 1881.

Cumming, ROUALEYN GEORGE GORDON, the 'Lion-hunter,' a Scottish sportsman and writer, born in 1820; died at Fort Augustus, in Scotland, in 1866. He entered the army, served some years in India, joined the Cape Rifles, and from 1843 till 1849 made five hunting expeditions into various parts of Africa. Records of his adventures are to be found in his *Five Years of a Hunter's Life* (1850), and the *Lion Hunter of South Africa* (1856).

Cummins, (kum'ins), ALBERT BAIRD, American legislator, born in Carmichaels, Pa., in 1850. He was governor of Iowa, 1902-08; elected U. S. Senator (Republican) in 1908 to succeed W. B. Allison, and reelected in 1909.

Cumulative Vote (kūm'ū - la-tiv), the system by which every voter is entitled to as many votes as there are persons to be elected, and may give them all to one candidate, or may distribute them among the candidates, as he thinks fit. The principle was first introduced into Britain by the Elementary Education Act of 1870, and has been applied on school board, and later in parliamentary elections. It has been advocated for many years in the United States and has been employed to a minor extent in Illinois and Michigan. The supreme court of Michigan pronounced it constitutional in 1891.

Cumyn (kum'in), COMYN, or CUMMING, a family whose name appears frequently in the early history of England and Scotland. It had its original possessions near the town of Comines in France, and from one of the branches sprang the historian Philip de Comines. The English Comyns came over with William the Conqueror, and Robert Comyn was sent by William to reduce the northern provinces. His nephew became chancellor of Scotland about 1133, and in the middle of the thirteenth century the family counted among its members four Scottish earls. In the beginning of the fourteenth century it was almost annihilated by Robert Bruce, who slew the son of its head (the Lord of Badenoch) in Dumfries. The Comyns who escaped settled down in

the English court, and established important connections. See *Comyn*.

Cundinamarca (kōn-di-na-mär'ka), one of the departments of the Republic of Colombia. Area, estimated 79,810 square miles; pop. 537,658.

Cundurango (kun-du-ran'go), the name given in Ecuador to a plant found in Loya province. It is also found in Colombia and is claimed to be useful in the cure of cancer, scrofula and other blood diseases. Its virtues are said to have been discovered by accident, an Indian woman administering it to her husband, who was suffering from internal cancer. Her purpose was to poison him and put him out of his misery, but instead of dying he became quite cured. Despite this story, however, the actual value of the plant is in question.

Cuneiform Writing (kū-nē'i-form; Lat. *cuneus*, a wedge, and *forma*, a shape), the name applied to the wedge-shaped characters of the inscriptions on old Babylonian and Persian monuments; sometimes also described as *arrow-headed* or *nail-headed* characters. They appear to have been originally of the nature of hieroglyphs,

Part of a Babylonian Brick Bearing Cuneiform Writing.

and to have been invented by the primitive Accadian inhabitants of Babylonia (a probable Turanian race), from whom they were borrowed with considerable modification by the subsequent Babylonians and Assyrians, who were Semites by race and spoke an entirely different language. The use of the character, however, ceased shortly after the reign of Alexander the Great; and after the lapse of nearly two thousand years it was doubted by many if the signs had ever had an intelligible meaning. They were even regarded by some as the work of a species of worm, by others as mere talismanic signs, astrological symbols and the like. The first hints towards decipherment were given by Karstens Niebuhr late in the eighteenth century; and the labors of Grotefend, Rask, Burnouf, Lassen, Rawlinson and other investigators slowly perfected the means of translation. Most of the inscriptions

first discovered were in three different languages and as many varieties of cuneiform writing, the most prominent, and at the same time the simplest and latest, being the Persian cuneiform writing with about sixty letters. Next older in time and much more complex is what is designated the Assyrian or Babylonian system of writing, consisting of from 600 to 700 characters, partly alphabetic, partly syllabic, or representing sound groups. Finally comes the Accadian inscriptions, the oldest of all, originally proceeding from a people who had reached a considerable degree of civilization more than four thousand years before Christ, and whose language (allied to Turkish) ceased to be a living tongue about 1700 B.C. The most celebrated trilingual inscription is that at Behistun, in Persia, cut upon the face of a rock 1700 feet high, and recording a portion of the history of Darius. The British Museum contains many thousands of inscribed clay tablets, cylinders, prisms, etc., the decipherment of which is in progress. Many have also been collected by American investigators, and the University of Pennsylvania has a rich collection of inscriptions. See also *Assyria*.

Cunene (ku-nē'ne), a river of South Africa, which enters the Atlantic after forming the boundary between the Portuguese and German territories there.

Cuneo. See *Coni*.

Cunningham (k u n' i n g- h a m), the northern and most fertile district of Ayrshire, Scotland.

Cunningham, ALLAN, poet, born in 1785, at Blackwood in Dumfriesshire, Scotland; apprenticed in his eleventh year to a stonemason. Having been employed by Cromek to collect materials for his *Remains of Nithsdale and Galloway Song*, he sent instead his own productions, which were printed, but quickly recognized as being forgeries. He then proceeded to London, where he at first supported himself by journalism, but afterwards obtained a situation in the studio of Chantrey, with whom he remained till his death. His later works comprise the drama of *Sir Marmaduke Maxwell*; the novels of *Paul Jones* and *Sir Michael Scott*; the *Songs of Scotland*; his *British Painters, Sculptors, and Architects* (1829); and lives of Burns and Mary, Queen of Scots. He died at London in 1842.—His son PETER (1816-69) is also known as the author of a series of works, including *The*

Story of Nell Gwynne, *Life of Drummond of Hawthornden*, *Modern London*, *Life of Inigo Jones*, etc. He also edited *Walpole's Letters*, *Goldsmith's Works*, etc., and contributed to many periodicals and magazines.

Cunningham, WILLIAM, Scottish divine, famous for rousing speeches and pamphlets; born in 1805; died in 1861. He visited the United States in 1843 to collect information with regard to theological institutions.

Cupel (kū'pel), a small, shallow, porous, cup-like vessel, used in assays, to separate the precious metals from their alloys. See *Assaying*.

Cupid (kū'pid; Lat. *Cupido*), the god of love; corresponding with the Greek Erōs. He is represented as a winged infant, naked, armed with a bow and a quiver full of arrows.

Cupola (kū'pō-la), in architecture, a spherical vault on the top of an edifice; a dome or the round top of a dome. The Italian word *eupola* signifies a hemispherical roof which covers a circular building, like the Pantheon at Rome and the Round Temple of Vesta at Tivoli. The term is also applied distinctively to the concave interior as opposed to the dome forming its exterior. See *Dome*.

Cupping (kup'ing), a surgical operation consisting in the application of the cupping-glass in cases where it is desirable to abstract blood from, or draw it to, a particular part. When blood is removed the operation is termed *cupping* or *wet-cupping*; when no blood is drawn, it is *dry-cupping*. The cupping-glass, a cup-shaped glass vessel, is first held over the flame of a spirit-lamp, by which means the included air is rarefied. In this state it is applied to the skin, and as the heated air cools it contracts and produces a partial vacuum, so that the skin and integuments are drawn up slightly into the glass and become swollen. If blood is to be drawn, a scarificator or spring-lancet is generally used.

Cupressus. See *Cypress*.

Cupuliferæ (kū-pū-lif'e-rē), a botanical order, so named from the peculiar husk or cup (*cupule*) in which the fruit is enclosed. They are trees or shrubs, inhabiting chiefly the temperate parts of the northern hemisphere, and common in Europe, Asia and North America. The chief genera are the oak, chestnut, beech and hazel.

Cur, the name loosely given to any worthless dog of mongrel breed,

but applied more strictly to a cross between the sheep-dog and terrier.

Curaçao (kō-rā-sā'ō'), an island of the Dutch West Indies, in the Caribbean Sea, 46 miles N. of the coast of Venezuela; 36 miles long and 8 miles broad; capital Willemstad, principal harbor Santa Anna. It is hilly, wild and barren, with a hot, dry climate. Yellow fever has visited it every sixth or seventh year. Fresh water is scarce, and serious droughts occur. The tamarind, cocoa-palm, banana and other useful trees are reared—among them three varieties of orange, from one of which the Curaçao liqueur is made. Sugar, tobacco, cochineal and maize are also produced, but the staple exports are salt, and a valuable phosphate of lime used as a manure in its natural state, or made to yield valuable superphosphates. The islands of Curaçao, Bonaire, Oruba (or Aruba), the Little Curaçao form a Dutch government, the residence of the governor being at Willemstad. From the sixteenth century Curaçao was held in succession by the Spaniards, Dutch and British, and finally ceded to Holland at the general peace in 1814. Pop. 29,718; including the dependencies, about 50,000.

Curaçao, or CURAÇOA, a liqueur or cordial prepared from a peculiar kind of bitter orange growing in Curaçao, which has a persistent aromatic odor and taste. It is prepared from the yellow part of the rind, which is steeped in strong alcohol, the infusion being afterwards distilled and rectified and mixed with syrup. For the true orange, the common bitter orange of Europe is often substituted, and the genuine deep-yellow color imitated by caramel, etc.

Curari (kō'rā-ri), CU'RARA, URARA, WOORALI, the well-known arrow-poison used by the Indians of Spanish Guiana and of Northern Brazil. It is the aqueous extract of a tree, the *Strychnos toxifera*, thickened with mucilaginous matter; and its properties are such that if introduced into a scratch or puncture of the skin, so as to mix with the blood, it causes death by paralysis of the nerves of the respiratory organs. It may, however, be introduced in moderate doses into the alimentary canal without injury, and animals killed by it are wholesome as food. The active principle is called *curarin*.

Curassow (kū-ras'sō), or Hocco, the name given to gallinaceous birds of the genus *Crax*, family Cracidae; natives of the warm parts of America. The crested curassow (*Crax alector*), found in Guiana, Mexico and Bra-

zil, is a handsome bird, nearly as large as the turkey and more imposing in appearance, being of a dark-violet color, with a purplish-green gloss above and

Crested Curassow (*Crax alector*).

on the breast; the abdomen is snow white, and the crest golden. Another species is the red curassow (*Crax rubra*), also a native of South America, and about the size of a turkey. The cushew-bird (*Urax pauxi*) is called the galeated curassow.

Curate (kū'rāt), properly an incumbent who has the care of souls; now generally restricted to signify the substitute or assistant of the actual incumbent. In the Church of England curacies are either *stipendary* or *perpetual*. A stipendiary curate is one who is hired by the rector or vicar to serve for him and may be removed at pleasure; a perpetual curate is one who is not dependent on the rector, but is supported by a part of the tithes or otherwise. By English law the lowest stipend to be paid to a curate is £80, the sum rising, in proportion to the population of the cure, to £150 as a maximum.

Curator (kū-rā'tur), in civil law, the guardian of a minor who has attained the age of fourteen, of persons under various disabilities, or of the estate of deceased or absent persons and insolvents.—In learned institutions the person who has charge of the library or collections of natural history, etc., is often called the curator.

Curb, the general term for a hard and callous swelling on various parts of a horse's leg, as the hinder part of the hock, the inside of the hoof, beneath the elbow of the hoof, etc.

Curb-roof, in architecture, a roof in which the rafters, instead of continuing straight down from the ridge to the walls, are at a given height received on plates, which in their turn are supported by rafters less in-

clined to the horizon, so that this kind of roof presents a bent appearance, whence its name. Called also a *Mansard roof*, from the name of its inventor.

Curb-sender, an automatic signaling apparatus invented by Sir W. Thomson of Glasgow and Prof. Fleeming Jenkin of Edinburgh, and used in submarine telegraphy. The message is punched on a paper ribbon, which is then passed through the transmitting apparatus by clockwork. The name is due to the fact that when a current of one kind of electricity is sent by the instrument another of the opposite kind is sent immediately after to curb the first, the effect of the second transmission being to make the indication produced by the first sharp and distinct, instead of slow and uncertain.

Curcas. See *Physic-nut*.

Curculionidæ (kur-kū-li-on'i-dē), the weevils or snout-beetles, one of the most extensive families of coleopterous insects. See *Weevil*.

Curcuma (kur'kū-ma), a genus of plants of the ginger family, of which *C. longa* yields *tumeric*, *C. zedoaria*, zedoary.

Curd. See *Cheese* and *Milk*.

Curfew (kur'fū; Fr. *couvre-feu*, cover fire), a practice originated in England by William the Conqueror, who directed that at the ringing of the bell at eight o'clock all fires and lights should be extinguished. The law was repealed by Henry I in 1100, but the bell continued to be rung in many districts to modern times and probably may still be heard. The same was also given

Curfew for Fire.—Demin's Encyc. des Beaux Arts.

formerly to a domestic utensil for covering up a fire. In the United States an ordinance establishing a curfew, with the purpose of keeping young people off the streets, has existed in Salem, Massachusetts, since Puritan days. Similar ordinances have of late been adopted in other cities, in general providing that children under 15 shall not frequent the streets after 9 o'clock in summer and 8 in winter.

Curia (kū'ri-a). PAPAL, in its stricter sense the authorities which administer the papal primacy; in its com-

mon wider use all the authorities and functionaries forming the papal court. The different branches of the curia having respect to church government are the sacred congregation of cardinals, the secretariat of state, and the vicariate of Rome, the machinery employed being supplied by the chancery, the dataria, and the camera apostolica. As 'supreme judge' in Christendom the pope acts through special congregations and delegated judges, or through the regular tribunals of the rota and signatura, and the penitenziaria. The institution of the papal chapel and the household of the pope (*famiglia pontifica*) are also classed as departments of the curia; and finally the functionaries maintaining the external relation of the pope—legates, nuncios, apostolic delegates, etc. Formerly the curia included besides these the mechanism and functions of secular administration.

Curiatii. See *Horatii*.

Curico (kū-ri-kō), a town of Chile, capital of province of same name. Pop. 14,577. Area of province, 2978 sq. miles; pop. 119,811.

Curie (kü-rē), PIERRE, physicist and chemist, born near Paris, 1859. He aided his wife, Marie (born in Poland in 1867), in the analytical study of pitchblende, through which, in 1898, the remarkable element radium was discovered. Only the bromide of this was known until 1910, when Madame Curie succeeded in isolating the metal. He was killed accidentally in Paris, April 19, 1906, and Madame Curie was elected to succeed him as professor.

Curie, MARIE. See *Radium* and previous article.

Curitiba (kö-ri-tē'ba), a town of S. Brazil, capital of the province of Paraná, connected by railway with the port of Paranagua. Pop. 24,553.

Curlew (kur'lū; *Numenius*), a genus of birds belonging to the order Gallatores, or Waders, and of the same family (*Scolopacidæ*) as the snipe and woodcock. The genus is characterized by a very long, slender and arcuated bill, tall and partly naked legs, and a short, somewhat rounded tail. The bill is more or less covered with a soft, sensitive skin by which the bird is enabled to detect its food in the mud. Two species of curlew inhabit the British Isles, the curlew proper, called in Scotland the 'whaup' (*Numenius arquata*), and the whimbrel (*N. phæopus*). They feed on various worms, small fishes, insects and molluscous animals, and are very shy, wary birds. Three species of

Curling

curlew are inhabitants of America—the long-billed curlew (*N. longirostris*), about 29 inches long, with a bill 7 to 9 inches in length; the Hudsonian, or short-billed curlew (*N. Hudsonicus*); and the Esquimaux curlew (*N. borealis*).

Curling (kur'ling), a favorite Scottish winter amusement on the ice, in which contending parties slide large smooth stones having somewhat the shape of a flattened hemisphere, weighing from 30 to 45 lbs. each, with an iron or wooden handle at the top, from one mark to another. The space within which the stones move is called the *rink*, and the hole or mark at each end the *tee*. The length of the rink from tee to tee varies from 35 to 50 yards. The players are arranged in two parties, each headed by a *skip* or direc-

Curling Rink. T, Tee. B B, Rings round Tee called the Trough. F, Footboard. H, Hog-score.

tor. The number of players upon a rink is eight or sixteen—eight when the players use two stones each, and sixteen when they use one stone each. There may be one or more rinks according to the number of curlers. The object of the player is to play his stone as near to the mark as possible, to guard that of his partner which has been well laid before, or to strike off that of his antagonist. When the stones on both sides have been all played the stone nearest the tee counts one, and if the second, third, fourth, etc., belong to the same side, each counts one more, the number played for being generally twenty-one. If a player's stone does not cross a line, called the *hog-score*, at some distance in front of the tee his shot goes for nothing and the stone is removed from the rink. The set matches are termed *bonspiels*. The game is now played in England, Canada, and elsewhere.

Curran (kur'an), JOHN PHILPOT, an Irish advocate and orator, born at Newmarket, near Cork, in 1750. He was educated at Trinity College, Dublin, went to London, was called to the bar, and during the administration of the Duke of Portland was raised to the bench. In 1784 he was chosen a member of the Irish House of Commons. His eloquence, wit and ability soon made him the most popular advocate of his age and country. On a change of

ministry during the vice-royalty of the Duke of Bedford his patriotism was rewarded with the office of master of the rolls, which he held till 1814, when he retired with a pension of £3000 a year. He died at Brompton in 1817. A collection of his forensic speeches was published in 1805.

Currant (kur'ant), the name of two well-known shrubs, order Grossulariaceæ, cultivated in gardens for their fruit. The red currant, *Ribes rubrum*, the fruit of which is used principally for tarts and jellies, is a native of Southern Europe, Asia and North America. The white currant is a cultivated variety of the red, and is used chiefly for dessert and for conversion into wine. The black currant, *R. nigrum*, a native to most parts of Europe, and found abundantly in Russia and Siberia, is used for tarts

and puddings and for a fine jelly recommended in cases of sore throat. Many species are indigenous in America, one of them the ornamental *Ribes aureum*, which produces a fine berry. In Australia the name is given to *Leucopogon Richci*, one of the Epacridaceæ, and in Tasmania to certain species of *Coprosma*, of the nat. order Cinchonaceæ. The Indian currant of America is the snow-berry, *Symphoricarpus racemösus*. See also *Currants*, where the origin of the name is given.

Currants (from *Corinth*, being brought from the adjoining parts of Greece), a small kind of dried grape imported from the Levant, chiefly from the vicinity of Patras in the Morea, and also from Zante, Cephalonia and Ithaca, of which islands they are the staple produce. The plant is delicate and the crop precarious, and as the plantation must be six or seven years old before it bears, its cultivation requires a great outlay of capital. After being dried the currants are exported in large butts. They are now also a product of California.

Currant Wine, a wine made of the juice of the white or red currant (preferably the former). A pint of water is added to every four pints of berries and afterwards a pound and a half of sugar to each pint, a little spirits being mixed in the liquor before

it is set aside to ferment. Fermentation requires several weeks, and the wine is not fit for use for some months. For black-currant wine the berries are first put over the fire and heated to the boiling point in as small a quantity of water as possible.

Currency (kur'en-si), any medium of exchange by which the processes of trade are facilitated. Originally all exchanges may be supposed to have been made directly by barter, one commodity being exchanged for another according to the convenience of the particular holders. In barter, however, it would obviously often be difficult to find two persons whose disposable goods suited each other's needs, and there would also arise difficulties in the way of estimating the terms of exchange between unlike things, and of subdividing many kinds of goods in the barter of objects of different value. To obviate these some special commodities in general esteem and demand would be chosen as a medium of exchange and common measure of value, the selection varying with the conditions of social life. In the hunting state furs and skins have been employed by many nations; in the pastoral state sheep and cattle are the chief negotiable property. Articles of ornament, corn, nuts, olive oil, and other vegetable products, cotton cloth, straw mats, salt, cubes of gum, bees'-wax, etc., have all been at various times employed to facilitate exchange. These, however, while removing some of the difficulties attendant upon barter, would only partially solve others. It would be felt by degrees that any satisfactory medium must not only possess utility and value, but it must be portable, not easily destructible, homogeneous, readily divisible, stable in value, and cognizable without great difficulty. The metals would naturally commend themselves as best satisfying these requirements, and accordingly in all historical ages gold, silver, copper, tin, lead and iron have been the most frequent materials of currency. The primitive method of circulating them appears to have consisted simply in buying and selling them against other commodities by a rough estimation of the weight or size of the portions of metal. Sometimes the metal was in its native state (*e. g.*, rough copper or alluvial gold dust), at others in the form of bars or spikes, the first approximation to a coinage being probably rudely shaped rings. The earliest money was stamped on one side only, and rather of the nature of stamped ingots than coins

as we know them. The chief desiderata influencing the subsequent development of coinage were the prevention of counterfeiting, the prevention of any fraudulent subtraction of metal from the coin, the removal as far as possible of anything likely to occasion loss of metal in the wear and tear of usage, and the production of an artistic and historical monument of the state issuing the coin. Hence the elaboration of designs to cover the whole of a given portion of metal, and the nicer determination of quality, size, degree of relief, inscription, etc. While, however, metallic money of a guaranteed standard value was at an early period found to facilitate in a high degree the mechanism of exchange, it was speedily discovered that it was possible in large part to replace the standard gold or silver or copper coins by various forms of currency of a representative character. The standard money depended solely for its value in exchange upon the value of the material of which it was composed; its metallic value and its nominal value were coincident; the representative money derived its value from a theoretical convertibility at will into the standard coin. Thus in token coins the metallic value may be much less than the nominal value, which is defined by the fact that they can either by force or law or custom be exchanged in a certain fixed ratio for standard coins. Gradually a series of devices came to be employed to further the interchange of commodities with the least friction, and the least possible actual use of the coinage except as a standard and common denominator of value in terms of which exchanges were made. Even in home transactions, but especially in international transactions, the use of actual specie was found to involve a loss of interest and a risk of still more serious loss, and a paper currency based upon credit offered the readiest solution of the difficulty. In this way bank-notes, bills of exchange, and checks—warrants or representative documents convertible, if desired, into standard coin—took their place alongside the metallic currency, partly displacing it, partly extending and supplementing it.

The requisites of circulation are that the monetary issues, whether of coin or paper, shall be from a recognized or official source, and that they admit of being freely returned when necessary to the source from which they are issued. The certification of the fineness of the masses of metal circulating in a community, and the protection from adulteration and fraud, clearly fall among

the necessary acts of police. It is still argued, as by Herbert Spencer in his *Social Statics*, that the coinage should be left to the ordinary competition of manufacturers and traders; but when this has occurred the currency has uniformly become debased, and it is generally held, in accordance with the maxims of civil and constitutional law, that the right of coining is a prerogative of the state. Even in the case of state issues base money has been circulated, as in England in the reigns of Henry VIII and Edward VI, but the attempt is little likely to be repeated, the last of such debased issues, with the refusal to redeem it at its nominal value, having been made by a petty German prince early in the last century. In the matter of state supervision two precautions are particularly necessary; that the standard coins shall be issued as nearly as possible of the standard weight, and that all coin worn below the least legal weight shall be withdrawn from circulation. The ground for these precautions is to be found in the broad general principle relating to the circulation of money, and known as Gresham's Law, that bad money invariably drives good money out of circulation, the heaviest coins being selected for exporting, hoarding, melting, conversion into jewelry, gold-leaf, etc. The law holds good not only with regard to coins in one kind of metal, but to all kinds of money in the same circulation, the relatively cheaper medium of exchange being retained in circulation while the other disappears. Of the various systems of metallic currency, the first adopted was that known as the single-legal-tender system, in which the state issued certified coins in one metal only. It was found, however, that in such cases the people invariably circulated for convenience coins of other metals, and there naturally arose out of this the adoption of a double or multiple legal tender system, in which coins were issued in different metals at a fixed rate of exchange. To obviate difficulties arising from the possession of two or more metals as concurrent standards of value, with the constant tendency of one or other to become more valuable as metal than as currency, a third system, the composite-legal-tender, came into existence, in which coins of one metal were adopted as the standard of value, and token coins only issued in the other metals for the payment of small amounts. The last system is that now prevalent in Great Britain; but the double-legal-tender system, to which the French have long adhered, and which long existed in the

United States, has found an increasing number of advocates for its universal adoption. It was abandoned in the United States in 1900 in favor of gold as the single standard of value. See *Bimetallism*.

The circulation of representative money differs from that of standard metallic money in that it circulates only within the district or country where it is legally or habitually current. In the payment of debts to foreign merchants the only money which can be exported is standard metallic money. Hence Gresham's law holds with regard to paper money, which is, like light and debased coins, capable of driving out standard money. Examples of this are to be found in the suspension of specie payments by the Bank of England between 1797 and 1819, in the history of the French assignats at the time of the revolution, and in the financial history of the American Civil war. The various methods on which the issue of paper money may be conducted are exceedingly numerous and a matter of interminable debate. The state may either constitute itself the sole issuer of representative money on the same lines as it constitutes itself sole issuer of metallic money, or it may allow corporations, companies, or private individuals to issue representative money under legislative control.

The question as to the duty of a government in this respect has been much obscured by the want of a clear apprehension of the distinction between a real and a nominal currency. The doctrine of orthodox English writers on the currency of the absolute convertibility of the bank-note, by which is intended a convertibility provided for by the action of government, is held by some writers to proceed on an altogether exaggerated and inaccurate notion of the functions of a government. Another idea, that the issue of paper money ought to be wholly controlled by government, or ought to rest entirely upon government credit, places a high degree of faith in the trustworthiness of governments, and is held by many to misconceive the nature and objects of a paper currency. See also *Bank and Money*.

Currentometer (k u r-ent-om'e-tér), CURRENT GAUGE, an instrument for measuring the velocity of currents. It may be constructed in various ways, *e.g.*, a simple tube which is bent and has its lower end open to the current, the ascension of water in the vertical part indicating the velocity of the current.

Currents (kur'ents), MARINE, masses of sea-water flowing or moving forward in the manner of a great stream. They are phenomena of the highest importance, both on account of their influence upon the climate of many maritime regions—an influence often reaching far inland—and their practical relation to the art of navigation. These currents are numerous, and taken together constitute an oceanic circulation the intricacy and irregularity of whose form is due to the number and variety of the agencies at work. Among the theories which have been put forward to account for the existence of currents the chief place belongs to the theory of a circuit maintained between equatorial and polar waters. According to this theory there is in either hemisphere an area within which the waters of the ocean are colder, and hence by many degrees denser, than within the belt of the tropics. The natural result is a tendency of the colder and heavier water to sink and to diffuse itself over the lower portion of the ocean-bed, and a movement of the warmer and lighter water in the direction of the surface, over which it tends to become diffused. In other words, the colder waters will move beneath the surface in the direction of the equator, and the warmer waters will flow along the surface in the direction of either pole. Hence, in either half of the globe there are two great and opposite currents—a *cold* current flowing from the pole towards the equator, and a *warm* current flowing from the equator in the direction of the pole. This theory has been excellently illustrated by Dr. Carpenter's experiment, in which a trough of glass filled with water and having a lump of ice at one end and a heated bar of iron at the other exhibits a similar circulation of hot and cold currents. To this theory Sir C. Wyville Thompson opposed a theory of evaporation as the general cause of the movement, holding that in the Antarctic Ocean at least the return of moisture to the south to balance the cold indraught of water that comes from thence takes place in a large measure through the atmosphere. Another great general cause of currents is to be found in the axial rotation of the earth eastward, by which the movement of tropical water towards the pole is deflected eastward, and becomes in the northern hemisphere a northeastwardly current and in the southern a southeastwardly one. Under the operation of the same laws the opposite currents from polar latitudes to the equator are de-

flected in southwesterly and northwesterly directions, respectively. It is to such influences that we may, in the main, attribute the well-known differences between the climates of North America and Europe within correspondent parallels. Other causes, more local in their nature, must be looked for to explain the origin and direction of currents in particular cases. In the case of surface or drift currents, for instance, it is probable that these are largely caused by the action of winds. Thus it is to the constant drift of surface water to the westward under the influence of the trade-wind that the equatorial currents of the Atlantic and Pacific are due. In the case of the Atlantic Ocean the westward-moving waters, encountering the eastward extension of the South American mainland, become of necessity divided into two streams, the one of which sets to the southward along the eastern coast of Brazil, while the other advances along the more northwardly portions of the South American continent, past the outlets of the Amazon and the Orinoco, and thence into the Caribbean Sea. From the latter land-enclosed basin its course is necessarily into the similarly shut-in basin of the Mexican Gulf, whence it finally emerges through the narrow channel of Florida as the well-known gulf stream (which see). In the case of the Pacific Ocean there exists no such unbroken land barrier to the westwardly progress of the equatorial waters. A portion of its equatorial stream, however, is deflected to the northward towards the coasts of Japan (where it forms the well-known Japan stream, setting to the northeastward, past the Kuriles, in the direction of the Aleutian Islands), while another portion turns southwardly in the direction of Australia and New Zealand. To the same action of the winds, operating in connection with the obstacles presented by the land, divergent and counter-currents are due. Thus in the Atlantic and the Pacific there flows between the two equatorial trade-wind currents a counter-current in exactly the opposite direction, and there is a similar counter-current in the Indian Ocean north of its sole trade-wind current. Currents called *indraught currents* are also caused by the flow of water to replace that taken away by currents due to causes already mentioned. An example of this is found on the west coast of Africa, where an indraught current replaces the water blown towards the coast of South America. In the case of inland seas evaporation deter-

mines the direction of the surface currents, the direction being inwards, where, as in the Mediterranean, the evaporation exceeds the inflow of fresh water; and outwards, as in the Baltic and the Black Sea, where there is an opposite state of matters.

Curriculum (ku-rik'ū-lum), originally, in Latin, the course over which the race was run, hence the whole course of study at a university necessary to qualify for a particular degree.

Currie (kur'ri), JAMES, the biographer of Burns and earliest editor of his works, was born in Dumfriesshire in 1756; died in 1805. He tried in succession commerce, journalism and medicine, and in 1780, after completing his studies at Edinburgh, he was appointed assistant surgeon in the army. Disappointed in his hopes of promotion, he settled at Liverpool, where he was made a physician to the infirmary, and increased his reputation by some publications on medicine. Having made an excursion into Scotland in 1792 he had become personally acquainted with Robert Burns, and upon the death of the poet he was induced to become the editor of an edition of his works, to which he added a memoir. By this work a sum of £1400 was raised for Mrs. Burns and her family.

Curry (kur'i), an Eastern condiment, a powder composed of cayenne pepper, coriander, ginger, turmeric, and other strong spices.

Currying (kur'i-ing) is the art of dressing cowhides, calfskins, sealskins, etc., principally for shoes, saddlery, or harness. after they have come from the tanner. In dressing leather for shoes the leather is first soaked in water until it is thoroughly wet; then the flesh side is shaved to a proper surface with a knife of peculiar construction, rectangular in form with two handles and a double edge. The leather is then thrown into the water again, scoured upon a stone till the white substance called *bloom* is forced out, then rubbed with a greasy substance and hung up to dry. When thoroughly dry it is *grained* with a toothed instrument on the flesh side and *bruised* on the grain or hair side for the purpose of softening the leather. A further process of *paring* and *graining* makes it ready for *waxing* or *coloring*, in which oil and lampblack are used on the flesh side. It is then sized, dried and tallowed. In the process the leather is made smooth, lustrous, supple and waterproof.

Cursores (kur-sō'rez), or RUNNERS, an order of birds, which includes the ostrich, rhea, emeu, cassowary and apteryx. The birds of this order are distinguished by their remarkable velocity in running, the rudiment-

MORPHOLOGY OF CURSORES.

A, Sternum of the Ostrich (*Struthio camelus*): s, Scapula; c, Coracoid. B, Side View of the Pelvis of the Ostrich: i, Ilium; p, Pubis; is, Ischium; f, Femur. C, Foot of *Apteryx Australis*. D, Tarso-metatarsus of the *Apteryx*, showing the hallux placed high up on its posterior surface. E, Foot of the *Rhea Americana*.

ary character of their wings, which are too short to be of use for flight, and by the length and strength of their legs. The breast-bone is destitute of the ridge or keel which it possesses in most birds, hence the name *Ratitæ*. (L. *ratis*, a raft).

Curtis (kur'tis), GEORGE WILLIAM, author, born at Providence, Rhode Island, in 1824; died in 1892. In 1851 he published a popular work, *Nile Notes of a Howadji*, and in 1852 *The Howadji in Syria*. Later works were *Lotus Eating*, *The Potiphar Papers*, *Prue and I* and *Trumps*. He became popular as an orator. In 1850 he connected himself with the *New York Tribune*; in 1853 with *Harper's Monthly*. In 1857 he became the editor of *Harper's Weekly*, and of *Harper's Bazar* in 1867. He was an earnest advocate of civil service reform.

Curtius (kurt'se-us), ERNST, a German Hellenist, born in 1814; visited Athens and the Peloponnesus in 1837 to make antiquarian researches; returned to his native country in 1840; appointed tutor to Prince Frederick William; succeeded Hermann as professor at Göttingen in 1856. Of his works, which all relate to Greek antiquities, the best known is the *History of Greece*, which has been published in English. Died in 1896.

Curtius, GEORG, brother of the preceding, a distinguished phil-

ologist, notable for his application of the comparative method to the study of the Greek and Latin languages. He was born at Lübeck in 1820, and in 1862 became professor of classical philology at Leipzig. He died in 1885. Of his works, a *Greek Grammar*, *Principles of Greek Etymology* and *The Greek Verb* have been translated into English.

Curtius (kur'she-us), **METTUS** or **MARCUS**, a noble Roman youth, who, according to the legend, plunged with horse and armor into a chasm which had opened in the forum (B.C. 362), thus devoting himself to death for the good of his country, a soothsayer having declared that the dangerous chasm would only close if what was most precious to Rome were thrown into it.

Curtius Rufus, **QUINTUS**, a Roman writer, author of a *History of Alexander the Great*, in ten books, the first two of which are lost. His style is florid, and his narratives have more of romance than of historical certainty. Nothing certain is known of his life.

Curule Magistrates (kur'öl), in ancient Rome, the highest dignitaries of the state, distinguished from all others by enjoying the privilege of sitting on ivory chairs (*sellæ curules*) when engaged in their public functions. The curule magistrates were the consuls, prætors, censors and chief ædiles, who, to distinguish them from the plebeian ædiles, were called *curule*.

Curve (kurv; Latin, *curvus*, crooked), a line which may be cut by a straight line in more points than one; a line in which no three consecutive points lie in the same direction. The doctrine of curves and of the figures and solids generated from them constitutes what is called the higher geometry, and forms one of the most interesting and important branches of mathematical science. Curve lines are distinguished into algebraical or geometrical and transcendental or mechanical. The varieties of curves are innumerable; that is, they have different degrees of bending or curvature. The curves most generally referred to, besides the circle, are the ellipse, the parabola and the hyperbola, to which may be added the cycloid.

Curwen (kur'wen), **JOHN**, an English musician, the chief promoter of the tonic sol-fa method of teaching to sing, was born November 14, 1816. He became a minister of the Independent Church, and became acquainted with Miss Glover's sol-fa system while visiting that lady's school at Norwich. Af-

ter that he devoted much of his time to bringing the new method before the public by lectures, publications, and the establishment of a tonic sol-fa association and college. He died May 26, 1880.

Curzola (kur'dzō-la), the most beautiful of the Dalmatian Islands, in the Adriatic, stretching W. to E. about 25 miles, with an average breadth of 4 miles; area, 85 square miles. It is covered in many places with magnificent timber. The fisheries are very productive. It contains a town of the same name. Pop. 17,377.

Cusco (kös'kō). See *Cuzco*.

Cusco-bark, **CUZCO-BARK**, the bark of *Cinchona pubescens*, which comes from Cuzco, in South America, and is exported from Arequipa. It contains a peculiar alkaloid called cusco-cinchonine or cusconine, which resembles cinchonine in its physical qualities, but differs from it in its chemical properties. When applied medicinally it excites warmth in the system, and has therefore been recommended in cold intermittents.

Cushing (kush'ing), **CALEB**, statesman and diplomatist, was born at Salisbury, Massachusetts, in 1800; died in 1879. He studied law and was admitted to the bar in 1823, visiting Europe soon after and publishing *Reminiscences of Spain*, and *Historical and Political Review of the Revolution in France*. He served in Congress 1835-43; was appointed secretary of the treasury in 1843, but not confirmed by the Senate; in 1844 negotiated the first treaty of the United States with China, and in 1847 took part in the Mexican war, rising in rank to brigadier-general. In 1852 he was made a justice of the Supreme Court of Massachusetts; was Attorney-General of the United States 1853-57; in 1872 was United States counsel at Geneva in the Alabama Claims arbitration; in 1873 was minister to Spain, and in 1874 was nominated by President Grant Chief Justice of the United States Supreme Court, but was not confirmed.

Cushing, **FRANK HAMILTON**, ethnologist, was born at Northeast, Pennsylvania, in 1857. In 1875 he was engaged by Professor Baird to make collections of Indian relics for the National Museum, and in 1879 accompanied Major Powell's expedition to New Mexico, and here for six years dwelt in a village of the Zuñi Indians, learning their language and traditions and gaining initiation into their secret religious ceremonies. His researches among the ancient ruins in this region were of great importance. In 1895 he discovered re-

mains of a sea-dwelling people on the Gulf coast of Florida. Died in 1900.

Cushing (kush'ing), WILLIAM BAR-KER, naval officer, was born at Delafield, Wisconsin, in 1843; died in 1874. He was appointed to the Naval Academy in 1857, but resigned the next year, and on the outbreak of the Civil war entered the service as a volunteer officer. He distinguished himself by gallant service during the war, and especially by his brilliant and daring exploit of blowing up the Confederate ironclad *Albermarle* while at anchor at Plymouth, North Carolina, in 1864. After the war he served in the Pacific and Asiatic squadrons, reaching the rank of commander.

Cushman (kush'man), CHARLOTTE S., actress, was born at Boston, Massachusetts, in 1816; died in 1876. Her first theatrical appearance was in opera at the Tremont Theater, Boston, but her reputation was gained in the drama, her first appearance in tragedy being as Lady Macbeth in 1855. She showed great power in this field, especially in Shakesperean characters, and for many years was a favorite on the American stage. She also manifested high ability as a dramatic reader.

Cusp (kusp), the point at which two converging curves meet and have a common tangent. Such points are numerous in architecture in the internal curvings of trefoils, heads of Gothic windows, etc. In the decorated and

Architectural Cusps.—1, Henry VII's Chapel. 2, Monument of Sir James Douglas, Douglas Church. 3, Beauchamp Chapel, Warwick.

perpendicular styles the cusps, in addition to leaves, flowers, etc., were frequently ornamented with heads or animals. In the Romanesque and Norman styles they were often ornamented with a small cylinder which bore a flower or similar device.

Cusparia Bark (kus-pa'ri-a), the bark of the *Galepea Cusparia*, and some other species. See *Angostura Bark*.

Cusso (kus'sō; *Hagenia Abyssinica*), a small Abyssinian tree, order Rosaceæ, yielding flowers which are imported into Europe and used as an anthelmintic.

Custard (kus'tard), a composition of milk or cream and eggs, sweetened with sugar and variously flavored; cooked in the oven or stew-pan.

Custer (kus'tēr), GEORGE ARMSTRONG, soldier, was born in Harrison Co., Ohio, in 1839. He was graduated from West Point in 1861, and entered the army as a cavalry officer. He participated in all but one of the battles of the Army of the Potomac, and was notable for dash and daring. After the Civil war he performed arduous service on the frontier. In 1876, while fighting the Sioux Indians, he and his command were attacked by superior numbers and were all killed.

Custodia (kus-tō'di-a), a shrine of precious metal in the shape of a cathedral, in which the host or the relics of a saint are carried in procession on certain solemn occasions.

Custom House (kus'tom), an establishment where commodities are entered for importation or exportation and the duties, bounties, etc., on the same are payable.

Customs (kus'toms), duties charged upon goods exported from or imported into a state. In Great Britain the articles now subject to duty are comparatively few in number, and of these spirits, wine and tobacco furnish two-thirds of the whole revenue from customs. In the United States and many other countries customs duties are levied on the great majority of articles of import, and largely with the view of aiding home manufacture by increasing the cost of the imported article.

Cutch. See *Catechu*.

Cutch (kuch), a state in the west of India, lying to the south of Sind, under British protection; area, 7616 sq. miles. During the rainy season it is wholly insulated by water, the vast salt morass of the Rann separating it on the north and east from Sind and the guicowar's dominions. Its southern side is formed by the Gulf of Cutch, and on the west it has the Arabian Sea. The country is subject to violent volcanic action. The date is the only fruit which thrives, and the principal exports are cotton and horses. The Rann of Cutch covers about 9000 square miles, and is dry during the greater part of the year. Pop. of the state, 488,022.

Cutcherry (kuch'e-ri), in the East Indies, a court of justice or public office.

Cutch Gundava (gun-da'va), a division of Beluchistan, in the northeast; area, 10,000 sq. miles; pop. 100,000.

Cuthbert (kuth'bert), St., a celebrated leader in the early English Church, was born, according to the tradition, near Melrose about 635. He became a monk, and in 664 was appointed prior of Melrose, which after some years he quitted to take a similar charge in the monastery of Lindisfarne. Still seeking a more ascetic life, Cuthbert then retired to the desolate isle of Farne. Here the fame of his holiness attracted many great visitors, and he was at last persuaded to accept the bishopric of Hexham, which he, however, resigned two years after, again retiring to his hermitage in the island of Farne, where he died in 687. The anniversary of his death was a great festival in the English Church.

Cuticle (kū'ti-kl), the epidermis or outermost layer of the skin, a thin, pellucid, insensible membrane that covers and defends the true skin.

Cutis (kū'tis), in anatomy, a dense resisting membrane of a flexible and extensible nature, which forms the general envelope of the body; it is next below the cuticle, and is often called the true skin.

Cutlass (kut'las), a short sword used by seamen. A guard over the hand is an advantage. It is, if well understood, a very effectual weapon in close contact; on account of its shortness it can be handled easily, and yet is long enough to protect a skilful swordsman.

Cutlery (kut'ler-i), is a term applied to all cutting instruments made of steel. The finer articles, such as the best scissors, penknives, razors and lancets are made of cast-steel. Table-knives, plane-irons, and chisels of a very superior kind are made of shear-steel, while common steel is wrought up into ordinary cutlery. One of the commonest articles of cutlery, a razor, is made as follows:—The workman, being furnished with a bar of cast-steel, forges his blade from it. After being brought into true shape by filing, the blade is exposed to a cherry-red heat and instantly quenched in cold water. The blade is then tempered by first brightening one side and then heating it over a fire free from flame and smoke, until the bright surface acquires a straw color (or it may be tempered differently). It is again

quenched, and is then ready for being ground and polished.

Cuttack (kut'tak), a town of Hindustan, in Orissa, on the right bank of the Mahanuddy, 60 miles from its embouchure and 230 s. s. w. Calcutta. It has little trade, and is known mainly for its beautiful filigree work in gold and silver. Pop. 51,364. The district of Cuttack has an area of 3654 sq. miles. It is well watered, and rice, pulse, sugar, spices, dyestuffs, etc., are grown along the coast, which is low and marshy, and wheat and maize in the hill regions. On the coast salt is extensively manufactured. Pop. 2,062,758.

Cutter (kut'er), a small vessel, furnished with one mast, and a straight running bowsprit which may be run in upon deck. It differs from the sloop in having no stay to support its jib.

Cuttle-bone (kut'l), the dorsal plate of *Sepia officinalis*, formerly much used in medicine as an absorbent, but now used for polishing wood, painting, varnishing, etc., as also for pounce and tooth-powder, and for canary-birds on which to sharpen their beaks.

Cuttle-fish. See *Cephalopoda*, *Squid* and *Sepia*.

Cutty-stool (kut'i), a low stool, the stool of repentance, a seat formerly set apart in Presbyterian churches in Scotland, on which offenders against chastity were exhibited before the congregation and submitted to the minister's rebukes before they were readmitted to church privileges.

Cutwater, the sharp part of the bow of a ship, so called because it cuts or divides the water.

Cutworm, any worm or grub which is destructive to cultivated plants, as cabbage, corn, beans, etc.

Cuvier (küv-yā), GEORGES LÉOPOLD CHRÉTIEN FRÉDÉRIC DAGO-BERT, BARON, a distinguished modern naturalist, was born in August, 1769, at Montbéliard, then belonging to the duchy of Würtemberg. After studying at Stuttgart he became a private tutor in the family of Count d'Héricy, in Normandy, where he was at liberty to devote his leisure to natural science, and in particular to zoology. A natural classification of the vermes or worms was his first labor. The ability and knowledge shown in this work procured him the friendship of the greatest naturalists of France. He was invited to Paris, established at a central school there, and was received by the Institute as a member of the first class. His lectures on natural history, distinguished not less for the elegance of

their style than for profound knowledge and elevated speculation, were attended by all the accomplished society of Paris. In January, 1800, he was appointed to the Collège de France. Under Napoleon, who fully recognized his merits, Cuvier held important offices in the department of public instruction. In 1819 he was received among the forty members of the French Academy. He died at Paris in 1832. Among the numerous works by which he greatly extended the study of natural history we may mention *Recherches sur les Ossements Fossiles; Discours sur les Révolutions de la Surface de la Globe; Leçons d'Anatomie Comparée; Histoire Naturelle des Poissons; Le Règne Animal*, the last a general view of the animal kingdom, in which all animals were divided into the four great classes; Vertebrata, Mollusca, Articulata and Radiata.—His brother FRÉDÉRIC (1773-1838) was also a naturalist of no mean order.

Cuxhaven (kuks'hāvn), a German seaport, bathing-place, and pilot station in Hamburg territory, at the mouth of the river Elbe. The harbor is large and commodious, and there are shipyards, a lighthouse, an old castle, fortifications, etc. Pop. 6906.

Cuyabá (kō-yā-bä'), or JESUS DE CUYABA, a town of Brazil, capital of Matto Grosso, on the river Cuyaba, nearly 300 miles above its entrance into Paraguay. Pop. 17,815. There are rich gold-mines in the district.

Cuyp (koip), ALBERT. See KUYP.

Cuzco (kōz'kō), an ancient city in Peru, capital of a department of the same name, is situated in a wide valley about 11,300 feet above sea-level, between the Apurimac and Urubamba. The houses are built of stone, covered with red tiles, and are many of them of the era of the Incas. The ruins of the fortress built by the Incas, a stupendous specimen of cyclopean architecture, are still to be seen, as well as other massive specimens of ancient Peruvian architecture. The inhabitants manufacture sugar, soap, cotton and woolen goods, etc. There is a university, a cathedral, etc. Cuzco is the most ancient of the Peruvian cities, and was at one time the capital of the empire of the Incas. In 1534 it was taken by Pizarro. Pop. about 30,000. Area of the department, about 156,317 sq. miles; pop. 328,980.

Cyamus (sī'a-mus), a genus of Crustacea, the species of which are parasites on the whale. They are called *Whale-lice*.

Cyanic Series (sī-an'ik), in botany, a series of colors in flowers of which blue is the type, passing into red or white, but never into yellow. It is distinguished from the *zanthis* series, of which the type is yellow, passing into red and white, but never into blue.

Cyanide (sī'a-nīd), a binary combination of cyanogen with a metallic base.

Cyanin (sī'a-nin), the blue coloring matter of certain flowers, as of the violet, cornflower, etc. It is extracted from the petals by alcohol.

Cyanite, or KYANITE (sī'a-nit, kī'a-nit), a mineral of the garnet family found both massive and in regular crystals. Its prevailing color is blue, but of varying shades. It is found only in primitive rocks.

Cyanogen (sī-an'o-jen), a compound radical composed of one atom of carbon and one of nitrogen; symbol, CN (or Cy). It is a gas of a strong and peculiar odor, resembling that of crushed peach leaves, and burning with a rich, purple flame. It is irrespirable and highly poisonous. It unites with oxygen, hydrogen, and most non-metallic elements, and also with the metals, forming cyanides. Combined with hydrogen it forms prussic (hydrocyanic) acid. See *Prussic Acid*.

Cyanometer (sī-a-nom'e-tēr; 'measurer of blue') is the name of an instrument invented by Saussure for ascertaining the intensity of color in the sky. It consists of a circular piece of metal or pasteboard, with a band divided by radii into fifty-one portions, each of which is painted with a shade of blue, beginning with the deepest, not distinguishable from black, and decreasing gradually to the lightest, not distinguishable from white. The observer holds this up between himself and the sky, turning it gradually round till he find the tint of the instrument exactly corresponding to the tint of the sky.

Cyanosis (sī-a-nō'sis), a condition in which, from lack of proper aëration, the blood is blue instead of red; hence called the blue disease; the blue jaundice of the ancients. It is sometimes due to malformation of the heart, whereby the venous and arterial currents mingle.

Cyanotype Process (sī-an'ō-tip), a photographic picture obtained by the use of a cyanide. This process is in very common use by architects and engineers for copying plans, producing an image with white lines upon a blue ground. Sensitive paper is made by brushing it over with a solution of ferric oxalate (10 gr. to the

oz.) ; it is then exposed under the positive and treated with a solution of potassium ferricyanide, by which the image is developed. The color of the ground is deepened by subsequent washing with solution of potassium bisulphate.

Cyathea (sī-ath'e-a), a genus of arborescent ferns, order Polypodiaceæ, characterized by having the spores, which are borne on the back of the frond, enclosed in a cup-shaped indusium. There are many species scattered over the tropical regions of the world. *C. medullaris* is a fine New Zealand species of comparatively hardy character. The soft, pulpy medullary substance in the center of the trunk is an article of food, somewhat resembling sago.

Cybele (sib'e-lē), originally a goddess of the Phrygians, like Isis, the symbol of the moon, but later introduced among the Greeks and Romans. Her worship was celebrated with a violent noise of instruments and rambling through fields and woods, and her priests were eunuchs in memory of Atys. (See *Atys*.) In later times she was represented as a matron, with a mural crown on her head, in reference to the improved condition of men arising from agriculture and their union into cities.

Cycadaceæ (sī-ca-dā'se-ē), or CYCADS, (sīkads), a nat. order of gymnospermous plants, resembling palms in their general appearance, and, as a rule, increasing by a single terminal bud. The leaves are large and pinnate, and usually rolled up when in bud like a crozier. The microscopical structure of the wood as well as the general structure of their cones ally them with the conifers. The plants of this order inhabit Indian, Australia, Cape of Good Hope and tropical America. Many are fossil.

Cycas (sī'kas), a genus of plants, type of the Cycadaceæ.

Cyclades (sik'la-dēz), or KYKLADES, the principal group of islands in the Grecian Archipelago now belonging to the kingdom of Greece, so named from lying round the sacred island of Delos in a circle (Gr. *cyclos* or *kuklos*). The largest islands of the group are Andros, Paros, Myconos, Tenos, Naxos, Melos and Thera and Santorin. They are of volcanic formation and generally mountainous. Some are very fertile, producing wine, olive oil and silk; others almost sterile. The inhabitants are excellent sailors. Area 1041 sq. miles. Pop. (1907) 130,378.

Cyclamen (sik'la-men), a genus of bulbous plants, nat. order Primulaceæ, or primroses. The species

are low-growing, herbaceous plants, with very handsome flowers. Several of them are favorite spring-flowering greenhouse plants. An autumnal-flowered species

Cyclamen (garden variety).

(*C. hederæfolium*) has become naturalized in parts of the south of England. The fleshy root-stalks, though acrid, are greedily sought after by swine; hence the vulgar name, *Sowbread*.

Cycle (sī'kl; Gr. *cyclos* or *kuklos*, a circle) is used for every uniformly returning succession of the same events. On such a succession or cycles of years rests all chronology, particularly the calendar. Our common solar year, determined by the periodical return of the sun to the same point in the ecliptic is well known to contain fifty-two weeks and one day, and leap year a day more. Consequently in different years the same day of the year cannot fall upon the same day of the week. And as every fourth year is a leap year, it will take twenty-eight years (4×7) before the days return to their former order according to the Julian calendar. Such a period is called a *solar cycle*. The *cycle of the moon*, or golden number, or metonic cycle, is a period of nineteen years after which the new and full moons return on the same days of the month.

Cyclic Poets (sī'klik). See *Greece (Literature)*.

Cycling (sī'kling), the art of locomotion by means of a machine consisting usually of two, but sometimes of three or four wheels, connected by a light framework of steel and having a seat or seats for one or more riders. It is propelled by the pressure of the rider's feet on two cranks attached to an axle. To the practised cyclist his machine is a rapid and easy mode of traveling, and the rate of twenty miles an hour has been attained both by bicyclists and tricyclists. The most remarkable example of what can

be done by a skilled cyclist is the journey of 12,000 miles performed by Mr. Thomas Stevens across the continents of America, Europe and Asia on a bicycle. Commencing in April, 1884, he crossed first America, then Europe, then Asia, finishing at Yokohama in Japan in December of the same year. Of late some attempts have been made to utilize cycling in the army. Motor cycles, moved by gasoline engines, are coming into common use. See *Bicycle* and *Tricycle*.

Cyclobranchiata (sī'klō-brang-ki-ā'-ta), an order of gasteropods in which the branchiæ or organs of respiration form a fringe around the body of the animal, between the edge of the body and the foot. The order consists principally of the limpets.

Cycloid (sī'klōid; Gr. *cyclos*, circle), a curve generated by a point in the plane of a circle when the circle is rolled along a straight line and kept always in the same plane. The genesis of the common cycloid may be conceived by imagining a nail in the circumference of a carriage-wheel; the curves which the nail describes while the wheel runs forward are cycloids. The cycloid is the curve of swiftest descent; that is, a heavy body descending by the force of its own gravity will move from one point of this curve to any other point in less time than it will take to move in any other curve which can be drawn between these points. Also, a body falls through any arc of an inverted cycloid in the same time whether the arc be great or small. In the figure let the circle of which the

diameter is AB make one revolution upon the straight line ABA, equal in length to its circumference, then the curved line AAA, traced out by that point of the circle which was in contact with the point A in the straight line when the circle began to revolve is called a cycloid. The length of the cycloid is four times the diameter of the generating circle, and its area three times the area of this circle. This line is very important in the higher branches of mechanics.

Cyclometer (sī-klom'e-tēr), an apparatus for measuring and recording the distances traversed by wheeled vehicles and bicycles. It is also used in railroading. It is purely automatic, and by an ingenious attachment

can be made to record and locate every inequality in the roadbed of a railroad. **Cycloid Fishes**, an order of fishes according to the arrangement of Agassiz, having smooth, round, or oval scales, as the salmon and herring. The scales are formed of concentric layers, not covered with enamel and not spinous on the margins; they are generally imbricated, but are sometimes placed side by side without overlapping.

Cyclone (sī'klōn), a circular or rotatory storm or system of winds, varying from 50 to 500 miles in diameter, revolving round a center, which advances at a rate that may be as high as 40 miles an hour, and towards which the winds tend. Cyclones of greatest violence occur within the tropics, and they revolve in opposite directions in the two hemispheres—in the southern with, and in the northern against, the hands of a watch—in consequence of which, and the progression of the center, the strength of the storm in the northern hemisphere is greater on the south of the line of progression and smaller on the north than it would if the center were stationary, the case being reversed in the southern hemisphere. An *anti-cyclone* is a storm of opposite character, the general tendency of the winds in it being away from the center, while it also shifts within comparatively small limits. Cyclones are preceded by a singular calm and a great fall of the barometer.

Cyclopædia (sī-klō-pē'di-a), See *Encyclopædia*.

Cyclopean Works (si-klō'pē-an), in ancient architecture, masonry constructed with huge blocks of stone unhewn and uncemented, found in Greece, Sicily, Asia Minor, Peru, etc. A similar style of work is to be found in the British Isles, as the Rock of Cashel in Ireland or the Laws near Broughty-Ferry in Scotland.

Cyclops (sī'klōps; Gr. *Kylōps*, literally round-eyed, pl. *Kyklōpes*; in English the word is used as a singular or a plural), in Greek myths, a fabled race of one-eyed giants, the sons of Urānus and Gē (Heaven and Earth), slain by Apollo. They were often represented as a numerous race living in Sicily and rearing cattle and sheep. Of such is the Cyclops of the *Odyssey*. Later traditions describe them as the servants of Vulcan working under Ætna, and engaged in forging armor and thunderbolts.—*Cyclops* is likewise the generic name of a certain minute Crustacean, order Branchiopoda, having but one eye, situated in the middle of its forehead,

Cyclostomi (sī - klos'tō - mi), **CYCLOSTOMATA** (sī - klos - tom'a - ta), an order of cartilaginous fishes having circular mouths, as the lamprey. Called also *Marsipobranchia*.

Cyder. See *Cider*.

Cydnus (sid'nus), a river in Cilicia, rising in the Taurus Mountains, anciently celebrated for the clearness and coolness of its waters.

Cydonia (si-dō'ni-a). See *Quince*.

Cygnus (sig'nus; 'the Swan'), one of Ptolemy's northern constellations. Within this constellation is one of the richest portions of the Milky Way.

Cylinder (sil'in - dēr), a geometrical solid which, in popular languages, may be described as a long, round, solid body, terminating in two flat, circular surfaces which are equal and parallel. There is a distinction between *right* cylinders and *oblique* cylinders. In the first case, the axis—that is, the straight line joining the center of the two opposite bases—must be perpendicular, and it may be regarded as described by the revolution of a rectangular parallelogram round one of its longer sides (the axis); in the second, the axis must form an angle with the inferior base.—In steam engines, the cylinder is the chamber in which the force of the steam is exerted on the piston.

Cylindrical Lens (sil-in'drik-al), a lens whose surfaces are cylindrical, instead of spherical, which is usually the case. A convex cylindrical lens brings the image of a source of light to a focus in a line instead of in a point. They are usually *plano-cylindrical*; that is, cylindrical on one side and flat on the other.

Cylindrical Vaulting, in architecture, the most ancient mode of vaulting, called also a wagon, barrel or tunnel roof. It is a plain half-cylinder without either groins or ribs.

Cyllene (sil-lē'nē). a mountain of Southern Greece, 7789 feet high.

Cyma (sī'ma), in architecture, a wavy molding the profile of which is made up of a curve of contrary flexure, either concave at top and convex at bottom or the reverse. In the first case it is called a *cyma recta*; in the second a *cyma re-*

1, Cyma recta.
2, Cyma reversa.

versa. It is a member of the cornice, standing below the abacus or corona.

Cymbals (sim'bals), musical instruments consisting of two basins of brass with a plane periphery, which emit a ringing sound when struck together. They are military instruments, but are now frequently used in orchestras.

Cyme (sim), in botany, a mode of inflorescence in which the principal axis terminates in a flower, and a number of secondary axes rise from the primary, each of these terminating in a flower, while from these secondary axes others may arise terminating in the same way, and so on, giving a flat-topped or rounded mass. Examples may be found in the common elder and the Caryophyllaceæ.

Cyme.

Cymri (kim'ri), a branch of the Celtic family of nations which appears to have succeeded the Gaels in the great migration of the Celts westwards, and to have driven the Gaelic branch to the west (into Ireland and the Isle of Man) and to the north (into the Highlands of Scotland), while they themselves occupied the southern parts of Britain. At a later period they were themselves driven out of the Lowlands of Britain by the invasions of the Angles, Saxons and Jutes, and compelled to take refuge in the mountainous regions of Wales, Cornwall and the northwest of England. Wales may now be regarded as the chief seat of the Cymri.

Cynanche (sin-ang'kē), a name given to several diseases of the throat or windpipe, such as quinsy, croup, etc.

Cynara (kin'a-ra), a genus of Compositæ, in many respects like the thistle. The two best-known species are the artichoke and the cardoon.

Cynewulf (kin'e-wulf), an Anglo-Saxon or early English poet, whose name we only know from its being given in runes in the poems attributed to him, viz. *Elenc* ('Helena'), the legend of the discovery of the true cross; *Juliana*, the story of the martyr of that name; and *Crist* ('Christ'), a long poem incomplete at the beginning. The name Cynewulf also occurs as the solution of one of the metrical riddles in the Anglo-Saxon collection. Other poems, the *Andreas*, the *Wanderer*, the *Seafarer*, etc., have been ascribed to him without sufficient grounds. Cynewulf probably lived in the first half of the eighth century.

From his poems we may gather that he spent the earlier part of his life as a wandering minstrel, devoting the later to the composition of the religious poems connected with his name.

Cynics (sin'iks), a sect of philosophers among the ancient Greeks, founded by Antisthenes, a scholar of Socrates, at Athens, about 380 B.C. Their philosophy was a one-sided development of the Socratic teaching by Antisthenes and his followers, who looked only to the severer aspect of their master's doctrines, and valued themselves on their contempt of arts, sciences, riches, and all the social civilization of life. They made virtue to consist in entire self-denial and independence of external circumstances. In time this attitude degenerated into a kind of philosophic savagery and neglect of decency, and the Cynics fell into contempt.

Cynip (sī'nip), the gallfly, a genus of hymenopterous insects remarkable for their extremely minute head and large, elevated thorax. The females are provided with an ovipositor by which they make holes where they deposit their eggs in different parts of plants, thus producing those excrescences which are known as galls. The gall of commerce used in manufacturing ink is caused by the *Cynips gallæ tinctoriæ* piercing a species of oak which grows in the Levant. The *Cynips rosæ*, or bedeguar gallfly, produces the hairy excrescences seen on the rosebush and the sweet-brier. See *Bedeguar*.

Cynocephalus (sī-nō-sef'a-lus), a genus of baboons. See *Baboon*.

Cynoglossum (sī-nō-glos'um), hound's-tongue, a genus of plants, nat. order Boraginaceæ, consisting of herbs from the temperate zones. *C. officināle* and *C. montānum* are British plants. The former has a disagreeable smell like that from mice, and was at one time used as a remedy in scrofula. There are about fifty other species, all coarse plants.

Cynomorium (sī-nō-mō'r-i-um), a genus of plants, nat. order Cynomoriaceæ. *C. eoecinēum*, the fungus *melitensis* of the old herbalists, is a small plant which grows in Sicily, Malta and Gozo, and was valued as an astringent and styptic in dysentery and hemorrhage.

Cynosarges (sī-nu-sar'jēz), in ancient Athens, a gymnasium in which Antisthenes, the founder of the Cynics, taught.

Cynoscephalæ (sī-nos-sef'a-le; Greek, 'dog's heads'), a

range of hills in Thessaly, memorable for two battles fought there in ancient times. The first was in B.C. 364, between the Thebans and Alexander of Pheræ, in which Pelopidas was slain; and the second in B.C. 197, in which the last Philip of Macedon was defeated by the Roman consul Flamininus.

Cynosura (sī-nō-sū'r-a), CYNOSURE (lit. 'dog's tail'), an old name of the constellation Ursa Minor, or the Lesser Bear, containing the North Star.

Cynosurus, a genus of grasses. See *Dog's-tail Grass*.

Cynthius (sin'thi-us), a surname of Apollo, from Mount Cynthus, island of Delos, on which he was born. For the same reason Diana, his sister, is called Cynthia.

Cyperaceæ (sī-pēr-ā'se-ē), the sedges, a natural order of monocotyledonous plants including fully 2000 known species. The members of this order are grassy or rush-like plants, generally growing in moist places on the margins of lakes and streams. Their stem is a cylindrical or triangular culm with or without knots; the leaves are sheathing. They are of little or no economical use, with the exception of *Cypērus papyrus*, which furnished the papyrus of Egypt.

Cyperus (sip'er-us), a genus of plants, type of the order Cyperaceæ. They are herbs with compressed spikelets of many flowers, found in cold climates, and characterized by the possession of bisexual flowers. Several kinds are cultivated in cool houses for decorative purposes; but it is essential that water be freely supplied as the species are mostly natives of swampy districts. *C. alternifolius*, the umbrella palm, is useful in aquaria.

Cypress (sī'pres), a genus of coniferous trees. The *Cupressus sempervirens*, or common European cypress, is a dark-colored evergreen with extremely small leaves, entirely covering the branches. It has a quadrangular or, where the top branches diminish in length, pyramidal shape. Cypress-trees, though of a somewhat somber and gloomy appearance, may be used with great effect in shrubberies and gardens. They are much valued also on account of their wood, which is hard, compact, and very durable, of a reddish color and a pleasant smell. It was used at funerals and as an emblem of mourning by the ancients. Among other members of the genus are the Indian cypress (*C. glauca*); the *C. pendula*, a native of China and Japan; and the *C. thurifera*, or incense-bearing cypress, a native of Mexico; the ever-

green American cypress or White Cedar (*C. thyoides*), etc. The *Taxodium distichum*, or deciduous cypress of the United States and Mexico, is frequently

Cypress (*Cupressus sempervirens*, var. *fastigiata*).

called the Virginian cypress. Its timber is valuable, and under water is almost imperishable. In parts of the United States this cypress constitutes forests hundreds of miles in extent.

Cyprian (sip'ri-an), St., a father of the African Church, born at Carthage about the beginning of the third century, was a teacher of rhetoric there. About 246 he was converted to Christianity, when he distributed his property among the poor, and began to live in the greatest abstinence. The church in Carthage soon chose him presbyter, and in 248 he was made bishop. During the persecutions under Decius and Valerian he had twice to leave Carthage, but continued by his extensive correspondence to govern the African Church. He was beheaded in 258, for having preached the gospel in his gardens at Carthage. Among his writings are eighty-one *Epistolæ* or official letters, besides several works on doctrine.

Cyprinidæ (si-prin'i-dē), the carps, a family of soft-finned, abdominal fishes, characterized by a small mouth, feeble jaws, gill-rays few in number; body covered with scales; and no dorsal adipose fin, such as is possessed by the silures and the salmon. The members are the least carnivorous of fishes. They include the carps, breams, tenches, breams, loaches, etc. The type genus is *Cyprinus*.

Cyprinodontidæ (si - prin - o-don'ti-dē), a family of

malacopterygious fishes, allied to the Cyprinidæ, or carps.

Cyprinus (si-prī'nus), the carp genus of fishes, type of the family Cyprinidæ (which see).

Cypripedium (si - pri - pē' di-um), lady's slipper, a genus of plants of the nat. order Orchidacæ. Three species are natives of the United States. *C. arietinum*, the ram's-head, is found from Canada to Vermont. One species (*C. calceolus*) is a native of Britain.

Cypris (sip'ris), a genus of minute fresh-water crustaceans popularly known as waterfleas. They have the body enclosed in a delicate shell and swim by means of cilia. The Cypris is common in stagnant pools, and is very often found in a fossil state.

Cyprus (si'prus), an island lying to the south of Asia Minor, and the most easterly in the Mediterranean. Its greatest length is 145 miles, maximum breadth about 60 miles; area, 35,842 square miles. The chief features of its surface are two mountain ranges, both stretching east and west, the one running close to the northern shore, and extending through the long northeastern horn or prolongation of the island, the other and more massive (Mount Olympus) occupying a great part of the south of the island, and rising in Troödos to 6590 feet. Between them is the bare and mostly uncultivated plain called Messaria. There is a deficiency of water. The climate is in general healthy. The mountains are covered with forests of excellent timber (now under government supervision), and the island is esteemed one of the richest and most fertile in the Levant. Agriculture, however, is in a very backward state, and locusts sometimes cause great damage. Wheat, barley, cotton, tobacco, olives, raisins and carobs are the most important vegetable products. The wine is famous, especially that known as *commandery*. Silkworms are reared, and a coarse kind of silk is woven. Salt in large quantities is produced. The minerals are valuable; the copper mines (the name *copper* is derived from that of this island), and are again being worked. Large numbers of sheep and goats are reared on the extensive pasture lands of the island. The principal towns are Lefkosia or Nicosia, the capital, the only considerable inland town, and the seaports Larnaca and Limassol. The chief exports are carobs, wine and cotton, with cheese, raisins, cocoons, wool, etc.

After belonging successively to the Phœnicians, Greeks, Egypt, Persia and

again Egypt, Cyprus in 57 B.C. became a Roman province, and passed as such to the eastern division of the empire. In 1191 it was bestowed by Richard of England (who had conquered it when engaged in the third crusade) on Guy de Lusignan, and after his line was extinct it fell into the hands of the Venetians (1489), with whom it remained till it was conquered by the Turks in 1571 and annexed to the Ottoman Empire. In 1878 it was ceded to Britain by the convention of Constantinople concluded between England and Turkey, its reversion to Turkey being provided if Russia should give up Batoum and Kars. Britain was also bound to pay a subsidy to Turkey annually amounting to about \$465,000, but this is not paid directly, being retained as an offset against British claims on Turkey. The island has become much more prosperous under British administration, and roads, harborworks, etc., have been constructed, trees planted, and schools opened. The head of the government is chief-commissioner, and there is a legislative council of twelve elected and six official members, nine of the former being Greeks, the others Mohammedans. Pop. 237,022, of whom more than three-fourths belong to the Greek Church.

Cypselus (sĭp'se-lus), a genus of birds, type of the family Cypselidæ, including the swifts and their congeners. One peculiarity in this family is that the hind toe is turned forward along with the three anterior toes.

Cyr (sēr), St., a French village in the department of the Seine-and-Oise, 1 league west of Versailles; famous for the seminary for the education of ladies of rank which Louis XIV founded here. During the revolution this institution was done away with, and the fine buildings finally converted into a military school by Napoleon (1803). Pop. of the commune, 4253.

Cyrenaica (si-re-nā'i-ka), once a powerful Greek state in the north of Africa (corresponding partly with the modern Barca), west of Egypt, comprising five cities (Pentapolis), among which was Cyrene, a Spartan colony founded in 631 B.C. In later times it came into the hands of the Ptolemies, and in B.C. 95 the Romans obtained it. The Arab invasion ruined it (647). Cyrenaica is at present a vast but as yet very imperfectly explored field of antiquities.

Cyrenaics (si-re-nā'iks), a philosophical sect founded about 380 B.C. by Aristippus, a native of Cyrene and a pupil of Socrates. See *Aristippus*.

Cyrene (si-rē'nē), in ancient times a celebrated city in Africa, about 10 miles from the north coast, founded by Battus and a body of Dorian colonists, B.C. 631. Numerous interesting remains have been discovered here. The town now occupying the site of the ancient Cyrene is a miserable place in the vilayet of Barca. See *Cyrenaica*.

Cyril (sir'il), the name of three saints or fathers of the Christian church. 1. CYRIL OF JERUSALEM, born there about the year 315 A.D., was ordained presbyter in 345, and in 350 or 351 became Patriarch of Jerusalem. He engaged in a warm controversy with Acacius, the Arian Bishop of Cæsarea, by whose artifices he was more than once deposed from his episcopal dignity. He died in 386 or 388. We have some writings composed by him.

2. CYRIL OF ALEXANDRIA was educated by his uncle Theophilus, Patriarch of Alexandria, and in 412 A.D. succeeded him as patriarch. In this position his ambitious spirit brought the Christians into violent quarrels. At the head of the populace he assailed the Jews, destroyed their houses and their furniture, and drove them out of the city. Orestes, the prefect, having complained of such violence, was attacked by 500 furious monks. The assassination of Hypatia, the learned lecturer on geometry and philosophy, took place, it is said, at the instigation of Cyril. His quarrel with Nestorius, and with John, Patriarch of Antioch, regarding the twofold nature of Christ, convulsed the church, and much blood was shed between the rival factions at the Council of Ephesus in 431, the emperor having at last to send troops to disperse them. Cyril closed his restless career in 444.

3. St. CYRIL, 'the Apostle of the Slavs,' a native of Thessalonica. He converted the Chazars, a people of Hunnish stock, and the Bulgarians, about A.D. 860. He died about 868. He was the inventor of the *Cyrillian Letters* which took their name from him, and is probably the author of the *Apologies* which bear his name.

Cyrillian Letters (si-ril'i-an), characters used in one of the modes of writing the Slavonic language. In Poland, Bohemia and Lusatia, Roman or German letters are used; but among Russians, Bulgars, and all the Slavonic nations belonging to the Greek Church, the Cyrillic alphabet, a modification of the Greek one, is in use. Besides these there is the Glagolitic alphabet, in which the oldest literature of the Slavonic church is written. See *Glagolitic*.

Cyrus (sī'rus), King of Persia, a celebrated conqueror. The only ancient original authorities for the facts of his life are Herodotus and Ctesias. According to Herodotus, he was the son of Cambyses, a distinguished Persian, and of Mandane, daughter of the Median King Astyages. His grandfather, made apprehensive by a prophecy that his grandson was to dethrone him, gave orders that Cyrus should be destroyed after his birth. But the boy was preserved by the kindness of a herdsman, and at length sent to his parents in Persia. Here Cyrus soon gathered a formidable army, conquered his grandfather (B.C. 559), and thus became king of Media and Persia. In 546 he conquered Cræsus of Lydia, and two years later took Babylon. He also subdued Phœnicia and Palestine, and restored the Jews from their Babylonish captivity. He was slain in battle with a Scythian nation in B.C. 529. Such is the account given by Herodotus; but the narrative of Ctesias differs in not making Cyrus a relative of Astyages and in some other points. The *Cyropædia* of Xenophon, which professes to give an account of the early life of Cyrus, is merely a philosophical romance.

Cyrus, called the YOUNGER, to distinguish him from Cyrus the founder of the Medo-Persian monarchy, was the second son of Darius Nothus or Ochus. Having formed a conspiracy against his elder brother, Artaxerxes Mnemon, Cyrus was condemned to death, but released at the request of his mother, Parysatis, and made governor of Asia Minor. Here he secretly gathered an army, an important part of which consisted of 13,000 Greek auxiliaries, and marched eastwards. His brother with a large army met him in the plains of Cunaxa (B.C. 401), and in the battle which followed, although the troops of Cyrus were victorious, Cyrus himself was slain. The retreat of the Greek auxiliaries of Cyrus from the interior of Persia to the coast of Asia Minor is the subject of Xenophon's *Anabasis*.

Cysticercus (sis-ti-ser'kus), an immature form of tapeworm found in certain animals.

Cystic Worm (sis'tik), an immature or half-developed form of tapeworm, once erroneously supposed to be a distinct species of intestinal worm.

Cystideæ (sis-tid'e-ē), a family of fossil echinoderms, with feebly developed arms, occurring in the Silurian and Carboniferous strata.

Cystitis (sis-ti'tus), inflammation of the bladder,

Cystopteris (sis - top'tér - us), the bladder-fern, a genus of polypodiaceous, delicate, flaccid ferns.

Cystotomy (sis-tot'ō-mi), in surgery, the operation of cutting into the bladder for the extraction of a calculus or other purpose.

Cythera (si-thē'ra). See *Cerigo*.

Cytisine (sit'i-sin), an alkaloid detected in the ripe seeds of the Laburnum. It is of a nauseous taste, emetic and poisonous.

Cytisus (sit'i-sus), a genus of plants belonging to the nat. order

Leguminosæ, suborder Papilionaceæ. The

members of the genus are shrubs or small trees, sometimes spiny, with leaves composed of three leaflets, and with yellow, purple or white flowers. They belong to Europe, Asia and North Africa, and are very ornamental plants. The best-known species is the common laburnum

Broom (*Cytisus Scoparius*).

(*C. Laburnum*; see *Laburnum*). Another species is the Alpine laburnum (*C. Alpīnus*). The common broom (*C. Scoparius*) also belongs to this genus. See *Broom*.

Cyzicus (siz'i-kus), a peninsula of Asia Minor, 60 miles southwest of Constantinople. It was once an island, and the site of an ancient town of the same name.

Czar (zär or tsär), a title of the autocrat of all the Russias, not improbably a corruption of the Roman title Cæsar. It was first adopted in 1579 by Ivan IV. The feminine of czar is *czarina*, meaning the empress of Russia.

Czarevna (zär-ev'na), the wife of the czarowitz.

Czarowitz, or CZAREVITCH (zä'ro-vits, zä're-vich), the title of the eldest son of the czar of Russia.

Czartoryski (châr-to-ris'kē), ADAM GEORGE, Prince, a celebrated Polish statesman and patriot, born in 1770. His education was completed at the University of Edinburgh and in London. He fought bravely under Kosciusko, and after the partition of his country in 1795 was sent to St. Petersburg, where he formed a close friendship with Prince Alexander, and was made minister of foreign affairs. In 1805 he resigned his office, and withdrew soon after from public affairs. On the outbreak of the Polish revolution in 1830 he

took an active part and became the head of the national government. After the failure he lived at Paris. He died in 1861.

Czaslau (chás'lou), a town of Bohemia, 45 miles E. S. E. of Prague. Here Frederick the Great defeated the Austrians (1742). Pop. 9105.

Czechs (chehs), the most westerly branch of the great Slavonic family of races. The Czechs have their headquarters in Bohemia, where they arrived in the fifth century. (See *Bohemia*.) The origin of the name is unknown. The total number of the Czechs (including Moravians, Slovaks, etc.) is about 6,000,000, nearly all of whom live in the Austrian Empire. They speak a Slavonic dialect of great antiquity and of high scientific cultivation. The Czech language is distinguished as highly inflectional, with great facility for forming derivatives, frequentatives, inceptives and diminutives of all kinds. Like the Greek, it has a dual number, and its manifold declensions, tenses and participial formations, with their subtle shades of distinction, give the language a complex grammatical structure. The alphabet consists of forty-two letters, expressing a great variety of sounds. In musical value the Czech comes next to Italian.

Czegled (tseg'lād), a market town, Hungary, 39 miles S. E. of

Budapest, in a district yielding grain and wine. Pop. 30,166.

Czenstochowa (chen-sto-hō'va), a town in Russian Poland, government of Petrokow. There is here a convent containing a famous picture of the Virgin, which is visited by vast numbers of pilgrims. Pop. 53,650.

Czernowitz (cher'no-vits), a city of Austria, the chief town of Bukowina, 138 miles S. E. of Lemberg. It has manufactures of clocks, silver-plate, carriages, toys, etc. Pop. (including suburbs), 69,619, a considerable proportion being Jews.

Czerny (cher'ni), GEORGE, Hospodar of Servia, born in the neighborhood of Belgrade about 1770; beheaded by the Turks, in July, 1817. His true name was George Petrovitch, but he was called *Czerny* or *Kara George*, i. e., Black George. In 1801 he organized an insurrection of his countrymen against the Turks, took Belgrade, and forced the Porte to recognize him as Hospodar of Servia. In 1813, however, he had to retire before a superior force, and took refuge in Austria. Returning to his country in 1817, he was taken and put to death.

Czerny (cher'ni), KARL, pianist and musical composer, born in 1791; died in 1857. Among his pupils were Liszt, Thalberg and other distinguished musicians.

Czirknitz. See *Zirknitz*.

D

D, the fourth letter in our alphabet, representing a dental sound formed by placing the tip of the tongue against the root of the upper teeth, and then forcing up vocalized breath, or voice, into the mouth, the soft palate being raised to prevent its escape through the nose. **T** is formed in the same way, except that it is uttered with breath merely and not with voice. As a numeral **D** represents 500.

Dab (*Pleuronectes limanda*), a fish belonging to the family of the Pleuronectidæ, or flat-fishes, comprising also the soles, turbot, halibut, plaice and flounder, the last two being included in the same genus with the dab. It is of

Dab (*Pleuronectes limanda*).

a pale-brownish color spotted with white on the side which it usually keeps uppermost, and white on the underside, and has rougher scales than the other members of the same genus. It is preferred to the flounder for the table.

Dabchick (dab'chik). See *Grebe*.

Da Capo (da ka'po; Italian, 'from the head or beginning'), in music, an expression written at the end of a movement to acquaint the performer that he is to return to the beginning, and end where the word *fine* is placed.

Dacca (dak'ka), a commissioner's division of Hindustan in Bengal, at the head of the Bay of Bengal; area, 15,000 square miles. It is one of the richest districts in India, and produces such quantities of rice as to be called the granary of Bengal. The surface is an uninterrupted flat, and is intersected by the Ganges and Brahmapootra—from whose periodical inunda-

tions its extraordinary fertility arises. Dacca was at one time celebrated for its hand-woven muslins, which are still hardly to be equaled in their combination of durability and delicacy; but this branch of industry has considerably decayed. Pop. 10,807,825, Mohammedans being in a decided majority.—**Dacca**, its capital, is about 150 miles northeast of Calcutta. The city has much decayed with the decrease of its staple trade in the celebrated Dacca muslin; suburbs which once extended northwards for 15 miles are now buried in dense jungle. Dacca, being free from violent heats, is one of the healthiest and most pleasant stations in Bengal. Pop. 90,679.

Dace (dās; *Leuciscus vulgāris*), a small river fish of the family Cyprinidæ, and resembling the roach, but longer and thinner. It is a gregarious

Dace (*Leuciscus vulgāris*).

fish, swimming in shoals and inhabiting chiefly deep, clear streams with a gentle current. It seldom exceeds a pound in weight.

Dacelo (da-sē'lō), an Australian genus of kingfishers, one species of which is the 'laughing jackass,' so called on account of its harsh, discordant note.

Dachshund (daks'hunt). See *Badger Dog*.

Dacia (dā'shi-a), in ancient times, a region north of the Danube, inhabited by the Daci or Getæ, afterwards a Roman province. It was conquered by the emperor Trajan in 101 A.D., but in 274 A.D., in the reign of Aurelian, had to be abandoned by the Roman colonists.

Dacier (dä-syā), **ANDRÉ**, a learned Frenchman, born in 1651. He studied at Saumur, and in 1672 he went to Paris, where the Duke of Montausier

entrusted him with the editing of the Latin writer Pompeius Festus *ad usum Delphini* (see *Delphin Classics*). In 1683 he married Anne Lefèvre, the daughter of his former teacher, afterwards became perpetual secretary of the French Academy, published many editions and translations of the ancient classics, and died in 1722.—His wife, ANNE, born in 1651, published an edition of Callimachus, and was entrusted with several editions of the classics *ad usum Delphini*. Her learned works were not interrupted by her marriage in 1683. Her translation of Homer and writings on Homeric poetry attracted a good deal of attention. Among her other works were translations of Terence, Plautus, two plays of Aristophanes, Anacreon and Sappho. She died in 1720.

Dacoity (da-koi'ti), originally in the criminal code of India, a robbery committed by an armed band or gang, and technically under the present law of India any robbery in which five or more persons take a part. The term has also been applied more widely.

Dacrydium (da-krid'i-um), a genus of trees of the pine or yew family.

Dacryoma (da-kri-ō'ma), a disease of the lachrymal duct of the eye, by which the tears are prevented from passing into the nose and consequently trickle over the cheek.

Dactyl (dak'til), in versification, a foot consisting of one long followed by two short syllables, or, in English, one accented and two unaccented, as *happily*.

Dactylology (dac-til-ol'o-ji), is the art of communicating ideas or conversing by means of the fingers. It is of great value to the deaf and dumb. See *Deaf and Dumb*.

Daddy-long-legs, a name given to a species of the crane-fly (*Tipula oleracea*). See *Crane-fly*.

Dado (dā'dō), in classical architecture, the middle part of a pedestal, that is to say, the solid rectangular part between the plinth and the cornice; also called the *die*. In the interior of houses it is applied to a skirting of wood several feet high round the lower part of the walls, or an imitation of this by paper or painting.

Dædalus (dē'da-lus), a mythical Greek sculptor, the scene of most of whose labors is placed in Crete. He is said to have lived three generations before the Trojan war. He is credited with building the famous labyrinth in Crete, and inventing wings for flight, which

his son Icarus foolishly attempted to use and was drowned in the Icarian Sea.

Daffodil (daf'ō-dil), the popular name of a European plant which is one of the earliest ornaments of our gardens, being a favorite object of cultivation. Botanically it is *Narcissus pseudo-narcissus*, order Amaryllidaceæ. Many varieties of the daffodil are in cultivation, differing chiefly in bulk and in the form of the flower, which is of a bright primrose-yellow color. There are other forms of the name in local or partial use.

Dagger (dag'er), a weapon resembling a short sword, with sharp-pointed blade. In single combat it was wielded in the left hand and used to parry the adversary's blow, and also to despatch him when vanquished.

Daghestan (dä-ges-tän'), a province of Russia, in the Caucasus, stretching along the west side of the Caspian Sea; area, 11,036 square miles. Its fertile and tolerably cultivated valleys produce good crops of grain, and also silk, cotton, flax, tobacco, etc. The inhabitants, almost all professed Mohammedans, consist chiefly of races of Tartar origin and of Circassians. Capital Derbend. Pop. 605,100.

Dago (dag'è), an island belonging to Russia, to the S. W. of the entrance of the Gulf of Finland, with productive fisheries. The inhabitants, almost all Swedes, number about 14,000.

Dagoba (da-gō'ba), in Buddhist countries and those which at one time held the Buddhist faith, a solid structure erected to contain some sacred relic or relics, as distinguished from the term *stupa* or *tope*, which in its specific

Ceylonese Dagoba.

application is usually restricted to monuments which commemorate some event or mark some spot sacred to the followers of Buddha. Dagobas are built of brick or stone, are circular in form, generally with a dome-shaped top, and are erected on

natural or artificial mounds, while the stone or brick structure itself sometimes rises to an immense height. These dagobas have always been held in the highest veneration by the Buddhists, and a common mode of testifying their veneration is to walk round them, repeating prayers the while.

Dagobert I (dag'o-bért; called the *Great* on account of his military successes), King of the Franks, in 628 succeeded his father, Clothaire II. After a successful, magnificent, but licentious reign, he died at Epinay in 638.

Dagon (dā'gon; probably from the Hebrew *dag*, a fish), the god of the Philistines, whose image is generally believed to have been in the form of a merman, with the upper part human and the extremities, from the waist downwards, in the shape of the tail of a fish.

Daguerre (dä-gār), LOUIS JACQUES MANDÉ, was born in 1789 at Corneilles, dep. Seine-et-Oise. He was a scene-painter at Paris, and as early as 1814 had his attention directed by Nicéphore Niepce to the subject of photographic pictures on metal. In 1829 they made a formal agreement to work out the invention together, but it was not till after Niepce's death, on July 5, 1833, that Daguerre succeeded in perfecting the process since called *daguerreotype*. (See article following.) The new process excited the greatest interest. Daguerre was made an officer of the Legion of Honor, and an annuity of 6000 francs was settled on him, and one of 4000 on the son of Niepce. Daguerre died in 1851.

Daguerreotype Process (da-ger'-ro-tīp), the original photographic process, consisting in sensitizing a silver plate with the vapor of iodine, and then placing it in a camera obscura previously focused, and afterwards developing the picture by vapor of mercury. It is then fixed by immersion in thiosulphate of sodium. After thorough washing and drying the picture is covered with glass to prevent its being rubbed off. Daguerreotype has now been superseded by the collodion and other processes, but the chemical principle is the same.

D'Aguesseau. See *Aguesseau*.

Dagupan (da-g'ō'pan), a town of Luzon, Philippine Islands, on the railroad from and about 130 miles N. W. of Manila. It was one of the strongholds of the Philippine insurgents, and was taken from them in November, 1899, by the American troops after a sharp skirmish. Pop. 20,357.

Dahabieh (dā-hā-bē'e), a boat used on the Nile for conveyance of travelers. It varies considerably in size; has one or two masts, with a very

Dahabieh.

long slanting yard on each mast supporting a triangular sail, and accommodates from two to eight passengers.

Dahlgren Guns (dāl'gren), an improved kind of cannon invented by John A. Dahlgren, admiral of the United States navy, born in 1809; died in 1870. Their chief peculiarity consists in their having less metal between the muzzle and the trunnions than ordinary cannons.

Dahlia (dāl'ya; so called after the Swedish botanist Dahl), a genus of plants belonging to the nat. order Compositæ, suborder Corymbiferae, natives of Mexico. By cultivation an immense number of varieties has been produced, all deriving their origin from *D. coccinea* and *D. variabilis*. The flowers are large and beautiful, sporting into innumerable varieties. It does not stand frost, and has to be taken up during the winter.

Dahlmann (däl'män), FRIEDRICH CHRISTOPH, a distinguished historian of Germany, born in 1785; died in 1860. He was professor at Göttingen and afterwards at Bonn, and distinguished himself as an advocate of liberal measures in politics. Among his principal works is a history of the English revolution.

Dahn (dän), FELIX, a German historian, born at Hamburg, in 1834, and became law professor at Würzburg and at Königsberg. His works include *The Kings of the Germans*, *The Migration of Nations*, *Ancient History of the Germanic and Romanic Peoples*, works on

the philosophy of law poems, novels, plays, etc.

Dahomey (dä-hō'me), a former negro kingdom of West Africa, with an area of about 58,000 sq. miles and a coast line of 70 miles. It lies between German Togoland on the w. and British possessions on the e. and extends to the Niger River on the w. The Dahomans are all pagans and the former king was an absolute tyrant, whose army was partly made up of Amazons, while wholesale human sacrifices formed part of the state ceremonies. The last king, whose capital was Abomey, was deposed by the French in 1900, and the country is now under French rule.

Daimiel (dī-me-el'), a town of Spain, New Castile, province of Ciudad Real, and 20 miles E. N. E. of the town of Ciudad Real, on left bank of the Azuer. The manufactures are linen and woolen fabrics, etc. Pop. 11,825.

Daimios (dī'mi-ōz), a class of feudal lords formerly existing in Japan, but now deprived of their privileges and jurisdiction. By decree of August, 1871, the daimios were made official governors on a salary for the state in the districts which they had previously held as feudal rulers.

Dair-el-kamar (dār-el-ka'mar), the chief town of the Druses, Syria, on a slope of Mount Lebanon, 12 miles southeast of Beyrout, with about 30,000 inhabitants.

Dairen (dī'ren), a city and seaport of Manchuria, situated on the Liao-tung Peninsula and on the Ta-lien-wan Bay in the Yellow Sea, 25 miles N. of Port Arthur. This city, originally named Dalny, was built by order of the Czar of Russia, for a commercial seaport, on the concession leased from China in 1898, and was thrown open as a port, free to the commerce of all nations December 1, 1901. It was divided into administrative, wholesale, retail and residential sections, the principal official buildings being erected and the streets laid out before opening. A fine town, with handsome buildings and all modern improvements, soon sprang up. The harbor, one of the best and deepest of the Pacific, free of ice the year round, was provided with breakwaters, great stone piers and large docks, including two dry docks. The town formed one of the eastern termini of the Trans-Siberian Railway, and was provided with elevators, gas and electric lighting, etc. The city was occupied by Japanese troops in 1904, during the Russo-Japanese war, and retained by Japan after the war. They re-named it Dairen, and it is now a place of

much commercial importance. Pop. about 50,000.

Dairi (dī'rē), or DAIRI-SOMA, an alternative name for the Mikado of Japan. See *Mikado*.

Dairy (dā'ri), the department of a farm which is concerned with the production of milk and its manufacture into butter and cheese. As a rule, the soil and climate of a country, and the nearness of suitable markets, determine in a great measure the choice between tillage and dairy husbandry. For milk dairies cows that yield abundantly are selected, while for butter and cheese dairies the rich quality of the milk is the principal point. Regularity in feeding is very important, and the nature of the food given has a great effect on the quality of the milk. The younger the cow the richer is her milk, and the second and third years, therefore, are generally the most profitable, both quantity and quality being taken into account. In general, after the seventh or eighth year it is not considered advisable to continue the cow longer in milk, as her milk is fast deteriorating and she consumes more food than a young one. In the United States the cattle of Ayrshire and Jersey hold the first place for dairy purposes, the first on account of the large yield which they give on comparatively poor feeding, the second for the richness of their milk. Various other European breeds have been introduced. In the management of a dairy cleanliness is of the utmost importance, as no substance more easily receives and retains the odors and taste of putrescent matter than milk. No food, either vegetable or animal, should be allowed to enter the milk house. A good mode of purifying the atmosphere of a milk house is to dip cloths in a solution of chloride of lime and then hang them up on cords stretching from one corner to the other. In a similar way, too, the temperature of the room may be kept low during hot weather. The milk room, therefore, should be built in such a manner as to be most easily cleaned and kept clean. The floor should be of smooth flagstones carefully jointed and dressed. It should have a slight slope towards the wall, where a channel is formed to convey all water and spilt liquid to a drain. All cornices and moldings, or any projections or cavities where dust or dirt can lodge, should be as far as possible avoided. The practice of making a larder of a portion of the milk house, or of having a number of cheeses drying on the shelves, is much to be reprehended. Spilt milk should never be allowed to remain an instant longer than is necessary for

its removal. The liberal use of water (cold in summer and warm in winter) is always to be commended; a little common washing-soda dissolved in the water will be found useful in destroying any taint of sourness the milk dishes may have acquired. The best dishes for milk are made either of glass, tin, tinned iron, or well-glazed earthenware. Wood is objectionable because it is difficult to keep the dishes clean, and lead and zinc are liable to corrosion or decomposition from the acid of the milk. In the United States, however, coöperative dairies have been widely introduced in which every care is taken and sanitation made an absolute requisite. See also *Butter*, *Cheese*.

Dais (dā'is), a platform or raised floor at the upper end of an ancient dining-hall, where the high table stood; also a seat with a high wainscot back, and sometimes with a canopy, for those who sat at the high table. The word is also sometimes applied to the high table itself.

Daisy (dā'si), the name of a plant which is very familiar, and a great favorite (*Bellis perennis*). In the days of chivalry it was the emblem of fidelity in love. Its name is literally day's eye, because it opens and closes its flower with the daylight. It has been naturalized in parts of New England. The common daisy of the United States, the big or ox-eye daisy, also an introduced plant, is properly a chrysanthemum.

Dâk, DAWK (dāk), in the East Indies, the post; a relay of men, as for carrying letters, despatches, etc., or travelers in palanquins. The route is divided into stages, and each bearer, or set of bearers, serves only for a single stage. A *dâk-bungalow* is a house at the end of a stage designed for those who journey by palanquin.

Daker-hen (d ā'k er-hen), a name sometimes given to the corn-crake or landrail, a bird of the family Rallidæ.

Dakoity (da-koi'ti). See *Dacoity*.

Dakota Formation, a group of rocks belonging to the cretaceous strata and outcropping along the western border of the great plains from Texas to Alberta. The rocks consist of coarse, yellowish sandstones with associated shales. Fossil shells and abundant plant remains are found. The formation contains a valuable supply of coal and yields artesian waters freely.

Dakota Indians (d a-k ō' t a). See *Sioux*.

Dalai Lama (d a-lī la'ma). See *Lamaism*.

Dalbeattie (dal-bē'ti), a town in Kirkcudbrightshire, Scotland, with large granite-polishing works, paper-mills, concrete works, etc., and in the neighborhood granite quarries. Pop 3469.

Dalbergia (dal-bēr'gi-a), a genus of fine tropical forest trees and climbing shrubs, nat. order Leguminosæ, some species of which yield excellent timber. *D. latifolia* (the blackwood, or East Indian rosewood) is a magnificent tree, furnishing one of the most valuable furniture woods. *D. Sissoo* gives a hard, durable wood, called sissoo, much employed in India for railway-sleepers, house and shipbuilding, etc.

Dale, RICHARD, an American naval officer, born at Norfolk, Virginia, in 1756. He was first officer under Paul Jones on the *Bon Homme Richard*, helped materially towards the victory, and was the first man to board the *Scrapis* when captured. He was afterwards put in command of an American squadron, the *President* being his flagship. Died in 1826.

Dalecarlia (dal-e-kār'li-a), or DAL-ARNE, a tract in Sweden. The name, meaning 'valley-land,' is kept alive in the minds of the inhabitants by the noble struggles which the Dalecarlians, its inhabitants, made to establish and maintain the independence of the country.

Dalgarno (dal-gār'nō), GEORGE, born at Aberdeen about 1627, took up his residence at Oxford, where he taught a private grammar school for about thirty years, and where he died in 1687. He was a man of great originality and acquirement, and has left behind him two remarkable works, *Signorum*, an essay on a universal or philosophical language, and *Didascalocophus*, or *the Deaf and Dumb Man's Tutor*.

Dalhousie (dal-hō'zi, JAMES ANDREW BROWN RAMSAY, TENTH EARL AND FIRST MARQUIS OF, born in 1812, a British statesman, was educated at Harrow and at Christchurch, Oxford. After filling the offices of vice-president (1843) and president of the board of trade (1844), he was appointed governor-general of India (1847). In this post he showed high administrative talent, establishing railway lines, telegraphs, irrigation works, etc., on a vast scale. He greatly extended the British empire in India, annexing the Punjab, Oude, Berar, and other native states, as well as Pegu in Burmah. In 1849 he was made a marquis, and obtained the thanks of both

Houses of Parliament. He outstayed his term of office to give the government the aid of his experience in the annexation of Oude; and when he returned to Europe

Marquis of Dalhousie.

in 1856 it was with a constitution so completely shattered that he was never able to appear again in public life, and died on December 19, 1860. As he left no direct male issue, his marquisate expired with him.

Dall, WILLIAM HEALY, naturalist, born at Boston, Massachusetts, in 1845. He became a pupil of Professor Agassiz, was in Alaska with a telegraphic expedition 1866-68; on the Coast Survey in Alaska 1871-84; palæontologist on the Geological Survey 1884-98; since 1880 a curator of the National Museum. He is a member of the National Academy of Sciences. His works include *Alaska and its Resources*, *Coast Pilot of Alaska*, *Tribes of the Extreme Northwest*, *Contributions to North American Ethnology*, etc.

Dallas (dal'as). GEORGE MIFFLIN, Vice-President of the United States, was born in Philadelphia in 1792, son of Alexander James Dallas, Secretary of the Treasury under President Madison and founder of the second United States Bank. Becoming prominent in the Democratic party, he was elected United States Senator in 1831, was made Minister to Russia in 1837, and elected Vice-President, under President Polk, in 1844. He was Minister to England 1856-61. He died in 1864.

Dallas, a city, capital of Dallas Co., Texas, on the Trinity River, a well-built and flourishing place, traversed by several railroads, and the

most important place in Northern Texas. It does a large shipping trade and has cotton, woolen and flouring mills and various other industries. Here are several institutions for the higher education of men and women, a large courthouse and city hall, a Confederate monument, etc. Pop. 92,104.

Dalles (dalz), the name given to various rapids and cataracts in North America. *The Great Dalles of the Columbia* are about 200 miles from its mouth, where the river is compressed by lofty basaltic rocks into a roaring torrent about 58 yards in width; the *Dalles of the St. Louis* are a series of cataracts near Duluth, Minnesota.

Dallinger (dal'in-ger), WILLIAM HENRY, scientist, born at Devonport, England, in 1841, was pastor at Liverpool, then governor of Wesley College, Sheffield, and in 1883, was made president of the Royal Microscopical Society. His researches were in the life history of minute organisms and the changes in the cell nucleus. He wrote *Minute Forms of Life*, *The Origin of Life*, etc.

Dalmatia (dal-mā'shi-a), a province of Austria, with the title of kingdom, the most southern portion of the Austrian dominions. It consists of a long, narrow, triangular tract of mountainous country and a number of large islands along the northeast coast of the Adriatic Sea, and bounded N. by Croatia, and N. E. by Bosnia and Herzegovina. In breadth it is very limited, not exceeding 40 miles in any part; its whole area is 4940 English square miles. The inland parts of Dalmatia are diversified by undulatory ground, hills, and high mountains; but though there are some rich and beautiful valleys, the country on the whole must be considered poor and unproductive. The Narenta, the Zermagna, the Kerka and the Cettina are the principal rivers, all with short courses. On some of these the scenery is singularly wild and picturesque. The interior is occupied by a much-neglected population, and agriculture is in a very backward state. Timber is scarce, and the country does not produce sufficient grain for its own wants. Apples, pears, peaches, apricots, oranges, pomegranates, etc., are among the fruits; the wines are strong, sweet and full bodied. On the coast fish, especially the tunny and the sardine, abound. The trade of the country is mostly confined to the coast towns, where the population is mainly of Italian extraction. Chief of these are Zara (the capital), Sebenico, Cattaro, Spalato and Ragusa. Among the nu-

merous islands sprinkled along the coast many are valuable for their productions, such as timber, wine, oil, cheese, honey, salt and asphalt. The population is divided between the Italians of the coast towns and the peasants of the interior, Slovenian Slavs speaking a dialect of the Salvonic. The majority are Roman Catholics. After passing successively through the hands of Hungarian and Venetian rulers, and of the first Napoleon, Dalmatia finally, in 1814, fell under Austrian rule. Pop. 591,597.

Dalmatian Dog, a variety of dog, called also the Danish, spotted, or coach-dog. See *Coach-dog*.

Dalmatic (dal-mat'ik), or DALMATICA, an ecclesiastical vestment worn by the

deacon at mass, so called because it was an imitation of Dalmatian costume. It is worn also by bishops under the chasuble. It is a long robe with large, full sleeves with black or red longitudinal stripes and partially unclosed sides. A similar robe was worn by kings and emperors at high solemnities, and continues still to be worn by the sovereigns of England on such occasions.

Dalmatica, Cathedral of Chartres (twelfth century).

Dalny. See *Dairen*.

Dalriada (dal-ri-a-da), the ancient name of a territory in Antrim, called after Carbry Riada, one of its chiefs. In the sixth century a band of Irish from this quarter settled in Argyleshire under Fergus MacErc, and founded the kingdom of the Scots of Dalriada. After being almost extinguished, the Daldriadic line revived in the ninth century with Kenneth Macalpine, and, seizing the Pictish throne, gave kings to the whole of Scotland.

Dalry (dal-rē), a town of Scotland, county of Ayr, on the Garnock, 19 miles s. w. of Glasgow, with iron-works and woolen and worsted mills. Pop. 5316.

Dalrymple (dal-rim'pl), SIR DAVID, Lord Hailes, a Scottish lawyer, antiquary and historian, born at Edinburgh in 1726. He studied at Eton and Utrecht. In 1748 he was called to the bar, and in 1766 was made a judge

of the Court of Session. His publications were numerous, but consist principally of new editions and translations. Of his original production the *Annals of Scotland from Malcolm Canmore to the Accession of the House of Stuart*, is the most important. He died in 1792.

Dalrymple, JAMES, first Viscount Stair, a Scottish lawyer and statesman, was born in 1619. In the English Civil war he sided with the Parliament, but afterwards joined the royalists; was made a knight on the Restoration, and in 1671 president of the Court of Session. In 1682 he fell out of favor with the king, and retiring to Holland became an adherent of the Prince of Orange, who, after the revolution, raised him to the peerage. He died in 1695. The connection of his son, the Master of Stair, with the massacre of Glencoe brought some odium upon him in his last years. He wrote: *The Institutes of the Laws of Scotland* (which is still a standard authority), *Vindication of the Divine Perfections* and *An Apology for his Own Conduct*.

Dalrymple, JOHN, first Earl of Stair, born in 1648; died in 1707; son of the preceding, was an able Scottish lawyer and statesman. It was through him that the massacre of Glencoe was perpetuated in 1692. He succeeded his father as viscount in 1695, and in 1703 was created earl. He was largely instrumental in bringing about the union between Scotland and England.

Dal Segno (sen'yō; Italian), often contracted into *D. S.*, means 'from the sign.' In music this expression denotes that the singer or player shall recommence at the place where the sign *S* is put.

Dalton (dal-ton), JOHN, an English chemist and natural philosopher, born in 1766. After teaching for twelve years at Kendal, in 1793 his reputation as a mathematician won for him the chair of mathematics at the New College, Manchester. Here he continued to reside (though the college was removed in 1799), publishing from year to year valuable essays and papers on scientific subjects, while he also lectured in London, and visited Paris. In 1808 he announced in his *New System of Chemical Philosophy* his atomic theory of chemical action, the discovery of which spread his fame over Europe. Various academic and other honors were bestowed upon him, and in 1833 he received a pension of £150, afterwards increased to £300. He died in 1844.

Dalton-in-Furness, a town of England, in the county of Lancaster. In its vicinity are extensive ironworks, and the ruins of the magnificent Cistercian abbey of Furness. Pop. (1911) 10,765.

Daltonism, another name for *Color-blindness*, which see.

Dalton's Law. See *Gas*.

Daly (dā'li), AUGUSTIN, dramatist born at Plymouth, North Carolina, in 1838; died in 1899. He became a very successful theatrical manager, and established Daly's Theater, New York, in 1879. He served as a dramatic critic, adapted French and German plays, and wrote *Under the Gaslight*, *Divorcee*, *Pique*, etc.

Daly, CHARLES FRANCIS, jurist, born at New York in 1816; died in 1899. He was admitted to the bar in 1837, became judge of the New York Court of Common Pleas in 1844, and was its chief justice for 27 years. He was president of the American Geographical Society from its origin in 1864, and wrote on the history of map making and physical geography, etc.

Dalyell, or DALZELL (dā-el'), THOMAS, a Scottish soldier, born about 1599. He was taken prisoner fighting on the royalist side at Worcester, and afterwards escaped to Russia, where he was made a general. Returning to England at the restoration, he was made commander-in-chief of the forces in Scotland, and made himself notorious for his ferocity against the Covenanters. He died in 1685.

Dam, a bank or construction of stone, earth, or wood across a stream for the purpose of keeping back the current to give it increased head, for holding back supplies of water, for flooding lands, or for rendering the stream above the dam navigable by increased depth. Its material and construction will depend on its situation and the amount of pressure it has to bear. For streams which are broad and deep strong materials are required, usually stone masonry bound in hydraulic cement and a strong framework of timber. The common forms of a dam are either a straight line crossing the stream transversely, one or two straight lines traversing it diagonally, or an arc with its convex side towards the current. The breaking of a dam, thus letting loose its volume of held back water, is apt to be attended with serious loss of life and property, as in several recent cases in the United States. See *Embankment* and *Reservoir*.

Damage-feasant (dam-aj-fē'a-zant), in law doing injury; trespassing, as cattle; applied to a stranger's beasts found in another person's ground, and there doing damage.

Damages (dam'a-jez), in law, pecuniary compensation paid to a person for loss or injury sustained by him through the fault of another. It is not necessary that the act should have been a fraudulent one; it is enough that it be illegal, unwarrantable, or malicious. If, however, a person has suffered a loss through fraud or delict on the part of another, that person has not only a claim to ordinary damages, but may also claim remote or consequential damages, and may estimate the amount of the loss he has sustained not at its real value, but at the imaginary value which he himself may put upon it, subject, however, to the modification of a judge or a jury. In other cases the damages cover only the loss sustained estimated at its real value, together with the expenses incurred in obtaining damages.

Daman. See *Hyrax*.

Daman (dā-mā'n'), a seaport of Hindustan, at the mouth of the Gulf of Cambay, 100 miles north from Bombay. It belongs to the Portuguese, who conquered it in 1531, and made it a permanent settlement in 1558. It formerly had a large trade, but this has much declined. The settlement, which is governed under Goa, has an area of 148 sq. miles; pop. 64,248.

Damanhoor (dā-man-hör'), a town of Egypt, capital of the province of Behera, 38 miles E. S. E. of Alexandria. It has manufactures of cotton and wool. Pop. 38,752.

Damar (dā-mär'), or DEMAR', a town of Yemen, Arabia, 120 miles north by west of Aden. Pop. about 20,000.

Damar. See *Dammar*.

Damaraland (dā m' a-r a-l a-n d), a German protectorate in South Africa, extending along the Atlantic coast from Cape Frio to Walfisch Bay, and inland to 20° E. long. Area about 100,000 sq. miles, including a large amount of barren lands.

Damar Resin (dā'mar). See *Dammar Resin*.

Damascening (dam'a-sēn-ing). See *Damaskeening*.

Damascenus (dam-a-sē'nus), JOHN, John of Damascus, afterwards called also John *Chrysorrhoas* ('golden stream'), was born at Damascus about 676 A.D.; died about 760. He was the author of the first system

GENERAL VIEW OF WORK ON MISSISSIPPI DAM FROM ILLINOIS SHORE

of Christian theology in the Eastern Church, or the founder of scientific dogmatics, and his exposition of the orthodox faith enjoyed in the Greek Church a great reputation.

Damascus (da-mas'kus), a celebrated city, capital of the Turkish vilayet of Syria, supposed to be the most ancient city in the world. It is beautifully situated on a plain which is covered with gardens and orchards and watered by the Barrada. The appearance of the city, as it first opens on the view, has been rapturously spoken of by all

portant and busiest streets is 'Straight Street,' mentioned in connection with the conversion of the Apostle Paul. Damascus is an important emporium of trade in European manufactures; it is also a place of considerable manufacturing industry in silk, damasks, cotton and other fabrics, tobacco, glass, soap, etc. Saddles, fine cabinet-work and elegant jewelry are well made; but the manufacture of the famous Damascus blades no longer exists. One of the holy Moslem cities, it continues to be the most thoroughly oriental in all its features of

travelers; but the streets are narrow, crooked, and in parts dilapidated, and, except in the wealthy Moslem quarter, the houses are low, with flat-arched doors and accumulations of filth before the entrance. Within, however, there is often a singular contrast, in courts paved with marble and ornamented with trees and spouting fountains, the rooms adorned with arabesques and filled with splendid furniture. Among the chief buildings are the Great Mosque and the Citadel. The bazaars are a notable feature of Damascus. They are simply streets or lanes covered in with high woodwork and lined with shops, stalls, cafés, etc. In the midst of the bazaars stands the Great Khan, it and thirty inferior khans being used as exchanges or marketplaces by the merchants. One of the most im-

any city in existence. Of its origin nothing certain is known; but it is of great antiquity, being mentioned as a place apparently of importance in Gen. xiv, 15. After passing successively under the power of Israelites, Persians, Greeks and Romans, it fell at last in 1516 into the hands of the Turks. Pop. about 150,000.

Damascus-steel, a kind of steel originally made in Damascus and the East, greatly valued in the making of swords for its hardness of edge and flexibility. It is a laminated metal of pure iron and steel of peculiar quality, carbon being present in excess of ordinary proportions, produced by careful heating, laborious forging, doubling and twisting.

Damask (dam'ask), the name given to textile fabrics of various

materials, ornamented with raised figures of flowers, landscapes, and other forms, being the richest species of ornamental weaving, tapestry excepted. Damask is very commonly made in linen for table napery.

Damaskeening (d a m-a s-kēn'ing), the ornamenting of iron and steel with designs produced by inlaying or incrusting with another metal, as gold, silver, etc., by etching, and the like.

Damasus (dam'a-sus), the name of a pope born about 305, reigned 366-384. He was a friend of St. Jerome, whom he led to undertake the improved Latin version of the Bible known as the Vulgate.

Dambool (d a m-b ö l'), a village of Ceylon, 70 miles northeast of Colombo, at which is a rock containing a number of caves, in one of which is a colossal statue of Buddha hewn out of the rock.

Dames of the Revolution,

an American society founded in 1896, its membership being confined to women of direct descent from an ancestor who assisted in establishing the independence of the United States during the Revolutionary war.

Dame's-violet, THE ROCKET, the popular names of *Hespëris matronâlis*, nat. order Brassicæ, stem single, erect, 3 to 4 feet high, leaves lanceolate, flowers purple, often double, is a fine garden perennial, said to be native about Lake Huron.

Damien (da-mē-an), JOSEPH, a Catholic missionary, born in Belgium in 1840. Admitted to holy orders at the age of nineteen, his life was one of the noblest self-sacrifice. He sought the leper settlement of the Hawaiian Islands in 1874 and spent the remainder of his life among these unfortunates as physician and helper. Leprosy attacked him in 1885, but he worked on devotedly till his death in 1889.

Damiens (dā-mē-än). ROBERT FRANÇOIS, notorious for his attempt to assassinate Louis XV, was the son of a poor farmer, and born in 1715 in the village of Tieulloy. His somber and obstinate disposition early obtained him the name of *Robert-le-Diable*. After enlisting as a soldier he became a house-servant in various establishments in Paris, and, having robbed one of his masters, he had to save himself by flight. After spending some months in different cities, in 1756 he returned to Paris with a mind which seems to have become disordered. On January 5, 1757, as Louis

XV was getting into his carriage to return from Versailles to Trianon, he was stabbed by Damiens in the right side. The wound was of a trifling nature, and Damiens, who made no attempt to escape, declared he never intended to kill the king. Damiens was condemned and torn in quarters by horses March 28, 1757, on the Place de Grève at Paris.

Damietta (da-mi-et'a), a town of Egypt, on one of the principle branches of the Nile, about 6 miles from its mouth. It contains some fine mosques, bazaars and marble baths. Alexandria has long diverted the great stream of commerce from Damietta, but the latter has still a considerable trade with the interior in fish and rice. The ancient town of Damietta stood about 5 miles nearer the sea. Pop. (1907) 29,354.

Dammar (d a m' a r; or DAM'MARA) PINE, a genus of trees of the nat. order Coniferæ, distinguished by their large, lanceolated, leathery leaves, and by their seeds having a wing on one side instead of proceeding from the end. The *Dammāra orientālis* is a lofty tree of the East India Archipelago, attaining on some of the Molucca Islands a height of from 80 to 100 feet. It yields one variety of dammar resin. The Kauri pine, or *Dammāra austrālis*, found in the North Island of New Zealand, is a magnificent tree, rising to a height of 150 to 160 feet, and yielding kauri gum. See *Kauri*.

Dammar Resin, a gum or resin of several kinds produced by different trees. The East Indian or cat's-eye resin is got from the *Dammāra orientālis*, a tree of the East Indian Islands (see above), and is used for making varnishes for coach-builders, painters, etc. In its native localities it is burned as incense, and is also used for caulking ships. *Sal* dammar is produced by the sal tree of India (*Shorëa robusta*), *rock* dammar by *Hopëa odorāta* and other species of trees; both yield good varnishes. *Black* dammar is another Indian species.

Dammooda (da-mö'da), a river of Hindustan, presidency of Bengal, which enters the Hooghly near its mouth; length, 350 miles.

Damocles (dam'o-klēz), a native of Syracuse, and one of the courtiers and flatterers of the tyrant Dionysius the Elder. One day he was extolling the grandeur and happiness of Dionysius, whereupon the latter invited him to a magnificent banquet, where he would be regaled with regal fare and regal honors. In the midst of the entertainment, however, Damocles hap-

pened to look upwards, and perceived with dismay a naked sword suspended over his head by a single hair, and was thus taught to form a better estimate of royal honors.

Damon and Pythias (dā'mun, pi'-the-as), two illustrious Syracusans, celebrated as models of constant friendship. Pythias had been unjustly condemned to death by Dionysius the Younger, tyrant of Sicily; but, having to leave Syracuse to arrange his affairs, his friend Damon was taken as a pledge that Pythias should return on the day fixed. Pythias, however, being unexpectedly detained, had great difficulty in reaching Syracuse in time to save Damon being executed in his place; and Dionysius was so affected by this proof of their friendship that he pardoned Pythias.

The Knights of Pythias, a fraternal order established in the United States, has this pleasant incident for its basis. Its growth has been remarkably rapid, and lodges are in existence in every state of the Union. See *Knights of Pythias*.

Dampier (dam'pi-er), WILLIAM, an English navigator, born in 1652. He was descended from a good family in Somersetshire; but losing his father when young, he was sent to sea, and soon distinguished himself as an able mariner. After serving in the Dutch war, in the Bay of Campeachy as a log-

William Dampier.

wood-cutter, in a band of privateers on the Peruvian coasts, in a Virginian expedition against the Spanish settlements in the South Seas, and other enterprises of a similar nature, he returned home in 1691. In 1697 he published his *Voyage Round the World*, which became very

popular, and next year he was appointed commander of a royal sloop-of-war, fitted out for a voyage of discovery in the Australian seas. The vessel, on the home voyage (1700), foundered off the isle of Ascension, and Dampier returned to England. In 1703 he sailed for the South Sea in command of a privateer, returning in 1707; and next year he shipped as pilot with Captain Woodes Rogers, and accompanied him on his voyage round the world. He died in 1715. Besides the book mentioned, he wrote *Voyages and Descriptions*, a supplement to it, and *Voyage to New Holland*. He was an excellent hydrographer, and a keen observer.

Damps, noxious exhalations issuing from the earth, and deleterious or fatal to animal life. Damps exist in wells which continue long covered and not used, and in mines and coal-pits; and sometimes they issue from the old lavas of volcanoes. These damps are distinguished by miners under the names of *choke-damp*, consisting chiefly of carbonic acid gas, which instantly suffocates; and *fire-damp*, consisting chiefly of light carburetted hydrogen, so called from its tendency to explode.

Damson (dam'sen), a variety of the common plum (*Prunus domestica*). The fruit is rather small and oval, and its numerous subvarieties are of different colors; black, bluish, dark purple, yellow, etc. The damson (corruption of Damascene), as its name imparts, is from Damascus.

Dan (Hebrew, meaning 'judgment'), one of the sons of Jacob by his concubine Bilhah. At the time of the exodus the Danites numbered 62,700 adult males, being then the second tribe in point of numbers. Samson was a member of this tribe.

Dana (dā'na), CHARLES ANDERSON, editor, was born in Hinsdale, New Hampshire, in 1819. After association with the *New York Tribune* for 14 years as one of the proprietors and managing editor, in 1863 he was appointed Assistant Secretary of War. After 1868 he was the editor of the *New York Sun*. Perhaps more than any other journalist his personality was identified with his newspaper. He died in 1897.

Dana, FRANCIS, statesman, born at Cambridge, Massachusetts, in 1743; died in 1811. He became an able lawyer, joined the 'Sons of Liberty,' and was active in the measures leading to the Revolution. He was a prominent leader in State and national councils during the war, was sent to Russia as minister in 1781, was judge of the Supreme Court of Massachusetts in 1785, and was chosen

a member of the constitutional convention of 1787, but ill health prevented his serving.

Dana, JAMES DWIGHT, an American naturalist, born in 1813, and after 1855 a professor at Yale College. His writings include *System of Mineralogy*, *Manual of Mineralogy*, *Coral Reefs and Islands*, *Manual of Geology*, *Text-book of Geology*, and many reports and papers. He died in 1895.

Dana, RICHARD HENRY, an American writer, born in 1787, at Cambridge in Massachusetts; educated at Harvard; published several collections of poems and two novels. He died in 1879. —His son RICHARD HENRY (born in 1815; died in 1882) was the author of the well-known work *Two Years before the Mast*, the result of his own experiences during a voyage recommended to him on account of his health.

Danae (dan'ā-ē), in Greek mythology, daughter of Acrisius, king of Argos. She was shut up by her father in a brazen tower, but Zeus, inflamed with passion for her, transformed himself into a golden shower, and descended through the apertures of the roof into her embraces. Set adrift on the waves by her father, she reached safely one of the Cyclades, where her child, Perseus, was brought up.

Danaides (da - nā' i - dēz), the fifty daughters of Danaus, a mythological character who, in peril from his brother, the King of Lybia, fled to Argos, where he was chosen king. The fifty sons of Ægyptus, the Lybian king, followed him and under pretense of friendship, sought the hands of his daughters in marriage. Danaus consented, but gave each of his daughters a dagger, bidding them to murder their husbands on the bridal night in revenge for his treatment by Ægyptus. All did so except one, Hypermnestra, who allowed Lynceus, her husband, to escape. The poets tell us that in the underworld the Danaides, as a punishment for their crimes, were compelled forever to pour water into a vessel full of holes.

Danbury (dan'ber-i), a city, one of the capitals of Fairfield Co., Connecticut, about 60 miles N. N. E. of New York. It has many large hat factories, also fur-cutting works and manufactures of shirts, sewing machines, plated ware, silks, etc. Pop. 23,502.

Danby (dan'bi), FRANCIS, painter, born near Wexford, England, 1793. He established his reputation in 1823 by his *Sunset at Sea after a Storm*; and in 1825, by his *Delivery of Israel out of Egypt*, obtained the honor of being

admitted as an associate of the Academy. Among his subsequent pictures the most celebrated are the *Opening of the Sixth Seal*, exhibited in 1828; the *Age of Gold*, in 1831; *The Enchanted Island—Sunset*, in 1841; *The Contest of the Lyre and Pipe in the Vale of Tempe*, in 1842; and the *Painter's Holiday*, in 1844. Danby's excellence lay in his delineations of scenery, and the poetic halo with which he contrived to invest them. He died in 1861.

Dance of Death. See *Death, Dance of*.

Dancing (dans'ing), a studied and rhythmical movement of the limbs generally adjusted to the measure of a tune. In ancient times it was generally an expression of religious, patriotic, or military feeling, as in the case of the dance of David before the ark, the choric dances, or the Pyrrhic dance of the Greeks. The Romans, however, like the orientals, had their dancing done by hired slaves. This solemn character of the dance has declined with the progress of refinement and civilization, and it is now nothing more than an elegant social amusement and an agreeable spectacle at public entertainments. As a social amusement, something can be said both for and against dancing. It is a pleasantly animated indoor physical exercise, and helps to give grace to the ordinary movements of the body. It can be urged against it that, as an exercise, it takes place most frequently when the body should be in repose, and under circumstances not very favorable to health, such as overcrowded and overheated rooms, etc. It is, therefore, though in itself a healthy amusement, peculiarly liable to abuse.

Dancing Disease, an epidemic nervous disorder apparently allied to hysteria and chorea, occasionally prevalent in Germany and Italy during the middle ages. In 1734, during the celebration of the festival of St. John at Aix-la-Chapelle, the streets became crowded with men and women of all ranks and ages, who commenced dancing in a wild and frantic manner till they dropped down from fatigue. The mania spread to Cologne, Metz and Strasburg, and gave rise to much imposture, profligacy and disorder. At the beginning of the seventeenth century the epidemic began to decline, and is only known now as a nervous affection in individual cases.

Dandelion (d a n - d e - lī' on, *Leontodon Taraxacum*), a plant belonging to the nat. order Compositæ, indigenous to Europe, but now also common in America. The leaves are all

radical, and runcinate or jagged on the margin. From this circumstance has been derived its French name *dent de lion* (lion's tooth), of which the English appellation is a corruption. The stems are hollow and have one large bright-yellow flower and a tapering, milky, perennial root, which acts as an aperient and tonic, and is much esteemed in affections of the liver. The whole plant is full of a milky and bitter juice. (See *Taraxacin*.) The seed of the plant is furnished with a white pappus, and is transported far and wide by the wind.

Dandie Dinmont Terrier, a peculiar breed of the Scotch terrier, so called from the Border farmer of that name who figures in Scott's novel of *Guy Mannerling*. This breed is known by its short legs, wiry and abundant hair, and large ears. It is very courageous when fully grown. It is usually either of a light-brown or a bluish-gray color, termed respectively the 'Mustard' and the 'Pepper' variety.

Dandolo, ANDREA, Doge of Venice and of an illustrious Venetian family, was born about 1310, and made doge in 1343. He carried on a war against the Turks with various success, and greatly extended Venetian commerce by opening a trading connection with Egypt. He wrote a chronicle of Venice, comprising the history of the republic from its commencement to 1342, which was published in Muratori's collection. He died in 1354.

Dandolo (dān'do-lo), ENRICO, Doge of Venice, was chosen to that office in 1192, at the advanced age of eighty-four. On the formation of the Fourth Crusade Dandolo induced the senate to join in it, and by its help recovered the revolted town of Zara. Constantinople was next stormed, the blind old doge, it is said leading the attack. In the division of the Byzantine Empire the Venetians added much to their dominions. Dandolo died at Constantinople in 1205, at the age of ninety-seven.

Danebrog, DANNEBROG (dān'e-brog), literally 'the cloth or banner of the Danes,' a Danish order of knighthood, said to have been instituted in 1219, and revived in 1693. The decorations consist of a cross of gold *pattée*, enameled with white, and suspended by a white ribbon embroidered with red.

Danegelt, DANEGELD (dān'geld; that is, 'Dane tax'), in English history, an annual tax laid on the English nation for maintaining forces to oppose the Danes, or to furnish tribute to procure peace. It was at first one shilling,

and ultimately seven, for every hide of land, except such as belonged to the church. When the Danes became masters of England the *danegelt* was a tax levied by the Danish princes on every hide of land owned by the Anglo-Saxons.

Danelagh, DANELAW (dān'lā), the ancient name of a strip of territory extending along the east coast of England from the Thames to the Tweed, ceded by Alfred to Guthrun, King of the Danes, after the battle of Ethandune. This name is retained till the Norman conquest, its inhabitants being governed by a modification of Danish law and not by English law.

Danewerk (dā'ne-verk; Ger. 'Danes' work'; Danish, *Dannevirke*), an ancient wall of about from 30 to 40 feet high and of an equal thickness extending along the southern frontier of Schleswig for nearly 10 miles, from the North Sea to the Baltic. It was constructed in the middle of the tenth century and repaired in 1850, but was captured by the Austrians and Prussians in the Schleswig-Holstein war of 1864 and soon after destroyed.

Daniel (dan'yel), the prophet, a contemporary of Ezekiel, was born of a distinguished Hebrew family. In his youth, B.C. 605, he was carried captive to Babylon, and educated in the Babylonish court for the service of King Nebuchadnezzar. Thrown into a lions' den for conscientiously refusing to obey the king, he was miraculously preserved, and finally made prime-minister in the court of the Persian king Darius. He ranks with what are called the 'greater prophets.' The book of the Old Testament which bears his name is divided into a historical and a prophetic part. Modern criticism generally regards it as written during the oppression of the Jews under Antiochus, about 170 B.C. It is partly in Chaldee.

Daniel, SAMUEL, an English historian, poet, and contemporary with Shakespere, was born in 1562. Under the patronage of the Pembroke family he received several court appointments, but he commonly lived in the country, employed in literary pursuits. His great poem, *The History of the Civil Wars between the Houses of York and Lancaster*, is written with much rhetorical grace and dignity of style. He wrote also epistles, pastorals, sonnets, and a few tragedies, as well as a clear and useful sketch of English history till the time of Edward III. He died in 1619.

Daniell, JOHN FREDERICK, a distinguished English physicist, born at London in 1790. In 1816 he

commenced the *Quarterly Journal of Science and Art* in concert with Mr. Brande. In 1820 he published an account of a new hygrometer which he had invented. Soon afterwards his valuable works, *Meteorological Essays* and the essay on *Artificial Climate*, appeared. In 1831 he was appointed professor of chemistry in King's College, London, and made further important discoveries, chief among which is his apparatus for maintaining a powerful and continuous current of electricity in galvanic batteries (see following article). For these discoveries he received successively the three medals in the gift of the Royal Society. He was made a D.C.L. of Oxford in 1843, and died in 1845.

Daniell's Battery, a galvanic battery the cells of which were originally constructed in the following way: A tall, cylindrical copper vessel was nearly filled with a saturated solution of sulphate of copper. A rod of amalgamated zinc was enclosed in a skin or bladder, which was filled with dilute sulphuric acid, and suspended in the copper cylinder. When the zinc rod was connected by a wire with the copper

DANIELL'S BATTERY.—SECTION OF CELL.
C, Outer copper cell. B, Solution of sulphate of copper. D, Shelf for sulphate of copper. E, Porous cell. A, Sulphuric acid. Z, Zinc.

vessel, which itself formed one of the plates of the battery, the current passed, according to common phraseology, from the copper through the wire to the zinc. Instead of the bladder or skin porous earthenware pots are now employed to contain the dilute sulphuric acid in which the zinc is immersed. In improved modifications of Daniell's battery the most important change is that of substituting, for the dilute sulphuric acid that surrounds the zinc, solution of sulphate of zinc, and in this case the zinc is not amalgamated. By doing away with the

sulphuric acid, local waste of the zinc is to a great extent prevented, and the solution of sulphate of zinc is used instead of pure water on account of the very high resistance of water impregnated with salts.

Danish Language and Literature. See *Denmark*.

Dankali', or DANA'KIL (the former is the Arabic singular, the latter the plural), the common name of a number of rude tribes that inhabit Africa east of Abyssinia, between it and the Red Sea, bordering on the south with the Somalis. Some engage in fishing, others in the rearing of cattle. They are of the Mohammedan religion, and are estimated to number 70,000.

Dannebrog. See *Danebrog*.

Dannecker (dan'ek-er), JOHANN HEINRICH, a German sculptor, born in 1758. Early signs of talent recommended him to the notice of Charles, Duke of Würtemberg. As a student at the Karlschule he greatly distinguished himself, was appointed court sculptor, and visited Paris and Rome. In 1790 he returned to Würtemberg, and became professor of the fine arts at Stuttgart. His best works are his statue of Christ and his *Ariadne Seated on a Panther*. His portrait busts are excellent; those of Schiller, Lavater, the Duchess Stephanie of Baden, deserve particular mention. Dannecker died in 1841.

Dannemora (da-ne-mō'ra), a village, on a lake of the same name, 24 miles N. N. E. of Upsala, in Sweden, celebrated for its iron-mines, the second richest in Sweden, which have been worked uninterruptedly for upwards of three centuries, and produce the finest iron in the world.

Dante, ALIGHIERI (dàn'tā à-lē-gē-ā'rē), (a contraction of *Durante*) the greatest of Italian poets, was born in Florence about the end of May, 1265, of a family belonging to the lower nobility. His education was confined to the learned Brunetto Latini. He is said also to have studied in various seats of learning, and it is certain that either at this time or in the course of his wandering life he made himself master of all the knowledge of his time. He seems to have been quite a boy, no more than nine years of age, when he first saw Beatrice Portinari, and the love she awakened in him has been described in that record of his early years, the *Vita Nuova*, as well as in his later great work, the *Divina*

Commedia, in terms which make it hard to distinguish the real personality of Beatrice from some ideal power of beauty and virtue of which she is to Dante the symbol. Their actual lives at least went far enough apart, Beatrice marrying a noble Florentine, Simone Bardi, in 1287, and dying three years afterwards; while the year following Dante married Gemma dei Donati, by whom he had seven children. At this time the Guelfic party

Dante.

in Florence became divided into the rival factions of Bianchi and Neri (Whites and Blacks), the latter being an extreme papal party, while the former leaned towards reconciliation with the Ghibellines. Dante's sympathies were with the Bianchi, and being a prior of the trades and a leading citizen in Florence he went on an embassy to Rome to influence the pope on behalf of the Bianchi. The rival faction of the Neri, however, had got the upper hand in the city, and in the usual fashion of the time were burning the houses of their rivals and slaying them in the open street. In Dante's absence his enemies obtained a decree of banishment against him, coupled with a heavy fine, a sentence which was soon followed by another condemning him to be burned alive for malversation and peculation. From this time the poet became, and to the end of his life remained, an exile; and his history, first lost by the indifference of contemporaries and then hallowed by the legends of later generations, becomes semimythical. He has told us himself how he wandered 'through almost all parts where this language is spoken,' and how hard he felt it 'to climb the stairs and eat the bitter bread of strangers.' During this period he is said to have visited many cities, Arezzo, Bologna, Sienna, etc., and

even Paris. In 1314 he found shelter with Can Grande della Scala at Verona, where he remained till 1318. In 1320 we find him staying at Ravenna with his friend Guido da Polenta. In September, 1321, his sufferings and wanderings were ended by death. He was buried at Ravenna, where his bones still lie. His great poem, the *Divina Commedia* ('Divine Comedy'), written in great part, if not altogether, during his exile, is divided into three parts, entitled *Hell*, *Purgatory* and *Paradise*. The poet dreams that he has wandered into a dusky forest, when the shade of Virgil appears and offers to conduct him through hell and purgatory. Further the pagan poet may not go, but Beatrice herself shall lead him through paradise. The journey through hell is first described, and the imaginative power with which the distorted characters of the guilty and the punishments laid upon them are brought before us; the impressive pathos of these short histories—often compressed in Dante's severe style into a couple of lines—of pope and Ghibelline, Italian lord and lady; the passionate depth of characterization, the subtle insight and intense faith, make up a whole which for significance and completeness has perhaps no rival in the work of any one man. From hell the poet, still in the company of Virgil, ascends to purgatory, where the scenes are still mostly of the same kind, though the punishments are only temporary. In the earthly paradise Dante beholds Beatrice in a scene of surpassing magnificence, ascends with her into the celestial paradise, and after roaming over seven spheres reaches the eighth, where he beholds 'the glorious company which surrounds the triumphant Redeemer.' In the ninth Dante feels himself in the presence of the divine essence, and sees the souls of the blessed on thrones in a circle of infinite magnitude. The deity himself, in the tenth, he cannot see for excess of light. There are many notable translations of Dante's great poem. Among English versions we may mention those of Cary, Longfellow and Dean Plumptre, and an excellent prose translation by Dr. John Carlyle. The *Vita Nuova* has been admirably translated by D. G. Rossetti in his *Early Italian Poets*. Dante's other works are: *Il Convito* ('The Banquet'), a series of philosophical commentaries on the author's canzoni; *Il Conzoniere*, a collection of poems; a Latin treatise, *De Monarchia*, a work intended to prove the supremacy of the head of the Holy Roman Empire; a treatise on the Italian language entitled, *De Vulgari Eloquentia*; and an inquiry into the relative altitude of

DANTE AND BEATRICE

While, contrary to a prevalent belief, Dante and Beatrice were not lovers, she was the controlling inspiration of his life and the heroine of his "*Divina Commedia*."

the water and the land, *De Aqua et Terra*.

Danton (dān-tōn), GEORGE JACQUES, an advocate by profession, and one of the great figures in the French Revolution, born in 1759. His colossal stature, athletic frame, and powerful voice contributed not a little, together with his intellectual gifts and audacity, to win him a prominent position among the revolutionaries. He founded the club of the Cordeliers, was foremost in organizing and conducting the attack on the Tuileries, August 10, 1792, and as a reward for such services was made minister of justice and a member of the provisional executive council. When the advance of the Prussian army spread consternation among the members of the government Danton alone preserved his courage, and in a celebrated speech summoned all Frenchmen capable of bearing arms to march against the enemy. He voted for the capital punishment of all returning aristocrats, but undertook the defense of religious worship, and along with Robespierre brought Hébert and the worshipers of the goddess Reason to the scaffold. But the rivalry of the two great leaders had now reached a point when one must succumb, and the crafty Robespierre succeeded in having Danton denounced and thrown into prison, March 31, 1794. Five days afterwards he was condemned by the revolutionary tribunal as an accomplice in a conspiracy for the restoration of monarchy, and executed the same day.

Dantzic, or DANZIG (dānt'zih), a fortified town and port of Prussia, capital of the province of West Prussia, 253 miles N. E. Berlin, on the

is one of the most important seaports in the Prussian monarchy. The more modern parts are regularly and well built; in the other parts the streets are narrow and the houses old and indifferent. Among the principal buildings are the Dom or Cathedral, begun in 1343, the church of St. Catherine, the exchange, the arsenal, observatory, three monasteries, to synagogues, two theaters, etc. The industries are numerous, but, excepting those connected with shipbuilding, artillery and beer, not of great importance. The prosperity of the town is founded chiefly on its transit trade, particularly in wheat from Poland. There is also a considerable trade in amber. The proper port of Dantzic is Neufahrwasser, at the mouth of the Vistula; but vessels of large size can now come up to and enter the town. After being alternately possessed by the Teutonic knights and the Poles, Dantzic, on the partition of Poland, fell to Prussia. Pop. 169,306.

Danube (dan'üb; anc. *Ister* or *Danubius*; German, *Donau*), a celebrated river of Europe, originates in two small streams rising in the Schwarzwald, or Black Forest, in Baden, and uniting at Donaueschingen. The direct distance from source to mouth of the Danube is about 1000 miles, and its total length, including windings, about 1670 miles. From its source the Danube flows in a northeasterly direction to Ulm, in Würtemberg, where it becomes navigable for vessels of 100 tons; then to Ratisbon in Bavaria, where it becomes navigable for steamers. Here it turns in a southeasterly direction, entering Austria at Passau, passing Vienna and Budapest, above which latter town it suddenly turns due south, holding this direction till it is joined by the Drave, after which it runs S. S. E. and enters Servia at Belgrade. Continuing its general course eastward it forms for a long distance the boundary line between Roumania and Bulgaria. At Silistria it once more turns northward, and flowing between Roumania and Bessarabia falls into the Black Sea by three different outlets. In the upper part of its course, through Würtemberg and Bavaria, the Danube flows through some of the most fertile and populous districts of its basin. Its principal affluents here are the Iser and Lech. In Austria it passes through a succession of picturesque scenery till past Vienna, the land on both sides being well peopled and cultivated. The principal affluents are the March, or Morawa, and the Ens. After passing through what is called the Carpathian Gate, at Pressburg, where it enters Hungary, it gives off a number of branches,

left bank of the west arm of the Vistula, about 3 miles above its mouth in the Baltic, and intersected by the Mottlau, which here divides into several arms. It

Danubian Principalities

Danville

forming a labyrinth of islands known as Schütten, but on emerging it flows uninterruptedly southwards through wide plains interspersed with pools, marshes, and sandy wastes. The principal affluents here are the Save, the Drave and the Theiss. Sixty miles before entering Roumania the river passes through a succession of rapids or cataracts which it has made in cutting a passage for itself through the cross chain of hills which connect the Carpathian Mountains with the Alps. The last of these cataracts,

Danvers (dan'vers), a village in Danvers Township, Essex Co., Massachusetts, 19 miles N. N. E. of Boston. It has manufactures of shoes, bricks, leather, etc., and contains a State insane asylum and a normal college. Pop. of township, 9407.

Danville (dan'vil), the name of four important American cities. (1) The capital of Vermilion Co., Illinois, 125 miles s. of Chicago. Coal is mined largely near by, and there are flour, lumber, woolen, glass, iron and other in-

at Old Orsova, is called the Iron Gate. The lower course of the Danube, in Roumania and Bulgaria, is through a flat and marshy tract, fertile but badly cultivated and thinly peopled. In this part it increases its width from 1400. to 2100 yards, and farther on forms an expanse like a sea, and is studded with islands. Of the three outlets the Sulina Mouth is the deepest, and is usually chosen by ships bound up the river. The Danube is navigable for steamers up to Regensburg (Ratisbon), nearly 1500 miles from its mouth. Some of its tributaries, such as the Save, the Theiss and the Drave, are also navigable, so that the water system of the Danube may be estimated as admitting of about 2500 miles of steam navigation.

Danubian Principalities. See Roumania.

dustries. Here is a branch of the National Soldiers' Home. Pop. 27,871.—(2) A borough, capital of Montour Co., Pennsylvania, 56 miles N. by E. of Harrisburg. It was the seat of the first railroad ironworks in the country, and has some of the largest American ironworks. Here is a State insane asylum. Pop. 7517.—(3) A city of Pittsylvania Co., Virginia, on the Dan River, 141 miles s. w. of Richmond. It is the seat of the Randolph Macon Institute, the Roanoke Female College and the Military Institute, is the center of the fine yellow tobacco section, nearly 40,000,000 pounds of leaf tobacco being sold here in a year. It has cotton and other mills. Pop. 19,020.—(4) A city, capital of Boyle Co., Kentucky, 36 miles s. s. w. of Lexington. Here is Center College, founded 1819, the Danville Theological Seminary, and a deaf

and dumb asylum. It is an important horse market. Pop. 5420.

Daoudnagar. See *Daudnagar*.

Daphne (daf'nē), the Greek name for laurel, in Greek mythology a nymph beloved by Apollo. Deaf to the suit of the god, and fleeing from him, she besought Zeus to protect her. Her prayer was heard, and at the moment Apollo was about to encircle her in his arms she was changed into a laurel, a tree thenceforth consecrated to the god.

Daph'ne, a genus of plants, nat. order Thymelaceæ. They are shrubs, inhabiting the greater part of the northern hemisphere, but chiefly the south of Europe and the warmer parts of Asia. The best known is the mezereon (*D. Mezerëum*), with pale-green leaves and very fragrant flowers. *D. Laureola* (spurge laurel) has an irritant bark, and its berries are poisonous.

Daphnia (daf'ni-a), the water-flea, a genus of minute crustaceans belonging to the division of Branchiopoda. The best-known species is the *D. pulex*, or 'branch-horned' water-flea, which is a favorite microscopical object. The head is prolonged into a snout, and is provided with a single, central, compound eye; it is also furnished with antennæ, which act as oars, propelling it through the water by a series of short springs or jerks. These animals are very abundant in many ponds and ditches; and as they assume a red color in summer impart the appearance of blood to the water.

Darab', or DARABJERD (dä-rab'jerd), a town of Persia, province of Farsistan, beautifully situated in an extensive plain among groves of dates, oranges and lemons, 140 miles southeast of Shiraz. Pop. about 5000.

Darbhangah (dur-bung'ga), a town of Hindustan, in the Patná division of Behar, in a low-lying district subject to inundation; it is the residence of the Maharaja of Darbhangah, who has a fine new palace here. Pop. 66,244.

D'Arblay, MADAME. See *Burney*.

Dardanelles (d a r'da-nelz); ancient *Hellespont*), a narrow channel which connects the Sea of Marmora with the Ægean Sea, and at this particular point separates Europe from Asia. It is about 40 miles in length, and varies in breadth from 1 to 4 miles. Its rapid current, often much accelerated by winds, runs southward. On the Asiatic side the country is fine and fertile, rising gradually upwards from the

sea to the range of Mount Ida; the European side is steep and rugged, but densely peopled and highly cultivated. On both shores there are numerous forts and batteries. Two castles on the opposite shores occupy the sites of ancient Sestos and Abydos, and recall the story of Hero and Leander. By treaty made in 1841 between the five great powers and Turkey, confirmed by the Peace of Paris in 1856, it is settled that no non-Turkish man-of-war shall pass the strait without the express permission of the Turkish government.

Dardanus (dar'da-nus), in Greek mythology, the progenitor of the Trojans.

Darfur, or DARFOOR (där'föör), a considerable region of Central Africa, forming a large oasis in the S. E. corner of the Great Desert. It may be considered as lying between lat. 11° and 15° N. and long. 26° and 29° E.; on the east it has Kordofan and on the west Bornou, while the regions to the south are occupied by barbarous nations. The inhabitants are Mohammedans and negroes and are semibarbarous. Their occupation is chiefly agriculture, and cattle form their principal wealth. The commerce with Egypt is extensive, and is carried on entirely by the African system of caravans. It exports slaves, ivory, ostrich feathers, gum, copper, etc., and receives in exchange sugar, cotton, cloth, hardware, firearms, etc. Unlimited polygamy is allowed, and the morals and manners of the natives are of a very degraded kind. Pop. estimated at about 750,000.

Daric (dar'ik) an ancient Persian gold coin of Darius, weighing about 120 grains, value about \$6, and bearing

Golden Daric, from British Museum.

on one side the figure of an archer. In later times the name has been applied to a silver coin having the figure of an archer.

Darien (dā'ri-en), GULF OF, a gulf of the Caribbean Sea at the north extremity of South America, between the Isthmus of Panama and the mainland.

Darien, ISTHMUS OF, often used as synonymous with the Isthmus of Panama, but more strictly applied to

GENERAL VIEW OF DARJEELING

the neck of land between the Gulf of Darien and the Pacific.

Darien Scheme, a celebrated financial project conceived and set afloat by William Paterson, a Scotsman, towards the close of the seventeenth century. Paterson was a man of bold and original conceptions, and possessed of a wide knowledge of commerce and finance. He was the first projector of the Bank of England, but was disappointed of his just recompense. His next scheme was one of magnificent proportions. He proposed to form an emporium on each side of the Isthmus of Darien or Panama for the trade of the opposite continents. The settlement thus formed would become the entrepôt for an immense exchange between the manufactures of Europe and the produce of South America and Asia. Paterson had designed to limit the benefits of the scheme to Scotland mainly, but had to seek help in London, where the subscriptions soon ran up to £300,000. Alarm was soon excited among the English merchants, especially those connected with the Indies, at the gigantic Scotch scheme, and the English subscriptions were withdrawn. Scotland, indignant at this treatment, subscribed at once and with great enthusiasm £400,000, a full half of all the cash in the kingdom. Little more than the half, however, was paid up. In 1698 five large vessels laden with stores, etc., and with 1200 intending colonists, sailed for the Isthmus of Darien. The settlement was formed in a suitable position, and the colonists fortified a secure and capacious harbor; but nothing else had been rightly calculated. Many of the colonists were of the gentry, totally unacquainted with any of the arts necessary in a new colony; the provisions were either improper for the climate or soon exhausted; the merchandise they had brought was not adapted for the West Indian market. To add to their difficulties the colonists were attacked by the Spaniards and all commerce forbidden with them. For eight months the colony bore up, but at the end of that time the survivors were compelled by disease and famine to abandon their settlement and return to Europe. Two of the ships were lost on the way home, and only about thirty of the colonists, including Paterson, reached Scotland.

Darius (da-rī'us), the name of several Persian kings. (1) DARIUS I, fourth king of Persia, son of Hystaspes, a prince of the royal family of the Achæmenidæ, attained the throne in B.C. 521. His reign was distinguished by many important events. He reduced,

after a two years' siege, the revolted city of Babylon, and led an expedition of 700,000 men against the Scythians on the Danube, from which he extricated himself after suffering great losses. To revenge himself against the Athenians who had promoted a revolt of the Ionian cities, he sent an army under Mardonius to invade Greece. But the ships of Mardonius were destroyed by a storm in doubling Mount Athos (492 B.C.), and his army was cut to pieces by the Thracians. Darius, however, fitted out a second expedition of 500,000 men, which was met, on the plains of Marathon by an Athenian army 10,000 strong, under Miltiades, and completely defeated (490 B.C.). Darius had determined on a third expedition when he died, B.C. 485.—(2) DARIUS II, surnamed *Nothos*, or the Bastard, by the Greeks, an illegitimate son of Artaxerxes I (*Longimānus*). He ascended the throne in 423, and died in 404. His son Cyrus is familiar to us through Xenophon's *Anabasis*.—(3) DARIUS III, surnamed *Codomannus*, great grandson of Darius II, was the twelfth and last king of Persia. He ascended the throne B.C. 336, when the kingdom had been weakened by luxury and the tyranny of the satraps under his predecessors, and could not resist the attacks of a powerful invader. Such was Alexander of Macedon; and the army which was sent against him by Darius was totally routed on the banks of the Granicus, in Asia Minor. Darius then hastened with 400,000 soldiers to meet Alexander in the mountainous region of Cilicia, and was a second time totally defeated near the Issus, B.C. 333. Two years afterwards, all proposals for peace having been rejected by Alexander, Darius collected a second army, and meeting the Macedonian forces between Arbela and Gaugamela was again routed and had to seek safety in flight (331 B.C.). Alexander now captured Susa the capital, and Persepolis, and reduced all Persia. Meanwhile Darius was collecting another army at Ecbatana in Media, when a traitorous conspiracy was formed against him by which he lost his life in 330 B.C. Alexander married his daughter Statira.

Darjeeling, or DARJILING (där-jël'-ing), a district of India, in the extreme north of the lieutenant-governorship of Bengal, division of Cooch-Bihar; area, 1234 sq. miles. Tea, coffee, cinchona and cotton are cultivated more or less, and the cultivation of the tea-plant and the making of tea is now the staple industry. Pop. 249,117.—DARJEELING, the chief town in the district, is a sanatory station for the British troops,

Darlaston

and though little more than 36 miles from the plains stands at an elevation of 7400 ft. above sea-level, on a ridge with deep valleys on either side, in a bleak but healthy situation. There is a residence of the lieutenant-governor, barracks, a sanatorium, etc. Pop. 16,924, much increased in the hot weather.

Darlaston (där'las-tun), a town and parish of England, 17 miles s. by E. of Stafford. It has extensive coal and iron mines. Pop. 17,107.

Darley (dar'li), FELIX O. CARR, artist, born at Philadelphia, Pennsylvania, in 1822; died in 1888. He early showed talent in drawing, and won reputation by his drawings for Irving's *Legend of Sleepy Hollow* and *Rip Van Winkle*, and his illustrations for the novels of Judd, Dickens, Cooper and Simms. In 1868, after residing for some years in Europe, he published *Sketches Abroad with Pen and Pencil*.

Darling (dar'ling; from a governor of N. South Wales), a name of several applications in Australia. The *Darling River*, a river rising in the N. E. of New South Wales, flows in a south-westerly direction till it joins the Murray. —*Darling District* is a pastoral district about 50,000 sq. miles in extent, in the s. w. of New South Wales, and watered by the Darling and the Murray. —The *Darling Downs* consists of a rich tableland west of Brisbane in Queensland. It is well watered, and measures about 6000 sq. miles. The *Darling Range* is a range of granite mountains in Western Australia, running in a northerly direction parallel with the coast from Point D'Entrecasteaux for 250 miles.

Darling, GRACE, a celebrated English heroine, was born in 1815, in the Longstone Lighthouse (Farne Islands, coast of Northumberland), of which her father was keeper. In 1838 the steamer *Forfarshire*, with forty-one passengers on board besides her crew, became disabled off the Farne Islands during a storm, and was thrown on a rock where she broke in two, part of the crew and passengers left clinging to the wreck. Next morning William Darling descried them from Longstone, about a mile distant, but he shrank from attempting to reach the wreck through a boiling sea in a boat. His daughter Grace, however, implored him to make the attempt and let her accompany him. At last he consented, and father and daughter each taking an oar, they reached the wreck and succeeded in rescuing nine sufferers. The news of the heroic deed soon spread, and the brave girl received testimonials from all quarters. A purse of £700 was publicly

subscribed and presented to her. Four years afterwards she died of consumption, in 1842.

Darlington (där'ling-tun), a municipal and parliamentary borough of England, 17½ miles south of Durham; well built, chiefly of brick. The woolen manufacture is carried on to a considerable extent, and there are large ironworks and establishments manufacturing steel, locomotive engines, iron bridges, etc. Pop. (1911) 55,633.

Darlingtonia (där-ling-tō'ni-a), a remarkable genus of American pitcher-plants, nat. order Sarraceniaceæ. A single species is known from California. The leaves are long and trumpet-shaped, with a wing rising from one side of the mouth.

Darmstadt (därm'stät), a town of Germany, capital of the Grand-duchy of Hesse, in a sandy plain, on the Darm, 15 miles s. of Frankfort. It consists of an old and a new town. The former, which is the business part of the town, is very poorly built; the houses are old, and the streets narrow and gloomy. The new town is laid out with great regularity, and has handsome squares and houses. Among the remarkable buildings are the old palace (with a library of 500,000 volumes and 4000 MSS., a picture-gallery, and a rich museum of natural history), the Roman Catholic Church, and the Rathhaus, or town-hall, built in 1580. Darmstadt has some iron-foundries, breweries, etc., but depends more upon the residence of the court than upon either trade or manufactures. Pop. 83,000.

Darmstadt, or HESSE - DARMSTADT. See *Hesse*.

Darnel (dar'nel), the popular name of *Lolium temulentum*, a species of poisonous grass. It appears to be the *infelix lolium* of Virgil, and the tares of Scripture. Its properties are said to be narcotic and stupefying, but recent researches have cast some doubt on its reported deleterious qualities. It is met with in cornfields, and is now naturalized in N. America.

Darnétal (där-nā-tál), a town of France, dep. of Seine-Inférieure, 2½ miles east of Rouen. There are extensive woolen factories and spinning-mills. Pop. 6739.

Darnley (darn'li). HENRY STUART, LORD, son of the Earl of Lennox and Lady Margaret Douglas, a niece of Henry VIII, and by her first marriage queen of James IV, born in 1541. In 1565 he was married to Mary, Queen of Scots. It was an unfortunate match, and ere long gave rise first to coolness,

Darnley

then to open quarrel, and finally to deadly hate, which the murder of Rizzio, to which Darnley was a party, only increased. Mary affected, however, to be reconciled to him, but could not long conceal her contempt for the handsome imbecile. After the birth of a son, subsequently James VI, Darnley was seized at Glasgow with smallpox, from which he had barely recovered when Mary visited him, and had him conveyed to an isolated house called Kirk of Field, close to the Edinburgh city walls. This dwelling, which belonged to a retainer of Bothwell's, the rapidly rising favorite, was blown into the air with gunpowder (February 10, 1567). The dead bodies of the king and his page were found in a field at a distance of 80 yards from the house, quite free from any mark which such an explosion would cause. Strong circumstantial evidence points to Bothwell as the murderer, and, some think, to Mary as an accomplice in the crime.

Darrang (dur'rung), a district of Assam province Hindustan, forming a portion of the upper valley of the Brahmaputra; area, 3418 sq. miles; pop. 337,313. Virgin forests cover a large portion of the region.

Darters (dar'ters), or SNAKE-BIRDS, a genus (*Plotus*) of web-footed birds of the pelican tribe, found near the eastern coasts of the tropical parts of America, and on the western coast of tropical Africa, as well as in Australia. The birds perch on trees by the sides of lakes, lagoons and rivers, and after hovering over the water suddenly dart at their finny prey with unerring aim (hence the name). From the serpent-like form of their head and neck, the head being scarcely thicker than the neck, they are called snake-birds.

Dartford (dart'ford), a town of England, county of Kent, on the Darent, 15 miles southeast of London. On the river are numerous paper, corn, and oil mills, a large foundry, and an extensive gunpowder manufactory, etc. Dartford was the first place in Britain where a paper-mill was erected. Wat Tyler was a native of this place, and the insurrection known by his name broke out at Dartford. Pop. (1911) 23,609.

Dartmoor (dart'mör), an extensive upland tract in England, in the western part of Devonshire, often called the *Forest of Dartmoor*, and belonging to the Duchy of Cornwall; reaching from Brent s. to Oakhampton N., 22 miles, with a breadth of about 20 miles, and occupying from 130,000 to 150,000 acres. Cattle and sheep are fed

on the coarse grass during the summer months. Several of the rugged granite hills (here called *tors*) are of considerable height, Yes Tor rising 2050 feet above the plain. Dartmoor prison, built in 1809 as a state prison, is now a convict depot.

Dartmouth (dart'muth), a municipal borough and seaport of England, county of Devon, situated near the entrance of the river Dart into the British Channel, 30 miles south from Exeter. The harbor is safe and commodious, and the port is much resorted to by ocean steamers for coaling purposes. Pop. (1911) 7055.

Dartmouth, a town of Nova Scotia, opposite Halifax. It has rope-walks, tanneries, etc. Pop. (1911) 5058.

Dartmouth College, an institution founded at Lebanon, Connecticut, in 1754 and removed to Harvard, New Hampshire, in 1769. Aided by Lord Dartmouth, an English nobleman, it was given his name. In 1816 the New Hampshire legislature changed its name to Dartmouth University, but this was opposed by the trustees and a memorable lawsuit followed, the case being carried to the United States Supreme Court. Daniel Webster was one of the counsel for the trustees, whose case was won and the university organization dissolved. The college has remained a conservative institution, and has now about 100 instructors and 1200 students, with an endowment of nearly \$3,000,000.

Daru, PIERRE ANTOINE NOEL MATTHIEU BRUNO, COUNT, a French statesman and author, born at Montpellier in 1767; died in 1829. He favored the revolution, but was imprisoned during the reign of terror, when he translated the odes and epistles of Horace into French verse. Napoleon discovered his abilities and rewarded him by various official appointments of trust. In the campaigns against Austria and Prussia (1806-09) he served with ability as a diplomatist and financier. He became chief minister of state in 1811, and was called to the chamber of peers in 1818. In later life he devoted himself exclusively to letters. His chief works are his *History of the Venetian Republic*, *Life of Sully*, *History of Bretagne*, etc.

Darwen, OVER (ō'vēr dar'wen), a municipal borough of Lancashire, England, 3½ miles south of Blackburn. Until about the middle of the last century Over Darwen was an insignificant village; now it is a populous and thriving town. The staple manufacture

is cotton; other manufactures are paper, iron castings, earthenware, etc. Pop. (1911) 40,344.

Darwin (dar'win), CHARLES ROBERT, an English naturalist, born at Shrewsbury in 1809; died at Down, near Beckenham, Kent, in 1882; was the son of Dr. Robert Darwin and grandson of Dr. Erasmus Darwin. He was educated at Shrewsbury School, and at the universities of Edinburgh and Cambridge. He early devoted himself to the study of natural history, and in 1831 he was appointed naturalist to the surveying voyage of H.M.S. *Beagle*, commanded by Captain (afterwards Admiral) Fitzroy. The vessel sailed in December, 1831,

Charles Darwin.

and did not return till October, 1836, after having circumnavigated the globe. Mr. Darwin came home with rich stores of knowledge, part of which he soon gave to the public in various works. In 1839 he married his cousin Emma Wedgwood, and henceforth spent the life of a quiet country gentleman, engrossed in scientific pursuits—experimenting, observing, recording, reflecting and generalizing. In 1839 he published his *Journal of Researches during a Voyage round the World*; in 1842 *Structure and Distribution of Coral Reefs*; in 1844 *Geological Observations on Volcanic Islands*, etc.; in 1846 *Geological Observations in South America*; in 1851 and 1854 his *Mono-graph of the Cirrhipedia*, and soon after the *Fossil Lepadridæ and Balanidæ of Great Britain*. In 1859 his name attained its great celebrity by the publication of *The Origin of Species by Means of Natural Selection*. This work, scouted and derided though it was at first in certain quarters, may be said to have worked

nothing less than a revolution in biological science. In it for the first time was given a full and satisfactory exposition of the theory of evolution as applied to plants and animals, the origin of species being explained on the hypothesis of natural selection. The rest of his works are largely based on the material he had accumulated for the elaboration of this great theory. The principal are a treatise on the *Fertilization of Orchids* (1862); *Domesticated Animals and Cultivated Plants, or The Principle of Variation, etc., under Domestication* (1867); *Descent of Man and Variation in Relation to Sex* (1871); *The Expression of the Emotions in Man and Animals* (1872); *Movements and Habits of Climbing Plants* (2d. ed., 1875); *Insectivorous Plants* (1875); *Cross and Self Fertilization* (1876); *The Power of Movement in Plants* (1880); *The Formation of Vegetable Mold* (1881), the last containing a vast amount of information in regard to the common earthworm. Mr. Darwin was buried in Westminster Abbey.—His son GEORGE HOWARD, born in 1845, distinguished himself both in mathematics and in physics; was second wrangler at Cambridge in 1868, and in 1883 was elected Plumian professor of astronomy in the same university.

Darwin, ERASMUS, an English physician and poet, was born in 1731. He was educated at Cambridge and Edinburgh; practised as a physician in Lichfield till 1781, when he removed to Derby, near which he died in 1802. His name is chiefly known from his poem of the *Botanic Garden*, which first appeared in 1789 and 1792. The fame it acquired was splendid but very transient, and it has since sunk almost into oblivion. In 1794-96 Dr. Darwin published *Zoonomia, or the Laws of Organic Life*; in 1799 *Phytologia, or the Philosophy of Agriculture and Gardening*. *The Temple of Nature* appeared posthumously in 1803. Charles Darwin was his grandson.

Darwinism (dar'win-izm), the views, especially regarding the origin and development of animals and plants, expressed in detail and advocated with much earnestness in the works of Charles Darwin. See *Evolution*, *Natural Selection*, etc.

Dass, PETTER, Norwegian poet, of Scottish extraction, born in 1647; died in 1708. He is known as the 'father of Norwegian poetry,' and his principal poem, *The Trumpet of Northland*, is one of the favorite national poems.

Dasyure (das'i-yūr), the brush-tailed opossum, a genus of plantigrade marsupials found in Australia and

Tasmania, and so named in contrast to the opossums of the New World (*Didelphys*), which have naked tails somewhat like rats. The ursine dasyure (*Dasyūrus ursinus*) of Tasmania is about the size of a badger, but of a sturdier form, of a dull black color, carnivorous, and of so savage a temper as to have gained for itself the alternative name of *Diabōlus ursinus*, or Tasmanian devil. Formerly it was most destructive to flocks and poultry yards, but is now in the inhabited districts nearly extirpated. The various species of the genus have much the same nature and habits as the European polecat.

Dataria (da-tā'ri-a), the papal office of the chancery at Rome, from which all bulls are issued.

Date (Latin, *datum*, given), that addition to a writing which specifies the year, month and day when, and usually the place where, it was given or executed; also the time when any event happened, when anything was transacted, or when anything is to be done.

Date, the fruit of the date-palm or the tree itself, the *Phœnix dactylifera*. The fruit is used extensively as an article of food by the natives of Northern Africa and of some countries of Asia. It consists of an external pericarp, separable into three portions, and covering a seed which is hard and horny in consequence of the nature of the albumen in which the embryo plant is buried. Next to the cocoanut tree the date is unquestionably the most interesting and useful of the palm tribe. Its stem shoots up to the height of 50 or 60 feet without branch or division, and of nearly the same thickness throughout its length. From the summit it throws out a magnificent crown of large feather-shaped leaves, and a number of spadices, each of which in the female plant bears a bunch of from 180 to 200 dates, each bunch weighing from 20 to 25 lbs. The fruit is eaten fresh or dried. Cakes of dates pounded and kneaded together are the food of the Arabs who traverse the deserts. A liquor resembling wine is made from dates by fermentation. Persia, Palestine, Arabia and the north of Africa are best adapted for the culture of the date-tree, and its fruit is in these countries an important article of food. It is now being introduced into California.

Date-line, INTERNATIONAL, the line at which the date of the day changes on going around the globe. A man who travels around the earth in the direction of the sun's movement gains

on the sun and adds a little to the length of each day. On completing the round he will have added twenty-four hours, and thus have gained a full day. It may be Sunday still to him, but it will be Monday to the people he had left. If he goes round opposite to the sun he loses solar time and each day becomes shorter, so that on completing the round he has lost a day's time unconsciously. It is now Monday to him, but it is Sunday to the people he left when starting. To avoid this complication a meridian line has been chosen, on crossing which the traveler changes his reckoning. If it is Tuesday, when he crosses this line going westward he calls it Monday. If going eastward he calls it Wednesday. Thus an awkward complication is avoided. The date-line has been fixed at the 180° meridian from Greenwich. This line has the advantage of traversing water through nearly all its course. Two deviations are made where it crosses island masses. After passing through Bering Strait it slants to the west around the Aleutian Islands, that they may have the same day as the United States, to which they belong, when the Fiji and neighboring groups of islands belonging to Great Britain are reached it bends to the east, so as not to embarrass the local commerce with a change of day.

Date-plum, the name given to several species of *Diospyros*, a genus of trees of the ebony family. The European date-plum is the *D. Lotus*, a low-growing tree, native of the south of Europe. It produces a small fruit, the supposed lotus of the ancients. The American date-plum, or persimmon (*D. Virginiana*), attains a height of 50 or 60 feet; the fruit is nearly round, about an inch in diameter, is very austere, but edible after being frosted. The Chinese date-plum (*D. Kaki*) is cultivated for the sake of its fruit, which is about the size of a small apple, and is made into a preserve.

Datholite (dath'o-līt), the siliceous borate of lime, a mineral of a white color of various shades found in Scotland and on the continent of Europe; also near Lake Superior, where it is used in the manufacture of boric acid.

Datia (dat'i-a), a native state in Bundelkhand, Hindustan, under the Central India Agency. Area, 911 sq. miles; pop. 173,759.—DATIA, the chief town of the state, is situated 125 miles S. E. of Agra, and contains a large number of handsome houses, the residences of the local aristocracy. Pop. 24,071.

Datiscin (da-tis'sin), a substance yielded by the bastard hemp, *Datisea cannabina*, a herbaceous, dioecious perennial, a native of the south of Europe, where it is used as a substitute for Peruvian bark, and for making cordage. Datiscin ($C_{21}H_{22}O_{12}$) is extracted from the leaves, and is used as a yellow dye.

Dative (dā'tiv; L. *dativus*, from *dare*, to give), in grammar, a term applied to the case of nouns which usually follow verbs or other parts of speech that express giving, or some act directed to the object, generally indicated in English by *to* or *for*.

Datura (dā-tū'ra), a genus of plants, order Solanaceæ, with large, trumpet-shaped flowers. There are several species, all having poisonous properties and a disagreeable odor. *D. Stramonium* is the thorn-apple, possessing strong narcotic properties, and sometimes employed as a remedy for neuralgia, convulsions, etc. The dried leaves of *D. Stramonium*, and *D. Tatula*,

Thorn-apple (*Datura Stramonium*).—1, Root. 2, Seed-vessel cut across.

an American species, are smoked as a remedy for asthma.

Daturine (dā'tū-rīn), a poisonous alkaloid found in the thorn-apple (*Datura Stramonium*), its chemical formula being identical with atropine, the alkaloid from deadly nightshade.

Daubenton (dō-bān-tōn), or D'AUBENTON, LOUIS JEAN MARIE, a French naturalist and physician, born in 1716; died in 1800. He studied medicine at Paris, and in 1742 began to assist Buffon in the preparation of his great work on natural history, the anatomical articles of which were prepared by him. In 1745 he was appointed curator and demonstrator of the cabinet of natural history in Paris, of which he had charge for nearly fifty years. He became professor of natural history in the College of France in 1778. Among his publications are: *Instructions to Shepherds*, *A Methodical View of Minerals*, etc., and he contributed many scientific articles to the first *Encyclopédie*.

Daubeny (da'be-ni), CHARLES GILES BRIDLE, an English scien-

tist, born in 1795; died in 1867. For many years he was professor of chemistry, botany and rural economy at Oxford, and wrote several esteemed scientific works.

D'Aubigné (dō-ben-yā). See *Merle D'Aubigné*.

Daucus (da'kus), a genus of umbelliferous plants, the most important of which is the carrot.

Daudet (dō-dā), ALPHONSE, a French novelist, born at Nîmes, in 1840. He settled in Paris in 1857, and wrote poems, essays, plays, etc., without much success, till he discovered his powers as a novelist, when he speedily rose to the highest rank. His more celebrated works are *Fromont jeune et Risler Aîné* (1874); *Jack* (1876); *La Nabob* (1877); *Les Rois en Exil* (1879); *Numa Roumestan* (1881); *L'Evangeliste* (1883); *Sappho* (1884); *Les Aventures Prodigieuses de Tartarin de Taraseon* (1874); its sequel, *Tartarin en les Alpes* (1886); *Trente Ans à Paris* (autobiographical), 1888; and *L'Immortel* (1888). All his most important works have been translated into English. He died in 1897.—His brother, ERNEST (born in 1837), also distinguished himself as a novelist, and was one of the best-known political writers of the French republican party.

Daudnagar (dä-öd-nug'ur), a town in Gayá district Bengal; has manufactures of cloth, carpets and blankets; and a river trade with Patna. In the vicinity is a fine temple. Pop. about 10,000.

Daughters of the American

Revolution, a society composed of women each of whom is directly descended from an ancestor who 'with unfailing loyalty rendered material aid to the cause of independence as a recognized patriot, as soldier or sailor, or as a civil officer, in one of the several colonies or states.' It was organized in 1890 at Washington, D. C.

Daughters of the Confederacy,

a society organized in Nashville, Tennessee, in 1894, and composed of the wives, widows, mothers, sisters or lineal descendants of men who served in the Confederate army or navy or otherwise aided the cause of the Southern Confederacy.

Daughters of the King, an order of women members of the Protestant Episcopal Church, organized in 1885. Its purpose is to bring young women within the influence of the church and to coöperate

with pastors to that end. (It is distinct from the 'King's Daughters.')

Daughters of the Revolution

a patriotic society of American women organized in 1891, membership being confined to women lineally descended from 'a military or naval or marine officer, soldier, sailor, or marine,' in the Revolutionary service, or from one who signed the Declaration of Independence, or was a member of the Continental or State congresses or a congressional official assisted in the winning of American independence; with the limitation that these remained loyal to Congress or States throughout the war.

Daulatabad (dou-lat-ä-bäd'), a town of India, in the Nizam's Dominions (Haidarabad), Deccan; 170 miles N. E. of Bombay; the fortress, also known by the name of *Deogiri*, was from remote antiquity the stronghold of the rulers of the Deccan. Pop. 1243.

Daun (doun), LEOPOLD JOSEPH MARIA, COUNT VON, an Austrian general, was born in 1705, and died in 1766. He served in the Turkish war in 1710, as major-general in Italy in 1734, and distinguished himself at the battle of Krozka in 1737, and the capture of Dingelfingen in 1740. In 1748, after serving against the French in the Netherlands, he was made Knight of the Golden Fleece. His skilful passage of the Rhine, and his marriage with the Countess of Fux, a favorite of Maria Theresa, procured for him the post of master-general of the ordnance, and in 1757 that of general field-marshal. That same year he defeated Frederick the Great at Kollin, and soon after took Breslau. In 1758 he again defeated Frederick at Hochkirch; but he was at last thoroughly defeated by Frederick at Torgau in 1759. He afterwards became president of the aulic council.

Dauphin (dä'fin), the title of the eldest son of the king of France prior to the revolution of 1830, said to be derived from the dolphin, the crest of the lords of Dauphiny. The name was assumed towards the middle of the ninth century by the lord of Dauphiny, which province was bequeathed by Humbert II to the king of France in 1349 on condition that the heir of the throne should bear the title of Dauphin of Viennois.

Dauphiny (dä-fin-ē; *Dauphiné*), one of the ancient provinces of France, which comprised the modern departments of the Isère, the Hautes Alpes, and part of that of the Drôme. The capital of the whole was Grenoble.

Dauw (dä'u), or PEECHI (*Equus Burcheli*), a species of zebra which inhabits the plains of Southern Africa, particularly to the north of the Orange River. Its general color is a pale brown, with grayish white on the abdomen and inner parts of the limbs. Its head, neck and body and the upper parts of its limbs are striped like the zebra, but the stripes are not so dark in color. The Dutch colonists call it *Bonte-quagga*.

Davenant (dav'en-ant), SIR WILLIAM, an English poet and dramatist, born at Oxford in 1605; died in 1688. His father kept the Crown Inn, a house at which Shakespere used to stop on his journeys between London and Stratford. He was early introduced into court life through his service with the Duchess of Richmond and Lord Brooke; and having produced several plays and court masques, he succeeded Ben Jonson in the laureateship (1637). During the civil war he fought on the royal side, was made a lieutenant-general, and received the honor of knighthood. On the decline of the royal cause he retired to France; but attempting to sail for Virginia, his ship was captured, and he escaped death through the good offices of John Milton, a kindness he was able to repay after the Restoration. Under Charles II Davenant flourished in the dramatic world. His works consist of dramas, masques, addresses, and the epic *Gondibert*, which was never finished; but he is remembered chiefly by the travesty of Shakespere's *Tempest*, made in conjunction with Dryden. He was buried in Westminster Abbey.

Davenport (dav'en-pōrt), a city capital of Scott Co., Iowa, situated at the foot of the upper rapids of the Mississippi, near Rock Island. Woolen goods, agricultural implements and machines, pottery, carriages, engines and machinery are among the manufactures. The island is connected by a bridge with Davenport and is the site of a United States arsenal and military headquarters. Pop. 43,028.

Daventry (dav'en-tri), or DAIN-TREE, a market town of England, in the county of and 11 miles W. by N. of Northampton; has extensive manufactures of whips and shoes. Pop. 3517.

David (dä'vid), King of Israel, the youngest son of Jesse, a citizen of Bethlehem, and descended through Boaz from the ancient princes of Judah. The life of David is recorded through the first and second books of *Samuel* and the first book of *Chronicles*. The

book of *Psalms*, a large portion of which has been attributed to him (see *Psalms*), also contains frequent allusions to incidents in his life. He reigned from 1055 B.C. to 1015 B.C. according to the usual chronology, but recent investigations put the dates of David's reign from 30 to 50 years later. Under David the empire of the Israelites rose to the height of its power, and his reign has always been looked on by the Jews as the golden age of their nation's history.

David I, King of Scotland, son of Malcolm Canmore; born about 1080; succeeded his brother Alexander I in 1124; died in 1153. He was the first to introduce feudal institutions and ideas into his native land. He twice invaded England to support his niece Matilda against Stephen, her rival claimant for the English crown, during one of his incursions being defeated at the Battle of the Standard (1138). He died at Carlisle, and was succeeded by his grandson Malcolm. He acquired a considerable reputation for sanctity. While yet Prince of Cumbria he had begun the establishment of the Glasgow bishopric. He adjusted the bishoprics of Dunkeld, Moray, Aberdeen, Ross, Caithness, Brechin, Dunblane and Galloway. Among the religious houses for regulars which date from his reign are Holyrood, Melrose, Jedburgh, Kelso, Dryburgh, Newbattle, etc. His services to the church procured for him the popular title of saint, but the endowments so taxed the royal domains and possessions that James VI bitterly characterized him as 'ane sair sanct for the crown.'

David II, King of Scotland, son of Robert Bruce, born in 1322; succeeded to the throne in 1329; died in 1370. On the death of his father he was acknowledged by the greater part of the nation. Edward Baliol, however, the son of John Baliol, formed a party for the purpose of supporting his pretensions to the crown; he was backed by Edward III of England. Battles were frequent, and at first Baliol was successful; but eventually David succeeded in driving him from Scotland. Still, however, the war was carried on with England with increasing rancor, till at length David was made prisoner at the battle of Neville's Cross (1346). After being detained in captivity for eleven years he was ransomed for 100,000 marks. The remainder of his reign was occupied in disputes with his parliament.

David (dā-vēd, or dā'vid), FÉLICIEŒ-CÉSAR, a French musician and composer, born at Cadenet (Vaucluse) in 1810; died in 1876. He entered

the Paris Conservatoire in 1830, and became an ardent disciple of St. Simon, Infantin and other social speculators. In 1832, with a few companions, he went to the East in order to realize his dreams of a perfect life, but returned disappointed in 1835. He then published his *Mémoires Orientales*, and soon after his most successful work, *Le Désert*. Other works are: *Moïse sur le Sinai*, *Christophe Colomb*, *Le Paradis*, *Le Perle du Brésil*, *Hereulaneum* and *Lalla Rookh*.

David, JACQUES LOUIS, the founder of painting, born at Paris in 1738; died at Brussels in 1825. He went to Rome in 1774, and passed several years there painting a number of important pictures. A second visit produced the *Horatii*, one of his masterpieces. In 1787 he produced *The Death of Socrates*, in 1788 *Paris and Helen*, and in 1789 *Brutus*. In the revolution he was a violent Jacobin, and wholly devoted to Robespierre. Several of the scenes of the revolution supplied subjects for his brush. What is considered his masterpiece, *The Rape of the Sabines*, was painted in 1799. He was appointed first painter to Napoleon about 1804; and after the second restoration of Louis XVIII he was included in the decree which banished all regicides from France, when he retired to Brussels.

David, PIERRE JEAN, a French sculptor, born at Angers in 1789 (hence commonly called David d'Angers); died in 1856. He went when very young to Paris, became the pupil of J. L. David, and in 1809 a prize obtained from the Academy enabled him to pursue his studies at Rome, where he formed a friendship with Canova. On his return to Paris he laid the foundation of his fame by a colossal statue of the great Condé in marble. He visited Germany twice, in 1828 and 1834, and executed busts of Goethe for Weimar, of Schelling for Munich, of Tieck for Dresden, of Rauch and Humboldt for Berlin. In 1831 he began the magnificent sculptures of the Pantheon, his most important work, which he finished in 1837. He executed a great number of medallions, busts and statues of celebrated persons of all countries, among whom we may mention Walter Scott, Canning, Washington, Lafayette, Gutenberg, Cuvier, Victor Hugo, Béranger, Paganini and Madame de Staël.

David, SAINT, patron of Wales, Archbishop of Caerleon, and afterwards of Menevia, now St. David's, where he died about 601. He was celebrated for his piety, and many legends are told of his miraculous powers. His

JEFFERSON DAVIS AND HIS CABINET

Beginning at the left are Secretaries Mallory, Benjamin, Walker, President Davis, General Lee, Secretaries Reagan. Meminger, Vice-President Stephens and Secretary Toombs.

writings are no longer extant. His life was written by Ricemarch, bishop of St. David's in the eleventh century.

David's, ST., a decayed episcopal city of Wales, County Pembroke, near the promontory of St. David's Head, once the metropolitan see of Wales. Within a space of 1200 yards in circuit are the cathedral, chiefly of the twelfth century, with a finely decorated rood-loft, the episcopal palace, the ruins of St. Mary's College, and other ecclesiastical edifices, chiefly ruinous. Pop. of township 5398.

Davidson, GEORGE, astronomer, born in 1825, and brought to the United States in childhood. He was appointed on the United States coast survey in 1845, and had charge of the transit of various expeditions to Japan in 1874, and New Mexico in 1882. He completed the transit factors of many thousands of stars. In 1873 he became professor in the University of California, and president of the California Academy of Sciences in 1874. In 1898 he became professor of geography in the University of California. He is a member of the National Academy of Science and of many foreign learned institutions.

Davies (dā'vēs), SIR JOHN, an English poet and lawyer, born in 1570; died in 1626. In 1603 he was appointed solicitor-general for Ireland, and soon after attorney-general. He was knighted in 1607, returned to the English Parliament in 1621, and obtained the dignity of lord chief-justice in 1626. He wrote *Orchestra*, *Hymns to Astrea*, *Nosce Teipsum*, a metaphysical poem and his best-known work; he is also the author of a work on the political state of Ireland.

Davila (dā'vi-lā), ENRICO CATERINO, an Italian historian, born near Padua in 1576; died in 1631. Brought up in France, he for a time served with distinction in the French army. In 1599 he entered the Venetian service.

Davis, ANDREW JACKSON, clairvoyant, born in Orange Co., New York, in 1826. He developed in youth remarkable powers. An uneducated boy, he wrote, under clairvoyant influence, tomes full of philosophical speculations and learned disquisitions. These were published as *Principles of Nature*, *Her Divine Revelations*, *The Great Harmonia* (4 vols.), etc. They advocated the doctrines of spiritualism. He practiced for many years as a clairvoyant healer of the sick. He died in 1910.

Davis, CUSHMAN KELLOGG, legislator, born at Henderson, New York,

in 1834; died in 1900. He removed to Wisconsin, studied law, and served in the Civil war. He was elected to the Minnesota legislature in 1867, was district attorney of that State 1868-73, and governor 1874-75. Was United States Senator 1877-1900, and served on the Paris Peace Commission of 1898.

Davis (dā'vis), HENRY WINTER, statesman, was born in Annapolis, Maryland, in 1817. As a member of Congress he was a brilliant orator. Although representing a slave State, he was unfaltering in fidelity to the Union and a strenuous advocate of emancipation, and as early as 1865 favored negro suffrage. He died in 1865.

Davis, JEFFERSON, president of the Confederate States of America during the Civil war; born in Kentucky in 1808. He was trained at West Point Military Academy, and from 1828 to 1835 saw a good deal of service on

Jefferson Davis.

the frontier. At the latter date he became a cotton planter in the State of Mississippi. He was elected to Congress in 1845, but at the commencement of the Mexican war he left Congress and engaged actively in the contest. He entered the Senate in 1847, and held various posts in the government, upholding the policy of the slave States and the doctrine of slave rights. On the outbreak of the Civil war he was chosen president of the Southern States, continued president throughout the war, and was taken prisoner after the fall of Richmond. After two years imprisonment in Fortress Monroe, he was set at liberty by the general amnesty of 1868. He afterwards wrote a history of the war. He died in 1889, at New Orleans.

Davis, or DAVYS, JOHN, an English navigator, born at Sandridge, in Devonshire about 1550. In 1585-87 he conducted three expeditions for the

discovery of the northwest passage. In the first he coasted round the south of Greenland and sailed across the strait that now bears his name into Cumberland Gulf, and in the third he sailed north through Davis Strait into Baffin Bay. He also accompanied the expedition of Cavendish to the Pacific in 1591-93, and made several voyages to the East Indies.

Davis, REBECCA HARDING, novelist, born at Wheeling, West Virginia, about 1840; died in 1910. She married L. C. Davis of Philadelphia in 1863. Her works include *Life in the Iron Mills*, *Waiting for the Verdict*, *Dallas Galbraith*, etc.—RICHARD HARDING DAVIS, her son, born at Philadelphia in 1864, served as correspondent in the Spanish and Boer wars and has been a voluminous writer of tales and novels, including *Soldiers of Fortune*, *Gallagher and Other Stories*, *The Bar Sinister*, etc., also descriptive works and plays.

Davison (dā'vi-son), WILLIAM, a statesman in the reign of Queen Elizabeth, of Scottish extraction. After being employed in several important diplomatic missions to Holland and Scotland, he became secretary of state to Queen Elizabeth in 1586. He was made the scapegoat of the other ministers for his excess of zeal in despatching the warrant for the execution of Mary, Queen of Scots (1587). He was brought to trial, heavily fined and imprisoned, and died in 1608 without regaining favor.

Davis Strait, a narrow sea which separates Greenland from Baffin Land, and unites Baffin Bay with the Atlantic Ocean; lat. 60° to 70° N.

Davits (dā'vits), two projecting arms of wood or iron on the side or stern of a vessel, used for suspending or lowering and hoisting the boats by means of sheave and pulley. They are fixed so as to admit of being shipped and unshipped at pleasure.

Davos (dā-vōs), an elevated valley (over 5000 feet) of Switzerland, Canton Grisons, containing several villages; a winter resort of persons suffering from chest diseases.

Davout, or DAVOUST (dā-vö), LOUIS NICOLAS, Duke of Auerstädt and Prince of Eckmühl, marshal and peer of France, born in 1770 at Annoux, in Burgundy; died in 1823. He entered the army at the age of seventeen; served with distinction under Dumas, and at the passage of the Rhine, in 1797. He went with Bonaparte to Egypt in 1798, and commanded the cav-

alry of the army of Italy in 1800. He received a marshal's baton in 1804, led the right wing at Austerlitz in 1805, and defeated the Prussians at Auerstädt in 1806. He shared the glory of Eylau, Eckmühl and Wagram; was made Governor of Hamburg; took part in the Russian campaign of 1812, and was wounded at Borodino. During the Hundred Days (1815) he was Napoleon's minister of war, and after Waterloo was appointed by the provisional government general-in-chief of the French armies. In 1819 he was a member of the Chamber of Peers.

Davy (dā'vi), SIR HUMPHRY, a distinguished English chemist, was born at Penzance, in 1778; died at Geneva in 1829. After having received the rudiments of a classical education he was placed with a surgeon and apothecary,

Sir Humphry Davy.

and early developed a taste for scientific experiments. So successful was he in his studies that he was appointed professor of chemistry in the Royal Institution at the age of twenty-four. In 1803 he was chosen a member of the Royal Society. His discoveries with the galvanic battery, his decomposition of the earths and alkalies and ascertaining of their metallic bases, his demonstration of the simple nature of the oxymuriatic acid (to which he gave the name of *chlorine*), etc., obtained him an extensive reputation; and in 1810 he received the prize of the French Institute. In 1814 he was elected a corresponding member of that body. Having been elected professor of chemistry to the Board of Agriculture he delivered lectures on agricultural chemistry during ten successive years. The numerous accidents arising from fire-damp in mines led him to enter upon a series of experiments on the nature of the explosive gas, the re-

sult of which was the invention of his safety-lamp. He was knighted in 1812, and created a baronet in 1818. In 1820 he succeeded Sir J. Banks as president of the Royal Society, and at the time of his death he was a member of most of the scientific societies of Europe. He wrote: *Philosophical Researches, Elements of Agricultural Chemistry, Electro-Chemical Researches, Elements of Chemical Philosophy, Researches on the Oxymuriatic Acid, On Fire-damp*, etc. He also contributed some valuable papers to the *Philosophical Transactions*, and was author of *Salmonia, or Days of Fly-fishing*; and *Consolations in Travel, or the Last Days of a Philosopher*.

Davy Lamp. See *Safety-lamp*.

Davyum (dā'vi-um; after Sir H. Davy), a metal of the platinum group discovered in 1877. It is a hard, silvery metal, slightly ductile, extremely infusible, and has a density of 9.385 at 25°C.

Dawes, HENRY L., statesman, was born in Cummington, Massachusetts, in 1816; died in 1903. He was graduated at Yale College and studied law. After serving as member of the House of Representatives for seven consecutive terms, in 1874 he was elected United States Senator, and reelected 1881 and 1887. During his career he was prominent in legislation.

Dawson (dā'son), HENRY, an English landscape painter, born in 1811; died in 1878. In early life he was a worker in a Nottingham lace-factory, but this occupation he gave up for art in 1835. After struggling for some time at Nottingham he removed to Liverpool in 1844, and thence to Croydon in 1850, and in later years resided at Chiswick. It was long before his abilities were fully recognized, and his pictures began to bring high prices only a little before his death. Among the best of them are *Wooden Walls of Old England, London from Greenwich Hill, Houses of Parliament, The Rainbow, Rainbow at Sea* and *The Pool below London Bridge*.

Dawson, SIR JOHN WILLIAM, a Canadian geologist, born at Pictou, Nova Scotia, in 1820; died in 1899. Educated at Pictou and Edinburgh University, he early turned his attention to geology, having published papers on the subject when not much over twenty. He accompanied Sir Charles Lyell when examining the geology of Nova Scotia in 1842. In 1850 he became superintendent of education for Nova Scotia, and in 1855 principal and professor of natural history, in McGill

College, Montreal, in which position, as well as in that of vice-chancellor, and latterly principal of the university, his services in the cause of education were very marked. He became a member of the Royal Society (London) in 1862, was knighted in 1885, and was president of the British Association in 1886 during its meeting at Birmingham. His published works include *Acadian Geology, The Story of the Earth and Man, Science and the Bible, The Dawn of Life, The Chain of Life*, etc.

Dawson City, a river port of the Yukon district, Canada, on the Yukon River and in the center of the Klondike gold region. It was founded in 1896, after the discovery of the Klondike gold deposits, and in the early days of mining excitement had a population of over 20,000. River steamers on the Yukon reach it, and it has railway and water communication with Skagway.

Dax (daks), a town and watering place of Southwestern France, dep. Landes, on the left bank of the Adour, 25 miles N. E. of Bayonne. The chief attraction of the place is its thermal springs, which have temperatures varying from 86° to 166° Fahr., were much frequented by the Romans, and are still in great repute for the cure of rheumatic and similar complaints. Pop. (1906) 8585.

Day (dā), either the interval of time during which the sun is continuously above the horizon or the time occupied by the revolution of the earth on its axis, embracing this interval (the period of light) as well as the interval of darkness. The day in the latter sense may be measured in more than one way. If we measure it by the apparent movement of the stars, caused by the rotation of the earth on its axis, we must call day the period between the time when a star is on the meridian and when it again returns to the meridian; this is a *sidereal day*. It is uniformly equal to 23 hours, 56 minutes, 4.098 seconds. But more important than this is the *solar day*, or the interval between two passages of the sun across the meridian of any place. The latter is about 4 minutes longer than the former, owing to the revolution of the earth round the sun, and it is not of uniform length, owing to the varying speed at which the earth moves in its orbit and to the obliquity of the ecliptic. For convenience an average of the solar day is taken, and this gives us the *mean solar* or *civil day* of 24 hours, the difference between which and the actual solar

day at any time is the *equation of time*.

The length of the days and nights at any place varies with the latitude and season of the year, owing to the inclination of the earth's axis. In the first place, the days and nights are equal (twelve hours each) all over the world on the 21st of March and the 21st of September, which dates are called the *vernal* (spring) and *autumnal equinoxes* (Lat. *æquus*, equal; *nox*, night). Again, the days and nights are always of equal length at the equator, which, for this reason, is sometimes called the *equinoctial* line. With these exceptions, we find the difference between the duration of the day and the night varying more and more as we recede from the equator. This will be easily understood from a consideration of the accompanying figure, which represents

Diagram to Illustrate the Differences in the Length of Day and Night.

the position of the earth at the northern summer solstice. Let SA, S'D, S''B represent the sun's rays, then the vertical circle AFBG will be the *circle of illumination*—that is, the line which separates the illuminated and dark hemispheres of the earth. Consider a place F. As the earth turns round it would describe a circle FDGH, the greater part of which, FDG, is performed in the sunlight, and the smaller part, GHF, in the dark. In other words, the day for the place F would be longer than its night. It will be also seen that for any place within the Arctic circle AK the sun does not set, while in the Antarctic circle the sun never rises so long as the earth is in this position. At the northern winter solstice the reverse of all this is the case—the Arctic circle never comes into the light area, and places

within the Antarctic circle never enter into the dark. From this it will be seen that at both poles the year consists of one day of six months' duration, and one night of the same length.

The Babylonians began the day at sunrise; the Jews at sunset; the Egyptians and Romans at midnight, as do most modern peoples. The civil day in most countries is divided into two portions of twelve hours each. The abbreviations P. M. and A. M. (the first signifying *post meridiem*, Latin for *afternoon*; the latter *ante meridiem*, *forenoon*) are requisite, in consequence of this division of the day. The Italians in some places reckon the day from sunset to sunset, and enumerate the hours up to twenty-four; the Chinese divide it into twelve parts of two hours each. For astronomical purposes the day is divided into twenty-four hours instead of two parts of twelve hours. Formerly it began at noon, but since January 1, 1885, the day of twenty-four hours has begun at midnight at Greenwich Observatory; and this reckoning is now generally adopted for astronomical purposes elsewhere than at Greenwich. The Greenwich day practically determines the date for all the world. At midday at Greenwich the date (day of the week and month) is everywhere the same, though there are all possible differences in naming the hour of the day. But midday at Greenwich is the only instant at which we ever have the same date all over the world. The meridian of midnight, which is then at 180° E. or W., goes on revolving, gradually bringing a new date to every place to the west of that line, but obviously not bringing that new date to the places immediately to the east of that line till twenty-four hours after. From this it follows that whereas places on the one side of the globe never have a different date except when midnight lies between them, places on the opposite side of the globe, and on different sides of the meridian of 180° E. or W., never have the same date except when midnight lies between them. The actual difference of time between Wellington in New Zealand and Honolulu in the Sandwich Islands is only about 2 hours; yet a person at Wellington may date a letter 9 o'clock A. M. June 26, while another writing at the same instant at Honolulu dates his 11 o'clock A. M. June 25.

Day, THOMAS, an ingenious writer, of a benevolent, independent, but eccentric spirit, was born at London in 1748; killed by a fall from a horse in 1789. His father, who was a collector of the customs, died while he was an infant.

leaving him a considerable fortune. He was educated at the Charter House and at Oxford. In 1765 he was called to the bar. He renounced most of the indulgences of a man of fortune, that he might bestow his superfluities upon those who wanted necessities; and he also expressed a great contempt for forms and artificial restraint of all kinds. He wrote, in prose and verse, on various subjects, but the *History of Sandford and Merton* is the only work by which his name is perpetuated.

Day, WILLIAM RUFUS, statesman, born at Ravenna, Ohio, in 1849. He was admitted to the bar in 1872, became a judge in Ohio, and of the United States District Court in 1889. He was appointed assistant Secretary of State in 1897, became Secretary of State in April 1898, and resigned to become chairman of the Paris Peace Commission. He has been an associate justice of the United States Supreme Court since 1903.

Daybook, a journal of accounts; a book in which are recorded the debts and credits or accounts of the day. See *Bookkeeping*.

Dayfly, the popular name of those neuropterous insects which belong to the genus *Ephemera*. They are so called because, though they may exist in the larval and pupal state for several years, in their perfect form they exist only from a few hours to a few days, taking no food, but only propagating their species and then dying.

Day-lily, the popular name for a genus of lilies (*Hemerocallis*), natives of temperate Asia and Eastern Europe, two species of which (*H. flava* and *H. fulva*) are grown in gardens. They have long, radical leaves, and a branched, few-flowered scape, with large, handsome blossoms, the segments of which are united into a tube.

Daysman, in English law, an arbitrator or elected judge. This term is antiquated. It occurs in the book of Job, ix, 33.

Days of Grace, are days allowed for the payment of a promissory note or bill of exchange after it becomes due.

Dayton (dā'ton), a city of Campbell Co., Kentucky, opposite Cincinnati, and adjacent to Newport. Has manufactures of pianos, watch cases, cigars, etc. Pop. 6979.

Dayton, a city of Ohio, capital of Montgomery County, at the confluence of the Mad and Great Miami rivers, 60 miles N. E. of Cincinnati. It has abundant waterpower, is on the line of the Miami and Erie Canal, and is a

place of great industrial activity, a center of railway communication, and in the variety and extent of its manufactures it stands in the front rank of western towns of its size. Its commercial interests are also large. A State insane asylum and a national home for disabled soldiers and sailors are situated here. Pop. 116,577.

Deacon (dē'k n), ecclesiastically, a person in the lowest degree of holy orders. The office of deacon was instituted by the apostles, and seven persons were chosen at first to serve at the feasts of Christians, and distribute bread and wine to the communicants, and to minister to the wants of the poor. In the Roman Catholic Church the deacon is the chief minister at the altar. He assists the priest in the celebration of mass, and on certain conditions can preach and baptize. In the Church of England the deacon is the lowest of the three orders of priesthood, these being bishops, priests and deacons. The deacon may perform all the ordinary offices of the Christian priesthood except consecrating the elements at the administration of the Lord's Supper, and pronouncing the absolution. In Presbyterian churches the deacon's office is to attend to the secular interests, and in Independent churches it is the same, with the addition that he has to distribute the bread and wine to the communicants.

Deacon, in Scotland, the president of an incorporated trade, who is the chairman of its meetings and signs its records. Before the passing of the Burgh Reform Act the deacons of the crafts, or incorporated trades, in royal burghs, formed a constituent part of the town-council, and were understood to represent the trades as distinguished from the merchants and guild brethren. The deacon-convenor of the trades in Edinburgh and Glasgow still continues to be a constituent member of the town council.

Deaconess (dē'kn-es), (1) a female deacon in the primitive church; (2) the term for a kind of quasi sister of mercy among certain American and other Protestants.

Dead-eyes, in ships, round, flattish, wooden blocks, encircled by a rope or an iron band, used to extend the shrouds and stays, and for other purposes.

Dead-letter, a letter which lies for a certain period uncalled for at the post-office, or one which cannot be delivered from defect of address, and which is sent to the general post-office to be opened and returned to the writer.—*Dead-letter office*, a department of the

general post-office where dead-letters are examined and disposed of.

Dead-lights, are strong wooden or metal shutters fitted on the outside of the cabin windows of a vessel, so as to close them tightly in bad weather.

Deadly Nightshade. See *Belladonna*.

Dead Men's Fingers. See *Alcyonium*.

Dead-nettle, the common name of the species of plants of the genus *Lamium*, nat. order Labiatae, from the resemblance of their leaves to those of the nettle, though they have no stinging property. There are several species found in Britain (and now also in N. America), as the white dead-nettle (*L. album*), the red (*L. purpureum*), and the yellow (*L. Galeobdolon*).

Dead Reckoning (ded rek'on-ing), the calculation of a ship's place at sea without any observation of the heavenly bodies. It is obtained by keeping an account of the distance which the ship has run by the log, and of her course steered by the compass, and by rectifying these data by the usual allowance for drift, leeway, etc., according to the ship's known movements.

Deadwood (ded'wud), a city of South Dakota, capital of Lawrence Co., situated among the Black Hills and a great ore reducing center. It is an important trading and supply point. Pop. 3653.

Dead Sea (Latin, *Lacus Asphaltites*; Arabic, *Bahr Lut*, 'the Sea of Lot'), called in Scripture 'Salt Sea,' 'Sea of the Plains,' and 'East Sea,' a celebrated lake in Asiatic Turkey, near the south extremity of Palestine, in the pashalic of Damascus. The north extremity is 25 miles east of Jerusalem and 10 miles southeast of Jericho; length, north to south, about 46 miles; breadth at the widest part, 9 to 10; average, about 8½ miles. The basin or hollow in which the Dead Sea reposes forms the south termination of the great depression through which the Jordan flows, that river entering it at its north extremity. It receives several other tributaries, but has no outlet. The surface is 1312 feet below the level of the Mediterranean, and 984 feet below Lake Tiberias, from which the Jordan issues. It lies deeply imbedded between lofty cliffs of naked limestone, its shores presenting a scene of indescribable desolation and solitude, encompassed by desert sands and bleak, stony, salt hills. Sulphur and rock-salt, lava and pumice abound along its

shores. The water is nauseous to the taste and smells, and so dense that the human body will not sink in it. At about a third of its length from the north end it attains a maximum depth of 1308 feet. The southern portion is a mere lagoon, 12 feet deep in the middle and 3 at the edges. It was long assumed that this lake did not exist before the destruction of Sodom and the other 'cities of the plain,' and that, previously to that time, the present bed of the lake was a fertile plain, in which these cities stood, and was then merely traversed by the Jordan, which, in accordance with this theory, was supposed to hold on its course to the Red Sea. This theory has been shown to be highly improbable. Eminent critics are of opinion that the cities of the plain stood on the lower part of the lake, which received an extension when these cities were destroyed.

Deaf and Dumb, or DEAF-MUTES, persons both deaf and dumb, the dumbness resulting from deafness which has either existed from birth or from a very early period of life. Such persons are unable to speak simply because they have not the guidance of the sense of hearing to enable them to imitate sounds. Among the causes assigned for congenital deafness are consanguineous marriages, hereditary transmission, scrofula, certain local or climatic conditions, ill health of the mother during pregnancy, etc. Acquired or accidental deafness, which occurs at all ages, is frequently due to such diseases as smallpox, measles, typhus, paralysis, hydrocephalus and other cerebral affections, but more particularly to scarlet fever, which is somewhat apt to leave the patient deaf owing to the inflammatory state of the throat extending to the internal ear, and thus causing supuration and destruction of the extremely delicate parts of the auditory apparatus. In the greater proportion of deaf-mutes no defect is visible, or can be detected by anatomical examination, and no applications yet discovered appear to be useful. The necessity of communication, and the want of words, oblige the deaf-mutes to observe and imitate the actions and expressions which accompany various states of mind and of feeling, to indicate objects by their appearance and use, and persons by some peculiar mark, and to describe their actions by direct imitation. In this way he and his friends are led to form a dialect of that universal language of attitude, gesture and expression which becomes a substitute for words in the hands of the pantomimic actor, and which adds force and clearness to the finest

erusions of the orator; in other words, the natural *sign language*. This language, in its elements, is to be found among all nations, and has ever been the medium of communication between voyagers and the natives of newly discovered countries. It is employed by many savage tribes to supply the paucity of expression in their language and to communicate with other tribes. Among some of the Indians of North America it exists as a highly organized language. Such a means of communication is after all very imperfect, however, and various more perfect systems have been devised to enable deaf-mutes to communicate with one another and with the rest of mankind, and thus to gain such an education as people in general possess. In 1648 John Bulwer published the earliest work in English on the instruction of the deaf and dumb. This was followed by Dalgarno's *Ars Signorum* ('Art of Signs') in 1661, and Dr. W. D. Holder's *Elements of Speech*. Dalgarno, who was a native of Scotland, likewise published, in 1680, *Didascalocophus, or the Deaf and Dumb Man's Tutor*, a work of considerable merit. To Dr. John Wallis, however, Savilian professor of mathematics at Oxford, is generally ascribed the merit of having been the first Englishman who succeeded in imparting instruction to deaf-mutes. In 1743 the practicability of instructing deaf-mutes was first publicly demonstrated in France by Pereira, a Spaniard, before the Academy of Sciences, which gave its testimony to the success of the method. About the same time the Abbé de l'Épée, who devoted his life and fortune to this subject, introduced a system for the instruction of the deaf and dumb, which was taught with great success in the Royal Parisian Institution, and afterwards still further developed by his pupil and successor, the Abbé Sicard. In 1779 a public institution for the education of deaf-mutes was established at Leipzig, through the labors of Samuel Heinicke, the great upholder of the vocal or articulatory system, which is still retained at Vienna and throughout Germany. About twenty years previously Thomas Braidwood had established near Edinburgh in 1760 a deaf and dumb school on the articulating system, which was visited by Dr. Johnson during his tour in Scotland. The first public institution in Great Britain for the gratuitous education of the deaf and dumb was founded at Bermondsey in 1792 by the Rev. Messrs. Townsend and Mason. From this establishment originated the London Asylum in Kent Road, which was opened in 1807. In the

United States great advances have been made in the education of deaf-mutes, and a National Deaf-mute College is maintained at Washington by the government. Many states have established institutions for the care and instruction of deaf-mutes.

The two chief methods of conveying instruction to the deaf and dumb are by means of the manual alphabet, and by training them to watch the lips of the teacher during articulation. There are two kinds of manual alphabet: the double-handed alphabet, where the letters are expressed by the disposition of the fingers of both hands; and the single-handed, in which the letters are formed with the fingers of one hand. Particular gestures which are attached to each word as its distinctive sign are largely used, as are also real objects and models, pictures, etc. The method of teaching by articulation, the pupil learning to recognize words, and in time to utter them, by closely watching the motions of the lips and tongue in speech, and by being instructed through diagrams as to the different position of the vocal organs, is now receiving much attention, and has given excellent results, cases being known where persons have conversed with the deaf and dumb and remained ignorant that those to whom they were speaking were afflicted in this way. It is by no means a novel system, but of late it has vastly increased in favor with authorities. A new mode of teaching articulation has recently been brought into notice, consisting in the use of the system of *visible speech* devised by Mr. Melville Bell. The characters of the alphabet on which this system is founded are intended to reveal to the eye the position of the vocal organs in the formation of any sound which the human mouth can utter. Its practical value as a means of instruction with all classes of the deaf and dumb has not as yet been sufficiently tested.

Deafness, the partial or total inability to hear. This is a symptom of most affections of the ear. It may be due simply to an accumulation of wax. If it comes on suddenly without pain in a healthy person this is probably the cause. When it comes on with a cold in the head it is the result of a cold or catarrh, and is likely to pass off in a few days. Attended by pain, ringing in the ears, etc., some degree of inflammation is likely present. The most intractable form of deafness comes on very gradually and painlessly, and is connected with disease of the middle ear. If a skilled ear surgeon were consulted in

time much might probably be done to stay its progress. Deafness due to the disease of the nerve of hearing is usually very intense, comes on suddenly or advances very rapidly, and is not easily reached by treatment. As to other causes of complete deafness see *Deaf and Dumb*.

Deák (dā-äk'), FRANZ, a Hungarian statesman, born of a noble Magyar family, in 1803; died in 1876. He was elected to the National Diet in 1832, and became the leader of the liberal party. At the revolution of 1848 he became minister of justice, but retired when Kossuth obtained power. On the defeat of the patriots in 1849 he retired from public life, and did not return till the Franco-Austrian war gave him an opportunity of serving his country. He is regarded as the master-spirit of the movement by which the ancient independence of his country was restored in 1867. Though the leader of the liberal party, he constantly refused office, but no change in the ministry was made without his consent.

Deal (dēl), a seaport and watering place of England, County Kent, between the North and South Foreland, 72 miles E. by S. of London. Walmer Castle, Sandown Castle and Deal Castle are in the vicinity of the town. Boat-building and sail-making are carried on. There is a pier, but no proper harbor; the well-known Downs afford excellent anchorage. Pop. (1911) 11,297.

Deal, the division of a piece of timber made by sawing; a board or plank. The name deal is chiefly applied to boards of fir above 7 inches in width and of various lengths exceeding 6 feet. If 7 inches or less wide they are called battens, and when under 6 feet long they are called deal-ends. The usual thickness is 3 inches, and width 9 inches. The standard size, to which other sizes may be reduced, is 1½ inches thick, 11 inches broad, and 12 feet long. *Whole deal* is deal which is 1½ inches thick; *slit deal*, half that thickness. Deals are exported from Prussia, Sweden, Norway, Russia and British North America.

Deal-fish, the *Trachipterus Arcticus*, so called from its excessively compressed body, a denizen of the northern ocean and an occasional visitor to the coasts of Iceland, Norway and Britain; measures from 4 to 8 feet in length; is of a silvery color with minute scales, and has the dorsal fin extended along the whole length of the back. It is also known by the Scandinavian name Vaagmaer.

Dean (dēn; from L. *decānus*, from *decem*, ten), an ecclesiastical dignitary, said to have been so called because he presided over ten canons or prebendaries; but more probably because each diocese was divided into deaneries, each comprising ten parishes or churches, and with a dean presiding over each. In England, in respect of their differences of offices, deans are of several kinds. *Deans of chapters* are governors over the canons in cathedral and collegiate churches. The *dean and chapter* are the bishop's council to aid him with their advice in affairs of religion, and they may advise, likewise, in the temporal concerns of his see. *Rural deans* were originally beneficed clergymen appointed by the bishop to exercise a certain jurisdiction in districts of his diocese remote from his personal superintendence, but their functions have for many years become almost obsolete. *Dean of the chapel royal*, in Scotland, is a title bestowed on six clergymen of the Church of Scotland, who receive from the crown a portion of the revenues which formerly belonged to the chapel royal in Scotland, and which are now in the gift of the crown.

Dean Forest, England, county of Gloucester. It formerly comprised the greater part of the county west of the Severn, but is now reduced to about 22,000 acres, nearly one-half of which is enclosed, and was formerly appropriated for the growth of navy timber, but is now mainly covered with coppices. This district is crown property, and the inhabitants (chiefly coal and iron miners) enjoy many ancient privileges. In 1911 it contained a pop. of 54,261.

Dean of Faculty. —(1) In some universities, as that of London and those of Scotland, the chief or head of a faculty (as of arts, law, or medicine); in the United States, a registrar or secretary of the faculty in a department of a college, as in a medical, theological, or scientific department. (2) The president for the time being of an incorporation of barristers or law practitioners; specifically, the president of the incorporation of advocates in Edinburgh.

Dean of Guild, in Scotland, originally that magistrate of a royal burgh who was head of the merchant company or guildry; now the magistrate whose proper duty is to take care that all buildings within the burgh are sufficient, that they are erected agreeably to law, and that they do not encroach either on private or public prop-

erty. He may order insufficient buildings to be taken down.

Death (deth), is that state of a being, animal or vegetable, but more particularly of an animal, in which there is a total and permanent cessation of all the vital functions, when the organs have not only ceased to act, but have lost the susceptibility of renewed action. Death takes place either from the natural decay of the organism, as in old age, or from derangements or lesions of the vital organs caused by disease or injury. The signs of actual death in a human being are the cessation of breathing and of the beating of the heart; insensibility of the eye to light, pallor of the body, complete muscular relaxation, succeeded by a statue-like stiffness or rigidity which lasts from one to nine days; and decomposition, which begins to take place after the rigidity has yielded, beginning first in the lower portion of the body and gradually extending to the chest and face. What becomes of the mind or thinking principle, in man or animal, after death, is a matter of philosophical conjecture or religious faith.

Death, CIVIL, of old the entire loss or forfeiture of civil rights; the separation of a man from civil society, or from the enjoyment of civil rights, as by banishment, abjuration of the realm, entering into a monastery, etc.

Death, DANCE OF, a grotesque allegorical representation in which the figure of Death, generally in the form of a skeleton, is represented interrupting people of every condition and in all situations, and carrying them away; so called from the mocking activity usually displayed by the figure of Death as he leads away his victims. It was frequently drawn by artists of the middle ages for cemeteries and cloisters. These representations were common in Germany, and also in France, where they received the name of *Danse Macabre*, the derivation of which has been much disputed. The series attributed to Hans Holbein, the younger, was first published at Lyons in 41 plates, increased in a subsequent edition by 12 additional plates. A remarkable *Dance of Death* was painted, in fresco, on the walls of the churchyard in the suburb of St. John at Basel, which was injured, in early times, by being washed over, and is now entirely destroyed. This piece has been ascribed to Holbein; but it has long since been proved that it existed sixty years before his birth.

Death-rate, the proportion of deaths among the inhabitants of a town, country, etc. It is usually

calculated at so many per thousand per annum.

Death's-head Moth, the largest species of lepidopterous insect found in Europe, and systematically known by the name of *Acherontia atropos*. The markings upon the back of the thorax very closely resemble a skull, or death's-head; hence the English name. It measures from 4 to 5 inches in expanse. It emits peculiar sounds, somewhat resembling the speaking of a mouse, but how these are produced naturalists have not been able satisfactorily to explain. It attacks beehives, pillages the honey, and disperses the inhabitants. It is regarded by the vulgar as the forerunner of death or other calamity.

Death Valley, a narrow valley in California, between the Panamint and Fernal Mountains, its central part covered with salt and 300 or 400 feet below sea level. It is considered the driest and hottest place in the United States, its temperature having reached the extreme of 122° F. It is so called because a party of emigrants perished there in 1849.

Death-watch, the popular name of the *Anobium tessellatum*, a coleopterous insect that inhabits the wood-work of houses. In calling to one another they make a peculiar ticking sound, which superstition has interpreted as a forerunner of death.

Débacle (dā'ba-kl), a sudden breaking up of ice in a river; used by geologists for any sudden outbreak of water, hurling before it and dispersing stones and other débris.

Debenture (de-ben'tūr), a deed-poll (declaratory deed) given by a public company in acknowledgment of borrowed money. It gives the holder the first claim for dividends, while the capital sum lent is usually assured on the security of the whole undertaking. With the deed, coupons or warrants for the payment of interest at specified dates are generally issued. Custom-house certificates of drawback are also termed debentures.

Deborah (deb'o-rā), a Hebrew seer or prophetess who lived in the time of the Judges, by the aid of Barak delivered the northern tribes from the

Death-Watch Beetle (*A. tessellatum*).—1, Natural size. 2, Magnified. 3, Head as seen from underneath.

oppression of Jabin, and secured a peace of forty years' duration. The triumphal ode (Judges, v) attributed to her is a remarkable specimen of Hebrew poetry.

De Bow (de bō), JAMES D. B., born at Charleston, South Carolina, in 1820; died in 1867. An able statistician, he founded in 1845 *De Bow's Commercial Review*, and in 1847 became professor of political economy and statistics in the University of Louisiana. In 1855 he published *Industrial Resources of the South and West*.

Debra Tabor (de'bra ta'bor), a town in Abyssinia, about 35 miles E. of Lake Dembea, at present the residence of the Abyssinian sovereign.

Debreczin (de-bret'sin), a town of Hungary, on the edge of the great central plain, 113 miles E. of Budapest. Its houses are mostly of a single story; the streets broad and unpaved. Among the principal edifices are the Protestant church and college. Chief manufactures are coarse woollens, leather, soap, tobacco-pipes, casks, etc., and a large trade is done in cattle. Debreczin is considered the headquarters of Hungarian Protestantism. Pop. 72,588.

Debs, EUGENE VICTOR, labor leader and socialist, born at Terre Haute, Indiana, in 1855. A locomotive fireman, he rose to be president of the American Railway Union, and in 1897 Chairman of the National Council Social Democracy of America. While managing a railroad strike in 1894 he was charged with conspiracy and acquitted, but was imprisoned for six months for contempt of court. He was the presidential candidate of the Social Democracy in 1900, and again in 1904 and 1908, obtaining a vote of 420,000 in the latter year.

Debt, NATIONAL. See *National Debt*.

Decade (dek'ād; Latin, *decas*, *decadis*; Greek *dekas*, from *deka*, ten) is sometimes used for the number ten, or for an aggregate of ten. The books of Livy's Roman history are divided into decades. In the French revolution, decades, each consisting of ten days, took the place of weeks in the division of the year. The term is now usually applied to an aggregate of ten years.

Decagon (dek'a-gon), in geometry, a figure of ten sides and angles.

Decaisnea (de-kā'nē-a), a genus of plants, nat. order Lardizabalaceæ, growing on the Himalayas 7000 feet above the sea. It sends up erect stalks like walking-sticks, bearing leaves 2 feet long. Its fruit, which resembles

a short cucumber, contains a sweet, yellow, edible pulp.

Decalogue (dek'a-log; Gr. *deka*, ten, and *logos*, a word), the ten commandments, which, according to Exod., xx, and Deut., v, were given by God to Moses on two tables of stone. The Jews call them the *ten words*. Jews and Christians have divided the ten commandments differently; and in some Catholic catechisms the second commandment has been united with the first, and the tenth has been divided into two.

Decameron. See *Boccaccio*.

Decamps (dè-kāp), ALEXANDRE GABRIEL, an eminent French painter, was born at Paris in 1803; killed while hunting at Fontainebleau in 1860. His paintings include pictures of Oriental scenery and character, historical pictures, genre pictures and animals.

De Candolle (dè kăn-dol), AUGUSTIN PYRAME, one of the most illustrious of modern botanists, whose natural system of classification, with some modifications, is the one still generally used, was born at Geneva in 1778; died there in 1841. He took up the study of medicine at Geneva and Paris, where he attracted the notice of Cuvier and Lamarck, whom he aided in various scientific researches. After returning to his native city he again visited Paris, and took his medical degree, selecting as the subject of his thesis the medical properties of plants. In 1804 he lectured in the College of France on vegetable physiology; and the following year published an outline of his course, under the title of *Principes de Botanique*, prefixed to the third edition of Lamarck's *Flore Française*. In this outline he laid the basis of the system of classification which he afterwards developed in larger and more celebrated works. In 1808 he obtained the chair of botany in the faculty of medicine at the University of Montpellier. In 1816 he returned to Geneva, where a chair of natural history was expressly created for him, and where he continued for many years to extend the boundaries of his favorite science by his lectures and publications. His chief works are: *L'Histoire des Plantes Grasses*, *Regni Vegetabilis systema Naturale* (incomplete), *Théorie Élémentaire de Botanique*, *Organographie Végétale*, *Physiologie Végétale* and *Prodromus Systematis Naturalis*, the latter completed by his son ALPHONSE (1806-93), also an eminent botanist and member of the French Institute.

Decandria (de-kan'dri-a), in the Linnæan system of bot-

any, the tenth class of plants. The flowers have ten stamens, and one, two, three, or more pistils. It includes the pink, *Lychnis*, *Saxifrage*, etc.

Decapitation (de-kap-i-tā'shun), beheading, capital punishment inflicted by the sword, ax, or guillotine.

Decapoda (de-kap'o-da; Gr. *deka*, ten, and *pous*, *podos*, a foot).—(1) The highest order of crustaceans, so called from having five pairs of legs. They are subdivided into *Brachyura*, the short-tailed decapods or crabs; *Macrura*, or long tailed, including the shrimp, lobster, prawn, crayfish, etc.; and *Anomura*, of which the hermit-crab is an example. (2) One of the two divisions of the dibranchiate cuttle-fishes (the other being the *Octopoda*). They have two arms longer than the other eight, and bear the suctorial discs only at the extremities.

Decapolis (de-kap'o-lis), a district of ancient Palestine containing ten cities, partly on the east, partly on the west of the Jordan.

Decastyle (dek'as-tīl; Gr. *deka*, ten, and *stylos*, a column), a portico or colonnade of ten columns.

Decatur (de-kā'tēr), a city, capital of Macon Co., Illinois, 39 miles E. of Springfield. It has iron-works, flour and cereal mills, and many other industries. It is an important railroad center and a place of considerable trade. Pop. 31,140.

Decatur, STEPHEN, an able American naval commander, born in 1779; killed in a duel in 1820. Among the chief exploits of his life were the burning of the frigate *Philadelphia* under the guns of the forts of Tripoli; the capture of the British frigate *Macedonian* in 1812; his attempted escape from the blockade of New York harbor, 1813-14; and his chastisement of the Algerines, 1815. He was renowned for his cool intrepidity and great resolution.

Decazeville (dè-käz-vēl), a town of France, dep. Aveyron, with coal and iron mines and large iron-works. Pop. (1906) 9749.

Deccan (dek'an; Sanskrit, *Dakshina*, the south), a term locally limited to the territory of Hindustan lying between the Nerbudda and the Kistna, but generally understood to include the whole country south of the Vindhya Mountains, thus comprising the Presidency of Madras and part of Bombay, Hyderabad, Mysore, Travancore and other native states.

Decebalus (de-seb'a-lus), the name several Dacian kings, or

perhaps a general title of honor borne by them. One of them distinguished himself by his opposition to the Roman arms during the reigns of Domitian and Trajan. He entered the province of Mœsia, defeated and killed Appius Sabinus, the Roman governor, and captured many important towns and fortresses. Domitian agreed to pay him a yearly tribute, which was continued by Nerva, but refused by Trajan, who subdued Dacia, and Decebalus, to escape falling into the hands of the victors, committed suicide.

December (de-sem'bēr), the twelfth month of our year, from the Latin *decem*, ten, because in the Roman year instituted by Romulus it constituted the tenth month, the year beginning with March. In December the sun enters the tropic of Capricorn, and passes the winter solstice.

Decemvirs (de-sem'vēr), the ten magistrates who had absolute authority in ancient Rome (B.C. 451-449). See *Appius Claudius*.

Deciduous (de-sid'ū-us), is a term applied in botany to various organs of plants, particularly leaves, to indicate their annual fall. A tree of which the leaves fall annually is called a deciduous tree, and the same term is applied to the leaves themselves. The term is also applied in zoology to parts which fall off at a certain stage of an animal's existence, as the hair, horns and teeth of certain animals.

Decimal (des'i-mal) FRACTIONS. See *Fraction*.

Decimal System, is the name given to any system of weights, measures, or money in which the unit is always multiplied by 10 or some power of 10 to give a higher denomination, and divided by 10 or a power of 10 for a lower denomination. This system has been rigidly carried out in France in all its weights and measures, and the principle obtains in the coinage of Belgium, Italy, Spain, Portugal, the United States, and some other countries. To express the higher denominations, that is to say, the unit multiplied by 10, 100, 1000, 10,000, the French, in their metric system, make use of the prefixes *déca*, *hecto*, *kilo*, *myria*, derived from the Greek; thus, the *mètre* being the unit of length, *décamètre* is 10 mètres, *hecto-mètre* 100 mètres, *kilomètre* 1000 mètres. To express lower denominations, that is, tenths, hundredths, etc., the Latin prefixes *déci*, *centi*, *milli* are used in the same way; thus a *centilitre* is the hundredth part of a *litre*, *décilitre* the tenth part of a *litre*. The basis of the whole system is the linear measure, the unit of

which is the mètre, supposed to be the ten-millionth part of a quadrant of the earth's meridian (39.37 inches). The square of 10 mètres, or square décamètre, called an *are*, is the unit of surface measure. The cube of the tenth part of the mètre, or cubic décimètre, called a *litre*, is the unit of liquid capacity. The cube of the mètre, called a *stère*, is the unit of solid measure. The weight of a cubic centimètre of distilled water at 39.2° Fahr. (4° Centigrade), called a *gramme*, is the unit of weight. The unit of money is the *franc*, which is divided into *décimes* and *centimes*.

Decimation (de-si-mā'shun), the selection of the tenth man of a corps of soldiers by lot for punishment, practiced by the Romans. Sometimes every tenth man was executed; sometimes only one man of each company, the tenth in order. The term is frequently used in a loose way for the destruction of a great but indefinite proportion of people, as of an army or inhabitants of a country.

Decius (dē-she-us), C. MESSIUS QUINTUS TRAJANUS, a Roman emperor, who reigned from A.D. 249 to A.D. 251. He persecuted the Christians, and perished with his army in a battle near Abricium against the Goths.

Deck (dek), a horizontal platform or floor extending from side to side of a ship, and formed of planking supported by the beams. In ships of large size there are several decks one over the other. The *quarter-deck* is that above the upper deck, reaching forwards from the stern to the gangway.

Decker, THOMAS. See *Decker*, Thomas.

Declaration (dek-lā-rā'shun), an avowal or formal statement; especially a simple affirmation substituted in lieu of an oath, solemn affirmation, or affidavit, which modern law allows in a variety of cases, such as those which relate to the revenues of customs or excise, the post-office, and other departments of administration. Justices of the peace, notaries, etc., are also empowered in various cases to take voluntary declarations in lieu of oaths, solemn affirmations and affidavits.—*Declaration of Independence*, the solemn declaration of the Congress of the United States of America, on July 4, 1776, by which they formally renounced their subjection to the government of Britain.—*Declaration of Paris*, an instrument signed at the Congress of Paris, 1856, and subsequently accepted by the chief powers. It declared (1) privateering to be abolished; (2) a neutral flag covers

enemy's goods, with the exception of contraband of war; (3) neutral goods, except contraband of war, are not liable to capture under an enemy's flag; and (4) blockades, in order to be binding, must be effective.—*Declaration of War*, the formal notice of hostilities.—*Declaration of Rights*, the name of a Bill of Rights presented by the Convention to the Prince and Princess of Orange in 1689.

Declaration of Independence.

A famous state paper issued by the American Continental Congress on July 4th, 1776. It was drawn up by Thomas Jefferson, as member of a committee appointed for the purpose, and declared that the united colonies of America were 'Free and Independent States,' giving at length the reasons for this act, which was based on the unjust and oppressive treatment of the colonies by the king and parliament of England.

Declension (de-klen'shun), in grammar, the aggregate of the inflections or changes of form which nouns, pronouns, and adjectives receive in certain languages according to their meaning or relation to other words in a sentence, such variations being comprehended under the three heads of number, gender, and case, the latter being the most numerous. See *Case*.

Declination (dek-li-nā'shun), in astronomy, the distance of a heavenly body from the celestial equator (equinoctial), measured on a great circle passing through the pole and also through the body. It is said to be north or south according as the body is north or south of the equator. (Great circles passing through the poles, and cutting the equator at right angles, are called *circles of declination*. Twenty-four circles of declination, dividing the equator into twenty-four arcs of 15° each, are called hour circles or horary circles.—Declination of the compass or needle, or *magnetic declination*, is the variation of the magnetic needle from the true meridian of a place. This is different at different places, and at the same place at different times. The declination at London was 11° 15' E. in 1576, 0° in 1652, 19° 30' W. in 1760, 24° 27' W., its maximum, in 1815, subsequently changing eastward.

Declinometer (dek-li-nom'e-tēr), an instrument for determining the magnetic declination, and for observing its variations. In magnetic observatories there are permanent instruments of this kind, and they are now commonly made self-registering. Such instruments register the small hourly and

SIGNING THE DECLARATION OF INDEPENDENCE

From the famous painting by Trumbull. Each figure is taken from an authentic portrait.

annual variations in declination, and also the variations due to *magnetic storms*.

Decomposition (dē-kom-pō-zish'un), CHEMICAL, is the separation of the constituents of a body from one another. Roughly speaking—for it is a difference of degree rather than of kind—decomposition is either artificial or spontaneous. Artificial decomposition is produced in bodies by the action of heat, light, electricity, or chemical reagents; spontaneous, in bodies which quickly undergo change in ordinary circumstances, unless special precautions are taken to preserve them. The bodies of the mineral, and the definite crystallized principles of the organic, world belong to the first; organized matter, such as animal and vegetable tissues, organic fluids, such as blood, milk, bile, and the complex non-crystallized bodies, albumen, gelatin, emulsin, etc., belong to the second.

Decorated Style (dek'u-rā-ted), in architecture, the second style of pointed (Gothic) archi-

Decorated Style.—York Cathedral, West Front, tecture, in use in Britain from the end of the thirteenth to the beginning of the fifteenth century, when it passed into the

perpendicular. It is distinguished from the Early English, from which it was developed, by the more flowing or wavy lines of its tracery, especially of its windows, by the more graceful combinations of its foliage, by the greater richness of the decorations of the capitals of its columns, and of the moldings of its doorways and niches, finials, etc., and generally by a style of ornamentation more profuse and naturalistic, though perhaps somewhat florid. The most distinctive ornament of the style is the ball-flower, which is usually inserted in a hollow molding. (See *Ball-flower*.)

Decoration Day (d e k-o-rā'shun). The beautiful ceremony of decorating the graves of soldiers of the late Civil war in the United States, on the 30th of May of each year, is made possible through the organization of the Grand Army of the Republic, whose posts in every State of the Union keep records of soldiers' graves for the purpose. It is a legal holiday in several of the States, and is observed throughout the North and in parts of the South.

Decoy (de-koi'), a place into which wild fowls are enticed in order to be caught. A decoy pond is kept only in a secluded situation. Several channels or pipes of a curved form, covered with light hooped network, lead from the pond in various directions. The wild fowl are induced to enter the wide mouth of the channel by tamed ducks, also called decoys, trained for the purpose, or by grain scattered on the water. When they have got well into the covered channel they are surprised by the decoy-man and his dog, and driven up into the funnel net at the far end, where they are easily caught. The details differ in different cases, but this is the general principle of the contrivance.

Decree (de-krē), in general, an order, edict, or law made by a superior as a rule to govern inferiors. In law it is a judicial decision or determination of a litigated cause. Formerly, in England, the term was specially used for the judgment of a court of equity, but the word *judgment* is now used in reference to the decisions of all the divisions of the supreme court, as, also, in the United States. The word is still used in Scotland for the final judgment of a court, frequently in the form *decret*.

Decree Nisi (nē'sē), literally, a 'decree unless,' a legal term for the decree of divorce issued by a court on satisfactory proof being given in support of a petition for dissolution of marriage; it remains imperfect for

at least six months, and is then made absolute, 'unless' sufficient cause is shown why it should not be made so. If within the time appointed good reason can be shown for such a proceeding, the decree nisi will be reversed, or a further inquiry will be ordered.

Decrepitation (d e-k r ep-i-tā'shun), the act of flying asunder with a crackling noise on being heated, or the crackling noise, attended with the flying asunder of their parts, made by several salts and minerals when heated. It is caused by the unequal sudden expansion of their substance by the heat, or by the expansion and volatilization of water held mechanically within them.

Decrescendo (d ā-k r e-s h en'dō), an Italian term in music which denotes the gradual weakening of the sound, or the reverse of *crescendo*.

Decretals (d e-k r ē'tals), a general name for the papal decrees, comprehending the rescripts (answers to inquiries and petitions), decrees (judicial decisions by the *Rota Romana*), mandates (official instructions for ecclesiastical officers, courts, etc.), edicts (papal ordinances in general), and general resolutions of the councils. The decretals form a most important portion of the Roman Catholic canon law, the authoritative collection of them being that made by the orders of Gregory IX and published in 1234.

Dedham, the seat of Norfolk Co., Massachusetts, 9 miles s. w. of Boston. It has manufactures of woolen goods, carpets, machinery, pottery etc. It was the birthplace of Fisher Ames. Pop. 9284.

Dedication (ded-i-kā'shun), the act of consecrating something to a divine being, or to a sacred use, often with religious solemnities. Also an address prefixed to a book, and formerly inscribed to a patron, testifying respect and recommending the work to his protection and favor; now chiefly addressed to friends of the author, or to public characters, simply as a mark of affection or esteem.

Deduction (de-duk'shun), in reasoning, the act or method of drawing inferences, or of deducing conclusions from premises; or that which is drawn from premises. See *Logic*.

Dee (dē), the name of several British rivers. (1) A river of Scotland, partly in Kincardineshire, but chiefly in Aberdeenshire, one of the most finely wooded and one of the best salmon rivers in Britain. The city of Aberdeen stands at its mouth. (2) A river of N. Wales

and Cheshire: rises in Lake Bala, Merionethshire; flows to the Irish Sea 20 miles below Chester. (3) A river of Scotland, county of Kirkcudbright: rises in Loch Dee, situated among the western hills, flows s. e. and s., and falls into Kirkcudbright Bay. Each of these streams is between 80 and 90 miles long.

Dee, JOHN, an English mathematician, alchemist and astrologer, born in 1527; died in 1608. In early life he successfully devoted much of his time to mathematical, astronomical and chemical studies. In the reign of Mary he was imprisoned on suspicion of practicing the 'black art'; but was in favor with Elizabeth, who is said to have employed him on secret political missions, and paid him a fixed salary. In 1581, along with a man named Kelly, he visited several of the continental courts, pretending to raise spirits. In 1595 he obtained from the queen the wardenship of Manchester College. Here he resided for nine years, and then returned to his old residence at Mortlake, where he died, leaving behind him many works, partly of a scientific character, partly dealing with the occult sciences, invocation of spirits, etc.

Deed (dēd), in law, a writing containing some contract or agreement, and the evidence of its execution, made between parties legally capable of entering into a contract or agreement; particularly an instrument on paper or parchment, conveying real estate to a purchaser or donee. It is either an *indenture* or a *deed-poll*; the former made between two or more persons in different interests, the latter made by a single person, or by two or more persons having similar interests.

Deeg (dēg), a town and fortress in Bhurtpore, Central India, 57 miles northwest of Agra, situated in the midst of marshes, and almost surrounded by water during a great part of the year. At the southwest corner is a lofty rock, on which the citadel stands. It was taken in 1804 by General Fraser, and dismantled after the capture of Bhartpur by Lord Combermere. Pop. 15,828.

Deemster (dēm'ster), an officer formerly attached to the High Court of Justiciary in Scotland, who formally pronounced the doom or sentence of death on condemned criminals. The office was conjoined with that of executioner. The name is now given in the Isle of Man to two judges who act as the chief-justices of the island, the one presiding over the northern, the other over the southern division. They hold

courts weekly at Douglas, Ramsey, and other places.

Deep Sea Exploration. Investigation of the deeper areas of the ocean. The method employed by sounding with apparatus fitted to bring up specimens of organic life and of the sea bottom. American explorations were conducted from 1872 onwards by the U. S. Coast Survey and the Fish Commission, while several European nations have engaged in similar work. The most important of these explorations was that of the English ship *Challenger* (1872-76), which widely traversed the Atlantic and Pacific, and brought up numerous and extraordinary specimens of deep sea animal life. The sea-bottom was also examined and much learned concerning its make-up and conditions. One interesting feature of the results is that many of the animals found are phosphorescent, themselves lighting up their dark abode.

Deer (dēr), a general name for the ungulate or hoofed ruminating animals constituting the family Cervidæ, of which the typical genus is *Cervus*, the stag or red deer. The distinguishing characteristics of the genus are, that the members of it have solid branching horns which they shed every year, and eight cutting teeth in the lower jaw and none in the upper. The horns or antlers always exist on the head of the male, and sometimes on that of the female. The forms of the horns are various: sometimes they spread into broad palms which send out sharp snags around their outer edges; sometimes they divide fantastically into branches, some of which project over the forehead, while others are reared upwards in the air; or they may be so reclined backwards that the animal seems almost forced to carry its head in a stiff erect posture. They are used as defensive and offensive weapons, and grow with great rapidity. There are many species of deer, as the red deer or stag, the fallow-deer, the roe-buck, the reindeer, the moose, the elk, the axis, rusa, muntjac, wapiti, etc. (See the separate articles.) Deer are pretty widely distributed over the world, though there are none in Australia and few in Africa, where the antelopes (whose horns are permanent) take their place. The reindeer alone has been domesticated.

Deer Forest, an extensive tract of mountainous land set apart for the protection of wild deer, especially red deer, which are used for purposes of sport. In Scotland, to which such forests are chiefly confined, some 2,000,000 acres, distributed over nine or

ten counties, are devoted to deer forests. The land is usually, in by far the greater part, of the wildest and least productive kind, but of course may yield large numbers of grouse and other game as well as deer. A great many of the forests are rented by sportsmen from the proprietors, and the rents drawn are considerable, ranging from £1000 to £5000, and even much more, per annum for a single forest. Crofters have often been removed from their holdings in order that the land might be incorporated in some deer forest, and this has been regarded as a great grievance. On the other hand, the lessees of the forests have expended large sums of money in the country, and the rents paid the proprietors have enabled them to do the same.

Deer-grass, the name of several North American plants of the genus *Rhexia*.

Deer-mouse, the common name of the animals belonging to the genus *Meriones*, an American genus of rodent animals allied to the mice and the jerboas of the Old World. The deer-mouse of Canada (*M. Canadensis*) is a pretty little animal of the size of a mouse, with very long hind-legs and a tail, and very short forelegs.

Deer-stalking, an exciting but laborious mode of hunting the red deer, in which, on account of the extreme shyness of the game, their far-sightedness and keen sense of smell they have to be approached by cautious manœuvring before a chance of obtaining a shot occurs. Great patience and tact and a thorough knowledge of the ground are essential to a good stalker, who has to undergo many discomforts in crouching, creeping, wading through bogs, etc. Advance from higher to lower ground is usually made, since the deer are always apt to look to the low ground as the source of danger. 'Deer-driving' towards a point where the shooters are concealed is often practiced, but is looked on as poor sport by the true deer-stalker.

Defamation (def-a-mā'shun), the malicious uttering of slanderous words respecting another which tend to destroy or impair his good name, character, or occupation. To constitute defamation in law the words must be spoken maliciously. Defamation is punishable either by action at common law or by statute.

Default (de-falt'), in law, signifies generally any neglect or omission to do something which ought to be done. Its special application is to the non-appearance of a defendant in court

when duly summoned on an appointed day. If he fail to appear judgment may be demanded and given against him by default.

Defendant (de-fen'dant), in law, the party against whom a complaint, demand, or charge is brought; one who is summoned into court and defends, denies, or opposes the demand or charge, and maintains his own right. The term is applied even if the party admits the claim.

Defender of the Faith (*Fidei Defensor*), a title belonging to the King of England, as *Catholicus* to the King of Spain, *Christianissimus* to the King of France, etc. Leo X bestowed the title of *Defender of the Faith* on Henry VIII in 1521, on account of his book against Luther, and the title has been used by the sovereigns of England ever since.

Deffand (def-än), MARIE DE VICHY-CHAMROND, MARQUISE DU, a conspicuous character among the French literati of the eighteenth century, born in 1697; died in 1780. In 1718 she married the Marquis du Deffand, from whom she separated after ten years. During the latter part of her long life she became the center of a literary coterie, which included Choiseul, Boufflers, Montesquieu, Voltaire, D'Alembert, David Hume and Horace Walpole. She possessed much natural talent; but the laxity of her morals formed a strong contrast to the superiority of her intellectual powers.

Defiance (de-fi'ans), a city, capital of Defiance Co., Ohio, on the Maumee River, 50 miles s. w. of Toledo. It has extensive machine shops and other manufacturers. Pop. 7327.

Deflading (dē-fi-lād'ing), that branch of fortification the object of which is to determine (when the intended work would be commanded by eminences within the range of firearms) the directions or heights of the lines of rampart or parapet, so that the interior of the work may not be incommoded by a fire directed to it from such eminences.

Defile (de-fil'), a narrow passage or way in which troops may march only in a file, or with a narrow front; a long, narrow pass, as between hills, etc.

Definition (def-i-nish'un), a brief and precise description of a thing by its properties; an explanation of the signification of a word or term, or of what a word is understood to express. Logicians distinguish definitions into *nominal* and *real*. A nomi-

nal definition explains the meaning of a term by some equivalent word or expression supposed to be better known. A real definition explains the nature of the thing. A real definition is again *accidental*, or a description of the accidents, as causes, properties, effects, etc.; or *essential*, which explains the constituent parts of the essence or nature of the thing. An essential definition is, moreover, *metaphysical* or *logical*, defining 'by the genus and difference,' as it is called; as, for example, 'a plant is an organized being, destitute of sensation,' where the part first of the definition states the genus (organized being), and the latter the difference (destitute of sensation, other organized beings possessing sensation); or *physical*, when it distinguishes the physical parts of the essence; thus, a plant is distinguished by the leaves, stalk, root, etc. A strictly accurate definition can be given of only a few objects. The most simple things are the least capable of definition, from the difficulty of finding terms more simple and intelligible than the one to be defined.

Defoe (dē-fō'), DANIEL, an English writer of great ingenuity and fertility, was born in 1661 in London, where his father, James Foe, carried on the trade of a butcher. In 1685 he joined the insurrection of the Duke of Monmouth, and had the good fortune to escape; after which he made several unsuccessful attempts at business, and at last turned his attention to literature. In 1701 appeared his satire in verse, *The True-born Englishman*, in favor of William III. As a zealous Whig and Dissenter he was frequently in trouble. For publishing *The Shortest Way With the Dissenters* (1702), the drift of which was misunderstood by both Churchmen and Dissenters, he was pilloried and imprisoned in Newgate, obtaining his liberty through the influence of Harley, who employed him in several important missions, particularly in the negotiations for the union with Scotland, of which he wrote the history. While in Newgate, in 1704, he commenced the *Review*, a literary and political periodical which lasted for nine years. In 1705 he wrote a short account of the *Apparition of Mrs. Veal*, a fictitious narrative accompanying a translation of Drelincourt on Death. In 1706 he published his largest poem, entitled *Jure Divino*, a satire on the doctrine of divine right. In 1707 he was in Scotland, which he also visited several times subsequently in connection with political affairs, and as an agent of those in

DANIEL DEFOE

power. In 1719 appeared the most popular of all his performances: *The Life and Surprising Adventures of Robinson Crusoe*, the favorable reception of which was immediate and universal. The success of Defoe in this performance induced him to write a number of other lives and adventures in character; as *Moll Flanders*, *Captain Singleton*, *Roxana*, *Duncan Campbell*, *The Memoirs of a Cavalier*, *Journal of the Plague*, etc. After the accession of King George I, he was employed by government in some underhand work connected with the obnoxious Jacobite press, and was a prolific contributor to periodical and ephemeral literature. He died in London in 1731.

Deforcement (de-fōrs'ment), in law, the holding of lands or tenements to which another person has a right; a general term including any species of wrong by which he who has a right to the freehold is kept out of possession. In Scots law, it is the resisting of an officer in the execution of law.

De Gérando (dè zhā-rān-dō), JOSEPH MARIE, BARON, a French philosopher and statesman, born at Lyons in 1772; died in 1842. After serving in the army for some time he took office as minister of the interior under Lucien Bonaparte, and was afterwards engaged in the organization of Tuscany and the Papal states on their union to France. In 1819 he commenced a course of lectures in the Faculté de Droit, in Paris, on public and administrative law. He was raised to the peerage in 1837. De Gérando has acquired great fame by his philosophical writings. His principal works are *Des Signes et de L'Art de Penser*, *De la Génération des Connaissances Humaines*, *Histoire comparée des Systèmes de Philosophie*, *Du Perfectionnement Moral et de l'Education de Soi-même*, *De l'Education des Sourds-muets de Naissance*, and *De la Bienfaisance Publique*.

Deggendorf (deg'en-dorf), a town of Bavaria, on the Danube, with manufactures of cloth, etc. Pop. (1906) 7154.

Degradation (de-gra-dā'shun), the ecclesiastical censure by which a clergyman is divested of his holy orders. The canon law distinguishes degradation into two sorts; the one summary, by word only; the other solemn, by stripping the person degraded of those ornaments and rights which are the ensigns of his order or degree. The term is also applied to the deprivation of offices not ecclesiastical.

Degree (de-grē'), in geometry or trigonometry, the 360th part of the circumference of any circle, the circumference of every circle being supposed to be divided into 360 equal parts, called degrees. A *degree of latitude* is the 360th part of the earth's circumference north or south of the equator, measured on a great circle at right angles to the equator, and a *degree of longitude* the same part of the surface east or west of any given meridian, measured on a circle parallel to the equator. Degrees are marked by a small ° near the top of the last figure of the number which expresses them; thus 45° is 45 degrees. The degree is subdivided into sixty equal parts called minutes; and the minute is again subdivided into sixty equal parts called seconds. Thus, 45° 12' 20" means 45 degrees, 12 minutes and 20 seconds. The magnitude or quantity of angles is estimated in degrees and parts of a degree, because equal angles at the center of a circle are subtended by equal arcs, and equal angles at the centers of different circles are subtended by similar arcs, or arcs containing the same number of degrees and parts of a degree. An angle is said to be so many degrees as are contained in the arc of any circle intercepted between the lines which contain the angle, the angular point being the center of the circle. Thus we say an angle of 90°, or one of 45° 24'. It is also usual to say that a star is elevated so many degrees above the horizon, or declines so many degrees from the equator, or such a town is situated in so many degrees of latitude or longitude. The length of a degree depends upon the radius of the circle of the circumference of which it is a part, the length being greater the greater the length of the radius. Hence the length of a degree of longitude is greatest at the equator, and diminishes continually towards the poles, at which it = 0. Under the equator a degree of longitude contains 60 geographical, and 69½ statute miles. The degrees of latitude are found to increase in length from the equator to the poles, owing to the figure of the earth. Numerous measurements have been made in order to determine accurately the length of degrees of latitude and longitude at different parts of the earth's surface and thus settle its dimensions and magnitude. When the French determined to establish their system of measures and weights based upon the mètre (see *Decimal System*), they settled that this basis was to be the ten-millionth part of the distance from the equator to the pole,

which distance had to be found by accurate measurement. Ten degrees of latitude were accordingly measured, from Dunkirk to Formentera, one of the Balearic islands. Similar measurements having been made in Britain, the length of a total arc of twenty degrees has been found. Many measurements have also been made elsewhere. The term is also applied to the divisions, spaces, or intervals marked on a mathematical, meteorological, or other instrument, as a thermometer or barometer.

Degree, in universities, a mark of distinction conferred on students, members, or distinguished strangers, as a testimony of their proficiency in the arts or sciences, or as a mark of respect, the former known as ordinary, the latter as honorary degrees. The degrees are bachelor, master and doctor, and are conferred in arts, science, medicine, divinity and music. Degrees are conferred on women by London University. Cambridge admits them to the tripos examinations, and Oxford to most of its honor schools, but neither grants at present the stamp of a degree. St. Andrew's University grants the title L.L.A. to women who pass in four subjects; the standard of attainment being the same as that required for the M.A. degree, the books prescribed and the questions set being practically identical. In the United States universities similar degrees are given and women frequently receive them.

Degree, in algebra, a term used in speaking of equations, to express what is the highest power of the unknown quantity. Thus, if the index of that power be 3 or 4 (x^3 , y^4), the equation is respectively of the third or fourth degree.

Dehra (dā'ra), a town of Hindustan, capital of Dehra Doon, beautifully situated, with military cantonments, English, Presbyterian and Roman Catholic churches, and an American mission. Pop. 28,095.

Dehra Doon (dā'ra dön), a beautiful and fertile valley in the Meerut division of the Northwestern Provinces, Hindustan, at the s. w. base of the lowest and outermost ridge of the Himalayas. It is bounded on the n. by the Jumna, n. e. by the mountains of Gurwhal, from 7000 to 8000 feet high, s. e. by the Ganges, s. w. by the Sewalik range, 3000 to 3500 feet high. Its length from s. e. to n. w. is about 45 miles; breadth, from 15 to 20 miles. The chief town in the valley is Dehra.

Dei gratia (dē'i grā'shi-a; 'by the grace of God'), a formula

which sovereigns add to their title. The expression is taken from several apostolical expressions in the New Testament.

Deinosauria. See *Dinosauria*.

Deioces (dī'o-sēz), an ancient personage who flourished about seven centuries B.C., rose from a private station to be the founder of the Median Empire. By acting as arbitrator in the disputes which took place in his own vicinity, the fame of his justice induced the Medes to choose him for their king after their revolt from the Assyrians. He built the city of Ecbatāna, in which he resided; after a reign of thirty-five years he left the throne to his son Phraortes.

Deira (de'i-ra), an ancient Anglican kingdom, stretching from the Tees to the Humber, and extending inland to the borders of the British realm of Strathclyde. With Lerneia it formed the Kingdom of Northumbria.

Deism (dē'izm; Lat. *Deus*, God), a philosophical system which, as opposed to *Atheism* (Gr. *a*, not, and *Theos*, God), recognizes a great First Cause; as opposed to *Pantheism* (Gr. *pan*, all, *Theos*), a Supreme Being distinct from nature or the universe; while, as opposed to *Theism*, it looks upon God as wholly apart from the concerns of this world. It thus implies a disbelief in revelation, skepticism as regards the value of miraculous evidence, and an assumption that the light of nature and reason are the only guides in doctrine and practice. It is thus a phase of Rationalism. In the last century there were a series of writers who are spoken of distinctively as the English deists. They include Collins, Toland, Tindal, etc.

Dejanira (dej-a-nī'rā), in Greek mythology, the wife of Hercules or Heracles (which see).

Dekalb (de-kalb'), a city of Dekalb Co., Illinois, 58 miles w. of Chicago. It is the seat of the Northern Illinois Normal School, and has large manufacturers of wire, shoes, gloves, etc. Pop. 8102.

De Kalb, JOHN, a German soldier, born at Hüttendorf in 1721. An officer in the French army, he came to America with Lafayette in 1777, was appointed a major-general by Congress, and served in Washington's army. In 1780 he was second in command under General Gates in the South and was killed at the battle of Camden. He called himself baron, but was really a peasant's son, without title.

Dekker, or DECKER (dek'er), JEREMIAS DE, a Dutch poet, born in 1609 or 1610; died in 1666. His best-

Dekker

known poems are: *Lof der Geldzucht*, a satire on avarice; and *Puntdichten*.

Dekker, DECKER, or DECKAR, THOMAS, an English dramatist and miscellaneous writer, born about 1570; died in 1641. He was a voluminous writer, and besides a great number of pamphlets he wrote many plays which give a vivid picture of contemporary life in London. Among these are: *Old Fortunatus*, *Shoemaker's Holiday*, *Satiromastix*, *The Honest Whore*, etc. He also collaborated with Massinger, Ford Middleton, Jonson, and others. A quarrel with Ben Jonson occasioned that Poet's *Poetaster* and the *Satiromastix* of Dekker.

De la Beche, SIR HENRY. See *Ceeche, Sir Henry de la*.

Delaborde (dè-lâ-bôrd), HENRY FRANÇOIS, COUNT, a French general, born at Dijon in 1764; died in 1833. He distinguished himself in the republican armies; fought through the whole of the Napoleonic wars, and was ennobled in 1807. After the second restoration he was placed on the list of the officers who were to be criminally prosecuted, but in consequence of a technical error the case against him lay over, and he lived retired and unannoyed till his death.

Delacroix (dè-lâ-krwä), FERDINAND VICTOR EUGÈNE, an eminent French painter, born in 1799; died in 1863. He is considered the chief of the modern French romantic school of painters. In 1831 he joined the embassy sent by Louis Philippe to the Emperor of Morocco. To this journey we are indebted for several pictures remarkable for their vivid realization of oriental life as well as their masterly coloring. They are: *The Jewish Marriage*, *Muley Abderrhaman with his Bodyguard*, *Algerian Ladies in their Chamber*, *Moorish Soldiers at Exercise*, and several scenes of common life. He decorated several of the public buildings of Paris, and was admitted into the Institute in 1857. He was an artist of great versatility, strong in coloring, but weak in drawing.

Delagoa Bay (dè-lâ-gô'a bâ), in Southeast Africa, a large sheet of water separated from the Indian Ocean by the peninsula and island of Inyack. The bay stretches north and south upwards of 40 miles, with a breadth of from 16 to 20 miles, and forms the southern extremity of the Portuguese settlement of Mozambique. It is available for vessels of large tonnage, though the presence of shoals, banks and flats renders the navigation of the bay somewhat intricate. The port and Portuguese settlement of Lourenço Marques is be-

Delaroche

coming a place of considerable trade since the opening of gold mines in the Transvaal. A railway running towards the Transvaal has been opened for a distance of over 160 miles.

Delambre (dè-län-br), JEAN BAPTISTE JOSEPH, a French astronomer and pupil of Lalande, born at Amiens in 1749; died in 1822. His studies were not directed to astronomy until his thirty-sixth year, but he rapidly acquired fame, and produced numerous works of great value. He was engaged with Méchain from 1792 till 1799, in measuring an arc of the meridian from Barcelona to Dunkirk. In 1807 he succeeded Lalande in the Collège de France, and wrote his *Traité d'Astronomie Théorique et Pratique* (three vols. 4to, 1814), *Histoire de l'Astronomie du Moyen Age* (1819), *Hist. de l'Astronomie Moderne* (1821), two vols., and *Hist. de l'Astronomie du 18me Siècle* (two vols.).

Deland (de-land'), MARGARET W., novelist, was born in Pittsburgh, Pennsylvania, in 1857. She wrote *John Ward, Preacher*; *Story of a Child*; *Old Chester Tales*; *The Awakening of Helena Richie*; *The Old Garden* and other poems, etc.

Delane (de-län'), JOHN THADDEUS, born at London in 1817; died in 1879; became editor of the *London Times* in 1841, and retained that important post till 1877, during which time that paper attained an almost unparalleled influence and a great circulation.

Delaroche (dè-lâ-rosh), HIPPOLYTE (familiarily styled PAUL), probably the greatest painter of the

Paul Delaroche.

French school, born at Paris in 1797; died in 1856. He studied landscape

painting for a short time, but applied himself afterwards to historical painting, and rapidly rose to eminence. His subjects are principally taken from French and English history. Among them may be mentioned: *Joan of Arc interrogated in Prison by Cardinal Beaufort*; the *Death of Queen Elizabeth*, a work greatly admired by French and generally reprobated by English critics; *The Children of Edward IV in the Tower*; *Cromwell contemplating the Dead Body of Charles I*; *The Execution of Lady Jane Grey*; and the *Hemicycle*, an immense work painted in oil on the wall of the École des Beaux Arts, Paris. It represents an assemblage of the great painters, sculptors and architects from the days of Giotto to those of Lesueur, and has been admirably engraved by Dupont. His merits consist in correct drawing, appropriate expression, harmonious color, and great distinctness and perspicuity in treatment, rendering the story of his pictures at once intelligible. He held a middle place between the classical and the romantic schools, and was regarded as the leader of the so-called 'eclectic school.'

Delavigne (dè-là-vèn), JEAN FRANÇOIS CASIMIR, a French poet and dramatist, born at Havre in 1793; died in 1843. At the restoration he published a set of elegies, entitled *Les Méseniennes*, which deplored the faded glories of France. He produced in 1819 his tragedy of *Les Vêpres Siciliennes*; *Les Comédiens* appeared in 1820, and the tragedy of *Le Paria* in 1821. Of his other plays which followed these may be mentioned: *L'Ecole des Vieillards*; *Marrino Faliero*; and the dramas of *Louis XI*—founded on Commynes' *Memoirs* and *Quentin Durward*—and *Don Juan d'Autriche*. His hymns *La Parisienne* and *La Varsoivienne*, and the ballad *La Toilette de Constance*, are among his more popular poetical pieces. He died a member of the Academy.

Delaware (del'a-wâr), a river which rises in the Catskill Mountains in New York, separates Pennsylvania from New York and New Jersey, and New Jersey from Delaware, and loses itself in Delaware Bay. It has a course of about 300 miles, and is navigable for large vessels to Philadelphia, and for smaller craft to the head of tide-water at Trenton (155 miles).

Delaware, one of the original thirteen United States, and, next to Rhode Island, the smallest State in the Union, named after Lord Delaware, one of the early governors of Virginia. It is bounded north by Pennsylvania, east by the Delaware River and

Bay and by the ocean, south and west by Maryland; area, 2370 square miles. It is divided into three counties, Kent, Newcastle and Sussex, and has nearly the form of a right-angled triangle (hence its popular name 'the Diamond State'). In the south and towards the coast the surface is very level, but the north part is rather hilly. An elevated swampy tableland towards the west traverses the State, forming the watershed between the Chesapeake and the Delaware bays. A great part of the soil is fertile, and agriculture is in a flourishing state. Fruit cultivation (peaches, apples, berries) is largely engaged in, and the canning and drying of fruits are important industries. There are also extensive and varied manufactures. A ship canal connects Chesapeake River and Delaware Bay. There are about 300 miles of railway. Wilmington is the chief manufacturing and commercial town. The capital is Dover. Delaware, though slave-holding, remained loyal to the Union at the secession of the Southern States. Pop. 202,322.

Delaware, a city, capital of Delaware Co., Ohio; a place of considerable trade and the seat of the Ohio Wesleyan University. There are celebrated medicinal springs in the vicinity. Furniture, carriages, etc., are produced. Pop. 9076.

Delaware Bay, an estuary or arm of the sea between the States of Delaware and New Jersey. At the entrance between Capes May and Henlopen, it is 11 miles wide, and is nearly 60 miles long, being in parts 25 miles wide. Near Cape Henlopen is situated the Delaware Breakwater, which affords vessels a shelter within the cape. It was erected by the Federal government, and cost about \$3,000,000.

Delaware Indians, a tribe belonging to the Algonquin family, originally known as living on the Delaware River, and called by themselves *Lenni Lenape*. They had to leave their original settlements about the middle of the nineteenth century, going farther west, and eventually were removed to the Indian Territory. Their numbers are now insignificant.

Del Credere (del kred'e-râ), an Italian mercantile phrase, similar in import to the English *guarantee* or the Scotch *warrantice*. It is used among merchants to express the obligation undertaken by a factor, broker, or mercantile agent, when he becomes bound, not only to transact sales or other business for his constituent, but also to guarantee the solvency of the persons with whom he contracts. On

STREET SCENE IN DELHI

account of this guarantee a higher commission, called a *del credere* commission, is paid to the factor or agent.

Deleb Palm (de-leb'), the *Borassus* *Æthiōpum*, a native of the interior and west of Africa, allied to the Palmyra palm. Its leaves and fruits are used by the Africans for the same purposes as those of the Palmyra by the Asiatics, and the tender roots produced by the young plant are extensively used as an article of food.

Delegate (del'e-gāt), a person appointed and sent by another or by others, with powers to transact business as his or their representative. The title was given to members of the First Continental Congress in America, 1774. Representatives to Congress from the United States territories are designated by this term. They have the right of discussion, but have no vote.

Delescluze (dè-lā-kluz), LOUIS CHARLES, a French communist, born in 1809. He adopted a journalistic career and was imprisoned and fined for his socialistic and revolutionary articles, and also sentenced to banishment. He escaped to England, but having returned to France (1853) was kept in prison for some time and then banished to Cayenne. On his return he again got into trouble. After the fall of the empire and the German occupation he became a prominent member of the Commune, and was shot at one of the barricades in 1871.

Delfshaven (delfs'hä-ven), a former town of Holland, on the Maas, 2 miles S. W. of Rotterdam, of which it is now a suburb. It is well protected from inundation by dikes, etc., and has ample accommodation for shipping.

Delft (delf), formerly DELF, a town of Holland, 8 miles N. W. of Rotterdam, intersected in all directions by canals. Among its buildings are the town hall, the Prinsen-hof, the scene of the assassination of William the Silent, now a military barrack; the old Reformed church, containing the monuments of Admiral Tromp, the naturalist Leeuwenhoek, etc.; the new church, containing monuments to William I, Hugo Grotius, and the burial vaults of the present royal family. Delft was formerly the center of the manufacture of the pottery called *delft-ware*; its chief industries now embrace carpets, leather, soap, oil, gin, etc. Pop. 31,582.

Delft-ware, or DELF, is a kind of pottery covered with an enamel or white glazing which gives it the appearance of porcelain. It was originally manufactured in Delft in the

fourteenth century, is now considered coarse, but was among the best of its day.

Delfzyl (delf-zil'), a strongly fortified town and port of North Holland, province Gronigen, on the Dollart. Pop. 7395.

Delhi (del'ē), a city of Hindustan, in the Punjab, anciently capital of the Patan and Mogul empires, about 954 miles N. W. Calcutta. At the durbar in 1911, when George V of England was made Emperor of India, he changed the capital to Delhi. It was at one time the largest city in Hindustan, covering a space of 20 square miles, and having a population of 2,000,000. A vast tract covered with the ruins of palaces, pavilions, baths, gardens, mausoleums, etc., marks the extent of the ancient metropolis. The present city abuts on the right bank of the Jumna, and is surrounded on three sides by a lofty stone wall 5½ miles long, strengthened by the British at the beginning of the last century with a ditch and glacis. The palace or residence of the Great Mogul, built by Shah Jehan, commenced in 1631, and now known as 'the fort,' is situated in the east of the city, and abuts directly on the river. It is surrounded on three sides by an embattled wall of reddish sandstone nearly 60 feet high, with round towers at intervals, and a gateway on the west and south. Since the mutiny in 1857 a great portion has been demolished in order to make room for military barracks. One of the most remarkable objects in the city is the Jamma Musjid or Great Mosque, a magnificent structure in the Byzantine-Arabic style, built by the Emperor Shah Jehan in the seventeenth century. Among modern buildings are the government college, founded in 1792 (abolished as a college); the Residency, and a Protestant church. The East Indian Railway enters the city by a bridge over the Jumna. The S. W. quarter of the town is densely occupied by the shops and dwellings of the native population; the streets are narrow and tortuous, but some of the main thoroughfares of the city are splendid streets, the chief being the Chandni Chauk, or 'Silver Street.' During the mutiny Delhi was seized by the Sepoys, who held possession for four months, during which many atrocities were committed. Pop. 208,575.

Delille (dè-lél), JACQUES, a French didactic poet, born in 1738; died in 1813. His translation of Virgil's *Georgics*, published in 1770, with a *Discours Préliminaire* and numerous annotations, established his fame, and obtained him admission to the French

Academy. He became professor of Latin poetry in the College of France, and of belles-lettres at the University of Paris. Though an adherent of the old system, Robespierre spared him on every occasion. At his request Delille wrote the *Dithyrambe sur l'Immortalité de l'Ame*, to be sung on the occasion of the public acknowledgement of the Deity. In 1794 he withdrew from Paris, but returned again in 1801, and was chosen a member of the Institute. He spent two years in London, chiefly employed in translating *Paradise Lost*. His reputation mainly rests on the *Georgics*, and *Les Jardins*,

the body, as the heart; it may be caused by long-continued and exhausting pain, and by a state of inanition of the nervous system.

Delirium Tremens, an affection of the brain which arises from the inordinate and protracted use of ardent spirits. It is therefore almost peculiar to drunkards. The principal symptoms of this disease, as its name imports are delirium and trembling. The delirium is a constant symptom, but the tremor is not always present, or, if present, is not always perceptible. Frequently the sufferer thinks he sees the

Great Mosque at Delhi, viewed from Northeast.

a didactic poem. Other works are *L'Homme des Champs*, *La Pitié*, *Les Trois Règles de la Nature*, *La Conversation*, *L'Enéide de Virgile*, etc.

Deliquescence (de-l-i-que-s'ens), a change of form from the solid to the liquid state, by the absorption of moisture from the atmosphere. It occurs in many bodies, such as caustic potash, carbonate of potassium, acetate of potassium, chloride of calcium, chloride of copper, chloride of zinc, et.

Delirium (de-lir'i-um), a temporary disordered state of the mental faculties occurring during illness either of a febrile or of an exhausting nature. It may be the effect of disordered or inflammatory action affecting the brain itself, or it may be sympathetic with active diseases in other parts of

most frightful, grotesque, or extraordinary objects, and may thus be put into a state of extreme terror. It is properly a disease of the nervous system. The common treatment is to administer soporifics so as to get the patient to sleep.

Delisle (dé-lél), GUILLAUME, a French geographer, born in 1675; died in 1726. He published upwards of 130 maps, and reconstructed the system of geography current in Europe in the beginning of the eighteenth century. Louis XV appointed him geographer to the king.—His brother, JOSEPH NICOLAS, born in 1688; died in 1768, was a distinguished astronomer, geographer and mathematician. He visited England, where he formed acquaintance with Newton and Halley.

Delitzsch (dā'lēch), a town of Prussian Saxony, on the

Löbber, 15 miles north of Leipzig, with manufactures of woollens, and several important annual fairs. Pop. 10,479.

Delitzsch, FRANZ, a German theologian, born at Leipzig in 1813. He was a strong supporter of strict orthodox theology; became professor of theology at Rostock in 1846, at Erlangen in 1850, and at Leipzig in 1867. He published many devotional and theological works and several commentaries. Died in 1890.—His son FRIEDRICH, born in 1850, has distinguished himself in Assyriology, and is professor of that subject at Leipzig.

Della Cruscans (del'a krus'kans), a coterie of English poetasters resident for some time in Florence, who printed inferior sentimental poetry and prose in 1785. Coming to England, they communicated the infection to minds of a like stamp, and the newspapers of the day, chiefly the *World* and the *Oracle*, began to give publicity to their lucubrations. They were extinguished by the bitter satire of Gifford's *Baviad and Mæviad*. Mrs. Piozzi, Boswell, Merry, Cobb, Holcroft, Mrs. H. Cowley and Mrs. Robinson were the leaders. They took the name from the Accademia Della Crusca in Florence.

Della Robbia (del'lá rob'i-à) LUCA, an Italian sculptor, born in 1400 at Florence; died in 1482. He was distinguished for his work both in marble and bronze, and also for his reliefs in terra-cotta coated with enamel, a kind of work named after him. Other members of the family distinguished themselves in the same line, especially ANDREA (1435-1525) nephew and pupil of Luca.

Della Robbia Ware, terra-cotta bas-reliefs thickly enameled with tin-glaze; made at Florence (chiefly 1450-1530); in France (1530-1567); so called from the name of the above artist.

Dellys (del-lēz'), a seaport of Algeria, 49 miles east of Algiers. It consists of a French and an Arab town; the climate is salubrious, and there is a trade in grain, oil and salt. Pop. 14,070.

Delolme (dè-lolm), JEAN LOUIS, a Swiss writer, born at Geneva in 1740; died in 1806. He at first practiced as a lawyer in his native city, but the part which he took in its internal commotions obliged him to repair to England, where he passed some years in great indigence. He became known by his celebrated *Constitution de l'Angleterre*.

De Long, GEORGE WASHINGTON, Arctic explorer, born in New

York City in 1844; entered the Naval Academy and became an officer in the U. S. navy. He took part in an expedition to northern Greenland in 1874, and in 1879 sailed as commander of the *Jeannette* on an expedition to explore the Arctic Ocean north of Siberia. The ship was crushed in the ice June 12, 1881, and De Long died of starvation in the delta of the Lena River, October 30. His remains were brought to the United States in 1884.

Deloo (de-lö'; *Cephalolöphus grimmia*), a small but pretty antelope occurring over a great part of Central and Southern Africa.

Delorme (dè-lorm), MARION, a celebrated French beauty who reigned under Louis XIII. The date of her birth is stated at 1611, 1612 and 1615. Her beauty and wit soon made her house the rendezvous of all that was gallant and brilliant in Paris. She espoused the side of the Frondeurs, and Mazarin was about to have her arrested when her sudden death in 1650 terminated her short career. The legend is current in France that the death and funeral was a mere pretense; that she escaped to England, returned to Paris, and after marrying three husbands lived to the age of 129. Victor Hugo has taken her as the subject of one of his dramas.

Delos (dē'los), an island of great renown among the ancient Greeks, fabled to be the birthplace of Apollo. It was a center of his worship, and the site of a famous oracle. It is the central and smallest island of the Cyclades, in the Aegean Sea, a rugged mass of granite about 12 square miles in extent. At first the island, occupied by the Ionians, had kings of its own, who also held the priestly office. In 477 B.C. it became the common treasury of the Greeks who were leagued against Persia. Subsequently the Athenians removed the inhabitants from it, but they were soon restored. Its festivals were visited by strangers from all parts of Greece, Asia Minor, etc. After the destruction of Corinth (146 B.C.) the rich Corinthians fled thither, and made Delos the seat of a flourishing commerce. The greatest curiosity of the island was the Temple of Apollo. The Persians, when they made war against Greece, forebore attacking the island out of reverence to the patron deities. The Delians showed great skill and taste in making utensils, statues of their gods, figures of heroes, animals, etc., in bronze and silver. Delos, called *Dili* or *Sdili*, is now without permanent inhabitants; a few shepherds from the

neighboring isles pay it summer visits with their flocks. Abundant ruins of its former magnificence yet exist, and excavations resulting in interesting archæological discoveries have recently been made.

Delphi (del'fī), an ancient Greek town, originally called Pytho, the seat of the famous oracle of Apollo, was situated in Phocis, on the southern side of Parnassus, about 8 miles N. of the Corinthian Gulf. It was also one of the meeting places of the Amphictyonic Council, and near it were held the Pythian games. The oracles were delivered by the mouth of a priestess who was seated on a tripod above a subterranean opening, whence she received the vapors ascending from beneath, and with them the inspiration of the Delphian god. The oracular replies were always obscure and ambiguous; yet they served, in earlier times, in the hands of the priests, to regulate and uphold the political, civil and religious relations of Greece. The oracle was celebrated as early as the ninth century B.C., and continued to have importance till long after the Christian era, being at last abolished by the emperor Theodosius. Persons came to consult it from all quarters, bestowing rich gifts in return. The splendid temple thus possessed immense treasures, and the city was adorned with numerous statues and other works of art. It first lost its treasures in 357 B.C., when seized by the Phocians; it was afterwards plundered by Sulla and by Nero, while Constantine also removed several of its treasures. The site of the town is now occupied by a village called *Castri*, near which may be seen the still-flowing Castalian spring.

Delphin Classics (del'fin klas'iks), a collection of the Latin classical authors made for the dauphin (Lat. *ad usum Delphini*), son of Louis XIV., under the editorship of Bossuet and Huet, with notes and interpretations. A similar series based on these was published in London.

Delphinidæ (del-fin'i-dē), the dolphin family of cetaceans. See *Dolphin*.

Delphinium (del-fin'i-um), a genus of Ranunculaceæ, comprising the larkspurs, stavesacre, etc. See *Larkspur*.

Delsarte (del-sart), FRANÇOIS A. N. E., a French singer and teacher of elocution, born at Solesmes in 1811; died in 1871. He won a high reputation as a teacher of dramatists and a singer of declamatory music, and published works on voice culture and several novels. The system founded by him,

known as the Delsarte system, is still popular in the United States, and is applied to the promotion of health by a series of bodily movements held to yield a harmonious development of the body and a true and natural dramatic expression.

Delta (del'ta), the name of the Greek letter Δ, answering to the English D. The island formed by the alluvial deposits between the mouths of the Nile, from its resemblance to this letter, was

Stages in the filling up of a lake. In A two streamlets are represented as pouring their 'deltas' into a lake. In B they have filled the lake up, converting it into a meadow across which they wind on their way down the valley. named Delta by the Greeks; and the same name has since been extended to those alluvial tracts at the mouths of great rivers which, like the Nile, empty themselves into the sea by two or more diverging branches.

Delta Metal, a brass, or alloy of copper and zinc, to which manganese has been added. It is used for parts of machinery and for ornamental work.

Deltoid Muscle (del'toid), a muscle of the shoulder which moves the arm forwards, upwards and backwards.

Deluc (dè-lök), JEAN ANDRÉ, a geologist and meteorologist, was born in 1726 at Geneva; died at Windsor in 1817. In 1773 he went to England; was elected a fellow of the Royal Society of London, and appointed reader to the queen, a situation he held for forty-four years. He made numerous geological excursions in Central Europe and in England, of which he has published accounts. He aimed at defending the Mosaic account of the creation against the criticism whose weapons were furnished by his favorite science. He made many valuable original experiments in meteorology. Among his numerous writings are his *Recherches sur les Modifications de l'Atmosphère* (Geneva, 1772); *Nouvelles Idées sur la Météorologie* (London, 1786); and his *Traité élémentaire de Géologie* (Paris, 1810).

Deluge (del'ūj), the universal inundation which, according to the Mosaic history, took place to punish the great iniquity of mankind. It was pro-

duced, according to Genesis, by a rain of forty days; and covered the earth 15 cubits above the tops of the highest mountains, and killed every living creature except Noah, with his family, and the animals which entered the ark by the command of God. Many other nations mention, in the mythological or prehistoric part of their history, inundations which, in their essential particulars, agree with the Scriptural account of Noah's preservation, each nation localizing the chief events and actors as connected with itself.

Delundung (de-lun'dung; *Prionodon gracilis*), an interesting quadruped inhabiting Java and Malacca, allied to the civets, and probably forming a connecting link between them and the Felidæ, being destitute of scent-pouches. It is of slender form, with a long tail, and is beautifully spotted.

Delvino (del'vi-no), a town of Albania, Turkey, about 44 miles northwest of Janina; it is the seat of a Greek bishop, and has some trade in olive oil. Pop. about 6500.

Demagogue (dem'a-gog), originally simply one who leads or directs the people in political matters; now it usually means one who acquires influence with the populace by pandering to their prejudices or playing on their ignorance.

Demand and Supply, terms used in political economy to express the relations between consumption and production, between the demand of purchasers and the supply of commodities by those who have them to sell. The relations which subsist between the demand for an article and its supply determine its price or exchangeable value. When the demand for a commodity exceeds the supply the price of the commodity is raised, and when the supply exceeds the demand the price falls.

Demavend (de-mü'vend), a volcanic mountain of Persia, and the highest peak of the Elbruz chain, 45 miles south of the Caspian Sea and about 40 miles N. E. of Teheran. Its height is about 19,400 feet, and it bears evidence of having been active during the latest geological (if not within the historical) period.

Dembea (dem'be-a), or TSANA, a lake of Abyssinia, in a province of the same name in the west part of that country. It is of irregular form, about 140 miles in circumference, has an elevation of 6100 feet above the sea, and forms the reservoir of the Blue Nile.

Dembinski (dem-bin'skē), HENRYK, a Polish general, and leader

in the Hungarian revolution of 1849; born in 1791; died in 1864. He served under Napoleon during the Russian campaign of 1812; was governor of Warsaw and commander-in-chief of the Polish army during the revolution of 1830; was appointed by Kossuth commander of the Hungarian troops in 1849, and served till Kossuth's resignation compelled him to seek refuge in France, where he remained till his death.

Dementia (de-men'shi-a), a form of insanity in which unconnected and imperfectly defined ideas chase each other rapidly through the mind, the powers of continued attention and reflection being lost. It often implies such general feebleness of the mental faculties as may occur in old age.

Demerara (dem-er-ä'ra), or DEMARARA, a division of British Guiana, which derives its name from the river Demarara or Demerara. It extends about 100 miles along the coast, lying on the east of Essequibo and on the west of Berbice. The soil is very fertile, producing abundant crops of sugar, coffee, cotton, rice, etc. Chief town, Georgetown. Pop. of province, 171,000.—The river, after a course of about 120 miles, flows into the Atlantic.

Demesne (de-män'), or DOMAIN, in law, a manor-house and the land adjacent or near, which a lord keeps in his own hands or immediate occupation, for the use of his family, as distinguished from his tenemental lands, distributed among his tenants.

Demeter (de-mē'tēr), one of the twelve principal Grecian deities, the great mother-goddess, the nourishing and fertilizing principle of nature. She was the daughter of Cronus and Rhea, and mother of Persephōnē (Proserpine). The main feature in the myth of Demeter, and that which forms the fundamental idea of her worship, is the loss and recovery of her daughter, Persephōnē. By the Romans she was called *Ceres*. See *Ceres*.

Demetrius (de-met'ri-us), or DMITRI, the name of a series of impostors who usurped supreme authority in Russia, and led to some of its remarkable revolutions. Ivan Vasilievitch, who had put his eldest son to death with his own hand, left the throne in 1584 to another son, Feodor, a feeble prince, whom Boris Godunoff entirely supplanted in his authority. Ivan had left another son, Dmitri, by a second marriage; and Boris, fearing that he might one day prove a formidable obstacle to his ambitious projects, caused him to disappear, but no one

exactly knew how. Grishka, or Gregory Otrepieff, a native of Jaroslav and a novice in a monastery, personated Dmitri, went to Lithuania, where he embraced the Roman Catholic religion and married the daughter of Mniszek, palatine or waiwod of Sandomir. In 1604 he entered Russia at the head of a body of Poles, was joined by a number of Russians and Cossacks, and defeated an army sent against him. On the death of Boris he was placed on the throne, but he offended the Russians by his attachment to Polish manners and customs, and still more by a want of respect to the Greek religion and its patriarch, and he was assassinated after reigning about eleven months. A rumor of his being still alive having spread, another impostor quickly appeared to personify him, and the Poles espousing the cause of the second false Dmitri, made it triumphant, until he was assassinated in 1610 by the Tatars whom he had selected as his bodyguards. A state of anarchy ensued and continued for nearly half a century, during which a number of other false Dmitris appeared in different quarters.

Demetrius, surnamed *Poliorcetes* (the besieger of cities), king of ancient Macedonia, son of Antigonus, a successor of Alexander the Great, was born about B.C. 339. Being sent by his father to wrest Greece from Cassander, he appeared before Athens with a fleet, expelled the governor Demetrius Phalereus, and restored to the people their ancient form of government (307 B.C.). He conquered Macedonia (294 B.C.) and reigned seven years, but lost this country, was imprisoned by Seleucus, and died in Syria, 283 B.C.

Demetrius Phalereus (fa-lē' rös), a celebrated Greek orator and statesman, born 345 B.C.; in 317 was made Macedonian governor of Athens, and embellished the city by magnificent edifices. He fled to Egypt when Athens was taken by Demetrius Poliorcetes (see above), where he is said to have promoted the establishment of the Alexandrian Library and of the museum. Demetrius wrote on several subjects of philosophical and political science, but the work on rhetoric, which has come to us under his name, belongs to a later age.

De Mille, JAMES, a Canadian novelist, born at St. John's, New Brunswick, in 1837; died in 1880. He was professor of classical languages in Acadia College in 1860-65, and of history and rhetoric in Dalhousie College in 1865-80. His books were numerous, including *The Dodge Club*, *The American*

Baron, *A Comedy of Terrors*, *The Cryptogram*, etc.

Demi-lune (de'mi-lūn), in fortification, practically the same as a ravelin (which see).

Demi-monde (de'mi-mond), an expression first used by the younger Dumas in a drama of the same name (first performed in 1855), to denote that class of gay female adventurers who are only half-acknowledged in society; popularly disreputable female society; courtezans.

Demi-rilievo (-ri-li-ā'vō), in sculpture, half-relief, or the condition of a figure when it rises from the plane as if it had been cut in two and only one half fixed to the plane.

Demise (de-mīz; literally, 'a laying down'), in law, a grant by lease; it is applied to an estate either in fee-simple, fee-tail, or for a term of life or years. As applied to the crown of England, *demise* signifies its transmission to the next heir on being laid down by the sovereign at death.

Demisemiquaver (dem'i-sem'i-quā-ver), in music, half a semiquaver, or the thirty-second part of a semibreve.

Demiurge (dem'i-urj); Greek, *dēm-iourgos*, a handicraftsman), a designation applied by Plato and other philosophers to the Divine Being, considered as the Architect or Creator of the universe. The Gnostics made a distinction between the Demiurge and the Supreme Being; with them the first is the Jehovah of the Jews, who, though deserving to be honored as the Creator, was only the instrument of the Most High.

Demmin (dem-mēn'), an old town of Prussia, province of Pomerania, 70 miles W. N. W. from Stettin, with manufactures of woolen and linen cloth, hats, leather, hosiery and tobacco; and a good trade. Pop. 12,541.

Democracy (de-mok'ra-si), the rule of a people by the people themselves; that form of government in which the sovereignty of the state is vested in the people, and exercised by them either directly, as in the small republics of ancient Greece, or indirectly, by means of representative institutions, as in the constitutional states of modern times. The term is also applied in a collective sense to the people or populace, especially the populace regarded as rulers. See also next article.

Democrat (dem'ō-krat), one who adheres to democracy. In the United States, a member of one of the two great political parties into which that country is divided; opposed to *Re-*

publican. The main features of the Democratic principles are decentralization, self-government of the states, and tariff for revenue only. The Democratic party was in the ascendant during most of the time from the election to the Presidency of Jefferson, in 1800, to that of Lincoln, in 1860. Since the latter date the Republicans have nearly always been in control of the government, the only Democratic President being Cleveland, who served two terms, at disconnected intervals.

Democritus (de-mok'ri-tus), a Greek philosopher of the new Eleatic school, a native of Abdēra, who was born between 470 and 460 B.C. He traveled to Egypt, where he studied geometry, and probably visited other countries, to extend his knowledge of nature. Among the Greek philosophers he enjoyed the instruction of Leucippus. He afterwards returned to his native city, where he was placed at the head of public affairs. Indignant at the follies of the Aberites, he resigned his office and retired to solitude, to devote himself exclusively to philosophical studies. According to later biographers he was called 'the laughing philosopher,' from his habit of laughing at the follies of mankind. In his system he developed still further the mechanical or atomical theory of his master Leucippus. Thus he explained the origin of the world by the eternal motion of an infinite number of invisible and indivisible bodies or atoms, which differ from one another in form, position, and arrangement, and which have a primary motion, which brings them into contact, and forms innumerable combinations, the result of which is seen in the productions and phenomena of nature. In this way the universe was formed fortuitously, without the interposition of a First Cause. The eternal existence of atoms (of matter in general) he inferred from the consideration that time could be conceived only as eternal and without beginning. He applied his atomical theory, also, to natural philosophy and astronomy. Even the gods he considered to have arisen from atoms, and to be perishable like the rest of things existing. In his ethical philosophy Democritus considered the acquisition of peace of mind as the highest aim of existence. He is said to have written a great deal; but nothing has come to us except a few fragments. He died 370 B.C., at an advanced age. His school was supplanted by that of Epicurus.

Demogorgon (d ē-m o-g o r'g o n), a mysterious divinity in

pagan mythology viewed as an object of terror rather than of worship, by some regarded as the author of creation, and by others as a famous magician, to whose spell all the inhabitants of Hades were subjected.

Demoiselle (dem-wā-zel'), the Numidian crane (*Anthropoides virgo*), an African bird which visits the south of Europe. It is about 3 feet in length, and differs from the true cranes in having the head and neck quite feathered and the tertials of the wings elongated and hanging over the tail. It has its name from its gracefulness and symmetry of form.

Demoivre (dē-mwä-vr'), ABRAHAM, a French mathematician, born in 1667; died at London in 1754. He settled in London after the revocation of the edict of Nantes, and gained a livelihood by becoming a teacher of mathematics. His chief works are: *Miscellanea Analytica*; *The Doctrine of Chances, or a Method of Calculating the Probabilities of Events at Play*; and a work on annuities; besides Papers in the *Transactions* of the Royal Society, of which he was a fellow.

Demon (dē-mun; Greek, *daimōn*), a spirit or immaterial being of supernatural but limited powers, especially an evil or malignant spirit. Among the ancient Greeks the name was given to beings similar to those spiritual existences called angels in the Bible. In the New Testament evil spirits are called demons (commonly translated 'devils'). A belief in demons is found in the oldest religions of the East. Buddhism reckons six classes of beings in the universe; two, gods and men, are accounted good; the other four are malignant spirits. The Persians and the Egyptians had also a complete system of demons; and in Europe, up till the middle ages, the divinities of oriental, classical, and Scandinavian mythology often figure, from the Christian point of view, as evil spirits. In later times phases of demonology may be seen in the witchcraft mania and the spiritualism of the present day.

Demoniac (de-mō'ni-ak), a person whose mental faculties are overpowered, and whose body is possessed and actuated by some created spiritual being; especially a person possessed of or controlled by evil spirits. The New Testament has many narratives of demoniacs, and various opinions are entertained in regard to the characters of their affliction.

Demonology (d ē-m o n-ol'o-ji), the doctrine or science

which treats of the nature or character of demons or evil spirits.

Demonstration (dem-un-strā'shun), in a logical sense, any mode of connecting a conclusion with its premises, or an effect with its cause. In a more rigorous sense it is applied only to those modes of proof in which the conclusion necessarily follows from the premises. In ordinary language, however, demonstration is often used as synonymous with *proof*.

Demonte (dā-mōn'tā), a town of North Italy, on the Stura, 14 miles s. w. from Cuneo. Pop. of commune, 5155.

De Morgan (de mor'gan), AUGUSTUS, mathematician and logician, was born at Madura, in Southern India, in 1806; died in 1871. He was educated at Cambridge, gaining the fourth place in the mathematical tripos in 1827. The following year he was appointed professor of mathematics in the University College, or, as it was then called, London University—a situation which he held until 1866, with the exception of the five years from 1831 to 1836. His writings are very numerous, and include *Elements of Arithmetic*, *Elements of Algebra*, *Elements of Trigonometry*, *Essay on Probabilities and on their Application to Life Contingencies and Insurance Offices*, *Formal Logic*. Professor De Morgan was an extensive contributor to the *Penny Cyclopædia* and to several leading periodicals of the time.

Demos (dē'mos; Greek), the people as a whole, or the body of people of the lower class as distinguished from those of rank, wealth, or position.

Demosthenes (dē-mo's'the-nēz), a famous ancient Greek orator, the son of a sword-cutler at Athens, where he was born in 382 (according to some in 385) B.C. His father left him a considerable fortune, of which his guardians attempted to defraud him. Demosthenes, at the age of seventeen years, conducted a suit against them himself, and gained his cause. He then set himself to study eloquence, and though his lungs were weak, his articulation defective, and his gestures awkward, by perseverance he at length surpassed all other orators in power and grace. He thundered against Philip of Macedon in his orations known as the *Philippics*, and endeavored to instill into his fellow-citizens the hatred which animated his own bosom. He labored to get all the Greeks to combine against the encroachments of Philip, but Macedonian gold and their want of patriotism frustrated his efforts.

He was present at the battle of Chæroneia (380 B.C.), in which the Athenians and Bœotians were defeated by Philip, and Greek liberty was crushed. On the accession of Alexander, in 336, Demosthenes tried to stir up a general rising against the Macedonians, but Alexander at once adopted measures of extreme severity, and Athens sued for mercy. It was with difficulty that Demosthenes escaped being delivered up to the conqueror. In 324 he was imprisoned on a false charge of having received a bribe from one of Alexander's generals, but managed to escape into exile. On the death of Alexander the next year he was recalled, but the defeat of the Greeks by Antipater caused him to seek refuge in the temple of Poseidon, in the island of Calauria, on the coast of Greece, where he poisoned himself to escape from the emissaries of Antipater (322 B.C.). The character of Demosthenes is by most modern scholars considered almost spotless. His fame as an orator is equal to that of Homer as a poet. Cicero pronounces him the most perfect of all orators. He carried Greek prose to a degree of perfection which it never before had reached. Everything in his speeches is natural, vigorous, concise, symmetrical. We have under his name sixty-one orations, some of which are not genuine. The great opponent—and indeed enemy—of Demosthenes as an orator was Æschines, and a controversy with the latter called out one of the noblest efforts of the great orator.

Demotic Alphabet (dē-mot'ik; or ENCHORIAL), a simplification of the hieratic, which again was a contraction of the hieroglyphic characters. See *Hieroglyphic Writing*.

Demotica, or DIMOTIKA (dē-mot'i-ka), a town of Roumelia, on the right bank of the Maritza, 20 miles south from Adrianople; the see of a Greek archbishop; pop. about 10,000.

Dempster (dem'ster), THOMAS, a Scotch writer, was born at Muiresk in 1529; died at Bologna in 1625. He studied in various institutions, became noted for learning, and is said to have been regent of the College of Navarre, Paris, at the age of seventeen. He held professorships of law and belles-lettres at Toulouse, Nîmes, Pisa and Bologna, and became noted for his quarrelsome temper, which often involved him in scenes of armed violence. The best known among his many works is *Historia Gentis Scotorum*, a biographical dictionary of the authors and saints of Scotland, many of them fictitious. A more valuable work is *De Etruria Regali*.

Demulcents (dē-mul'sents), medicines which tend to soothe or protect the mucous membranes against irritants. They are generally composed of starch, gum, albuminous or oily substances largely diluted.

Demurrage (de-mur'aj) in maritime law, the time during which a vessel is detained by the freighter, beyond that originally stipulated, in loading or unloading. When a vessel is thus detained she is said to be *on demurrage*. The name is also given to the compensation which the freighter has to pay for such delay or detention. Demurrage must be paid though it be proved the delay is inevitable; but it cannot be claimed where it arises from detention by an enemy, tempestuous weather, or through the fault of the owner, captain, or crew. The term is applied also to detention of railway wagons, etc.

Demurrer (de-mur'er), in law, a stop at some point in the pleadings, and a resting of the decision of the cause on that point; an issue on matter of law. A demurrer confesses the fact or facts to be true, but denies the sufficiency of the facts in point of law to support the claim or defense.

Demy (de-mī'), a size of paper intervening between royal and crown. Printing demy measures generally 22 inches by 17½, writing 20 inches by 15½, drawing 22 inches by 17.

Denain (dē-nan), a town of Northern France, dep. Nord, 6 miles from Valenciennes. It stands in the center of a coal-field, and has ironworks, etc. A great victory was gained here in 1712 by the French under Villars over the allies under Eugene and Albemarle. Pop. 22,845.

Denarius (de-nā'ri-us), a Roman silver coin worth 10 asses or 10 lbs. of copper originally, and afterwards considered equal to 16 asses, when the weight of the ass was reduced to an

Denarius of Tiberius Cæsar.

ounce on account of the scarcity of silver. The *denarius* was equivalent to about 7¾d. English money. There was also a gold denarius equal in value to 25 silver ones.

Denatured Alcohol. Under a law passed by the

United States Congress in 1907, on alcohol intended for use as fuel or for illuminating purposes, or other mechanical employment, the internal tax need not be paid. But to avoid taxation it must be rendered unfit for drinking by the addition of such unpalatable substances as wood alcohol, pyridin, benzola, sulphuric ether, or animal oil. Thus treated it is spoken of as denatured.

Denbigh (den'bi), a county of North Wales, on the Irish Sea; area, 664 square miles, of which about a fourth is arable. Along the N. the ground is level, in the E. hilly, while the mountains in the S. and W. rise from 1000 to 2500 feet. There are several beautiful and fertile vales, among the more celebrated of which are the vales of Llangollen, Clwyd and Conway. Barley, oats and potatoes are grown on the uplands; and in the rich valleys wheat, beans, and peas. Cattle and sheep are reared, and dairy husbandry is carried on to a considerable extent. The minerals consist of lead, iron, coal, freestone, slate and millstone. Flannels, coarse cloths and stockings are manufactured. The principal rivers are the Clwyd, the Dee and the Conway. Pop. 144,796.—The county town Denbigh is near the center of the Vale of Clwyd, 25 miles W. of Chester, picturesquely situated on a rocky eminence, the summit of which is crowned by the ruins of an ancient castle. Tanning and shoemaking are carried on. Pop. 6892.

Denderah (den'dér-a; the *Tentyra* of the Greeks and Romans), an Arab village of Upper Egypt, on the left bank of the Nile, 28 miles N. of Thebes, celebrated for its temple dedicated to Athor, the Egyptian Venus, the best preserved of any of the great temples of antiquity in Egypt.

Dendermonde (den-dér-mōn'de), or TERMONDE, a town of Belgium, province of East Flanders, at the confluence of the Dender with the Scheldt, 12 miles N. W. from Brussels. It is strongly fortified, defended by a citadel, and surrounded, by low, marshy ground which can be laid under water. Manufactures, woolens, linens, tobacco, etc. The town was taken by Marlborough in 1706. Pop. 9719.

Dendrite (den'drīt), a stone or mineral, on or in which are figures resembling shrubs, trees, or mosses. The appearance is due to arborescent crystallization, resembling the frostwork on our windows. The figures generally appear on the surfaces of fissures and in joints in rocks, and are attributable to the presence of the hydrous oxide of man-

ganese, which generally assumes such a form.—Thread-like prolongations of nerve cells bear the same name.

Dendrobium (den-drō'bi-um), an extensive genus of epiphytes dispersed over the damp tropical forests of Asia, order Orchidaceæ. They vary much in habit; many are cultivated in hothouses on account of the beauty of their flowers.

Dendrophis (den'drō-fis), a genus of harmless serpents, family Colubridæ, found in India and Africa, living on trees and feeding on reptiles.

Dengue (deng'gā), a febrile epidemic disease of the West Indies and Southern United States, the symptoms of which are such as would accompany a mixture of scarlet fever and rheumatism.

Denham (den'am), DIXON, lieutenant-colonel and African traveler, was born at London in 1786; died at Sierra Leone, in 1828. In 1823-24 he was engaged, in company with Captain Clapperton and Dr. Oudney, in exploring the central regions of Africa. Denham himself explored the region around Lake Tchad, was wounded and separated from his company, but found his way home after great suffering, when he published his *Narrative of Travels*. In 1826 he went to Sierra Leone as superintendent of the liberated Africans, and in 1828 was appointed lieutenant-governor of the colony.

Denham, SIR JOHN, a poet, born at Dublin in 1615; died in 1689, and was buried in Westminster Abbey. In 1641 he first became known by his tragedy of *The Sophy*, and in 1642 he published his first edition of his most celebrated poem, called *Cooper's Hill*. He was subsequently entrusted with several confidential missions by the royalist party, and, being detected, fled to France. At the restoration, in 1660, he obtained the office of surveyor of the king's buildings, and was created a knight of the Bath, and a fellow of the newly formed Royal Society.

Denina (dā-nē'nā), CARLO GIOVANNI MARIA, an Italian historian, born in 1731 at Revello, in Piedmont. He became professor at Pinerolo, and afterwards at Turin, where he published the first three volumes of his *History of Italian Revolutions* (1769), containing a general history of Italy. In 1777 he went to Rome, and four years later to Berlin, where he was welcomed by Frederick the Great, an account of whose life and reign he afterwards wrote. Most of his works—*History of Piedmont*, *Political*

and Literary History of Greece, etc.—were written at Berlin. In 1804 he was introduced to Napoleon, who appointed him imperial librarian at Paris. He died in 1813.

Denis, ST. (san deh-nē), a town in France, department of the Seine, 6 miles north of Paris, lying within the lines of forts surrounding the capital. It contains the famous abbey church of St. Denis, a noble Gothic structure, in part dating from the eleventh century or earlier, but much was done in the way of restoration in the nineteenth century. St. Denis was the burial place of the kings of France; and all her rulers from Hugh Capet downwards, besides some of the earlier dynasties, lay there till 1793, when the revolutionary fury of the convention caused the tombs to be rifled and the church to be denuded. At the restoration Louis XVIII again sought out the relics of his ancestors, so far as they could be found, and had them buried here, and there is now again a long series of restored royal tombs, with numerous other monuments, much stained glass, and modern decoration. The church is about 354 feet long and 92 high. Pop. 60,808.

Denis, ST., (deh-nē; Latin, *Dionysius*), the apostle of the Gauls. He set out from Rome on his sacred mission towards the middle of the third century, became the first Bishop of Paris, and was put to death by the Roman Governor Pescennius. Catulla, a heathen lady converted by the sight of the saint's piety and sufferings, had his body buried in her garden, where the Abbey of St. Denis now stands.

Denison (den'i-sun), a city of Grayson Co., Texas, 73 miles N. of Dallas. It has cotton, cottonseed oil and lumber mills, machine-shops, etc. Pop. 13,632.

Denison, AARON L., watchmaker, was born at Freeport, Maine, in 1812. He learned the watchmaking business and in 1835 conceived the idea of making all the parts of watches by machinery. He invented the standard gauge known by his name, organized the Warren Watch Company, and placed the first machine-made watch on the market in 1853. The factory was removed to Waltham in 1854 and has had an immense development. He died in 1895.

Denison, GEORGE TAYLOR, military Canada, author, was born at Toronto, in 1839. He entered the Canadian militia and became commander of the governor-general's bodyguard. His *History of Cavalry* won a prize of 5000 rubles, offered by the Czar of Russia.

Other works were *Manual of Outpost Duties*, *Modern Cavalry*, etc.

Denizen (den'i-zn), in English law, an alien who is made a subject by the sovereign's letters patent, holding a middle state between an alien and a natural-born subject. A denizen cannot sit in either house of parliament or hold any civil or military office of trust.

Denmark (den'mark), a northern kingdom of Europe, consisting of a peninsular portion called Jutland, and an extensive archipelago lying east of it and comprising the islands of Seeland (or Sjælland), Fünen (or Fyen), Laaland (or Lolland), Falster, Langeland, Möen, Samsø, Lasø, Arrø, Bornholm, and many smaller ones. Besides these there are the outlying possessions of Iceland, Greenland and the Faroe islands in the Atlantic Ocean, and Santa Cruz, St. Thomas and St. John in the West Indies. The area of the home possessions is 14,789 square miles (barely half that of Scotland), of which Jutland occupies 9755; the pop. in 1880 was 1,980,259; in 1900, 2,449,540. Including Iceland, part of Greenland, etc., the total area of the Danish possessions is 101,403 square miles; pop. 2,585,662. Copenhagen is the capital; other chief towns are Odense, Aarhus, Aalborg, Randers and Horsens. For administrative purposes Denmark is divided into eighteen provinces or districts, besides the capital, nine of these making up Jutland, while the others embrace the islands.

On the south, Denmark is bounded by Germany and the Baltic; on the west it is washed by the North Sea; northwards it is separated from Norway by the Skager Rack; eastward it is separated from Sweden by the Kattegat and the Sound. Denmark, whether insular or mainland, is a very low-lying country, the eastern side of Jutland, where the highest elevation occurs, not exceeding 550 feet. All the rocks belong to the upper series of the secondary and to the tertiary formation. The rock most fully developed is the chalk, above which is an extensive boulder formation containing seams of lignite. Above this are thick beds of clay and marl. Where this prevails, as in Seeland and the east of Jutland, the soil is generally fertile; but where it is overlaid with deep beds of sand, as in the north and west of Jutland, the aspect is extremely desolate. Nearly the whole west coast, indeed, is rendered almost uninhabitable by the drift-sand which has formed an almost uninterrupted line of sterile downs called *Klitten*, extending

from Cape Skagen (or The Skaw) to Blaavands Hook. A large portion of Jutland consists of healthy or moory land, comparatively unprofitable. Elsewhere it exhibits a fertile, undulating surface. The islands, especially Seeland and Fünen, are fertile and present many landscape beauties. The country was once covered with great forests, but these have disappeared, and Denmark is largely dependent on other countries for her supplies of timber. Woods of some extent still exist, however, especially in the islands. In the earliest prehistoric times (the stone age) the Scotch fir was the prevailing tree, and subsequently the oak. The principal tree now is the beech, the oak forming but a small portion of the timber of Denmark. The elm, ash, willow, aspen and birch are met with in small numbers or singly. Pine forests have been planted in the north of Jutland and elsewhere. Denmark has numerous streams but no large rivers; the principal is the Guden, which flows northeast through Jutland into the Cattegat. It is navigable for part of its course. Less important streams are the Holm, the Lonborg and the Stor Aa. All the others are insignificant brooks and streamlets. The lakes are very numerous but not large, the largest not exceeding $5\frac{1}{2}$ miles in length by about $1\frac{1}{2}$ miles broad. There are numerous winding inlets of the sea that penetrate far into the land. The largest of these, the Liimfiord in Jutland, entering from the Cattegat by a narrow channel, winds its way through to the North Sea, thus making northern Jutland really an island. In this fiord, which widens out greatly in the interior and gives off various minor fiords, there are one large and various small islands. Intercourse between the various islands and parts of the kingdom, separated from each other by water, is well kept up by ferries, etc. and the country is well supplied with railways both in Jutland and the islands. Copenhagen, Aalborg, Aarhus and Randers are the chief seaports. Owing to the lowness of the land and its proximity to the sea on all sides, the climate is remarkably temperate for so northerly a region, though the thermometer in winter may sink to 22° below zero, and in summer rise to 89° . Violent winds are frequent, and rains and fogs prevalent, but the climate is favorable to vegetation.

The agricultural land is greatly subdivided, as the law interdicts the union of small farms into larger. Among crops the greatest area is occupied by oats, which are grown all over the country, but

best in Jutland. Barley is grown chiefly in Seeland, and is largely used in brewing beer, the common beverage of the country. Rye is extensively raised, and the greater part of the bread used in Denmark is made from it. Turnips, beans, peas, flax, hemp, hops, tobacco, etc., are also grown; but in general cattle-breeding, grazing and the dairy take up most of the farmer's attention in Denmark. The old Danish breed of horses, found chiefly in Jutland, has long been famous for strength, symmetry, docility and bottom. The fisheries are still important, but not so much so as formerly. The herring, turbot, torsk and salmon are the most abundant. The manufactures, although progressing, are not yet of great importance. Paper, gloves, the woolens and earthenware of Jutland, the wooden clocks of Bornholm, are the chief. There are also iron-foundries, sugar-refineries, some extensive tanneries, and many distilleries. The people of Denmark bake their own bread, brew their own beer, and make the greater part of their house furniture and utensils with their own hands.

The commerce of Denmark is carried on chiefly with Great Britain, Germany, Norway, Sweden and Russia, Germany possessing the largest share, and Great Britain a little less than Germany. The value of imports has in recent years been over \$300,000,000. The chief imports are textile manufactures, metal goods, coal, timber, oil, coffee, sugar, tobacco, fruit, etc. The chief exports are cattle, horses and swine, butter (a most important item), bacon, hides, flour, eggs, and other edibles. Much of the butter and other agricultural produce goes to Britain. The mercantile marine has a total tonnage of about 550,000. The railways have a length of about 3000 miles. Since 1875 the unit of the Danish monetary system has been the *krone*, or crown, value 26.8 cents. The krone is divided into 100 *öre*. The Danish *pound* weight is equal to 1.102 avoirdupois. The *barrel* or *toende*, the principal measure in Denmark, is equal to 3.8 imperial bushels; the *viertel*, used for wine and liquor, to 1.7 English gallons. The *foot* equals 12.356 English inches; the *mile* is 4.684 English miles.

The population of Denmark is composed almost exclusively of Danes, with a few thousand Jews and others. The Danes have regular features, fair or brownish hair, and blue eyes. They still maintain their reputation for seafaring skill and hospitable customs. They are almost exclusively Lutherans in religion, but unlimited toleration is extended to all faiths. Jews, however, though themselves

electors, cannot be elected as representatives. At the head of the educational institutions stand the University of Copenhagen and the Holberg Academy at Sorøe. The provinces are well supplied with gymnasia and middle schools, and primary instruction is given at the public expense in the parochial schools. It is rare to meet a peasant who cannot read and write, even among the poorer class.

The government of Denmark was originally an elective monarchy. In 1661 it became a hereditary and absolute monarchy, and in 1849 a hereditary constitutional one, the legislative power being vested in the king and diet jointly. The diet or *Rigsdag* consists of two chambers, the *Landsting* or upper house, the *Folkething* or lower house. The former is a senate of 66 members, twelve of whom are nominated for life by the crown, the others being elected for eight years. The members of the Folkething are 102 in number, directly elected by universal suffrage, and hold their seats for three years. The Rigsdag meets every October, and all money bills must be submitted to the lower house. The army consists of all the able-bodied young men of the kingdom who have arrived at the age of twenty-one years. The time of service is eight years in the regular troops, and afterwards eight more in the reserve. Every corps has to drill for thirty to forty-five days every year. The army on a war footing has a total strength of about 70,000 men. The navy is unimportant in number and strength. The revenue in 1910 amounted to about \$38,000,000. The national debt is about \$75,000,000.

History.—The oldest inhabitants of Denmark whom we find mentioned by name were the Cimbri, who dwelt in the peninsula of Jutland, the *Chersonesus Cimbrica* of the Romans. They first struck terror into the Romans by their incursion, with the Teutones, into the rich provinces of Gaul (113-101 B.C.). After this, the Goths broke into Scandinavia, and appointed chiefs from their own nation over Denmark, Norway and Sweden. For a considerable time Denmark was divided into a number of small states, whose inhabitants lived mostly by piracy along the neighboring coasts. In 787 they began to make their descents on the eastern coasts of England, and along with other inhabitants of Scandinavia they conquered Normandy in 876-7. Under Gorm the Old all the small Danish states were united in 920, and his grandson Sweyn, now the head of a powerful kingdom, commenced the conquest of Norway and of England, which was ultimately completed by his son Canute.

Canute died in 1035, leaving a powerful kingdom to his successors, who, in 1042, lost England, and in 1047 Norway. In 1047 Sweyn Magnus Estridsen ascended the throne, but with the exception of the great Waldemar the new dynasty furnished no worthy ruler, and the power of the kingdom decayed considerably till the accession of the politic Queen Margaret in 1387, who established the union of Calmar in 1397, uniting under her rule Denmark, Sweden and Norway. In 1448 Christian I, count of Oldenburg, was elected to the throne, thus founding the royal family of Oldenburg, which kept possession of the throne till 1863. Under the rule of Christian, Norway, Sweden, Schleswig and Holstein were connected with the crown of Denmark, but under his successor, Christian II, Sweden established its independence. Under Frederick I (1523-33) the Reformation was introduced. Christian IV of Denmark ascended the throne in 1588, took part in the Thirty Years' war, and engaged twice in a war with Sweden, with most unfortunate results. Frederick III again engaging in war with Sweden in 1657 was equally unsuccessful. Christian V and Frederick IV were conquered in the war with Charles XII. Denmark, however, after the fall of Charles XII, gained by the Peace of 1720 the toll on the Sound, and maintained possession of Schleswig. After this Denmark enjoyed a long repose. In 1800, having acceded to the northern confederacy, the kingdom was involved in a war with Great Britain, in which the Danish fleet was defeated at Copenhagen, April 2, 1801. In 1807, there being reason to think that Denmark would join the alliance with France, a British fleet was sent up the Sound to demand a defensive alliance or the surrender of the Danish fleet as a pledge of neutrality. Both were denied, and the Danish capital was bombarded and forced to capitulate, the whole fleet being delivered up to the British. The war, however, was continued, Denmark forming new alliances with Napoleon until 1814, when a peace was concluded by which she ceded Heligoland to England in exchange for the Danish West India Islands, and Norway to Sweden in exchange for Swedish Pomerania and Rügen, which, however, she shortly after surrendered to Prussia, receiving in return Lauenburg and a pecuniary compensation. In June, 1815, the king entered into the German confederacy as representing Holstein and Lauenburg. In 1848 Schleswig and Holstein revolted and were not finally subdued till 1852. In 1857 the Sound dues were abolished. Frederick VII died in 1863 and with him the Oldenburg line became extinct. He was succeeded by Christian IX (Prince of Sonderburg-Glücksburg). At the commencement of 1864 the Danish territory was politically distributed into four parts, viz., Denmark Proper (consisting of the Danish islands and North Jutland), the duchy of Schleswig or South Jutland, with a population more than one-half Danish, the remainder Frisian and German; the duchy of Holstein, purely German; the duchy of Lauenburg, also German. The measures of the Danish government compelling the use of the Danish language in state schools having given great umbrage to the German population of the duchies, the disputes resulted in the intervention of the German confederation, and ultimately Holstein was occupied by the troops of Austria and Prussia (1864). After a short campaign the Prussians captured Alsen, overran the greater part of Jutland, and forced the Danes to accept a peace (August 1), by which they renounced their right to the duchies of Schleswig, Holstein and Lauenburg. A difference now arose between Austria and Prussia as to what should be done with the duchies, and Prussia showing an evident intention of annexing them, the result was a war between the two powers, which ended in the total defeat of Austria at Sadowa, or Königgrätz, July 3, 1866. By the treaty which followed Prussia obtained the duchies. The chief events since then have been prolonged struggle between the government and the Folkething; the influence of a new political party (1893) desiring parliamentary concord in the agrarian interest; the rejection of the proposal to sell the Danish West Indies to the United States; the death of Christian IX and accession of Frederick VIII (1906); the death of Frederick VIII and accession of Christian X (1912).

Language and Literature.—The Danish language belongs to the Scandinavian branch of the Teutonic family of languages, and is a sister of the Swedish and Norwegian. It is written either in the German or the Roman characters. From the long union of Norway with Denmark, Danish became the written language of the Norwegians, and is still the language of the educated classes. The oldest literary monuments of the Danish language consist of the laws of the early kings in the twelfth century. Next to these come the heroic ballads (*Kjæmpeviser*), some of which date from the thirteenth, others from the fourteenth, fifteenth and sixteenth centuries. They were collected while they still lived in the

mouths of the people, by A. S. Vedel. Other ancient literary monuments probably belonging to the thirteenth century, are the Danish *Rhyming Chronicle* and a Danish translation of the Old Testament. During the Reformation period Christian Pedersen (1480-1554) did for the Danish language much what Luther did for the German, by publishing, besides other works, a translation of the New Testament and the Psalter and later the complete Bible. The sixteenth and seventeenth centuries were distinguished by the publication of a number of works on the national history, among the writers of which we may mention Hans Svaning the elder, Arild Hvitfeld, Nils Krag, Vitus Bering, Ramus, etc. Modern Danish poetry commences in the period succeeding the Reformation with hymns, Scriptural dramas, edifying narratives, etc. Justesen Raach and Erik Pontoppidan the elder are among the chief names in this department. Anders Bording (died in 1677) and Thomas Kingo (died in 1723) made names as lyric poets, the sacred poems of the latter being a noble contribution to Danish literature. A new epoch began with Louis Holberg (1684-1754), who was the founder of the Danish stage, and his name and that of the lyric and dramatic poet Ewald mark the brightest period of the national literature. Among the comic dramatists Peder Andreas Heiberg, and among song writers the celebrated Jens Baggesen hold the first place. Fresh life was inspired into Danish poetry by Adam Oehlenschläger (1779-1850), contemporary with whom was Adolf Wilhelm Schack Staffeldt (1770-1826), a lyric poet of the first rank. In 1811 Bernhard Severin Ingemann made his appearance, first as a lyric poet, but afterwards turned his attention to the drama, and later to the historic romance. Among dramatic writers the names of Johan Ludwig Heiberg, Overskou, Hostrup, Erik Bøgh and the more recent Molbech and Edvard Brandes, are well known. Among poets we may mention Heiberg, Andersen, Blicher, Hølst, Paludan-Müller and Rosenhoff; the modern school being represented by Carl Ploug, Drachmann and Gjellerup. Among those who have displayed a talent for novel writing are Ch. Winther, Carl Bernhard, Meyer Aron Goldschmidt, Sten Stensen Blicher, who describes common life in Jutland with poetic truth. Among other distinguished modern writers we must mention Hendrik Hertz, a lyric poet and dramatist; Hans Christian Andersen, famous throughout Europe for his stories; and Waldemar Thisted, a lyrist and novel writer of considerable note. Among scholars

the names of Madvig, Westergaard, Rask and others take a high place.

Dennewitz (den'e-vits), a small Prussian village in the circle of Potsdam, province of Brandenburg, famous for the battle between the French and Prussians, September 6, 1813, in which the latter, aided towards the end by Russian and Swedish armies, were victorious.

Dennis (den'is), JOHN, an English dramatist and critic, born in London in 1657; died in 1734. Of independent means, he devoted himself to literature, wrote some dramatic pieces and poems, and at length settled down to criticism. His irritability and rancorous criticisms involved him in perpetual broils. Pope gave him a place in his *Dunciad*, and Swift satirized him with merciless wit in his *Narrative of the Deplorable Frenzy of Mr. John Dennis*. Having fallen into poverty in his old age, a play was given for his benefit, to which his former antagonist, Pope, contributed a prologue.

Denon (dè-nōn), DOMINIQUE VIVANT, BARON DE, a distinguished French artist, born in 1747, of a noble family. Of amiable manners, and with a talent for the arts, he was appointed gentleman-in-ordinary to Louis XV. He was afterwards employed in the diplomatic service, and was long connected with the French embassy in Naples, where he greatly improved his talent for drawing and engraving. Returning to France he became acquainted with Bonaparte, accompanied him in his campaigns, was made inspector-general of museums, selected the works of art to be transferred from conquered countries to the Louvre, and superintended the erection of monuments in honor of the French successes. He died at Paris in 1825. He published *Travels in Upper and Lower Egypt*, finely illustrated.

Dénouement (dā-nō-mān), a French term naturalized in England, and signifying the winding up or catastrophe of a plot, the solution of any mystery, etc.

Density (den'si-tē), in physics, the quantity of matter contained in a body under a given bulk. If a body of equal bulk with another contains double the quantity of matter it is of double the density. Or if a body contain the same quantity of matter as another, but under a less bulk, its density is greater in proportion as its bulk is less than that of the other. Hence the density is directly proportional to the quantity of matter, and inversely proportional to the bulk or magnitude. The relative quan-

tities of matter in bodies are known by their gravity or weight, and when a body, mass, or quantity of matter is spoken of, its weight or gravity is always understood, that being the proper measure of the density or quantity of matter. The weights of different bodies, of equal bulks, indicate their relative densities. The density of solids, fluids and gases, as compared with that of water, is their *Specific Gravity* (which see). As for the density of the earth, see *Earth*.

Dental Formula (den'tal fôr'm ū-la), an arrangement of symbols and numbers used to signify the number and kinds of teeth of a mammiferous animal. The *dental formula* of man is:

I. $\frac{2-2}{2-2}$, C. $\frac{1-1}{1-1}$, P.M. $\frac{2-2}{2-2}$, M. $\frac{3-3}{3-3}$ = 32,

which is read thus: Two incisors on each side of both jaws, one canine tooth on each side of both jaws, two præmolars on each side of both jaws, and three true molars on each side of both jaws, in all 32 teeth.

Dentalium (den-tā'li-um), a genus of gasteropodous molluscs, the shell of which consists of a tubular arcuated cone open at both ends, and resembling the tusk of an elephant in miniature. There are many species, known by the common name of tooth-shells.

Dentaria (den-tā'ri-a), coral-root, a genus of plants, nat. order Cruciferae. There are about twenty species, natives of temperate countries. They are ornamental herbs, with creeping, singularly toothed root-stocks, from which they receive the names of coral-root and toothwort. The stem-leaves are opposite or in whorls of three, and the flowers are large and purple. *D. bulbifera*, the only British species, is a rare plant in the southeast of England. *D. diphylla*, or pepperwort, a North American species, has roots that are used as mustard.

Dentatus (den-tā'tus), MANIUS CURTIUS, an ancient Roman general of Sabine descent. In B.C. 290 he brought to a victorious termination the war with the Samnites, which had lasted for nearly fifty years. In B.C. 275 he defeated King Pyrrhus at Beneventum, for which he received a magnificent triumph. In B.C. 274 he was made consul for the third time and conducted to a successful issue the last war with the southern Italians. He died about B.C. 270.

Dentex (den'teks), a genus of acanthopterygious fishes of the family of the Sparidæ, or sea-brems.

They have conical teeth, and those immediately in front are long and hooked inward. The *Dentex vulgāris*, common in the Mediterranean, sometimes attains the length of 3 feet. Its general appearance is not unlike the perch. It is esteemed as an article for food.

Dentifrice (den'ti-fris), a preparation for cleansing the teeth, of which there are various kinds in the form of tooth-powders, tooth-washes, or tooth-pastes. Cuttle-fish bone, finely powdered chalk, and charcoal are common dentifrices. Rhatany, catechu, myrrh and mastic are also often employed.

Dentils (den'tils), in architecture, the little cubes resembling teeth, into which the square number in the bed-molding of an Ionic, Corinthian, or composite cornice is divided.

Dentine (den'tīn), aa, Dentils of the Corinthian Cornice. the ivory tissue lying below the enamel and constituting the body of a tooth. It consists of an organic basis disposed in the form of extremely minute tubes and cells, and of earthy particles.

Dentirostres (den'ti-ro-s-trez), a tribe of birds of the order Insectores or Perchers, including Shrikes, Butcher-birds, etc., characterized by having a notch and tooth-like process on each side of the margin of the upper mandible. They are rapacious and prey on weaker birds.

Dentistry (den'tis-tri), the art of cleaning and extracting teeth, or repairing them when diseased, and replacing them when necessary by artificial ones. There are two very distinct departments in dentistry, the one being *dental surgery*, the other what is known as *mechanical dentistry*. The first requires an extended medical knowledge on the part of the practitioner, as, for instance, a knowledge of diseases whose effects may reach the teeth, of the connection between the welfare of the teeth and the general system, etc., as well as ability to discern latent oral diseases, calculate the effects of operations, etc. The chief operations in this department are *sealing*, or removing the tartar which has accumulated on the base of the teeth; *regulating*, the restoring of overcrowded and displaced teeth to their proper position; *stopping*, the filling up of the hollow of a decayed tooth and thus preventing the progress of decay; *extracting*, a proc-

ess requiring considerable muscular power and delicacy of manipulation. The second department, *mechanical dentistry*, is concerned with the construction of artificial substitutes for lost teeth, and requires much mechanical science, it being a very delicate work to give artificial teeth a perfectly natural appearance in shape and color. The actual construction of the teeth, however, has passed largely into the hands of the manufacturers, and the dentist has only the selecting, fitting and fixing to do. In the United States the Baltimore College of Dental Surgery is the oldest devoted to this art, being chartered in 1839; the Ohio College of Dental Surgery followed in 1845; the Philadelphia College of Surgery in 1850; the Philadelphia Dental College in 1863; the New York College of Dentistry in 1865, and various others at later dates. The *American Journal and Library of Dental Science* was established in Baltimore in 1839. Every state has now its State Dental Society; besides national organizations, of which the American Dental Association is among the most important. The art of dentistry has had an important development in the United States, having greatly advanced within recent years.

Dentition (den-tish-un), the cutting of teeth. See *Teeth*.

D'Entrecasteaux (dān-tr-kas-tō), a name of several applications in geography. (1) A channel between the southeast cape of Tasmania and Bruny Island. It affords good shelter and anchorage to ships. (2) D'Entrecasteaux Isles, a group lying E. of British New Guinea. (3) D'Entrecasteaux Point, on the s. w. coast of Australia. The name is that of a distinguished French navigator of the eighteenth century.

Denudation (dē-nū-dā'shun), in geology, the act of washing away the surface of the earth by water, either in the form of constant currents or of occasional floods.

Denver (den'ver), an industrial and commercial city, capital of the State of Colorado, on the right bank of the South Platte River, 15 miles east of the Rocky Mountains. It is the junction of eight important railway systems, and has a large trade, being the chief supply center for the farming, grazing and mining regions of Colorado and New Mexico. In its vicinity are some of the largest smelting works of the country. It has also large manufacturing interests, including the car shops of two lines of railroad. It is the emporium of the gold

and silver mining districts of the State and the chief center of the coal trade. The city is well built, and contains among its institutions, the State capitol and the University of Colorado. It is situated at an elevation of 5370 feet, and the climate is peculiarly dry and salubrious. The town was founded in 1858. Pop. in 1880, 35,629; in 1890, 106,713; in 1900, 133,859; in 1910, 213,381.

Deobstruents (d ē-o b' s t r ö-ents), medicines which open the natural passages of the fluids of the body, as the pores and lacteal vessels, and thus cause removal of obstructions.

Deobund, or DEOBAND (dā-o-band'), a town of Hindustan, Sahārunpur district, N. W. Provinces, an ancient place with manufactures of fine cloth. Pop. 19,250.

Deodand (dē'o-dand; *Deo dandum*), a thing to be given or dedicated to God, an obsolete legal term for anything that had caused a person's death, all such chattels being forfeited by the old rule of the common law of England to the sovereign or lord of the manor. Its origin was attributed to the notion, that where a man was suddenly cut off in his sins expiation ought to be made for the benefit of his soul; and, accordingly, the chattel, which occasioned his death should be forfeited to the king, to be devoted by him to pious uses. Deodands were abolished in 1846.

Deodar (dē'o-dar), DEODAR CEDAR, or INDIAN CEDAR (*Cedrus Deodāra*), a large and valuable Indian tree similar to the cedar of Lebanon, and by some considered only a variety. It is native to the Himalayas and yields timber that is much used in Hindustan. It was introduced into Britain in 1831, and is now a common ornamental tree. See *Cedar*.

Deodorizers (d ē-ō' d e r - ī z-ers), chemical substances which have the power of destroying fetid effluvia, as chlorine, chloride of lime, etc.

Deogarh (dā-o-gar), the name of two towns in Hindustan: (1) In Bengal, 170 miles n. w. of Calcutta, with a group of temples to which numerous pilgrims resort. Pop. about 10,000. (2) In Oodeypore Rajputana. Pop. 6846.

Deogiri (dā'o-gi-ri). See *Daulatabad*.

D'Eon de Beaumont (dā-on də bō-mōn), CHARLES GENEVIÈVE LOUISE AUGUSTE ANDRÉ TIMOTHÉE, a notorious French character, chevalier, doctor of law, diplomatist, etc.,

born in 1728. In 1755 he was sent as envoy on a difficult mission to the Russian court, on which occasion he seems to have dressed himself as a woman. He afterwards distinguished himself in the Seven Years' war, then went to London as secretary of the French legation, and ultimately became minister plenipotentiary. Having quarreled with the French government, he lived fourteen years in London in a kind of banishment. During these years he had occasionally, probably for purposes of intrigue, dressed and passed as a female, and about this time his sex began to be doubted. In 1777 he returned to France, was ordered to dress as a woman, and continued to do so both there and after he returned to England (in 1785), where he died in great poverty in 1810, being then regarded by everyone as a female.

Deontology (dē-on-tol'ō-jī), or the science of duty; the term used by certain philosophic schools (Bentham, Spencer, etc.) to denote their doctrine of ethics.

Department (de-part'ment), a subdivision of executive government, under a subordinate officer. In the United States the government embraces the departments of state, justice, interior, war, navy, treasury, post-office, agriculture and commerce and labor, the heads of which form the Advisory Cabinet of the President. The government is conducted in three separate departments—the legislative, judicial and executive. The country is subdivided into military departments, each under an officer appointed by the President.

De Pauw University (dē pa), at Greencastle, Putnam County of Indiana, is one of the chief institutions of learning maintained by the Methodist Church in America, constituted in 1837. It is excellently endowed, mainly by the liberality of the Hon. W. C. de Pauw, has a staff of 46 professors and teachers, and over 1000 students.

Depew (de-pū'), CHAUNCY MITCHELL, orator and statesman, born at Peekskill, New York, in 1834. He studied law and became prominent as a railroad lawyer. He was made vice-president of the New York Central R. R. in 1882 and president in 1885, and also became president of the West Shore R. R. Actively engaging in politics, he was successively secretary of state for New York and minister to Japan, and received 100 votes for President in the Republican National Convention of 1888. In 1899 he was elected United States

Senator from New York. He gained a high reputation as an orator and for the rich vein of humor in his after-dinner speeches.

Dephal (dep'hal; *Artocarpus La-koocha*), an Indian tree of the same genus as the breadfruit and jack, and cultivated for its fruit. The juice is used for bird-lime.

Depilatories (de-pil'a-tur-iz), applications used to remove the hair from the body, especially the face and scalp, without injuring the texture of the skin. The celebrated *rusma* depilatory consists of quicklime and orpiment (tersulphuret of arsenic) boiled in water impregnated with a strong alkaline lye. This mixture is rubbed gently on the parts, which are afterwards washed in warm water.

Deponent (de-pō'nent), (1) in grammar, a verb passive in form but active or neuter in signification. (2) In law, a person who makes an affidavit, or one who gives his testimony in a court of justice; a witness upon oath.

Deposit (de-poz'it), in law, something given or entrusted to another as security for the performance of a contract, as a sum of money or a deed. In commerce, a deposit is generally either money received by banking or commercial companies with a view to employ it in their business, or documents, bonds, etc., lodged in security for loans. In the first case interest is usually paid to the depositor. The receipt given by the banker for money deposited with him is called a *deposit receipt*.

Deposit, in geology, a layer of matter formed by the settling down of mud, gravel, stones, detritus, organic remains, etc., which had been held in suspension in water.

Deposition (de-pō-zish'un), in law, the testimony given in court by a witness upon oath. It is also used to signify by way of answer to interrogatories. Depositions are frequently taken conditionally, or *de bene esse*, as it is called; for instance, when the parties are sick, aged, or going abroad, depositions are taken, to be read in court in case of their death or departure before the time for the trial to be held.

Deposition of a Clergyman, the degradation of a clergyman from office, divesting him (in churches which do not, like the Church of Rome, hold the indelible nature of orders) of all clerical character. See *Deprivation*.

Dépôt (dā'pō or dep'ō), a French word in general use as a term for a place where goods are received and stored; hence in military matters, a magazine where arms, ammunition, etc., are kept. The term is now usually applied to those companies of a regiment which remain at home when the rest are away on foreign service.

Deprivation (dep-ri-vā'shun), the removing of a clergyman from his benefice on account of heresy, misconduct, etc. It entails, of course, loss of all emoluments, but not the loss of clerical character.

De Profundis (dē pro-fun'dis), in the liturgy of the Roman Catholic Church, one of the seven penitential psalms, the 130th of the Psalms of David, which in the Vulgate begins with these words, signifying, 'Out of the depths.' It is sung when the bodies of the dead are committed to the grave.

Deptford (det'ford), a parliamentary borough, England, in the counties of Kent and Surrey, on the right bank of the Thames, forming now part of London. It has some manufacturers of pottery, chemicals, soap, etc. The old naval dockyard was shut up in 1869, but the royal victualling yard is still the largest establishment of its kind. Pop. (1911) 109,498.

Deputy, one who exercises an office as representing another.—*Chamber of Deputies*, the lower of the two legislative chambers in France and in Italy, elected by popular suffrage, and corresponding in some respects to the House of Commons in Britain, and the House of Representatives in America. See *France, Italy*.

De Quincey (de quin'si), THOMAS, an English author, the son of a Manchester merchant, born at Greenhay, near Manchester, in 1785. In 1793 his father died, leaving the family a fortune of £30,000. After attending for some time the Bath and Manchester grammar schools, where he showed precocious ability, especially in classical studies, he importuned his guardian to send him to Oxford University, and on being refused he ran away from school, ultimately arriving in London in an absolutely destitute condition. His sufferings at this time he has described in his *Confessions of an English Opium Eater*. At length, in 1803, he matriculated at Oxford, and it was in the second year of his course here that he began to take opium in order to alleviate severe neuralgic pains. On leaving college he settled at Grasmere, West-

moreland, in the vicinity of Wordsworth and Southey, and devoted himself to literary work. Here or in London he remained till 1828, reading voraciously, and writing for the *London Magazine*, *Knight's Quarterly Magazine*, and afterward *Blackwood's Magazine*. From 1828 to 1840 he lived in Edinburgh, then removed with his family to Lasswade, which continued to be his headquarters. He died at Edinburgh in 1859. His writings, nearly all contributions to magazines, are distinguished by power of expression, subtle thought, and an encyclopædic abundance of curious information. He was eccentric in his habits, incapable of managing money matters, but amiable and polite.

Dera Ghazi Khan (der'a gä-zē' kân), a district and town in the Punjab, Hindustan. The former, which is in Derajat division, has an area of 4517 square miles and a pop. of 471,149. The town has a pop. of 23,731, half Hindus and half Mohammedans. It has extensive manufactures of silk, cotton and coarse cutlery.

Dera Ismail Khan (der'a ēs-mä-ēl' kân), a district and a town of Hindustan, in the Punjab, in the division of Derajat. The district lies north of that of Dera Ghazi Khan on both sides of the Indus, and has an area of 9296 square miles, and a pop. of 252,379. The town is a staple place for cotton goods. Pop. 31,737.

Derajat (-jät'), a division or commissionership of Hindustan, in the Punjab, occupying part of the valley of the Indus, and comprising Dera Ghazi Khan, Dera Ismail Khan and Bannu; area 22,315 sq. miles. It is well watered and fertile, and contains numerous towns and villages. Pop. 1,643,603, mostly Mohammedans.

Derbend, or DERBENT (der-bent'), a fortified Russian town, capital of the government of Daghestan, on the west shore of the Caspian, an ancient place formerly belonging to Persia. The manufactures consist of woollen stuffs, copper and iron ware, rose-water, etc.; and there is some trade in saffron, largely grown in the vicinity. Pop. 14,821.

Derby (der'bi, dār'bi), a municipal and parliamentary borough in England, capital of Derbyshire, on the Derwent, here crossed by an elegant bridge of three arches, 115 miles N. N. W. London. It is pleasantly situated in a wide and fertile valley open to the south, and is well and regularly built.

in the modern quarter. It has some fine public buildings, among which are the churches of All Saints, St. Alkmund and St. Werburgh, the county hall, school of art, infirmary, etc. There is also a very handsome free library and museum. The principal manufactures are silk, cotton, paper, articles in Derbyshire spar, castings, porcelain, etc. Derby is one of the oldest towns in the kingdom, and is supposed to owe its origin to a Roman station, Derventio, situated at Little Chester, on the opposite side of the river. Under the Danes it took the name of Deoraby. Richardson, the novelist, was a native of the town. Pop. 123,433.—The county of Derby, or Derbyshire, in the center of the kingdom, area, 1029 square miles, five-sixths being arable or in permanent pasture. The southern and eastern parts have a fertile soil, while the north-western portion is bleak, with a rocky and irregular surface. Here is the loftiest range of the English Midlands, the mountains of the Peak. The Peak itself is 2000 feet high. The principal rivers are the Derwent, the Trent, the Wye, the Erwash, the Dove and the Rother. Oats and turnips are important crops, and dairy-husbandry is carried on to a large extent. Coal is abundant in various parts of the county, iron ore is also plentiful, and lead, gypsum, zinc, fluorspar, and other minerals are obtained. The manufactures are silk, cotton and lace, machinery and agricultural implements. Pop. (1911) 560,129.

Derby (der'bi), a city of New Haven Co., Connecticut, on the Housatonic River, 9 miles w. of New Haven. It absorbed the adjoining city of Birmingham in 1893. It has manufactures of brass, guns, iron, paper, woolens, typewriters, etc. Pop. 8991.

Derby, EDWARD GEOFFREY SMITH STANLEY, FOURTEENTH EARL OF, an English statesman, born at Knowsley Park, Lancashire, in 1799; died there in 1869. In 1820 he was returned to the House of Commons as member for Stockbridge. At first inclining to the Whig party, he joined Canning's ministry in 1827, and in 1830 became chief secretary for Ireland in Lord Grey's government, greatly distinguishing himself by his speeches in favor of the Reform Bill in 1831-32. The opposition led by O'Connell in the House of Commons was powerful and violent, but Stanley, while supporting a bill for the reform of the Irish Church and the reduction of ecclesiastical taxation, was successful in totally defeating the agitation for the repeal of the Union. He

warmly advocated the abolition of slavery, and passed the act for this purpose in 1833; but in the following year a difference of opinion with his party as to the diversion of the surplus revenue of the Irish Church led him to

Edward, 14th Earl of Derby.

join the Tories. In 1841 he became colonial secretary under Sir Robert Peel, but resigned on Peel's motion for repeal of the corn laws. In 1851 and 1858 he formed ministries, and again in 1866. Early in 1868 he resigned office. Earl Derby joined to great ability as a statesman, and brilliant oratorical powers, a high degree of scholarly culture and literary ability.—EDWARD HENRY STANLEY, fifteenth earl of Derby, was born in 1826; educated at Rugby and Trinity College, Cambridge. In 1852 he was under secretary of foreign affairs; afterwards secretary of state for India. Under his superintendence the management of the British India empire was transferred from the East India Company to the government of Great Britain. In 1866 and also in 1874 he was secretary of state for foreign affairs. Lord Derby became a Liberal in 1879, and was secretary of state for the colonies under Mr. Gladstone from 1882 to 1885. He, however, took a stand against Irish Home Rule in 1886, and afterwards ranked among Gladstone's opponents. He died in 1893.

Derby, ORVILLE ADELBERT, geologist, was born at Kellogsville, New York, in 1851. He became an instructor of geology at Cornell University, resigned in 1875 to join the geological survey of Brazil, and has been chief of this survey since 1907. He is the highest authority in the geology and physical geography of

Derby Day

Brazil, on which he has written many valuable papers.

Derby Day (där'bi dā), the great annual London holiday, on which the horse-race for the stakes instituted by Lord Derby in 1780 is run. It always falls on a Wednesday. The race is run on Epsom Downs, an extensive plain in the neighborhood of London. The entry-money for each subscriber is fifty guineas, and the stakes are run for by colts of three years. The entries are so numerous that the value of the stakes reaches several thousand pounds. On Epsom Downs, on the Derby Day, are assembled all classes, high and low.

Derbyshire. See *Derby*.

Derbyshire Neck. See *Goiter*.

Derbyshire Spar. See *Fluorspar*.

Derecske (de-rech'ke), a town of Hungary, in the county of Bihar. Soda is obtained from the neighboring swamps. Pop. 8767.

Dereham (dēr'am), EAST, a town in England, nearly in the center of the county of Norfolk, with manufactures of agricultural implements, iron-foundries, and a brisk trade. The poet Cowper was buried in the church here. Pop. 5729.

Derelict (der'e-lik), a vessel or anything relinquished or abandoned at sea, but most commonly applied to a ship abandoned by the crew and left floating about.

Derg, LOUGH (loug derg); (1) a lake of Ireland, county of Donegal, about 3 miles long by 2½ broad at the broadest part, and studded with islets, one of which, called Station Island, has long been a great resort of Roman Catholic pilgrims; (2) an expansion of the river Shannon between County Tipperary and Counties Clare and Galway, about 24 miles long and averaging 2 miles in breadth.

Derham (der'am), WILLIAM, an English philosopher and divine, born in 1657; died in 1735. He was long rector of Upminster in Essex. His best-known works are entitled *Physico-Theology*, *Astro-Theology* and *Christo-Theology*.

Derivation (der-i-vā'shun). See *Etymology*.

Derma (der'ma), DERMIS, the true skin, or under layer of the skin, as distinguished from the cuticle, epidermis, or scarf-skin.

Dermatology (der-ma-tol'ō-ji), the branch of medicine which treats of the skin and its diseases.

Dermatophyte (der-ma t'ō-fit), a parasitic plant, chiefly of the lowest type of the Cryptogamia, infesting the cuticle and epidermis of men and other animals, and giving rise to various forms of skin-disease, as ringworm, etc.

Dermestes (der-mes'tez), a genus of coleopterous insects, one species of which (*D. lardarius*) is known by the name of bacon-beetle, and is often found in ill-kept ham or pork shops.

Dermot Mac Murragh (der'mot m a k murra), the last Irish king of Leinster, attained the throne in 1140. Having carried off the wife of O'Ruarc, prince of Leitrim, he was attacked by the latter, and after a contest of some years driven out of Ireland (1167). He then did homage to the English king, and with the help of Richard, Earl of Pembroke, recovered his kingdom, but died in the same year (1170), and was succeeded by Pembroke, who had married his daughter.

Derna (der'na), a town in Barca, on the north coast of Africa. Pop. 7000.

Derrick (der'ik), a lifting apparatus consisting of a single post or pole, supported by stays and guys, to which a boom with a pulley or pulleys is attached, used in loading and unloading vessels, etc. Floating derricks of the strongest construction, with an immense boom and numerous blocks, are also used.

Derrick-crane (der'ik krān), a kind of crane combining the advantages of the common derrick and those of the ordinary crane. The jib of this crane is fitted with a joint at the foot, and has a chain instead of a tension-bar attached to it at the top, so that the inclination, and consequently the sweep, of the crane, can be altered at pleasure.

Derry. See *Londonderry*.

Dervish (der'vish), or DERVISE (Persian, poor), a Moham-medan devotee, distinguished by austerity of life and the observance of strict forms of worship. There are many different orders of them. Some live in monasteries, others lead an itinerant life, others devote themselves to menial or arduous occupations. They are respected by the common people, and the mendicants among them carry a wooden bowl into which the pious cast alms. One of their forms of devotion is dancing or whirling about, another is shouting or howling, uttering the name *Allah*, accompanied by violent motions of the body, till

Dervish

they work themselves into a frenzy and sometimes fall down foaming at the mouth. They are credited with miraculous powers, and are consulted for the

Traveling Dervish of Khorasan

interpretation of dreams and the cure of diseases.

Derwent (der'went), the name of four rivers in England, in Derbyshire, Yorkshire, Durham and Cumberland, respectively, the last draining Derwentwater Lake. Also a river in Tasmania.

Derwentwater, or KESWICK LAKE, a beautiful lake in Cumberland, England, in the vale of Keswick. It is about 3 miles in length and $1\frac{1}{2}$ in breadth, and stretches from Skiddaw on the north to the hills of Borrowdale. Near the northeast corner is the celebrated cascade of Lodore. Its waters are carried to the sea by the Derwent.

Derwentwater, JAMES RATCLIFFE, LAST EARL OF, one of the leaders in the rebellion of 1715, born at London in 1689. The standard of revolt having been raised in Scotland, Lord Derwentwater commenced the movement in England on October 6, 1715, but was forced, along with the other Jacobite nobles, to surrender at discretion on November 13th. He was executed on Tower Hill, February 24, 1716, his estates being confiscated, and in 1735 granted to Greenwich Hospital.

Derzhawin (der-zh ä'vin), GABRIEL ROMANOWITCH, a Russian lyric poet, born in 1743. He entered the army as a private soldier, distinguished himself highly, and was eventually transferred to the civil service, in which he obtained the highest offices. In

1803 he retired from public life and devoted himself entirely to poetry. One of his most beautiful poems is the *Oda Bog*, or *Address to the Deity*. He died in 1816.

Desaguadero (des-ä-g w ä-dä'rō), a river of Bolivia, in a valley of the same name, issuing from Lake Titicaca, and carrying its waters into Lake Aullagas. Also a river in the Argentine Confederation flowing into Lake Bevedero Grande, and separating the provinces of San Juan and Mendoza. Desaguadero signifies in Spanish 'a channel of outlet.'

Desaix de Veygoux (dè-sä dè vā-gö), LOUIS CHARLES ANTOINE, a distinguished French general, born in 1768 at St. Hilaire d'Ayat, in Auvergne. He was of noble family, and entered the army as a sublieutenant. He distinguished himself greatly in 1794 under Pichegru, and two years later with the army of the Rhine under Moreau. In 1797 he accompanied Bonaparte to Egypt, and was very successful in reducing Upper Egypt. After the Treaty of El Arish he followed Bonaparte to Italy, took command of the corps of reserve, and, arriving on the field of Marengo at a critical moment, decided the victory by a brilliant charge, June 14, 1800. He himself fell, mortally wounded by a cannon shot.

Desault (dè-sō), PIERRE JOSEPH, one of the most celebrated surgeons of France, was born in 1744, and died in 1795. After some experience in the military hospital at Bèfort he went to Paris in 1764, studied under Petit, and two years afterwards became a lecturer on his own account. His reputation soon increased, and he became principal surgeon in the hospital De la Charité, and in 1788 was put at the head of the great Hôtel Dieu in Paris. Here he founded a surgical school, in which many of the most eminent surgeons of Europe were educated.

Descant (des'kant), in music, an addition of a part or parts to a subject or melody, a branch of musical composition which preceded the more modern counterpoint and harmony, coming into existence at the end of the eleventh or beginning of the twelfth century.

Descartes (dä-kärt), RENÉ, a great French philosopher and mathematician, with whom the modern or new philosophy is often considered as commencing, was born March 31, 1596, at La Haye, in Touraine. He was educated at the Jesuit College of La Flèche, where he showed great talent.

He entered the military profession and served in Holland and in Bavaria. In 1621 he left the army, and after a variety of travels finally settled in Holland, and devoted himself to philosophical inquiries. Descartes, seeing the errors and inconsistencies in which other philosophers had involved themselves, determined to build up a system anew for himself, divesting himself first of all the beliefs he had acquired by education or otherwise, and resolving to accept as true only what could stand the test of reason. Proceeding in this way he found (*Meditationes de Prima Philosophia*) that there was one thing that he could not doubt or divest himself of the belief of, and that was the existence of himself as a thinking being, and this ultimate certainty he expressed in the celebrated phrase '*Cogito, ergo sum*' (I think, therefore I am). Here, then, he believed he had found the test of truth. Starting from this point Descartes found the same kind of certainty in such propositions as these: that the thinking being or soul differs from the body (whose existence consists in space and extension) by its simplicity and immateriality and by the freedom that pertains to it; that every perception of the soul is not distinct; that it is so far an imperfect finite being; that this imperfection of its own leads it to the idea of an absolutely perfect being; and from this last idea he deduces all further knowledge of the truth. Descartes also contributed greatly to the advancement of mathematics and physics. The higher departments of geometry were greatly extended by him. His system of the universe attracted great attention in his time, though long since exploded. It rested on the hypothesis of celestial vortices, immense currents of ethereal matter, by which he accounted for the motion of the planets (*Principia Philosophiæ*, 1644). His works effected a great revolution in the principles and methods of philosophizing. In 1647 the French court granted him a pension of 3000 livres, and two years later, on the invitation of Christina of Sweden, he went to Stockholm, where he died in 1650.

Descent (d e-sent'). in law, is the transmission of the right and title to lands to the heir, on the decease of the proprietor, by the mere operation of law. The rule determining to whom an estate belongs, on the decease of the proprietor, is that of consanguinity, or relationship by blood, though with some exceptions, as in the case of the portion, or the use of a portion, of a man's property given by the laws to his

widow. The rules of descent, designating what relations shall inherit, and their respective shares, will be determined by the genius and policy of the government and institutions. Hence the practice of entailments in the feudal system. And wherever the government is founded in family privileges, or very intimately connected with them, as is the case in all governments where the hereditarily aristocratical part of the community have a great preponderance, the sustaining of families will very probably be a characteristic feature in the code of laws. Thus, in Britain, all the lands of the father, unless otherwise directed by will, go to the eldest son. In the United States of America this distinction in favor of the eldest son has been abolished, and the laws there are founded upon the principle of equal distribution both of real and personal estate among heirs of the nearest surviving degree. Kindred in blood are divided into three general classes, viz. 1, descendants; 2, ancestors; 3, collateral relatives, that is, those who have descended from the same common ancestor. The civil law computes the degrees by counting the generations up to the common ancestor, as father, grandfather, great-grandfather; or mother, grandmother, great-grandmother; and from him or her down to the collateral relative, as brother, cousin, etc., making the degree of relationship the sum of these two series of generations. Every person has two sets of ancestors, the paternal and maternal, and therefore two sets of collateral relatives. There is also a distinction of collateral kindred, into those of the whole blood and those of the half blood.

Deseada (de-se-ä'dä), or DÉSIKADE, one of the Leeward Islands, belonging to the French, in the Caribbean Sea, about 10 miles long and hardly 5 broad. The soil is in some places black and good, in others sandy and unproductive. Pop. about 1500.

Deseret (dez'er-et). See *Utah*.

Desert (dez'ert), a term more particularly applied to vast barren plains such as are found in Asia and Africa, but which may also be used to designate any solitude or uninhabited place whether barren or not. See *Sahara* and *Gobi*.

Deserter (d e-zér'ter), a soldier or sailor who quits the service without leave. Deserters are tried by court-martial, which may inflict death as the extreme punishment, or a less severe punishment, according to the circumstances of the case.

Desertion (de-zér'shun), by husband or wife, without due cause, is in England ground for a judicial separation. A wife may obtain an order to protect any money or property she may have acquired since desertion, against her husband or his creditors. Desertion in most of the states of the Union constitutes a ground of divorce, though they differ as to the period of time which must elapse before action can be brought.

Desful. See *Dizful*.

Deshoulières (dā-söl-yār), ANTOINETTE DU LIGIER DE LAGARDE, a French lady of much literary reputation in the seventeenth century; born in 1634; died in 1694. She was the center of attraction in the best circles of the period, and was elected a member of several learned societies. Among her works are odes, eclogues, idyls, and a tragedy, *Genéric*.

Desiccation (des-i-kā'shun), a process of dispelling moisture by the use of air, heat, or chemical agents, such as chloride of calcium, quicklime, oil of vitriol and fused carbonate of potash.—*Desiccation cracks*, in geology, are the fissures caused in clayey beds by the sun's heat, and seen in various rock strata.

Design (de-zīn'), thought, arrangement, or grouping, imagination or invention in works of art. A design is a composition of invention, pictorial, architectural, or decorative. It may be simply an imperfect sketch, as a record of a first thought; or it may be a fully matured work, as a cartoon in preparation for fresco painting, or a drawing to illustrate a book.

Design, SCHOOLS OF. The earliest instruction in industrial art was given in the Franklin Institute, founded at Philadelphia in 1824. In 1847 was founded at Philadelphia a School of Design for Women, still a flourishing institution. England first established schools of design after the Crystal Palace Exhibition of 1851, which showed a marked deficiency in the field of industrial art. The Maryland Institute established schools of art and design in 1848, the Massachusetts Institute of Technology was founded in 1861, and in 1873 a State Normal Art School was opened in Boston. The Centennial Exposition at Philadelphia in 1876 showed clearly the deficiencies of the United States in the field and led to a great stimulation in the study of the fine and industrial arts, a direct result being the founding of the

Pennsylvania Museum and School of Industrial Art, which has now a remarkably rich art museum in Memorial Hall (the art gallery of the Exhibition). Since then State schools of design and industrial art have multiplied in this country, New York, Boston and Cincinnati having excellent schools of decorative art, and many other cities following in the same line, so that the United States now ranks high in this field of art study.

Désirade (dā-zē-räd). See *Deseada*.

Desman (des'man). See *Musk-rat*.

Desmidiaceæ (des-mid-i-ā'se-ē), DESMIDIE'Æ, a nat. order of microscopic, fresh-water, confervoid Algæ. They are green gelatinous plants composed of variously forced cells having a bilateral symmetry, which are either free, or in linear series, or collected into bundles or into starlike groups, and imbedded in a common gelatinous coat. Desmidiaceæ differ from Diatomaceæ in their green color and absence of silex.

Desmodium (des-mō'di-um), a genus of plants. See *Moving Plant*.

Des Moines (dé moin), a manufacturing and trading city, capital of the State of Iowa and of Polk County, on the Des Moines River, about 340 miles west of Chicago. Among its chief buildings are the new State house, the State arsenal, colleges, opera houses, etc. It is the seat of Drake University, Highland Park College, and other collegiate institutions. There are coal-mines in the vicinity, and the manufactures and other industries are varied and rapidly increasing, the river affording abundant water-power. Its industries include important pork-packing establishments and bridge-building works. It was made the State capital in 1855, and was one of the first cities to adopt the commission system of municipal government. Pop. 86,368.

Des Moines, the largest river in the State of Iowa, rises in the s. w. of Minnesota and flows in a southeasterly direction until it falls into the Mississippi about 4 miles below Keokuk, after a course of 300 miles.

Desmology (des-mol'ō-jī; Greek, *desmos*, a ligament), that branch of anatomy which treats of the ligaments and sinews.

Desmoulins (dā-mö-lan), BENOIT CAMILLE, born in 1760

or 1762, was conspicuous during the first period of the French revolution. He was among the most notable of the pamphleteers and orators who urged the multitude forward in the path of revolution. He, along with others, prepared the plan for the taking of the Bastille (July, 1789), was one of the founders of the club of Cordeliers, and the promoter of the assembly in the Champ de Mars. In 1793 he gave his vote for the death of the king. Having become closely connected with Danton and the party of opposition to Robespierre, and inveighing against the reign of blood and terror, he was arrested on the order of the latter on March 30, 1794, tried on the 2d of April, and executed on the 5th. He met his fate in an agony of despair.

Desna (dyes-nâ'), a river in Russia, which rises in the government of, and about 50 miles east of the town of Smolensk, flows through the governments of Orel and Tchernigov till it joins the Dnieper near Kiev. It is 500 miles in length and navigable nearly throughout.

De Soto (dē sō'tō), HERNANDO, a Spanish explorer and discoverer of the Mississippi, born about 1496; died in 1542. He accompanied expeditions to the New World under Davila and Pizarro, and played a distinguished part in the conquest of Peru. In 1539 he led an expedition to Florida, whence after many difficulties he penetrated to and beyond the Mississippi. Here he was attacked with fever and died.—The name De Soto has been given to a county in the N. W. of Mississippi, in the locality of his discovery of the Mississippi River.

De Soto, a city of Jefferson Co., Missouri, 43 miles S. by W. of St. Louis. Lead, zinc and tin ore are produced in the vicinity, and it has railroad machine shops and shipments of grain, lead and zinc. Pop. 4721.

Despot (des'pot; Greek, *despotēs*), originally a master, a lord; at a later period it became an honorary title which the Greek emperors gave to their sons and sons-in-law when governors of provinces. At present *despot* means an absolute ruler, as the Emperor of Russia, and in a narrower sense a tyrannous one.

Dessalines (dā-sā-lēn), JEAN JACQUES Emperor of Hayti, born in Africa about 1760, was a slave in 1791, when the insurrection of the blacks occurred in that island, but was set free along with the other slaves in St. Domingo in 1794. His talents for war, his courage, and unscrupulous conduct

raised him to command in the insurrections of the colored people, and after the deportation of Toussaint L'Ouverture, and the subsequent evacuation of the island by the French, Dessalines was appointed governor-general for life with absolute power; and the year following (1804) was declared emperor with the title of Jacques I. But his rule was savage and oppressive, and both the troops and the people, sick of his atrocities, entered into a conspiracy against him, and, October 17, 1806, he was slain by one of his soldiers.

Dessau (des'ou), a town in Germany, capital of the duchy of Anhalt, in a beautiful valley on the left bank of the Mulde, mostly well built, with fine squares and many handsome buildings. The manufactures consist of woollens, woolen yarn, carpets, machinery, tobacco, etc. The ducal palace has a picture-gallery and interesting relics and antiquities. Pop. 55,134.

De Stendhal. See *Beyle, Marie-Henri*.

Desterro (des-ter'ō), a seaport of Brazil, capital of the province of Santa-Catharina. The harbor is, next to that of Rio de Janeiro, the best on the Brazilian coast. Pop. 30,687.

Destutt de Tracy (dā-tü de trā-sē), ANTOINE LOUIS CLAUDE, a French philosophical writer, born in 1754, of a family of Scottish extraction; died in 1836. As a philosopher he belonged to the Sensationalist school, and considered all our knowledge to be derived originally from sensation. Among his chief works are *Idéologie* (1801), *Logique* (1805), *Traité de la Volonté* (1815.)

Detachment (de-tach'ment), a body of troops selected from the main army for some special service.

Determinism (de-tèr'min-izm), a philosophical theory which holds that the will is not free, but is invincibly determined either—according to the older form of the theory—by a motive furnished by Providence, or—according to the modern form—by the aggregation of inherited qualities and tendencies.

Detinue (det'i-nū), in law, the form of action whereby a plaintiff seeks to recover a chattel personal unlawfully detained.

Detmold (det'möld), a town of Germany, capital of Lippe-Detmold, on the left bank of the Werra, 50 miles southwest of Hanover, with a new and an old palace (or castle), good public library, museum, etc. In the vicinity a

colossal statue has been erected to the famous warrior Hermann or Arminius who overthrew the Roman general Varus and his legions in a battle which was fought near this place. Pop. 13,164.

Detonating Powders (dē-t'ū-nā-tīng), certain chemical compounds which, on being exposed to heat or suddenly struck, explode with a loud report, owing to one or more of the constituent parts, suddenly assuming the gaseous state. The chloride and iodide of nitrogen are very powerful detonating substances. The compounds of ammonia with silver and gold, fulminate of silver and of mercury detonate by slight friction, by means of heat, electricity, or sulphuric acid.

Detonating Tube, a species of eudiometer, being a stout glass tube used in chemical analysis for detonating gaseous bodies. It is generally graduated into centesimal parts, and perforated by two opposed wires for the purpose of passing an electric spark through the gases which are introduced into it, and which are confined within it over mercury and water.

Detritus (de-trī'tus), in geology, small fragments of matter worn off or detached from solid bodies by attrition, distinguished from débris, which is made up of larger fragments.

Detroit (dē-troit'), the metropolis of Michigan, situated on the Detroit River, the greatest shipping highway in the world, the tonnage being about 35 millions yearly. It has a river front of many miles and is also an important railroad junction, numerous roads, centering here or traversing the city. It is a prosperous and beautiful city, containing many parks, one of which, Belle Isle, stretches nearly from the docks to Lake St. Clair, and a wide boulevard which surrounds the city, beginning and ending at the river front. There are many fine churches, hospitals and public buildings, opera house, theaters, etc. Detroit is a great manufacturing city, chemicals, stoves, cars, glass, shoes, electric supplies, steel, tobacco, etc., being made here. It has also immense railroad car-works and iron-working establishments, flouring-mills, tanneries, stove works and lumber yards. It has an enormous commerce, chiefly in grain, wool, pork, lard, hides and copper. The harbor is one of the finest in the country. The chief public building, the city hall, is on the Campus Martius, and faces upon four streets. In addition are several educational institutions, colleges of law and medicine, a well-

filled public library, a museum of art, and other interesting buildings. Detroit owes its origin to the French, who here made a settlement in 1701. It remained under their control until 1762. It has had a rapid recent growth, the pop. increasing from 285,704, in 1900, to 465,766, in 1910.

Detroit River, or STRAIT OF ST. CLAIR, a river or strait of North America, which runs from Lake St. Clair to Lake Erie. It is 28 miles long, and of sufficient depth for the navigation of large vessels. It is about ¾ mile wide opposite Detroit and enlarges as it descends. An immense lake trade passes through it.

Dettingen (det'ing-en), the name of several places in Germany, among which is a village of Bavaria, on the right bank of the Main, famous for the victory gained by the English and Austrians under George II of England over the French in 1743.

Deucalion (dū-kā'li-on), in Greek mythology, the son of Prometheus and father of Hellen, ancestor of the Hellenes. According to tradition, he saved himself and his wife, Pyrrha, from a deluge which Zeus had sent upon the earth by building a ship which rested upon Mount Parnassus. To repair the loss of mankind they were directed by an oracle to throw stone behind them, which became men and women.

Deus ex Machinâ (mak'i-na; L. 'a god out of the machine'), a phrase used to designate the resorting to supernatural causes to explain phenomena that one is not able to account for by natural means. The phrase is taken from the practice on the classical stage of introducing a god from above by means of some mechanical contrivance in order to effect a speedy dénouement of the plot.

Deuterocanonical (d ū' t e r-ō-), a term applied to those books of Scripture that were admitted into the canon after the rest, some of them being regarded by Protestants as apocryphal.

Deuteronomy (d ū' t e r-on'u-mi), the last of the books of the Pentateuch, so called (Greek, *deuteros*, second; *nomos*, a law) from its consisting in part of a restatement of the law as already given in Exodus, Leviticus and Numbers, and containing also, in addition to special commands and admonition not previously given, an account of the death of Moses. See *Pentateuch*.

Deutz (doits), a town in Prussia, on the right bank of the river Rhine, opposite the city of Cologne, with which it communicates by a bridge, and with which city it was incorporated in 1888. It is strongly fortified as part of the defenses of Cologne—forming in fact, a *tête-du-pont*. There are some manufacturing of porcelain and glass, also an iron-foundry, machine-works, and a large establishment for the construction of artillery.

Deutzia (dūt'zi-a), a genus of plants, of the nat. order Philadelphaceæ, containing seven or eight species, all of which are interesting from the beauty of their flowers, some of them favorite garden and greenhouse plants. They are small shrubs indigenous to China and Japan and Northern India.

Deux-Ponts (deu-pōn), the French name for the German town *Zweibrücken* (which see), both names meaning 'two bridges.'

Devanagari (dā-va-nā'ga-rē), a name of the Sanskrit alphabet.

Development Theory. See *Evolution*.

Deventer (dāv'en-tēr), an old town in Holland, province of Overijssel, 8 miles north from Zutphen, at the confluence of the Schipbeek and Ijssel. Its industries embrace carpets, cast-iron goods, printed cottons, hosiery, and a kind of cake called Deventer cake. It has a large export trade in butter. Pop. 26,212.

De Vere (de-vēr). AUBREY THOMAS, an Irish poet, born in County Limerick in 1814; died in 1902. He was the son of Sir Aubrey de Vere, a poet and dramatist (1788-1846). Educated at Trinity College, Dublin, he engaged in literary work, publishing *Irish Odes* and other volumes of poems, also *Picturesque Sketches of Greece and Turkey, Recollections by Aubrey de Vere*, etc.

Devereux, ROBERT. See *Esser, Robert Devereux, Earl of*.

Deveron (dev'e-ron), a river of Scotland belonging to Aberdeenshire and Banffshire, 60 miles long.

Deviation of the Compass, the variation of a ship's compass from the true magnetic meridian, caused by the near presence of iron. In iron ships the amount of deviation depends upon the direction, with regard to the magnetic meridian, in which the ship lay when being built. It is least when the ship has been built with her head south. Armor-plated ships should be plated with their

head in a different direction from that in which they lay when built. The mode now generally employed to correct deviation is by introducing on board ship masses of iron and magnets to exactly neutralize the action of the ship's magnetism. Compasses are sometimes carried on masts in iron vessels as a means of removing them from the disturbing influence of the iron of the hull. In this position they serve as standards of comparison for the binnacle compass. Wooden ships are also affected, though in a far less degree, by the direction in which they lie when building.

Device (de-vīs'), a name common to all figures, ciphers, characters, rebuses, mottoes, etc., which are adopted by a person or a family by way of badge or distinctive emblem, often a representation of some natural body, with a motto or sentence applied in a figurative sense.

Devil (dev'il; Greek, *diabolos*, a slanderer or accuser), in theology, an evil spirit or being; especially the evil one, represented in Scripture as the traducer, father of lies, etc. Most of the old religions of the East acknowledge a host of devils. The doctrine of Zoroaster, who adopted an evil principle called Ahriman, opposed to the good principle and served by several orders of inferior spirits, spread the belief in such spirits among the people. The Greek mythology did not distinguish with the same precision between good and bad spirits. With the Mohammedans *Eblis*, or the devil, was an archangel whom God employed to destroy a pre-Adamite race of *jinns*, or genii, and who was so filled with pride at his victory that he refused to obey God. The Satan of the New Testament is also a rebel against God. He uses his intellect to entangle men in sin and to obtain power over them. But he is not an independent self-existent principle, like the evil principle of Zoroaster, but a creature subject to omnipotent control. The doctrine of Scripture on this subject soon became blended with numerous fictions of human imagination, with the various superstitions of different countries, and the mythology of the pagans. The excited imaginations of hermits in their lonely retreats, sunk as they were in ignorance and unable to account for natural appearances, frequently led them to suppose Satan visibly present; and innumerable stories were told of his appearance, and his attributes—the horns, the tail, cloven foot, etc.—distinctly described. In consequence of the cures which Christ and his apostles performed on the possessed, the early church be-

lieved in a power connected with the consecration of priests to drive out evil spirits. (See *Exorcism*.) The belief in evil spirits, witches, etc., was in the seventeenth century so common that they became the objects of judicial process. With the progress of the natural sciences, however, in the eighteenth century many wonderful phenomena became explained, and less was heard of witchcraft.

Devil, the machine through which cotton or wool is first passed to prepare it for the carding-machines; a teasing-machine.

Devil, TASMANIAN. See *Dasyure*.

Devil-fish, the popular name of various fishes, one of them being the angler (which see). Among others the name is given to several large species of ray occasionally captured on the Atlantic and Pacific coasts of America, and much dreaded by divers, whom they are said to devour after enveloping them in their vast wings. During gales of wind or from strong currents these immense fish are driven into shoal water, and being unable to extricate themselves, fall an easy prey to the vigilance of the fisherman, who obtain considerable quantities of oil from their livers.

Devil's Advocate. See *Advocatus Diaboli*.

Devil's Bit, the common name of a species of scabious (*Scabiōsa succisa*), nat. order Dipsacæ. It has heads of blue flowers nearly globular, and a fleshy root, which is, as it were, cut or bitten off abruptly. The sweet scabious is a well-known fragrant garden flower.

Devil's Bridge (*Teufelsbrücke*), a famous bridge in Switzerland, over the Reuss, built of stone from mountain to mountain, 75 feet in length, on the road over St. Gothard, from Germany to Italy.

Devil's Dust, a name sometimes applied to old woollen goods when torn up into their original fibers, to be woven again into new fabrics, called *shoddy*.

Devil's Punchbowl, a small lake of Ireland, near the Lakes of Killarney, between 2000 and 3000 feet above the sea, supposed to be the crater of an ancient volcano.

Devil's Wall, in the south of Germany, a structure which was originally a Roman rampart, intended to protect the Roman settlements on the left bank of the Danube and on the right bank of the Rhine, against the inroads of the Teutonic and other

tribes. Remains of it are found from the Danube, in Bavaria, to Bonn on the Rhine.

Devil-worship, the worship paid to the devil, an evil spirit, a malignant deity, or the personified evil principle in nature, by many of the primitive tribes of Asia, Africa and America, under the assumption that the good deity does not trouble himself about the world; or that the powers of evil are as mighty as the powers of good, and have in consequence to be bribed and reconciled. There is a sect called devil-worshippers inhabiting Turkish and Russian Armenia and the valley of the Tigris, who pay respect to the devil, to Christ, and to Allah or the supreme being, and also worship the sun.

Devise (de-vīz'), in law, usually the disposition of real estate by will, but also sometimes applied to any gift by will, whether of real or personal estate.

Devizes (de-vī'zez), a town in England, county of Wilts, finely situated on a commanding eminence, 82 miles west by south of London. The name is derived from the Latin *divisæ terræ*, ('divided lands'), because the ancient castle of Devizes was built at the meeting-place of three different manors. Agricultural engines and implements are made, and malting is carried on. Pop. (1911) 6741.

Devon, DEVONSHIRE (dev'un-shér), a maritime county in the S. W. of England, its northern coast being on the Bristol Channel and its southern on the English Channel; area, 2586 square miles, the county being the third largest of England. From Exeter to the confines of Cornwall extends the wide and barren tract called Dartmoor; but the vale of Exeter, comprising from 120,000 to 130,000 acres, and the south extremity of the county called *South Hams*, limited by a line drawn from Torbay to Plymouth Sound, are among the most fertile districts of England. Tin, lead, iron, copper, manganese, granite and the clay used by potters and pipemakers are the chief mineral products. The geological formation of the Old Red Sandstone is so largely developed that the term Devonian has to some extent become its synonym. Agriculture is in a somewhat backward state, owing, probably, to the general preference given to dairy husbandry, for which the extent and richness of its grass lands make the county most suitable. Wheat, barley, beans, peas and potatoes are the principal crops. About three-fourths of the county are under crops or

in pasture. there is a large trade in butter, cheese, and live stock and the 'clotted' cream and cider of Devonshire are well known as specialties of the county. Pop. (1911) 701,981.

Devonian System (de-vō'ni-an), in geology, a name originally given to rocks of Devonshire and Cornwall, intermediate between the Silurian and Carboniferous strata, and consisting of sandstones of different colors, calcareous slates and limestones, etc. They are divided into lower, middle and upper groups, all containing fossils, but the middle most abounding in them, including corals, crinoids, crustaceans, mollusca (especially brachiopods), and cephalopods. Devonian rocks occupy a large area in Central Europe, as well as in the United States, Eastern Canada and Nova Scotia. The term has been often used as equivalent to Old Red Sandstone.

Devonport (dev'un-port), a municipal and parliamentary borough and port of England, county of Devon, contiguous to Plymouth. It is the seat of one of the royal dockyards, and an important naval and military station. A bastioned wall and fosse defend the town on the northeast and south sides, while the sea entrance is protected by heavy batteries on Mount Wise. Connected with the dockyards and fortifications are the gun wharf, foundries, machine-works, ropewalks, storehouses, naval and military barracks, etc. It has no special trade beyond that connected with the dockyards and government works. Pop. (1911) 81,694.

Devonshire. See *Devon*.

Devonshire, DUKE OF. See *Cavendish*.

Dew (dū) is a deposition of water from the atmosphere upon the surface of the earth in the form of minute globules. The earth absorbs heat during the day; at sunset its supply is cut off, but the radiation continues. Grass and foliage being radiators lose their heat and the moisture of the atmosphere is condensed by contact therewith. See *Dew-point*.

Dewas (dā-wäs'), a state of Central India. Pop. 142,162. Its capital, of the same name, has a pop. of 15,000.

Dewey, GEORGE, naval officer, born in Vermont, in 1837, appointed to the Naval Academy in 1854. On the outbreak of the Civil war, he was commissioned as lieutenant and assigned to the *Mississippi*, which, under Farragut, took part in forcing the Mississippi

River. This vessel running aground in March, 1863, and being exposed to a hot Confederate fire, Dewey fired her and escaped with the crew. He took part in the two attacks on Fort Fisher, and continued in active service after the war, being made captain in 1884. In 1885 he was sent to command the flagship *Pensacola*, European squadron, and in 1888 was appointed Chief of Bureau of Equipment and Recruiting, with the rank of commodore. Commissioned commodore in 1896, he was placed in 1898 in command of the Asiatic squadron, and on May 1, after the declaration of war against Spain, fought the Battle of Manila, silencing the forts and destroying the Spanish fleet, without the loss to himself of a man or ship. On May 11, Congress unanimously adopted a resolution of thanks, granted him a sword of honor and placed him on the active list as rear-admiral. On August 13, he, in conjunction with General Merritt, attacked Manila, reduced it and took possession. In February, 1899, he was given the rank of admiral, previously borne only by Farragut and Porter. On October 3, a jeweled sword ordered by Congress was presented him on the steps of the Capitol at Washington.

Dewberry (dū'bèr-i; *Rubus cæsius*), an edible fruit belonging to the order Rosaceæ, and to the same genus as the bramble. The American dewberry (*rubus Canadensis*) derives this name from the dew-like bluish bloom which covers the fruit. It abounds in dry, stony fields from Canada to Virginia, as a running plant, which bears a larger and sweeter berry than the common blackberry.

De Wint, PETER, an English landscape painter in water-colors; born in 1784; died in 1849. He studied in the schools of the Royal Academy, where he occasionally exhibited; but most of his pictures were shown in the exhibitions of the Water-color Society. English scenery was his favorite subject. He occasionally painted in oil with marked success.

De Witt, JAN, grand-pensionary of Holland, celebrated as a statesman and for his tragic end, was the son of Jacob de Witt, burgomaster of Dort, and was born in 1625 or 1632. He became the leader of the political party opposed to the Prince of Orange, and in 1652, two years after the death of William II, was made grand-pensionary. In 1665 the war with England was renewed and conducted by De Witt with great ability till its termination in 1665. In 1672 Louis XIV invaded the Spanish

Netherlands and involved. Holland in war. De Witt's popularity, already on the decline, suffered still further in the troubles thus occasioned, and he felt it necessary to resign his office of grand-pensionary. At this time his brother Cornelius, who had been tried and put to torture for conspiring against the life of the young Prince of Orange, lay in prison. Jan de Witt went to visit him, when a tumult suddenly arose among the people, and both brothers were murdered, August 20, 1672. De Witt was a man of high character, simple and modest in all his relations.

Dew-point, the temperature at which condensation of the vapor in the air takes place. When the temperature of the air has been reduced by radiation to the dew-point, dew is deposited and an amount of heat set free which raises the temperature of the air. Thus the dew-point will indicate what the minimum temperature of the night is likely to be, a knowledge of which is useful to the horticulturist.

Dewsbury (dūz'bēr-i), a town of England, in the West Riding of Yorkshire, and 30 miles southwest of the town of York, chiefly engaged in the manufacture of heavy woolen cloths, including blankets, carpets, rugs, flannels, baizes, etc. Pop. (1911) 53,358.

Dexter (dɛks'tēr), a term meaning on the right-hand side, chiefly used in heraldry. The *dexter chief point* is a point in the right-hand upper corner of the shield, being in the dexter extremity of the chief.

A. Dexter chief point.

Dextrine (dɛks'trin; $C_6H_{10}O_5$), the soluble or gummy matter into which starch can be converted by the action of dilute acids or malt extract, or by heat. It is remarkable for the extent to which it turns the plane of polarization to the right hand, whence its name. Its composition is the same as that of starch. By the action of hot diluted acids dextrine is finally converted into grape-sugar. It is white, insipid, and without smell. It is a good substitute for gum-arabic in medicine.

Dextro-Compounds (dɛks'trō), bodies which cause the plane of a ray of polarized light to rotate to the right. Dextrine itself, dextroglucose, tartaric acid, malic acid, cinchonine, and many other bodies have this property; while others, which have the opposite effect, of causing the plane to

rotate to the left, are called *larvo-compounds*.

Dextrose (dɛks'trōs), a name for grape-sugar (which see).

Dey (dā), a title formerly assumed by the rulers (under the Turkish Sultan) of Algiers, Tripoli and Tunis.

Dezful (dēz'fōl). See *Dizful*.

Dhalak (dhā-lāk'), an archipelago of the Red Sea, off the coast of Abyssinia. It consists of nearly 100 rocks and islets, mostly uninhabited, clustering round the island of Dhalak el-Kebir, which is about 35 miles long by 30 broad. This island possesses a pearl-fishery.

Dhar (dhār), a small native state in Central India, with an area of about 1740 square miles. The soil is fertile, and yields wheat, rice, opium, etc. Pop. 142,115. The capital is of the same name, is surrounded by a mud wall, and has some striking buildings. Pop. 17,792.

Dharangaon (dār-an'ga-on), a town of Hindustan, in Khandesh district, Bombay. Pop. 14,000.

Dharapuram (dār-a-pu'ram), a town of Hindustan, Coimbatore district, Madras. Pop. 8000.

Dharmkot (därm'kot), a town of India, in Ferozpur district, Punjab. Pop. 6000.

Dharmsala (därm'sa-la), a hill station with military cantonments, in Kangra district, Punjab, India. Pop. 6971.

Dharwar (dār-wär'), the chief town of Dharwar district, in the Bombay Presidency, Hindustan, a straggling place with some trade. There is a fort well planned and strongly situated, but now falling into ruins, and military cantonments at 2 miles' distance. Pop. 31,279. The Dharwar district has an area of 4535 square miles; pop. 1,113,298.

Dhole (dōl), the Cingalese name for the wild dog of India (*Cyon dukhuensis*). It is distinguished from the genus *Canis*, or dog proper, by its having one molar fewer in either side of the lower jaw. It is of a fox-red or rufous-fawn color, in size between a wolf and a jackal, and hunts always in packs.

Dholera (dhō-lā'ra), a seaport of Hindustan, Bombay Presidency, one of the chief cotton-marts in the Gulf of Cambay. Pop. about 10,000.

Dholka (dōl'ka), a town of Hindustan, Bombay Presidency, probably one of the oldest towns in Gujarat. Pop. about 15,000.

Dholpur (dōl'pör), a native state of Central India, Rajputāna; (1901) 270,973.

Dhow (dou), an Arab sea-going vessel, ranging from a comparatively small size up to 250 tons burden, with one mast and a large square sail. It is used for merchandise and is often employed in carrying slaves from the east coast of Africa to Arabia.

Dhulia (dō'le-ä), a town of Hindustan, Khandesh district, Bombay Presidency. Pop. about 25,000.

Dhurra, DOURAH (du'ra), East Indian millet, the seed of *Sorghum vulgäre*, largely grown in India and after wheat the chief cereal crop of the Mediterranean region, being largely used in those countries by the laboring classes for food. Varieties are grown in many parts of Africa, one of them known as Kaffir corn. It does not make good bread, but is excellent for puddings and is prepared for food in various ways. The plant is closely allied to the sugar cane and is cultivated in the United States as a source of sugar.

Diabase (di'a-bäs), diorite or greenstone, a fine-grained, crystalline-granular rock.

Diabetes (di-a-bē'tez), a disease of which the most remarkable symptoms are: a great increase in the quantity of urine, a voracious appetite, a stoppage of the cutaneous perspiration, thirst, emaciation, and great muscular debility. In true diabetes (*diabetes mellitus*) the composition of the urine is also greatly affected an abundance of saccharine matter (diabetic sugar) being found in it. This disease usually attacks persons of a debilitated constitution and often without any obvious cause. With respect to treatment, a diet should be employed of which farinaceous or saccharine matter (starch and sugar) forms no part, ordinary bread or biscuits, rice, arrowroot, pastry and fruits being accordingly forbidden though almost any kind of animal food, including eggs, cheese, butter, cream, etc., as also various vegetables, may be eaten. Tea, coffee, dry wines, spirits and bitter ale may be drunk. Milk should be taken only sparingly. The disease is essentially a chronic one, though it may quickly end in death. Diseases of the lungs are liable to attack a diabetic person.

Diabetic Sugar (di-a-bēt'ik), the sweet principle of diabetic urine. It is identical with starch-sugar, grape-sugar, etc. It is not a constituent of normal urine, but in diabetes it may be present to the amount

of 8 or 10 per cent., and in some cases more.

Diablerets (dya-ble-rä), LES, a mountain group of the Bernese Alps, Switzerland, between Canton Vaud and Canton Valais. The highest peak has a height of 10,620 feet.

Diacaustics (di-a-kas'tiks). See *Caustic* (in optics).

Diachylon (di-ak'i-lon), a substance prepared by heating together oxide of lead or litharge, olive-oil and water, until the combination is complete, and replacing the water as it evaporates. It is used for curing ulcers and is the basis of many plasters.

Diacoustics (di-a-kous'tiks), the science or doctrine of sounds as they are refracted by passing through different mediums.

Diadelphia (di-a-del'fi-a), the name given by Linnæus to his seventeenth class of plants, distinguished by having their stamens united in two bundles by their filaments.

Diadem (di'a-dem), an ancient ornament of royalty. It was originally a head-band of fillet made of silk, linen, or wool, worn round the temples and forehead, the ends being tied behind and let fall on the neck, as seen in old representations of the diadem of the Indian Bacchus. Subsequently it was usually set with pearls and other precious stones. The term is also used as equivalent to crown or coronet.

Diæresis (di-ē're-sis), a separation of one syllable into two; also the mark (· ·) which shows that a second vowel is to be pronounced, as in *aërial*.

Diaglyphic (di-a-glif'ik), a term applied to sculpture, engraving, etc., in which the objects are sunk into the general surface.

Diagnosis (di-ag-nō'sis), in medicine, the discrimination of diseases by their distinctive marks or symptoms; the discovery of the true nature and seat of a disease.

Diagonal (di-ag'o-nal), in geometry, a straight line drawn between the opposite angles of a quadrilateral figure.

Diagonal Scale, a measuring scale which consists of a set of parallel lines drawn on a ruler, with lines crossing them at right angles and at equal distances. One of these equal divisions, namely, that at the extremity of the ruler, is subdivided into a number of equal parts, and lines are drawn through the points of division obliquely across the parallels. With the

help of the compasses such a scale facilitates the laying down of lines of

Diagonal Scale.

any required length to the 200th part of an inch.

Diagoras (dī-a-g'o-ras), an ancient Greek poet and philosopher, who flourished about 425 B.C. He spent a great part of his life in Athens. Like his teacher Democritus, he attacked the prevailing polytheism, and sought to substitute the active powers of nature for the divinities of the Greeks. On this account he had to leave Athens.

Diagram (dī'a-gram), a figure or geometrical delineation applied to the illustration or solution of geometrical problems, or any illustrative figure in which outlines are chiefly presented, and the details more or less omitted.

Dial (dī'al), or SUN-DIAL, an instrument for showing the hour of the day from the shadow thrown while the sun is shining by a *stile* or *gnomon* upon a graduated surface. This instrument was known in the earliest times by the Egyptians, Chaldeans and Hebrews. From those eastern nations it came to the Greeks. It was introduced into Rome during the first Punic war. Dials are of various construction, horizontal, inclined, or upright, the principle in every case being to show the sun's distance from the meridian by means of the shadow cast by the stile or gnomon. The stile is made parallel with the earth's axis, and may be considered as coinciding with the axis of the diurnal rotation. Consequently as the sun moves westwards the shadow of the stile moves round in the opposite direction, falling on the meridian lines so marked as to represent the hours of the day. The dial of course gives solar time, which, except on four days of the year, is slightly different from that of a well-regulated clock. Dials are now rather articles of curiosity or ornament than of use.

Dialect (dī'a-lekt), the language of a part of a country, or a distant colony, deviating either in its grammar, vocabulary, or pronunciation, from the language of that part of the common country whose idiom has been adopted as the literary language, and the

medium of intercourse between well-educated people. Although the use of provincial dialects becomes inconvenient after a language has acquired a fixed literary standard, the study of such dialects is always valuable to the philologist for the light they throw on the history of the language. The diffusion of education and of printed books has much relaxed the hold which the provincial dialects of various countries once had of the people, and in general it may be said that the educated classes of any country now speak each of them a uniform language.

Dialectics (dī-a-lek'tiks), the old name of logic, or the art of reasoning, but used in Kant's philosophy to mean the logic of appearance, or that logic which treats of inevitable tendencies towards error and illusion in the very nature of reason.

Diallage (dī'al-āj), a silico-magnesian mineral of a lamellar or foliated structure. Its subspecies are green diallage, hypersthene and bronzite. The metalloidal subspecies is called schillerstein, or schillerspar. It forms diallage rock, and enters into serpentine.

Dialling (dī'al-ing), the art of making sun-dials; also the art and practice of mine-surveying in which the theodolite, magnetic needle, etc., are employed.

Dialogue (dī'a-log), a conversation or discourse between two or more persons. The word is used more particularly for a formal conversation in theatrical performances, and for a written conversation or composition in which two or more persons carry on a discourse. This form was much in favor among the ancient philosophers as a medium for expressing their thoughts on subjects. The *Dialogues* of Plato are the finest example. Many of the great French and Italian writers have used this form. Landor's *Imaginary Conversations* is the best production of this kind in English.

Dialysis (dī-al'i-sis), the separation of the *crystalloid* constituent elements of a mixture from the *colloid*, the former being bodies which diffuse readily, such as sugar, salt, bichromate of potassium, etc.; the latter bodies which diffuse with difficulty or not at all, bodies resembling glue or gelatin, such as gum, starch, caramel, albumen, the ordinary constituents of food, etc., etc. The dialysis is affected by pouring a mixed solution of crystalloid and colloid on a sheet of parchment paper stretched over a wood or gutta-percha hoop, having its edges well drawn up, and confined by an outer rim. The parchment is allowed to float on a basin of water.

In a short time all the crystalloid bodies will have passed through the membranous septum into the pure water, while the colloid matter will remain almost entirely in the dialyzer.

Diamagnetic (dī-a-ma-g-nē't'ik), a term applied to substances which, when under the influence of magnetism and freely suspended, take a position at right angles to the magnetic meridian, that is, point east and west. From the experiments of Faraday it appears that all matter is subject to the magnetic force as universally as it is to the gravitating force, arranging itself into two great divisions, the *paramagnetic* and *diamagnetic*. Among the former are iron, nickel, cobalt, platinum, palladium, titanium, and a few other substances; and among the latter are bismuth, antimony, cadmium, copper, gold, lead, mercury, silver, tin, zinc and most solid, liquid and gaseous substances. When a paramagnetic substance is suspended freely between the poles of a powerful horseshoe magnet it points in a line from one pole to the other, which Faraday terms the *axial line*. On the other hand, when a diamagnetic substance is suspended in the same manner it is repelled alike by both poles, and assumes an equatorial direction, or a direction at right angles to the axial line. It has been supposed that the diamagnetic phenomena is a result of the superior magnetic force of the oxygen of the atmosphere.

Diamantina (dē-a-man-tē'na), a town of Brazil, in the diamond district in the province of Minas Geraes, the inhabitants of which are almost all engaged in the gold and diamond trade. Pop. 17,980.

Diameter (dī-am'e-tēr), the straight line drawn through the center of a circle, and touching the two opposite points of the circumference. It thus divides the circle into two equal parts, and is the greatest chord. The length of the diameter is to the length of the circumference of the circle as 1 to 3.14159265. . . .

Diameter.

the latter number being an interminable decimal.

Diamond (dī'a-mond), the hardest and one of the most valuable of gems, and the purest form in which the element carbon is found. (See *Carbon*.) It crystallizes in forms belonging to the regular or cubic system, the most common being the regular octahedron and rhombic dodecahedron (twelve faces). The finest diamonds are

colorless, perfectly clear, and pellucid. Such are said to be of the finest *water*. But diamonds are often blue, pink, green, or yellow, and such are highly prized if of a decided and equal tint throughout. The hardness of the diamond is such that nothing will scratch it, nor can it be cut but by itself. The value of a diamond is much enhanced by cutting facets upon it inclined at certain angles to each other so as to produce the greatest possible play of color and luster. What is called the *brilliant* cut best brings out the beauty of the stone. Its upper or principal face is octagonal, surrounded by many facets. But this form of cutting requires an originally well-shaped stone. For other diamonds the *rose* cut is used. In this form six triangles are cut on the top so that their apices meet in a point called the summit. Round this are disposed other facets. Stones which are too thin to cut as rose-diamonds are cut as *table*-diamonds, which have a very slight play of color. In the cut Fig. 1 is the diamond in its rough state; Fig. 2 is the vertical, and Fig. 3 the lateral appearance of a brilliant; Fig.

Diamonds, rough and variously cut.

4 the vertical, and Fig. 5 the lateral appearance of a rose-cut diamond; in Fig. 6 the flat portion *a* in a cut stone is called the *table*; the part *a b b*, which projects from the setting, is the *front*, the part *b b c*, sunk in the setting, is the *back* or *culasse*, while the line *b b* is the *girdle*. The art of cutting and polishing the diamond was unknown in Europe till the fifteenth century, and the stone itself was not nearly so highly valued in the middle ages as the ruby. Diamonds are valuable for many purposes. Their powder is the best for the lapidary, and they are used for jewelers' watches, as lenses for microscopes, and in the cutting of window and plate glass. When used as a glazier's tool the diamond must be uncut. Inferior kinds of diamonds are also extensively used by engineers in rock-boring (see *Boring*), and by copper-plate engravers as etching-points. Diamonds are obtained from alluvial deposits (sands, clays, etc.), being separated by washing. They are found in India,

Borneo, and other parts of the East; sometimes in N. America and Australia; but the chief diamond fields of to-day are Brazil and Cape Colony, the center of the latter being Kimberley in Griqua Land West. Diamonds were first discovered in the latter in 1867, but since then the output has amounted to over \$200,000,000 in value. One of the largest diamonds known (weight 367 carats) was found in Borneo about a century ago, and belongs to the Rajah of Mattan. One of the most celebrated is the Koh-i-noor (Mountain of Light), belonging to the British crown. It weighed originally nearly 800 carats, but by subsequent recuttings has been reduced to $103\frac{3}{4}$ carats. The Orloff diamond, belonging to the Emperor of Russia, weighs 195 carats; the Pitt diamond, among the French crown jewels, $136\frac{1}{2}$. The former, which came from India, has been thought to have originally formed part of the Koh-i-noor stone. The largest Brazilian diamond weighed $254\frac{1}{2}$ carats and was cut to a brilliant of 125. Some of the South African diamonds are also very large, one being found in 1893 weighing 971 carats, or nearly half a pound. More recently a much larger one has been found, weighing 3034 carats. This has been cut into eleven pieces, the largest, a drop brilliant, weighing $516\frac{1}{2}$ carats. This, called the Star of South Africa, has been placed in King George's scepter, and another, of 309 3-16 carats, in his crown.

Diamond, in technical language, is the rhomboid—that is, a quadrangle with equal sides and two obtuse angles.

Diamond-beetle, the *Entimus imperialis*, a splendid coleopterous insect belonging to the family Curculionidæ or weevils.

Diamond-drill. See *Boring*.

Diamond Harbor, a port on the left bank of the Hugli River, about 38 miles by the railway from Calcutta, formerly much used as an anchorage for ships waiting for the tide.

Diamond Necklace, an affair of some note in French history immediately preceding the Revolution. See *Antoinette, Marie*; *La Motte*; and *Rohan, Louis*.

Diana (dī-an'a), in mythology, an ancient Italian goddess whom the Romans latterly identified with the Greek Artēmis, with whom she had various attributes in common, being the virgin goddess of the moon and of the chase, and having as attributes the cres-

cent moon, bow, arrows and quiver. The name is a feminine form of Janus. She seems to have been originally the patron divinity of the Sabines and

Diana.—Antique statue in the Louvre.

Latins. She was worshiped especially by women as presiding over births, no man being allowed to enter her temple. See *Artemis*.

Diana-monkey (*Cercopithecus Diana*), a species of monkey found in Africa, and so named from the crescent-shaped band on the forehead resembling the crescent moon, which was the symbol of Diana.

Diana of Poitiers, *Duchess of Valentinois*, born in 1499. She was the mistress of King Henry II of France and descended from the noble family of Poitiers, in Dauphiny. At an early age she married the Grand-seneschal of Normandy, Louis de Brezé, became a widow at thirty-one, and some time after the mistress of the young Duke of Orleans. On his accession to the throne, in 1547, as Henry II, Diana continued to exercise an absolute empire over him till his death in 1559. After that event she retired to her castle of Anet, where she died in 1566.

Diandria (dī-an'dri-a), the second class in the Linnæan system, comprehending all genera with flowers having only two stamens, provided the stamens are neither united at their base, nor combined with the style and stigma, nor separated from the pistil.

Dianthus (dī-an'thus), the genus of flowers to which the pink belongs.

Diapason (dī-a-pā'zun), in music, the concord of the first and last notes of an octave. The word is also used for the most important foundation-stops of an organ. They are of several kinds, as *open diapason*, *stopped diapason*, *double diapason*. The French use the term as equivalent to pitch in music.

Diaper (dī'a-pèr), a kind of textile fabric much used for towels and napkins, and formed either of linen or cotton, or a mixture of the two, upon the surface of which a flowered or figured pattern is produced by a peculiar mode of twilling.—As a term in ornamentation diaper is applied to a surface covered with a flowered pattern sculptured in low relief, or to a similar pattern in painting or gilding covering a panel or flat surface.

Diaphoretics (dī-a-f-o-r-e't'iks) are agents used in medical practice for producing a greater degree of perspiration than is natural, but less than in sweating. The Turkish bath and a large part of hydropathic treatment, diluent drinks, etc., are employed for this purpose. *Diaphoretics* increase only the insensible perspiration, while *sudorifics* excite the sensible discharge called sweat.

Diaphragm (dī'a-fram), in anatomy, a muscular membrane placed transversely in the trunk, and dividing the chest from the abdominal cavity. In its natural situation the diaphragm is convex on the upper side and concave on its lower, but when the lungs are filled with air it becomes almost flat. It is the principal agent in respiration, particularly in inspiration. A complete diaphragm is found only in Mammalia.

Diarbekir (dē-är-bek'r), a town of Asiatic Turkey, capital of the pashalic of same name, on a high bank overlooking the Tigris, and surrounded by a lofty, massive wall. It has manufactures of iron and copper ware, leather, silk, woolen and cotton goods, and a considerable trade. Pop. about 35,000.

Diarrhœa (dī-a-rē'a), a very common disease, which consists in an increased discharge from the alimentary canal, the evacuations being but little affected, except in their assuming a more liquid consistence. They are generally preceded or accompanied by flatulence and a gripping pain in the bowels, and frequently by sickness. Diarrhœa is often produced by indigestible food, repletion of the stomach, cold applied to the surface of the body, impressions on the nervous system. It is often also a symptom of some other disease. In its simple form diarrhœa is not difficult of

cure, mild purgatives given in small doses and accompanied by quantities of mild diluents being frequently successful. Castor-oil, rhubarb and magnesia are the most generally applicable. The food should be of the least stimulating kind.

Diastase (dī'as-tās), a substance existing in barley, oats and potatoes, but only after germination. When in solution it possesses the property of causing fecula or starch to break up at the temperature of 150° Fahr., transforming it first into dextrine and then into sugar. It is obtained by digesting in a mixture of three parts of water and one of alcohol, at a temperature of 113° Fahr., a certain quantity of germinated barley ground and dried in the open air, and then putting the whole under pressure and filtering it. Diastase is solid, white and soluble in water and diluted alcohol, but insoluble in strong alcohol.

Diathermancy (dī-a-t'h'er-man-si), the property that is possessed in various degrees by different substances of transmitting radiant heat. Bodies that are equally transparent, that is, bodies which have equal power of transmitting rays of light, are very different in their power of transmitting heat rays. Thus a thin plate of glass and a thin plate of rock-salt may be nearly equally transparent, but the plate of rock-salt has far superior power of transmitting rays of heat. The latter, it has been found, allows 92 per cent. of the total heat from any source to pass; glass only 39 per cent. from a lamp flame, 24 per cent. from incandescent platinum, etc. Rock-salt is the only body equally diathermanous to heat from all sources. The diathermancy of the plates in every case decreases very rapidly as their thickness is increased.

Diathesis (dī-ath'e-sis), in medicine, a certain general habit or constitution of body as predisposing to certain diseases.

Diatomaceæ (dī-a-to-mā'se-ē), a natural order of confervoid algæ, consisting of microscopic plants found in fresh, brackish and salt water, and on moist plants and damp ground. The frond secretes a very large quantity of silex, which is formed in each cell into three portions, viz., two generally symmetrical valves and a connecting hoop. The species consist of single free cells, or the cells remain attached so as to form linear, flabelliform, circular, or geniculate fronds, or in some cases the cells or frustules are enclosed in a transparent, gelatinous sheath or frond. The ordinary method of increase is by cell division.

Diatomaceæ are found fossil, forming considerable deposits of tertiary age, as at Bilin, Bohemia; Richmond, Virginia, etc. Fossil polishing powders, as tripoli and bergmehl, are composed of them. They are abundant in guano.

Diatomite (dī-at'u-mīt), a diatomaceous earth (see *Diatomaceæ*), generally found underlying peat in various districts of Scotland. In Syke, at Loch Quire, where large supplies of diatomite have recently been discovered, it is found about 18 inches below the surface, and extends downward for about 7 feet, and in some places to a much greater depth. Diatomite is principally used for the manufacture of dynamite, its value as an absorbent being fully double that of the ordinary German kieselguhr. It is described also as extremely well adapted for the manufacture of silicate and ultramarine paints, siliceous glazings, porcelain, boiler-coatings, isolating felt, etc.

Diatonic (dī-a-ton'ik), a term originally applied by the Greeks to one of their three genera of music. In modern music it is applied to the natural scale, and to the intervals, chords, melodies, or harmony characteristic of it. A diatonic chord is a chord having no note chromatically altered. A diatonic interval is an interval formed by two notes of the diatonic scale unaltered by accidentals. A diatonic melody is a melody composed of notes belonging to one scale only.

Diaz (dō'áz), BARTOLOMMEO, a celebrated Portuguese navigator of the fifteenth century, named in 1486 commander of one of that long succession of exploratory expeditions which the Portuguese court had during this century, become distinguished for promoting. The two vessels composing the expedition sailed along the African coast till they reached Cape Negro (lat. 15° 50' s.), where Diego Cam, a previous explorer, had stopped. At 29° s. they anchored at a point to which they gave the name of Angra das Voltas (Bay of Detours). In sailing north from this point they doubled the Cape of Good Hope without knowing it, and landed at a bay on the east coast. Diaz now wished to continue his voyage in order to discover the country of Prester John, but the sailors refused to accompany him. In again doubling the Cape he gave it the name of Cabo Tormentoso (Cape of Storms), which the king changed to its present designation. In 1500 Diaz had command of a vessel in the expedition of Cabral which discovered Brazil. In returning home the

vessel which he commanded was lost, May 29, 1500.

Diaz, PORFIRIO, President of Mexico, was born at Oaxaca, Mexico, in 1830, of Indian descent through his mother. He became a lawyer, took part in civil wars (1854-67), and in 1867 was defeated in a contest for the presidency. Exiled in 1871, he returned in 1876, headed a successful revolution, and was made provisional president, being regularly elected in the following year. Under the constitution he could serve only one term, but an amendment set aside this rule, and he was again elected in 1884, being regularly reëlected until 1908. Under his rule Mexico prospered as never before, foreign capital was brought into the country, public works were built, and the resources of the state developed. But his home rule was stern and often oppressive, discontent spread widely, and in the autumn of 1910 a revolutionary movement broke out which extended throughout the country and became successful in May, 1911. The resignation of Diaz was demanded and the old ruler was forced to submit, leaving the country in voluntary exile, while the powers of government fell into the hands of the triumphant revolutionists.

Dibdin, (dib'din), CHARLES, an English dramatic manager and poet, composer and actor, born in 1745: died in 1814. At the age of fifteen he made his appearance on the stage, and was early distinguished as a composer. He invented a new kind of entertainment, consisting of music, songs and public declamations, which he wrote, sung, composed and performed, himself, and by this means succeeded in amusing the public for twenty years. His patriotic songs were very popular, and his sea-songs, among which are *Tom Bowling*, *Poor Jack* and *The Trim-built Wherry*, are still favorites in the British navy.—His son, CHARLES DIBDIN, composed and wrote many small pieces and occasional songs.—Another son, THOMAS, early displayed the same dramatic tastes as his father, was connected with various theaters, and wrote a great many songs and a number of dramas.

Dibranchiata (dī-brank-i-ā'ta), the two-gilled Cephalopods or cuttle-fishes. See *Cephalopoda*.

Dice (dis), cubical pieces of bone or ivory, marked with dots on each of their six faces, from one to six, according to the number of faces. They are shaken in a small box and then thrown on the table. Dice are often loaded or falsified in some way so as to

make the high or the low sides turn down. Dice are very ancient, being well known among the Egyptians and Greeks.

Dichlamydeous (dī-klam-id'i-us), in botany, said of plants that have both calyx and corolla.

Dichobune (dī-ko-būn'), a genus of extinct quadrupeds occurring in the Eocene formations, presenting marked affinity to the ruminants, and coming between them and the Anoplotherium.

Dichotomy (dī-kot'o-mi), a cutting in two; a division by pairs. Hence, in botany, a mode of branching by constant forking, each branch dividing into two others.

Dichroic Crystals (dī-krō'ik), crystals that have the property of exhibiting different colors when polarized light is passed through them in different directions. Thus *dichroite*, a mineral observed by Haüy, appears deep blue in the direction of the principal axis, and yellow brown in a direction at right angles to it, even when viewed with ordinary light.

Dichroite (dī'kro-it), a mineral, a silicate of magnesium, iron and aluminium, which readily undergoes modifications and passes into other minerals. It exhibits different colors. (See preceding article.) Sometimes called *Iolite*.

Dichroscope (dī'kro-skōp), an optical instrument, usually consisting of an achromatized double-image prism of Iceland spar, fixed in a brass tube, which has a small square hole at one end and a convex lens at the other, of such a power as to give a sharp image of the square hole. On looking through the instrument the square hole appears double, and if a dichroic crystal is placed in front of it the two images will appear of different colors. See *Dichroic*.

Dick, THOMAS, a Scottish author of popular scientific works, born at Dundee, in 1774. He was for many years a teacher at Perth, but afterwards resided at Broughty-Ferry, where he devoted himself to astronomical science, especially in its relations to religion. Some years before his death a small pension was granted to him by the government. Among his works are *The Christian Philosopher* (1823). *Celestial Scenery* (1838), etc. He died in 1857.

Dickens (dik'ens), CHARLES, one of the greatest English novelists, was born in 1812, at Landport, Portsmouth. His father, John Dickens, was then in the employment of the Navy Pay Department, but subsequently

became a newspaper reporter in London. Young Dickens received a somewhat scanty education, was for a time a mere drudge in a blacking warehouse, and subsequently a clerk in an attorney's office. Having perfected himself in shorthand, however, he became a newspaper critic and reporter, was engaged on the *Mirror of Parliament* and the *True Sun*, and in 1835 on the *Morning Chronicle*. For some time previously he had been contributing humorous pieces to the *Monthly Magazine*; but at length, in 1835, appeared in the *Morning Chronicle* the first of that series of *Sketches by Boz* which brought Dickens into fame. It was followed in quick succession by a pamphlet entitled *Sunday under Three Heads*, by Timothy Spark (1836); the

Charles Dickens.

Tugs of Ramsgate (1836); *The Village Coquette*, a comic opera (1836); and a farce called the *Strange Gentleman* (1836). In the same year Chapman and Hall engaged the new writer to prepare the letterpress for a series of comic sketches on sporting subjects by Seymour, an artist who had already achieved fame, and suggested as a subject the adventures of an eccentric club. Seymour committed suicide soon after, and H. K. Browne joined Dickens as illustrator, the result being the immortal *Pickwick Papers*. The great characteristics of Dickens' genius were now fully apparent, and his fame rose at once to the highest point it was possible for a writer of fiction to reach. A new class of characters, eccentric indeed, but vital representations of the humors and oddities of life, such as Mr. Pickwick, Sam Weller and his father, Mr. Winkle, and others, were made familiar to the public. Under the name of the *Posthu-*

mous Papers of the Piekwick Club this work was published in two vols. 8vo. in 1837. In the same year Dickens was engaged as editor of *Bentley's Magazine*, to which he contributed *Oliver Twist*, a work which opened up that vein of philanthropic pathos and indignant satire of institutions which became a distinguishing feature of his works. Before the completion of *Oliver Twist*, *Nicholas Nickleby* was begun, being issued complete in 1839. As the special object of *Oliver Twist* was to expose the conduct of workhouses, that of *Nicholas Nickleby* was to denounce the management of cheap boarding-schools. *Master Humphrey's Clock*, issued in weekly numbers, contained among other matter two other leading tales, *The Old Curiosity Shop* and *Barnaby Rudge*, the latter a historical tale, going back to the times of the Gordon riots. It was published complete in 1840-41. In 1841 Dickens visited the United States, and on his return wrote *American Notes for General Circulation* (1842). His next novel, *Martin Chuzzlewit* (1844), dwelt again on his American experiences. These works created great indignation in the United States by the severity of their satirical criticism. *Martin Chuzzlewit* added a number of typical figures—Mr. Pecksniff, Mark Tapley, Sarah Gamp and others—to English literature. The series of *Christmas Tales* followed, in which a new element of his genius, the power of handling the weird machinery of ghostly legend in subordination to his own peculiar humor, excited a new sensation of wonder and delight. These enumerated consecutively were: *A Christmas Carol* (1843), *The Chimes* (1844), *The Cricket on the Hearth* (1845), *The Battle of Life* (1846), *The Haunted Man* and the *Ghost's Bargain* (1847). The extraordinary popularity of these tales created for a time a new department in literature, that of the sensational tale for the Christmas season. In 1845 Dickens went to Italy, and on his return the *Daily News*, established on January 1, 1846, was intrusted to his editorial management; but, despite his early training, this was an occupation uncongenial to his mind, and in a few months the experiment was abandoned. His *Pictures from Italy* were published the same year. Next followed his novels of *Dombey and Son* (1848) and *David Copperfield*, a work which has a strong autobiographical element in it (1849-50). In 1850 Dickens became editor of the weekly serial *Household Words*, in which various original contributions from his own pen appeared. In 1853 his *Bleak*

House came out. *A Child's History of England*, commenced in *Household Words*, was published in 1852-54. *Hard Times* appeared in *Household Words*, and was published in 1854. *Little Dorrit*, commenced in 1856, dealt with imprisonment for debt, the contrasts of character developed by wealth and poverty, and executive imbecility, idealized in the *Circumlocution Office*. In 1859, in consequence of a disagreement with his publishers, *All the Year Round* superseded *Household Words*; and in the first number of this periodical, May 28, was begun *A Tale of Two Cities*. *Great Expectations* followed in the same paper, beginning December 1, 1860. In *All the Year Round* also appeared a series of disconnected sketches, called the *Uncommercial Traveler*, published in 1868. *Our Mutual Friend*, completed in 1865, and published in the usual monthly numbers, with illustrations by Marcus Stone, was the last great serial work which Dickens lived to finish. It contained some studies of characters of a breadth and depth unusual with Dickens, and is distinguished among his works by its elaborate plot. The first number of his last work, *The Mystery of Edwin Drood*, was issued on April 1, 1870, and only three numbers had appeared when he died somewhat suddenly, at his residence, Gad's Hill Place, near Rochester, on June 9th. He had considerably overtaxed his strength during his later years, more especially by his successive series of public readings from his own works, one series being delivered in America in 1867-68. He was buried in Westminster Abbey. Dickens' work as a novelist is firmly based upon a wide and keen observation of men. It is true that most of his characters suffer from being created to exhibit little more than one trait or quality alone, and thus receive an air of grotesqueness and exaggeration which approaches caricature. But the single trait or quality which they embody is so truly conceived, and exhibited with such vitality and humor, as to place Dickens, in spite of all that is grotesque and overstrained in his work, among the great artists.

Dickinson (dik'in-sun), DON M., lawyer, was born at Port Ontario, New York, in 1846; studied law in Michigan, and practiced in Detroit and Washington. He became prominent as a Democratic politician in the Greeley campaign of 1872 and the Tilden campaign of 1876. He was postmaster-general of the United States, 1887-89, chairman of the Democratic

National Campaign Committee in 1892, senior counsel for the United States in the Fur Seal Arbitration of 1896-97, and member of the Court of Arbitration in the controversy between the United States and Salvador in 1902.

Dickinson College, a collegiate institution at Carlisle, Pennsylvania, the oldest in the State except the University of Pennsylvania, it being founded in 1783. It was named after Hon. John Dickinson, who gave it valuable gifts. It was a Presbyterian institution until 1883, when it passed under the control of the Methodists. It has endowed funds of about \$360,000.

Dickson (dik'sun), a borough in Lackawanna Co., Pennsylvania, 5 miles N. of Scranton. It has foundries, machine shops, silk-mills, etc., and coal is mined in its vicinity. Pop. 9331.

Dicotyledon (dī-kot-i-lē'don), a plant whose seeds are characterized by the embryo containing a pair of cotyledons or seed-leaves, which are always opposite to each other. Dicotyledons are further characterized by their netted-veined leaves and the exogenous structure of their stems. The class is divided into four subclasses: Thalamifloræ, Calycifloræ, Corollifloræ and Monochlamydeæ (which see, respectively). The class receives also the name of *exogens*.

Dictator (dik-tā'tur), an extraordinary magistrate of the Roman republic, first instituted B.C. 501. The power of naming a dictator when an emergency arose requiring a concentration of the powers of the state in a single superior officer was vested by a resolution of the senate in one of the consuls. The dictatorship was limited to six months, and the person who held it could not go out of Italy. This rule was laid aside during the first Punic war. The dictator was also forbidden to appear in Rome on horseback without the permission of the people, and he had no control over the public funds without the permission of the senate. He had the power of life and death, and could punish without appeal to the senate or people. All the other magistrates were under his orders.

Dictionary (dik'shun-ar-i; from the Latin *dictio*, a saying, expression, word), a book containing the words, or subjects, which it treats, arranged in alphabetical order. It may be either a vocabulary, or collection of the words in a language, with their definitions; or a special work on one or more branches of science or art prepared

on the principle of alphabetical arrangement, such as dictionaries of biography, law, music, medicine, etc. Among dictionaries of the English language, the earliest seem to have been those of Baret, 1573, and of Bullokar, 1616. That of Dr. Johnson, published in 1755, made an epoch in this department of literature. Previous to this the chief English dictionary was that of Bailey, a useful work in its way. An enlarged edition of Johnson's dictionary, by the Rev. H. J. Todd, appeared in 1818; and this, again enlarged and modified, was issued under the editorship of Dr. R. G. Latham (1864-72). The first American dictionary was that of Noah Webster, first published in 1828, and frequently republished since. It greatly enlarged the dictionary vocabulary, gave full etymologies, and indicated both pronunciation and syllabification. It was the first dictionary to embody the historical principles of treatment which find their culmination in the *New English Dictionary*. This monumental work is being edited mainly by Dr. James A. H. Murray of Oxford, England. The first section was published in 1884. A rival of Webster's work appeared in Worcester's in 1859; and many smaller dictionaries for home and school use have since found general acceptance. *The Century Dictionary*, the first edition of which appeared in 1889-91, is the best American dictionary on a large scale. The chief etymological dictionary of the English language, is that of Professor Skeat. The greatest French dictionary is that of Littré; the greatest German, that of the brothers Grimm; the greatest Latin, the *Thesaurus Linguae Latinæ*, now being prepared.

Dictograph (dik'tō-graf), a telephone apparatus for the dictation of letters, etc., to a person at a distance.

Dictyogen (dik-tī'ō-jen), the name given by Lindley to a group of monocotyledonous plants, with net-veined leaves, intermediate between the monocotyledons and dicotyledons, as the yam, sarsaparilla, etc.

Didactic Poetry (di-dak'tik), poetry which professes to give a kind of systematized instruction on a definite subject or range of subjects. Thus the *Georgics* of Virgil and the *De Rerum Natura* of Lucretius undertake to give the one a complete account of agriculture and kindred arts, the other a philosophical explanation of the world. In a larger sense of the word most great poems might be called didactic, since they

contain a didactic element in the shape of history or moral teaching. Dante's *Divina Commedia*, Milton's *Paradise Lost*, or Goethe's *Faust*, for example. The difference may be said to be this, that in the one case the materials are limited and controlled by nothing but the creative fancy of the poet, while in the other they are much more determined by the actual nature of the subject treated of.

Didelphia (dī-dēl'fi-a), one of the three subclasses of the mammalia (the others being Monodelphia and Ornithodelphia), comprising the order otherwise known as Marsupials, which form the only order in the subclass.

Didelphys (dī-del'fis). See *Opossum*.

Diderot (dēd-rō), DENIS, a French writer and philosopher, was born in 1713, at Langres, in Champagne, and educated in the school of the Jesuits, and afterwards at Paris, at the College of Harcourt. His first works were the *Essai sur le Mérite et la Vertu* (1745); and the *Pensées Philosophiques* (1746), a pamphlet against the Christian religion. His *Lettre sur les Aveugles à l'Usage de Ceux qui Voyent*, is in the same strain. These heterodox publications cost him an imprisonment for some time at Vincennes. Diderot now tried writing for the stage, but his pieces were failures. In 1749 he had begun along with D'Alembert and some others the *Encyclopædia*. At first it was intended to be mainly a translation of one already published in English by Chambers. Diderot and D'Alembert, however, enlarged upon this project, and made the new *Encyclopædia* a magnificently comprehensive and bold account of all the thought and science of the time. Diderot, besides revising the whole, undertook at first the mechanical arts, and subsequently made contributions in history, philosophy and art criticism. But the profits of all his labor were small, and it was only the liberality of the Empress Catharine, who purchased his library for 50,000 livres and made him a yearly allowance of 1000 livres, that saved Diderot from indigence. In 1773 he visited St. Petersburg to thank his benefactress and was received with great honor. On his return to France he lived in retirement, and died in 1784. Besides his articles in the *Encyclopædia*, he wrote numerous works, some of which were published after his death. Among the best known are *Le Nègre de Rameau*, a kind of philosophical dialogue which Goethe thought worthy of translation; *Essai sur la Peinture*, and *Paradoxe sur le Comé-*

dieu, suggestive essays on the principles of painting and acting; two lively tales, *La Religieuse* and *Jacques le Fataliste*.

Dido (dī'do), or ELISSA, the reputed founder of Carthage. She was the daughter of a king of Tyre, and after her father's death her brother Pygmalion murdered her husband Sichaerbas, or as Virgil calls him, Sichæus, with the view of obtaining his wealth. But Dido, accompanied by many Tyrians of her party, fled with all the treasure over sea, and landing on the coast of Africa, founded Carthage about 860 B.C. The story is told by Virgil with many inventions of his own in the *Aeneid* (books i and ii).

Didot (dē-dō), a famous house of printers, booksellers and type-founders at Paris. The founder was FRANÇOIS DIDOT, born in 1689; died in 1757. Of his sons FRANÇOIS AMBROISE (born in 1720; died in 1804) and PIERRE FRANÇOIS (born in 1732; died in 1795), the first distinguished himself in the type-founding art as an inventor of new processes and machines, the second was equally eminent by his bibliographical knowledge, and contributed much also to the advancement of printing. PIERRE (born in 1761; died in 1853), succeeded his father FRANÇOIS AMBROISE in the printing business. He made himself famous by his magnificent editions of classic authors in folio, among which his Virgil (1798) and his Racine (1801) may be particularly mentioned. He did much also for the improvement of types, etc. He is known also as an author.—FIRMIN (born in 1764; died in 1836), the brother of Pierre, took charge of the type-founding, was the inventor of a new sort of script, and an improver of the stereotype process.—AMBROISE FIRMIN (born in 1790; died in 1876) and HYACINTHE FIRMIN (born in 1794; died in 1880) occupied a distinguished position among the publishers of Paris. The house has now extended its trade into everything connected with bookselling, papermaking, bookbinding, etc.

Didunculus (dī-dung-kū-lus), a genus of birds allied to the pigeons, and comprising only the one species, *D. strigirostris* of the Navigator Islands. The bird is of special interest as being the nearest living ally of the extinct dodo. It has a length of about 14 inches, with a glossy plumage verging from velvety black on the back to a greenish black on the head, breast and abdomen. The large beak, which is nearly as long as the head, is greatly arched on the upper half, while the lower

is furnished with two or three tooth-like indentations.

Didunculus strigirostris.

Didymium (dī-dim'i-um), a rare metallic element, occurring along with *lanthanum* in the mineral cerite as discovered by Mosander in 1843. Recently it is said to have been resolved into two new elements: *Praseodymium* and *Neodymium*.

Didynamia (dī-di-nā'mi-a), the fourteenth class in the Linnaean system of plants, the members of which have four stamens, of which two are longer than the other two.

Die (dī), a metallic stamp for impressing a design or figure upon coins or other metallic objects. See *Die-sinking*.

Die (dē), an ancient town of France, dep. Drôme, 26 miles southeast of Valence; with a former cathedral and Roman remains. Pop. (1906) 3090.

Dié (dē-ā), St., a town of France, dep. of Vosges, on the Meurthe, 25 miles E. N. E. of Epinal. Both iron and copper are worked; there are marble quarries; and a variety of manufactures are carried on. Pop. 16,289.

Diebitsch-Sabalkanski, H A N S K A R L, a Russian general, born at Grossleippe in Silesia in 1785, was educated at the military school of Berlin, but in 1801 quitted the Prussian service for that of Russia. He was present at the battles of Austerlitz and Friedland, served with distinction in the campaign of 1812, took part in the battles of Dresden and Leipzig, and was made lieutenant-general at the age of twenty-eight. He had the chief command in the Turkish war of 1828-29, stormed Varna, and made the famous passage of the Balkans, for which the surname of Sabalkanski was conferred on him. In 1830 he commanded the army sent against the revolted Poles, but did not distinguish himself in this service. He died in 1831.

Diedenhofen (dé'den-hō-vn). See *Thionville*.

Dieffenbach (dē'fen-báh), JOHANN FRIEDRICH, a German surgeon, born at Königsberg in 1792. After having studied at Bonn and Paris he settled in Berlin, where his talent as an operator soon attracted notice. Surgery is particularly indebted to him for new methods of forming artificial noses, eyelids, lips, etc., and curing squinting, stammering, etc. He died in 1847.

Dieffenbachia (dēf-en-bak'i-a). See *Dumb-cane*.

Dielectric (dī-e-lek'trik), a name applied by Faraday to any medium through or across which electrostatic induction can take place. (See *Induction*, *Electrostatic*.) Faraday first showed that electrostatic induction was not action at a distance, but took place by means of the insulating medium separating the two conductors. The medium he named a *dielectric*, and measured its specific inductive capacity by taking that of common air as unity.

Dielytra (dī-e-lī'tra), a genus of plants belonging to the nat. order Fumariaceæ or Fumiteries. The best known is *D. spectabilis*, a native of Northern China and Siberia, now common in European and other gardens. It blossoms in April and May, and its long drooping racemes of purplish-red blossoms present a very graceful appearance. It grows freely in the open air. It is sometimes called pendent heart or virgin's heart from the shape of the blossoms.

Diemen (dē'men), A N T O N V A N, a Dutch administrator, was born in 1593. Having gone to India, he speedily rose to the highest dignities, and was at length, in 1636, made governor-general. He administered the government with much ability, and contributed much to the establishment of the Dutch commerce in India. Abel Tasman, whom he sent with a vessel to the South Seas in 1642, gave the name of *Van Diemen's Land*, to the island now called Tasmania. Van Diemen died in 1645.

Dieppe (dē-ep), a seaport town of France, department Seine-Inférieure, on the English Channel, at the embouchure of the Arques, 93 miles N. N. W. Paris. Almost the only public edifices worth special notice are the two Gothic churches (St. Jacques, begun in the thirteenth century, and St. Rémi, founded in 1522), and the old castle (1433), now a barrack. To the west of Dieppe proper is the suburb La Barre; and on the opposite side of the harbor

La Pollet, which is inhabited chiefly by sailors and fisherman. The port is spacious, admitting vessels of 1200 tons burden; but it cannot be entered at low water. Dieppe is one of the chief watering places of France, and is much frequented by visitors in summer and autumn. The great bathing establishment forms a luxurious retreat for bathers and invalids, and includes a ballroom, etc. The manufactures include works in ivory, the most famed in Europe; works in horn and bone, lacemaking, sugar-refining, shipbuilding, etc. There is a busy fishery, and the foreign trade is still considerable. There is constant steam intercourse between this port and Newhaven. In early times Dieppe was the chief port of France, but its prosperity diminished after the revocation of the Edict of Nantes (1685). Pop. (1906) 22,120.

Dies Fasti et Nefasti (dī' ē s), a Roman division of days, with reference to judicial business, into working days and holidays. A *dies fastus* was a day on which courts and assemblies could be held and judgments pronounced; a *dies nefastus*, a day on which courts could not be held nor judgments pronounced.

Die-sinking, is the art of preparing dies for stamping coins, buttons, medallions, jewelry, fittings, etc. The steel for the manufacture of dies is carefully selected, forged at a high heat into the rough die, softened by careful annealing, and then handed over to the engraver. After the engraver has worked out the design in intaglio the die is put through the operation of hardening, after which, being cleaned and polished, it is called a *matrix*. This is not, however, generally employed in multiplying impressions, but is used for making a *punch* or steel impression for relief. For this purpose another block of steel of the same quality is selected, and, being carefully annealed or softened, is compressed by proper machinery upon the matrix until it receives the impression. When this process is complete the impression is retouched by the engraver, and hardened and collared like the matrix. Any number of dies may now be made from this punch by impressing upon it plugs of soft steel. In place of this process patterns are now frequently engraved upon rollers for transference to sheet metal by rolling pressure.

Dies Iræ (dī' ē s ī' rē), one of the great Latin hymns of the mediæval church, generally used as part of the requiem or mass for the souls of the dead. It describes, as its name ('the

day of wrath') denotes, the final judgment of the world, and seems to have been suggested by the description in Zephaniah, i, 15 and 16. It is supposed to have been written by Thomas da Celano, a Franciscan friar of the thirteenth century. There are many translations, but hardly any which convey the solemn force of the original.

Diest (dēst), a town of Belgium, province Brabant, 32 miles E. N. E. Brussels. It has some manufactures, but the chief products of the place are beer and gin, the former being largely exported. Pop. (1904) 8383.

Diet (dī'et), a meeting of some body of men held for deliberation or other purposes; a term especially applied to the legislative or administrative assemblies of the German Empire, Austria, etc.

Dietetics (dī-e-tet'iks), that part of medicine which relates to the regulation of diet. The ideal diet is clearly that which, without burdening the viscera uselessly, furnishes all necessary nutritive elements, with due consideration for special physiological conditions in any given case. Under the head of *Aliment* the physiological properties of various foods have already been considered theoretically in respect of their capacity to supply physical waste in nitrogenous and non-nitrogenous matter. (See *Aliment*.) No single substance contains the elements needed to replace this waste in their requisite proportions, and a mixed diet is therefore necessary. For instance, to secure the required amount of carbon a man would need to eat about 4 lbs. of lean beef, while 1 lb. would yield all the nitrogen required; thus, apart from the labor of digesting 4 lbs. of beef, the body would be compelled to get rid of the excess of nitrogen. Bread, on the other hand, has carbon in abundance, but is deficient in nitrogen; so that by uniting 2 lbs. of bread with $\frac{3}{4}$ lb. of lean meat, the due proportion of carbon and nitrogen is satisfactorily supplied. Milk and oatmeal taken together also contain nitrogenous and non-nitrogenous substances in nearly the required proportions. A certain proportion of saline matter is also necessary. The nature of the food most suitable for a healthy man is dependent in part upon general conditions such as climate and season, and in part upon special conditions of individual habit. The inhabitants of the Arctic regions need large quantities of oleaginous food; those of the tropics live chiefly on starchy products. With increased activity and exertion, as in training, an increase in the

nitrogenous foods becomes necessary. In a state of health we need not draw hair-breadth distinctions as to the superior salubrity of the several sorts of diet, the quantity rather than the quality of food being the main consideration. Those persons who have been most remarkable for health and life have generally been contented with two moderate meals a day, which are certainly quite sufficient during a state of health. In various countries the breakfast generally consists of tea, coffee, or cocoa, with a certain proportion of bread and butter; persons with delicate digestive powers, or who lead a sedentary life, cannot with safety or comfort eat animal food *constantly* at breakfast. At dinner all made dishes highly spiced, such as curries, turtle-soup, etc., as provoking appetite, are hurtful; and the custom of late dining is not to be commended. Stewed and boiled meats are more difficult to digest than meat cooked by fire alone. The flesh of young animals seems to be more difficult of digestion than that of old; and the flesh of tame than that of wild animals. All sorts of fat meat must be taken in smaller quantities. Hence, also, ham, bacon and salted meats cannot be eaten in such quantities as the tender flesh of poultry. Fish has the advantage of being easily soluble. All boiled vegetables are in general easy of digestion; raw vegetables and salads are rather more difficult. Fruit should be taken in the forenoon rather than after a hearty meal.

In all diseases attended with much fever or quickness of pulse the stomach loathes animal food, and there is generally a great increase of thirst, to quench which water, either quite cold, or iced, or tepid, or rendered acid, may be freely indulged. Infusions, too, of barley, sage, balm, etc., may be taken. In chronic diseases attended with hectic fever, milk is the most proper diet. The best food for infants is, of course, their mothers' milk; but whenever they begin to cut teeth a little animal food, such as soft-boiled eggs, beef broth and even chicken minced very fine, may be given. Many infants suffer from having too much sugar given them in their food.

Dietrich (dē'trih), CHRISTIAN WILHELM ERNST, a German painter and engraver, called by Winckelmann 'the Raphael of Landscape,' born in 1712. He studied under his father, and afterwards under Alexander Thiele at Dresden, where he became court painter, professor in the academy, etc. He adopted several different manners or styles of painting, successfully imitating

Raphael and Mieris, Correggio and Ostade. He died in 1774.

Dietrich of Bern, the name under which Theodoric the Great, king of the Ostrogoths, appears in the old German legends. Bern stands for Verona, his capital.

Dieu, or D'YEU (dyeu; ancient *Insula Dei*), an island off the west coast of France, department of Vendée. It is inaccessible on the west side, but on the east has a tolerable harbor defended by batteries. The chief industry is fishing. There are four lighthouses on the island. Pop. about 3000.

Dieu et Mon Droit (dyeu e mon drwä; 'God and my right'), the motto of the arms of England, first assumed by Richard I, and revived by Edward III when he claimed the crown of France. Except during the reigns of Elizabeth and Anne, who used the motto *Semper eadem*, and of William III, who personally used *Je maintiendray*, it has ever since been the royal motto of England.

Diez (dêts), FRIEDRICH CHRISTIAN, a German philologist of the Romance languages, born in 1794. Having qualified himself as a lecturer at Bonn, he was appointed professor of the Romance languages in 1830. His work stands in much the same relation to the Romance dialects which the researches of Grimm occupy with respect to German dialects. In addition to various works on the poetry of the Troubadours, he published a very valuable *Grammatik der Romanischen Sprachen* in 1836-42, and an *Etymologisches Wörterbuch der Romanischen Sprachen* in 1853. He died in 1876.

Differential Calculus. See *Calculus*.

Differential Thermometer (dif-e-ren'-shal), an instrument for determining very minute differences of temperature. Leslie's differential thermometer consists of two glass bulbs containing air connected by a bent tube containing some sulphuric acid, the movement of which (as the air expands and contracts) serves to indicate any slight difference of temperature between the two bulbs.

Diffraction (di-frak'shun), a term applied to certain phenomena connected with the modification that rays of light undergo in passing close to the edge of an opaque body. Thus when a beam of direct sunlight is admitted into a dark room through a narrow slit, and falls upon a screen placed to receive it, there appears a line of white light bordered by colored fringes;

these fringes are produced by diffraction. See *Interference*.

Diffusion (di-fū'shun), the gradual dispersion of particles of one liquid or gas among those of another. Thus, in the case of gases, when a jar of oxygen and a jar of hydrogen are connected together by a tube or opening of any kind, they rapidly become mixed; and their mixture does not depend on gravity, but takes place in opposition to that force, as may be shown by placing the jar of hydrogen gas above the other. Oxygen is sixteen times heavier than hydrogen, bulk for bulk, but the heavier gas moves upwards and the lighter downwards, and the process of intermixture, or *diffusion*, goes on until the two gases are apparently equally distributed throughout the whole space. After that they have no tendency whatever to separate. Similarly, if two vessels, one containing oxygen and the other hydrogen, be connected by a tube which is stuffed with a plug of porous material, such as plaster of Paris, the gases gradually diffuse one into the other through the porous plug. The two gases, however, do not pass through the porous separator at equal rates, but in *inverse proportion to the square roots of the densities of the gases*. Thus in the cases of two vessels, one containing hydrogen and the other oxygen, which is sixteen times as heavy as hydrogen, the hydrogen will pass towards the oxygen jar four times as quickly as the oxygen will pass towards the hydrogen jar. Kindred phenomena occur when two liquids that are capable of mixing, such as alcohol and water, are put in contact, the two gradually diffusing one into the other in spite of the action of gravity. In some cases, however, as where ether and water are employed, the diffusion is only partial, extending a comparatively small distance on either side of the original line of separation. When solutions of various solid bodies are placed in contact, interdiffusion also takes place. On the results of his examination of the phenomena of diffusion of liquids and salts across porous membranes or *septa*, Graham founded a method of separating *colloid* from *crystalloid* bodies, which he called *dialysis* (which see).

Digamma (dī-gam'a), a letter which once belonged to the Greek alphabet, and which remained longest in use among the Æolians. It resembled our letter F, and hence was called *digamma*, that is, double F. It appears to have had the force of *f* or *v*.

Digby (dig'bi), SIR EVERARD, an English gentleman, born of a

Roman Catholic family in 1581. He enjoyed some consideration at the court of Elizabeth and James I, by whom he was knighted. Having been accused of contributing money to the Guy Fawkes conspiracy, he was hanged in 1606.

Digby, SIR KENELM, eldest son of the preceding, born in 1603. He studied at Oxford, was knighted in 1623, and on the accession of Charles I was created a gentleman of the bedchamber, a commissioner of the navy, and a governor of the Trinity House. He soon after fitted out at his own expense a small but successful squadron against the Algerines and Venetians. In 1636 he became a Roman Catholic, and was imprisoned as a Royalist from 1638 to 1643, when he was allowed to retire to the continent. At the restoration he returned to England, became a member of the Royal Society, and was much visited by men of science. He died in 1665. He wrote numerous works; a *Treatise on the Nature of Bodies*, a *Treatise on the Nature and Operation of the Soul*, *Of the Cure of Wounds by the Power of Sympathy*, etc. Evelyn calls him 'an arrant mountebank.'

Digest (dī'jest), a name originally given to a collection or body of Roman laws, digested or arranged under proper titles by order of the emperor Justinian. Hence applied to any somewhat similar collection.

Digester (di-jes'ter), a strong vessel of copper or iron, on which is screwed an air-tight cover with a safety-valve, the object being to prevent loss of heat by evaporation. Water may be thus heated to 400° Fahr.; at which temperature its solvent power is so greatly increased that bones are converted into a jelly.

Digestion (di-jest'yun), is that process in the animal body by which the aliments are so acted upon that the nutritive parts are prepared to enter the circulation, and separated from those which cannot afford nourishment to the body. The organs effecting this process are called the *digestive* organs, and consist of the stomach, the great and small intestines, etc. (see *Intestine*, *Stomach*), the liver and pancreas. When the aliments, after being properly prepared and mixed with saliva by mastication, have reached the stomach, they are intimately united with a liquid substance called the *gastric juice*, by the motion of the stomach. By this motion the aliments are mechanically separated into their smallest parts, penetrated by the gastric juice, and transformed into a uniform pulpy or fluid mass. The gas-

tric juice acts upon the albuminous parts of the food, converting them into peptones, which can pass through organic membranes and thus enter the blood. This action is aided by the warmth of the stomach. The pulpy mass, called *chyme*, proceeds from the stomach through the pylorus, into that part of the intestinal canal called the small intestine, where it is mixed with the pancreatic juice, bile and intestinal juice. The pancreatic juice converts starch into sugar, albumins into peptones, and emulsionizes fats, so that all these kinds of food are rendered capable of absorption. The process is aided by the intestinal juice. The bile also acts upon fats, and thus the food is formed into the *chyle*, which is absorbed into the system by the capillary vessels called *lacteals* (see *Chyle*, *Chyme*), while the non-nutritious matters pass down the intestinal canal and are carried off.

Digit (dij'it; Lat. *digitus*, a finger), in arithmetic, any one of the ten numerals, 1, 2, 3, 4, 5, 6, 7, 8, 9, 0. Digit is also a measure of a finger's breadth, equal to $\frac{3}{4}$ inch.—*Digit*, in astronomy, is the measure by which we estimate the quantity of an eclipse. The diameter of the sun or moon's disk is conceived to be divided into twelve equal parts, called *digits*; and according to the number of those parts or digits which are obscured, so many digits are said to be eclipsed.

Digitalin (dij-i-tal'in), a vegetable glucoside, the active principle of the *Digitālis purpurēa* or foxglove. It is white, difficult to crystallize, inodorous, has a bitter taste, and is a strong poison.

Digitalis (dij-i-tal'is), a genus of plants, nat. order Scrophulariaceæ, containing about twenty species of tall herbs, natives of Europe and Western Asia. The purple foxglove (*D. purpurēa*) is a common wild flower in Britain, and several species are grown in American gardens. Digitalin, also preparations of digitalis leaves, are used as cardiac stimulants and diuretics.

Digitate (dij'i - tāt), in botany, branched out into divisions resembling fingers, said of leaves or roots.

Digitigrada (dij-it-i-grā'da), a section of the Carnivora, so called from their walking on the ends of their toes; as distinguished from the Plantigrada, which, like the bear, place the whole foot upon the ground. This tribe includes the weasel, dog, cat, etc.

Digitorium (dij-i-tō'ri-um), a small portable dumb instrument having a short keyboard with five

keys like those of a piano, used by pianoplayers for practice, to give strength and flexibility to the fingers.

Digne (dēn'y'), a town of France capital of the department of Basses-Alpes, picturesquely situated on a mountain slope, 60 miles northeast of Marseilles. Pop. 4628.

Dihong (dē-hong'). See *Brahmaputra*.

Dijon (dē-zhōn), a town in Eastern France, capital of the department Côte-d'Or, in a fertile plain, at the foot of a range of vine-clad slopes, formerly surrounded by ramparts, which now furnish beautiful promenades. At some distance it is surrounded by a series of forts. Some of the buildings belong to the period when Dijon was capital of the dukedom of Burgundy, the chief being the cathedral, a building of vast extent with a lofty wooden spire above 300 feet high; the churches of Nôtre Dame and St. Michael; the ancient palace of the dukes of Burgundy, now used as the hôtel de ville and museum; and the *palais de justice*, formerly the parliament house of Burgundy. It has important educational institutions and a valuable library. Industries: woolens, hosiery, candles, mustard, vinegar, chemicals, paper-hangings, etc., tanneries, foundries, machine factories, cotton and oil mills. The trade is considerable, particularly in the wines of Burgundy. Pop. (1906) 65,516.

Dika (dē'ka), a vegetable fat obtained from the seeds of a W. African tree, genus *Irvingia*, used in making fine soaps.

Dikamali (dē-ka-mā'li), a resin exuding from Indian trees, genus *Gardenia*, a solution of which is used to dress wounds and open sores.

Dike (dik), or DYKE, a word variously used in different localities to represent a ditch or trench, and also an embankment, rampart, or wall. It is specially applied to an embankment raised to oppose the incursions of the sea or a tidal river, the dikes of Holland being notable examples of work of this kind. These are often raised 40 feet above the high-water mark, and are wide enough at the top for a common roadway or canal, sometimes for both. The Helder Dike, one of the largest, is about 6 miles in length and involves an annual outlay of over \$30,000.

Dike, DYKE, in geology, a term applied to intrusions of igneous rock, such as basalt, greenstone, etc., which fill up veins and fissures in the stratified systems, and sometimes project on the surface like walls.

Dilapidation (di-lap-i-dā'shun), in English law, is where an incumbent of a church living suffers the parsonage house or outhouses to fall down, or be in decay for want of necessary repairs; or it is the pulling down or destroying any of the houses or buildings belonging to a spiritual living, or destroying of the woods, trees, etc., appertaining to the same. An outgoing incumbent (or his heirs) is liable for dilapidation to his successor.

Dilemma (di-lem'a; from Gr. *dis*, twice, and *lēmma*, an assumption), in logic, an argument in which the same conclusion may be drawn from two contrary propositions. We append one of the most famous of the classical dilemmas. A young rhetorician said to an old Sophist: 'Instruct me in pleading and I shall pay you when I gain a cause.' The master sued for the reward, and the scholar eluded the claim by a dilemma. 'If I gain my cause I shall not pay you, because the award of the judge will be against you. If I lose it I may withhold it, as I shall not have gained a cause.' The master replied: 'If you gain you must pay me, because you promised to pay me when you gained a cause; if you lose you must pay me, because the judge will award it.' The two results which are found equally objectionable are called the 'horns' of the dilemma.

Dilettante (di-let-tān'tā), an Italian expression, signifying a lover of the arts and sciences, who devotes his leisure to them as a means of amusement and gratification, being thus nearly equivalent to *amateur*. In 1734 a number of gentlemen founded in London a Dilettante Society which published a splendid work on *Ionian Antiquities*, 1769-1840; *Specimens of Ancient Sculpture, Egyptian, Etruscan, Greek and Roman*, 1809, 1835; the *Temples of Ægina and Bassæ*, 1860, etc.

Dilke (dilk), SIR CHARLES W., an English official and author, born at Chelsea in 1843. He entered Parliament as a radical in 1868 and in 1882 became president of the local government board, with a seat in the cabinet. He wrote *Problems of Greater Britain*, *Army Reform*, *The British Empire*, and other works. His wife, Emily F. Dilke, is an able art critic and author of *The Renaissance of Art in France*, *Art in the Modern State*, etc.

Dill (dil), an umbelliferous plant, *Anethum graveolens*, a native of the southern countries of Europe, the fruits, commonly but erroneously called seeds, of which are moderately warming,

pungent, and aromatic, and are employed medicinally as a carminative. In appearance it resembles the fennel. Dill-seeds yield dill-water and an essential oil, when distilled with water. Dill-water is used as a remedy in flatulency and gripes of children.

Dilleniaceæ (dil-en-i-ā'se-ē), an order of plants, chiefly fine trees, inhabiting the East Indies, allied to Ranunculaceæ and Magnoliaceæ.

Dillingen (dil'ing-en), an old town of Bavaria, on the Danube. 24 miles northwest of Augsburg. It was long the seat of a Jesuit university, and the castle was formerly the ordinary residence of the Bishop of Augsburg. Pop. (1905) 6078.

Dillon (dil'un), JOHN, politician, was born of Irish parentage in New York in 1851, educated at the Catholic University of Dublin, and early identified himself with the Parnellite movement for reform in Irish affairs. He was elected to Parliament for County Tipperary in 1880 and soon became prominent there for the violence of his language. In Ireland his speeches were so ultra-radical that they led to his imprisonment three times between 1881 and 1888. He became one of the most prominent promoters of the 'Plan of Campaign' in Irish agitation, and in 1896 succeeded Justin McCarthy as chairman of the main section of the Irish Nationalist party.

Dilman (dēl-mān'), a town of Persia, province of Azerbaijan, 75 miles west of Tabreez. Pop. estimated at 15,000.

Dilolo (dē-lō'lo), a small lake in Central S. Africa, lat. 11° 30' s.; regarded as the source of the Zambesi.

Dilo-oil (dē'lo-oil), an oil obtained from the poon-tree of India, also called poon-seed oil. See *Poon*.

Diluents (dil'ū-ents), in medicine, are those substances which are taken to increase the proportion of fluid in the blood. They consist of water and watery liquors.

Diluvium (di-lō'vi-um), the name formerly given by geologists to certain gravels and comparatively recent deposits, which seem to have been the result of a rush of water or *deluge*.

Dime (dim; French, *dîme*, Lat. *decimus*, tenth), the term for the tenth part of a dollar or ten-cent piece in the United States of America, a silver coin whose English equivalent is about 5d.

Diminutive (di-min'ū-tiv), in grammar, a word having a special affix which conveys the idea of littleness, and all other ideas connected with this, as tenderness, affection, con-

tempt, etc. The opposite of *diminutive* is *augmentative*. In Latin, diminutives almost always ended in *lus*, *la*, or *lum*; as *Tulliola*, *meum corculum*, little Tullia, my dear or little heart; *homunculus*, a manikin. The Italian is particularly rich in diminutives and augmentatives, such compound diminutives as *fratellinucciettinetto* (a diminutive of *frate*, brother) being sometimes employed. Among English diminutive affixes are *kin*, as in *manikin*, a little man; *pipkin*, a little pipe; *ling*, as in *gosling*, a little goose; *darling*, that is, *dearling*, or little dear; and *et*, as in *pocket*, from *poke*, a bag or pouch; *tablet*, a little table. Diminutives are also formed, in colloquial and familiar language, by adding *y* or *ie* to the names, as *Charley*, *mousie*, etc.

Dimity (dim'i-ti), a stout cotton fabric, ornamented in the loom either by raised stripes or fancy figures. It is usually employed white, as for bed and bedroom furniture.

Dimorphism (dī-morf'izm), in crystallography, the crystallization of a body in forms belonging to two different systems, or incompatible forms of the same system, a peculiarity exhibited by sulphur, carbon etc.

Dimorphism, in botany, the condition when analogous organs of the same species appear under two very dissimilar forms. Thus the common primrose occurs in two forms, one having long stamens and a short pistil, the other a long pistil and short stamens.

Dinajpur (dē'nāj-pör), a town of Bengal, Hindustan, capital of a district of the same name, 205 miles north of Calcutta; pop. 13,430. The district covers an area of about 4118 square miles; pop. 1,567,080.

Dinan (dē-nän), a town of France department of Côtes-du-Nord (Brittany), on the Rance, 14 miles south of St. Malo. It stands on a steep hill nearly 200 feet above the river, is surrounded by high old walls pierced with four gates, and is a picturesque and interesting old place. Pop. (1906) 8588.

Dinant (dē-nän), a town of Belgium, in the province and 14 miles s. of Namur; picturesquely and strongly situated on the Meuse, a place of antique appearance. The town-house was once the palace of the Princes of Liège. Pop. (1904) 7674.

Dinapur (dē'nä-pör), a town of Patna district, Bengal, Hindustan, on the right bank of the Ganges, about 12 miles N. W. of Patna. It is a cantonment and military headquarters of the district with extensive barracks.

The environs are studded with handsome bungalows. Pop. with cantonment, 33,700.

Dinar (dē-nār'; L. *denarius*), formerly an Arab gold coin, also a Persian coin; at present the chief Servian coin, value 1 franc.

Dindigal (din-di-gul'), a town of Madras Presidency, Madura district, India, with a fort on a rocky height. Pop. (1905) 25,182.

Dindorf (din'dorf), WILHELM, a German classical scholar, born in 1802, lived most of his life at Leipzig, and died in 1883. His chief publications were editions of the Greek dramatists and works elucidative of them and other Greek writers.

Dingo (ding'gō), the native wild dog of Australia (*Canis Dingo*), of a wolf-like appearance and extremely fierce. The ears are short and erect, the tail rather bushy, and the hair of a reddish-dun color. It is very destructive to the flocks, killing more than it eats. Its remains have been found fossil, but the fact of its having been the only placental mammal in this continent renders its indigenous character doubtful.

Dinitronaphthol (din-ī-trō-nap'thol). See *Naphthyl*.

Dinoceras (dī-nō'se-ros; Gr. *deinos* terrible, *keras*, a horn), a fossil mammal found in the Eocene strata of N. America, in some respects akin to the elephant and of equal size, but without a proboscis. Its bones were very massive; it had two long tusks in the upper jaw, three pairs of horns, and brain proportionally of any known mammal.

Dinornis

(dī-nor'nis; Gr. *deinos*, terrible, *ornis*, a bird), an extinct genus of large wingless birds—classed among the Struthionidæ or ostrich tribe—the bones of five species of

the smallest Dinornis (pelvic and leg bones which have and outline of body). been found in New Zealand. The largest must have stood at least 14 feet in height, several of its bones being at least twice the size of those of the ostrich. The

body seems to have been even more bulky in proportion, the tarsus being shorter and stouter in order to sustain its weight. They do not appear to have become extinct until the seventeenth or eighteenth century, and are spoken of as *moas* by the natives, who buried the eggs with their dead as provision for their journey to the other world.

Dinosauria (dī-nō-sā'ri-a; Gr. *deinos*, terrible, and *sauros*, a lizard), a group of colossal lizards, resembling the pachydermatous mammals in general appearance, but in reality intermediate between the struthious birds and lizards. The majority, as the *Megalosaurus*, which attained to 40 feet in length, were carnivorous; the *Iguanodon*, however, was herbivorous. They were the land reptiles of the Jurassic, Wealden and inferior Cretaceous continents.

Dinotherium (dī-no-thē'ri-um; Gr. *deions*, terrible; *thērion*, beast), a genus of extinct gigantic mammals, the remains of which occur in Tertiary formations in several parts of Europe. The largest species (*D. giganteum*) is calculated to have attained the length of 18 feet. It had a proboscis and also two tusks placed at the anterior extremity of the lower jaw, and curved downwards somewhat after the manner of those in the upper jaw of the walrus. The zoological position of the dinotherium is that of a proboscidean allied to the elephant. The skull, molar teeth and scapular bone are the only portions yet discovered. Kaup regards it as intermediate between the mastodons and tapirs and terrestrial; while Blainville and Pictet regard it as allied to the sea-cows, and inhabiting the embouchure of great rivers.

Dinotherium restored.

Diocese (dī'ō-sēs; Greek, *dioikēsis*, administration), the circuit or extent of a bishop's jurisdiction. Each English diocese is divided into archdeaconries, each archdeaconry (nominally) into rural deaneries and each deanery into parishes. See *Bishop*.

Diocletian (dī-o-kle'she-an; C. VALE-RIUS DIOCLETIANUS, sur-named *Jovius*), a man of mean birth, a native of Dalmatia, proclaimed Emperor of Rome by the army 284 A.D. He defeated Carinus in Moesia (286),

conquered the Allemanni, and was generally beloved for the goodness of his disposition, but was compelled by the dangers threatening Rome to share the government with M. Aurelius Valerius Maximian. In 292 C. Galerius and Constantius Chlorus were also raised to a share in the empire, which was thus divided into four parts, of which Diocletian administered Thrace, Egypt, Syria and Asia. As the result of his reconstitution of the empire there followed a period of brilliant successes in which the barbarians were driven back from all the frontiers, and Roman power restored from Britain to Egypt. In 305, in conjunction with Maximian, he resigned the imperial dignity at Nicomedia, and retired to Salona in Dalmatia, where he cultivated his garden in tranquillity until his death in 313. In the latter part of his reign he was induced to sanction a persecution of the Christians.

Diodati (de-o-dā'tē), GIOVANNI, an Italian Protestant divine, born at Lucca, about 1576, of a noble Catholic family. He was for some time professor, first of Hebrew, then of theology, at Geneva, and in 1619 represented the Genevan clergy at the Synod of Dort, and aided in drawing up the Belgic confession of faith. He is most celebrated for a translation of the Bible into Italian, which is superior to his translation of it into French. He died at Geneva in 1649.

Diodon (dī'o-don). See *Globe-fish*.

Diodorus (dī-o-do'rus) OF ARGYRIUM, in Sicily, and therefore called *Siculus*; a Greek historian in the time of Julius Cæsar and Augustus. His universal history, in the composition of which he traveled through a great part of Europe and Asia, occupied him thirty years, and consisted of 40 books, but only books 1-5 and 11-20, with certain fragments, are now extant.

Diœcious (dī-ē'shus; Gr. *di*, double, *oikos*, a house), in botany a term applied to plants which have flowers with stamens on one individual and those with pistils on another; as opposed to *monœcious*. The willow, the yew, the poplar, etc., are diœcious.

Diogenes (dī-oj'e-nēz) OF APOLLONIA (Crete), known also as the *Physicist*, a Greek philosopher of the fifth century B.C., who belonged to the Ionian school, and considered air as the element of all things.

Diogenes, OF SINOPE (si-nō'pē; on the Black Sea), the most famous of the Cynic philosophers, born

about 412 B.C. Having been banished from his native place with his father, who had been accused of coining false money, he went to Athens, and thrust himself upon Antisthenes as a disciple. Like Antisthenes, he despised all philosophical speculations, and opposed the corrupt morals of his time; but while the stern austerity of Antisthenes was repulsive, Diogenes exposed the follies of his contemporaries with wit and good humor. As an exemplar of Cynic virtue he satisfied his appetite with the coarsest food, practiced the most rigid temperance, walked through the streets of Athens barefoot, without any coat, with a long beard, a stick in his hand, and a wallet on his shoulders, and by night, according to the popular story, slept in a tub (or large earthenware vessel). On a voyage to the island of Ægina he fell into the hands of pirates, who sold him as a slave to the Corinthian Xenocrates in Crete. The latter emancipated him, and entrusted him with the education of his children. He attended to the duties of his new employment with the greatest care, commonly living in summer at Corinth and in winter at Athens. He died in 323 B.C., at a great age. Of the many stories related of him the majority are probably fictions; many indeed are chronologically impossible. His enemies accused him of various scandalous offenses, but there is no ground for supposing him guilty of any worse fault than that of elevating impertinence to the rank of a fine art.

Diogenes Laërtius, author of a sort of history of philosophy in Greek, appears to have been born at Laerte, in Cilicia, and to have lived towards the close of the second century after Christ; but no certain information exists either as to his life, studies, or age. The work is divided into ten books, and bears in MSS. the title, *On the Lives, Doctrines and Apothegms of those who have distinguished themselves in Philosophy*. It is full of absurd and improbable anecdotes, but contains valuable information regarding the private life of the Greeks, and many fragments of works now lost. It was the foundation of the earlier modern histories of philosophy.

Diomedea (dī-o-me-dē'a), a genus of birds, including the various species of albatross (which see).

Diomed Islands (dī'o-mēd), a group of three small islands in Bering Strait, and midway between Asia and America.

Diomedes (dī-o-mē'dēz), in Greek mythology, (1) A king of

the Bistōnes, who fed his horses on human flesh, and used to throw all strangers who entered his territories to those animals to be devoured. He was killed by Hercules, who carried off the horses. (2) One of the heroes at the siege of Troy, the son of Tydeus and Deïpyle, and king of Argos, one of the suitors of Helen. After she was carried off Diomedes engaged in the expedition against Troy, in which his courage and the protection of Pallas rendered him one of the most distinguished heroes. He wounded Aphrodite and Ares, and thrice assailed Apollo; and by carrying off the horses of Rhœsus from the enemies' tents, and aiding Ulysses in the removal of Philoctetes from Lemnos, he fulfilled two of the conditions on which alone Troy could be conquered. Finally he was one of the heroes concealed in the wooden horse by whom the capture of Troy was at length accomplished. Different accounts were given of his after-life. He is often called *Diomede*.

Dion (dī'on) OF SYRACUSE, in Greek history, a connection by marriage of the elder and the younger Dionysius, tyrants of Syracuse, over whom he long exercised great influence. He attempted to reform the younger Dionysius (which see), but his enemies succeeded in effecting his banishment. He afterwards returned and made himself ruler of the city, but became unpopular, and in 353 B.C. one of his followers, Calippus of Athens, caused him to be assassinated.

Dionæa (dī-on-ē'a), a genus of plants, nat. order Droseraceæ. Only one species is known, *D. muscipula* (Venus' fly-trap), a native of the sandy savannas of Carolina and Florida. It has a rosette of root leaves, from which rise a naked scape bearing a corymb of fairly large, white flowers. The leaves have a dilated petiole and a slightly stalked 2-lobed lamina, with three short, stiff bristles on each lobe. The bristles are remarkably irritable, and when touched by a fly or other insect the lobes of the leaf suddenly close on and capture the insect. It is said to digest the food thus captured by means of a fluid which dissolves it exactly like ordinary gastric juice.

Dion Cassius (dī'on kash'e-us), or DIO CASSIUS, a Greek historian, born about 155 A.D. at Nicæa, in Bithynia. After accompanying his father to Cilicia, of which he held the administration, he came to Rome about 180, and obtained the rank of a Roman senator. On the accession of Pertinax Dion was appointed prætor, and in the

reign of Caracalla he was one of the senators whom it had become customary to select to accompany the emperor in his expeditions, of which he complains bitterly. In 219 he was raised to the consulship, and about 224 became pre-consul of Africa. In 229 he was again appointed consul; but feeling his life precarious under Alexander Severus, he obtained permission to retire to his native town of Nicæa. The period of his death is unknown. The most important of his writings, though only a small part is extant, is a *History of Rome*, written in Greek and divided into eighty books, from the arrival of Æneas in Italy and the foundation of Alba and Rome to A.D. 229.

Dion Chrysostom (kris'os-tom), a Greek sophist and rhetorician and a favorite of Trajan; born in A.D. 50; died about A.D. 110. Eighty of his orations (in excellent Attic) have been preserved.

Dionysia (dī-o-nish'i-a). See *Bacchanalia*.

Dionysius (dī-ō-nish'e-us), St., a disciple of Origen, and patriarch of Alexandria in 248 A.D. He was driven from the city in 250, and in 257 was banished to Libya, but was restored in 260. Died in 265 A.D.

Dionysius, OF HALICARNASSUS, in Caria, a Greek critic and teacher of eloquence, born about 70 B.C. He went to Rome about 30 B.C., where he wrote his *Roman Antiquities*, in twenty books, in which he relates (in Greek) the early history of Rome and its government up to the times of the first Punic war. We have the first nine books of this work entire, the tenth and eleventh nearly so, and some fragments of the others. His rhetorical writings are of greater value, especially his essays on the Greek orators. He died about 6 B.C.

Dionysius, THE AREOPAGITE, that is one of the judges of the Areopagus, at Athens, a convert to Christianity by the Apostle Paul about the middle of the first century, and the first bishop at Athens, where he suffered martyrdom. Certain writings formerly ascribed to him consist of obscurely written treatises on mystical subjects. Scotus Erigena translated them into Latin. In France, where a certain Dionysius (see *Denis, St.*) established the first Christian community at Paris in the third century, they were readily received, this Dionysius being without further inquiry taken for the Areopagite, because the origin of the Gallican Church could thus be carried back to the first

century; and France gained a patron saint who was a martyr and the immediate disciple of an apostle.

Dionysius, THE ELDER, in Greek history, tyrant or absolute ruler of Syracuse, born about 430 B.C. of obscure parentage. He obtained the rank of general, and afterwards of commander-in-chief; and gaining the support of the army, he seized the supreme power in Syracuse, though only twenty-five years of age. He extended his rule over other cities in Sicily; and after some successes and reverses in the struggle with the Carthaginians he gained a complete victory over them under the walls of Syracuse. In his expeditions into Lower Italy he reduced the city of Rhegium by famine (387). After another short war with Carthage he lived some time in peace, occupied with writing poems, tragedies, etc., with which he contended for the Olympian prize. In 368 he commenced a new war against the Carthaginians, but failed to drive them entirely out of Sicily. He is said to have died from a potion administered at the instigation of his son Dionysius the Younger (367 B.C.).

Dionysius, THE LITTLE (so called on account of his short stature), a Scythian monk who was abbot of a monastery at Rome in the beginning of the sixth century, and died about the year 530, according to others about 545, celebrated as the author of the computation of time from the Christian era. This mode of computation, however, was not publicly used until the eighth century.

Dionysius, THE YOUNGER, a tyrant of Syracuse, who, in 367 B.C., succeeded his father, Dionysius the Elder. For the purpose of recalling him from the excesses to which he was addicted Dion persuaded him to invite Plato to his court, but the influence of the philosopher effected no permanent change. Becoming suspicious of Dion, the tyrant banished him and confiscated his property, but in 357 B.C. Dion made himself master of Syracuse. Dionysius fled to Locri, but after the murder of Dion recovered his power in Syracuse. His misfortunes, however, had rendered him more cruel, and Timoleon, who came to Syracuse with aid from Corinth against the Carthaginians, deposed him in 344 B.C. He was carried to Corinth, where he is said to have gained a living by giving lessons in grammar, or as one of the attendants on the rites of Cybele.

Dionysus (dī-o-nī'sus), the original Greek name of the god of wine, the name Bacchus, by which he was called both by the Greeks and

the Romans, being at first a mere epithet or surname. See *Bacchus*.

Diophantus (dī-o-fan'tus) OF ALEXANDRIA, the first Greek writer on algebra, flourished, according to some authorities, about the middle of the fourth century after Christ. He left behind him thirteen books of *Arithmetical Questions*, of which only six are extant; and a work on *Polygon Numbers*.

Diopside (dī-op-sid), a rare mineral, a variety or subspecies of augite, occurring in prismatic crystals of a vitreous luster, and of a pale green, or a greenish or yellowish white.

Diopsis (dī-op'sis), a genus of dipterous insects, or two-winged flies, the members of which are remarkable for the immense prolongation of the sides of the head, the head appearing as if it were furnished with two long horns, each having a knot at its apex.

Diopase (dī-op-tās), emerald copper ore, silicate of copper, a translucent mineral, occurring crystal-like in six-sided prisms.

Dioptries (dī-op'triks), that part of optics which treats of the refraction of light passing through different mediums, as through air, water or glass, and especially through lenses. These phenomena, however, are now more commonly treated under the head of *refraction*. See *Refraction*.

Diorama (dī-ō-ra'ma), a mode of painting and of scenic exhibition invented by Messrs. Daguerre and Bouton, and first exhibited in 1823. It secures a higher degree of illusion than the ordinary panorama, by a mode of uniting transparent painting to the usual opaque method, and causing the light to fall upon the picture both from *before* and *behind*. At the same time, by means of colored transparent blinds, suspended both above and behind the picture, the rays of light can be intercepted and made to fall at pleasure in graduated tints upon every part of the picture in succession.

Diorite (dī-ō-rīt), a tough trap-rock, sometimes of a whitish color speckled with black or greenish black, sometimes very dark in color, consisting of hornblende and feldspar.

Dioscoreaceæ (dī-os-kor-e-ā'se-ē), a nat. order of endogenous plants, with alternate reticulate-veined leaves, tuberous root-stocks and twining stems. The flowers are small and unisexual. There are six genera, with about 100 species. The typical genus is *Dioscorea*, which includes the yam. Black bryony is the only British

representative. The tortoise plant or elephant's-foot occurs in South Africa. See *Yam*.

Dioscorides, PEDANIUS (dī-os-kor'i-dēz, pe-dā'ni-us), born in Cilicia in the first century of the Christian era, a Greek physician, author of a celebrated work on *Materia Medica*, in five books, particularly valuable in regard to botany.

Dioscure (dī-os-kū'ri). See *Castor* and *Pollux*.

Diosma (dī-os'ma), a genus of rutaceous plants inhabiting Southern Africa, allied to *Barosma* (which see). They have alternate or opposite simple leaves, strongly marked with dots of transparent oil, and diffusing a powerful odor when bruised. Some species are cultivated for their white or pinkish flowers.

Diospyros (dī-os'pi-ros), a large genus of trees or shrubs, natives of the warmer regions of the world, nat. order Ebenaceæ. The trees of this genus supply ebony wood. That from Ceylon is the wood of *D. Ebenum*; from India, of *D. melanoxylon* and *D. Ebenaster*; and that from Mauritius of *D. reticulata*. The *D. Lotos* is the Indian date-plum. It is by some supposed to have been the lotus tree of the ancients, whose fruit was said to produce oblivion.

Dip, of the horizon, an allowance made in all astronomical observations of altitude for the height of the eye above the level of the sea.

Dip, in geology, the inclination or angle at which strata slope or *dip* downwards into the earth. The degree of inclination or amount of the dip, which is easily measured by a special instrument, is determined by the angle which a line drawn perpendicular to the direction of the stratum makes with the horizon. The line in which such strata cut the surface is called the *strike*, and is always at right angles to the dip.

Diphtheria (dip- or dif-thē'ri-a), a contagious disease characterized by the formation of a thick, leathery, false membrane in the throat, and allied to croup, which, indeed, is often considered a form of it, the disease being called diphtheria when it attacks principally the tonsils and parts in their neighborhood, and croup when it principally attacks the larynx. (See *Croup*.) It has only in recent times attracted public attention by its frequency and peculiar symptoms. It is a most fatal disease, resulting from the introduction into the body of a specific bacterium, is contagious, often epidemic, and in some places endemic. It is always accompanied by a

very low state of the system, indicating the necessity of giving stimulating nourishment very freely. The membrane may spread more or less, going down into the windpipe or up the nose, and death may be caused by suffocation and exhaustion, the violence of the poison sometimes causing it even without the formation of the membrane. The most essential thing in its treatment is to give antitoxin, keep up the strength by food stimulants, and apply antiseptic agents to the exudation. See *Antitoxin*.

Diphthong (dif'thong), a coalition or union of two vowels pronounced in one syllable. In uttering a proper diphthong both vowels are pronounced; the sound is not simple, but the two sounds are so blended as to be considered as forming one syllable, as in *void*, *bough*. The term improper diphthong is applied to the union of one syllable of two or more vowels, of which only one is sounded, as in *bean*.

Diphyodont (dī'fi-ō-dont), a term applied to those animals which develop two sets of teeth, a deciduous or milk set, and a permanent set—as distinct from the monophyodonts, which develop only one set. The majority of mammals are diphyodont, though the number of teeth replaced may vary; thus in man twenty teeth of the adult are preceded by a milk set; in the hare, the anterior incisors are not so preceded, but the posterior smaller incisors replace an earlier pair.

Diplacanthus (di-pla-kan'thus), a genus of ganoid fishes, found only in the Old Red Sandstone. They have small scales, a heterocercal tail, and two dorsal fins with a strong spine in front.

Dipleidoscope (di-plī'd o-s k ō p), an instrument for indicating the passage of the sun or star over the meridian, by the coincidence of two images of the object, the one formed by single and the other by double deflection. It consists of an equilateral hollow prism, two of whose sides are silvered on the inside so as to be mirrors, while the third is formed of glass. The prism is adjusted so that one of the silvered sides shall be exactly in the plane of the meridian, and the transparent side towards the object.

Diploma (di-plō'ma; Gr. *diplōma*, from *diploō*, to double or fold), literally a document folded but once, and therefore divided into two parts. It is used to signify a document signed and sealed, in which certain rights, privileges, dignities, etc., are conferred, especially a university degree.

Diplomacy (di-plō'ma-si), the art of conducting negotiations, arranging treaties, etc., between nations; the branch of knowledge which deals with the relations of independent states to one another; the agency or management of envoys accredited to a foreign court; the forms of international negotiations. The Cardinal de Richelieu is generally considered as the founder of that regular and uninterrupted intercourse between governments which exists at present between almost all the Christian powers; though the instructions given by Machiavelli to one of his friends, who was sent by the Florentine Republic to Charles V (Charles I of Spain) show that Richelieu was not the first to conceive the advantages that might be derived from the correspondence of an intelligent agent accredited at the seat of a foreign government. Diplomatic agents are of several degrees: 1, ambassadors; 2, envoys extraordinary and ministers plenipotentiary; 3, ministers resident; 4, *chargés d'affaires*; 5, secretaries of legation and *attachés*. Their rank was regulated in Europe, in the above order, by the congress assembled at Vienna in 1814. Among the European powers it is agreed that of ministers of the same rank he who arrives first shall have the precedence over his colleagues. The United States was long represented by ministers only, but now sends ambassadors to the leading countries of Europe.

Diplomatics (di-plo-mat'iks), originally the science of deciphering ancient MSS. It laid down certain principles for the systematic examination of public documents, and taught the forms and styles adopted in them, the titles and rank of public officers subscribing them, etc. Among the earliest exponents of diplomatics were Papebroeck, an Antwerp Jesuit (1675), and Mabillon (1681).

Diplophonia (dip-lō-fō'ni-ā), the simultaneous production of two sounds of different pitch, due to partial paralysis of the larynx.

Diplopterus (di-plop'ter-us), a genus of fossil ganoid fishes, belonging to the Old Red Sandstone.

Diplozoon (di-plō-zō'on), a parasitic trematode worm which infests the gills of the bream, and which appears to be formed of two distinct bodies, male and female, united in the middle, and resembling an X.

Dipnoi (dip'noi; Gr. *di*, *dis*, double, and *pnoē*, breath), an order of fishes, including only the singular mud-fishes (*Lepidosiren*), important as ex-

hibiting the transition between fishes and the amphibia. Formerly *Lepidosiren* was reckoned the lowest of the amphibia, now it constitutes the highest order of fishes. The body is fish-like in shape, covered with small, horny scales of a cycloid character; the pectoral and ventral fins are represented by two pairs of long, filiform organs; the heart has two auricles and one ventricle, and the respiratory organs are twofold, consisting of ordinary gills opening externally, and of true lungs—formed by the modified swimming-bladder—communicating with the œsophagus by means of an air duct or trachea, whence the name. They are also called *Protopteri*. The combination of respiratory organs is similar to that which is presented by the tailed amphibians with persistent gills (*perennibranchiate*), as the axolotl. This interesting group is allied to the ganoids through the *Ceratodus* of Queensland. The *L. paradoxa* is found in the Amazon; *L. annectens* in the Gambia.

Dippel (dip'el), JOHANN CONRAD, a German theologian and alchemist, born in 1672. He studied theology, defended the orthodox party against the Pietists, led a turbulent life at Strasburg, and then joined the Pietists until an unfortunate tractate placed him in disfavor with both parties. He then turned his attention to alchemy, and during a residence at Berlin produced the oil called after him (see next article), from which indirectly followed the discovery of Prussian or Berlin blue. After various adventures and wanderings in Sweden, Denmark and Germany he died in 1734.

Dippel's Oil, the rectified form of the black fetid oil, containing ammoniac carbonate, which can be obtained by the destructive distillation of animal matter, such as stag's-horn, ivory, or blood. The cruder form was used in medicine, despite its appearance and odor, until Dippel refined it. His oil was formerly prescribed as an antispasmodic and diaphoretic, but is no longer used in medicine.

Dipper (dip'er), a bird of the genus *Cinclus*, allied to the thrushes.

The common dipper, water-ouzel, or water-crow (*Cinclus aquaticus*), is a familiar European bird; it is about 7 inches in length, with a very short tail, small rounded wings, and large, powerful feet; the bill is of moderate length, straight and slender. The male has the upper part of the body dark brown, the throat and breast white, belly rusty. The dipper frequents streams, and feeds largely on water insects and larvæ. It can dive in

and walk under water, effecting its progress by grasping the stones with its

Dipper (*Cinclus aquaticus*).

feet. The song is sweet and lively. Other species are found in Asia and America.

Dipping-needle, or INCLINATION COMPASS, an instrument for showing the direction of one of the components of the earth's magnetism. In essentials the instrument consists of a light magnetized steel bar supported on a horizontal axis which passes, as nearly as possible, through the center of inertia of the bar. When a needle thus mounted is placed anywhere not in the magnetic equator, it dips or points downwards; and if the vertical plane, in which it moves, coincides with the magnetic meridian the position of the needle shows at once the direction of the magnetic force. The intersection of two or more directions found by making the experiment at different places, indicates the place of the magnetic pole.

Diprotodon (di-prō'to-don), a gigantic fossil marsupial of Australia, allied to the kangaroos.

Dipsacus (dip'sa-kus). See *Teasel*.

Dipsas (dip'sas), a genus of Asiatic and tropical American non-venomous serpents of the family Colubridæ, of very elongated form. With the ancients it was a serpent whose bite was said to produce a mortal thirst.

Dipsomania (dip-so-mā'ni-a; Gr. *dip-sa*, thirst, and *mania*, madness), a term recently introduced to denote an insane craving for intoxicating liquors, when occurring in a confirmed or habitual form. It is often of hereditary origin, but may result from sunstroke, from some injury to the brain, or from disease. The only remedy appears to be seclusion, with enforced abstinence and healthy occupation. Homes for this purpose have been established in Britain and the United States.

Diptera (dip'te-ra), an order of two winged insects, of which the common house-fly and the blue-bottle are familiar examples. They are characterized by a body with slight coriaceous coverings, a trunk open beneath, and containing a sucker composed of two, four, or six lancet-shaped elongated scales, two palpi, antennæ almost always composed of three joints, large eyes, an abdomen of from four to seven distinct segments, tarsi with five joints, and two short clubbed appendages called *haltères* or balancers, which seem to be the rudiments of the posterior pair in four-winged insects, and are kept in continual motion. All undergo complete metamorphosis, and all are oviparous except the *Sarcophaga*, which issue from their mother in shape of larvæ; and the *Pupipara*, which first make their appearance as nymphs. The greater number live on the sap of flowers, but some feed on blood, others fasten on other animals to lick up their perspiration, their sores, or various secretions.

Dipteraceæ (dip-ter-ā'se-ē), DIPTEROCARPEÆ, an important order of Asiatic exogenous, polypetalous trees, allied to the mallows (*Malvaceæ*). The different species produce a number of resinous, oily, and other substances; one, a sort of camphor; another, a fragrant resin used in temples; and others, varnishes; while some of the commonest produce pitches, and sal, valuable timber.

Diptych (dip'tik; Greek) originally signifies the same as *diplo-ma*, something folded; the double tablets of metal, ivory, etc., used by the Greeks and Romans. Diptychs became important in the Christian church, in them being written the names of popes, and other distinguished persons who had deserved well of the church, to be mentioned in the church prayers. Diptychs also often contained pictures of Biblical scenes, etc.

Dipus. See *Jerboa*.

Dipyre (dī'pīr), a mineral consisting chiefly of silicate of alumina, with small proportions of the silicates of soda and lime. Its name indicates the double effect of fire upon it (Gr. *di*, double, *pyr*, fire) in producing first phosphorescence and then fusion.

Diræ, or EUMENIDES. See *Furies*.

Directors (di-rek'turs), persons elected to meet together at short fixed intervals and consult about the affairs of corporations or joint-stock companies, and to advise and assist the manager. These are termed *Ordinary*

Directors, as in many companies there is a body called *Extraordinary Directors*, who have little or no business functions, and are chosen, as a rule, on account of their social position imparting a degree of distinction to the concern. Directors are appointed by a general meeting of the shareholders in the undertaking, and a certain number of them, usually a third, retire every year. Ordinary directors are granted a certain remuneration for their services. The duties and responsibilities of directors are defined by the constitution of the company, or by the various acts of legislature affecting joint-stock and other companies.

Directory (di-rek'to-ri), the name given to a body of five officers to whom the executive authority in France was committed by the constitution of the year III (1795). The two legislative bodies, called the *councils*, elected the members of the directory; one member was obliged to retire yearly, and his place was supplied by election. This body was invested with the authority, which, by the constitution of 1791, had been granted to the king. By the revolution of the 18th Brumaire the directory and the constitution of the year III were abolished. It was succeeded by the consulate.

Direct Primary, a method of nominating candidates for office now adopted in many of the States of the American Union. Under the former method conventions of elected delegates were held, who nominated the candidates, usually those selected by the party leaders. In the new method of direct primaries the candidates are voted for directly by the people, who thus have an immediate control over the results.

Directrix (di-rek'triks), in mathematics, a line perpendicular to the axis of a conic section, and so placed that the distance from it of any point in the curve is to the distance of the same point from the focus in a constant ratio; also, the name given to any line, whether straight or not, that is required for the description of a curve. The directrix of a parabola is a line perpendicular to the axis produced, and whose distance from the vertex is equal to the distance of the vertex from the focus. Thus A B is the directrix of the parabola V E D, of which F is the focus.

Directrix of a Parabola.

Dirk (dèrk), a kind of dagger formerly used as a weapon of offense

by the Highlanders of Scotland. Dirks are worn by midshipmen and cadets of the royal navy, and still form part of the full Highland costume.

Dirk-hartog Island, on the west coast of Australia, 45 miles long north to south, and 10 miles broad.

Dirt-beds, in geology, layers of ancient soil, such as those in the oölitic strata of the Isle of Purbeck (Dorset), which contain the stumps of trees that once grew in them.

Disability (dis-a-bil'i-ti), in law, incapacity to do any legal act. It is either *absolute*, which wholly disables the person; such as outlawry or excommunication—or *partial*, such as infancy, coverture, insanity, or drunkenness.

Disbanding (d i s-b a n d' ing), the breaking up of a regiment, or other body of military, and releasing them from service, when they are no longer required, or it may be on account of insubordination.

Disbarring (dis-bar'ing), expelling a barrister from the bar, a prerogative which, in England, is possessed by the benchers of each of the four Inns of Court. The party disbarred may lodge an appeal with the judges in their capacity of visitors.

Disc, **DISK**, the central part of a radiate compound flower surrounded by the ray. Also a part, sometimes cup-shaped, at the base of the stamens, consisting in some cases of rudimentary stamens, in others of the modified receptacle.—In astronomy the term is applied to the face or circular figure exhibited by the sun, moon, or a planet in the sky.

Discharge. See *Calico-printing*.

Discharging Arch (dis-charj'ing), an arch formed

in the substance of a wall to relieve the part which is below it from the superincumbent weight. such arches are commonly used over lintels and flat-headed openings.

Disclaimer (dis-klām'-er), in its stricter legal sense, a plea containing renunciation or a denial of some claim alleged to have been made by the party pleading.

Discharging Arch.

Disco (dis'kō), an island off the w. coast of Greenland, 70 miles long and averaging 50 miles in width, lat. about 70° N. It has large coal deposits. Godhavn at its southern extremity is a place of call for whales.

Discophora (dis-kof'e-ra), a subclass of the Hydrozoa, comprising most of the organisms known as sea-jellies, jelly-fishes, sea-nettles, etc.

Discord (dis'kord), in music, a dissonant or inharmonious combination of sounds, so called in opposition to the *concord*. See *Dissonance*.

Discount (dis-kount), the charge made by a banker for interest of money advanced by him on a bill or other document not presently due. In advancing money on such security the banker deducts the charge for interest on his advance from the total amount represented on the security, pays the difference, which is called the *proceeds* of the bill, to the person parting with it, and collects the full amount to reimburse himself for outlay and interest at maturity. Popularly, the term *discount* is applied to any deduction from the full amount of an account made by the party to whom it is paid, especially on prompt or early payment. When a bill which has been *discounted* is paid by the acceptor before it is due, the discount allowed for repayment is called *rebate*.

Discovery (dis-kov'e-ri), in law, the act of revealing or making known any matter by a defendant in his answer to a bill in chancery. The word is also used in reference to the disclosure by a bankrupt of his property for the benefit of his creditors.

Discrase (dis'krās), an ore of silver, consisting of antimony and silver. It occurs in hexagonal prisms, massive, disseminated or granular.

Discus (dis'kus), **DISC**, or **DISK**, among the Greeks and Romans a quoit of stone or metal, convex on both its sides, sometimes perforated in the middle. The players aimed at no mark, but simply tried to throw the quoit to the greatest possible distance. It was sometimes furnished with a thong of leather to assist in the throwing.

Disease (diz-ēz'), any morbid state of the body, or of any organ or part of the body. Diseases are described as local or constitutional, idiopathic, symptomatic, epidemic, endemic, contagious, acute, chronic, etc. As to their classification, see *Nosology*. The influence of the parents on the organization of the child is so great that not only peculiarities of external form, but the peculiar constitution, the greater or less

activity and development of the organs, are found to pass from parent to child. As it is in the particular state of the several organs and functions that a very great part of diseases have their foundation, the liability to certain diseases may be inherited with the organic structure, and the son attacked by various complaints at the same period of life in which his father was. The most important hereditary defect is physical weakness. These diseases are called *hereditary*; but it is only the predisposition to them that is inherited. Hence the actual development of hereditary diseases requires certain coöperating circumstances. Constitutional diseases often depend on circumstances which affect the fœtus during pregnancy. Among the diseases, the predisposition to which is most frequently hereditary are scrofula, hæmophilia (especially bleeding at the lungs), and hemorrhoids, consumption, gout, gravel and stone, cancer, disorders of the mind, hysterical and hypochondriac affections, apoplexy, epilepsy and organic diseases of particular parts, especially of the heart. Inherited diseases are much more difficult to cure than those which originate in accidental external causes, and special care should therefore be taken to adopt an environment and mode of life calculated to counteract the inherited predisposition. As to the origin of certain diseases see *Germ Theory*.

Diseases of Plants, may be divided into two main classes: those produced by temperature, excess or deficiency of moisture and light, impure air, the composition of the soil, and other mechanical or chemical agencies; and those produced by other organized beings, whether belonging to the animal or vegetable world. Too high a temperature will produce an excitement inconsistent with healthy growth, while a low temperature destroys the connection between the cells, and is one of the chief causes of cancer. In the absence of light the chemical changes necessary to the complete development of the chlorophyll will not take place, and the plant is in consequence blanched. Tender tissues, however, frequently require protection from a too free admission of light. In tropical forests, unhealthy to man, certain vegetables find a congenial atmosphere, but in most cases pure air is indispensable, as shown by the difficulty of cultivating plants in the heart of towns. Few things are more prejudicial to plant life than excess of moisture, partly from its immediate action on the tender tissues of the roots, and partly from decomposition, but, more than all,

from the low state of temperature which is kept up at the very point where a certain degree of heat is essential. Diseases springing from the actions of other organisms may be classed as direct injuries, alterations of tissues from the presence of larvæ of insects, exhaustion from parasitic insects or plants, especially fungi.

Dishonor of a Bill (dis-on'ur), the refusal or neglect to accept or pay when due a bill of exchange, or promissory note, or draft on a banker. It is absolutely necessary that the holder of a dishonored bill should give immediate notice of the non-payment to the drawers or endorsers.

Disinfectant (dis-in-fekt'ant) is any substance that destroys the germs and odors of contagious and infectious diseases. The most important for practical purposes are formaldehyde, chlorine, carbolic acid, sulphurous acid, Condyl's fluids (containing respectively manganate and permanganate of potash), and Burnett's fluid, containing chloride of zinc. Carbolic acid is one of the most effective, needing, however, some little care in the handling, as it sometimes causes severe burns. It does not in its common form mix with water, but floats on the surface undiluted. For application to the skin Condyl's fluid is one of the readiest preparations. In cases of infectious or contagious disease, disinfectants, such as chlorinated lime or carbolic acid, should at once be placed about the house, especially in the sickroom and in the passages and landing outside. A large sheet also should be nailed so as to hang across the door, and this should be kept constantly wet with carbolic acid. All excretions should be instantly disinfected and also the closet which receives them. In a country place it is best to bury them in a considerable depth of earth. Every article of clothing and furniture should be carefully treated, as the germs may lurk in them and break out after a lapse of months or years.

Disintegrator (dis-i n'te-grā-tur), a machine for pulverizing and sometimes for mixing various materials, such as rock, asphalt, ore, artificial manures, sugars, corn, the ingredients of mortar, etc.

Disk. See *Disc*.

Dislocation (dis-lō-kā'shun), a surgical term applied to cases in which the articulating surfaces of the bones have been forced out of their proper relations. The particular dislocation takes its name either from the joint itself or its furthest bone, and is

called *compound* when accompanied with an external wound. The most common dislocations are those of the hip, shoulder, elbow, knee and ankle, and the chief obstacle to their reduction is the spasmodic and violent contraction of the muscles consequent upon them, the application of considerable force often being necessary to set the joint. Chloroform is of great use, not only in preventing pain, but in relaxing the muscles. The most dangerous dislocations are those of the bones of the spine.—In geology it signifies the displacement of parts of rocks or portions of strata from the situations they originally occupied.

Dismal Swamp, a large tract of marshy land, beginning a little south of Norfolk, Virginia, and extending into North Carolina, containing 150,000 acres; 30 miles long, from north to south, and 10 broad. This tract was formerly covered with trees, with almost impervious brushwood between them, but it has now in part been cleared and drained. In the midst of the swamp is a lake, called *Drummond's Pond*, 7 miles in length. A navigable canal through the swamp connects Chesapeake Bay and Albemarle Sound.

Dismas (dis'mas), St., the name of the penitent thief, according to mediæval legends.

Dispart (dis'part), the difference between the semidiameter of the base ring at the breech of a gun and that of the ring at the swell of the muzzle.

Dispensary (dis-pen'sa-ri), a charitable institution for the free supply of medicine to the poor. Each institution has one or more physicians, surgeons and apothecaries, who attend the sick, and, if necessary, to visit them at stated times in order to prescribe for at their own habitations. A note from a subscriber or governor is usually required of would-be patients. Provident dispensaries are similar institutions in which a small fee is exacted.

Dispensation (dis-pen-sa'shun) is the act by which an exception is made to the rigor of the law in favor of some person. The pope may release from all oaths or vows, and may sanction a marriage within the prohibited degrees of the Mosaic law, or exempt from obedience to the disciplinary enactments of the canon law. In England the monarch claimed, in former times, a similar dispensing power in civil law, but the prerogative was so much abused by James II that it was abolished by the Bill of Rights. The power of commuting sentences in capital cases is the only form in which the dispensing

power of the crown still exists. In ecclesiastical matters a bishop may grant a dispensation allowing a clergyman to hold more than one benefice or to absent himself from his parish.

Dispensatory (dis-pen'sa-to-ri), the same as *Pharmacopœia* (which see).

Dispersion (dis-per'shun), an optical term applied to the angular separation experienced by the component rays of a pencil of light on emerging from a refracting medium whose surfaces are not parallel to each other, e.g., the common prism. The length of the spectrum and the relative space occupied by the colored rays vary greatly according to the refracting medium, the spectrum from a prism of oil of cassia being two or three times longer than one formed by a glass prism.

Disposition (dis-pō-zish'un), in Scotch law, is, in its general acceptation, a deed by which a person provides for the general disposal of his property heritable and movable, after his death, equivalent to a will or testament; also a conveyance of property.

Disraeli, BENJAMIN. See *Beaconsfield*.

D'Israeli (diz-rā'e-li), ISAAC, man of letters, and father of the well-known statesman, was born in Enfield, Middlesex, in 1766. His father, Benjamin D'Israeli, a descendant of a family of Spanish Jews which had settled at Venice in the fifteenth century to escape the Inquisition, came over to England in 1748 and made a large fortune. Isaac D'Israeli, however, showed a strong repugnance to commerce, and was finally permitted to follow his literary bent. An anonymous reply to Peter Pindar, entitled *On the Abuse of Satire*, was followed in 1791-1793 by the appearance of his *Curiosities of Literature*, the success of which determined much of his afterwork. His *Essay on the Literary Character* was published in 1795, and some time afterwards a volume of romantic tales, *The Loves of Mejnoun and Leila*. Between 1812 and 1822 appeared the *Calamities of Authors*, *Quarrels of Authors* and *Inquiry into the Literary and Political Character of James I*; the three being afterwards published collectively under the title of *Miscellanies of Literature*. In 1828 appeared the commencement of his *Life and Reign of Charles I*, a work completed in 1831. An affection of the eyes put an end to a projected life of Pope and a history of English Freethinkers, but in 1841 he published a selection from his MSS. un-

der the title of *Amenities of Literature*. He died in 1848. The greater part of his life was passed in his library.

Diss (dis), a town of England, Norfolk, on the slope of a hill 18 miles south by west from Norwich. It was formerly noted for the manufacture of 'Suffolk hempen cloth,' worsted yarn and knit hosiery. Pop. 3769.

Disseizin (dis-sē'zin), or DISSEISIN, in law, is the dispossessing one of a freehold estate, or interrupting his *seizin*. Of freeholds only can a *seizin* be had, or a disseizin done. Whether an entry upon lands is or is not a disseizin will depend partly upon the circumstances of the entry and partly upon the intention of the party, as made known by his words or acts.

Dissenters (dis-ent'ers), the common name by which in Britain all Christian denominations, excepting that of the Established Churches, are usually designated, though in acts of parliament it generally includes only Protestant dissenters, Roman Catholics being referred to under their specific name. The most important bodies of English dissenters are the different bodies of Methodists, the Congregationalists and the Baptists; and of Scotch dissenters, the Free Church and the United Presbyterian Church. The Nonconformists were dissenters from the English Church.

Dissentis (dis'sen-tis), a town of Switzerland, canton Grisons, about 3800 ft. above the sea, at the junction of the Middle and Vorder Rhine, with a Benedictine abbey established in 614. Pop. 1400.

Dissociation (dis-sō-shi-ā'shun), a chemical term used to express the partial decomposition which takes place when chemical compounds are exposed to a high temperature; as when by the passage of steam through a white-hot platinum tube some of it is decomposed and an explosive mixture of oxygen and hydrogen may be collected. In his writings on dissociation Ste. Claire Deville uses the term in a more extended sense, as denoting the separation of a body into its constituents (whether simple or compound) at a temperature inferior to that at which its composition is usually seen to take place.

Dissolving Views (di-solv'ing) are paintings upon glass magnified and thrown with great distinctness upon a screen by means of one or two magic lanterns with strong lenses, and illuminated by the oxyhydrogen light. If one lantern is used the

picture is drawn out of focus gradually, and a second substituted, which is brought gradually into focus, thus producing the haze and brilliancy which have gained this sort of exhibition its name. If two lanterns are used, they are placed side by side with their lens tubes slightly convergent, so that the images may be superposed on the screen. By means of a revolving shutter either lantern can be wholly or partially shut off and the image of other lanterns be correspondingly disclosed.

Dissonance (dis'u-nans), in music, that effect which results from the union of two sounds not in accord with each other. The ancients considered thirds and sixths as dissonances; and, in fact, every chord except the perfect concord is a dissonant chord. The old theories include an infinity of dissonances, but the present received system reduces them to a comparatively small number. The most common are those of the tonic against the second, the fifth against the sixth, or (the most frequent of all) the fourth against the fifth.

Distaff (dis'taf), the first instrument employed in spinning. It consisted of a staff, on one end of which the wool or flax was rolled. The spinner held it in the left hand, and drew out the fibers with the right, at the same time twisting them. A small piece of wood called a spindle was attached to the thread, the weight of which carried it down as it was formed. When the spindle reached the ground the thread which had been spun was wound round it, and it was then again fastened near the beginning of the new thread.

Distemper (dis-tem'pèr), a disease of the dog commonly considered as of a catarrhal nature. In most cases a running from the nose and eyes is one of the first and chief symptoms, the defluction becoming after some time mucous and purulent. The animal is subject to violent fits of coughing combined with vomiting, loses its appetite, its flesh begins to waste, and if the disease be virulent, symptoms of affection of the brain manifest themselves, accompanied by fits, paralysis, or convulsive twitchings. In the first stage of the disease laxatives, emetics, and occasional bleeding are the principal remedies; diarrhœa should be checked by astringents, and to reduce the violence of the fits warm bathing and antispasmodics should be resorted to. The distemper is generally contagious, and occurs but once in a lifetime.

Distemper (Italian, *tempera*), in painting, a preparation of opaque color mixed in a watery glue, such as size, white of egg, or gum. It is used now chiefly in scene-painting and in paper for walls, but was employed in the higher departments of art before the introduction of oil-painting in the fifteenth century. Distemper is painted on a dry surface, fresco on wet mortar or plaster.

Distich (dis'tik), a couplet of verses, especially one consisting of a Latin or Greek hexameter and pentameter, making complete sense.

Distillation (dis-ti-lā'shun), the volatilization and subsequent condensation of a liquid by a special apparatus, resulting in a separation of the liquid from a mixture. The operation is performed by heating the crude liquid or mixture in a retort or vessel known as the *body of the still*. This is made of various shapes and materials, and is closed with the exception of a slender neck which opens into the condenser, a long tube through which the hot vapor from the still is passed. The tube is kept at a sufficiently low temperature to cause the vapor to condense, the common method of securing this being to surround the tube with a constantly renewed stream of cold water. In some cases ice or a freezing mixture may be required to effect condensation. On a large scale the condensing tube is coiled round and round in a tub or box, and is known as a *worm*. From the end of it the vapor, condensed into a liquid, drops or distils into a receiver. The simplest case of distillation is that of water containing solid matter in solution, the solid matter remaining behind in the still or retort while the water trickles pure into the receiver. The cut which

water, the distilled liquid trickling out at o. The cold water round the worm requires to be continually renewed, as it absorbs the heat. When the mixture to be distilled consists of two or more liquids of different boiling-points, such as alcohol and water, the more volatile comes off first, accompanied by a certain proportion of the vapor of the other, so that it is hardly possible completely to separate bodies by one distillation. This is effected by repeated successive distillations of the liquid with or without the addition of substances to retain the impurities. When the production of one of the ingredients only is aimed at by this process, it is called *rectification*, but when it is desired to separate and collect all the liquids present, or to divide a mixture into portions lying within certain ranges of temperature ascertained either by the thermometer or by the amount of liquor run off, or by the appearance of the distillate, etc., the process is called *fractional distillation*. In the laboratory, distillation is employed for purifying water, for recovering alcohol and ether, and for the preparation, purification, and separation of a great number of bodies. On the large scale distillation is employed in the preparation of potassium, sodium, zinc, mercury; of sulphuric acid, ether, chloroform, sulphide and chloride of carbon, essential oils and perfumes; purification of coal and wood tar, and the products obtained from them; and, most extensive of all, the manufacture of whisky, brandy, or other spirit. Sea-water is also distilled in many cases for drinking or cooking purposes. *Destructive distillation* differs from the preceding in this respect, that the original substance is not merely separated into the bodies by the mixture of which it is formed, but is so acted on that it is completely decomposed, and bodies are produced which had no existence in the original matter. The term is restricted to the action of heat upon complex organic substances out of contact with the air. The products of destructive distillation are numerous and varied. On the manufacturing scale the process is conducted sometimes for one part, sometimes for another part of the products. Coal, for example, is distilled primarily for the gas, but also for ammoniacal water, benzol, anthracene, and sometimes for the sake of the fixed carbon or coke, the volatile portions being neglected and practically wasted. Wood is distilled partly for the sake of the pyroligneous acid and the tar, partly for the charcoal. Bones are distilled for the sake of the charcoal, though the oil is also

Distilling Apparatus.

represents a simple form of still, shows B, a copper boiler, the 'body' of the still, A being the 'head,' and C the 'neck,' which communicates with the spiral worm D placed in a vessel which contains cold

collected. Shale is distilled solely for the sake of the oil.

Distoma (dis'to-ma), a genus of trematode or suctorial parasitical worms or flukes, inhabiting various parts in different animals. *D. hepaticum*, or common liver fluke, inhabits the gall-bladder or ducts of the liver in sheep, and is the cause of the disease known as the rot. They have also been discovered in man (though rarely), the horse, the hog, the rabbit, birds, etc. In form it is ovate, flattened, and presents two suckers (whence the name), of which the anterior is perforated by the aperture of the mouth. A branched water-vascular system is present, and opens posteriorly by a small aperture. All the animals of this genus present the phenomenon known as 'alternation of generation.'

Distress (dis-tres'), in law, is the taking of a personal chattel of a wrongdoer or a tenant, in order to obtain satisfaction for the wrong done or for rent or service due. If the party whose goods or cattle are seized disputes the injury, service, duty, or rent, on account of which the distress is taken, he may replevy the things taken, giving bonds, at the same time, to return them or pay damage in case the party making the distress shows that the wrong has been done, or the service or rent is due. Another description of distress is that of *attachment*, to compel a party to appear before a court when summoned for this purpose. The distresses most frequently made are on account of rent and taxes and *damage-feasance*.

Distribution of Animals (dis'tri-bū-shun). See *Zoology*.

Distribution of Plants. See *Botany*.

District Attorney (dis'trikt), an officer appointed in each judicial district, whose duty it is to prosecute all delinquents, in such district, for crimes and offenses cognizable under the authority of the United States, and all civil actions in which the United States shall be concerned, except in the Supreme Court, in the district in which the court shall be held.

District Courts (dis'trikt), an important series of courts in the United States, each under a single judge, and having original jurisdiction in civil, criminal and admiralty causes, in which the general government or officers of the government are concerned. They are about sixty in number, having been increased from time to time. Generally there is one for

each State, but the larger States have more than one.

District of Columbia. See *Columbia*.

Districts, CONGRESSIONAL, the divisions in the United States which each return a representative to Congress. Their number varies at different times, being fixed after each decennial census.

Ditch (dich), a trench in the earth made by digging, particularly a trench for draining wet land, or for making a fence to guard enclosures, or for preventing an enemy from approaching a town or fortress. In the latter sense it is called also a *fosse* or moat, and is dug round the rampart or wall between the scrap and counterscarp. See *Fortification*.

Dithyrambus (dith-i-r a m' bus), DITH'YRAMB, in Greek literature, a poem sung in honor of the god Bacchus or Dionysus, at his festivals. It was composed in a lofty and often inflated style; hence the term is applied to any poem of an impetuous and irregular character.

Ditmarshes (dit' marsh-es; German, *Dithmarschen*), a district of Holstein, in Germany, consisting of a monotonous flat stretching along the German Ocean, between the mouths of the Elbe and the Eider, and so little raised above the sea as to require the protection of strong embankments. The area is 500 sq. miles, and the total pop. above 70,000.

Dittany (dit'a-ni), the popular name of the plants of the genus *Dictamnus*, an herb of the rue family (Rutaceæ), found in the Mediterranean region. The leaves are pinnate, the large white or rose-colored flowers are in terminal racemes. The whole plant is covered with oily glands, and the secreted oil is so volatile that in hot weather its vapor becomes slightly inflammable. *D. Fraxinella* and *D. albus* are found in gardens. The dittany of the United States is *Cunila Mariana*, a labiate plant. The dittany of Crete is *Origānum Dictamnus*, and the bastard dittany is a species of *Marrubium* (horehound), both labiates.

Diu (dē'ö), an island of Hindustan, belonging to the Portuguese, on the northwest coast, off the south extremity of Gujerat, from which it is separated by a very narrow channel. It is 7 miles in length, from E. to W., and 2 miles in greatest breadth from N. to S. On a point on the east end of the island stands the town of Diu. It was formerly the seat of a considerable commerce, but

is now a place of no importance. Pop. of island, 14,614.

Diuretics (dī-ū-ret'iks), medicines intended to increase the secretion and discharge of urine. They either act directly on the kidneys, exciting these organs to increased action; or indirectly by first influencing the circulation. Of the first class are squill, broom, juniper, alcohol, potash, etc.; of the second, digitalis, elaterium, cream of tartar, etc.

Diurna (dī-ur'na), a name sometimes given to the diurnal lepidopterous insects or butterflies.

Divan (di-van'), a Persian word having several significations. It is used in Turkey for the highest council of state, the Turkish ministry; also for a large hall for the reception of visitors. Among several oriental nations this name is given to certain collections of lyric poems by one author. The *divans* of Hafiz and Saadi, the Persian poets, are among the most important. In Western Europe the term is applied to a café, and to a kind of cushioned seat.

Divers (dī-verz), birds remarkable for the habit of diving. The divers (Colymbidæ) are a family of swimming birds (Natatores), characterized by a strong, straight, rather compressed pointed bill about as long as the head; a short and rounded tail; short wings; thin, compressed legs, placed very far back, and the toes completely webbed. They prey upon fish, which they pursue under water, making use partly of their wings, but chiefly of their legs and webbed feet in their subaqueous progression. The leading species are the great northern diver (*Colymbus glaciālis*), the red-throated diver (*C. septentrionalis*), and the black-throated diver (*C. Arcticus*). These birds inhabit the Arctic seas of the New and Old worlds; they are abundant in the Hebrides, Norway, Sweden and Russia. The great northern diver, loon, or ember goose, is about 2¾ feet long, and is of handsome plumage.

Dividend (div'i-dend), literally what is to be divided, a term used in arithmetic and in reference to stocks, etc. In the latter sense it is the interest or profit of stocks divided among, and paid to, the proprietors. It also signifies the payment made to creditors out of the estate of a bankrupt.

Dividers (di-vi'ders), a pair of compasses or similar instrument.

Dividing Engine, a machine for divisions on the scales of scientific, mathematical, or other instruments. Some of

these perform work of extraordinary fineness and accuracy.

Divi-divi, LIBI-DIBI, or LIBI-DAVI, the pods of *Casalpinia coriaria*, a tree which grows in tropical America, and a member of the family which yields sapan, brazil, and other red woods. The pods are about 1 inch broad and 3 inches long, but are generally bent or curled up. They are highly astringent, containing a large proportion of tannic and gallic acids, for which reason they are used by tanners and dyers.

Divination (div-i-nā'shun), the act of divining; a foretelling future events, or discovering things secret or obscure, by the aid of superior beings, or by other than human means. In ancient times divination was divided into two kinds, *natural* and *artificial*. *Natural* divination was supposed to be effected by a kind of inspiration or divine afflatus; *artificial* divination was effected by certain rites, experiments, or observations, as by sacrifices, observation of entrails and flight of birds, lots, omens, positions of the stars, etc. Among modes of divination were: *axinomancy*, by axes; *belomancy*, by arrows; *bibliomancy*, by the Bible; *oneiromancy*, by dreams; *pyromancy*, by fire, etc.

Divine Right (di-vīn'), the claim set up by some sovereigns or their supporters to the absolute obedience of subjects as ruling by appointment of God, insomuch that, although they may themselves submit to restrictions on their authority, yet subjects endeavoring to enforce those restrictions by resistance to their sovereign's acts are considered guilty of a sin. The most recent claim of this character is that made by William II of Germany.

Diving (div'ing), the art or act of descending into water to considerable depths, and remaining there for a time. The uses of *diving* are important, particularly in fishing for pearls, corals, sponges, examining the foundations of bridges, recovering valuables from sunken ships, and the like. Without the aid of artificial appliances a skilful diver may remain under water for two, or even three minutes; accounts of longer periods are doubtful or absurd. Various methods have been proposed and engines contrived to render diving more safe and easy. The great object in all these is to furnish the diver with fresh air, without which he must either make but a short stay under water or perish. See *Diving-bell*, *Diving-dress*.

Diving-bell, a contrivance for the purpose of enabling persons to descend and to remain below the

DIVING-BELL AND DREDGING MACHINE.

LONGITUDINAL SECTION OF HOPPER DREDGER, Employed on the River Clyde
The Vessel steams to place of working and is moored by the Steam Winches A A at bow and stern to buoys, the Bucket Ladder B is then lowered by the Steam power, and thereafter Buckets set in motion by gearing C C. The depth of water at which the Bucket Ladder dredges is regulated by the Hoisting Shears and Chain Barrel D D, driven by shafting E E from the Engines. The Buckets discharge the material by the shoot F into the Hopper G. The dredged material is discharged by the doors of the Hopper being opened by the Lifting Chains H H. These doors are hinged on to the side of Vessel, and suspended at centre by the Lifting Chains, which are connected to geared Crab Winches I I.

SECTIONAL VIEW OF DIVING BELL AND BARGE, Employed on the River Clyde.
All the appliances are worked by steam, rendering manual labour unnecessary
A is the Bell, which is raised and lowered by means of the Chain and Steam Winch B. C C are Seats within the Bell; D D, Footboards. E, Air-pipe entering the Bell at F, the air being supplied by Air-pump G driven by the Engine H. J is a Steam Crane for raising or lowering material. K K, Steam Winches for working moorings and shifting position of the barge.

surface of water for a length of time, to perform various operations, such as examining the foundations of bridges, blasting rocks, recovering treasure from sunken vessels, etc. Diving-bells have been made of various forms, more especially in that of a bell or hollow truncated cone, with the smaller end closed, and the larger one, which is placed lowermost, open. The air contained within these vessels prevents them from being filled with water on submersion, so that the diver may descend in them and breathe freely for a long time, provided he can be furnished with a new supply of fresh air when the contained air becomes vitiated by respiration. This is done by means of a flexible tube, through which air is forced into the bell. A form, called the *nautilus*, has been invented which enables the occupants, and not the attendants above, to raise or sink the bell, move it about at pleasure, or raise great weights with it and deposit them in any desired spot.

Diving-dress, a waterproof dress of India rubber cloth used by professional divers, and covering the entire body except the head. The dress has a neck-piece or breastplate, fitted with a segmental screw bayonet joint, to which the head-piece or helmet, the neck of which has a corresponding screw, can be attached or removed. The helmet has

Diving-dress and Diving-helmet by Siebe, Gorman & Co.—*a*, Pipe by which air is supplied; *b*, valve by which it escapes.

usually three eyeholes, covered with strong glass, and protected by guards. Air is supplied by means of a flexible tube which enters the helmet and com-

municates with an air-pump above. To allow of the escape of the used air there is sometimes another flexible tube, which is led from the back part of the helmet to the surface of the water. But in the more improved forms of the dress, the breathed air escapes by a valve so constructed as to prevent water from getting in, though it lets the air out. Lead weights are attached to the diver; and his shoes are weighted, that he may be able to descend a ladder, walk about below, etc. Communication can be carried on with those above by means of a cord running between the diver and the attendants; or he may converse with them through a speaking tube or a telephonic apparatus. One form of diving-dress makes the diver independent of any connection with persons above the water. It is elastic and hermetically closed. A reservoir containing highly compressed air is fixed on the diver's back, which supplies him with air by a self-regulating apparatus at a pressure corresponding to his depth. When he wishes to ascend he simply inflates his dress from the reservoir. Another form, known as the Fleuss dress, makes the diver also independent of exterior aid. The helmet contains a supply of compressed oxygen, and the exhaled breath is passed through a filter in the breast-piece which deprives it of its carbonic acid, while the nitrogen goes back into the helmet to be mixed with the oxygen, the supply of which is under the diver's own control, and to be successively breathed. A diver has remained an hour and a half under 35 feet of water in this dress. The safe limit of depth at which operations can be carried on with the diving-dress is 120 to 150 feet. Diving for pearls, sponges, or corals is now to a great extent carried on by means of diving-dresses.

Divining Rod (*di-vīn'ing*), a rod usually of hazel, with two forked branches, used by persons who profess to discover minerals or water under ground. The rod, is carried slowly along by the forked ends, dips and points downwards, it is affirmed, when brought over the spot where the concealed mineral or water is to be found. The use of the divining-rod is still common in many parts, and quite recently various wonderful instances of its efficacy in discovering water have been published. This efficacy, however, needs proof.

Divisibility (*di-vis-i-bil'i-ti*), that general property of bodies by which their parts or component particles are capable of separation. Numerous examples of the division of matter to a degree almost exceeding be-

lief may be easily instanced. Thus, glass test-plates for microscopes have been ruled so fine as to have 225,000 spaces to the inch. Cotton yarn has been spun so fine that one pound of it extended upwards of 1000 miles, and a Manchester spinner is said to have attained such a marvelous fineness that one pound would extend 4770 miles. One grain of gold has been beaten out to a surface of 52 square inches, and leaves have been made 367,500 of which would go to make an inch of thickness. Iron has been reduced to wonderfully thin sheets. Fine tissue paper is about the 1200th part of an inch in thickness, but sheets of iron have been rolled much thinner than this, and as fine as one 4800th part of an inch in thickness. Wires of platinum have been drawn out so fine as to be only the 30,000th part of an inch in diameter. Human hair varies in thickness from the 250th to the 600th part of an inch. The fiber of the coarsest wool is about the 500th part of an inch in diameter, and that of the finest only the 1500th part. The silk fiber, as spun by the worm, is about the 5000th part of an inch thick; but a spider's fiber is only the 30,000th part of an inch in diameter; insomuch that a single pound of this attenuated substance might be sufficient to encompass our globe. The trituration and levigation of powders, and the perennial abrasion and waste of the surface of solid bodies, occasion a disintegration of particles almost exceeding the powers of computation. The solutions of certain saline bodies, and of other colored substances, also exhibit a prodigious subdivision of matter. A single grain of the sulphate of copper, or blue vitriol, will communicate a fine azure tint to five gallons of water. In this case the sulphate must be attenuated at least 10,000,000 times. Odors are capable of a much wider diffusion. A single grain of musk has been known to perfume a large room for the space of twenty years. At the lowest computation the musk had been subdivided into 320 quadrillions of particles, each of them capable of affecting the olfactory organs. All this goes to demonstrate the extraordinary minuteness of the constituent particles of matter.

Division (di-vizh'un), in arithmetic, the dividing of a number or quantity into any parts assigned; one of the four fundamental rules, the object of which is to find how often one number is contained in another. The number to be divided is the *dividend*, the number which divides is the *divisor*, and the result of the division is the *quotient*. Di-

vision is the converse of multiplication.

Division, in military matters, a portion of an army consisting of two or more brigades, composed of the various arms of the service, and commanded by a general officer. In the navy, a select number of ships in fleet or squadron of men-of-war. The term has been practically abolished since the introduction of gigantic heavily-armed ironclad ships into the navy.

Division, in parliament or congress, the mode of determining a question at the end of a debate. The speaker puts the question, and declares whether in his opinion the 'Ayes' or the 'Noes' have it. Should his opinion not be acquiesced in by the minority, the house is cleared, and the 'Ayes' directed to go into the right lobby and the 'Noes' into the left, where they are counted by two tellers appointed for each party.

Division of Labor, a principle employed in great industries for the simplification of the work to be done by each of the workmen engaged in it. The separation of complicated processes into a series of simple operations not only results in a great saving of time, but also demands much less ability on the part of the workman, in order that he may acquire the necessary skill in performing any particular operation. Owing to both of these causes, the saving of time, and the employment of cheaper labor, the cost of producing complicated articles is, by the application of this principle, immensely reduced. Division of labor tends to the invention of machinery, and to the effectual use of machinery when invented. It increases the skill and dexterity of the individual workman; it effects a great saving of time and capital, and it conduces to the more economical distribution of labor by classing work-people according to their capacity. It has, however, a deteriorating effect on the laborer's usefulness as an all-round workman.

Divorce (di-vōrs') is a separation, by law, of husband and wife, and is either a divorce *a vinculo matrimonii*, that is, a complete dissolution of the marriage bonds, or a divorce *a mensâ et thoro* (from bed and board), whereby the parties are legally separated, but not unmarried. The causes admitted by different codes of laws as grounds for the modification or entire dissolution of the marriage contract, as well as the description of tribunal which has jurisdiction of the proceedings, and the form of the proceedings, are various. Divorce was permitted by the law of Moses, but

forbidden in the New Testament, except for unchastity. The early laws of Rome permitted the husband to divorce his wife for adultery and many other alleged offenses. The facility of divorce continued, without restriction, under the Roman emperors, but as the modern nations of Europe emerged from the ruins of the Roman Empire, they adopted the doctrine of the New Testament. Marriage, in the Roman Catholic Church, besides being a civil contract, was considered a sacrament of the church, which it was unlawful to dissolve. The ecclesiastical courts could indeed annul a marriage, but only for a cause that existed at the time the marriage was contracted, such as prior contracts, impotency, etc. For any cause arising after marriage they could only pronounce a divorce *a mensâ et thoro*, which did not leave either party free to marry again, this being only a separation. A divorce *a vinculo matrimonii*, for any cause arising subsequent to marriage, could formerly be obtained in England only by an act of parliament, and the ecclesiastical courts must have previously pronounced a divorce *a mensâ et thoro*. According to present English practice, the husband may obtain a divorce for simple adultery; but if the wife be the petitioner, she must show that her husband has been guilty of certain kinds of adultery, or of adultery combined with desertion or gross cruelty. In Scotland, from the time of the Reformation, divorce might be obtained by either party on the ground of adultery, marriage being held to be only a civil contract, and as such under the jurisdiction of the civil courts. In the United States marriage is considered to be a civil contract, and the laws as to divorce and the facility or difficulty of obtaining it, differ greatly in the several states. Thus, formerly in South Carolina divorce was not granted for any cause. At present in most of the states, divorce is allowed for adultery, habitual drunkenness, desertion for a specified period, etc. In some states the matter is left wholly or partly to the discretion of the courts. Difficult legal questions have arisen from the granting of divorces in one state for reasons not sufficient in another, and the desirability of having Federal enactments making the practice uniform has been much debated.

Dix (diks), DOROTHEA L., an American philanthropist, born in Worcester, Massachusetts. She became deeply interested in the condition of criminals, lunatics and paupers, and visited almost every state in the Union in her efforts to relieve the unfortunate. Her exertions

had much to do with the establishment of lunatic asylums in Pennsylvania, New York, North Carolina and several other states; and by unceasing efforts she succeeded in 1854 in having a bill passed by Congress appropriating 10,000,000 acres of the public lands as an endowment for such asylums. This bill was vetoed by President Pierce. Besides tracts for prisoners, etc., she published several anonymous works: *The Garland of Flora*, *Evening Hours*, etc. She died in 1887.

Dix, JOHN A., statesman, was born in Boscowen, New Hampshire, in 1798. He received a military training, but afterwards studied law. At a critical time in 1861 he was appointed Secretary of the Treasury. In the Civil war under the first call for troops he organized seventeen regiments. After the defeat at Bull Run, by his energetic measures, he saved Maryland from going over to the Confederate cause. In 1872 he was elected governor of New York. He was a man of culture and a distinguished orator. He died in 1879.

Dixon (diks'on), WILLIAM HEPWORTH, miscellaneous writer, born at Manchester in 1821; died at London in 1879. In 1849 he published a memoir of Howard, the philanthropist, which was followed by the *Life of William Penn* (1851), and by a work on Admiral Blake (1852). In 1853, after having been a contributor, he became chief editor of the *Athenæum*, a post which he retained till 1869. During this period he published several very popular works, including the *Personal History of Lord Bacon*, *The Holy Land* and *New America*, the last being followed by *Spiritual Wives*. After his retirement from the *Athenæum*, and in the last ten years of his life, he gave to the world somewhere about twenty-five volumes of history, travel and fiction, among others, *Free Russia*; *Her Majesty's Tower*; *The Switzers*; *History of Two Queens*, *Catharine of Aragon* and *Anne Boleyn*, etc.

Dixon (diks'on), a city, capital of Lee Co., Illinois, on the Rock River, 98 miles w. of Chicago. It has manufactures of flour, ploughs, shoes, etc. Pop. 7216.

Dizful (dēz-föl'), a town of Persia, near the western boundary, on the river Dizful; a place of great trade and manufactures. Pop. 35,000.

Dizier (diz-i-ā), ST., a town of Northeastern France, dep. Haute-Marne, on the Marne where it becomes navigable, 35 miles southeast of Châlons. There are several blast-furnaces and other works. Pop. 10,082.

Djidda. See *Jiddah*.

Djokdjokarta (j o k-y o-k â r't â), a Dutch residency in the island of Java, on the south coast, with a capital of the same name. Its forests abound in teak. Its natural fertility is great, and rice, coffee and tobacco are extensively cultivated. It is ruled by a sultan who is dependent on the Dutch. Pop. 850,000. The town is large and regular, and the seat of the Dutch resident, which is a fort commanding both the palace and the town. Pop. 58,300.

Dmitrof (dmē-trof'), a town of Russia, in the government and 45 miles north of Moscow. It has manufactures of cloths, leather and porcelain. Pop. 4550.

Dmitrovsk (dmē-troisk'), a town in Russia, in the government of Orel, on the highway from Moscow to Kiev. There are manufactures of leather and soap. Pop. 5259.

Dnieper (nē-pēr; Russian, *Dnjepr*, *dnyepr*; anciently *borysthēnēs*), a great river of Russia which rises in the government of Smolensk, flows first southwest, then southeast, and again southwest to the Black Sea. It begins to be navigable a little above Smolensk, and has a total length, including windings, of 1230 miles. Among its tributaries are the Beresina, the Pripet, the Desna and the Psiol. In its lower course there are important fisheries. Between Kiev and Alexandrovsk it forms a series of cataracts, which are now being removed by blasting of the rocks. Since 1838 there have been steamboats on the river, and the trade carried by it is considerable.

Dniester (nēs'tēr; Russian, *Dnjestr*; anciently *tyras*), a large river of Europe, which has its source in the Carpathian Mountains, in Austrian Galicia, enters Russia at Chotin, and empties itself into the Black Sea, after a course of about 750 miles. Its navigation is difficult on account of frequent shallows and rapids.

Doab (dō-ab; that is, *Two Waters*), a name in Hindustan applied indiscriminately to any tract of country between two rivers. The tract between the Ganges and the Jumna is usually called *the Doab*; other similar tracts have their distinctive names, the Punjab being divided into five districts of this kind, Bari-Doab, Rechna Doab, Sindesagar Doab, etc.

Dobberan (dod'e-ran), or DOBERAN, a German watering place in Mecklenburg-Schwerin, 2 or 3 miles from the Baltic. There are mineral

springs, bathing establishments, etc. Pop. 5000.

Dobell (dō-bel'), SYDNEY, an English poet and man of letters, born in 1824. His first poem, *The Roman*, appeared in 1850, and was favorably received by the critics. Among his other works are *Balder*, *Sonnets on the War*, *England in Time of War*, etc. He died in 1874.

Döbeln (dew'beln), a town of the kingdom of Saxony, about 40 miles southeast of Leipzig, with a great trade in grain and manufactures of cloth, yarn, leather, lacquered wares, etc. Pop. (1905) 18,907.

Doberan. See *Dobberan*.

Dobereiner's Lamp (dō'be-rī-nēr), a contrivance for producing an instantaneous light, invented by Professor *Dobereiner*, of Jena, in 1824. The light is produced by throwing a jet of hydrogen gas upon recently prepared spongy platinum, when the metal instantly becomes red hot, and then sets fire to the gas. The action depends upon the readiness with which spongy platinum absorbs gases, more especially oxygen gas. The hydrogen is brought into such close contact with oxygen (derived from the atmosphere) in the pores of the platinum that chemical union, attended with evolution of light, takes place.

Dobrudja (dō-brud'ja), THE, a territory forming part of the kingdom of Roumania, included between the Danube, which forms its boundary on the west and north, the Black Sea on the east, and on the south a line stretching from Silistria to a point a few miles south of Mangalia. There are some fertile spots, but on the whole it is marshy and unhealthy. The population is of various nationalities, Roumanians, Bulgars, Greeks, Turks and Jews. The inhabitants support themselves by rearing sheep and buffaloes. The principal town is Badadagh. Pop. 267,808.

Dobson (dob'sun), HENRY AUSTIN, an English poet, born at Plymouth in 1840; entered the British civil service in 1856. He published *Vignettes in Rhyme*, *Proverbs in Porcelain*, and other poems, chiefly graceful lyrics, often in French form. He also wrote lives of Fielding, Steele, Goldsmith, etc.

Docetæ (do-sē'tē; from Greek *dokein*, to seem or appear), the name given, in the earlier ages of the church, to those who denied the reality of the human form of Christ, maintaining it to be merely a phantom or shadow. In the sense of regarding Christ's body as

a heavenly and ethereal, instead of a human one, docetism had its partisans even among the orthodox.

Dock (dok), a name applied to different plants of the genus *Rumex*, belonging to the rhubarb family (Polygonaceæ). These are large herbaceous plants, with stout roots, alternate and often entire leaves, and bearing panicles of small, greenish flowers. They are very troublesome as weeds, but the roots of some of them are used medicinally as astringents.

Docket, DOCKET (dok'et), in law, a term variously used, as for a summary of a larger writing; a small piece of paper or parchment containing the heads of a writing; an alphabetical list of cases in a court, or a catalogue of the names of the parties who have suits depending in a court.

Docks, are usually artificial enclosures for the reception of vessels, and provided with gates to keep in or shut out the tide. They are called *wet-docks* when they are intended to receive vessels for loading and unloading, the gates being in this case constructed so as to keep in the tide, and thus preserve the water within the docks as nearly as possible at the uniform level of high water. They are called *dry-docks*, or *graving-docks*, when they are intended to admit vessels to be examined and repaired, the gates in this case being such as to keep out the tide while the shipwrights are engaged on the vessel. There is another kind of dry-docks called *floating-docks*, which float on the surface of the water, and may be sunk sufficiently to allow of a vessel being floated into them, and then raised again, by pumping the water out of the tanks round the sides. One of the chief uses of a wet-dock is to keep a uniform level of water, so that the business of loading and unloading ships can be carried on without any interruption and without danger of damage to the vessel from straining, low tides, storms, etc. The first wet-docks constructed in England were those now called the Commercial Docks, in London, which existed in a much less extensive form so early as 1600. In 1800 the West India Docks were constructed, and were followed by the East India Docks, Millwall Docks, London Docks, the St. Katharine Docks and the Victoria Docks, affording, together with those at Tilbury, more than 600 acres of water accommodation, besides wharf and warehouse grounds, where all kinds of appliances and machinery for the speedy and convenient transfer of goods and cargoes are in use. Some of the warehouses are

extremely capacious, the tobacco warehouse of the London Docks being itself nearly 5 acres in extent. Next after the London docks come those of Liverpool, which extend more than 6 miles along the north bank of the Mersey, and cover, together with the Birkenhead docks, nearly as large a total acreage as those of London. There are important docks also in the maritime cities of France and other countries of Europe, where the height of the tides renders such constructions necessary.

Graving-docks are built of strong masonry, and their entrance is closed either by swinging gates opening in the middle, and when shut presenting a salient angle to the water in the river or harbor from which the dock is entered, or by a framework called a *caisson*, built like the hull of a ship, with a keel and a stem at both ends. When the caisson is empty it floats, and may be removed to admit of a vessel being floated into the dock. The caisson being then placed at the entrance and filled with water, again sinks into the grooves intended for it and closes the graving-dock. The water is then pumped out, leaving the ship dry and supported by wooden blocks and props. With regard to floating-docks, a common type of construction is the iron floating-dock built in watertight compartments, and not closed in at either end. It is sunk to the required depth by the admission of water into so many of the compartments, till the vessel to be docked can float easily above its bottom, and is then raised by pumping out the water until the ship can be propped up as in a dry-dock.

A kind of dry-dock, called the *hydraulic lift dock*, consists of a double row of iron columns, each of which contains a hydraulic press. All these hydraulic presses can be worked simultaneously by a powerful steam engine, and their combined action has the effect of raising a series of transverse iron girders stretching from the columns on one side to those of the other. An iron pontoon is first floated above these girders, and then sunk so as to rest on them, and the ship to be docked is floated above the pontoon and supported by blocks resting only upon the pontoon, so that the ship is in no way connected with the columns on each side. The hydraulic presses are then set to work, the girders with the pontoon and ship are raised high enough for the water to be run out of the pontoon, which is then sufficiently buoyant to float the ship. The pontoon may now be floated away clear of the dock, and another take its place. By this

U. S. BATTLESHIP "MISSISSIPPI" IN DRY DOCK AT LEAGUE ISLAND

The method of dry docking a large ship. After warping the vessel into the dock, the gates are closed and the water pumped out, allowing the vessel to settle on the supporting blocks beneath the keel. Additional supports are put out to the walls.

plan a number of vessels can be floated for overhauling and repairs in very shallow water and at comparatively slight expense. Docks in the United States are not of so much importance to commerce as in England, the rise and fall of the tides being far less. Vessels can be loaded or unloaded without difficulty at the wharves of any of the Atlantic or Gulf ports without aid of docks. There are, however, some very fine docks for convenient handling of merchandise; for instance the Atlantic docks at Brooklyn and large dry-docks connected with the navy yards.

Dokkyards, establishments supplied with all sorts of naval stores, materials and conveniences for the construction, repairs and equipment of ships of war. In England the royal dokkyards are at Chatham, Sheerness, Portsmouth, Devonport and Pembroke, besides the Deptford and Woolwich storeyards. There are also royal dokkyards at Haulbowline in Cork Harbor, at the Cape of Good Hope, Gibraltar, Malta, Halifax, Bermuda, Antigua, Jamaica, Sierra Leone, Trincomalee, Singapore, Hong-Kong, Esquimalt (Vancouver's Island), Fernando Po. Sydney and Shanghai. The dokkyards are under the direct control of the Admiralty, with a rear-admiral as superintendent. In the United States there are nine important navy yards, located at Brooklyn, N. Y.; Boston, Mass.; Portsmouth, N. H.; Philadelphia, Pa. Portsmouth, Va.; Mare Island, Cal.; New London, Conn.; Pensacola, Fla.; Washington, D. C. and Port Orchard, Wash.

Doctor (dok'tur), a term literally signifying teacher. In the middle ages, from the twelfth century, it came into use as a title of honor for men of great learning, such as Thomas Aquinas (Doctor Angelicus), Duns Scotus (Doctor Subtilis), etc. It was first made an academical title by the University of Bologna, and emperors and popes soon afterwards assumed the right of granting universities the power of conferring the degree in law. The faculties of theology and medicine were soon included, but for a long time the faculty of arts retained the older title of *Magister*, till the German universities substituted that of Doctor. The title of Doctor is in some cases an honorary degree, and in other cases (as in medicine and science) conferred after examination. The title of D.C.L. (Doctor of Civil Law), for example, at the University of Oxford and at Trinity College, Dublin, is an honorary degree, and so also are those of D. (Doctor of Divinity) and LL.D.

(Doctor of Laws) at the Scotch universities. The popes and the archbishops of Canterbury exercise the right of conferring the degree of Doctor both in law and divinity. In the United States seats of learning, while usually conferred after examination, it is common to give an honorary degree to persons of distinction, without regard to their educational fitness.

Doctor's Commons, was a college founded for the Doctors of the Civil Law in London, and was at one time the seat of the court of arches, the archdeacon's court, the court of admiralty, etc. The practitioners in these courts were called advocates and proctors. In 1857 an act was passed empowering the college to sell its property and dissolve, and making the privileges of the proctors common to all solicitors.

Doctors of the Church, a name given to four of the Greek Fathers (Athanasius, Basil, Gregory Nazianzen and Chrysostom) and three of the Latin Fathers (Jerome, Augustine and Gregory the Great). The Roman Catholic Church recognizes others 'Doctors,' including, besides those already mentioned, Ambrose, Hilary, Cyril, John Damascene, Chrysologus, Leo, Isidore, Peter Damian, Anselm, Bernard, Thomas Aquinas, Bonaventura, Francis de Sales and Alphonsus de Liguori. The title is posthumous.

Doctrinaires (dok-tri-nārs), a section of French politicians, represented by the Duc de Broglie, Royer-Collard, Guizot and others, who became prominent after the restoration in 1815. They favored a constitutional monarchy with a balance of powers similar to that which then existed in Britain. In the chambers they thus occupied a place between radicals and ultra-royalists. They received the name of *doctrinaires* because they were looked upon more as theoretical constitution-makers than practical politicians, and the term is now used with a wider application to political theorists generally.

Dodder (dod'er), the common name of the plants of the genus *Cuscuta*, a group of slender, branched, twining, leafless, pink or white, annual parasites. The seeds germinate on the ground, but the young plant shows its parasitic habit by speedily attaching itself to some other plant, from which it derives all its nourishment. They are chiefly natives of temperate climates, and are often very destructive to flax, clover and other crops. There are fifty species in two genera.

Doddridge (dod'rij). PHILIP, an English Dissenting divine, born in London in 1702. He was an earnest pastor, and the author of many

covered with down instead of feathers, with short, ill-shaped legs; a strong, bulky, hooked beak, and wings and tail so short as to be useless for flight. Its

Lesser Dodder (*Cuscuta epithymum*).

hymns, devotional treatises, etc. *The Rise and Progress of Religion in the Soul* and *The Family Expositor* are among the best known works. He died in 1751.

Dodecagon (dō-dek'a-gon) a figure enclosed by twelve equal straight lines.

Dodecahedron (dō-dek-a-hē'dron), a regular solid contained under twelve equal and regular pentagons, or having twelve equal bases.

Dodecandria (dō-de-kan'dri-a; Greek *dōdeka*, twelve), in botany, the twelfth class of Linnæus, comprising plants having twelve to eighteen stamens.

Dodge, MARY ABIGAIL, author, born in 1838; died in 1896. Her works, written under the name of Gail Hamilton, are piquant and humorous, including *Country Living and Country Thinking*, *Gala Days*, *Battle of the Books*, *Twelve Miles from a Lemon*, etc.

Dodgson (dodj'sun). CHARLES LUTWIDGE, an English writer, born in 1833; died in 1898. An English clergyman, and mathematical lecturer in Christ Church College from 1855 to 1881, he wrote works remarkably alien to mathematical pursuits. Under the *nom de plume* of Lewis Carroll he was the author of the highly popular *Alice in Wonderland*, *Through a Looking Glass*, and other works in the same fantastic and original vein.

Dodo (dō'dō; *Didus ineptus*), an extinct genus of birds once abundant on the island of Mauritius, and assigned by naturalists to the order Columbæ or pigeons, though an extreme modification of the type. It was a massive, clumsy bird, larger than a swan,

Dodo, from painting in the Belvedere, Vienna

extinction was due to its organization not being adapted to the new conditions, which colonization and cultivation introduced.

Dodona (dō-dō'na), a celebrated locality of ancient Greece, in Epirus, where was one of the most ancient Greek oracles. It was a seat of Zeus, whose communications were announced to the priestesses in the rustling of the leaves on its oak tree and the murmuring of water which gushed forth from the earth.

Dodsley (dods'li), ROBERT, an English poet and dramatist, born in 1703; died in 1764. Among his writings was a tragedy, entitled *Cleone*, which had some success on the stage. A selection of *Fables* in prose, with an *Essay on Fables* prefixed, was one of his latest productions. He planned the *Annual Register* (commenced in 1758); the *Collection of Old Plays*, twelve vols. 12mo. which now chiefly sustains his name as a publisher; and the *Collection of Poems by Different Hands*, six vols. 12mo.

Doe, JOHN, and RICHARD ROE, two fictitious personages of the English law whose names were formerly used in a suit of ejectment. This fictitious form of procedure was abolished in 1852.

Doesborgh (dōs'borh), a fortified town of Holland, province of Gelderland, at the junction of the Old and New Yssel. Pop. 4442.

Dog (*Canis vulgāris*), a digitigrade, carnivorous animal, forming the type of the genus *Canis*, which includes also the wolf, the jackal, and, as a subgenus, the fox. The origin of the dog is a much-debated question, some considering the breed derived from the wolf, an opinion which is based on resemblances of structure, the susceptibility which the wolf shows of being domesti-

ARCADE IN DOGE'S PALACE

cated, the fact of the two animals breeding together and producing fertile young, and the equality in the period of gestation. But all these points are subject to exceptions and reservations which make the matter doubtful. It is generally agreed that no trace of the dog is to be found in a primitive state, the dhole of India, and dingo of Australia being believed to be wild descendants from domesticated ancestors. Several attempts to make a systematic classification of the varieties of dogs have been made, but without much success, it being difficult in many cases to determine what are to be regarded as types, and what as merely mongrels and cross-breeds. Colonel Hamilton Smith divides dogs into six groups, as follows:—(1) *Wolf-dogs*, including the Newfoundland, Esquimaux, St. Bernard, shepherd's dog, etc.; (2) *Watch-dogs and Cattle-dogs*, including the German boar-hound, the Danish dog, the matin dog, etc.; (3) *Greyhounds*, the lurcher, Irish hound, etc.; (4) *Hounds*, the bloodhound, stag-hound, foxhound, setter, pointer, spaniel, cocker, poodle, etc.; (5) *Cur-dogs*, including the terrier and its allies; (6) *Mastiffs*, including the different kinds of mastiffs, bulldog, pug-dog, etc. (See the articles under these names.) Dogs have in the upper jaw six incisors, two strong curved canines and six molars on each side, the first three, which are small and have cutting edges, being called false molars in the lower jaw are six incisors, two canines, and on each side seven molars. The forefeet have five toes the hind-feet four or five, the claws are strong, blunt and formed for digging, and are not retractile. The tail is generally long, and is curled upwards. The female has six to ten mammæ; she goes with young nine weeks, as a rule. The young are born blind, their eyes opening in ten to twelve days; their growth ceases at two years of age. The dog commonly lives about ten or twelve years at the most, twenty.

Dogbane (*Apocynum androsæmifolium*), an American plant found from Canada to Carolina, belonging to the nat. order Apocynaceæ (which see). The whole plant is milky; the root is intensely bitter and nauseous, and is employed in America instead of ipecacuanha. Another species (*A. Canabinum*) yields a useful fiber, and is known as Canada or Indian hemp.

Dog-cabbage. See *Dog's-cabbage*.

Dog-cart, a sort of double-seated gig for four persons, those before and those behind sitting back to

back it is often furnished with a boot for holding dogs.

Dog-days, the name applied by the ancients to a period of about forty days, the hottest season of the year, at the time of the heliacal rising of Sirius, the dog-star. The time of the rising is now, owing to the precession of the equinoxes, different from what it was to the ancients (July 1); and the dog-days are now counted from July 3 to August 11, that is, twenty days before and twenty days after the heliacal rising.

Doge (dōj; from Latin *dux*, a leader, later a duke), formerly the title of the first magistrates in the Italian republics of Venice and Genoa. The first doge of Venice elected for life was Paolo Anafesto, in 697 and in Genoa, Simon Boccanera, in 1339. In the former city the dignity was always held for life; in the latter, in later times, only for two years. In both cities the office was abolished by the French in 1797.

Dogfish, a name given to several species of small shark, common around the British Isles. The rough skin of one of the species (*Scyllium catulus*), the lesser-spotted dogfish, is used by joiners and other artificers in polishing various substances, particularly wood. This species is rarely 3 feet long. *S. canicula*, the greater dogfish, is from

Small-spotted Dogfish (*Scyllium catulus*).
3 to 5 feet in length. It is blackish-brown in color, marked with numerous small, dark spots. Both species are very voracious and destructive. Their flesh

Dutch Dogger.

is hard, dry and unpalatable. The common or picked dogfish (*Acanthias vulgāris*) is common in British and N.

American seas, and is sometimes used as food. It is fierce and voracious.

Dogger (d o g' e r), a Dutch vessel equipped with two masts and somewhat resembling a ketch. It is used particularly in the German Ocean for the cod and herring fisheries.

Dogger-bank, an extensive sand-bank of the German Ocean, celebrated for its cod-fishery. It commences about 36 miles east of Flamborough Head and extends E. N. E. to within 60 miles of Jutland, in some places attaining a breadth of about 60 miles, though it terminates merely in a point, where the shallowest water over it is 9 fathoms.

Dog-grass. Same as *Couch-grass*.

Dog-lichen, the popular name of a plant, *Peltidea canina*, common on damp ground, stones and trunks of trees. It was formerly supposed to be a specific for hydrophobia. Also known as *ash-colored ground liverwort*.

Dogma (dog'ma), an article of religious belief, one of the doctrines of the Christian faith. The history of dogmas, as a branch of theology, exhibits in a historical way the origin and the changes of the various Christian systems of belief, showing what opinions were received by the various sects in different ages of Christianity, the sources of the different creeds, by what arguments they were attacked and supported, what degrees of importance were attached to them in different ages, the circumstances by which they were affected, and the mode in which the dogmas were combined into systems. Lectures on this subject are common in the German universities.

Dogmatics (dog-mat'iks), a systematic arrangement of the articles of Christian faith (dogmas), or the branch of theology that deals with them. (See *Dogma*.) The first attempt to furnish a complete and coherent system of Christian dogmas was made by Origen in the third century.

Dog-parsley, same as fool's parsley.

Dog-rose, the *Rosa canina*, or wild brier, nat. order Rosaceæ. By the Dutch invention of forming standards much use is made of the dog-rose for budding purposes.

Dog's-bane. See *Dogbane* and *Apocynaceæ*.

Dog's-cabbage, DOG-CABBAGE, *Thelypodium cynocrambe*, a smooth, succulent herb, nat. order Chenopodiaceæ, found in the south of Europe.

Though it is slightly acrid and purgative, it is sometimes used as a pot-herb.

Dog's-fennel, a British plant found in cultivated fields (*Anthëmis Cotûla*), with acrid, emetic properties. It derives its name of dog's-fennel from some resemblance of its leaf to fennel and from its bad smell.

Dog's-mercury, *Mercurialis perennis*, nat. order Euphorbiaceæ, an herb common in Britain. It has poisonous properties, and may be made to yield a fugitive blue dye.

Dog's-tail Grass (*Cynosûrus*), a genus of grasses. *Cynosûrus cristatus* is a perennial found wild all over Great Britain in pastures, lawns and parks. Its roots are long and wiry, and descending deep into the ground ensure the herbage against suffering from drought. Its stem is from 1 to 2 feet high and its leaves are slightly hairy.

Dog-star, a name for Sirius, the star that gives their name to the dog-days (which see).

Dog's-tooth Ornament, an architectural

ornament or molding consisting of square four-leaved flowers with projecting centers placed in close contact with each other. It is the characteristic decorated molding of Early English architecture.

Dog's-tooth Ornament.

Dog's-tooth Violet, *Erythronium dens-canis*, a liliaceous plant grown in gardens, so called from the appearance of its white bulbs.

Dog-tooth, or CANINE TOOTH, one of the teeth in the human jaw placed between the foreteeth and the grinders. They are sharp pointed, resembling a dog's teeth.

Dog-tooth Spar, a form of calcic spar found in Derbyshire and other parts of England, and named from a supposed resemblance to a dog's tooth.

Dog-watch, a nautical term distinguishing two watches of two hours each (4 to 6 P.M. and 6 to 8 P.M.). All the other watches count four hours each, and without the introduction of the dog-watches, the same hours would always fall to be kept as watch by the same portion of the crew.

Dogwood, a common name of trees of the genus *Cornus*, but specifically applied in Britain to *C. san-*

guinea. It is a common shrub in copses and hedges in England the small, cream-white flowers are borne in dense, round clusters. The wood is used for skewers and for charcoal for gunpowder. The *C. mascula* is known as the cornel tree. *Cornus florida* and other American species are also called dogwood. Its leaves turn red before falling and add much to the autumn beauty of American woods. The 'poison dogwood' of America is *Rhus venenata*, one of the sumachs. See *Cornel*, *Cornaceæ*.

Doiley (doi'li), a small ornamental napkin used at table to set glasses on at dessert.

Doit, an ancient Scottish coin, of which eight or twelve were equal to a penny sterling. In the Netherlands and Lower Germany there was a coin of similar name and value.

Dolabra (do-lā'bra), the Latin name for a celt. See *Celts*.

Dolbear (dol'bār), AMOS EMERSON, scientist, was born at Norwich, Connecticut, in 1837; died in 1910. He was professor at Kentucky University, 1867-74, and afterward of physics and astronomy in Tuft's College. He made inventions in telegraphy and wrote *Art of Projecting*, *The Speaking Telephone*, *Matter, Ether and Motion*, *Natural Philosophy*, etc.

Dolce (dol'chā), or DOLCEMENTE, in music, an instruction to the performer that the music is to be executed softly and sweetly.

Dolci (dol'chē), CARLO, a celebrated painter of the Florentine school, was born at Florence in 1616, and died there in 1686. His works, principally heads of madonnas, saints, etc., have a character of sweetness and melancholy. Among his chief productions are *St. Cecilia at the Organ* and *Herodias with the Head of John the Baptist*, both in the Dresden Gallery, and *St. Andrew in Prayer*, at the Pitti Gallery.

Dolcinites (dol'chē-nīts), a Christian sect of Piedmont, so named from their leader *Dolcino*. They arose in 1304 as a protest against the Papacy, but were suppressed by the troops of the Inquisition in 1307.

Doldrums (dol'drumz), among seamen, the parts of the ocean near the equator that abound in calms, squalls and light, baffling winds; otherwise known as the horse-latitudes.

Dôle (dōl), a town in France, Jura, 26 miles southeast of Dijon. It is of Roman origin, was long the capital of Franche Comté, and has some interesting antiquities. The manufactures are

Prussian blue, hosiery, ironware, leather, etc. Pop. (1906) 11,166.

Dole, SANFORD BALLARD, was born in the Hawaiian Islands, of American parentage, in 1844. He studied law, practiced it in Honolulu, and became a member of the Hawaiian legislature and judge of the supreme court. He was a leader in the reform movement of 1887 and on the formation of a republic in 1893 was made its president. When Hawaii was annexed to the United States he continued in power as governor of the islands, and of the Territory of Hawaii in 1900. He has been an United States district judge in the territory since 1903.

Dolerite (dol'e-rīt), a variety of trap-rock composed of augite and labradorite with some titaniferous magnetic iron ore and other minerals.

Dolgelley (dol-geth'lē), a town of Wales, capital of Merioneth County, near the foot of Cader Idris. It has manufactories of woollens, flannels and cloths. Pop. (1911) 2160.

Dolichocephalic (dol-i-ko-sef'a-lik), long-headed; a term used in ethnology to denote those skulls in which the diameter from side to side is less in proportion to the longitudinal diameter (*i. e.*, from front to back) than 8 to 10.

Dolichos (dol'i-kos), a genus of leguminous plants, suborder Papilionaceæ. They are found in the tropical and temperate regions of Asia, Africa and America, and all produce edible legumes. *D. sesquipedālis*, which is also grown in the south of France, has pods a foot in length and containing seven to ten kidney-shaped seeds. *D. lignōsus* is one of the most common kidney beans in India. *D. tuberosus* of Martinique has a fleshy, tuberous root which is an article of food.

Dolichosaurus (dol-i-ko-sa'rus; 'long lizard'), an extinct snake-like reptile found in the chalk, whose remains indicate a creature of aquatic habits, from 2 to 3 feet in length.

Dollar (dol'ar), a silver or gold coin of the United States, of the value of 100 cents. The same name is also given to coins of the same general weight and value, though differing somewhat in different countries, current in Mexico, a great part of South America, Singapore, the Philippine Islands, etc. The name is from the Dutch (also Danish and Swedish) *daler*, from Ger. *thaler*, so named from Ger. *thal*, a dale, because first coined in Joachim's *Thal*, in Bohemia, in 1518. The sign \$, used in

this country to signify a dollar, is supposed to date from the time of the pillar dollar of Spain. This was known as the 'Piece of Eight' (meaning 8 reals), the curve being a partial representation of the figure 8. The two vertical strokes are thought to represent the Pillars of Hercules, which were stamped upon the coin itself.

Dollart (dol'lert), THE, a gulf of the German Ocean, at the mouth of the Ems, between the Dutch province of Groningen and Hanover. It was originally dry land, and was formed by irruptions of the sea, which took place in 1277 and 1530, overwhelming thirty-four large villages and numerous hamlets.

Döllinger (deul'ing-ër), JOHANN JOSEPH IGNAZ, a celebrated German theologian and leader of the Old Catholic party, was born at Bamberg, in Bavaria, in 1799. In 1822 he entered the church, and soon after published *The Doctrine of the Eucharist during the First Three Centuries*, a work which won him the position of lecturer on church history at the University of Munich. In later years he took an active part in the political struggles of the time as representative of the university in the Bavarian parliament, and as delegate at the Diet of Frankfort voted for the total separation of church and state. In 1861 he delivered a course of lectures, in which he attacked the temporal power of the papacy. But it was first at the Œcumenical Council of 1869-70 that Dr. Döllinger became famous over Europe by his opposition to the doctrine of papal infallibility. In consequence of his opposition to the vatican decrees he was excommunicated in 1871 by the Archbishop of Munich. A few months later he was elected rector of the University of Munich, and in 1873 rector of the Royal Academy of Science. Among his numerous works we may notice *Origins of Christianity*, *A Sketch of Luther*, *Christianity and the Church*, etc. He died in 1890.

Dollond (dol'ond), JOHN, an English optician of French descent, born in 1706; died in 1761. He devoted his attention to the improvement of refracting telescopes, and succeeded in constructing object-glasses in which the refrangibility of the rays of light was corrected. Subsequent members of the family have distinguished themselves in optics, astronomy, etc.

Dolman (dol'man), a long robe worn by the Turks as an upper garment. It is open in front, and has

narrow sleeves. It has given its name to a kind of loose jacket worn by ladies.

Dolmen (dol'men), a name sometimes used as equivalent to *cromlech*, sometimes in a distinctive sense. Sir John Lubbock maintains that *cromlech* should be applied to a stone circle, *dolmen* to a stone chamber, such circle or chamber consisting of huge stones set up often in prehistoric times for religious or sepulchral purposes or as memorials of some important event. See *Cromlech*.

Dolmonieu (dol-o-myeu), DÉODAT GUY SILVAIN TANCÈDE GRATET DE, a French geologist and mineralogist, born in 1750 at Dolomieu (Isère). After some years of military service he devoted himself to geological researches. He accompanied the French expedition to Egypt, but was shipwrecked on his return off the coast of Taranto, and imprisoned and harshly treated by the Neapolitan government. He died in 1801. Among his works are *Voyages aux Iles de Lipari*, etc., (1783); *Sur le Tremblement de Terre de la Calabre* (1784); *Philosophie minéralogique* (1802).

Dolomite (dol'u-mīt), a mineral, also called magnesian limestone. It is composed of carbonate of calcium and carbonate of magnesium, and varies from gray or yellowish white to yellowish brown. It abounds in the Apennines, Tyrol, Switzerland, Tuscany, North America, England, etc. A variety called *bitterspar*, and sometimes *rhombspar*, is found in crystals having the form of a rhomboid; color grayish, yellowish, or reddish brown, easily scratched with the knife, and semitransparent. A second variety is denominated *pearlspar*, which has crystals of curvilinear faces and a pearly luster.

Dolomite Mountains, DOLOMITE ALPS, a group of European mountains belonging partly to Tyrol, partly to North Italy, and having the Piave and Rienz on the east, the Adige and Eisack on the west. They are named from the prevalence of the mineral dolomite, and present most interesting and picturesque scenery, the peaks being endlessly varied in form. The highest summits are Palle di San Martino (10,968 ft.); Sorapiss (10,798), and Monte Tofana (10,715).

Dolphin (dol'fin; *Delphinus*), a cetaceous animal, forming the type of family (Delphinidæ) which includes also the porpoises and narwhal. Dolphins are cosmopolite animals, inhabiting every sea from the equator to

the poles; they are gregarious, and swim with extraordinary velocity. The common dolphin (*D. delphis*) measures from 6 to 10 feet in length, has a long, sharp snout with numerous nearly conical teeth in both jaws; its flesh is coarse, rank and disagreeable, but is used by the Laplanders as food. It lives on fish, mollusca, etc., and often may be seen in numbers

Common Dolphin (*Delphinus Delphis*).

round shoals of herring. The animal has to come to the surface at short intervals to breathe. The blowhole is of a semilunar form, with a kind of valvular apparatus, and opens on the vertex, nearly over the eyes. The structure of the ear renders the sense of hearing very acute, and the animal is observed to be attracted by regular or harmonious sounds. One or two young are produced by the female, who suckles and watches them with great care and anxiety, long after they have acquired considerable size. Compactness and strength are the characteristics of the genus.—The name is also commonly but improperly given to a fish, *Coryphæna hippūris*, a member of the mackerel family, the beauty of whose colors when dying has been much celebrated by poets. They abound within the tropics, are about 4 or 5 feet long, very swift in swimming, and are used as food, though said sometimes to be poisonous.

Dom, a Portuguese title corresponding with the Spanish *Don*.

Domain (dō-mān), same as *Demesne* (which see); also applied especially to crown lands or government lands.—*Right of eminent domain*, the dominion of the sovereign power over all the property within the state, by which it is entitled to appropriate any part necessary to the public good, compensation being given.

Dombrowski (dō-m-brov'skē). JAN HENRYK, a Polish general, distinguished in the wars of Napoleon, was born in 1755. He supported the rising of the Poles under Kosciusko in 1794. In 1796 he entered the service of France, and at the head of a Polish legion rendered signal services

in Italy in 1796-1801. He took a distinguished part in the invasion of Russia in 1812, and also in the campaign of 1813. After Napoleon's abdication he returned to Poland and the year following was made a Polish senator by Alexander I. He died in 1818.

Dome (dōm), a vaulted roof of spherical or other curvature, covering a building or part of it, and forming a common feature in Byzantine and also in Renaissance architecture. Cupola is also used as a synonym, or is applied to the interior, dome being applied to the exterior. (See *Cupola*.) Most modern domes are semielliptical in vertical section, and are constructed of timber; but the ancient domes were nearly hemispherical and constructed of stone. Of domes the finest, without any comparison, ancient or modern, is that of the Rotunda or Pantheon at Rome (142½ feet internal diameter and 143 feet internal height),

Section of Dome of San Pietro in Montorio, Rome at end of Fifteenth Century.

erected under Augustus, and still perfect. Among others the most noteworthy are St. Sophia at Constantinople (104 × 201 feet), the cathedral of Santa Maria del Fiore at Florence (139 × 310 feet), St. Peter's at Rome (139 × 330 feet), St. Paul's London (112 × 215 feet), the Hotel des Invalides (80 × 173 feet), and the church of St. Geneviève at Paris (67 × 190 feet). The figures represent the internal diameter and height in English feet. The finest dome in America is that of the Capitol at Washington, built of cast-iron.

Domenichino (dō-mē-n-i-kē' nō). *Domenico Zampieri*, an Italian painter of great eminence, of

the Lombard school, born at Bologna in 1581 or 1582. He studied under Annibal Carracci, and afterwards went to Rome, where he became painter to Pope Gregory XV. Among his best works are the *Communion of St. Jerome* in the Vatican Museum, the *History of Apollo*, the *Martyrdom of St. Agnes* and the *Triumph of David*. He died at Naples in 1641.

Domesday Book (or DOOMSDAY), a book containing a survey of all the lands in England, compiled in the reign and by the order of William the Conqueror. The survey was made by commissioners, who collected the information in each district from a sworn jury consisting of sheriffs, lords of manors, presbyters, bailiffs, villeins—all the classes, in short, interested in the matter. The extent, tenure, value and proprietorship of the land in each district, the state of culture, and in some cases the number of tenants, villeins, serfs, etc., were the matters chiefly recorded. The survey was completed within a year. Northumberland, Durham, Cumberland and Westmoreland were not included in the survey, probably for the reason that William's authority was not then (1086) settled in those parts. The Domesday Book consists of two volumes, one folio and one quarto. It has been twice republished, the last time (1861-65), in perfect facsimiles of the original.

Domestic Animals, such as are reared and kept by man, and are to some extent in a tame state; as the dog, cat, ox, sheep, swine, horse, ass, elephant, camel, llama, reindeer, etc.

Domfront (dom-frōn), a town of France, dep. Orne, picturesquely situated on a steep rock above the Varenne, 35 miles W. N. W. of Alençon. Pop. (1906) 2215.

Domicile (dom'i-sil), in law, the place where a person has a home or established residence. Domicile is often an important question in determining the efficacy of legal citations, the validity of marriage, the right of succession to property, etc. For some purposes what is called a temporary domicile is sufficient, but in questions of marriage and succession it is the permanent domicile that determines the decision. A permanent domicile may be constituted by birth, by choice, or by operation of the law. To constitute a domicile by choice both actual residence and the intention to make it the permanent home are required. It is a legal principle that the wife takes the domicile of her husband.

As a general rule the old domicile, and especially the domicile of origin, continues till a new one has been acquired.

Dominant (dom'i-nant), in music, the fifth tone of the diatonic scale, and which assumes the character of a keynote itself when there is a modulation into the first sharp remove. Thus, G is the dominant of the scale of C, and D the dominant of the scale of G.—*Dominant chord*, in music, that which is formed by grouping three tones, rising gradually by intervals of a third from the dominant or fifth tone of the scale. It occurs almost invariably immediately before the tonic chord which closes the perfect cadence.

Domingo (dō-mēn'gō), SAN, capital of the Dominican Republic (or San Domingo) in the island of Hayti. It lies on the southeast coast at the mouth of the Ozama, and has a commodious port. It is the oldest European city in the New World, having been founded in 1494 by Bartholomew Columbus. Pop. est. 20,000 to 25,000.

Dominic (dom'i-nik), SAINT, the founder of the order of the Dominicans, was born in 1170 at Calahorra, in Old Castile. He early distinguished himself by his zeal for the reform of canonical life and by his success as a missionary among the Mohammedans. His attention having been directed to the Albigenses in the south of France, he organized a mission of preachers against heresy in Languedoc. In 1215 he went to Rome to obtain the sanction of Pope Innocent III to erect the mission into a new order of preaching friars. His request was only partially granted, and it was the succeeding pope, Honorius III, who first recognized the importance of a preaching order, and conferred full privileges on the Dominicans. He also appointed Dominic Master of the Sacred Palace or court preacher to the vatican, an office which is still held by one of the order. Dominic died at Bologna in 1221, and was canonized in 1234 by Pope Gregory IX. St. Dominic is usually considered the founder of the Inquisition, which is supposed to have originated with his mission to the Albigenses; but his claim is denied, on the ground that two Cistercian monks were appointed inquisitors in 1198.

Dominica (dom-i-nē'ká), a British West India island, so named because discovered by Columbus on a Sunday (Sp. *dominica*), a member of the united colony of the Leeward Islands between Martinique and Guadeloupe. It is about 29 miles in length,

north to south, and 12 miles in breadth east to west area, 291 square miles. It is rugged and mountainous, but it contains many fertile valleys and is well watered. The shores are but little indented, and are entirely without harbors; but on the west side there are several good anchorages and bays. The principal exports consist of sugar, molasses, cocoa and lime-juice. The imports and exports amount each to about \$250,000 annually. Dominica was ceded by France to Great Britain in 1763. Roseau is the capital. Pop. 28,894, largely negroes and including about 300 descendants of the aboriginal Caribs.

Dominical Letter (d o-m i-n' i-k a l), in chronology, properly called Sunday letter, one of the seven letters of the alphabet, A B C D E F G, used in almanacs, ephemerides, etc., to mark the first seven days of the year and all consecutive sets of seven days to the end of the year, so that the letter for Sunday will always be the same. If the number of days in the year were divisible by seven without remainder, then the year would constantly begin with the same day of the week; but as it is the year begins and ends on the same day, and therefore the next year will begin on the day following, and on leap years two days following, so that the same series is not repeated till after four times seven, or twenty-eight years.

Dominican Republic (d ō-m i-n' i-kan), or SAN DOMINGO, a republic occupying the eastern portion of the island of Hayti; area, about 18,000 square miles. It is fertile and exports mahogany, sugar, tobacco, cocoa, etc., but its resources are as yet but little developed. It formerly belonged to Spain, and is the oldest colonial settlement in America. Its inhabitants are chiefly negroes and mulattoes, and the government is in the hands of the negroes. Capital, San Domingo. Pop. estimated at 500,000. See *Hayti*.

Dominicans (do-m i-n' i-kanz), called also *predicants*, or *preaching friars* (*prædicatores*), derived their name from their founder, St. Dominic. At their origin (1216, at Toulouse) they were governed by the rule of St. Augustine, perpetual silence, poverty and fasting being enjoined upon them; and the principal object of their institution was to preach against heretics. Their distinctive dress consists of a white habit and scapular with a large black mantle, and hence they have been commonly known as *Black Friars*. They were almost from the first a mendicant order.

They spread rapidly not only in Europe, but in Asia, Africa and America. In England there were fifty-eight Dominican houses at the dissolution of the monasteries, and the Blackfriars locality in London took its name from one of their establishments. They produced some famous scholars, such as Albertus Magnus and Thomas Aquinas, and became formidable as managers of the Inquisition, which was committed exclusively to

Dominican or Black Friar.

them in Spain, Portugal and Italy. In 1425 they obtained permission to receive donations, and ceased to belong to the mendicant orders, paying more attention to polemics and theological science. With the Franciscans, their great rivals, they divided the honor of ruling in church and state till the sixteenth century, when the Jesuits gradually superseded them in the schools and courts. They obtained new importance in 1620 by being appointed to the censorship of books for the church. Among notable Dominicans we may mention Savonarola, Las Casas and Lacordaire. There are establishments of the Dominicans in England, Ireland and the United States.

Dominium (d ō-m i-n' i-um), a term in the Roman law used to signify full ownership of a thing.

Domino (dom' i-no), formerly a dress worn by priests in the winter, which, reaching no lower than the shoulders, served to protect the face and head from the weather. At present it is a masquerade dress worn by gentlemen and ladies, consisting of a long silk mantle with wide sleeves and a masking hood. The name is also given to a half-mask formerly worn on the face by ladies when traveling or at masquerades.

Dominoes, a game played with small, flat, rectangular pieces of ivory, about twice as long as they are broad. They are marked with spots varying in number. When one player leads by laying down a domino, the next must follow by placing alongside of it another which has the same number of spots on one of its sides. Thus, if the first player lays down 6-4, the second may reply with 4-2, or 6-3, etc.; in the former case he must turn in the 4, placing it beside the 4 of the first domino, so that the numbers remaining out will be 6-2; in the latter case he must turn in the 6 to the 6 in like manner, leaving 4-3, to which his opponent must now respond. The player who cannot follow suit loses his turn, and the object of the game is to get rid of all the dominoes in hand, or to hold fewer spots than your opponent when the game is exhausted by neither being able to play.

Domitian (do-mish'e-an) or in full **TITUS FLAVIUS DOMITIANUS AUGUSTUS**, Roman emperor, son of Vespasian, and brother of Titus, was born in A.D. 51, and in 81 succeeded to the throne. At first he ruled with a show of moderation and justice, but soon returned to the cruelty and excesses for which his youth had been notorious. He was as vain as he was cruel, and after

Domitian.

an ineffective expedition against the Catti, carried a multitude of his slaves, dressed like Germans, in triumph to the city. He executed great numbers of the chief citizens, and assumed the titles of Lord and God. He established the most stringent laws against high treason, which enabled almost anything to be construed into this crime. At length a conspiracy, in which his wife Domitia took part, was formed against him, and he was assassinated in his bedroom, in A.D. 96.

Domo (dō'mō), or **DOMO D'OSSOLA**, a town of North Italy, province

of Novara, in the center of a plain on the great Simplon road. Pop. about 3000.

Domremy la Pucelle (dōn-rè-mi lá pü-säl), the birthplace of Joan of Arc, a small French village, department of the Vosges, seven miles N. of Neufchâteau. The house is still shown there in which the heroine was born, and in the neighborhood is the monument erected to her memory.

Don, or **DOONE** (dö'na; ancient *Tanaïs*), a river of Russia, which issues from Lake Ivan-Ozero, in the government of Tula; and flows S. E. to within 37 miles of the Volga, where it turns abruptly S. W. for 236 miles, and falls into the Sea of Azof; whole course nearly 900 miles. The chief tributaries are: right bank, the Donetz and Voronej; left, the Khoper and Manitsch. Although not admitting vessels of much draught, the Don carries a large traffic, especially during the spring floods, and a canal connects it with the Volga system of navigation. It has also very extensive and productive fisheries.

Don (don), a river of Scotland, County Aberdeen, rising near the Banffshire border. It flows tortuously E. through the whole breadth of Aberdeenshire, and falls into the North Sea a little to the north of Aberdeen, after a total course of 82 miles. Its salmon fisheries are of considerable value.—Also, a river of Yorkshire, England, which rises near Cheshire, and joins the Ouse after a course of about 70 miles. It is navigable for small craft to Sheffield.

Don (Latin, *dominus*, a lord or master), a Spanish title of honor, originally given only to the highest nobility, afterwards to all the nobles, and finally used indiscriminately as a title of courtesy. It corresponds with the Portuguese Dom. During the Spanish occupation it was introduced and became naturalized in some parts of Italy, and was particularly applied to the priests.

Donaldson (don'ald-sun), **JOHN WILLIAM**, an English scholar, born in London in 1811. He studied at London University and at Trinity College, Cambridge, where he was elected a fellow. His first work was *The Theater of the Greeks*, a work showing much erudition. In 1839 he published *The New Cratylus*, which was among the earliest attempts to bring the philological literature of the continent within the reach of the English student. In 1844 appeared the first edition of *Varonianus*, a work on Latin similar in

scope to the *Cratylus*. Among his other writings are grammars of the Hebrew, Greek and Latin languages. He died in 1861.

Donatello (don-à-tel'lo, properly *Donato di Betto Bardi*), one of the revivers of the art of sculpture in Italy, was born at Florence between 1382 and 1387. His first great works in marble were statues of St. Peter and St. Mark, in the church of St. Michael in his native town, in an outside niche of which is also his famous statue of St. George. Along with his friend Brunelleschi he made a journey to Rome to study its art treasures. On his return he executed for his patrons, Cosmo and Lorenza de' Medici, a marble monument to their father and mother, which is of high merit. Statues of St. John, of Judith, David and St. Cecilia are among his leading works. He died at Florence in 1466.

Donatio mortis causa, is a gift of personal property made in prospect of the death of the donor and consummated by that event.

Donati's Comet (dō-na'ti), so called from the Italian astronomer Donati, who first observed it in June, 1858. Next to the comet of 1811 it is the most brilliant that appeared during the century. It was nearest the earth on October 10, 1858.

Donatists (don'a-tists), one of a body of African schismatics of the fourth century, so named from their founder Donatus, Bishop of Casa Nigra in Numidia, who taught that though Christ was of the same substance with the Father, yet that he was less than the Father; that the Catholic Church was not infallible, but had erred in his time and become practically extinct, and that he was to be the restorer of it. All joining the sect required to be rebaptized, baptism by the impure church being invalid.

Donatus (do-nā'tus), ÆLIUS, a Roman grammarian and commentator, born in A.D. 333. He was the preceptor of St. Jerome, wrote notes on Virgil and Terence, and a grammar of the Latin language so universally used in the middle ages that 'Donat' became a common term for grammar or primer of instruction.

Donau (don'ou). See *Danube*.

Donaueschingen (don'ou-esh-ing-en), a town of Baden, Germany, 29 miles east by south of Freiburg. It contains the Prince of Fürstenberg's palace, in the garden of

which is a basin of clear sparkling water that is asserted to be the true source of the Danube. Pop. 5000.

Donauwörth (don'ou-veurt), a town of Bavaria, at the confluence of the Wörnitz and Danube. It was formerly a free imperial town, and was stormed by the Swedes under Gustavus Adolphus in the Thirty Years' war, 1632. Pop. 5,000.

Donax (don'aks; *Arundo donax*), a species of grass or reed inhabiting the southern parts of Europe; it grows to a great height and is used for fishing-rods, etc.

Don Benito (don bā-nē'tō), a town of Spain, province of Badajoz. It has manufactures of woollens, and a trade in cattle, grain, etc. Pop. 16,565.

Doncaster (don'kas-ter), a municipal borough and market town of England, West Riding of Yorkshire, on the river Don, well built, with straight, broad streets. The parish church, with its tower 170 feet high, Christ Church, the town hall and the theater are among the chief public buildings. It has manufactures of ropes, canvas, machinery, etc. It has been long celebrated for its annual races, now held in the middle of September. Doncaster was originally a Roman station on the line of the old Roman Watling Street. Pop. (1911) 30,520.

Dondrah Head (don'dra), the southern extremity of the island of Ceylon. It was the site during part of the seventh century of the Singhalese capital, numerous remains of which are still to be found.

Donegal (don'e-gal), a maritime county of Ireland, province of Ulster, bounded N. and W. by the Atlantic Ocean; area, 1876 sq. miles, of which about a fifth is under crops. The coast is indented with numerous bays, the most remarkable being Lough Swilly. It is the most mountainous county in Ireland, but has some fine fertile valleys. Mount Errigal, the loftiest summit, is about 2460 feet high. The streams and lakes are small, but numerous and abounding in fish. The climate is moist, the subsoil chiefly granite, mica slate and limestone, and the principal crops oats, potatoes and flax. Spade husbandry is much employed, and agriculture generally is in a very backward state. The manufactures are limited, and consist chiefly of linen cloth, woolen stockings and worked muslin. The fisheries are extensive and valuable, and form the chief employment of the inhabitants of the coast and islands. Grain, butter

and eggs are exported. The minerals include marble, lead, copper, etc., but are not wrought to advantage. Pop. 173,722.—**DONEGAL**, the county town, is a small seaport on the bay of the same name, at the mouth of the river Esk. Pop. 1214.

Donets (do'nets), a Russian river which rises in the government of Kursk, flows south and east, forming the boundary of several governments, and, after a course of 400 miles, joins the Don.

Dongola (don'gō-la), a district of Upper Nubia, extending on both sides of the Nile from about lat. 18° to lat. 20° N. It formerly belonged to Egypt and was the seat of a pasha, but after the evacuation of all the country south of Wady Halfa in 1886, by the Egyptian government, it was left in an unsettled state. Its chief products are dates, cotton, indigo and maize. The population is a mixture of Arabs and indigenous Nubians. Its chief town is Dongola or *El Ordeh*, on the left bank of the Nile. Pop. 10,000.

Doni (dō'ni), a clumsy kind of boat used on the coast of Coromandel and Ceylon; sometimes decked and occasionally furnished with an outrigger. The donis are about 70 feet long, 20 feet broad, and 12 feet deep, have one mast and a lugsail and are navigated in fine weather only.

Donizetti (don-e-zet'tē, or do-nid-zet'-te), GAETANO, an Italian composer, born in 1798, at Bergamo. He studied music at Bologna under the distinguished Abbé Mattei. His first opera, *Enrico di Borgogna*, was represented at Venice in 1818. In 1822 his *Zoraïde di Granata* gained him the honor of being crowned on the Capitol. In 1830 appeared his *Anna Bolena*, which first, along with *Lucrezia Borgia* and *Lucia di Lammermoor*—the latter his masterpiece—acquired for him an European frame. In 1835 Donizetti was appointed professor of counterpoint at the Royal College of Naples, but removed in 1840 to Paris, bringing with him three new operas, *Les Martyrs*, *La Favorita* and *La Fille du Régiment*, of which the last two are among his most popular productions. Of his other operas none except *Linda di Chamouni* (1842) and *Don Pasquale* (1843) achieved any special triumph, though he wrote in all sixty-four operas. He died in 1848.

Donjon (don'jon), the principal tower of a castle, situated in the innermost court or bailey, which the garrison could make the last line of defense. Its lower part was commonly used as a prison. See *Castle*.

Don Juan (Sp. pron. hū-ân'), the hero of a Spanish legend which seems to have had some historical basis in the history of a member of the noble family of Tenorio at Seville. Ac-

Tower of London, time of Henry VIII.
A, The Donjon.

cording to the legend, Don Juan was a libertine of the most reckless character. An attempt to seduce the daughter of a governor of Seville brought the indignant father and the profligate don into deadly conflict, in which the former was slain. Don Juan afterwards, in a spirit of wild mockery, goes to the grave of the murdered man and invites the statue of him erected there to a revel. To the terror of Don Juan the 'stony guest' actually appears at the table to bear him away to the infernal world. The legend has furnished the subject for many dramas and operas. The most famous of the latter is Mozart's *Don Giovanni*, which has made the story familiar to everybody. Among the former are *Burlador de Sevilla*, by Tellez, *Don Juan ou Le Festin de Pierre*, by Molière, and *The Libertine* by Shadwell. The *Don Juan* of Byron bears no relation to the old story but in name and in the libertine character of the hero.

Donkey (dong'ki), a domesticated ass; so called from *dun*, in relation to its color.

Donkey-engine (dong'ki), a small engine used in various operations where no great power is required. Thus, a donkey-engine is often stationed on the deck of a ship to work a crane for loading and unloading.

Donne (don), JOHN, a celebrated poet and divine, was the son of a merchant of London, in which city he was born in 1573. He studied both at Oxford and Cambridge. In his nineteenth year he abjured the Catholic religion, and became secretary to the Lord-chancellor Ellesmere, but finally lost his

office by a clandestine marriage with his patron's niece. The young couple were in consequence reduced to great distress, till his father-in-law relented so far as to give his daughter a moderate portion. By the desire of King James Donne took orders, and, settling in London, was made preacher of Lincoln's Inn. In 1621 he was appointed Dean of St. Paul's. He was chosen prolocutor to the convocation in 1623-24. He died in 1631, and was interred in St. Paul's. As a poet, and the precursor of Cowley, Donne may be deemed the founder of what Dr. Johnson calls the *metaphysical* class of poets. Abounding in thought, this school generally neglected versification, and that of Dr. Donne was peculiarly harsh and unmusical. His style is quaint and pedantic; but he displays sound learning, deep thinking and originality of manner. Besides the works already mentioned, he wrote *Letters*, *Sermons*, *Essays on Divinity* and other pieces.

Donnelly (don'el-i), IGNATIUS, author; born at Philadelphia, Pennsylvania, in 1831. For many years he resided in Minnesota, several times representing that State in Congress. He wrote *Atlantis*, *Ragnarok* and other works, and claimed to have found a cryptogram in Shakespere's plays which, in substance, transferred their authorship to Francis Bacon. He died in 1901.

Donnybrook (don'i-brök), a village of Ireland, now mostly in the parliamentary borough of Dublin. Its famous fair, which seldom passed off without riot and bloodshed, was abolished in 1855.

Donora (dō-nō'ra), a borough in Washington Co., Pennsylvania. It has lumber and produce interests. Pop. 8174.

Don Quixote (Sp. pron. kē-hō'tā), the title of a famous romance by Cervantes. (See *Cervantes*.) The name of the hero, Don Quixote, is used as a synonym for foolish knight-errantry or extravagant generosity.

Doo (dō). GEORGE THOMAS, an English engraver, born in 1800; died in 1886. He became early known as an excellent artist, and was appointed historical engraver to William IV, and subsequently to Queen Victoria. He was elected an associate of the Royal Academy in 1856, and next year academician.

Doom Palm (döm). See *Doum Palm*.

Doomsday Book (döms'day). See *Domesday Book*.

Doomster (döm'ster), a name formerly given in Scotland to the public executioner. See *Deemster*.

Doon (dön), a river in Ayrshire, Scotland, which, after a course of 30 miles, falls into the Firth of Clyde. It is celebrated in the poems of Burns.

Dor (dor), DORR, the black beetle, *Geotrüpes stereorarius*, one of the most common of beetles, of a stout form, less than 1 inch long, black with metallic reflections. It may often be heard droning through the air towards the close of the summer twilight. See *Dung Beetle*.

Dora (dō'ra), the name of two rivers in Northern Italy, both tributaries of the Po. The D. BALTEA rises on the southern slopes of the Mont Blanc group and falls, after a course of about 100 miles, into the Po below Chivasso; the D. RIPARIA, about 75 miles long, rises in the Cottian Alps, and joins the Po below Turin.

Dora D'Istria. See *Ghika, Helena*.

Dorak (dō'rak), a town of Persia, province Khuzistan, 300 miles S. E. of Bagdad. It has a considerable commerce, this being aided by a canal which connects the Dorak with the Karun. Pop. 6000.

Doran (dō'ran), JOHN, an English writer, born in 1807; died in 1878. He began writing when a mere youth, and produced a great number of books, among them being *Lives of the Queens of England of the House of Hanover*, *Monarchs retired from Business*, *History of Court Fools*, *The Princes of Wales, Their Majesties' Servants* (a history of the English stage from Betterton to Kean). *A Lady of the Last Century* (Mrs. Montague), *London in Jacobite Times*.

Dorcas Society (dor'kas, from the Dorcas mentioned in Acts, ix), an association generally composed of ladies for supplying clothes to the poor. Frequently the members of the society meet at stated times and work in common. Partial payment is generally required from all recipients except the very poor.

Dorchester (dor'ches-ter), a municipal borough of England, chief town of Dorsetshire, 118 miles S. W. of London. There are large cavalry and infantry barracks a little to the west of the town. The trade consists chiefly in agricultural produce. Dorchester was an important Roman station (Durnovaria), and many interesting Roman remains are still to be found in the vicinity. It was a parliamentary borough till

1885, when it was merged in the county. Pop. (1911) 9842.

Dordogne (dor'dōn), a department of France, which includes the greater part of the ancient province of Périgord, and small portions of Limousin, Angoumois and Saintonge. Area, 3560 square miles, of which about a third is fit for the plow. The chief minerals are iron, which is abundant, slate, limestone, marble and other stone. Mining, iron manufacture, etc., are carried on to a considerable extent, and there are a number of vineyards. The climate is mild but somewhat changeable. Pop. (1906) 447,052.—The river DORDOGNE, the principal river of the department, rises on the banks of the Puy-de-Sancy, flows w. s. w. and, after a course of 290 miles, unites with the Garonne in forming the Gironde.

Dordrecht (dor'dreht). See *Dort*.

Doré (dō-rā), PAUL GUSTAVE, a prolific French draftsman and painter, born at Strasbourg, January 6, 1833. He studied at Paris, contributing, when only sixteen years of age, comic sketches to the *Journal pour Rire*. He distinguished himself greatly as an illustrator of books. His illustrations of *Rabelais*, of Perrault's *Tales*, Sue's *Wandering Jew*, Dante's *Divina Commedia*, and Cervantes' *Don Quixote* displayed great fertility of invention, and the fine fantasy of his landscapes and the dramatic effectiveness of his groups acquired for him an European reputation. His illustrations of the Bible, of Ariosto's *Orlando Furioso*, and Milton's *Paradise Lost* are also of high excellence. As a painter he has grandeur of conception and a bold, expressive style. Among his chief works are *Christ leaving the Prætorium*, *Paolo and Francesca di Rimini*, *The Flight into Egypt*, *Mont Blanc*, etc. In later years Doré also won fame as a sculptor. He died in 1883.

Doree (dō're), a fish. See *Dory*.

Dorema (do-rē'ma), a genus of plants, nat. order Umbelliferæ. *D. ammoniacum*, a Persian species, yields the ammoniacum of commerce, a milky juice that exudes from punctures on the stem and dries in little 'tears.'

Doria (dō're-ā), one of the most powerful families of Genoa, became distinguished about the beginning of the twelfth century, and shared with three other leading families, the Fieschi, Grimaldi and Spinola, the early government of the republic. Among the older heroes of this family are OBERTO DORIA,

who, in 1284, commanded the Genoese fleet which at Meloria annihilated the power of Pisa; LAMBA DORIA, who, in 1298, defeated the Venetian Dandolo at the naval battle of Curzola; PAGANINO DORIA, who, in the middle of the fourteenth century, distinguished himself by great victories over the Venetians. But the greatest name of the Dorias is that of ANDREA, born at Oneglia in 1466, of a younger branch of the family. After serving some time as a condottiere with the princes of Southern Italy, he was entrusted by the Genoese with the reconstruction of their fleet. Disagreement with the Genoese factions drove him to take service with Francis I of France, in which he highly distinguished himself, and in 1527 he took Genoa in name of the French king. But, being displeased with the projects of Francis for reducing Genoa to a place of secondary importance, he went over to the service of Charles V (1529), carrying with him the whole influence and resources of Genoa. He reestablished order in Genoa, reorganized the government, and although refusing the title of doge practically controlled its affairs to the end of his life. As imperial admiral he performed many services for Charles, clearing the seas of Moorish pirates and assisting the emperor in his expeditions to Tunis and Algiers. In 1547 his authority was threatened by the conspiracy of Fieschi, and he narrowly escaped assassination in the tumult. He died in 1560.

Dorians (dor'i-anz), one of the four great branches of the Greek nation who migrated from Thessaly southwards, settling for a time in the mountainous district of Doris in Northern Greece and finally in Peloponnesus. Their migration to the latter was said to have taken place in B.C. 1104; and as among their leaders were certain descendants of Hercules (or Heracles), it was known as the return of the Heraclidæ. The Dorians ruled in Sparta with great renown as a strong and warlike people, though less cultivated than the other Greeks in arts and letters. Their laws were severe and rigid, as typified in the codes of the great Doric legislators Minos and Lycurgus. (See *Sparta*.)—The *Doric dialect* was characterized by its broadness and hardness, yet, on account of its venerable and antique style was often used in solemn odes and choruses.

Doric Mood (dor'ik), or DORIC MODE, in music, was of a grave and manly character, adapted both to religious services and war.

Doric Order, in architecture, is the oldest, strongest and simplest of the three Grecian orders, and the one that is best represented among the remains of ancient Greek architecture. The Doric column is distinguished by its want of a base (in the more ancient examples, at least), by the small number of its flutings, and by its massive proportions, the true Grecian Doric having the height of its pillars six times that of the diameter. The capital was small and simple, and the architrave, frieze and cornice were rather plain and massive.

Grecian Doric Order.

Dorigny (do-rē-nyē), the name of several French painters and engravers. MICHAEL, born in 1617, became professor in the Academy of Paris, and died in 1665. LOUIS, son of the preceding, was born in 1654, settled in Italy, and died in 1742. SIR NICHOLAS, brother of Louis, born in 1658 at Paris, was the most celebrated of the three. He spent eight years in engraving the famous cartoons of Raphael at Hampton Court, and was knighted by George I. He died in 1746.

Doris (dor'is), anciently a small and mountainous region of Northern Greece, at one time the abode of the Dorians (which see).

Doris. See *Sea-lemon*.

Dorking (dork'ing), a town of England, county of Surrey, 22 miles s. s. w. of London, largely consisting of villa residences. Large numbers of fowls, known as *Dorkings*, of an excellent breed, having five claws on the foot, are reared here, and sent to the London markets. Pop. (1911) 7850.

Dormant State (dor'mant), a state of torpidity in which certain animals pass a portion of the year. In cold and temperate climates this period of long sleep takes place during the winter months, and is properly called *hibernation*. It commences when the food of the animal begins to get scarce, continues for a longer or shorter

period, and is deeper or lighter according to the habits and constitution of the animal. Bats, bears, some animals of the rodent order, such as the porcupine, the dormouse, the squirrel, etc., all the animals belonging to the classes of Amphibia and Reptilia, such as tortoises, lizards, snakes, frogs, etc., and many species of molluscs and insects, hibernate more or less completely, retiring to suitable places of concealment—the bat to dark caves, the hedgehog to fern-brakes, snakes to holes in trees, etc. During hibernation there is a great decrease of heat in the bodies of the animals, the temperature sometimes sinking to 40° or even 20° Fahr., or in general to a point a little above that of the surrounding atmosphere. The respiration as well as the pulsation of the heart is exceedingly slow, and the irritability of the animal often so low that in some cases it can be awakened only by strong electric shocks. With frogs and amphibious reptiles the dormant state is very common, and if the temperature is kept low by artificial means they may remain dormant for years. The term *æstivation* has been used to describe a similar condition into which certain animals, such as serpents and crocodiles, in tropical countries pass during the hottest months of the year.

Dormer Windows (dor'mer), are windows inserted in the inclined plane of a sloping roof, on a frame rising vertically above the rafters. They are named dormer windows because they are found chiefly in attic bedrooms (Fr. *dormir*, to sleep).

Dormouse (dor'mous; *Myoxus*), a genus of mammiferous quadrupeds, of the order Rodentia. These little animals, which appear to be intermediate between the squirrels and the mice, inhabit temperate and warm countries, and subsist entirely on vegetable food. Their pace is a kind of leap, but they have not the activity of squirrels. While feeding they sit upright and carry the food to their mouth with their paws. The dormice pass the winter in a lethargic or torpid state, reviving only for a short time on a warm sunny day, when they take a little of their hoarded stores and then relapse into the dormant state. They bring forth three or four at a birth.

Dornbirn (dōrn'bīrn), a manufacturing town of Austria in Tyrol, about 6 miles from the Lake of Constance. Pop. 13,052.

Dornick (dor'nik), a kind of stout figured linen fabric used for table-cloths, and generally checkered.

Dornoch (dor'noh), a seaport and parliamentary and royal burgh of Scotland, county of Sutherland, at the entrance of the Dornoch Firth, the seat of the extinct bishopric of Caithness. It is one of the Wick district of parliamentary burghs. Pop. 624.—The DORNOCH FIRTH runs inland for about 16 miles between Ross-shire and Sutherlandshire.

Dorogobush (da-ra-ga-bösh'), a town of Russia, in the government of and 55 miles E. N. E. of Smolensk, on the Dnieper. Pop. 6640.

Dorohoi (dō-rō-hoi'), a town of Roumania in N. W. Moldavia, near the Austrian frontier. Pop. 12,701.

Dorp, a former town in the Rhine province of Prussia, on the Wupper. It has important manufactures of cutlery, paper, etc. It is now part of the town of Solingen.

Dorpat (dor'pāt), a town of Russia, government of Livonia, on the Embach, about 135 miles N. E. of Riga. Dorpat is chiefly remarkable for its university and other educational establishments. It is an ancient town, and was once a member of the Hanseatic Union. In 1704 it passed definitively into the hands of Russia. The vernacular language is Esthonian, but that of the learned is German. Pop. 42,421.

D'Orsay (dor'sā), ALFRED, COUNT, a dilettante artist and man of fashion, born at Paris in 1798; died in 1852. When a young man he visited England, and became acquainted with Byron and other literary and fashionable celebrities. He married a daughter of the Earl of Blessington, but after the earl's death a separation took place, and D'Orsay became an inmate of Gore House, which the Countess of Blessington had made the center of a famous literary coterie. A zealous Bonapartist, he followed Prince Louis Napoleon to Paris in 1849, and enjoyed his favor till his death.

Dorse (*Morrhua Callarius*), a fish of the cod genus, called also Baltic cod.

Dorset (dor'set), DORSETSHIRE, a maritime county in the south of England, having on the south the English Channel; area, 988 sq. miles. The general surface of the county is undulating; its principal elevations being chalk hills known as the North and South Downs, upon which immense flocks of sheep are pastured. On the south on the borders of Hampshire and along part of the sea-coast, is a heathy common. A great part of the county is in grass, and dairy husbandry is extensively carried on. Neither coal nor ores of any kind are

found, but the quarries yield the well-known Portland stone. Pipe-clay, plastic clay and potter's clay also abound. The principal manufactures are those of flax, canvas, duck, silk and woollens. The fish frequenting the coast are of various kinds, but the mackerel is the most abundant. Near the mouth of Poole harbor is a prolific oyster bank. Dorchester is the county town. Other towns are Bridgport, Poole and Weymouth. Pop. (1911) 223,274.

Dorset, EARLS OF. See *Sackville*.

Dorstenia (dor-stē'ni-a), a genus of plants, nat. order Urticaceæ or nettles, found in tropical America. They have their naked flowers buried in a flat, fleshy, somewhat concave receptacle. *D. Contrayerva* and other species have a stimulant and tonic rhizome, which is used medicinally under the name of *contrayerva* (which see).

Dort, or DORDRECHT (dort, dor'drekt), a town of Holland, province of South Holland, 14 miles S. E. of Rotterdam, on the Merwede, an arm or part of the Maas, and on an island separated from the mainland by an inundation in 1421. It is an old town, with a fine Gothic church (Groote Kerk, 'Great Church'), a good town house, museum, etc. It was formerly of more importance than now, but it still carries on an extensive trade, being not only near the sea, but by the Rhine, the Maas and other water communications, connected with an immense extent of inland territory. Pop. 38,386.

Dort, SYNOD OF, an assembly of Protestant divines convoked at Dort in 1618-19. Besides the Dutch and Walloon divines, it included representatives from England, Scotland, Switzerland and part of Germany, in all about 62 native and 24 foreign deputies. The synod was convoked principally for the sake of crushing the Arminian party, and extreme measures were taken to prevent that party being represented in the assembly or having a free voice there. The result was the condemnation of the Arminians and the dogmatic establishment of Calvinism in the Reformed church. The synod also set on foot the Dutch translation of the Bible known as the Dort Bible.

Dortmund (dort'mönt), a city of Prussia, province of Westphalia, situated on the Ems, 47 miles N. N. E. of Cologne. It has rapidly increased in recent years, its prosperity being due to its becoming the center of several important railway systems, to the opening of extensive coal mines in

THE DORY AND THE POLYP

the vicinity, and to the active manufactures of iron, steel, machinery, railway plant, etc. There are also a number of breweries, potteries, tobacco factories, chemical works, etc. It was once a free imperial Hanseatic town, and the seat of the chief tribunal of the Vehme. Pop. (1905) 175,292.

Dory (dō'ri), or **JOHN DORY** (*Zeus faber*), a fish belonging to the mackerel family, celebrated for the delicacy of its flesh. It seldom exceeds 18 inches in length, and is yellowish green in color with a blackish spot on each side, which, according to an old superstition, is the mark of St. Peter's forefinger and thumb. The dory is found on the Atlantic shores of Europe and in the Mediterranean. The name John Dory is supposed to be derived from the French *jaune doré*, golden yellow.

Dory (*Zeus faber*).

Dositheans (dō-sith'e-anz), an ancient sect among the Samaritans, so called from their founder Dositheus, who was a contemporary and associate of Simon Magus, and lived in the first century of the Christian era. They rejected the authority of the prophets, believed in the divine inspiration of their founder, and had many superstitious practices.

Dosso Dossi (do'sō do'sō), an Italian painter of the Ferrara school born in 1479; died in 1542. He was much honored by Duke Alfonso of Ferrara, and immortalized by Ariosto (whose portrait he executed in a masterly manner) in his *Orlando*. Modena and Ferrara possess most of his works.

Dost (dōst), **MOHAMMED KHAN**, born about 1790, a successful usurper who obtained possession of the throne of Afghanistan after the flight of Mahmud Shah in 1818. He ruled with very great ability, and although driven from his throne by a British army was ultimately restored, and later became a steady supporter of British power in the East. See *Afghanistan*.

Dostoeffsky (dos-to-yef'ski), **FEODOR MICHAÏLOVITCH**, a Russian novelist, born in 1818; died in 1881. After serving as an officer of engineers he devoted himself to literature, but becoming connected with communistic schemes he was banished to the mines

of Siberia, from which he returned in 1856 to resume his literary activity. His first novel, *Poor People*, came out in 1846. Among his works that have appeared in English are *Crime and Punishment*, *Injury and Insult*, *The Friend of the Family*, *The Gambler*, *The Idiot* and *Prison Life in Siberia*.

Dothan (dō'than), a city in Houston Co., Alabama, 119 miles S. E. of Montgomery. It has iron, turpentine and fertilizer works. Pop. 7016.

Dotis (dō'tis), or **TOTIS**, a market town of Hungary, county Kormorn, 37 miles W. N. W. of Budapest. It has a castle of the Esterhazy family, and manufactures of woollens and stoneware, etc. Pop. 7220.

Dotterel (dot'e-rel; *Charadrius morinellus*), a species of plover which breeds in the north of Europe, and returns to the south for the winter. In Scotland it appears in April and leaves in August, the young being hatched in July. It is found all over Europe and Northern Asia. Several species of the genus are represented in the United States, including the golden plover, the kill-deer and piping plover.

Douai (dō-ā), or **DOUAY**, a town of France, department Nord, on the Scarpe, 18 miles south of Lille. It is one of the oldest towns in France, of which it became part by the Treaty of Utrecht. It is strongly fortified, has a fine town house, several handsome churches, an academy of arts and law, a lyceum, museum and public library, Benedictine college, hospital, etc.; a cannon foundry, linen manufactories, machine-works, tanneries, etc. There was here for a long time, a college for British Roman Catholic priests, the most celebrated of its kind. Pop. (1906) 21,679.

Douai Bible, the English translation of the Bible used among English-speaking Roman Catholics, and executed by divines connected with the English College at Douai. The New Testament was published in 1582 at Rheims, the Old in 1609-10 at Douai, the translation being based on the Vulgate. Various revisions have since materially altered it.

Douarnenez (dū-ār-nè-nā), a seaport of France, Finistère, on a beautiful bay of the same name, 13 miles northwest of Quimper. It depends chiefly on the sardine fishery. Pop. (1906) 13,472.

Double Bass (dub'l). See *Contrabasso*.

Double Entry. See *Bookkeeping*.

Double Flowering, is the development, often by cultivation of the stamens and pistils of flowers into petals, by which the beauty of the flower is enhanced and its reproductive powers sacrificed.

Double Insurance, the effecting of two insurances upon the same goods. In marine insurance it is lawful for a shipper to insure his goods twice, but only to give an additional security in the event of the failure of the first underwriters. In the event of a loss it is ultimately divided among the underwriters in the ratio of the risks they have taken.

Double Standard of Monetary Value. See *Currency, Bimetallism*.

Double Stars, or **BINARY STARS**, stars which are so close together that they appear as one to the naked eye, but are seen to be double when viewed through a telescope, or when photographed. One of these stars may revolve about the other, or both may revolve round a common center. See *Stars*.

Doublet (dub'let), a close-fitting garment, covering the body from the neck to a little below the waist. It was introduced from France into Eng-

land received its name from being originally lined or wadded for defense.

Doublet, in lapidary work, a counterfeited stone composed of two pieces of crystal, with a color between them, so that they have the same appearance as if the whole substance of the crystal were colored.

Double-vault, in architecture, one vault built over another so that a space is left between the two. It is used in domes or vaulted roofs when the external and internal arrangements require vaults differing in size or shape, the outer and upper vault being made to harmonize with the exterior of the building, the inner or lower with the interior. See *Dome*.

Doubloon (dub-lön'), a coin of Spain and of the Spanish American states, originally double the value of the pistole. The doubloon of Spain is of 100 reals and equivalent to about \$5.00. The doubloon of Chile is worth about \$4.68; the doubloon of Mexico, \$16.16.

Doubs (dö), a department of France, having Switzerland on its eastern frontier. Its surface is traversed by four chains of the Jura. The temperature is variable, and the climate somewhat rigorous. About a third of the land is arable, but much the greater part is covered with forests. Maize, potatoes, hemp and flax are the principal crops. Much dairy produce is made into Gruyère cheese. The minerals include iron, lead and marble. Pop. (1906) 298,438. —The river Doubs rises in the department to which it gives its name, flows first N. E., then N. W. till it joins the Saône at Verdun-sur-Saône; length, 250 miles.

Douche (dösh), a jet or current of water or vapor directed upon some part of the body; employed in bathing establishments. When water is applied it is called the *liquid douche*, and when a current of vapor the *vapor douche*.

Douglas (dug'las), capital of the Isle of Man, is situated on the southeast coast of the island on a beautiful semicircular bay. It is frequented by immense numbers of visitors during the summer. Among the objects of interest are the House of Keys, the custom-house, the extensive breakwater, the promenade, etc. Pop. 19,223.

Douglas, a town in S. E. Alaska, on Douglas Island, opposite Juneau. Here are the famous Treadwell gold-mines, their quartz mills are said to be the largest in the world.

Douglas, a city in Cochise Co., Arizona, 27 miles S. E. of Bisbee. Pop. 6437.

1, Doublet, time of Edward IV. 2, 3, Doublets, time of Elizabeth. 4, Doublet, time of Charles I. land in the fourteenth century, and was worn by both sexes and all ranks until the time of Charles II. when it was superseded by the vest or waistcoat. The

Douglas (dug'las), a family distinguished in the annals of Scotland. Their origin is unknown. They were already territorial magnates at the time when Bruce and Baliol were competitors for the crown. As their estates lay on the borders they early became guardians of the kingdom against the encroachments of the English, and acquired in this way power, habits and experience which frequently made them formidable to the crown. We notice in chronological succession the most distinguished members of the family. **JAMES**, son of the William Douglas who had been a companion of Wallace, and is commonly known as the Good Sir James, early joined Bruce, and was one of his chief supporters throughout his career, and one of the most distinguished leaders at the battle of Bannockburn. He fell in battle with the Moors while on his way to the Holy Land with the heart of his master, in 1331.—**ARCHIBALD**, youngest brother of St. James, succeeded to the regency of Scotland in the infancy of David. He was defeated and killed at Halidon Hill by Edward III, 1333.—**WILLIAM**, son of the preceding, was created first earl in 1357. He recovered Douglasdale from the English, and was frequently engaged in wars with them. He fought at the battle of Poitiers. He died in 1384.—**JAMES**, the second earl, who, like his ancestors, was constantly engaged in border warfare, was killed at the battle of Otterburn in 1388. After his death the earldom passed to an illegitimate son of the Good Sir James, Archibald the Grim, Lord of Galloway.—**ARCHIBALD**, son of Archibald the Grim, and fourth earl, was the Douglas who was defeated and taken prisoner by Percy (Hotspur) at Homildon, September 14, 1402. He was also taken prisoner at Shrewsbury, July 23, 1403, and did not recover his liberty till 1407. He was killed at the battle of Verneuil, in Normandy, in 1427. Charles VII created him Duke of Touraine, which title descended to his successors.—**WILLIAM**, sixth earl, born in 1422, together with his only brother David was assassinated by Crichton and Livingstone at a banquet to which he had been invited in the name of the king, in Edinburgh Castle, on November 24, 1440. Jealousy of the great power which the Douglasses had acquired from their possessions in Scotland and France was the cause of this deed.—**WILLIAM**, the eighth earl, a descendant of the third earl restored the power of the Douglasses by a marriage with his cousin, heiress of another branch

of the family; was appointed lord-lieutenant of the kingdom, and defeated the English at Sark. Having later entered into a treasonous league, he was invited by James II to Stirling and there murdered by the king's own hand, February 22, 1452.—**JAMES**, the ninth and last earl, brother of the preceding, took up arms with his allies to avenge his death, but was finally driven to England, where he continued an exile for nearly thirty years. Having entered Scotland on a raid in 1484, he was taken prisoner and confined in the abbey of Lindores, where he died in 1488. His estates, which had been forfeited in 1455, were bestowed on the fourth Earl of Angus, the 'Red Douglas,' the representative of a younger branch of the Douglas family, which continued to flourish long after. The fifth Earl of Angus, Archibald Douglas, was the celebrated 'Bell-the-Cat,' one of whose sons was Gawin Douglas, the poet. He died in a monastery in 1514. Archibald, the sixth earl, married Queen Margaret, widow of James IV, attained the dignity of regent of the kingdom, and after various vicissitudes of fortune, having at one time been attainted and forced to flee from the kingdom, died about 1560. He left no son, and the title of Earl of Angus passed to his nephew David. James Douglas, brother of David, married the heiress of the Earl of Morton, which title he received on the death of his father-in-law. His nephew, Archibald, eighth Earl of Angus and Earl of Morton, died childless, and the earldom of Angus then passed to Sir William Douglas of Glenbervie, his cousin, whose son William was raised to the rank of Marquis of Douglas. Archibald, the great-grandson of William, was raised in 1703 to the dignity of Duke of Douglas, but died unmarried in 1761, when the ducal title became extinct, and the marquisate passed to the Duke of Hamilton, the descendant of a younger son of the first marquis. The line of Angus or the Red Douglas is now represented by the houses of Hamilton and Home, who both claim the title of Earl of Angus.

Douglas, **DAVID**, a Scottish botanist, born in 1798. In 1823, as botanical collector to the Horticultural Society of London, he came to the United States, and in 1824 went to California, collecting many rare plants and trees. In 1827 he returned to England, and some years later sailed on another expedition to the Sandwich Islands, where he met his death by an accident in 1834.

Douglas, **GAWIN**, an early Scottish poet of eminence. He was the son of Archibald, earl of Angus, and

Douglas

was born at Brechin about 1474. He received a liberal education, commenced at home and completed at the University of Paris. On returning to Scotland he took orders in the church, and ultimately became Bishop of Dunkeld. He died of the plague in 1522 in London, where he had been obliged to take refuge on account of political commotions. He translated Virgil's *Aeneid* into verse with much spirit and elegance, prefixing original prologues to the different books of the original. This was the first poetical translation into English of any classical author. It was written about 1512, and first published in 1553. He also wrote *The Palace of Honor* and *King Hart*, both allegorical poems.

Douglas, SIR HOWARD, Baronet, a British general, born in 1776, the son of Admiral Sir Charles Douglas. He served in Spain in the Peninsular war, and acquired much reputation by his writings on military subjects, especially by his *Treatise on Naval Gunnery* (1819). From 1823 to 1829 he was governor of New Brunswick, and from 1835 to 1840 lord high-commissioner of the Ionian Islands. He attained the rank of general in 1851, and died in November, 1861.

Douglas, STEPHEN ARNOLD, an American statesman, born in Vermont in 1813; died in 1861. Having gone to Jacksonville, Illinois, he became an attorney, was appointed attorney-general for the State, and in 1843 was elected a member of the United States House of Representatives. In 1847 he was member of the Senate, and by reelection remained a member of this body till his death. He was especially prominent in connection with the question as to the extension of slavery into new states and territories, which he maintained was a matter to be settled by the people of the respective states or territories, and not by Congress. There was a memorable contest between him and Abraham Lincoln for the Senate in 1858, Douglas being elected. He was the candidate of the Northern Democracy for the presidency in 1860, but was defeated by Lincoln.

Douglas, FREDERICK, an American lecturer and journalist, was the son of a negro slave, and was born at Tuckahoe in Maryland, about 1817. Although his father was a white man, he was, according to the law, reared as a slave. In 1832 he was purchased by a Baltimore shipbuilder, but made his escape in 1838. As he had taught himself to read and write, and showed talent as an orator, he was employed by the

Anti-slavery Society as one of their lecturers. In 1845 he published his autobiography, and afterwards made a successful lecturing tour in England. In 1870 he started a journal entitled *The New National Era*; in 1871 he was appointed secretary of the commission to Santo Domingo; in 1872, presidential elector; in 1877, marshal for the District of Columbia; commissioner of deeds for that district, 1881-86; and Minister to Hayti in 1890. He died in 1895.

Doulton (döl'tun), SIR L-ENRY, was born at Lambeth, England, in 1820; entered his father's pottery establishment, and in 1848 started near Dudley, what became the largest pottery in the world. The revival in art pottery was mainly due to him and since 1870 the Doulton pottery has gained the highest awards at exhibitions throughout the world. He was knighted in 1877.

Douma. See *Duma*.

Doum Palm (döm), a palm tree, *Hyphæne thebaica*. It is remarkable, like the other species of the genus, for having a repeatedly branched stem. Each branch terminates in a tuft of large, fan-shaped leaves. The fruit

Doum Palm (*Hyphæne thebaica*).

is about the size of an apple it has a fibrous, mealy rind, which tastes like gingerbread (whence the name *gingerbread tree*, sometimes applied to this palm), and is eaten by the poorer inhabitants of Upper Egypt, where it

grows. An infusion of the rind is also used as a cooling beverage in fevers. The seed is horny, and is made into small ornaments. Ropes are made of the fibers of the leaf-stalks.

Douro (dō'rō), or DUERO, one of the largest rivers of the Spanish Peninsula, which, flowing west, traverses about one-half of Spain and the whole of Portugal, and, after a course of 500 miles, falls into the Atlantic 3 miles below Oporto. It is navigable for small vessels for about 70 miles.

Douw (do'ū), GERARD. See *Dow*, Gerard.

Dove (dov). See *Turtle-dove* and *Pigeon*.

Dove, a river of England in Derbyshire, the favorite stream of Izaak Walton. After a course of 39 miles through highly picturesque scenery it falls into the Trent.

Dove (do've), HEINRICH WILHELM, a German physicist, distinguished by his researches into the laws of climate and meteorological phenomena, was born in 1803; and died in 1879. Among his works are *Meteorological Researches* (1837), *Distribution of Heat on the Surface of the Globe* (1852), and *Law of Storms* (1857).

Dove-plant. See *Holy Spirit Plant*.

Dover (dō'ver), a borough of England, County Kent, 67 miles south-east of London. It lies on the coast of the Strait of Dover, and is 21 miles distant from Calais on the French coast. It is an important railway terminus, and as a port for mail and packet service with the continent has a large passenger traffic. Shipbuilding, sail-making and fisheries are the chief industries. The harbor has been much improved in recent years. The entrance is protected by the Admiralty Pier, which is nearly half a mile in length. The celebrated castle of Dover stands on a chalk cliff 350 feet in height. Pop. (1911) 43,647.

Dover, a city, capital of the State of Delaware and of Kent Co., in that State, 48 miles s. of Wilmington. It is in a large peach-growing district, and has canning industries. Pop. 3720.

Dover, a city, capital of Strafford Co., New Hampshire. It is situated on both sides of the Cochecho, which has here a fall of over 30 feet, affording abundant water-power for the large manufactories of cotton and woolen goods, shoes, machinery, belting, glue, lumber, etc. It is the oldest town in the State, having been settled in 1623. Pop. 13,247.

Dover, a town of Morris Co., New Jersey, 12 miles N. N. W. of Morristown. It has rolling, knitting and silk mills, etc. Pop. 7468.

Dover, STRAITS OF, the narrow channel between Dover and Calais which separates Great Britain from the French coast. At the narrowest part it is only 21 miles wide. The depth of the channel at a medium in the highest spring tides, is about 25 fathoms. On both the French and English sides the chalky cliffs show a correspondence of strata which leaves no room for doubt that they were once united, this being also known through other evidence.

Dover's Powder, a preparation frequently used in medical practice to produce perspiration. It consists of 1 grain of opium, 1 of ipecacuanha, and 8 of sugar of milk in every 10 grains, which constitute a full dose. In preparing it the ingredients must be thoroughly mixed.

Dovetailing, in carpentry, is the fastening of boards together by letting one piece in the form of a dovetail into a corresponding cavity in another. The dovetail is the strongest kind of jointing.

Dovre-Fjeld (dō-vre-fyel'), an assemblage of mountain masses in Norway, forming the central part of the Scandinavian system, and extending as a plateau 2000 feet high E. N. E. from lat. 62° N. to lat. 63°. It is generally composed of gneiss and mica schist. One of the mountains belonging to it is Snehaetta, 7620 feet.

Dow, or DOUW (properly DOU), GERARD, an eminent painter of the Dutch school, was the son of a glazier, and born at Leyden in 1613. He studied under Rembrandt, and united his master's manner in chiaroscuro with the most minute finish and delicacy. His pictures are generally of small size and mostly scenes of family life. Dow died in 1675.

Dow, NEAL, reformer, born at Portland, Maine, about 1803; died in 1897. Elected a member of the legislature, he procured the passage of the famous 'Maine liquor law,' prohibiting the sale of ardent spirits. This law still prevails in Maine, though a vigorous effort to repeal it was made in 1911. He was twice mayor of Portland and a brigadier-general in the Civil war.

Dowagiac (dō-wā'ji-a k), a city of Cass Co., Michigan, on a river of the same name, 35 miles s. w. of Kalamazoo. It has good water-power, flour and lumber mills, and various other industries. Pop. 5088.

Dower (dou'er), in common law, is the right which a wife (not being an alien) has in the lands and tenements of which her husband dies possessed. By common law this right amounts to one-third of his estate during her life; by local custom in England and state law in the United States it is frequently greater. Where the custom of *gavelkind* prevails the widow's share is a half, and that of *free-bench* gives her the whole of a copyhold. The term is also applied to the property which a woman brings to her husband in marriage, but this is more correctly *dowry*.

Dowie (dou'ē), a religious fanatic or imposter, born in Scotland, became a pastor in Australia, afterwards sought the United States and settled near Chicago, founding a lacemaking industry near Waukegan, Illinois. Here he started a religious propaganda, naming the place Zion and his followers Zionites. He announced that he was the prophet Elijah returned to earth, and managed the business affairs of the place so shrewdly that Zion became a flourishing town, its finances being kept in his hands. In 1903 he projected at great expense a crusade upon New York, for the purpose of converting that irreligious city, but the effort ended in complete failure. In 1906 he sought Mexico, planning new settlements, but a revolt against him broke out in Zion, where his management had given rise to dissatisfaction, and he was deposed on a charge of polygamy, W. G. Volika succeeding. He died on March 9, 1907.

Dowlas (dou'las), a kind of coarse linen formerly much used by working people for shirts; this use of it is now generally superseded by calico.

Dowletabad. See *Daulatabad*.

Down (doun), a county of Ireland, in Ulster, bounded on the north by Belfast Lough and on the east by the Irish Sea; area, 950 sq. miles, of which over five-sixths are productive. The surface is very irregular, and in parts mountainous, Slieve Donard in the Mourne Mountains, being 2796 feet high. Agriculture is comparatively advanced, oats, wheat, flax and potatoes being the principal crops. The native breed of sheep is small, but valued for the delicacy of its mutton and the fine texture of its wool. The principal manufactures are linen and muslin. The fisheries on the coast, principally cod, haddock and herring, are considerable. The county town is Downpatrick; others are Newtonards and Banbridge. Pop. 289,335.

Downing, ANDREW JACKSON, landscape gardener, was born at Newburgh, New York, in 1815. The son of a nurseryman, he became interested in similar pursuits; in 1841, published an excellent treatise on *Landscape Gardening*, and in 1845 *Fruits and Fruit Trees of America*, which was highly successful. He was editor of the *Horticulturist* from 1846 to 1852, when he was drowned in consequence of the burning of the steamboat *Henry Clay*, on the Hudson River.

Downpatrick (doun-pat'rik), a market town and seaport of Ireland, county town of Down, 21 miles S. E. of Belfast. It is the seat of the diocese of Down Connor and Dro-more, has a cathedral, and is celebrated as the supposed burial place of St. Patrick. Pop. 3621.

Downs (douns), a term given to undulating grassy hills or uplands, especially applied to two ranges of undulating chalk hills in England, extending through Surrey, Kent and Hampshire, known as the North and South Downs. The word is sometimes used as equivalent to *dunes* or sand-hills.

Downs, THE, a celebrated roadstead for ships, extending 6 miles along the east coast of Kent in England, protected on the seaward side by Goodwin Sands.

Dowry. See *Dower*.

Doxology (doks-ol'ō-ji; from Greek *doxa*, praise, glory and *logos*), a set form of words giving glory to God, and especially a name given to two short hymns distinguished by the title of *greater* ('Glory be to God on high,' etc.) and *lesser* ('Glory be to the Father,' etc.). Both the doxologies have a place in the Church of England liturgy, the latter being repeated after every psalm, and the former used in the communion service.

Doyen (dwā-yān), GABRIEL FRANÇOIS, a French painter, born in 1726. was a pupil of Vanloo, and afterwards studied at Rome. Returning to Paris in 1753 he worked long without recognition, but at length won fame by his great picture, *Virginia's Death*. Catharine II invited him to Russia, and appointed him professor in the Academy at St. Petersburg. He died in 1806.

Doyle (doil), ARTHUR CONAN, novelist, was born at Edinburgh in 1859. He became a doctor, but devoted himself to literature after 1890. He is best known from his ingenious detective stories, *The Adventures of Sherlock Holmes*, etc., but also wrote a number of

able historical novels, *The White Company*, *Micah Clarke*, etc.

Doyle, RICHARD, an artist, born at London in 1826; died in 1883. He was long well known as a constant contributor of satirical designs in *Punch*, and also showed much talent in illustrations to Leigh Hunt's *Jar of Honey*, Thackeray's *Newcombes* and his *Rebecca and Rowena*, Ruskin's *King of the Golden River*, etc. In later life he devoted himself to water-color painting.

Dozy (dō'zi), REINHART, a Dutch orientalist and historian, born in 1820; died in 1883. He was thoroughly versed in most of the Semitic tongues, and spoke and wrote almost all the European languages with facility. Among his works (sometimes in Dutch, sometimes in French) are *Histoire des Musulmans d'Espagne de 711-1110*; *Géographie d'Edrisi*; *De Israeliten to Mekka*; *Het Islamisme*; *Supplements aux Dictionnaires Arabes*.

Dracæna (dra-sē'na), a genus of endogenous evergreen plants, nat. order Liliaceæ. It includes the dragon-tree of Teneriffe (*D. Draco*), celebrated for producing the resin called dragon's blood. (See *Dragon's Blood*, *Dragon-tree*.) Several species of *Dracæna* are cultivated in greenhouses for the beauty of their foliage, but many of the fine plants known by this name belong strictly to other genera.

Drachenfels (drä'hen-fels; 'dragon rock'), 'the castled crag of Drachenfels,' as Byron calls it, a hill in Rhenish Prussia, about 8 miles southeast of Bonn, rising 900 feet above the Rhine, and crowned by the old castle of Drachenfels.

Drachma (drak'ma), the unit of weight and of money among the ancient Greeks. It was the principal Greek coin, was made of silver, and was worth (the Attic drachma) about 19½ cents. As a weight among the Greeks it was about 2 dwt. 7 grains troy.

Draco (drä'ko), a legislator of Athens, about 620 B.C., whose name has become proverbial as an inexorable and bloodthirsty lawgiver, and whose laws were said to have been written in blood, not ink.

Draco, the Dragon, a constellation of the northern hemisphere, containing, according to Flamsteed, eighty stars. The star (γ) Draconis is celebrated as the one used in determining the coefficient of aberration of the fixed stars.

Dracocephalum (drak-o-sef'a-lum; 'dragon's head'), a genus of odoriferous annual and peren-

nial herbs, nat. order Labiatae, mostly found in the north of Asia, Europe and America. The most generally cultivated species is *D. canariense*, or Canary balm of Gilead.

Dracunculus (dra-kun'ku-lus), a genus of plants, nat. order Araceæ, with a long, spotted stalk. They are natives of Southern Europe. *D. vulgaris* (green dragon) is common in English gardens. Its flowers are black, very fetid, and give out exhalations which produce headache, giddiness and vomiting.—*Dracuncul* is also a genus of thread worms.

Draft, or DRAUGHT (draft), a bill drawn by one person on another. (See *Bill*.) Also a rough copy of any document intended to be afterwards transcribed.

Drag, (1) a long coach or carriage, generally uncovered and seated round the sides. (2) An apparatus for retarding or stopping the rotation of one wheel or of several wheels, in carriages especially. (3) An apparatus, consisting of a frame of iron with a bag-net attached, used to recover articles lost in the water.

Drag-net, a net drawn along the bottom of a river or pond to catch fish. The use of drag-nets is usually prohibited in rivers where fish breed, as it takes all indiscriminately.

Drago Doctrine (drā'gō), a political suggestion, supplementary to the Monroe Doctrine, originally devised by Signor Calvo, Argentine Minister to France, but offered by Dr. Louis Drago, Argentine Minister of Foreign Relations, at the 1906 Pan-American conference at Rio de Janeiro. It is to the effect that no nation has a right forcibly to undertake to collect debts due to its citizens by another nation. Its purpose was to protect the Latin-American nations from forcible acts or invasion on the plea of collecting debts, by European nations. The doctrine was adopted by the Congress, with the agreement that it, with a general arbitration scheme, should be submitted to The Hague tribunal.

Dragoman (drag'o-man), a word of Eastern origin, the general name for a guide and interpreter among Europeans throughout the East, and especially for those in the Levant countries.

Dragon (drag'on), a fabulous monster, the stories regarding which reach back almost as far as history. Its form is described as generally resembling that of a winged and two-legged serpent, the body covered with scales, the head

crested, and the mouth spouting fire. The immediate source of the medieval conception is probably the Scriptures,

The Dragon of fable.

modified by accounts brought home by the Crusaders of the crocodiles in Egypt.

Dragon, one of the northern constellations. See *Draco*.

Dragon, or DRAGON-LIZARD, a name for several species of lizards inhabiting Asia, Africa and South America. The common flying lizard (*Draco volans*), the best type of the genus, is about 10 or 12 inches in length, the tail being extremely long in proportion to the body. The sides are furnished with peculiar extensions of the skin, forming a kind of wings, which help to support it in the air when it springs from branch to branch. Its food consists almost exclusively of insects.

Dragon, GREEN, a plant. See *Dracunculus*.

Dragonet (drag'un-et), the common name of certain fishes of the Goby family. The gemmeous dragonet (*Callionymus lyra*) is found in the British seas.

Dragon-fly, a family (Libellulidæ) of neuropterous insects. They have a large head, large eyes and strong, horny mandibles. They are beautiful in form and color, and are of very powerful flight. The great dragon-fly (*Aeshna grandis*) is about 4 inches long, and the largest of the European species. They live on insects, and are remarkable for their voracity. The dragon-fly deposits its eggs in the water, where the larvæ and pupæ live on aquatic insects. The larval stage lasts for a year. The family is of very wide distribution. The small blue *Agrion* is a common European form. In the United States the dragon-fly is often spoken of as the devil's darning-needle.

Dragonnades, or DRAGONADES (drag-u-nāds'), the name given to the persecutions directed against the Protestants chiefly in the south of France, during the reign of Louis XIV.

Bands of soldiers, headed by priests, marched through the villages, giving the Protestant inhabitants the alternative of renouncing their faith or being given over to the extortions and violence of the soldiery. The dragoons were conspicuous in these expeditions, to which they gave their name. The dragonnades drove thousands of French Protestants out of France.

Dragon's Blood, a resinous juice, usually obtained by incision from various tropical plants, as *Calamus Draco*, *Dracæna Draco*, *Pterocarpus Draco*, etc. The varieties differ in composition, and are often much adulterated. It is opaque, of a reddish-brown color, brittle, and has a smooth, shining, conchoidal fracture. It is soluble in alcohol and oil, but scarcely so in water. It is used for coloring varnishes; staining marble, leather and wood; for tooth tinctures, etc.

Dragon's-head, a name of certain plants of the genus *Dracocephalum* (which see).

Dragon-tree (*Dracæna Draco*), a tree-like, liliaceous plant, with a stem simple or divided at top and in old age often much branched. It is a native of the Canaries, and yields the resin known as dragon's blood. It is often grown in stoves and greenhouses.

Dragoon (dra-gön'), a kind of mounted soldier, so called originally from his musket (*dragon*) having on the muzzle of it the head of a dragon. At one time dragoons served both as mounted and foot soldiers, but now only as the former. In the British army there are *heavy* and *light dragoons*. The first dragoon regiment, the Scots Greys, was formed in 1681.

Dragoon-bird. Same as umbrella-bird.

Draguignan (drā-gē-nyän), a town of Southern France, capital of dep. Var, in a beautiful valley, 41 miles northeast of Toulon. It has some interesting edifices and manufactures of silk, soap and leather. Pop. (1906) 7766.

Drainage Tubes (drā'nij), are used in surgery to effect a discharge of matter from an abscess or other collection of exudate when the source of the exuded matter cannot be excised. They are usually made of India rubber or caoutchouc, and are introduced into the abscess or wound so that one end is in contact with the seat of discharge, while the other reaches to the surface of the skin.

Draining (drā'ing), in agriculture, a method of improving the

soil by withdrawing the water from it by means of channels that are generally covered over. The successful practice of draining in a measure depends on a proper knowledge of the superficial strata, of their situation, relative degrees of porosity, etc. Some strata allow water to pass through them, while others, more impervious, force it to run or filtrate along their surfaces till it reaches more level ground below. In general, where the grounds are in a great measure flat and the soils of materials which retain the excess of moisture, they require arti-

neatly arranged in the bottom of the trench, the whole forming an open tube. In tile drains, tiles or pipes of burnt clay are used for forming the conduits. They possess all the qualities which are required in the formation of drains, affording a free ingress to water, while they effectually exclude vermin, earth and other injurious substances. Drainage tiles and pipes have been made in a great variety of forms, the earliest of which, since the introduction of thorough draining, was the horseshoe tile, so called from its shape. These should always rest on soles, or flats of burned clay. Pipe tiles, which combine the sole and cover in one piece, have been made of various shapes, but the best form appears to be the cylinder. An important department of draining is the carrying off of the waters which are the sources of springs. Sometimes the judicious application of a few simple drains, made to communicate with the watery layers, will often dry swamps of great extent, where large sums of money, expended in forming open drains in the swamp itself, would leave it but little improved. In the laying out of drains the first point to be determined is the place of outfall, which should always afford a free and clear outlet to the drains, and must necessarily be at the lowest point of the land to be drained. The next point to be determined is the position of the minor drains; in the laying out of which the surface of each field must be regarded as being made up of one or more planes, as the case may be, for each of which the drains should be laid out separately. Level lines are to be set out a little below the upper edge of each of these planes, and the drains must then be made to cross these lines at right angles. By this means the drains will run in the line of the greatest slope, no matter how distorted the surface of the field may be. All the minor drains should be made to discharge into mains or sub-mains, and not directly into an open ditch or water course. As a general rule, there should be a main to receive the waters of the minor drains from every 5 acres. The advantages of drainage are obvious. In the first place, it allows the soil to be brought into a more suitable condition for the growth of plants, aiding in producing the finely divided and porous state by which the roots and rootlets can spread themselves at will in order to obtain the needed supplies of food, air and moisture. It also allows the sun's rays to produce their full effect on the soil and plants without being robbed of great part of it by the stagnant water.

1, Horseshoe tile with sole. Sections of Drain.
—2, Stone drain. 3, Drain with horseshoe tiles.
4, Drain with pipe-tiles.

ficial means of drainage to render them capable of yielding good crops whether of grain or grass. The wetness of land which makes it inferior for agricultural purposes, may appear not only as surface water, but as water which flows through the lower strata, and to draw off these there are the two distinct operations of surface draining and under-draining. The rudest form of open drains are the deep furrows lying between high-backed ridges, and meant to carry off the surplus water after the soil is completely saturated, but in doing so they generally carry off also much of the best of the soil and of the manure which has been spread upon it. The ordinary ditch is a common form of water course useful in certain cases, as in hill pastures. But covered drains at a depth of 4 feet or so are the common forms in draining agricultural lands. They are generally either *stone drains* or *tile drains*. Stone drains are either formed on the plan of open culverts of various forms, or of small stones in sufficient quantity to permit a free and speedy filtration of the water through them. The box drain for instance, is formed of flat stones

Drain-trap, a contrivance to prevent the escape of foul air from drains, and to allow the passage of water into them. They are of various forms. In the traps represented below it will be seen that there must always be a certain quantity of water maintained to bar the way against the escape of the gas from the drain or sewer. When ad-

Drain-trap.

ditional liquid is conveyed to the trap there is, of course, an overflow into the drain. In the left-hand figure the gas is prevented from escaping by a metal plate thrown obliquely over the drain mouth and dipping into the water in the vessel beyond it.

Drake (drāk), SIR FRANCIS, an English navigator, born at Tavistock, in Devonshire, in 1539, or, according to some authorities, in 1545. He served as a sailor in a coasting vessel, and afterwards joined Sir John Hawkins in his last expedition against the Spaniards (1567), losing nearly all he possessed in that unfortunate enterprise. Having gathered a number of adventurers around him, he contrived to fit out a

Sir Francis Drake.

vessel in which he made two successful cruises to the West Indies in 1570 and 1571. In 1572, with two small ships, he again sailed for the Spanish Main, captured the cities of Nombre de Dios and Vera Cruz, and took a rich booty, which

he brought safely home. In 1577 Drake made another expedition to the Spanish Main, having this time command of five ships. On this, the most famous of his voyages, Drake passed the Straits of Magellan, plundered all along the coasts of Chile and Peru, sacked several ports, and captured a galleon laden with silver, gold, jewels, etc., to the value of perhaps \$1,000,000. He then ran north as far as 48° N. lat., seeking a passage to the Atlantic, but was compelled to return to Port San Francisco on account of the cold. He then steered for the Moluccas, and holding straight across the Indian Ocean, doubled the Cape of Good Hope, and arrived at Plymouth, November 3, 1580 (being thus the first of the English circumnavigators. As there was no war between England and Spain, the proceedings of Drake had a somewhat dubious character, but the queen maintained that they were lawful reprisals for the action of the Spaniards, and showed her favor to Drake by knighting him on board his own ship. Five years afterwards Drake was again attacking the Spaniards in the Cape Verd Islands and in the West Indies, and in 1588 particularly distinguished himself as vice-admiral in the conflict with the Spanish Armada. In 1593 he represented Plymouth in parliament. His later expeditions, that in 1595 against the Spanish West Indies and that to Panama, were not so successful, and his death, which took place in 1596 at sea off Porto Bello, was hastened by disappointment.

Drake, JOSEPH RODMAN, poet, born in New York in 1795; died in 1820. The poems of his which are still remembered are his beautiful work of imagination, *The Culprit Fay*, and his patriotic lyric, *The American Flag*.

Drakenberg Mountains (drä'ken-burg), a range of S. Africa forming the western frontier of Natal, and rising to the height of 9000 ft., a continuation of the Quathlamba range.

Drama (dra'ma; Gr., from *draō*. I act), a class of writings which almost entirely consist of dialogue, persons being represented as acting and speaking, and the pieces being usually intended to be acted on a stage by parties assuming the characters of the respective persons. Its two great branches are tragedy and comedy, the former, roughly speaking, melancholy in character, the latter cheerful. The origin of the drama must be sought for in the love of imitation, and dramatic performances of some kind are to be met with probably among all nations. Dramatic com-

positions are found in the Old Testament, for example in *Job* and the *Song of Solomon*; and ancient India and China both developed a dramatic literature of their own. The European drama had its origin in Greece. Both forms, tragic and comic, took their rise in the celebrations of the Greek festivals of Dionysus (Bacchus), at which hymns and chants were sung by choruses in honor of the god, and the chorus continued to be a prominent feature of the old Greek drama. Greek comedy commenced about 580-560 B.C. with Susarion, but it was long in attaining regular form. Of the old Greek comedy, the chief representatives were Cratinus, Eupolis, Pherecrates and Aristophanes—the last the greatest. The invention of tragedy is generally ascribed to Thespis about 530 B.C., who was followed by Phrynichus. But the true creator of tragedy was Æschylus, in whose works and those of Sophocles and Euripides it found its most perfect expression. Thespis had only one actor, who from time to time relieved the chorus by declamation. Æschylus changed this representation into real action by making use of two actors in addition to the chorus. Æschylus also introduced masks; and by means of a long gown and the *cothurnus*, or buskin, the lofty stature of the heroes was imitated. A third actor was first introduced by Sophocles. The accommodations for the spectators were improved, and machinery and scenery introduced. The theaters, which had been formerly built of wood, were now large stone erections, capable of containing the greater number of the citizens. The regular drama among the Romans was borrowed from the Greeks. Plautus and Terence were imitators of the Greek comedy, Livius Andronicus (240 B.C.) of the Greek tragedy. Of the Roman tragedy, the dramas of Seneca are the only specimens extant.

In most modern European countries the regular drama took its rise in the mysteries, miracle plays and moralities of the middle ages (see these terms). In Italy, however, it began with a reproduction in Latin of classical models. The earliest tragedy in Italian is Trissino's *Sofonisba* (1502). Regular comedies in Italian were written by Ariosto, Aretino, Macchiavelli and others; and to the same period (fifteenth and sixteenth centuries) belongs the Italian pastoral drama, which sprung from the ancient idylls, and aimed at a fanciful delineation of Arcadian and mythological scenes. Among the pastoral dramatists of this period are Poliziano, Tasso and Guarini,

The pastorals gave birth to the opera, early masters of which, so far as it may be included in the poetic drama, are Zeno and Metastasio. The Italian drama waned in the seventeenth century, but in the eighteenth genuine comedy and classic tragedy were restored, the former by Goldoni, the latter by Alfieri. Monti, Manzoni and Niccolini are among the later writers of tragedy.

The other European nations developed the dramatic art much later than the Italians. The English and Spaniards devoted their attention to it almost at the same time; the former reaching their acme in Shakespere, the latter in Lope de Vega and Calderon. The history of the English theater and the drama is naturally divided into two parts, the first of which begins with the reign of Elizabeth and ends with the reign of Charles I. The rapid development of the drama during the reign of Elizabeth was entirely unhampered by foreign influence. Lyly, Peele, Greene, Marlowe, Shakespere, Ben Jonson, Beaumont and Fletcher, Chapman, Webster, Middleton, Marston, Ford and Massinger are among the chief names connected with the brilliant period of the English drama. During the Commonwealth the Puritans prohibited all kinds of plays, and the theaters were shut up for thirteen years. With Charles II the drama reappeared, and exhibited a licentiousness hardly equaled by that of any other Christian nation. Among the chief names belonging to this period are Dryden, Otway, Lee, Shadwell, Wycherley and Etherege. From the close of the seventeenth to that of the eighteenth century British comedy was cultivated with much success by Cibber, Farquhar, Congreve, Sheridan and others. During the nineteenth century many writers became active in dramatic production, most of the leading poets producing dramatic poems. These, however, were rarely suited to the stage, for which wrote such well-known authors as Dion Boucicault, W. S. Gilbert, etc.

The French drama was in a miserable state before Corneille (1606-84), who indeed is looked on as the founder of the drama in France. Racine and Molière followed with brilliant productions, and Voltaire, and in later times Hugo, are some of the other distinguished French dramatists. Since about 1820 a new dramatic school has been formed in France, which, departing from the ancient strictness of what is called the *classic*, approaches more and more to the German or British, or what is called the romantic school. The establishment

of this school formed part of the general reaction against the excessive adherence to classic models in literature, the leader in the movement being Victor Hugo. C. Delavigne marks the transition from the classical to the beginnings of the romantic school, and among the modern dramatists may be mentioned A. de Vigny, George Sand, A. de Musset, Mérimée, Ponsard, Augier, Scribe, Dumas the Younger and Sardou.

The Spanish drama owes much of its interest to its deviation from the classic models followed in Italy and France, and its development of an originality in form and manner comparable to that shown in England. The religious tradition was followed in the *autos*, but most of the writers diverged into romantic drama of the freest kind. The comedy of fashionable life and intrigue, imitated freely by the great seventeenth century playwrights of other countries, had its origin chiefly in Spain. In the Don Juan story the Spanish stage supplied two or three of the most fertile dramatic motives of Europe, and in Lope de Vega and Calderon it brought forward dramatists unequaled in fertility and surpassed in genius only by the greatest dramatic authors. Fully half of the most famous French plays of the classical period make use of plots pirated from Spain, and English writers gleaned from the same fertile field. Unfortunately, the Spanish dramatic period was as short as it was brilliant. Yet Spain supplied Europe with a vigorous drama that completely defied classical traditions, and pushed to the utmost extent the comedy of intrigue and ingenious surprises, in which little regard is given to probability, but the ingenuity displayed in developing striking situations is remarkable.

The German drama is of later birth than any we have mentioned, and for a long time the Germans contented themselves with translations and adaptations from the French. Lessing was the first who, by word and deed, broke the French sway (1755), and he was succeeded by Schiller and Goethe, who rank as the greatest of the more modern dramatists. Prominent names in the German drama are Kotzebue, Körner, Schlegel, Tieck, Brentano, Grillparzer, Hebbel, Ludwig, Gutzkow, Freytag, Laube, Von Moser, etc. The Dutch drama begins with the classical tragedies of Koster in the beginning of the seventeenth century, and reached its highest in Vondel (1587-1659). Hollberg, Heiberg, Oehlenschläger, Ibsen and Björnson are the chief

names connected with the Scandinavian drama.

The literature of the drama in the United States is extensive, but a great proportion of it is of little literary value. The first play by an American author presented on the stage was *Contrast*, by Royal Tyler. Some of the writers who have been most prominent are John Howard Payne, William Dunlap, Robert M. Bird, R. T. Conrad, G. H. Boker, Epes Sargent, Bartley Campbell, Bronson Howard, Augustus Thomas, David Belasco, Sidney Rosengeld, William Gillette and others of more recent date.

Draper (drā'pər), JOHN WILLIAM, chemist and physiologist, born at Liverpool in 1811; died in 1882. He came to America in 1832, and was successively professor of physical science in Hampden-Sidney College, Virginia, and of natural history, chemistry and physiology in the University of New York. He made many contributions to scientific literature, and devoted much attention to the chemical action of light, in connection with which he effected some discoveries. Among his chief works is his very popular *History of the Intellectual Development of Europe*.—His son, HENRY DRAPER (born in 1837; died in 1882), chemist and astronomer, made some valuable researches on the spectra of the heavenly bodies.

Drapery (drā'pər-i), the clothes or hangings with which any object is draped or hung; specifically in *sculpture* and *painting*, the representation of the clothing or dress of human figures.

Draught (draft), the depth of a body of water necessary to float a ship; or the depth a ship sinks in water, especially when laden.

Draughts (drafts), a game resembling chess in being played on a board divided into sixty-four checkered squares. Each of the two players is provided with twelve pieces or 'men,' placed on every alternate square at each end of the board. The men are moved forward diagonally to the right or left one square at a time, the object of each player being to capture all his opponent's men, or to hem them in so that they cannot move. A piece can be captured only when the square on the diagonal line behind it is unoccupied. When a player succeeds in moving a piece to the further end of the board (the crown-head), that piece becomes a king, and has the power of moving or capturing diagonally backwards or forwards. When it so happens that neither of the players

BASCULE BRIDGE OPEN

BASCULE BRIDGE CLOSED

The advantages of this type of bridge are that the entire width of the channel is available for navigation, and the draw may be opened and closed much more rapidly than the swing type.

has sufficient advantage in force or position to enable him to win, the game is drawn. *Checkers* is the common American name of the game. The first mention of the game is in 1551.

Drave, or DRAU (drä've, drou), an European river which rises in Tyrol, flows E. S. E. across the north of Illyria and the south of Styria, and between Hungary on the left and Croatia and Slavonia on the right, and after a course of nearly 400 miles joins the Danube 14 miles east of Essek. It is navigable for about 200 miles.

Dravidian (dra-vid'i-an), a term applied to the vernacular tongues of the great majority of the inhabitants of Southern India, and to the people themselves who must have inhabited India previous to the advent of the Aryans. The Dravidian languages are generally considered to belong to the Turanian class, and the family consists of the Tamil, Telugu, Canarese, Malayalam, Tulu, Tuda, Gond, Rajmahal, Oran, etc. Only the first four mentioned have a literature, that of the Tamil being the oldest and the most important.

Drawback (dra'bak), usually a certain amount of duties or customs dues paid back or remitted to an importer when he exports goods that he has previously imported and paid duty on, as, for instance, tobacco, etc.; or a certain amount of excise paid back or allowed on the exportation of home manufactures.

Drawbridge (dra'brij), a bridge with a lifting floor, such as were formerly used for crossing the ditches of fortresses, or any movable bridge over a navigable channel where the height of the roadway is insufficient to allow vessels to pass underneath. Modern drawbridges across rivers, canals, the entrances of docks, etc., are generally made to open horizontally, and the movable portion is called a bascule, balance, or lifting bridge; a turning, swivel, or swing bridge; or a rolling bridge, in accordance with the mode in which it is made to open. Swing bridges are usually divided into two parts meeting in the middle, and each moved on pivots on the opposite sides of the channel, or they may move as a whole on a pivot in the middle of the channel. Rolling bridges are suspended from a structure high above the water, and are propelled backwards and forwards by means of rollers.

Drawing (dra'ing) is the art of representing upon a flat surface the forms of objects and their

positions and relations to each other. The idea of nearness or distance is given by the aid of perspective, foreshortening and gradation. The term drawing, in its strict sense, is only applicable to the representing of the forms of objects in outline, with the shading necessary to develop roundness or *modeling*. In art, however, the term has a wider significance. Highly finished paintings in water-color are called *drawings*, as are also sketches or studies in oils. Drawing, in its restricted sense, may be divided into these kinds: (1) *pen drawing*; (2) *chalk drawing*, which may include lead pencil drawing; (3) *crayon drawing*; (4) *drawing shaded with the brush or hair pencil*; (5) *architectural or mechanical drawing*. *Pen drawings* are often confined to pure outlines; an appearance of *relief* or projection being given by thickening or doubling the lines on the shadow side. *Finished pen drawings* have all the shading produced by combinations of lines. *Chalk drawings* (including lead pencil drawings) are most suited for beginners, as errors can be easily corrected. Black, red and white chalks are used. When the chalk is powdered and rubbed in with a stump, large masses and broad effects can be produced with much rapidity. A combination of hatching and stumping is generally preferable to adhering exclusively to either mode. *Crayon drawings* are those in which the true colors of the objects represented are more or less completely wrought out with different colored crayons. *Drawings shaded with the brush* are outlined with the pencil or pen, the shading being laid on or *washed in* with the brush in tints of Indian ink, sepia, or color. *Architectural and mechanical drawings* are those in which the proportions of a building, machine, etc., are accurately set out for the guidance of the constructor; objects are in general delineated by geometric or orthographic projection. The great schools of painting differ from one another as much in their drawing as in their painting. In Italy the Roman school, through Raphael's fine sense for the beautiful and expressive in form, and through his study of the antique, became the true teacher of beautiful drawing. The Florentine school tried to surpass the Roman precisely in this particular, but it lost by exaggeration what it had gained by learning and a close study of anatomy. In the Lombard school a tender style of drawing is seen through harmonious coloring and in the Venetian school the drawing is often veiled in the richness of the color. The Dutch

school excels in a careful and minute style of naturalistic drawing, combined with great excellence in coloring. The French school in the time of Poussin was very accurate in its drawing; at a later period its style betrayed a great amount of mannerism. David introduced again a purer taste in drawing and a close study of the antique, and these are qualities which distinguish his school (the so-called classical school) from the romantic and eclectic schools of a later period. The drawing of the British school is naturalistic rather than academic. It has of late years much improved in accuracy and expressiveness.

Drawing-room, a room appropriated for the reception of company; a room in which distinguished personages hold levees, or private persons receive parties.—*Court drawing-rooms* are those assemblies held from time to time for the reception or presentation to the sovereign of such ladies as by custom, right, or courtesy are admissible. Gentlemen are not expected unless in attendance on the ladies of their families. The sovereign sometimes deposes a member of the royal family to receive, in which case presentations are equivalent to those made to the sovereign in person.

Drayton (drā'ton), MARKET, or DRAYTON-IN-HALES, a town of England, County Salop, 18 miles northeast of Shrewsbury. It has a church, supposed to have been erected, with the exception of the steeple, in the reign of William I. There are paper and hair-cloth manufactories. Pop. (1911) 14,627.

Drayton (drā'ton), MICHAEL, an English poet, born in 1563, who is said to have studied at Oxford, and afterwards held a commission in the army. The poem by which his name is chiefly remembered is his *Polyalbion*, a sort of topographical description of England. It is generally extremely accurate in its details, with, at the same time, many passages of true poetic fire and beauty. Other works are his *Nymphidia*, the *Court of Fairy*; the *Barons' Wars*; the *Legend of Great Cromwell*; the *Battle of Agincourt*; besides numerous legends, sonnets and other pieces. Drayton was made poet laureate in 1626. He died in 1631, and was buried in Westminster Abbey.

Dreadnought (dred'nat), a British battleship built in 1906, which attracted the attention of the world by its great size (17,900 tons), intended to surpass the ships of any other nation. As it proved, its only ef-

fect was to set the other nations to building ships of the Dreadnought and super-Dreadnought types, so that this huge fighting machine was soon surpassed. The United States, for instance, has now afloat battleships of 20,000 tons and is building others from 26,000 to 27,500 tons.

Dream (drēm), a train of vagrant ideas which present themselves to the mind during sleep. The principal feature of the state of dreaming is the absence of voluntary control over the current of thought, so that the principle of suggestion has unlimited sway. There is usually an utter want of coherency in the images that appear before the mental eye, but this want excites no surprise in the dreamer. Occasionally, however, intellectual efforts are made during sleep which would be difficult to surpass in the waking state. It is said that Condillac often brought to a conclusion in his dreams reasonings on which he had been employed during the day; and that Franklin believed that he had been often instructed in his dreams concerning the issue of events which at that time occupied his mind. Coleridge composed from 200 to 300 lines during a dream: the beautiful fragment of *Kubla Khan*, which was all he got committed to paper when he awoke, remains as a specimen of that dream poem. Dreams are subjective phenomena dependent on natural causes. They generally take their rise and character from external bodily impressions, or from something in the preceding state of body or mind. They are, therefore, retrospective and resultant instead of being prospective or prophetic. The latter opinion has, however, prevailed in all ages and among all nations; and hence the common practice of divination or prophesying by dream, that is, interpreting them as presages of coming events. Some authorities declare that all our dreams take place when we are in process of going to sleep or becoming awake, and that during deep sleep the mind is totally inactive. This is denied by others, the question being one impossible to decide.

Dredging (drej'ing), a term applied to the operation of removing mud, silt and other deposits from the bottom of harbors, canals, rivers, docks, etc. The most simple dredging apparatus is the spoon apparatus, which consists of a strong iron ring or hoop, properly formed for making an impression upon the soft matter at the bottom, so as to scoop it into a large leather bag attached to the ring and perforated with a number of small holes. The means for

LADDER DREDGE, PANAMA CANAL

SUCTION DREDGE, PANAMA CANAL

The upper view shows a ladder dredge, which operates by means of buckets on a continuous chain, dipping the contents of the buckets into the scow which lies alongside. The lower view shows a suction dredge, which operates on soft mud or sands, pumping the discharge through the pipe seen at the left of the illustration. The pipe may be carried to any desired point and used for filling.

working it is a long handle, a suspending rope, and a crane or sweep-pole planted in a boat. Much more effective is the steam dredging-machine now in common use. It has a succession of strong iron buckets on an endless chain, which traverses on a frame whose lower end is vertically adjustable so as to regulate the depth at which it works. It is worked by steam, and the buckets tear up the matter at the bottom, raise it, and discharge it into punts, or hoppers stationed close to the dredging vessel. Dredging is also the operation of dragging the bottom of the sea in order to bring up oysters, or to procure shells, plants, and other objects for scientific observation. The oyster dredge is a light iron frame with a scraper like a narrow hoe on one side, and a suspending apparatus on the other. To the frame is attached a bag made of some kind of netting to receive the oysters. The dredges used by naturalists are mostly modifications of the oyster dredge.

Dred Scott Case, a famous case before the United States Supreme Court, the decision in which, delivered by Chief Justice Taney, March 6, 1856, awakened intense interest and led to serious results. The plaintiff, Dred Scott, was a slave in Missouri, his owner took him to Illinois, and also to Minnesota, then a territory, both free soil regions, where he kept him for years, afterwards moving back to Missouri, a slave State. The plea of Scott was that his residence in Illinois and Minnesota made him a free man. The decision was that he was a chattel, 'without rights or privileges except such as those who held the power and the government might choose to grant him.' The decision nationalized slavery by degrading the slave to the level of a horse or a plow and overrode every sentiment of humanity respecting him. Thenceforth the settlement of the slavery question drifted towards armed arbitrament.

Drenthe (dren'te), a province of Holland, bounded by Hanover, Overijssel, Friesland and Groningen; area, 948 square miles. It is in general more elevated than the surrounding provinces, especially in the center. The soil is generally poor, and the surface largely consists of heath and morass, but the province is famed for its horses and cattle. Drenthe is remarkable for the great number of so-called 'giants' graves' or barrows scattered over the country. Its capital is Assen. Pop. 149,551.

Dresden (dres'den), the capital of the kingdom of Saxony, is situated in a beautiful valley on both sides of the river Elbe, which is here spanned by three stone bridges. It is first mentioned in history in 1206, and has been the residence of the sovereigns since 1485, was greatly extended and embellished by Augustus the Strong (1694-1736), and rapidly increased during the nineteenth century. Among the chief edifices, besides several of the churches, are the Museum (joined on to an older range of buildings called the Zwinger), a beautiful building containing a famous picture gallery and other treasures; the Japanese Palace (Augusteum), containing the royal library of from 300,000 to 400,000 volumes, besides a rich collection of manuscripts; the Johanneum, containing the collection of porcelain and the historical museum, a valuable collection of arms, armor, domestic utensils, etc., belonging to the middle ages. The royal palace is unattractive externally, but has a fine interior. It contains (in what is called the Green Vault) a valuable collection of curiosities, jewels, trinkets and works of art. The theater is one of the finest structures of the kind in the world. The city is distinguished for its excellent educational, literary and artistic institutions, among which are the Polytechnic School, much on the plan and scale of a university; the Conservatory and School of Music, the Academy of Fine Arts, etc. The manufactures are not unimportant, and are various in character; the china, however, for which the city is famed, is made chiefly at Meissen, 14 miles distant. The commerce is considerable, and has greatly increased since the development of the railway system. The chief glory of Dresden is the gallery of pictures, one of the finest in the world, which first became of importance under Augustus II, king of Poland and elector of Saxony, but owes its most valuable treasures to Augustus III, who purchased the greater portion of the gallery of the Duke of Modena for \$900,000. The pictures number about 25,000, and in particular comprise many fine specimens of the Italian, Dutch and Flemish schools. Besides this fine collection the museum contains also engravings and drawings amounting to upwards of 350,000. There is here also a rich collection of casts exemplifying the progress of sculpture from the earliest times, and including copies of all the most important antiques. Dresden being thus rich in treasures of art, and favored by a beautiful natural situation, is the sum-

mer resort of many foreigners. It suffered severely in the Thirty Years' war, and also in 1813, when it was the headquarters of Napoleon's army. It was occupied by the Prussians in 1866, but was evacuated in the following spring. Pop. (1910) 546,882.

Dresden China, a delicate, semi-transparent, highly finished china made at Meissen, near Dresden. The manufacture resulted from an accidental discovery made by Böttger, a young chemist, in 1710, and the vases, statuettes, groups of figures, candelabra, clocks, etc., manufactured during the eighteenth century are highly prized.

Drew, JOHN, a popular American comedian, born in Dublin in 1825; died in 1862. He became manager of the Arch Street Theater of Philadelphia, which after his death was long managed by his widow, Louisa Drew (1820-1897). For a generation she stood high among comedy actresses, her greatest part being 'Mrs. Malaprop' in *The Rivals*.—Their son, JOHN DREW, born in 1853, has long been a successful comedian.

Drexel (dreks'el), ANTHONY J., banker, born in Philadelphia, Pennsylvania, in 1826; died in 1893. He became the head of the prominent banking house of Drexel & Co., and in 1891 founded the Drexel Institute of Art, Science and Industry, a prominent educational institution of Philadelphia.

Dreyfus (drä'fus), ALFRED, a Jewish captain in the French army who was arrested in 1894, on the charge of furnishing to a foreign government documents which he had copied at the Ministry of War. He was condemned in a secret trial and was transported, March, 1895, to Devil's Island, a rock off French Guiana. As he had seemingly been victimized to shield higher culprits, the case excited world-wide attention and indignation. M. Emile Zola pleaded for a new trial for Dreyfus, and was himself summoned before the Court of Assizes as being guilty of anti-patriotic measures. Dreyfus was retried by court-martial and again convicted in 1899, but was acquitted and rehabilitated by the Court of Appeal, July, 1906.

Drift, in geology, a term applied to earth and rocks which have been conveyed by icebergs or glaciers and deposited over the surface of a country; variously called *Diluvium*, *Diluvial*, *Glacial*, or *Northern Drift*, *Boulder Formation*, etc. Geologists now often use instead of *Drift* the terms *stratified* or *unstratified Boulder Clay*, which were not

formerly recognized as distinct formations.

Drift, in mining, the course or direction of a tunnel or gallery; or a passage between two mine shafts.

Drift Sand, sand thrown up by the waves of the sea, and blown when dry some distance inland until arrested by large stones, tree roots, or other obstacles, round which it gradually accumulates until the heaps attain considerable dimensions, often forming dunes or sand-hills.

Drill, a tool used for boring holes in wood, metal, stone, ivory, etc. It consists of a sharp chisel to which a circular motion is communicated by various contrivances. For drilling iron, steel, etc., a lathe driven by steam is generally used, the drill being fixed into a chuck and the work pressed against it as it revolves. For rock-boring the diamond rockdrill, an instrument with cutting edges made of boart or black diamond, is now generally adopted. See *Boring*.

Drill, a fine linen texture of a satiny finish, used for gentlemen's summer dresses. Plain drills are worked with five shafts, fancy patterns with eight.

Drill, the course of instruction in which a soldier or sailor is taught the use of arms and the practice of military and naval evolutions.

Drill (*Cynocephalus leucopharus*), a species of baboon, of a smaller size and less fierce disposition than the mandrill, and, like it, a native of the coast of Guinea. The face and ears are bare and of a glossy black color; the palms of the hands and soles of the feet are also naked and of a deep copper color.

Drilling (dril'ing), the plan of sowing in parallel rows as distinguished from sowing broadcast. It was introduced into England by Jethro Tull, who published a work on the subject in 1731. The crops which are now generally drilled are turnips, potatoes, beans, peas, carrots, clover, cereals, flax, etc. The first form of drill was of very simple construction and was only adapted for sowing one row at a time.

Drink. See *Dietetics*.

Drinking Fountain, an erection, often ornate and artistic, on or near a public thoroughfare or place of resort, for supplying people, and sometimes also horses, dogs, etc., with water to quench their thirst.

Dripstone (drip'stōn), a projecting tablet or molding over the

head of a doorway, window, archway, or niche to throw off the rain. It is also called a *weather molding*, and *label* when it is turned square. It is of

Dripstone, Westminster Abbey.

various forms; sometimes a head is used as a termination or support, at others an ornament or simple molding is adopted.

Driving-wheel, in machinery, a wheel that communicates motion to another or others; in railway locomotives the large wheel which is fixed upon the crank-axle or main shaft.

Drogheda (droh'e-da), an ancient town and seaport, and county of itself, formerly a parliamentary borough of Ireland, in the counties of Meath and Louth, on both sides of the Boyne, about 4 miles from the sea, 26 miles north of Dublin. The Boyne is here crossed by a railway viaduct of 18 arches and 95 feet high. Flax and cotton spinning are carried on; there are also saltworks, breweries and tanneries; and the fisheries are increasing. There is a good export trade in cattle, sheep, grain, butter, eggs, etc. The town was for a long time strongly fortified, and was taken by Cromwell with great slaughter in 1649; it surrendered to William III immediately after the battle of the Boyne. Pop. 12,760.

Drohobycz (dro-ho'bich), a town of Austria, in Galicia, 41 miles S. S. W. Lemberg. Its Catholic church is one of the handsomest in the country. It has an important trade, particularly in salt, obtained from springs in the vicinity. Pop. 19,146.

Droit d'Aubaine (drwä-dō-bān), an old rule in some European countries, by which the property of a deceased foreigner was claimed by the state, unless the defunct had a special exemption. In France, where it was not abolished till 1819, the Scotch, Savoyards, Swiss and Portuguese were exempted.

Droitwich (droit'ich), a town and parliamentary division of

England, in the county and 6 miles N. N. E. of Worcester, on the Salwarp. It is famous for its brine springs, from which salt has been manufactured for more than 1000 years. Pop. of town 4146.

Drôme (drôm), a southeast department of France, covered almost throughout by ramifications of the Alps, the average height of which, however, does not exceed 4000 feet; area, 2508 square miles, of which about one-fourth is waste, one-third under wood, and a great part of the remainder under tillage and pasture. A considerable extent of the area is occupied by vineyards, and several of the wines produced have a high reputation, especially Hermitage. Olives, chestnuts and silks are staple productions. Valence is the capital. Pop. (1906) 297,270.

Dromedary (drom'e-da-ri). See *Camel*.

Dromore (drō-mör'), an episcopal city, Ireland, County Down, on the Laggan, here crossed by two bridges, 16 miles southwest of Belfast. Its cathedral contains the tomb of Jeremy Taylor. Pop. 2307.

Drontheim (dron'thīm). See *Trondhjem*.

Dropsy (drop'si), a disease which consists in the collection of serous or watery fluid in the cellular tissue, or in different cavities of the body. It receives different appellations according to the particular situation of the fluid. When it is diffused through the cellular tissue, either generally or partially, it is called *anasarca*; when it is deposited in the cavity of the cranium it is called *hydrocephalus*; when in the chest, *hydrothorax*, or *hydrops pectoris*; when in the abdomen, *ascites*; in the uterus, *hydrometra*; within the scrotum, *hydrocele*; and within the ovary, *ovarian dropsy*. Obstructive organic disease of the heart and degenerative diseases of the kidneys are the most common causes of general dropsy. The treatment often includes removal of the fluid from the cavities containing it by tapping or puncturing; otherwise drugs which stimulate excretion by the skin, bowels and kidneys are employed, but all remedies frequently prove ineffectual.

Dropwort (from the small tubers on the fibrous roots), *Spiraea filipendula*, nat. order Rosaceæ, a British plant of the same genus as queen-of-the-meadow, found in dry pastures. The hemlock dropwort, or water dropwort, is *Oenanthe fistulosa*.

Droseraceæ (dros-er-ā'se-ē), a nat. order of albuminous, exogenous plants, consisting of marsh

herbs, whose leaves are usually covered with glands or glandular hairs. It contains six genera, including the sundew (*drosëra*), and Venus' fly-tray (*Dionæa*). (See *Sundew* and *Dionæa*.) They have no known qualities except that they are slightly bitter. The leaves are generally circinnate in the bud, as in ferns.

Drosky (dros'ki), a kind of light, four-wheeled carriage used by the Russians. It is not covered, and in the middle there rises a sort of bench placed lengthways on which the passengers ride as on a saddle; but the name is now applied to various kinds of vehicles, as the common cabs plying in the streets of German cities, etc.

Drosometer (dros-om'e-ter; Greek, *drosos*, dew, and *metron*, a measure), an instrument for ascertaining the quantity of dew which falls. It consists of a balance, one end of which is furnished with a plate fitted to receive the dew, the other containing a weight protected from it.

Drouais (drö-ä), JEAN GERMAIN, a French historical painter of considerable repute, born at Paris in 1763; died at Rome in 1788. His chief pictures are *The Canaanitish Woman at the Feet of Jesus*, *Dying Gladiator* and *Marius at Minturnæ*.

Drouet (drö-ä), JEAN BAPTISTE, Comte d'Erlon, French general, born in 1765; died in 1844. He served in the campaigns of the Moselle, Meuse and Sambre (1793-96), in the Peninsula, and at Waterloo, where he commanded the first corps d'armée. In 1834-35 he was governor-general of Algeria, and in 1843 was made a marshal.

Drouyn de Lhuys (drö-aṇ dé lwēs), ÉDOUARD, a French statesman and diplomatist; born in 1805; died in 1881. He entered the diplomatic service in 1831, and was chargé d'affaires at The Hague during the events which led to the separation of Belgium from Holland. In 1840 he was head of the commercial department under the minister of foreign affairs. Opposition to Guizot caused his dismissal in 1845. He became minister for foreign affairs in 1848, ambassador to London in 1849; and again foreign minister in 1851 and in 1863. On the fall of the empire he fled to Jersey, but subsequently returned to France.

Drowning (droun'ing) is due to the air being prevented entering the lungs, owing to the mouth and nostrils being immersed in a liquid, the liquid being commonly water. Death may, therefore, occur by drowning in a

small quantity of water. Thus, a child may fall head downwards into a tub and be drowned, though the tub is not half full of water, sufficient to cover the mouth and nostrils being all that is necessary, and a man overcome by a fit or by drunkenness may fall on a road with his head in a ditch or pool of water and thus meet death. Death by drowning is thus due to suffocation, to the stoppage of breathing, and to the entrance of water into the lungs. When death has been caused by drowning, the skin presents the appearance called goose-skin (*cutis anserina*), the face and surface of the body generally are usually pale, a frothy liquid is found in the lungs and air-passages, and about the lips and nostrils; water may be found in the stomach, and clenched fingers, holding substances grasped at, may serve to show that a struggle has taken place in the water, and that the body was alive at the time of immersion. Complete insensibility arises, it is probable, in from one to two minutes after submersion, recovery, however, being still possible; and death occurs in from two to five minutes. So long as the heart continues to beat, recovery is possible; after it has ceased it is impossible. Newly born children and young puppies bear submersion longer than the more fully grown.

For the restoration of the apparently drowned, several methods are suggested. Those of Dr. Sylvester, recommended by the English Humane Society, and Dr. Benjamin Howard, of New York, will be described. Which ever method is adopted, the following steps must first and immediately be taken: Pull the body up on to dry ground. Send immediately for medical assistance, warm blankets, dry clothing, brandy and hot water, if any one is at hand to send. No delay must be permitted, however, in treating the person, so that if only one person is on the spot he must begin to treat the person *instantly*, without seeking assistance. Remove all clothing from the neck and chest. Fold the articles of dress removed so as to make a firm pillow, which is to be placed under the shoulders, so that the upper part of the body is slightly raised and the head slightly thrown back. Cleanse the mouth and nostrils, open the mouth and pull forward the tongue. If natural efforts to breathe are made, try to stimulate them by brisk rubbing of the sides of the chest and of the face. If no effort to breathe is made, proceed to produce the entrance and outflow of air from the lungs by Sylvester's or Howard's method.

A DROSKY IN RUSSIA

Sylvester's method: Stand or kneel behind the person's head, grasp each arm at the elbow, draw both arms simultaneously upwards till they are extended in line with the body, as a man places them when he stretches himself. Let this movement occupy about 2 seconds. This enlarges the chest and causes the entrance of air to the lungs. Without a pause carry the arms down to the sides, making them overlap the chest a little, and firmly press them on the chest. This movement should occupy another 2 seconds. It expels air from the lungs. Repeat the movements, and maintain them steadily and patiently at the rate of 15 times a minute, until breathing has

lower part of the chest, so that the thumbs hook in under the lowest ribs and the fingers are spread out on the chest. Steadily press forwards, raising the ribs, your own body being thus thrown leaning forward. This enlarges the cavity of the chest and causes air to enter. When the ribs have been raised to the utmost extent, with a slight effort push yourself back to the more erect position, allowing the ribs to recoil to their former position. This expels the air. Repeat the process 15 times a minute. One person will find it more easy to maintain this method for a prolonged period than Sylvester's, especially if the patient be big and heavy.

Fig. 1.

Fig. 2.

Howard's Method for Restoring the Apparently Drowned.

been fully restored, or until medical aid arrives, or until death is certain. An hour is not too long a time to persist, and so long as there seems the least effort to breathe the efforts must be persevered in.

Howard's method: Place the body on its face, with the roll of clothing under the stomach; the head being supported on the arm as shown in Figure 1. Pull the body over the roll of clothing to expel water from the chest. Then turn the body on the back, the shoulders being supported as shown in Figure 2. Kneel over the body. Place both hands on the

Meanwhile, if other persons are present, they should be occupied in rubbing the body and limbs (*always upwards*) with hands or warm flannel, applying hot flannels, bottles, etc., to the limbs, feet, armpits, etc. As soon as the person is sufficiently restored to be able to swallow, give small quantities of hot brandy and water, hot wine and water, hot coffee, etc., and use every effort to restore and maintain warmth.

Drowning was formerly a mode of capital punishment in Europe. The last person executed by drowning in Scotland suffered death in 1611. In Ireland there

was an execution by drowning so lately as 1777.

Droylsden (droilz'den), a local board district in England, Lancashire, $3\frac{1}{2}$ miles E. of Manchester, of which it is practically an outlying suburb. It has cotton factories. Pop. (1911) 13,259.

Droz (drō), FRANÇOIS XAVIER JOSEPH, a French moralist and historian; born at Besançon in 1773; died in 1850. In 1806 he published an *Essai sur l'Art d'être Heureux*, which was very popular; and in 1823 *De la Philosophie Morale, ou des Différents Systèmes sur la Science de la Vie*, which procured his admission into the Academy. His reputation is, however, founded chiefly on his *Histoire du Règne de Louis XVI.*

Droz (drō), PIERRE JACQUET, a Swiss mechanic, born at Chaux-de-Fonds in 1721; died in 1790. Among his many contrivances were a compensation pendulum, a writing automaton, and an astronomical clock.—HENRI LOUIS JACQUET, son of the preceding, born in 1752 at Chaux-de-Fonds; died at Naples in 1791; followed the same line as his father, and constructed an automaton, representing a young woman, which played different tunes on the harpsichord, and a pair of artificial hands for a young man who was mutilated, by means of which he was enabled to perform most of the necessary offices for himself.

Drugget (drug'et), a coarse kind of woolen felt or cloth, formerly used by the lower classes for purposes of clothing, but now chiefly used as a covering for carpets.

Drugs, a general name for any substance, vegetable, animal, or mineral, used in the composition or preparation of medicines; also applied to ingredients used in chemical preparations employed in the arts.

Druids (drō'ids), the priests of the Celts of Gaul and Britain. According to Julius Cæsar, they possessed the greatest authority among the Celtic nations. They had some knowledge of geometry, natural philosophy, etc., superintended the affairs of religion and morality, and performed the office of judges. They venerated the mistletoe when growing on the oak, a tree which they likewise esteemed sacred. They had a common superior, who was elected by a majority of votes from their own number, and who enjoyed his dignity for life. They took unusual care to fence themselves round with mysteries, and it is probable that they cherished doctrines unknown to the common people; but

that they had a great secret philosophy which was handed down by oral tradition is very unlikely. Of their religious doctrines little is known.

Druids, THE ORDER OF, friendly societies which originated in a club of 'Druids' founded in London for mutual entertainment in 1780. They now form a great number of lodges or 'groves,' established for the mutual benefit of the members. They adopt a system of ceremonies professedly based on Druidical traditions. The order has extended to America, Australia, Germany, etc. A 'grove' was established in New York in 1833, and from this the order spread rapidly through the United States. From the past officers was organized a supreme body entitled 'Grand Grove of the United States of the United Ancient Order of the Druids,' which declared its independence of the British Supreme Grove and made an entire change in the ritual, adding a number of new degrees.

Drum, a musical instrument of percussion, of Oriental origin, either cylindrical or hemispherical in shape, with the end or ends covered with tightened parchment, which is stretched or slackened at pleasure by means of cords with sliding knots or screws. Drums are of three kinds: (1) the long or bass drum played with stuffed-nob drumsticks, and used only in large orchestras or military bands; (2) the side-drum, having two heads, the upper one only being played upon by two sticks of wood; (3) the kettle drum, a hemisphere of brass or copper, the end of which is covered with parchment, always used in pairs, one drum being tuned to the keynote, and the other to the fifth of the key, the compass of the two together being an octave.

Drum, in machinery, a short cylinder revolving on an axis for the purpose of turning wheels or shafts, etc., by means of belts or bands passing round it.

Drumclog (drum-klog'), a moorland tract in Lanarkshire, Scotland, 6 miles s. w. of Strathaven, the scene of a skirmish between Claverhouse and the Covenanters, in which the former was defeated (1679).

Drumfish, DRUM, *Pogonias chromis*, and other species of the same genus, fishes found on the Atlantic coasts of the United States, and so named from the deep drumming sound they make in the water. They usually weigh about 20 lbs.

Drum-major, the title of the non-commissioned officer whose duty it is to teach and direct the

Drummond

Drupe

drummers. He marches at the head of the band carrying the regimental baton.

Drummond (drum'mund), HENRY, biologist and theologian, was born at Stirling, Scotland, in 1851; died in 1897. In 1877 he became lecturer, and in 1884 professor of natural science in the Free Church College of Glasgow. His book, *Natural Life in the Spiritual World*, an effort to reconcile the doctrines of Christianity and evolution, excited great attention and was very widely read. Other works were *The Ascent of Man*, *The Greatest Thing in the World*, *Tropical Africa*, etc.

Drummond, THOMAS, the inventor of the lime-ball light known by his name, was born at Edinburgh in 1797; and died at Dublin in 1840. He was educated at Edinburgh and at Woolwich, and entered the army as an engineer. In 1819 he became assistant to Colonel Colby in the trigonometrical survey of Great Britain and Ireland. He invented a heliostat, and first used the light which bears his name about 1825 during the survey of Ireland. He subsequently entered political life, and became in 1835 under-secretary for Ireland, a county which he practically ruled with the utmost success for five years.

Drummond, WILLIAM, of Hawthornden, a Scottish poet distinguished for the elegance and tenderness of his verses, was born at Hawthornden House, 7 miles from Edinburgh, in 1585; died in 1649. He was educated at the University of Edinburgh; after which he spent four years in foreign travels, residing for a part of the time at Bourges, to study the civil law. On his return to Scotland he retired to Hawthornden and gave himself up to the cultivation of poetry and polite literature, and here he spent the most of his life. He entertained Ben Jonson for three weeks on the occasion of a visit which the English dramatist made to Scotland in the winter of 1618-19, and took notes of Jonson's conversation, which were first published in 1711. He was the first Scottish writer to abandon the native dialect for the language raised to supremacy by the Elizabethan writers. His chief productions are: *The Cypress Grove*, in prose, containing reflections upon death; *Flowers of Zion, or Spiritual Poems*; *Tears on the Death of Mæliades* (that is, Prince Henry); *Poems, Amorous, Funereal, Divine, Pastoral, in Sonnets, Songs, Sextains, Madrigals*; *The River Forth Feasting* (on King James' visit to Scotland in 1617); *Polemo-Middinia, or the Battle*

of the Dunghill, a macaronic poem; and *History of the Lives and Reigns of the Five Jameses, Kings of Scotland*. As an historian he is chiefly remarkable for an ornate style, and a strong attachment to the High Church principles of the Jacobites.

Drummond Light, a very intense light produced by turning two streams of gas, one of oxygen and the other of hydrogen, in a state of ignition upon a ball of lime. This light was proposed by Thomas Drummond (see article) to be employed in lighthouses. See *Limelight*.

Drunkenness (drung'kn-nes), the state of being drunk or overpowered by alcoholic liquor, or the habit of indulging in intoxication. A similar condition may be produced by numerous agents, but the term is always applied to the act or habit of drinking alcoholics to excess. By the common law drunkenness is an offense against the public economy, and those found drunk are liable to fine or imprisonment. Drunkenness is no excuse for any crime, but it renders a contract invalid if either of the parties was in a state of complete drunkenness when the contract was signed.

Drunken Parliament, in Scottish history, a name given to the privy-council, which, under its powers as representing the estates between sessions, met at Glasgow and passed an act (October 1, 1662) to remove the recusant ministers from their parishes within a month. All the members were said to have been drunk except Lockhart of Lee, who opposed the measure.

Drupaceæ (drū-pā'se-ē), a name given by some botanists to that division of rosaceous plants which comprehends the peach, the cherry, the plum and similar fruit-bearing trees.

Drupe (drūp), in botany, a stone fruit; a fruit in which the outer part of the pericarp becomes fleshy

Drupe of peach.

Drupe of peach, cut.

or softens like a berry while the inner hardens like a nut, forming a stone with a kernel, as the plum, cherry, apri-

cot and peach. The stone enclosing the kernel is called the *endocarp*, while the pulpy or succulent part is called the *mesocarp*. In some fruits, as those of the almond, the horse-chestnut and cocoa-nut, the mesocarp is not succulent, yet, from their possessing the other qualities of the drupe, they receive the name. The date is a drupe in which the hard stone or endocarp is replaced by a membrane.

Drury Lane Theater, one of the principal theaters in London, was established in the reign of James I. In 1671 it was burned down, and was rebuilt by Sir Christopher Wren between 1672 and 1674, but again consumed in 1809. On this occasion it was rebuilt by B. Wyatt, and was reopened on October 10, 1812, with an address composed by Lord Byron. It was in connection with this opening that James and Horace Smith wrote the *Rejected Addresses*. Nearly all the great English actors from Betterton and Garrick have been more or less connected with Drury Lane.

Druses (*drū'zes*), a curious people of mixed Syrian and Arabian origin, inhabiting the mountains of Lebanon and Anti-Lebanon, in whose faith are combined the doctrines of the Pentateuch, part of the tenets of Christianity, the teachings of the Koran, and the Sufi allegories. They describe themselves as Unitarians and followers of Khalif Hakim Biamr-Allah, whom they regard as an incarnation of deity, the last prophet, and the founder of the true religion. They are nearly all taught to read and write; but are exceedingly turbulent, their conflicts with their neighbors the Maronites having often caused much trouble to the Turkish government. Their total number (exclusive of women and children) has been estimated at from 70,000 to 75,000.

Drusilla (*drū-zil'a*), a daughter of Herod Agrippa I, king of the Jews. She was born in A.D. 38; married Azizus, king of Emesa, whom she divorced in order to marry Felix, procurator of Judea. She is thus the Drusilla who is mentioned in the Acts, and was probably present when Paul preached before Felix.

Drusus (*drū'sus*), the name of several distinguished Romans, among whom were:—**MARCUS LIVIUS**, orator and politician; became tribune of the people in 122 B.C. He opposed the policy of Caius Gracchus, and became popular by planting colonies.—**MARCUS LIVIUS**, son of the above, was early a strong champion of the senate or aristocratic party, but showed great skill in manipulating the mob. He rose to be

tribune of the people, and was assassinated in B.C. 91.—**NERO CLAUDIUS**, brother of the Emperor Tiberius, born in B.C. 38. By a series of brilliant campaigns he extended the Roman empire to the German Ocean and the river Elbe, and was hence called *Germanicus*. By his wife Antonia, daughter of Mark Antony, he had a daughter, Livia, and two sons, Germanicus and Claudius, the latter of whom afterwards became emperor. He died in B.C. 9.

Dryad (*drī-ad*), a wood nymph, in the Greek mythology. They were supposed to be the tutelar deities of trees. Each particular tree or wood was the habitation of its own special dryad.

Dryander (*dre-ā'n'dér*). **JONAS**, a Swedish naturalist and pupil of Linnæus, born in 1748; died in 1810. He settled in England in 1782, and was connected with the Royal and Linnæan societies till his death.

Dryandra (*dre-ā'n'dra*), named from the Swedish naturalist Dryander, a genus of Australian shrubs, with hard, dry, evergreen, generally serrated leaves, and compact, cylindrical clusters of yellow flowers, nat. order Proteaceæ. The species are esteemed by cultivators for the variety and peculiar forms of their leaves.

Dryburgh Abbey (*drī'burg*), a monastic ruin in Scotland, consisting of the nave's western gable, the gable of the south transept, and a fragment of choir and north transept of an abbey founded in 1150 on the banks of the Tweed, about 5 miles E. S. E. of Melrose. It is celebrated as the burial place of Sir Walter Scott and his family.

John Dryden.

Dryden (*drī'den*), **JOHN**, an English poet, was descended from an

ancient family, his grandfather being Sir Erasmus Dryden, of Canons Ashby, Northamptonshire. He was born near Aldwinkle, Northamptonshire, in 1631, and was admitted a king's scholar at Westminster under the celebrated Dr. Busby, whence he went to Trinity College, Cambridge, being here elected to a scholarship. After leaving the university he went to London, where he acted as secretary to his cousin, Sir Gilbert Pickering, a favorite of Cromwell; and on the death of the Protector he wrote his *Heroic Stanzas* on that event. At the Restoration, however, he hailed the return of Charles II in *Astræa Redux*, and from that time his devotion to the Stuarts knew no decay. In 1661 he produced his first play, *The Duke of Guise*; but the first that was performed was *The Wild Gallant*, which appeared in 1663 and was not a success. This was followed by *The Rival Ladies* and *The Indian Queen*, a tragedy on Montezuma in heroic verse, written in collaboration with Sir Robert Howard, whose sister, Lady Elizabeth Howard, Dryden married in 1663. He followed up *The Indian Queen* with *The Indian Emperor*, which at once raised Dryden to the highest pitch of public estimation, an elevation which he retained till his death. The great fire of London put a stop for some time to theatrical exhibitions. In the interval Dryden published the *Annus Mirabilis*, an historical account of the events of the year 1666, one of the most elaborate of his productions. In 1668 he also published his celebrated *Essay on Dramatic Poesy*—the first attempt to regulate dramatic writing. In 1668 the *Maiden Queen*, a tragi-comedy, was represented. This was followed in 1670 by the *Tempest*, an alteration from Shakespeare, in which he was assisted by Sir William Davenant. It was received with general applause, notwithstanding the very questionable taste and propriety of the added characters. Dryden was shortly afterwards appointed to the offices of royal historiographer and poet laureate, with a salary of £200 a year. He now became professionally a writer for the stage, and produced many pieces, some of which have been strongly censured for their licentiousness and want of good taste. The first of his political and poetical satires, *Absalom and Achitophel* (Monmouth and Shaftesbury) was produced in 1681, and was followed by *The Medal*, a satire against sedition; and *Mae Flecknoe*, a satire on the poet Shadwell. On the accession of James in 1685 Dryden became a Roman Catholic, a conversion the sincerity of which

has been not unreasonably regarded with suspicion, considering the time at which it occurred. At court the new convert was received with open arms, a considerable addition was made to his pension, and he defended his new religion at the expense of the old one in a poem, *The Hind and the Panther*. Among his other services to the new king were a savage reply to an attack by Stillingfleet, and panegyrics on Charles and James under the title of *Britannia Rediviva*. At the Revolution Dryden was deprived of the office of poet laureate and historiographer, and of the certain income which these offices secured him. During the remaining ten years of his life he produced some of his best works, including his admirable translations from the classics. He published, in conjunction with Congreve, Creech and others, a translation of Juvenal, and one of Persius entirely by himself. About a third part of Juvenal was translated by Dryden, who wrote an essay on satire which was prefixed to the whole. His poetic translation of Virgil appeared in 1697, and, soon after, that masterpiece of lyric poetry, *Alexander's Feast*, his *Fables*, etc. He died May 1, 1700, in the sixty-ninth year of his age, and was buried in Westminster Abbey. Dryden is unequaled as a satirist among English poets, and the best of his tragedies are unsurpassed by any since written. His poetry as a whole is more remarkable for vigor and energy than beauty, but he did much to improve English verse. He was also an admirable prose writer. Personally he was modest and kindly. The whole of his works, edited by Sir W. Scott, were published in 1818 (18 vols. 8vo): they were recently republished with additional notes, etc., by George Saintsbury.

Dry Dock. See *Docks*.

Drying Machine (drī'ing ma-shēn'), a machine used in bleaching, dyeing and laundry establishments, consisting of two concentric drums or cylinders, one within the other, open at the top, and having the inner cylinder perforated at its side with numerous small holes. The goods to be dried are placed within the inner cylinder, and the machine is then made to rotate with great velocity, when, by the action of centrifugal force, the water escapes through the holes in the side. The action of the drying machine is the same in principle as that witnessed when a person trundles a mop to dry it.

Drying-oil, the name given to linseed and other oils which have

been heated with oxide of lead; they are the bases of many paints and varnishes. When exposed to the air they absorb oxygen, and are converted into a transparent, tough, dry mass or varnish.

Dryobalanops (dri-o-bal'an-ops). See *Camphor*.

Dryophis (dri'o-fis), a genus of non-venomous tree serpents.

Dry Pile, a form of the ordinary voltaic pile, in which the liquid is replaced by some hygrometric substance, as paper which has been moistened with sugar and water and allowed to dry, chiefly useful in the construction of electroscopes of great delicacy.

Dry Point, a sharp-pointed instrument used by engravers to incise fine lines in copper without the plate being covered with etching ground or the lines bit in by acid. This tool is much employed in working the more delicate portions of plates produced as etchings.

Dry Rot, a well known disease affecting timber occasioned by various species of fungi, the mycelium of which penetrates the timber, destroying it. *Polyporus hybridus* is the dry rot of oak-built ships; *Merulius lacrymans* is the most common and most formidable dry rot fungus in Britain, found chiefly in firewood; while *Polyporus destructor* has the same preëminence in Germany. Damp, unventilated situations are most favorable to the development of dry rot fungi. Various methods have been proposed for the prevention of dry rot; that most in favor is thoroughly saturating the wood with creosote, which makes the wood unfit for vegetation.

Dry Rot Fungus (*Merulius lacrymans*).

favorable to the development of dry rot fungi. Various methods have been proposed for the prevention of dry rot; that most in favor is thoroughly saturating the wood with creosote, which makes the wood unfit for vegetation.

Dual (dū'al), in grammar, that number which is used, in some languages, to designate two things, while another number (the plural) exists to express many. The Greek, Sanskrit and Gothic of ancient languages, and the Lithuanian and Arabic of modern, possess forms of the verb and noun in which two persons or things are denoted, called the *dual* numbers.

Dualine (dö'a-lin), a blasting powder, composed chiefly of nitrate of ammonia and very fine sawdust, which has been acted upon by nitrosulphuric acid. It will burn in the open air without exploding and has advantages over gunpowder where blast-

ing has to be done in soft stone or coal; but in hard rock dynamite is preferable.

Dualism (dū'al-izm), the philosophical exposition of the nature of things by the hypothesis of two dissimilar primitive principles not derived from each other. Dualism in religion is chiefly confined to the adoption of a belief in two fundamental beings, a good and an evil one, as is done in some Oriental religions, especially that of Zoroaster. In metaphysics, dualism is the doctrine of those who maintain the existence of spirit and matter as distinct substances, in opposition to idealism, which maintains that we have no knowledge or assurance of the existence of anything but our own ideas or sensations. Dualism may correspond with realism in maintaining that our ideas of things are true transcripts of the originals, or rather of the qualities inherent in them, the spirit acting as a mirror and reflecting their true images or it may hold that, although produced by outward objects, we have no assurance that in reality these at all correspond to our ideas of them, or even that they produce the same idea in two different minds.

Duane (dö-ān'), WILLIAM J., an eminent lawyer and statesman, born at Clonmel, Ireland, of American parentage, in 1780. His father, William Duane (1760-1835), was a political editor, who for years published in Philadelphia an influential Democratic paper, the *Aurora*. The son was admitted to the bar in 1803 and practiced in Philadelphia. He was the legal adviser of Stephen Girard, whose last will he wrote. After serving in the Pennsylvania legislature, he was in 1833 appointed Secretary of the Treasury by President Jackson, who soon after ordered him to remove the deposits of public money from the Bank of the United States. This Duane refused to do and was in consequence removed from office. He wrote *The Law of Nations Investigated in a Popular Manner*. Died in 1865.

Dubarry (dü-bā-ri), MARIE JEANNE, COMTESSE, mistress of Louis XV, was born at Vaucouleurs in 1746. She came young to Paris, entered on an immoral course, and was presented to the king in 1769, who had her married for form's sake to the Count du Barry. She exercised a powerful influence at court, and with some of her confidants completely ruled the king. Important offices and privileges were in her gift, and the courtiers abased themselves before her. After the death of Louis she was dismissed from court and sent to live in a convent near Meaux. She re-

VIEW IN DUBLIN

ceived a pension from Louis XVI. During the reign of terror she was arrested as a royalist and executed, November, 1793.

Du Bartas (dü-bâr-tâ), GUILLAUME DE SALLUSTE, SIEUR. See *Bartas*.

Dubitza (dö-bit'za), a fortified town of Bosnia, on the right bank of the Unna, about 10 miles from its confluence with the Save. In the sixteenth and seventeenth centuries it was a frequent point of contention between Austria and Turkey. In 1878, with the rest of Bosnia, it passed under Austrian administration. Pop. 6000. On the opposite bank of the Unna, in Croatia, stands Austrian Dubitza, with upwards of 3000 inhabitants.

Dublin (dub'lin), the metropolis of Ireland, is situated in County Dublin, on the east coast of the island, at the mouth of the Liffey, the banks of which for more than two miles from the sea are lined with quays. The river, which divides the city into two unequal parts, is crossed by numerous bridges. In the old part of the city the streets are irregular, narrow and filthy; in the more modern and aristocratic quarters there are fine streets, squares and terraces, but with little pretension to architectural merit. The public buildings, however, are especially numerous and handsome. The main thoroughfare, east to west, is by the magnificent quays along the Liffey. The principal street at right angles to the river is Sackville Street, a splendid street 650 yards long and 40 yards wide, forming a thoroughfare which is continued across the river by O'Connell Bridge, a magnificent structure the same width as Sackville Street. The principal public secular buildings are the Castle, the official residence of the viceroy; the Bank of Ireland, formerly the Irish parliament house; Trinity College; the courts of justice; the custom house; the King's Inns; the post-office; rotunda; corn exchange; commercial buildings; the mansion house; city hall or corporation buildings, etc. The most important literary and scientific institutions are Trinity College (Dublin University); the Royal University; the Royal College of Science; the Roman Catholic University; the College of Surgeons; the Royal Dublin Society; the Royal Hibernian Academy of Painting, Sculpture and Architecture; the Royal Irish Academy for Promoting the Study of Science, Literature and Antiquities; the Archæological Society; the Royal Zoological Society, etc. Dublin contains two Protestant Episcopal cathedrals

—St. Patrick's Cathedral, erected in 1190, and thoroughly restored between 1860 and 1865; and Christ's Church, built in 1038 and also recently restored, both restorations being carried on by private munificence. The Roman Catholic Cathedral is a very large edifice. The charitable institutions are numerous and some of them possess splendid buildings. There are several extensive military and constabulary barracks in the city and vicinity. A little northwest of the city, up the Liffey, is the Phoenix Park, with an area of 1759 acres. In it are the Viceregal Lodge, the residence of the lord lieutenant; the chief secretary's and under-secretary's official residences; the Royal Hibernian Military School, and the depot of the Royal Irish Constabulary; as also the gardens of the Royal Zoological Society. The manufactures carried on are of little note; poplins, for which Dublin has been long celebrated, are still in some request, and brewing and distilling are largely carried on. Dublin is an ancient town, but its early history is obscure. It was held by the Danes for more than three centuries from 836. Pop. 290,638.—The county, which is in the province of Leinster, on the east coast of the island, has an area of 354 square miles, about a third of it under crops of various kinds, chiefly grass and clover. The surface on the whole is flat, but the ground rises at its southern boundary into a range of hills, the highest of which—Kippure—is 2473 feet above the sea. There is about 70 miles of sea-coast, the chief indentation being Dublin Bay. The principal stream is the Liffey, which intersects the county w. to E. Important water communications are the Royal and the Grand canals, both centering in Dublin, and uniting the Liffey with the Shannon. The manufactures are unimportant, but the fisheries are extensive. Pop. 398,356.

Dublin, a city, capital of Laurens Co., Georgia, on the Oconee River, 56 miles S. E. of Macon. It has manufactures of cotton, cotton-seed oil, naval stores, etc. Pop. 5795.

Dublin, UNIVERSITY OF, an institution founded in 1591, when a charter, or letters-patent, was granted by Queen Elizabeth for the incorporation of the 'College of the Holy and Undivided Trinity,' the University and Trinity College being practically the same. The corporation now consists of a provost, seven senior fellows, twenty-six junior fellows and seventy foundation scholars. The senate of the university consists of 'the chancellor of the university, or, in his absence, of the vice-chancellor, and

such doctors or masters of the university as shall have and keep their names on the books of Trinity College.' The senate possesses the right of electing the chancellor of the university; it is also the body which grants degrees. The fellows are appointed for life, after an examination. The college possesses a library of about 200,000 printed volumes and 1700 manuscripts. It has also a botanic garden and museum. In 1613 James I granted to the university the right of returning two members to Parliament. One was taken away at the Union, but was restored by the reform bill of 1832.

Dubnitz (döb-nit'za), a town in Bulgaria, 25 miles S. S. W. of Sofia. It has extensive ironworks and some manufactures of silk. Pop. about 8000.

Dubno (döb'nö), a town of European Russia, government of Volhynia. It was a place of some importance before the annexation of Western Poland by Russia. Pop. 13,785, in great part Jews.

Dubois (dü-bwä), GUILLAUME, a French cardinal, was the son of an apothecary; born in 1656; died in 1723. He became tutor to the Duke of Chartres, afterwards Duke of Orleans and regent, and maintained his influence by pandering to the vices of his pupil. He became privy-councilor and overseer of the duke's household, and minister for foreign affairs under the regency. The archbishopric of Cambrai having become vacant, Dubois ventured to request it of the regent, although he was not even a priest. The regent was astonished at his boldness; but he obtained the post, having in one morning received all the clerical orders, and, a few days after, the archbishopric. By his consummate address he obtained a cardinal's hat, and in 1721 was appointed prime minister.

Dubois (dü-bwä), PAUL, a French sculptor, born in 1829; died in 1905. He first studied law, but in 1856-58 gave himself up to sculpture under Tous-saint at Paris, and then went to Italy, where the sculptors of the early Renaissance, Donatello, Luca Della Robbia, etc., had a decided influence upon him. Among his works are a *St. John*, a *Narcissus*, a *Madonna and Child*, *Eve Awakening to Life*, a figure of *Song* for the opera-house at Paris, and numerous busts; but his greatest work is the monument of General Lamoricière in the Cathedral of Nantes, with figures of Military Courage, Charity, Faith and Meditation, which

rank among the best products of French plastic art.

Dubois (dö-boi', or dö-bois'), a town of Clearfield County, Pennsylvania, 129 miles E. N. E. of Pittsburgh. It has large coal car and machine shops, flour and lumber mills, etc. Pop. 12,623.

Du Bois-Reymond (dü bwä - rä-mön), EMIL, a German physiologist, and an especial authority on animal electricity, born at Berlin in 1818; died in 1896. He studied theology, geology and anatomy and physiology, and became professor of physiology in the University of Berlin in 1858.

Dubossari (dö-dä-sä'ri), a town of South Russia, gov. of Kherson, on the Dniester, 100 miles N. W. of Odessa. Pop. 13,276.

Dubovka (dö-bov'ka), a town of South Russia, gov. of Saratov, on the Volga; has an extensive river trade in wool, iron, oil, grain, etc. Pop. 16,370.

Dubuque (du-bük'), a city of Iowa, on the right bank of the Mississippi, capital of Dubuque Co. It occupies an important commercial position as a railway center and entrepôt for the agricultural and mineral products of the northern half of Iowa, and the timber of Wisconsin, and also for the valuable lead and zinc mines of the Northwest, and has numerous manufactures and important pork-packing industries. It is the oldest town in the State and is the center of a large trade by river and rail. It has various educational establishments and the Iowa Institute of Science and Arts. Pop. 38,494.

Ducange (dü - känzh), CHARLES DUFRESNE, SIEUR, a French historian and linguist, was born in 1610 near Amiens; died at Paris in 1688. He studied in the Jesuits' College at Amiens, afterwards at Orleans and Paris. At this last place he became parliamentary advocate in 1631, and in 1645 royal treasurer at Amiens, from which place he was driven by a pestilence, in 1668, to Paris. Here he devoted himself entirely to literature, and published his great works, viz., his *Glossaries of the Greek and Latin peculiar to the Middle Ages and the Moderns*, his *Historia Byzantina*, the *Annals of Zonaras*, the *Numismatics of the Middle Ages*, and other important works.

Ducas (dö'kas), MICHAEL, a Byzantine historian, who flourished in the fifteenth century. His *Historia Byzantina*, which contains a reliable ac-

count of the siege and sack of Constantinople, was largely used by Gibbon.

Ducat (duk'at), a coin formerly common in several European states, especially in Italy, Austria and Russia. It was either of silver or gold; average value of the former, 75 cents to \$1.00; and of the latter about \$2.32. It was named from being first coined in one of the Italian duchies—Lat. *ducatus*, a duchy.

Ducatoon (duk-a-tön'), formerly a Dutch silver coin worth 3 gulden 3 stivers, or \$1.30. There were coins of the same name in Italy. In Tuscany its value was about \$1.35, in Savoy slightly more, and in Venice about \$1.18.

Du Chaillu (dü-shā-yü), PAUL BEL-
LONI, traveler, born at Paris in 1835. He spent his youth in the French settlement at the Gaboon, on the west coast of Africa, where his father was a merchant. In 1852 he went to the United States, of which he afterwards became a naturalized citizen. In 1855 he began his first journey through Western Africa, and spent till 1859 alone among the different tribes, traveling on foot upwards of 8000 miles. He collected several gorillas, never before hunted, and rarely, if ever, before seen by any European. The result of this journey was published in 1861. A second expedition was made in 1863, an account of which, under the title *A Journey to Ashango Land*, appeared in 1867. The *Land of the Midnight Sun*, an account of a tour in Northern Europe (1881), had a considerable success. He also published a number of books intended for youth, and based on his travels. His latest work was *The Viking Age*, a treatise on the ancestors of the English-speaking peoples. He died in 1903.

Duchesne, or DU CHESNE (dü-shān),
ANDRÉ, a French historian, born in 1584; died in 1640. His most important works were his collection of French historians—*Historiæ Francorum Scriptores*; *Historiæ Normanorum Scriptores 838-1220*; *Histoire d'Angleterre, d'Ecosse et d'Irlande*; *Histoire des Papes*.

Duchn (dʏhn). See *Dukhn*.

Duchoborzi (dʏh-o-bor'tsē), a Russian sect of religious mystics which came first into notice in the eighteenth century. They hold that human souls existed before the creation of the world, and fell in that former existence. Their doctrinal system is, however, not well known; but their ethical teachings have a striking resemblance

to those of the Quakers. They are now few in number. Some are in Canada.

Ducis (d ü-sēs), JEAN FRANÇOIS, a French dramatic writer, born at Versailles in 1733; died in 1816. Of his original works, the tragedy *Abufar* was much admired; but he is now best known for his adaptations of Shakespere to the Parisian stage.

Duck, the name common to all the web-footed birds constituting the Linnæan genus *Anas*, now raised into a subfamily Anatinae, and by some naturalists divided into two subfamilies, Anatinae and Fuligulinae, or land ducks and sea ducks. The ducks are very numerous as species, and are met with all over the world. They are often migratory, going northward in summer to their breeding-places. Their food is partly vegetable, partly animal. The common mallard or wild duck (*Anas Boschas*) is the original of the domestic duck. In its wild state the male is characterized by the deep green of the plumage of the head and neck, by a white collar separating the green from the dark chestnut of the lower part of the neck, and by having the four middle feathers of the tail recurved. The wild duck is taken in large quantities by decoys and other means. Some tame ducks have nearly the same plumage as the wild ones; others vary greatly, being generally duller or pure white, but all the males have the four recurved tail feathers. There are several favorite varieties of the domestic duck, those of Normandy and Picardy in France, and the Aylesbury ducks in England, being remarkable for their great size and delicacy of flesh. The *musk duck*, erroneously called *Muscovy duck* (*Cairina moschāta*), a native of South America, is the largest of the duck kind, and approaches nearly to the size of a goose. The *canvas-back duck* (which see) is peculiar to America, and is celebrated for the excellence of its flesh. Other species of ducks are the shoveler, remarkable for the strange form of its bill; the gadwall, which is more rare in America than in Europe; the pintail or sprigtail, remarkable for the form of its tail, abundant in both hemispheres; the black or dusky duck, peculiar to America, and very abundant; the summer or wood duck, remarkable for its great beauty, and for its migrations being directly opposed to those of the other species; the teal; the eider duck, so well known for its valuable down; the scoter; the pochard or red-head; the scaup ducks or blue-bill; the long-tailed duck; the harlequin duck, all found on both continents.

Duck, a species of coarse cloth made of flax, lighter and finer than canvas.

Duck-bill, or DUCK-MOLE. See *Ornithorhynchus*.

Ducking-stool, a stool or chair in which common scolds were formerly tied and plunged into water. They were of different forms, but that most commonly in use consisted of an upright post and a transverse movable beam on which the seat was fitted or from which it was suspended by a chain. The ducking-stool is mentioned in the Doomsday survey; it was extensively in use throughout the country from the fifteenth till the beginning of the eighteenth century, and in one rare case at least—at Leominster—was used as recently as 1809.

Duckweed (duk'wēd), the popular name of several species of *Lemna*, nat. order Lemnaceæ, plants growing in ditches and shallow water, floating on the surface, and serving for food for ducks and geese. Five species are known in Europe, and others are common in America. They consist of small fronds bearing naked unisexual flowers.

Duckworth (duk'wurth), SIR JOHN THOMAS, a British admiral, born in 1748; died in 1817. He joined the navy when eleven years of age; and was post-captain in 1780. In 1793, on the breaking out of the French war, he was appointed to the command of the *Orion*, 74, forming part of the Channel fleet under Lord Howe, and distinguished himself in 1794 in the great naval victory gained by that celebrated admiral. In 1798 he aided in the capture of Minorca. From 1800 to 1806 he rendered important services on the West India station, in particular gaining a complete victory over a French squadron, for which he received a pension of £1000 a year and the thanks of both houses of parliament. In 1807, having been ordered to Constantinople, he forced the passage of the Dardanelles, but suffered severely from the Turkish batteries in returning. Between 1810 and 1813 he was governor of Newfoundland, in 1817 he was appointed to the chief command at Plymouth. In 1813 he was created a baronet.

Duclos (dū-klō), CHARLES PINOT, a French novelist, writer of memoirs and grammarian, born in 1704 at Dinant; died at Paris in 1772. He became secretary of the French Academy, and on the resignation of Voltaire he was appointed to the office of historiographer of France. His writings are

lively and satirical. Among the best are *Confessions du Comte de B—* (1741), *Considérations sur les Mœurs de ce Siècle*, *Mémoires secrets sur les Règnes de Louis XIV et XV* and *Remarques sur la Grammaire générale de Port-Royal*.

Ductility (duk-til'i-ti), the property of solid bodies, particularly metals, which renders them capable of being extended by drawing, while their thickness or diameter is diminished, without any actual fraction or separation of their parts. On this property the wire-drawing of metals depends. The following is nearly the order of ductility of the metals which possess the property in the highest degree, that of the first mentioned being the greatest; gold, silver, platinum, iron, copper, zinc, tin, lead, nickel, palladium, cadmium. Dr. Wollaston succeeded in obtaining a wire in diameter. The ductility of glass at of platinum only 1/30,000th of an inch high temperatures seems to be unlimited, while its flexibility increases in proportion to the fineness to which its threads are drawn.

Duddon (dud'un), an English river which flows 20 miles along the boundaries of Cumberland and Lancashire to the Irish Sea, and is the subject of a series of sonnets by Wordsworth, written in 1820.

Du Deffand, MADAME. See *Deffand*.

Duderstadt (d'ö'dér-stàt), an old German town, province of Hanover, 10 miles east from Göttingen, formerly a member of the Hanseatic League and a place of some importance. Pop. (1905) 5325.

Dudevant (düd-vän), ARMAN TINE LUCILE AURORE DUPIN, MADAME, better known by the nom de plume of George Sand, one of the greatest of French novelists, born in 1804; died in 1876. She was the daughter of Maurice Dupin, an officer of the republican army, who was descended from a natural daughter of Marshal Saxe. Until the age of fourteen she was brought up at the Château of Nohant, near La Châtre (department of Indre), mostly under the care of her grandmother, afterwards spending nearly three years in an Augustinian convent in Paris. In 1822 she married Baron Dudevant, to whom she bore a son and a daughter; but in 1831 separated from him, and took up her residence in Paris. In conjunction with Jules Sandeau, a young lawyer, she wrote *Rose et Blanche*, which was published in 1831, with the pseudonym Jules Sand. The reception it met with

afforded her an opportunity of publishing a novel solely by herself—*Indiana*, under the name of George Sand, which she ever after retained. *Indiana* had a brilliant success, but excited much criticism by its extreme views on social questions. This was also the case with many others of her works, a considerable number of novels appearing within the first few years after her *début*. She visited Italy with Alfred de Musset; and lived eight years with Frédéric François Chopin, the composer. These relations also influenced or occasioned some of her works (as *Elle et Lui*, 1858). In 1836 she obtained a judicial separation from her husband, with the care of her children. She took an active interest in the revolution of 1848, and contributed considerably to newspaper and other political literature. In 1854 she published *Histoire de Ma Vie*, a psychological autobiography. Among her later novels are: *La Mare au Diable*, *François le Champi*, *La Petite Fadette*, *Jean Teverino*, *La Filleule*, *Les Maîtres Sonneurs*, *L'Homme de Neige*, *Pierre qui Roule* and *Monsieur de Sylvestre*. Her published works consist of upwards of sixty separate novels, a large number of plays, and numerous articles in literary journals.—Her son MAURICE DUDEVANT, born at Paris in 1825, has written several novels, etc., and has attained a certain reputation as an artist.

Dudley (dud'li), a town of England, in an isolated part of Worcestershire enclosed by Staffordshire, 8 miles west by north of Birmingham. It is situated in the midst of the 'black country,' and has extensive coal mines, iron mines, ironworks, and limestone quarries. It produces nails, chain cables, anchors, vises, boilers, fire irons, and has also glassworks, brickworks, brass foundries, etc. There are the remains of a castle, said to have been founded in the eighth century by a Saxon prince called Dud, who has given the town its name. Pop. (1911) 51,092.

Dudley, SIR EDMUND, born in 1442; executed in 1510; noted in English history as an instrument of Henry VII in the arbitrary acts of extortion by the revival of obsolete statutes and other unjust measures practiced during the latter years of his reign. On the accession of Henry VIII he was arrested for high treason, and perished on the scaffold with his associate, Sir Richard Empson.

Dudley, LORD GUILDFORD, son of John, Duke of Northumberland, was married in 1553, to Lady Jane Gray, whose claim to the throne the duke in-

tended to assert on the death of Edward VI. On the failure of the plot Lord Guildford was condemned to death, but the sentence was not carried into effect till the insurrection of Wyatt induced Mary to order his immediate execution (1554).

Dudley, JOHN, Duke of Northumberland, land, son of Sir Edmund Dudley, minister of Henry VII; was born in 1502; beheaded in 1553. He was left by Henry VIII, one of the executors named in his will, as a kind of joint-regent during the minority of Edward VI. Under that prince he manifested the most insatiable ambition, and obtained vast accessions of honors, power and emoluments. The illness of the king, over whom he had gained complete ascendancy, aroused his fears, and he endeavored to strengthen his interest by marrying his son Lord Guildford Dudley to Lady Jane Grey, descended from the younger sister of Henry VIII, and persuaded Edward to settle the crown on his kinswoman by will, to the exclusion of his two sisters, the Princesses Mary and Elizabeth. The death of the king, the abortive attempts to place Lady Jane Grey on the throne, and the ruin of all those concerned in the scheme are among the most familiar events in the annals of England.

Dudley, ROBERT, Earl of Leicester. See *Leicester*.

Dudley Limestone, a highly fossiliferous limestone belonging to the Silurian system, occurring near Dudley, and equivalent to the Wenlock limestone. It abounds in beautiful masses of coral, shells and trilobites.

Duel (dū'el; from *L. duellum*, from *duo*, two), a premeditated and prearranged combat between two persons with deadly weapons, for the purpose of deciding some private difference or quarrel. The combat generally takes place in the presence of witnesses called seconds, who make arrangements as to the mode of fighting, place the weapons in the hands of the combatants, and see that the laws they have laid down are carried out. The origin of the practice of dueling is referred to the trial by 'wager of battle' which obtained in early ages. This form of duel arose among the Germanic peoples, and a judicial combat of the kind was authorized by Gundebald, king of the Burgundians, as early as 501 A.D. When the judicial combat declined the modern duel arose, being probably to some extent an independent outcome of the spirit and institutions of chivalry. France was the country in which it arose, the sixteenth

century being the time at which it first became common. Upon every insult or injury which seemed to touch his honor, a gentleman thought himself entitled to draw his sword, and to call on his adversary to give him satisfaction, and it is calculated that 6000 persons fell in duels during ten years of the reign of Henry IV. His minister, Sully, remonstrated against the practice; but the king connived at it, supposing that it tended to maintain a military spirit among his people. In 1602, however, he issued a decree against it, and declared it to be punishable with death. Many subsequent prohibitions were issued, but they were all powerless to stop the practice. During the minority of Louis XIV more than 4000 nobles are said to have lost their lives in duels. The practice of dueling was introduced into England from France in the reign of James I; but it was never so common as in the latter country. Cromwell was an enemy of the duel, and during the protectorate there was a cessation of the practice. It came again into vogue, however, after the Restoration, thanks chiefly to the French ideas that then inundated the court. As society became more polished duels became more frequent, and they were never more numerous than in the reign of George III. Among the principals in the fatal duels of this period were Charles James Fox, Sheridan, Pitt, Canning, Castlereagh, the Duke of York, the Duke of Richmond and Lord Camelford. The last-mentioned was the most notorious duelist of his time, and was himself killed in a duel in 1804. A duel was fought between the Duke of Wellington and Lord Winchelsea in 1829, but the practice was dying out. It lasted longest in the army. By English law fatal dueling is considered murder no matter how fair the combat may have been, and the seconds are liable to the same penalty as the principals. In 1813 the principal and seconds in a fatal duel were sentenced to death, though afterwards pardoned. An officer in the army having anything to do with a duel renders himself liable to be cashiered. In France dueling still prevails to a certain extent but the combats are usually very bloodless and ridiculous affairs. In the German army it is common, and is recognized by law. The duels of German students, so often spoken of, seldom cause serious bloodshed. In the United States duels are now uncommon. In some of the states the killing of a man in a duel is punishable by death or by forfeiture of political rights, and in a large number the sending of a challenge is a felony.

In the army and navy it is forbidden. Among the more famous duels of the early period were those in which Charles Lee was wounded by John Laurens; Gwinett, a signer of the Declaration, was killed by Gen. McIntosh, and Alexander Hamilton was slain by Aaron Burr. Decatur was killed and Barron wounded fighting a duel. Andrew Jackson killed Dickinson, and fought several other duels. Col. Benton killed Lucas, and had other encounters. Henry Clay and John Randolph fought in 1826.

Duenna (dū-en'a), an elderly female holding a middle station between a governess and companion, who takes charge of younger females in Spanish and Portuguese families.

Dufaure (dū-fōr), JULES ARMAND STANISLAS, a French orator and statesman, born in 1798; died in 1881. In the Chamber of Deputies he became an influential leader of the Liberal party. Under the republic he was minister of the interior, but was driven from the public service by the coup d'état of 1851. Under Thiers he acted as minister of justice; and in 1876, and again from 1877 to 1879, he was head of the cabinet.

Duff, SIR MOUNTSTUART ELPHINSTONE GRANT, usually called Grant Duff, a British politician and writer, born in 1829; died in 1906. He was made under-secretary for India in 1868, and was governor of Madras, 1881-86. He was president of the Royal Geographical Society, 1889-93, and of the Royal Historical Society, 1892. He wrote *Studies in European Politics*, *Ernest Renan*, *Notes from a Diary*, etc.

Dufferin (duf'er-in), FREDERICK TEMPLE HAMILTON-BLACKWOOD, MARQUIS OF, a British statesman and author, son of the fourth Baron Dufferin and a granddaughter of R. B. Sheridan, born at Florence in 1826; died in 1902. He began his public services in 1855, when he was attached to Earl Russell's mission to Vienna. Subsequently he was sent as commissioner to Syria in connection with the massacre of the Christians (1860) was Indian under-secretary (1864-66); under-secretary for war (1866); chancellor of the Duchy of Lancaster (1868-72); governor-general of Canada (1872-78); ambassador at St. Petersburg (1879-81); at Constantinople (1882); sent to Cairo to settle the affairs of the country after Arabi Pasha's rebellion (1882-83); viceroy of India (1884-88); British ambassador to Italy (1889). In addition to the celebrity he had attained as a brilliant diplomatist, he was also a popular and successful author. In

1847 he published *Narrative of a Journey from Oxford to Skibbereen during the year of the Irish Famine*; in 1860, *Letters from High Latitudes*; and at various times pamphlets on Irish questions. In 1891 he was appointed ambassador at Paris.

Duffy, SIR CHARLES GAVAN, an Irish reformer, born at Monaghan in 1816. In 1842 he founded a journal called the *Nation*, in which he supported the policy of O'Connell. He was tried for treason in 1848, but was acquitted. He afterwards emigrated to Australia, where he held important government positions, becoming prime minister in 1871. He was knighted in 1873. His *Ballad Poetry of Ireland* is a household book in his native country. He also wrote *Young Ireland* and *Four Years of Irish History*. Died in 1903.

Dufrenoy (du-frè-nwä), PIERRE ARMAND, a French geologist and mineralogist, born in 1792; died in 1857. He became director of the school of mines, and published a great variety of papers on geology and mineralogy. In 1841 he published a great geological map of France with three volumes of text, and this was followed by his *Traité de Minéralogie*. He introduced a new classification of minerals, based on crystallography.

Dufresne (dù-frän). See *Ducange*.

Dufresny (dù-frä-nē), CHARLES RIVIÈRE, a French comic poet, born in 1648; died in 1727. He was clever and versatile, and had great skill as a landscape gardener and an architectural designer. Among his dramatic pieces may be mentioned *L'Esprit de Contradiction*, *Le Mariage Fait et Rompu* and *Le Double Veuve*.

Dugdale (dug'däl), SIR WILLIAM, an English antiquary, born in 1605, of a good family in Warwickshire; died in 1686. He was made Chester herald in 1644; accompanied Charles I through the civil war; and after the Restoration received knighthood, and was appointed garter king-at-arms. In concert with Roger Dodsworth he produced an important work on English monasteries titled *Monasticon Anglieanum*. Among his other works are *Antiquities of Warwickshire*; *the Baronage or Peerage of England*; *Origines Judiciales, or Historical Memoirs of the English Law, Courts of Justice, etc.*; a *History of St. Paul's Cathedral*, and various minor writings. He also completed and published the second volume of *Spelman's Concilia*.

Dugong (dū'gong), a herbivorous mammal, the *Halicore du-*

gong, belonging to the order Sirenia, which includes the manatees. It is a native of the Indian seas; possesses a tapering body ending in a crescent-shaped fin, and is said sometimes to attain a length of 20 feet, though generally it is about 7 or 8 feet in length. The skin is thick and smooth, with a few scattered bristles; the color bluish above and white beneath. In its osteology it exhibits some points of correspondence with the Pachydermata. Its food consists of marine plants; it yields little or no oil, but is hunted by the Malays for its flesh, which resembles young beef, and is tender and palatable. A variety was discovered in the Red Sea by Rüppell, and called *Halicore tabernaculi*.

Dugout (dug'out), a cave dug in the side of a hill for use as a dwelling, a hiding-place, or a refuge from cyclones or tornadoes. Many of these exist in the Western States of this country. The word is also applied to a canoe excavated from a log of wood.

Duguay-Trouin (d ü-g ä-t r ö-a n), RENÉ, a distinguished French seaman born at St. Malo in 1673; died at Paris in 1736. As commander of a privateer he took many prizes from the British between 1690 and 1697. He then entered the royal marine as a captain, and signalized himself so much in the Spanish war that the king granted him letters of nobility, in which it was stated that he had captured more than 300 merchant ships and twenty ships of war. By the capture of Rio de Janeiro (1711) he brought the crown more than 25,000,000 francs. Under Louis XV he rendered important services in the Levant and the Mediterranean.

Du Guesclin (d ü-g ä-k l a n), BERTRAND, Constable of France, born about 1314; died in 1380. Mainly to him must be attributed the expulsion of the English from Normandy, Guienne and Poitou. He was captured by Chandos at the battle of Auray in 1364, and ransomed for 100,000 francs. While serving in Spain against Peter the Cruel he was made prisoner by the English Black Prince, but was soon liberated. For his services in Spain he was made Constable of Castile, Count of Trastamare and Duke of Molinas and in 1370 he was made Constable of France.

Duisburg (dö'is-burh), a flourishing town in Rhenish Prussia, 13 miles north of Düsseldorf. It is an ancient place, believed to be of Roman origin, early rose to be a free town, and

became a member of the Hanseatic League. It possesses a beautiful church of the fifteenth century, and has iron manufactories, engineering works, chemical works, cotton and woolen mills, etc.; and a large trade greatly facilitated by a canal communicating with the Rhine, which is about 2 miles distant. Pop. (1910) 229,478.

Dujardin (dü-zhâr-dan), KAREL, a Dutch artist, who excelled in painting landscapes, animals and scenes in low life, born in 1640 at Amsterdam; died at Venice in 1678. His paintings are rare, and command high prices.

Duke (dūk; French *duc*, Spanish *duque*, Italian *duca*, all from Latin *dux*, leader, commander), a title belonging originally to a military leader. In Britain it is a title of honor or nobility next below that of a prince or princess of the blood-royal, and that of archbishop of the Church of England. The first hereditary duke in England was the Black Prince, created by his father, Edward III, in 1336. The duchy of Cornwall was bestowed upon him, and was thenceforward attached to the eldest son of the king, who is considered a duke by birth. The duchy of Lancaster was soon after conferred on Edward's third son. John of Gaunt, and hence arose the special privileges which these two duchies still in part retain. A duke in the British peerage, not of royal rank, is styled 'your grace,' and is 'most noble'; his wife is a duchess. (See *Address, Forms of.*) The coronet consists of a richly chased gold circle, having on its upper edge eight golden leaves of a conventional type called strawberry leaves; the cap of crimson velvet is closed at the top with a gold tassel, lined with sarsnet, and turned up with ermine. (See *Coronet.*) At various periods and in different continental countries the title duke (*Herzog* in Germany) has been given to the actual sovereigns of small states. The titles 'grand-duke' and 'grand-duchess,' 'archduke' and 'archduchess,' are in use also on the European continent, the latter to distinguish the princes and princesses of the Austrian imperial family. In the Bible the word *dukes* is used, Gen., xxxvi, for the *duces* of the Vulgate.

Duke of Exeter's Daughter, a rack in the Tower of London, so called after its inventor, a minister of Henry VI.

Dukhn (duhn), a kind of millet (*Holcus spicatus* or *Pennisetum typhoides*), extensively cultivated

in Egypt, also in Spain and elsewhere.

Dukinfield (dū'kin-fēld), or DUCKINFIELD, a township of England, County Chester, separated by the Tame from Ashton-under-Lyne, and mostly within Stalybridge borough. Collieries, cotton factories, brick and tile works give employment to the inhabitants. Pop. (1911) 19,426.

Dulcamara (dul-k-a-mā'ra; L. *dulcis*, sweet, and *amarus*, bitter; lit. bitter-sweet), *Solanum Dulcamara*, a common European hedge-plant, otherwise called bittersweet or woody nightshade. It is found in the United States from New England to Arkansas; its root on being chewed gives a sensation of bitterness, then of sweetness.

Dulce (dul'sā), a lake of Guatemala, on the E. coast, communicating with the Gulf of Honduras by the lakelet el Golfete. It is about 30 miles long by 12 broad, and affords profitable turtle hunting.

Dulcigno (dul-chēn'yō), a small seaport town, formerly in Albania, now in the principality of Montenegro, on the Adriatic, the seat of a Roman Catholic bishop. Pop. 5000.

Dulcimer (dul'si-mer), one of the most ancient musical instruments, used in almost all parts of the world. The modern instrument consists of a shallow trapezium-shaped box without a top, across which runs a series of wires, tuned by pegs at the sides, and played on by being struck by two cork-headed hammers. It is in much

Italian Dulcimer.

less common use in Europe now than it was a century or two ago, and is interesting chiefly as being the prototype of the piano. It is still, however, occasionally to be met with at rustic rejoicings, and in the hands of street musicians. The Hebrew psaltery is supposed to have been a variety of the dulcimer.

Dulcinists (dul'sin-ists), followers of Dulcinus, a layman of Lombardy, in the fourteenth century, who preached the reign of the Holy Ghost, affirming that the Father had reigned till Christ's incarnation, and that the Son's reign terminated in 1300. He was followed by a great many people to the

Alps, where he and his wife were taken and burned by order of Clement IV.

Dulia (dū'li-a; Gr. *douleia*, service, from *doulos*, a slave), an inferior kind of worship or adoration, as that paid to saints and angels in the Roman Catholic Church. The Catholics recognize different degrees of worship. The lowest degree is the *dulia*, which is given to saints and angels. *Hyperdulia* is reserved for the Virgin alone; and *latria* is given to God and to each person in the Trinity.

Dulse (duls), a sea-weed, the *Rhodomenia palmata*, used in some parts of Scotland as an edible. It has a reddish-brown or purple, leathery, veinless frond, several inches long, and is found at low water adhering to the rocks. It is an important plant to the Icelanders, and is stored by them in casks to be eaten with fish. In Kamtchatka a fermented liquor is made from it. In the south of England the name is given to the *Iridæa edulis*, also an edible seaweed.

Duluth (du-luth'), a city, capital of St. Louis County, Minnesota, at the s. w. extremity of Lake Superior, the head of navigation on the Great Lakes. Five railroads, including the Northern Pacific and the St. Paul and Duluth, center here; large docks and other works have been constructed affording a convenient outlet for the surrounding wheat region. It has grain elevators with a capacity of 40,000,000 bushels and is the outlet of an important mineral region in its vicinity. It has also large stock yards, slaughtering and cold-storage establishments, ironworks and flouring mills, and does a large trade in iron and steel goods. Lumber is largely exported, and more than 2000 vessels enter the port annually. Pop. 78,466.

Dulwich (dul'ich), a village of England, County Surrey, 5 miles south of London Bridge (pop. 14,975), noticeable chiefly on account of its college and schools, the former called the College of God's Gift, founded as a charitable institution in 1619 by Edward Allen or Alleyn, a distinguished actor in the reigns of Elizabeth and James I. Four parishes are benefited by the charity: St. Luke's, Middlesex; St. Botolph's, Bishopgate; St. Saviour's, Southwark; and St. Giles' Camberwell. Having outlived its usefulness, in 1857 an act was passed by which the college was reconstituted. It now consists of two branches, the educational and the eleemosynary, between which the surplus revenue is divided in the proportion

of three-fourths to the former and one-fourth to the latter.

Duma, Douma (dū'ma), the Russian parliamentary assembly. This title, long borne by the municipal assemblies, is now applied to the national assembly, or council of state, created by a decree of the czar in 1905. The first assembly being largely composed of liberal and radical members, it was quickly prorogued, and a new election called for. The Duma now in session is the third elected, its members being chosen under a restricted suffrage, and its tone far more conservative than that of the preceding assemblies. The position of the president of the council is equivalent to that of the premier elsewhere.

Dumas (dū-mä), ALEXANDRE, a favorite French novelist, born in 1802, the son of a republican general, and grandson of Marquis de la Paillette and a negress, Tienette Dumas. In 1823 he went to Paris, and obtained an assistant-secretaryship from the Duke of Orleans, afterwards Louis Philippe. He soon began to write for the stage, and in 1829 scored his first success with his drama *Henry III*. It was produced when the battle between the romanticists and the classicists was at its height, and

Alexandre Dumas.

was hailed as a triumph by the former school. The same year appeared his *Christine*, and in quick succession *Antony*, *Richard d'Arlington*, *Térésa*, *Le Tour de Nesle*, *Catharine Howard*, *Mlle. de Belle-Isle*, etc. Dumas had now become a noted Parisian character. The critics fought over the merits of his pieces, and the scandalmongers over his prodigality and *galantries*. Turning his attention to romance, he produced a series of historical romances, among which may be mentioned *Les Deux*

Dianes; La Reine Margot; Les Trois Mousquetaires, with its continuations *Vingt Ans Après* and *Vicomte de Bragelonne*. The *Monte Cristo* and several others are also well known to English readers through translations. Several historical works were also written by him: *Louis XIV et son Siècle; Le Regent et Louis XV; Le Drame de '93; Florence et les Médicis*, etc. The works which bear his name amount to some 1200 volumes, including about 60 dramas; but the only claim he could lay to a great number of the productions issued under his name was that he either sketched the plot or revised them before going to press. He earned vast sums of money, but his recklessness and extravagance latterly reduced him to the adoption of a shifty, scheming mode of living. His *Mémoires*, begun in 1852, present interesting sketches of literary life during the restoration, but display intense egotism. In 1860 he accompanied Garibaldi in the expedition which freed Naples from the Bourbons. He died in 1870.

Dumas, ALEXANDRE, son of the above, born in 1824; novelist and dramatist. His works treat mostly of the relations between vice and morals. His first novels, *La Dame aux Camélias* and *Diane de Lys*, were very successful, as were also the plays which were founded on them. His dramas, which are much superior to his novels, deal satirically with the characters, follies and manners of French society. He died in 1895.

Dumas, MATTHIEU, a French soldier and military writer, born in 1753; died at Paris in 1837. He early entered the French cavalry, took part in the war of North American independence, and was employed in the Levant and in Holland. At the commencement of the revolution he assisted Lafayette in organizing the national guard. On the triumph of the extreme party in 1797 Dumas was proscribed, but made his escape to Holstein, where he wrote the first part of his *Précis des Evénements Militaires*, a valuable source for the history of the period of which it treats (1798-1807). He was recalled from exile by Napoleon, who had become first consul. His first employment was to organize the reserve for the army of Italy. In 1802 he was appointed state counselor; in 1805 he became general of division, and was shortly afterwards Neapolitan minister in the service of Joseph Bonaparte. In 1808 he was actively employed in the arrangements for the war against Austria, fought in the battles of Essling and Wagram, and arranged the terms of the armistice of Znaim. He

held the office of general intendant of the army in the campaign of 1812. After the restoration, Louis XVIII appointed him counselor of state, and gave him several important appointments connected with the army. In 1830 he aided in bringing on the revolution of July, and after the fall of Charles X he obtained the chief command of all the national guards of France, together with a peerage.

Du Maurier (dû mō-rī-ā), GEORGE LOUIS PALMELLA BUS-SON, artist and caricaturist, was born in Paris, in 1834, but was a naturalized British subject. He went to England in 1851, and studied chemistry, but soon adopted art as a profession. After studying in Belgium and France he began to draw on good for *Once A Week*, the *Cornhill Magazine*, etc. He subsequently joined the *Punch* staff, and became famous through his weekly drawings for that publication. He also illustrated a large number of books. *Trilby*, a novel, created a sensation on its publication and gave him rank as an author. He also wrote *Peter Ibbetson* and the *Marsians*. He died in 1897.

Dumb. See *Deaf and Dumb*.

Dumbarton (dum-bār'ton), a royal burgh and seaport of Scotland, chief town of Dumbarton Co., stands on the Leven near its junction with the Clyde, 16 miles w. n. w. Glasgow. Shipbuilding is carried on to a great extent, and there are foundries, engine works, etc. Originally it was called Alcluyd, and it was the chief town of Cumbria or Strathclyde. Pop. 19,985. A little to the south is the famous rock and castle of Dumbarton, rising above the Clyde. There has been a stronghold here from the earliest times, and the fortress of Dumbarton occupied an important place in Scottish history.—The county of Dumbarton is partly maritime, partly inland, consisting of two detached portions, the larger and most westerly lying between the Clyde, Loch Long and Loch Lomond, and the far smaller portion being about 4 miles east from the former. The surface is usually mountainous, its greatest elevation being a little over 3000 feet. The lower lands are fertile, and in general well cultivated. There are coal mines in the smaller section. On the banks of the Leven and elsewhere are extensive cotton-printing and bleaching establishments; and there are extensive shipbuilding yards along the Clyde. Pop. 113,870.

Dumb-bells, weights, usually in the form of two iron balls

connected by a biconic bar for holding, used in gymnastic exercises for strengthening the muscles of the arms and chest.

Dumb-cane, a plant of the order Araceæ, the *Dieffenbachia seguina* of the West Indies, so called from its acidity, it causing when chewed loss of power of speech.

Dumbness (dum'nes). See *Deaf and Dumb*, *Aphonia*, *Aphasia*.

Dumdum (dum'dum), a military village and extensive cantonment, Hindustan, province of Bengal, 4½ miles E. N. E. Calcutta. The village is famous as being the scene of the first open manifestation of the Sepoys against the greased cartridges, which led to the mutiny of 1857. Pop. 20,820.

Dumdum Bullet. See *Bullet*.

Dumfries (dum-frēz'), a river port and railway center of Scotland, capital of the county of same name, and the chief place in the south of Scotland; situated on the left bank of the Nith, about 6 miles from its junction with the Solway Firth. It is connected with the suburb Maxwelltown (in Kirkcudbright) by three bridges, one dating from the thirteenth century. It is a pleasing, well-built town, with various handsome public edifices. There are iron foundries, hosiery and tweed factories, tanneries, coach-building works, etc. The river Nith is navigable to the town for vessels of above 60 tons, but the port has decreased in importance since the development of the railway system. Dumfries is a place of great antiquity. The church of the Minorites which once stood here was the scene of the murder of the Red Comyn by Bruce in 1306. Burns spent his closing years here, and the street in which he lived now bears his name. His remains rest under a handsome mausoleum, and a statue of him was erected in 1882. Pop. 18,148.—The county abuts on the Solway Firth; area about 1100 square miles, of which about a third is under cultivation. The surface is for the most part mountainous, especially in the north and northwest districts, where some of the hills attain an elevation of over 2000 ft. Oats, potatoes and turnips are the most common products. Good cattle are reared, and are much in request for the English market. The sheep on the hill pastures are mostly cheviots; on the lower and arable lands the Leicester breed prevails. The salmon fishery is of importance. The minerals most abundant are coal, lead, iron antimony and gypsum. Coal and lead are worked to a small extent. Limestone

and freestone abound in various parts. Pop. 72,571.

Dumont (dû-mōn), PIERRE ÉTIENNE LOUIS, the friend and literary assistant of Mirabeau and Jeremy Bentham, was born at Geneva in 1759; died at Milan in 1829. He was ordained a minister of the Protestant Church in 1781. He attached himself to the democratic party in Geneva, and when the opposite party gained the ascendancy he went to St. Petersburg, in 1782, where he was appointed pastor of the French Reformed Church. Soon after he accepted an offer to act as tutor to the sons of Lord Shelburne, afterwards Marquis of Lansdowne, which brought him to London, where he became intimate with Jeremy Bentham and Sir Samuel Romilly. Visiting Paris during the first years of the revolution he gained the friendship of Mirabeau, whom he assisted in the composition of speeches and reports, and of whom he wrote some interesting recollections. On his return to London he formed that connection with Bentham which fixed his career as a writer; recasting, popularizing and editing Bentham's works in a form suitable for the reading public. He returned to Geneva in 1814 and became a senator.

Dumont D'Urville (dû-mōn dûr-vêl), JULES SEBASTIEN CÉSAR, a French navigator, was born in 1790; killed in a railway accident between Paris and Versailles in 1842. After completing his studies at Caen he entered the French navy, in which he ultimately rose to be rear-admiral. In 1826-29 he commanded the corvette *Astrolabe*, which was sent to obtain tidings of La Pérouse, and to make hydrographic observations. He made surveys of the coasts of Australia, New Zealand, etc., and found remains of the shipwreck of La Pérouse on one of the Pacific islands. The result of this voyage was the publication of *Voyage de Découverte autour du Monde*. In 1837 he sailed with the *Astrolabe* and *Zélée* on a voyage of Antarctic discovery, and after many dangers, and having visited many parts of Oceania, he returned in 1840. On his return he began the publication of *Voyage au Pôle sud et dans l'Océanie*, which was finished by one of his companions.

Dumouriez (dû-mō-ri-ā), CHARLES FRANÇOIS DUPERRIER, a French general of great military talent, was born at Cambrai in 1739, of a noble family of Provence; died near Henley-on-Thames in 1823. He served as an officer in the Seven Years' war. In 1768 he

went to Corsica as quartermaster-general of the small army which was sent for the conquest of that island, and was afterwards made colonel. In 1778 he was appointed governor of Cherbourg. At the revolution he joined the Jacobins, and subsequently the Girondists, and in 1792 he was minister of foreign affairs. War breaking out between France and Austria, he resigned in order to take command of the army; invaded Flanders, and de-

General Dumouriez.

feated the Austrians at Jemappes and conquered Belgium. Instead of prosecuting the war vigorously he now entered upon measures for the overthrow of the revolutionary government, issued a proclamation, in which he promised the restoration of the constitutional monarchy in the person of the heir to the crown, but was attacked by the Versailles volunteers, and compelled to flee (April 4, 1793). The convention set a price of 300,000 livres upon his head. At first he retired to Brussels, and after various wanderings found a final refuge in England. His *Memoirs*, written by himself, appeared in 1794; an enlarged edition in 1822. He was also the author of a large number of political pamphlets.

Düna (dü'ná), or WESTERN DVINA, a river of Russia, which rises in the government Tver, about 15 miles w. of the source of the Volga, falls into the Gulf of Riga, has a course of about 650 miles, and waters the seven governments of Tver, Pskoff, Vitebsk, Mogileff, Vilna, Courland and Livonia, draining an area of about 65,000 sq. miles. It is navigable for a considerable distance, but is frozen for about four months each year.

Dünaburg (dü'ni-burg), or DVINA-BURG, a fortified town of

Russia, government of Vitebsk, on the right bank of the Düna, or Dvina, 112 miles southeast from Riga. It carries on various industries, a considerable trade, and has three yearly fairs. Pop. 73,231.

Dünamünde (dü'ná-mün-de; 'Düna-mouth'), a fortress and port of Russia, on the Gulf of Riga, at the mouth of the Düna, having a large winter harbor for the shipping of Riga.

Dunbar (dun-bär'), a town of Scotland, a seaport in Haddingtonshire, at the mouth of the Firth of Forth. It is a place of great antiquity, having originated in a castle, once of great strength and importance, which underwent several memorable sieges, on one occasion being successfully defended against the English for nineteen weeks by Black Agnes, Countess of Dunbar. In 1650 Cromwell totally defeated the Scottish army under David Leslie near the town. The harbor is not very commodious, but the town is an important fishing station. Pop. 3581.

Dunbar, WILLIAM, the most eminent of all the old Scottish poets, was born, probably in East Lothian, about 1460-65. In 1475 he went to St. Andrews, where, in 1477, he took the degree of B.A., and two years later that of M.A. After this he seems to have become a begging friar of the Franciscan order, and made journeys in England and France, but he returned to Scotland about 1490, and attached himself to the court of James IV. from whom he received a pension of £10. On the marriage of James IV to Margaret of England, Dunbar celebrated the event in a poem of great beauty, entitled, *The Thrissil and the Rois*. His pension was ultimately raised to £80 a year, and he was the recipient of various additional gratuities, though he appears frequently to have addressed both the king and the queen for a benefice, but always without success. After Flodden his name disappears from the royal accounts, and he probably died about 1520. His works, which consist of elaborate allegories, satirical and grimly humorous pieces, and poems full of brilliant description and luxuriant imagination, were first collected by David Laing (Edinburgh, 1834).

Dunblane (dun'blān), an old episcopal city of Scotland, in Perthshire, 6 miles northeast of Stirling, on the Allan. The ancient cathedral, partly in ruins, dates from the twelfth century. The building is in process of being restored. About two miles from the town the indecisive battle of Sherrieffmuir was fought in 1715, between the royal forces under the Duke of Argyle, and the

Jacobites under the Earl of Mar. Pop. 2516.

Duncan (dun'kan), ADAM, VISCOUNT, a Scottish naval officer, was born in Dundee, in 1731; died in 1804. He went to sea when young, and was a post-captain in 1761. In the following year he served at the taking of Havana; and in 1779 he shared in the victory of Admiral Rodney over the Spaniards. In 1789 he became rear-admiral of the blue, and in 1794 vice-admiral of the white squadron. The following year he was appointed commander of the North Sea fleet, and in October, 1797, won a brilliant victory over the Dutch fleet off Camperdown, for which he was rewarded with the title of Viscount Duncan and a pension of £2000 a year.

Duncan, THOMAS, an eminent Scottish painter, was born in 1807; died at Edinburgh in 1845. He studied under Sir W. Allan, and was elected an associate of the Royal Academy in 1843. His principal works were illustrative of Scottish history and character. Among the best known of them are: *The Abdication of Mary, Queen of Scots*; *Anne Page and Slender*; *Prince Charles Edward and the Highlanders entering Edinburgh after Prestonpans*; *Charles Edward asleep in a Cave after Culloden*; *The Martyrdom of John Brown of Priesthill*, etc. His portraits are very highly esteemed.

Duncansby Head (dun'kans-bi), a promontory in Caithness-shire, Scotland, forming the N. E. extremity of the Scottish mainland, $1\frac{3}{4}$ miles E. of John o' Groat's House, and $18\frac{1}{2}$ N. by E. of Wick. Close by the promontory are two insulated rocks, of fantastic form and great height, called the Stacks of Duncansby, which in spring and summer are covered with sea-fowl.

Dunciad (dun'si-ad), THE, a celebrated satirical poem by Pope, in which he gibbets his critics and foes. The first three books were published in 1728, the fourth book, or *New Dunciad*, appeared in 1742, with illustrations by Scriblerus and notes variorum. Cibber was later substituted for Theobald as the hero; and among others who figured in the satire were Ambrose Philips, Blackmore, Bentley, Defoe, Dennis, Shadwell, Settle, etc.

Dundalk (dun-dak'), a seaport of Ireland, capital of the county of Louth, on Castletown River, about 2 miles above its mouth in Dundalk Bay. Its principal manufactures are ropes and castings; the trade chiefly in cattle and agricultural produce, is extensive. Here Edward Bruce, brother of

Robert Bruce, was defeated and slain by the English in 1318. Pop. 13,076.

Dundas (dun-das') OF ARNISTON, the name of a family several members of which held a conspicuous place in the legal and political history of Scotland.—SIR JAMES DUNDAS, the first of Arniston, knighted by James VI, was the third son of George Dundas of Dundas, a descendant of the Dunbars, earls of March.—His eldest son, SIR JAMES, was member of parliament for Mid-Lothian, and was appointed one of the judges of the Court of Session (1662).—His eldest son ROBERT was also raised to the bench of the Court of Session, and filled that station for thirty-seven years. He died in 1727.—His eldest son ROBERT (1685-1753) was successively solicitor-general for Scotland, lord-advocate, member of parliament for the county of Edinburgh, and dean of the faculty of advocates. In 1737 he was raised to the bench, and on the death of Lord-president Forbes of Culloden, in 1748, he was appointed his successor. His eldest son ROBERT (1713-87) also attained to the positions of lord-advocate, and lord-president of the Court of Session.—His brother, HENRY DUNDAS, VISCOUNT MELVILLE, distinguished statesman, born in 1741; died in 1811. He obtained the post of solicitor-general in 1773, that of lord-advocate in 1775, and was made joint keeper of the signet for Scotland in 1777. In 1782 he was appointed treasurer of the navy and member of the privy-council; and from that time took a leading part in all the Pitt measures, and had supreme influence in Scotland. Among other offices he held that of first lord of the admiralty; and in 1805, he was impeached before the House of Lords of high crimes and misdemeanors in his former office of treasurer of the navy, but was finally acquitted. He was created Viscount Melville in 1801, a title still borne by his direct descendant.

Dundee (dun-dē'), a city and seaport of Scotland, in the county of Forfar, on the north shore of the Firth of Tay, about 8 miles from the open sea, 37 miles N. N. E. of Edinburgh; in population the third town in Scotland. It stretches along the Tay from east to west, and of late years has been greatly extended in both directions. The more recently formed streets are spacious and handsome, but most of those of more ancient date are narrow and irregularly built. The most conspicuous building is St. Mary's Tower, or the Old Steeple, as it is popularly called, 156 feet high,

erected in the middle of the fourteenth century, and to which three modern parochial churches have been built in form of a cathedral, the nave, choir and transept, respectively, forming a separate church. Among public buildings are: the town hall, several public halls, the high school, exchange, infirmary, lunatic asylum, Albert Institute and free library, etc. The chief educational institution is the University College, open to both sexes, whose first session opened in 1883. Dundee has several public parks and recreation grounds and a good supply of water. The town has long been celebrated for its textile manufactures, particularly those of the coarser descriptions of linen, and it is now the chief seat of the linen trade in Scotland and of the jute trade in Great Britain, there being a great number of mills and factories engaged in the spinning and weaving of flax, jute and hemp. Shipbuilding is extensively carried on, and there are large engineering establishments, etc. Another branch of business is the northern seal and whale fishery. Dundee is also famous for its marmalade and other preserves and confectionery. The shipping accommodation includes five large wet docks, with a connected tidal harbor and graving docks. The railway facilities of Dundee were greatly increased in 1878 by the opening of a bridge across the Tay; but on December 28, 1879, the bridge was destroyed in a violent storm, when about 100 people in a train in the act of crossing lost their lives. A new bridge, to replace the one destroyed, was opened for traffic in June, 1887; it is a very substantial structure about two miles in length. Dundee was made a royal burgh by William the Lion, was twice in the possession of the English under Edward I, and was as often retaken by Wallace and Bruce. In 1645 it was besieged, taken, and sacked by the Duke of Montrose; and six years afterwards it was stormed by Monk, when a great number of its inhabitants were put to death. In 1888 it was raised by royal grant to the rank of a city. Pop. 169,409.

Dundee, JOHN GRAHAM OF CLAVERHOUSE, VISCOUNT. See *Graham*.

Dundonald (dun-don'ald), THOMAS COCHRANE, TENTH EARL OF, a British admiral, was born in Lanarkshire in 1775; died in 1860. At the age of eighteen he embarked with his uncle, then Captain, and afterwards Sir Alexander Cochrane, in the *Hind*, of twenty-eight guns, and soon distinguished himself by his daring and gallantry. In

1800 he was appointed to the *Speedy* sloop-of-war of fourteen guns, and in the course of thirteen months captured over fifty vessels, but was at last captured himself. In 1805, while in command of the *Pallas* frigate, he took some rich prizes, and for the next four years in the *Impérieuse* performed remarkable exploits in cutting out vessels, storming batteries, destroying signals, etc. On his return to England he entered parliament, and by his attacks on the abuses of the naval administration made himself obnoxious to the authorities. He gave further offense by charging Lord Gambier, his superior officer, with neglect of duty (which was true); by denouncing the abuses of the prize-court, and the treatment of the prisoners of war. His enemies succeeded, in 1814, in convicting him on a charge—since proved to be false—of originating a rumor, for speculative purposes, that Napoleon had abdicated. He was expelled from parliament, deprived of all his honors, imprisoned for a year, and fined £1000. The electors of Westminster immediately paid his fine and reelected him, but he had to remain in prison till the expiration of his sentence. In 1818 he took service in the Chilean navy, his exploits greatly aiding the national independence of that country, as well as soon after of Brazil. In 1832 he was restored to his rank in the British navy. In 1831, by the death of his father, he had succeeded to the name and title of Earl of Dundonald; in 1841 he became vice-admiral of the blue; in 1848 he was appointed commander-in-chief of the North America and West India station; and in 1851 and 1854, respectively, he became vice-admiral of the white, and rear-admiral of the United Kingdom. He did much to promote the adoption of steam and the screw propellor in warships. He wrote an autobiography, which, though left incomplete, is a most interesting work.

Dunedin (dun-ē'din), capital of the provincial district of Otago. New Zealand, and the most important commercial town in the colony, stands at the upper extremity of an arm of the sea, about 9 miles from its port, Port Chalmers, with which it is connected by railway. Though founded in 1848, its more rapid progress dates only from 1861, when extensive gold-fields discovered in Otago attracted a large influx of population. It is well paved, lighted with gas, and has a good supply of water. There are many handsome buildings, both public and private; the municipal buildings, the post-office, hospital, lunatic asylum, government offices,

the university, high schools, the new museum, several banks (especially the Bank of New Zealand), the athenæum and mechanics' institute, the freemasons' hall, two theaters, etc. Wool is the staple export. Several woolen and other manufactories are now in exist-

ence. There is a regular line of steamers between this port and Melbourne, and communication is frequent with all parts of New Zealand. Through the opening of the new Victoria Channel from Port Chalmers vessels drawing 16 feet can now ascend to Dunedin at low water. Pop., including suburbs, 36,070.

Dunes (dŭns), low hills of sand accumulated on the seacoast of Holland, Britain, Spain and other countries, in some places encroaching on and covering what once was cultivated land, but in others serving as a natural barrier to protect the country from the destructive encroachments of the sea.

Dunfermline (dun-fer'lin), a royal burgh of Scotland, county of Fife, 3 miles N. of the Firth of Forth, and 13 northwest of Edinburgh. The streets, though narrow, are well built. Dunfermline was early a favorite residence of the kings of Scotland, and here were born David II, James I, Charles I and his sister Elizabeth. The Benedictine abbey founded by Malcolm Canmore (1070) is now represented chiefly by the Abbey Church, underneath the pulpit of which are the remains of King Robert Bruce. Dunfermline early took the lead in the manufacture of table linen, and is still unrivaled by any other town in the kingdom. There are collieries in the neighborhood. Pop. 25,250.

Dun-fish, a name in the United States for cod cured by being split open, partially salted, piled up in a dark place under salt-grass or hay, and then closely packed; named from their dun color.

Dungannon (dun-gan'un), a town of Ireland, County Tyrone, 35 miles west by south of Belfast. It has manufactures of linen and earthenware. Pop. 3694.

Dungarpur (dön-gar-pör'), an Indian native state in Rajputána; area, 1440 sq. miles.; pop. 100,103.—DUNGARPUR is also the name of the chief town and residence of the maharawal of the state. Pop. 6094.

Dungarvan (dun-gar'van), a seaport of Ireland, County Waterford, on the Bay of Dungarvan, much resorted to for sea-bathing. The harbor is shallow, and the trade depends almost entirely on agricultural produce. Pop. 4850.

Dung Beetle, a name applied to a large number of coleopterous insects of the Lamellicorn family (or that family in which the antennæ terminate usually in lateral leaflets) from their habit of burying their eggs in dung. The *Geotrŭpes stercorarius*, 'dor' or 'shard-borne' beetle, and the *Scarabæus sacer*, or sacred beetle of the Egyptians, are examples.

Dungeness (dunj-nes'), a low headland on the S. coast of Kent, 10½ miles S. E. of Rye; has a lighthouse with fixed light.

Dunkeld (dun-keld'), a small town of Scotland, on the Tay, about 14 miles north by west from Perth; pop. 586. It is a very ancient place, and from 850, when Kenneth I removed the remains of St. Columba from Iona to a church which he had built here, became the metropolitan see of Scotland, till supplanted by St. Andrews. The choir of the ancient cathedral is still used as the parish church. Near it is Dunkeld House, the seat of the Duke of Athol, the grounds of which are the finest and most extensive in Scotland.

Dunkers (dun'kers), or TUNKERS, a religious sect in the United States, founded in Schwartzenu, Germany, in 1708, and which takes its name from the Ger. *tunken*, to dip, from their mode of baptizing converts. They reject infant baptism; use great plainness of dress and language; refuse to take oaths or to fight; and anoint the sick with oil in order to effect their recovery, depending on this unction and prayer, and rejecting the use of medicine. Every brother is allowed to speak in the congregation, and

their best speaker is usually set apart as their minister. They all emigrated to the United States, where they are found in nearly every State.

Dunkirk (dun-kirk'; French, *Dunkerque*), a seaport town of France, department Nord, at the entrance of the Strait of Dover, surrounded by walls, and otherwise defended by forts and outworks. It has several fine churches, a college, a public library and a gallery of paintings; manufactures of earthenware, leather, soap, starch, ropes; sugar-refineries, breweries, distilleries, etc. It was a fortified place in the middle ages and the scene of many contests between the Spaniards and French. Pop. (1906) 35,767; with suburbs, 60,000.

Dunkirk (dun'kurk), a city of Chautauqua Co., New York, on Lake Erie, 37 miles S. W. of Buffalo. It has an excellent harbor, lies on the Lake Shore, the Erie and other railroads, and is connected by rail with the oil regions of Pennsylvania. It has considerable trade with the other lake ports and has railroad shops, ironworks of various kinds, large warehouses, etc. Here is the Brooks Memorial Library and Hospital, the St. Mary's Academic School, etc. Pop. 17,221.

Dunlin (dun'lin), a British bird (*Tringa variabilis*), a species of sandpiper, occurring in vast flocks along sandy shores. It is about 8 inches in length from the point of the bill to the extremity of the tail, and its plumage undergoes marked variations in summer and winter, the back passing from black with reddish edges to each feather to an

Dunlin (*Tringa variabilis*).

ashen gray, and the breast from mottled black to pure white. The American *Tringa alpina* is a frequent visitor to Scotland, and there is some ground for believing that these large birds are merely varieties of the dunlin.

Dunlop (dun-lop'), a parish of Ayrshire, Scotland, which has given its name to an esteemed variety of cheese.

Dunmow (dun-mou'), GREAT and LITTLE, two villages of

England, county of Essex. The latter is remarkable for the ancient custom, recently revived, of giving a fitch of bacon to any couple who, a year and a day after their marriage, could swear that they had neither quarreled nor repented.

Dunmore (dun-mōr'), a town of Lackawanna County, Pennsylvania, 2 miles from Scranton. It derives its prosperity chiefly from the anthracite coal mines which are worked in the vicinity, but has silk and other industries. Pop. 17,615.

Dunnet Head (dun'et), a bold rock promontory in Caithness, with sandstone cliffs 100 to 300 feet high, the most northerly point of the mainland of Scotland, crowned by a lighthouse visible at a distance of 25 miles.

Dunnottar Castle (dun-ot'ar), an extensive ruin on the coast of Kincardineshire, Scotland, on a precipitous rock rising from the sea. It dates from the close of the fourteenth century, and was long the stronghold of the Keiths, earls marischal. During the commonwealth this castle was selected for the preservation of the Scottish regalia; and in 1685 it was used as a state prison for Covenanters. It was dismantled in 1720.

Dunois (dū-nwä), JEAN, Count of Orleans and of Longueville; a French hero, natural son of Louis, duke of Orleans, born in 1402; died in 1468. Dunois made the name 'Bastard of Orleans' illustrious by his military exploits. He began his career with the defeat of Warwick and Suffolk, whom he pursued to Paris. Being besieged by the English, he defended Orleans until relieved by the Maid of Orleans. In 1450 he had completely freed France from the English, and was rewarded by the title of 'deliverer of his country,' the county of Longueville, and the dignity of high chamberlain of France.

Dunquerque (dūn-kerk). See *Dunkirk*.

Duns, JOHN, commonly called *Duns Scotus*, an eminent scholastic divine, born in 1265 or 1275, but whether in England, Scotland or Ireland is uncertain. He was admitted when young into an institution belonging to the Franciscan friars at Newcastle, whence he was sent to Merton College, Oxford. In 1301 he was appointed divinity professor at Oxford, and the fame of his learning and talents drew crowds of scholars from all parts. In 1304 he went to Paris, and was appointed professor and regent in the theological schools, in

which situation he acquired the title of 'the subtle doctor.' Duns opposed Thomas Aquinas on the subject of grace and free-will; and hence the *Scotists* are opposed to the *Thomists*. Dune was the apostle of realism, which was opposed to the systems of nominalism and conceptualism promulgated by the other sections into which the schoolmen were divided. He died, it is said, at Cologne in 1308, leaving behind him numerous works.

Dunsinane (dun-sin-ān'), a hill in Scotland, one of the Sidlaws, altitude 1012 feet, about 7 miles N. E. of Perth, with vestiges of a hill fort locally called Macbeth's Castle.

Dunstable (dun'sta-bl), a town of England, county of Bedford, 32 miles northwest of London. It was an important Roman station, and had a palace and a priory founded by Henry I. Part of the latter is used as the parish church. Dunstable is famous for its manufactures of straw-plait. Pop. (1911) 8062.

Dunstan (dun'stan), St., an Anglo-Saxon divine and statesman, was born at Glastonbury in 925; died at Canterbury in 988. As a youth he was remarkable for his learning and his skill in music, painting, carving and working in metals. He entered the Benedictine order, became an anchorite, at Glastonbury, and in 945 was made abbot by King Edmund. After the death of Edmund, Edred, the next king, made him his prime minister and principal director in civil and ecclesiastical affairs. In the reign of Edwy he was banished, but was recalled by Edgar, and made Archbishop of Canterbury. He was again deprived of power on the accession of Ethelred in 978, and devoted the last years of his life to his diocese and the literary and artistic pursuits of his earlier days. He did much to improve education and to raise the standing and character of the priesthood. The old biographies of him have all a large legendary element.

Duodecimal System (d ū-o-d e s'i-mal), in numeration, a system of numbers the scale of which is twelve. *Duodecimals* is a term applied to an arithmetical method of ascertaining the number of square feet, etc., in a rectangular area or surface, whose sides are given in feet, inches and lines.

Duodecimo (dū-o-des'i-mō; often contracted 12mo) is that form of volume in which each leaf forms a twelfth part of the sheet.

Duodenum (dū-o-dē'num), the commencement of the intes-

tinal canal, the first of the smaller intestines, so called because its length is about twelve fingers' breadth (Lat. *duodeni*, by twelves).

Dupanloup (dü-pän-lö), FÉLIX ANTOINE PHILIBERT, French prelate, born at St. Félix, in Savoy, in 1802; became a French subject by naturalization in 1838; died at Paris in 1878. He was ordained in 1825, appointed professor of theology at the Sorbonne in 1841, and Bishop of Orleans in 1849. From that time he took a prominent part in all the political and religious discussions in France. He belonged to the Gallican party, but submitted to the decisions of the council of the vatican; and was a strenuous advocate for free education.

Dupleix (dü-plā), JOSEPH, a French leader in India, born in 1697; died in 1763. He accumulated a fortune by commercial operations in India, and in 1742 was appointed governor of Pondicherry for the French East India Company. He formed the project of founding a French empire in India, and soon made himself master of the Carnatic partly by conquest and partly by political intrigue. He was opposed by Clive, and a long string of British successes caused the complete overthrow of all his plans.

Dupont (dü-pōn), PIERRE, a French song writer, was born at Lyons in 1821; died at St. Étienne (Loire) in 1870. He was educated by his godfather, a priest, and began to write and compose songs at an early age. After issuing a volume of poems in 1844 he went to Paris and obtained a place in the office of the secretary of the Institute. Some of his songs, such as *Song of Bread* and *Song of the Workers*, had a Socialistic ring which proved obnoxious to the government which came into power in December, 1852. He was arrested, imprisoned and condemned to be banished for seven years; but his release was soon procured. His poems have been collected under the titles *Cahiers de Chansons*, *La Muse Populaire*, *Chants et Chansons*, *Poésie et Musique*, *Etudes littéraires*, etc.

Dupont de Nemours (dü-pōn dé nē-mör), PIERRE SAMUEL, a French political economist, born at Paris in 1739; died in America in 1817. He early gained a reputation for his writings on commerce and political economy, and was employed by Turgot and Vergennes in the public service. During the ministry of Calonne he became councilor of state, and in 1787 was secretary to the Assembly of the Notables. He was twice president of the National Assembly. During the revolu-

tion he opposed the extreme republicans, and escaped the guillotine narrowly at the downfall of Robespierre. From 1798 to 1802 he was in America, and on his return to France he refused all public office. He finally returned to America in 1815. Among his writings are *Philosophie de l'Univers*, *Vie de Turgot*, and a translation of Ariosto.

Düppel (döp'l), a fortified village in the province of Schleswig, Prussia, on the coast of the Little Belt. The place is of considerable strategical importance, and has been the scene of some severe struggles between the Danes, to whom it formerly belonged, and the Germans. It was captured by the Prussians in 1864, after a siege and bombardment which lasted nearly two months.

Dupuytren (d ü-p ü-i-t r ä n), GUILLAUME, BARON, a French surgeon and anatomist; born in 1777; died at Paris, in 1835. He became in 1803, second, and in 1815 first surgeon to the Hôtel Dieu, Paris. The professorship of surgery to the medical faculty, conferred upon him in 1813, was exchanged in 1818 for a clinical lectureship in the above hospital. In 1823 he was appointed first physician to Louis XVIII, and retained the same situation under Charles X. He was considered the first French surgeon of his day; he made important discoveries in morbid anatomy.

Duquesne (dü-kän), a borough of Allegheny Co., Pennsylvania, 12 miles S. E. of Pittsburgh. It has blast furnaces, steel works, etc. Pop. 15,727.

Duquesne (dü-kän), ABRAHAM, a French admiral, born in 1610; died in 1688. In his seventeenth year he was in the sea-fight off Rochelle, and distinguished himself during and after the year 1637 in the war against Spain. In 1647 he commanded the expedition against Naples. In the Sicilian war he thrice defeated the combined fleets of Holland and Spain, under the renowned De Ruyter. After he had reduced Algiers and Genoa, Louis XIV conferred upon him the fine estate of Bouchet, and made it a marquisate, with the title of Duquesne. He was a Protestant and the only person exempted from the banishment of his sect, occasioned by the repeal of the edict of Nantes.

Duquoin (du-kwoin'), a city of Perry Co., Illinois, 77 miles N. of Cairo. It has extensive coaling interests and various manufactures. Pop. 5454.

Dura Mater. See *Brain*.

Duramen (dū-rä'men), the name given by botanists to the central wood or heart-wood in the trunk of an exogenous tree. It is more solid than the newer wood that surrounds it, from the formation of secondary layers of cellulose in the wood cells.

Durance (dü-räns), a river of France which rises in the Cottian Alps and after a course of about 180 miles joins the Rhone about 4 miles below Avignon. Marseilles is supplied with water from the Durance.

Durand (dü-ron), ALICE M. C. H., novelist, known under the pen name of Henry Greville. She was born at Paris in 1842; died in 1902. Her best tales are of Russian life, most of them having been translated into English. They include *Dosia*, *La Princesse Ogherof*, *Fidelka* and many others.

Durango (dū-ran'gō), a town of Mexico, capital of the state of Durango, about 500 miles N. W. of Mexico, on an elevation 6845 feet above the sea. It is well built, has a cathedral, a mint, manufactures of cotton and woolen goods, leather, etc. Pop. 31,092.—The state (area, 38,009 sq. miles) is partly mountainous and unproductive, but has valuable gold, silver and iron mines and also fertile tracts. Pop. 370,294.

Durango, capital of La Plata Co., Colorado, 40 miles S. of Silverton, on the Las Animas River. It has smelting, iron and steel works, and large coal and coke industries. Pop. 4686.

Durant (du-rant'), a city of Bryan Co., Oklahoma, 19 miles N. E. of Denison, Texas. It has large coaling and coke interests and smelting, iron and steel works. Pop. 5330.

Durante (dö-rän'tä), FRANCESCO, Italian musician, born in 1684; died in 1755. He attained a high degree of eminence in vocal church music, and he trained the most celebrated musical masters of the eighteenth century in Naples—Pergolese, Sacchini, Piccini, Guglielmi, Jomelli, etc.

Durazzo (dö-rät'sō); anciently *Dyr-rhachium* or *Epidamnus*, a seaport of European Turkey. Pop. 5000.

Durban (dur-bän'), or PORT NATAL, the chief port of the colony of Natal, S. Africa. The town is well laid out, and carries on a considerable trade, being connected by railway with Maritzburg and the interior, but the harbor has a bad entrance, though recently improved. Durban was founded in 1834, and named after Sir Benjamin D'Urban, governor of the Cape. Pop. (1904) 67,842.

THE GREAT INDIAN DURBAR

King George V and Queen Alexandra, as Emperor and Empress of India, receiving the homage of His Royal Highness, the Rajah of Bhutan.

Durbar (dŭr-bär'), an audience room in the palaces of the native princes of India; hence, a general reception by a prince or ruler. A magnificent durbar was held on December 12, 1911, when King George V announced his coronation in person.

Düren (dü'ren), a town of Rhenish Prussia, on the right bank of the Roer, 16 miles E. by N. of Aix-la-Chapelle. It has important manufactures of woolens, paper, leather, rails, hardware, etc., and an extensive trade. Pop. (1905) 29,270.

Dürer (dü'rër), ALBERT, a German painter, designer, sculptor and engraver on wood and metal, born at Nuremberg in 1471; died there in 1528. His father was a skilful goldsmith of Hungary. In 1486 he left his father's trade and became an apprentice of Michael Wohlgemuth, then the best painter in Nuremberg. Having finished his studies, he entered upon his 'wanderjahre,'

Albert Dürer.

the usual course of travels of a German youth. On his return to Nuremberg he married the daughter of Hans Frey, a mechanic, who has been falsely accused for centuries of embittering his life and bringing him to his grave. In 1505 he went to Venice to improve himself in his art. His abilities excited envy and admiration. He painted the *Martyrdom of Bartholomew* for St. Mark's Church, which painting was purchased by the Emperor Rudolph and removed to Prague. He also traveled to Bologna, to improve his knowledge of perspective. On his return to Nuremberg his fame spread far and wide. Maximilian I appointed him his court painter, and Charles V confirmed him in this office. All the artists and learned men of his time honored and loved him, and for many years he was one of the chief burghers of his

native town. Profound application and great facility in the mechanical part of his art were the characteristics of Dürer, and enabled him to exert a great influence on German art. He was the first in Germany who taught the rules of perspective, and of the proportions of the human figure. He not only made use of the burin, like his predecessors, but was also among the first to practice etching. He invented the method of printing woodcuts with two colors. Among his masterpieces in painting are a *Crucifixion*, *Adam and Eve* and *Adoration of the Magi*, and portraits of Raphael, Erasmus and Melancthon, who were his friends. Among his best engravings on copper are his *Fortune*, *Melancholy*, *Adam and Eve in Paradise*, *St. Hubert*, *St. Jerome* and the *Smaller Passion* (so called), in sixteen plates. Among his best engravings on wood are the *Greater Passion* (so called), in thirteen plates; the *Smaller Passion*, with the frontispiece, thirty-seven pieces; the *Revelation of St. John*, with the frontispiece, fifteen plates; the *Life of Mary*, two prints, with the frontispiece. Dürer has also much merit as a writer, and published works on *Human Proportion*, *Fortification* and the *Use of the Compass and Square*.

Duress (dü'res), in law, restraint or compulsion, is of two kinds; *duress of imprisonment*, which is imprisonment or restraint of personal liberty; and *duress by menaces or threats* (*per minas*), when a person is threatened with loss of life or with some kind of injury. An act done under duress is voidable or excusable.

D'Urfey (dur'fi), THOMAS, an English poet and wit, the grandson of a French Protestant refugee, was born at Exeter in 1653, and died in 1723. He abandoned law for literature, and wrote a large number of comedies of a licentious character. D'Urfey's name is now principally remembered in connection with his *Pills to Purge Melancholy*, a collection of songs and ballads, partly his own, and many of them coarse or licentious. His society was generally courted by the witty, and he enjoyed the favor of four successive monarchs.

Durga (dŭr'gä), a Hindu divinity, one of the names given to the consort of Siva. She is generally represented with ten arms. In one hand she holds a spear, with which she is piercing Mahisha, the chief of the demons, the killing of whom was her most famous exploit; in another a sword; in a third the hair of the demon chief; and in others, the trident, discus, axe, club and

shield. A great festival in her honor, the *Durga puja*, is celebrated annually, lasting for ten days.

Durga.

Durham (du'ram), an ancient city of England, capital of the county of the same name, on the river Wear, which is crossed here by four bridges, 14 miles s. of Newcastle. The principal public buildings are the ancient castle, the cathedral and other churches, the town hall, county prison, grammar school, etc. The educational institutions comprise the university, the grammar school, a training school for schoolmistresses and other schools. There are manufactures of carpeting and mustard. The cathedral occupies a height overlooking the Wear. The larger portion of it is Norman in style, with insertions in all the English styles. It was founded by William de Carilepho, assisted by Malcolm, King of Scotland, in 1093. The castle, a little north of the cathedral, was founded by William the Conqueror. It is now appropriated to the University of Durham, founded in 1832, and incorporated in 1837. Pop. (1911) 17,550.

Durham, a county in the north of England, bounded by the counties of Northumberland, Cumberland and Yorkshire, with the North Sea on the east. Its area is 1015 sq. miles, of which two-thirds are under cultivation. The western portion of the county is hilly, enclosing fertile valleys, the eastern portion is more level, and the center contains extensive coal fields. Lead, iron and millstones are also produced. The chief corn crops are wheat and oats; the

chief green crops turnips and potatoes. The cattle are esteemed both for the dairy and for fattening. In connection with the commerce of the county may be noticed its foundries, ironworks, potteries, glasshouses, iron shipbuilding, engine and machine works, chemical works, etc. Pop. (1911) 929,340.

Durham, a city, capital of Durham County, North Carolina, 26 miles N. W. of Raleigh. It has snuff and tobacco factories and other industries. General Johnston surrendered here, April 25, 1865, to General Sherman, an event which practically ended the Civil war. Pop. 18,241.

Durham, BOOK OF, a Latin text of the gospels written by Bishop Eadfrith of Lindisfarne, with an interlinear Saxon gloss, finished in the year 720. It is now kept in the British Museum.

Durham, EARL OF (GEORGE LAMBERTON), 'the Father of Canadian Federation,' born at London in 1792; died there in 1840. In 1838 he was sent to Canada to readjust matters after the rebellion of the preceding year. His report to the British government was made the basis of the settlement resulting in the Dominion Act of 1867.

Durham, SIMEON OF, an English chronicler of the twelfth century; wrote *Annals of England to the Reign of Henry I*, particularly valuable for events connected with the N. of England. They were continued by John of Hexham.

Durian (dū'ri-an), or DURION (*Durio zibethinus*), a large and lofty tree growing in the Malayan Archipelago. The largish flowers, of a yellow-green color, are produced on the stem or main branches, and are followed by the large fetid fruit, which is of the size of a man's head, and is a favorite food of the natives during the time (May and June) when it is in season. There is usually a second crop in November. The smell is offensive, like putrid animal matter, but with this is associated the most delicious flavor, which places it, notwithstanding the odor, in the opinion of many, in the foremost place among tropical fruits.

Durian (*Durio zibethinus*).

Durmast (dur'mast), a species of oak, *Quercus sessiliflora*, or ac-

Duroc

cording to some, *Q. pubescens*, so closely allied to the common oak (*Q. Robur*) as to be reckoned only a variety of it. Its wood is, however, darker, heavier and more elastic, less easy to split, not so easy to break, yet the least difficult to bend. It is highly valued, therefore, by the builder and cabinet-maker.

Duroc (dû-rok), MICHEL GÉRARD CHRISTOPHE, Duke of Friuli, a distinguished general under Bonaparte, was born at Pont-à-Mousson in 1772; killed in 1813, at the battle of Bautzen. He served as aide-de-camp to Napoleon in the Italian and Egyptian campaigns. In 1805 he was made grand-marshal of the palace; and was frequently employed in diplomatic missions, though he still took his full share in the wars of France till the time of his death. He was a great favorite of Napoleon, and was killed by his side.

Durra. See *Dhurra*.

Dürrenstein (dûr'en-stin), a village in Lower Austria, on the Danube, 41 miles west by north of Vienna. Here are the ruins of the castle in which Leopold, Duke of Austria, imprisoned Richard Cœur-de-Lion on his return from Palestine, 1192.

Duruy (dû-rû-ē), VICTOR, a French historian and educationalist, born at Paris in 1811. He was appointed successively teacher of history in the gymnasium of Henry IV, then at the Normal School and the Polytechnic School, inspector of the Academy of Paris, inspector-general of secondary education and minister of public instruction (1863-69). He is author of the following works: *Géographie Politique de la République, Romaine et de l'Empire*, *Géographie Historique du Moyen Age*, *Histoire Romains*, *Histoire de France*, *Histoire Grecque*, *Histoire Populaire Contemporaine*, etc. Some of these are simply schoolbooks, but his *Histoire des Romains* (translated into English) and his *Histoire de la Grèce Ancienne* (translated into English) are extensive and important works, the former especially. He died in 1894.

Duryea (dur-yā'), a village of Luzerne Co., Pennsylvania, on the Lackawanna River, 12 miles s. w. of Scranton. It has coaling industries. Pop. 7487.

Dussaud's Telescope, an instrument invented in 1898 by M. Dussaud, a French scientist, which sends pictures by wire. The instrument consists of a camera at the opposite end from the lens, which

Dutch Oven

has a revolving screen worked by clock-work and pierced with small openings arranged in spiral form. Behind this is a system of selenium layers connected with a battery. By means of this machine an observer at the receiving station sees upon the screen the exact image produced in the camera of the transmitter.

Düsseldorf (dûs'sel-dorf), a town of Prussia, in the Rhenish province, beautifully situated among villas and gardens on the right bank of the Rhine, 22 miles N. N. W. of Cologne, one of the handsomest towns in the valley of the Rhine. It is a great focus of railway and steamboat communication, and has a number of handsome public buildings, and several remarkable churches. Among the public institutions particular notice is due to the Academy of Art, founded in 1767 by the Elector Theodore, and afterwards directed by Cornelius, Schadow, Bendemann, etc. It has the honor of having founded a school of painting, which takes the name of Düsseldorf, and has had a large number of distinguished pupils. The industries embrace iron, cotton, leather, tobacco, carpets, chemicals, objects of art, etc., and the trade is large. Pop. (1910) 357,702.

Dust-brand. See *Smut*.

Dutch (duch), the people and language of Holland or the Netherlands. See *Netherlands*.

Dutch Auction, a kind of auction in which articles are put up at a high price and lowered till a bidder is met with.

Dutch Clover, *Trifolium repens*, commonly called white clover, a valuable pasture plant. It has a creeping stem; the leaflets are broad, obovate, with a horseshoe mark in the center; the white or pinkish flowers are in a globular head.

Dutch Gold, an alloy of eleven parts of copper and two of zinc. Called also *Pinchbeck*. See also *Dutch Metal*.

Dutch Metal, an alloy containing 84.5-84.7 per cent. of copper and 15.5-15.3 per cent. of zinc, with a fine golden-yellow color, ductile, malleable and tenacious. When beaten out by a process analogous to that for gold-leaf, until the sheets are less than 1/50,000th part of an inch thick, it constitutes Dutch leaf or Dutch foil, and is used instead of gold-leaf for ornamental purposes.

Dutch Oven, a cooking chamber of tin-plate suspended in

front of a fire, and used chiefly for roasting meat. Much used in former times.

Dutch Pink, a bright-yellow color used in distemper, for staining paper-hangings, and for other ordinary purposes. It is composed of chalk or whiting colored with a decoction of birch leaves, French berries and alum.

Dutch Rush, *Equisetum hyemale*, one of the plants known as horsetails, with a firm texture and so large an amount of silex in the cuticle that it is employed as a fine sandpaper for polishing delicate woodwork. The plant is found in marshes and woods in Britain, but for economical use it is imported from Holland, whence its popular name. It is sparingly found in the United States.

Dutch Tears, a name for Prince Rupert's drops.

Dutrochet (dû-tro-shâ), RENÉ JOACHIM HENRI, a French physiologist, born in Poitou in 1776; died at Paris in 1847. He served for some time as medical attendant to Joseph Bonaparte during the Spanish campaign, 1808-09; but subsequently he returned to France, and retired to the estate of Châteaurenault, where he devoted himself exclusively to physical and physiological studies. His chief works have been published in a collective form with the title *Mémoires pour servir à l'Histoire Anatomique et Physiologique des Végétaux et des Animaux* (1837, two vols.).

Dutteeah, or DATTIYA. See *Datia*.

Duykerbok (doi'kér-bok), *Cephalolophus mugens*, a small S. African antelope with short horns (none in the female) and a tuft of stiff hairs between them.

Dvina, NORTHERN. See *Dwina*.

Dvina, WESTERN. See *Düna*.

Dvorak (dvor-shäk'), ANTON, a Bohemian musical composer, born in 1841. He studied at the Prague Conservatoire and at Vienna. He has composed several operas on national Bohemian subjects, a number of songs, orchestral arrangements of Bohemian dances, several symphonies, a *Stabat Mater*, a cantata (*The Spectre Bride*), and an oratorio (*St. Ludmilla*). His works are well known and popular. He died in 1904.

Dwale (dwāl), a name of the deadly nightshade. See *Nightshade*.

Dwarf (dwarf), a term applied to any animal or plant greatly below

the usual size of its kind, particularly to a human being of small dimensions. Accounts of dwarf tribes have been common from early times, such tribes being located especially in Africa; and it has recently been discovered, by Du Chaillu, Schweinfurth, and later travelers that there are several dwarfish tribes throughout this continent. The Obongo, a race of dwarfs, are described as living in woods near the Okanda River, in wretched huts made of branches. Other races are the Mabongo, and the Akka dwarfs of Central Africa (see *Akkas*): and a race is said to exist in the Congo State, not as a distinct community, however, but mixed with other tribes. Similar dwarfish peoples live in the Philippine Islands and a tribe of them was discovered in 1910 in New Zealand (see *Pygmy* and *Negritos*). Persons of dwarfish stature may be found in all races, and were formerly a fashionable appendage to the courts of princes and the families of nobles. Jefferý Hudson, the favorite dwarf of Charles I, at the age of thirty is said to have been only 18 inches high, though he afterwards grew to 3 feet 9 inches. Bébé, the celebrated dwarf of Stanislas of Poland, was 33 inches; Wybrand Lolkes, a Dutch dwarf, when sixty years of age was only 27 inches; Charles H. Stratton, 'General Tom Thumb,' was 31 inches high at the age of twenty-five; Francis Flynn, 'General Mite,' was only 21 inches at sixteen.

Dwarfing (dwarf'ing), the process of training up trees or shrubs for ornament in houses so as to cause them never to reach more than a very small size, by keeping them in poor soil, giving them little water, pinching off strong shoots, etc. Practiced among the Chinese and Japanese.

Dwight (dwit), TIMOTHY, an American divine, born in Massachusetts in 1752; died in 1817. His father was Colonel Timothy Dwight, and his mother was a daughter of Jonathan Edwards. He served as chaplain in the Revolutionary army, and ultimately became president of Yale College. His *Theology* (1818) was for long a standard both in Britain and in America. He was also the author of two poems, the *Conquest of Canaan* and *Greenfield Hill*, besides numerous unimportant works, consisting of dissertations, occasional sermons, etc.

Dwina (dwē-na), NORTHERN, a Russian river formed by the union of two small streams in the government of Vologda. It flows in a northwesterly direction, and falls by four mouths into the White Sea. At Archangel, before

it divides itself, it is 4 miles broad. It is navigable as far as Suchona, and is connected with the Volga by canal.

Dwina, WESTERN. See *Düna*.

Dyad (dī'ad; Greek *dyas*, the number two), in chemistry an elementary substance, each atom of which in combining with other bodies is equivalent of two atoms of hydrogen.

Dyaks (dī'aks), the aborigines of Borneo, chiefly inhabiting the interior of the island. They are a finely formed race, of a yellow complexion, and are described as docile, industrious and superior to the Malays. The more advanced of them practice agriculture and dwell in neatly constructed and tolerably comfortable houses. In Sarawak they have made considerable advances in civilization. They are mostly heathens. The practice of head-hunting (hunting their enemies to make trophies of their heads) is practiced among them, but has been abolished where European influence prevails. See *Borneo*.

Dyas (dī'as), in geology, a name for the Permian system.

Dyaus (dyous), the god of the sky in the older mythology of the Hindus. His name is etymologically connected with that of the Greek Zeus.

Dyce (dis), ALEXANDER, a Shakespearean editor, born at Edinburgh in 1798; died in 1869. He was educated at Edinburgh and Oxford, but in 1827 settled in London, where most of his life was passed. He first became known by his editions of Collins, Peele, Webster, Marlowe, Skelton, etc., accompanied by notes and biographies of the authors. In 1840 he founded the Percy Society for the publication of ancient comedies and ballads. His chief work, however, was an edition of Shakespeare in six volumes, with notes, etc. (1853-58).

Dyce, WILLIAM, an historical painter, born at Aberdeen in 1806; died near London in 1864. He studied at Edinburgh and at Rome, and finally settled in London, being appointed, in 1838, head of the government school of design, Somerset House. He was elected a Royal Academician in 1848. Among his chief works are *Francesca da Rimini* (1837); *Joash Shooting the Arrow of Deliverance* (1844); *King Lear in the Storm* (1851); *Christabel* (1855); *The Good Shepherd* (1856); the *Baptism of Ethelbert*, a large fresco for the Houses of Parliament, and a series of frescoes illustrative of the legends relating to King Arthur, for the same.

Dyck, SIR ANTHONY VAN (vān dik). See *Vandyck*.

Dyeing (dī'ing), the art of fixing a new and permanent color on textile substances, usually cotton, linen, silk and wool. Some preliminary operations are necessary in order to cleanse the stuff from any foreign matters which would prevent the dye having free access to it, as well as to remove any natural coloring which would interfere with the production of bright, clear tints. Cotton and linen fabrics go through a prolonged series of operations in bleaching (which see). Silk is boiled in a solution of fine soap to remove the fatty matter; and wool is cleansed by scouring in weak soap or soda-lye or weak ammonia.

The process of dyeing varies much according to the stuff and the coloring matters used. In general animal fibers, like silk and wool, combine more easily with most colors than vegetable fibers such as linen and cotton. In the case of the former, for example, a simple immersion in aniline dyes is sufficient to produce a fixed color. Such colors are said to be *substantive*, in relation to the stuffs with which they thus combine. Dyes which will not unite directly with the fibers so as to produce a good and permanent color are termed *adjective*. These dyes require the intervention of another agent to fix them on the different stuffs, and the name of *mordant* is applied to those substances which are employed to make the stuff to be dyed and the dyeing color combine. Alum, acetate of aluminium, chloride of tin, salts of iron, albumen, gluten, tannin, etc., are common mordants. The mordant is generally dissolved in water into which the stuffs to be dyed are plunged. In some cases it is mixed with the color and both are simultaneously applied to the stuff. An important characteristic of mordants is their power of affecting the natural tint of the dye and thus enabling a variety of shades to be produced at small expense. Thus, nitrates tend to give a yellow tinge to the colors, alumina deepens and oxide of tin brightens the natural tints. A process of dyeing to which the name of *Aero-hydraulic Dyeing* has been given consists in forcing the color through the material by hydraulic pressure. The advantages of the process (patented by Mr. G. C. Gibbs) are that the color is forced equally through any thickness of the stuff, which thus remains bright till completely worn out.

The dyestuffs in use at the present day are derived alike from the animal, mineral and vegetable kingdoms. Among animal dyes *cochineal*, the female insect of *Coccus cacti*, produces

the most valuable of scarlet and crimson dyes. A kindred insect, *Coccus ilieis*, produces *kermes*, an important red dye. Galls, which are used both as a dye and a mordant, are produced by the puncture of insects on the leaves and branches of the oak and other trees. Among the vegetable dyes in common use, madder, the root of the *Rubia tinctoria*, is perhaps the most important, furnishing various shades of red, purple, brown and black, as well as the famous Turkey red. *Munjeet* is the root of a closely allied Indian plant. *Logwood*, *Brazil-wood*, *sandal-wood*, *fustic*, *sappan-wood* are the chief woods used for dyeing purposes. For blue dyes, indigo, obtained from *Indigofëra tinctoria* and *Indigofëra Anil*, is still the most generally used. Safflower (obtained from the *Carthämus tinctoria*) yields a fine pink dye; various species of lichens give us a series of purple dyes known as *archil*, *cudbear* and *litmus*. Among mineral pigments *Prussian blue*, a ferrocyanide of iron; *ultramarine*, now prepared as a compound of alumina, silica, soda and sulphur; *chrome yellow*, *cobalt blues* and *arsenical greens* are the colors most in use. Among the most notable additions to the list of coloring stuffs within recent years are the aniline dyes of coal-tar origin (see *Aniline*), which yield a great variety of brilliant colors, such as magenta, mauve, aniline, purple, roseine, violine, etc. From coal-tar also the two coloring principles of madder (*alizarine* and *purpurine*) have been artificially produced, and alizarine has almost entirely superseded the use of the madder root. There are few organic substances which under proper treatment will not yield coloring matter, and of late new coloring matters have been obtained from wood-sawdust, lichens, mosses, paper and cotton waste, bran, starch, sugar, soot, etc. In addition to those above mentioned other dyestuffs are alkanet, annatto, catechu, camwood, French berries, divi-divi, sumach, saffron, turmeric, woad, etc.

Dyer (dī'er), JOHN, an English poet of the secondary class, born in Carmarthenshire in 1700, and educated at Westminster School. He became a painter, but not succeeding in that capacity took orders and was appointed to a small living. In 1727 he published his poem of *Grongar Hill*, in 1740 *The Ruins of Rome*, and in 1757 *The Flecece*, a didactic poem in five books. He died in 1758.

Dyer's-broom, an European and now also North American shrub (*Genista tinctoria*), formerly used with woad for dyeing green.

Dyer's-moss, a lichen, called also *Orchil* or *Archil*. See *Archil*.

Dyer's-weed, *Resēda Luteōla*, a plant of the same genus as *mignonette*, otherwise called *Yellow-weed*, *Weld* or *Wood*, nat. order *Resedaceæ*. This plant grows in waste ground; it affords a beautiful yellow dye, and is cultivated for that purpose.—*Dyer's Greenweed* is *Genista tinctoria*. See *Dyer's-broom*.

Dyestuffs. See *Dyeing*.

Dying Declaration, a deposition made by one who is in prospect of death. Such declarations are, as a general rule, admissible as evidence only in criminal and not in civil cases, and must be made, according to English and American, though not Scottish law, in the full consciousness of the danger of death.

Dyke. See *Dike*.

Dynameter (dī-nam'e-ter), an instrument used for measuring the magnifying power of telescopes. It consists of a small compound microscope, with a transparent plate, exactly divided, which is fixed to the tube of a telescope, in order to measure exactly the diameter of the distinct image of the eyeglass. Also has same significance as *Dynamometer*.

Dynamic Theory (dī-nam'i k), a theory explanatory of the essential constitution of matter. In the dynamic theory every body is considered as a space filled with continuous matter; porosity then becomes an accidental quality, but compressibility and dilatibility essential properties. The state of a body depends entirely on certain attracting and repelling forces; and its volume must change with every change in the relative proportions of these forces. It is opposed to the *atomic theory*, which supposes every body to be composed of indivisible and impenetrable particles termed *atoms*. These are almost infinitely small, with void spaces between them, so that this theory makes porosity essential to matter.

Dynamics (dī-nam'iks), the science which deals with the laws of force in their relation to matter at rest or in motion, and as such it is differentiated from *kinematics*, which considers motion mathematically, and apart from the forces producing it. It is to Newton that we owe the clear statement of the three primary laws of force. These are: (1) that every body remains in a state of rest, or of uniform motion

THE TEMPTATION IN THE WILDERNESS

Painted by William Dyce

along a straight line, unless it is compelled by force to change that state. (2) That change of motion is in proportion to the force employed, and occurs along the straight line in which the force acts. This change of motion includes both change of rate and of direction. (3) That, as the result of every action, there is also and always an equal reaction. These laws, which were formulated from experiment, involve the conception of force as a primary influence or action expressed in terms of space, time and matter. Now, in dealing with the laws of force, a standard of measurement is required which shall be applicable to all forces at all times, and we therefore require to begin by establishing units of space, time and mass. There are two systems of units in use, the one British, the other French. In the British system the foot is taken as the unit of length, and the second as the unit of time. In the French the centimeter is the unit of length, the second the unit of time; the unit velocity in the one case being that of one foot per second, in the other one centimeter per second. The British unit of mass is the pound (the mass of a certain lump of platinum deposited in the exchequer office, London); the French, the gramme; and, accordingly, the French units of space, mass and time are commonly known as the C.G.S. (centimeter, gramme, second) units. As the weight of a pound (or a gramme) is not the same at all parts of the earth's surface it cannot give us of itself an absolute or dynamical unit of force, that is, an invariable unit; but taking it in conjunction with unit time and unit velocity, we do obtain such a unit. Two absolute units of force are in common use in dynamics, the *poundal* and the *dyne*; the latter being the absolute unit in the C.G.S. system. The former is *that force which, acting on the mass of one pound for one second, generates in that mass a velocity of one foot per second*. The latter is *that force which, acting on the mass of one gramme for one second, generates in that mass a velocity of one centimeter per second*. It is important in dynamics to distinguish between *mass* and *weight*. The *mass* of one pound is the quantity of matter equal to a certain standard quantity (a certain lump of metal) and is quite independent of force. The *weight* of one pound is the force with which the mass of one pound is attracted to the earth's surface by the force of gravity. Another important term is *momentum*; the momentum of a body in motion at any instant is the product of the mass

of the body and the velocity at that instant. Dynamics is divided into two great branches; *statics*, which treats of solid bodies at rest under the action of forces; and *kinetics*, which treats of the action of forces in producing motion in solid bodies. Formerly the latter alone was called dynamics, and to this, in conjunction with statics, the general name *mechanics* was given. In the wide sense dynamics includes also hydrostatics.

Dynamite (dī'na-mīt, din'a-mīt), an explosive substance patented by Alfred Nobel in 1867. As originally made it consisted of a siliceous earth obtained at Oberlohe in Hanover and known as *kieselguhr*, impregnated with 75 per cent. of nitroglycerin (see *Nitroglycerin*), the object of the mixture being to facilitate the carriage and use of nitroglycerin by diminishing its susceptibility to explode by shock while not destroying its explosive force. The siliceous matter is of diatomaceous origin; it is extremely friable and porous, and has a considerable absorbent power. Dynamite thus prepared has the appearance of raw sugar. Diatomite, a substance superior to *kieselguhr*, is now also employed, and various other substances have been used to mix with the nitroglycerin, such as charcoal, sand, sawdust, etc. The mixture remains without change for a long period of time, unless exposed to water. It burns away quietly if a light is applied to it, but explodes if heated to a high temperature. Usually it is exploded by a specially arranged fulminating cap. Its explosive force is several times that of gunpowder, which it has largely superseded for blasting.

Dynamo (dī'na-mō), the name now usually given to what was originally called the *dynamo-electric machine*. The object of such machines is to produce electric currents by means of mechanical power, and they differ from *magneto-electric* machines, which have a similar object, by the circumstance that in place of the permanent steel magnets which form a necessary part of a magneto-electric machine, electro-magnets are employed. In the original dynamo-electric machines the current by which the electro-magnets were made was identical with the current given off by the machine, or else was a portion diverted from it; but in an important class of machines the current which makes the electro-magnets has an independent source, and to these machines the name 'dynamo' is also applied. The advantage of dynamo over

magneto machines lies in their greater compactness, arising from the fact that electro-magnets are much stronger than permanent steel magnets of the same bulk. The extensive use of dynamos as the principal commercial sources of electric currents may be said to date from the improvements introduced in their construction by Gramme, of Paris. For an explanation of their action, see *Induction*, *Magneto-electric*, *Magneto-electricity*.

Dynamometer (dī-na-mō-m'e-tēr), any instrument for measuring the relative strength of men or animals, or the force of machinery. Commonly it consists of a spiral spring suitably applied. When the pull upon a draught implement, as a plow for instance, is the point to be determined, the dynamometer is made a link in the draught-chain, and the amount of extension or collapse which it suffers indicates the intensity of the strain.

Dyne (dīn), in physics, a unit of force. See *Dynamics*.

Dynograph (dī'n ō-graf), an apparatus used in modern railroading for testing the inequalities of the road-bed, the track, etc. It consists of a recording instrument mounted in a car and geared to the wheels thereof. An automatic pencil records the slightest roughness or inequalities, and locates them. See *Cyclometer*.

Dyrrhachium. See *Durazzo*.

Dysentery (dis'en-ter-i; Greek, *dys*, difficult, *entēra*, the bowels), a dangerous disorder of the intestines, known by fever; tenesmus; frequent, griping stools, which are chiefly mucous, sometimes mixed with blood, the natural fæces being retained, or voided in small, compact, hard masses; loss of appetite and nausea. It may be occasioned by a sudden check in the perspiration, or the use of unwholesome and putrid food, or by noxious exhalations and vapors, and it is often the result of a specific contagion. When the symptoms run high, produce great loss of strength, and are accompanied with a putrid tendency and a fetid and involuntary discharge, the disease often terminates fatally in a few days. In some cases the febrile state wholly disappears after a time, while the proper dysenteric symptoms may be of long continuance. Hence the distinction into acute and chronic dysentery. Saline purgatives, and for severe cases laudanum (20 or 30 drops) or Dover's powder, are useful. The endemic dysentery of Egypt is a distinct disease caused by the presence of a worm in the intestines.

Dysmenorrhœa (dis-men-ō-rē'a), a disease of women, consisting in painful or difficult menstruation, which may be caused in various ways.

Dysodile (dis'o-dīl), a yellowish or greenish foliated mineral found in limestone, with remains of fish and of plants, which, when ignited, burns and emits a very bad smell.

Dyspepsia (dis-pep'si-a; Greek, *dys*, difficult, and *pepsis*, digestion), difficulty of digestion. The action of the stomach on the food is that usually designated as digestion, and it is the derangement of this process that is usually expressed by the term dyspepsia. This derangement may be caused by disorders of a very various and even opposite character. The subacute and chronic forms of gastric irritation and inflammation are the most common forms of dyspepsia, and are often caused by too highly seasoned or too abundant food and stimulant drinks, or by the improper use of emetics, tonics, or stimulants. Another class of dyspeptic diseases is connected with irritation of the mucous membrane of the duodenum, causing perversion of secretions and disorder of functions. A third class of dyspeptic diseases depends on the nerves connected with the digestive viscera. Hence arises an order of dyspeptic symptoms independent of any immediate affection of the stomach. Dyspepsia is therefore not a disease of a uniform character, but is rather attached as a symptom to a variety of diseases. The most common causes of dyspepsia are excesses of various kinds, especially in the quantity of food eaten. Persons of a sedentary life require less nutriment than those of active habits. Exercise and the quantity of food to be digested must be proportioned to each other. The quality of food as well as its quantity has to be considered. Good cookery, which renders the food tender and pulpy, is one preservative against dyspepsia. Tough and badly dressed meats, crude vegetables, hot bread and cakes, and the daily use of hot tea or coffee for breakfast are among the numerous causes of this ailment.

Dysphonia (dis-fō'ni-a), a difficulty in speaking. The disorder known as 'clergyman's sore throat' is a common example. Rest of the vocal organs, tonics, muscular exercise, change of scene are generally needed to aid recovery.

Dyspnœa (dis-pnē'a), a difficulty in breathing. It is sometimes hysterical, sometimes a symptom of dis-

Dytiscus

ease of the heart or lungs. The treatment varies with the cause.

Dytiscus (dī-tis'kus), more correctly DYTICUS. See *Water-beetle*.

Dzeren (dzē'ren), DZE'RON, the Chinese antelope, a remarkably swift species of antelope (*Procapra gutturōsa*) inhabiting the dry, arid deserts of Central Asia, Tibet, China and Southern Siberia. It is nearly 4½ feet in length, and 2½ high at the shoulder.

Dziggetai (dzig'ge-tī), or KIANG (*Equus Hemiōnus*), an animal found in Central Asia, allied both to the horse and ass. Its head is large like that of the ass, but in form resembles that of the horse. The ears also resemble those of the horse. It runs with a

rapidity rivaling that of the best Arabian horses.

Dzoungaria (dzoun'gā-ri-a), a Chinese territory in Central Asia, stretching from about 43° to 48° N. lat. and from about 82° to 86° E. lon. It has an area of 147,950 sq. miles, and pop. 600,000. It is administratively connected with Kuldja and after the surrender of Kuldja by the Russians in 1880 came again under Chinese rule. Dzoungaria, once the center of an independent empire, was first conquered by the Chinese in 1757. Along with Outer Mongoli and Chinese Turkistan, as a consequence of the Chinese revolution, it declared its independence of the Chinese Empire in December, 1911, and organized a government of its own.

E

E, the second vowel and the fifth letter of the English alphabet. It occurs more frequently in English words than any other letter of the alphabet. Its long or natural sound in English coincides with the sound of *i* in the Italian and French languages, as in *here*, *mere*, *me*. It has also another principal sound, a short one, heard in *met*, *men*. It has besides a sound like *a* in *bare*, as in *there*, *where*, etc., and the obscure sound which is heard in *her*. As a final letter in English it is generally silent, but it serves to indicate that the preceding vowel is to have its long sound, as in *mane*, *cane*, *plume*. When two *e*'s come together the sound is generally the same as that of the single *e* long, as in *deem*, *esteem*, *need* (comp. however *pre-exist*, etc.).

E, in music, is the third note or degree of the diatonic scale, answering to the *mi* of the Italians and French.

Eadie (ē'di), JOHN, a Scottish preacher and theologian, born in 1810; died in 1876. He was educated at Glasgow University, and entered the ministry of the Secession Church, becoming in 1843 professor of Biblical literature in the Divinity Hall of the church, a post which he continued to hold after the Secession body was merged in the United Presbyterian Church (in 1847). Among his works are *Biblical Cyclopædia*; *Analytical Concordance to the Scriptures*; *Eccelesiastical Cyclopædia*; *Commentary on the Greek Text of Ephesians*, and similar works on Colossians, Philippians and Galatians; and *The English Bible*. He was one of the scholars engaged on the Revised Version of the New Testament.

Eadmer (ēd'mer), an English monk, the friend and biographer of St. Anselm. In 1120 he was chosen Bishop of St. Andrews; but as the Scottish king refused to recognize the right of the Archbishop of Canterbury to consecrate him, he returned to England and died a simple monk about 1124. Besides the life of St. Anselm, Eadmer wrote lives of St. Wilfrid, St. Dunstan, St.

Odo, and other English saints, as well as a valuable history (*Historia Novorum*) of events in England and the English Church from 1066 to 1122.

Eads (ēdz), JAMES BUCHANAN, civil engineer, born at Lawrenceburg, Indiana, in 1820; died in 1887. He invented appliances for raising sunken steamers on the Western rivers, and during the Civil war constructed iron-clad steamers for the government. His greatest feats were the great steel bridge which he built over the Mississippi at St. Louis (1867-74) and the jetties by which he deepened for navigation the Southwest Pass or mouth of the Mississippi River. At a later date he projected the construction of a ship railway across the Isthmus of Tehuantepec.

Eagle (ē'gl), the general name of rapacious birds that form a group or subfamily (Aquilinæ) of the great family Falconidæ, which includes the eagles, falcons and hawks. The eagle is popularly regarded as the noblest and

Imperial Eagle—*Aquila imperialis*.

most courageous of the rapacious birds. It soars to a greater height than any other European bird, from which circumstance the ancients considered it as

the bird or messenger of Jove. The genus *Aquila*, which includes the most typical eagles, is distinguished by its long and powerful bill, the curve commencing at the cere, by its wings reaching to the tip of the tail, and by its tarsi being feathered to the toes. The imperial eagle (*A. imperialis*) of Central Europe is probably the species to which the popular belief in the courage, strength and nobleness of eagles is to be traced. *A. chrysaetus*, the golden eagle, measures over 6 feet from tip to tip of the expanded wings, and 3 feet from the beak to the end of the tail. The adults have the body brownish, becoming darker with age; the feathers of the head and neck pointed, and of a golden-red hue. This species is found all over the northern hemisphere. The Kirghis and other tribes of Central Asia use the golden eagle to kill antelopes, foxes and even wolves. The bald eagle (*Haliaeetus leucocephalus*), found in North America and Northeast Asia, is the symbol of the United States, though Franklin deplores the selection on account of his mean and dishonest habit of robbing the industrious osprey of the fish caught by him. Like all members of the genus, his diet is less restricted than that of the true eagles; and he even takes carrion. Another eagle (*Circus gallicus*), the serpent eagle, or short-toed eagle, ranges through Southern Europe, Asia and especially North Africa. In structure and habits this bird approaches the buzzards. See also *Harpy Eagle*.

Eagle, as a symbol. The eagle first appears as a war standard among the Persians, through whom it

by Marius, and later took the place of all the other emblems at the head of the legions. It was first made of wood, then of silver, and finally, under Cæsar and his successors, of gold. In the mediæval ages the eagle became the heraldic emblem of the old German Empire, and was made double headed in the fourteenth century. When the old German Empire ceased the double headed eagle was retained by Austria. A double headed eagle is also the national military symbol of Russia, as a single headed eagle is that of Prussia and the United States of America; the latter stands with outspread wings guarding a shield, with the motto *E pluribus unum*. The eagle is also the badge of several orders, the chief of which are the order of the *Black Eagle*, founded in 1701, and the highest order in Prussia; the order of the *Red Eagle*, also a Prussian order, and founded in 1705; the Russian order of the *White Eagle*, originally Polish, and instituted in 1325.

Eagle. A gold coin of the currency of the United States, of the value of ten dollars. It was first coined in 1795. There are also half-eagles, quarter eagles, and double-eagles, of proportionate values.

Eagle, a lectern or reading-desk in churches in the form of an eagle with expanded wings.

Eagle-hawk, a name of birds (genus *Morphuus*) belonging to the eagle group, but smaller than the true eagles, with comparatively short wings and long legs, natives of South America.

Eagle-owl, one of a subfamily of owls (*Buboninæ*), the most remarkable species of which is the *Bubo maximus* (the great horned owl), little inferior in size to the golden eagle. It is found in the mountainous parts of Central Europe. An allied species, the Virginian horned owl (*B. Virginianus*), is found in almost every quarter of the United States.

Eagle-wood. See *Aloes-wood*.

Eagre (ē'gér), a Norse word signifying the same as *bore* in a river. See *Bore*.

Ear, the organ of hearing. It is situated at the side of the head, and in the higher vertebrates is divided into the outer, middle and inner ear. The external ear, which is a cartilaginous funnel for collecting the sound waves and directing them inwards, is composed of the *pavilion*, or projecting part, and of the *auditory canal*, which extends from the *concha*, or central hollow of the

Roman Eagles.

reached the Egyptians. As the standard of the Roman armies it was first used

pavilion, to the membrane of the *tympanum* or *drum*. This membrane is a partition stretched obliquely across the bottom of the auditory canal, which it separates from the middle ear or drum; it is semitransparent and very delicate. It vibrates with the waves of sound

The Ear of the Right Side.

which strike against it, and transmits the vibrations to certain little bones of the cavity of the tympanum. These bones, which have been named, respectively, the hammer (*malleus*), the anvil (*incus*) and the stirrup (*stapes*), transmit the vibrations to the internal ear, forming a chain communicating at one end with the membrane just mentioned, and at the other with the inner ear. The internal ear consists of a bony cavity called the *vestibule*, three *semicircular canals*, and a bony structure in the form of a spiral shell, called the *cochlea*. The vestibule communicates with the tympanum, the cochlea, and the semicircular canals, and is entered by branches of the nerve of hearing. The various parts of the internal ear, which together form the *osseous labyrinth*, are lodged in the hardest part of the temporal bone; they are lined throughout with a very thin membrane, and are full of a very thin and limpid fluid. They contain a structure of corresponding form called the *membranous labyrinth*, consisting of sacs and canals, also containing a fluid. Within the membranous canal of the cochlea is lodged the complicated apparatus which is believed to be the chief agent in the perception of sound. The middle ear communicates with the throat and pharynx by the eustachian tube, through which air from the mouth may be pressed against the membrane of the drum. In the external auditory canal of the ear is produced the cerumen or earwax, which if allowed to accumulate may cause deafness. The cut shows A, the pavilion, B,

the external canal, C, the drum membrane partly removed, D, cavity of middle ear, E, anvil and M, hammer, the small bones communicating with the drum and vestibule, H, cochlea, G, semicircular canals, I, eustachian tube.

Ear-cockle, a disease in wheat caused by the presence in the grain of worms belonging to the genus *Vibrio*. Called in some parts of England *purples*.

Ear of Dionysius, a large funnel or shell, with flexible tube, for concentrating sound; a kind of ear trumpet. Its name comes from the traditional device by which Dionysius, tyrant of Syracuse, heard the talk of his prisoners in their dungeons.

Earl (erl), a degree of the British nobility between marquis and viscount, the title of highest antiquity in England. The title was made hereditary by William the Conqueror, and for a time was used interchangeably with that of *count*, the corresponding title on the continent. The wife of an earl is still called a *countess*. An earl's coronet is composed of eight pearls raised upon points, with small leaves between, above the rim. See *Coronet*.

Earle, ALICE MORSE, author, born at Worcester, Massachusetts, in 1853; died in 1911. She wrote extensively on colonial manners and customs in New England and New York, her works including *Home Life in Colonial Days*, *Childhood in the Colonies*, *Two Centuries of Costume in America*, etc.

Earle, JOHN, an English bishop and writer, born about 1601; died in 1665. He was educated at Oxford, and after writing some short poems gave to the world anonymously in 1628 *Microcosmographie, or a Piece of the World discovered in Essays and Characters*—a work full of wit, humor and admirable character painting. He was tutor to Charles II, accompanied him during his exile, and was held by him in the highest esteem. In 1662 he was consecrated Bishop of Worcester, and next year was translated to Salisbury.

Earle, JOHN, an English philologist, born at Elston, South Devon, in 1824. In 1876 he became professor of Anglo-Saxon at the University of Oxford. He published many philological works, including *The Philology of the English Tongue*, *Anglo-Saxon Literature*, *English Prose*, *The Psalter of 1539*, etc.

Earle, PLINY, physician, was born at Leicester, Massachusetts, in 1809; died in 1892. He became a prominent worker among the insane, being resident physician at the Frankford In-

Earl-marshal

sane Asylum, Philadelphia, 1840-42; at Bloomingdale, New York, 1844-49; and superintendent of the Massachusetts State Hospital for the Insane, 1864-85. He studied the European methods of treating the insane and published many valuable works on the subject.

Earl-marshal, a great officer of England, who had, anciently, several courts under his jurisdiction, as the court of chivalry and the court of honor. He is the head of the College of Arms (Heralds' College), grants armorial bearings, and determines all claims in connection with them. The office is hereditary in the family of the Howards. There was also an earl-marshal of Scotland, the office being hereditary in the Keith family.

Earlom (er'lom), RICHARD, an English mezzotinto engraver, born in 1743; died in 1822. His engravings from Reynolds, Hogarth, Van Huisum, etc., are very fine.

Early (er'li), JUBAL A., an American soldier, born in Franklin Co., Virginia, in 1816; died in 1891. He was graduated at West Point in 1837, served in the Florida and Mexican wars, and in 1861 joined the Confederate army, commanding a division of Lee's army at Gettysburg. In 1864 he made a cavalry raid on Chambersburg, Pennsylvania. Placed in command in the Shenandoah Valley, he was worsted there by General Sheridan. He practiced law after the war.

Early English Architecture,

the first of the Pointed or Gothic styles of architecture that prevailed in England. It succeeded the Norman in the Reign of Richard I (1189), and continued to the end of the reign of Henry II in 1272, a period of 123 years, when it gradually merged into the Decorated style. One of the leading peculiarities in this style is the form of the windows, which are narrow in proportion to their height, and terminate in a pointed arch, resembling the blade of a lancet. Throughout the early period of the style they are very plain, particularly in small churches; but in cathedrals and other large buildings the windows, frequently combined two or more together, are carried to a great height, are richly and deeply molded, and the jambs ornamented with slender shafts. On the eastern and western fronts of small churches the windows are often combined in this manner, with a circular window above and a richly molded door below; but in large buildings there is often more than one range of windows, and the combina-

Early English Architecture

tions are very various. Though separated on the outside, these lancets are in the interior combined into one design, thus giving the first idea of a compound window. The doorways are in general pointed, and in rich buildings sometimes double; they are usually molded, and en-

Early English Style.—Northwest Transept of Beverley Minster.

riched with the tooth ornament. The buttresses are often very bold and prominent, and are frequently carried up to the top of the building with but little diminution, and terminate in acutely-pointed pediments, which, when raised above the parapet, produce in some degree the effect of pinnacles. In this style, likewise, flying buttresses were first introduced (see *Buttresses*), and the buttresses themselves much increased in projection owing to the comparative lightness of the walls, which required some counter-support to resist the outward pressure of the vaulting. The roof in the Early English style appears always to have been highly pitched, and the towers surmounted by lofty pointed spires, as at Salisbury Cathedral (illustrated at *Gothic*). In the interior the arches are usually lancet-shaped, and the pillars often reduced to very slender proportions. As if to give still greater lightness of appearance, they are frequently made up of a center pillar, surrounded

by slight detached shafts, only connected with the pillar by their capitals and bases, and bands of metal placed at intervals. These shafts are generally of Purbeck marble, the pillar itself being of stone, and from their extreme slenderness they sometimes appear as if quite inadequate to support the weight above

Early English Style.—Detached Shafts in Lady Chapel, Salisbury Cathedral.

them. Some of the best examples are to be seen in Salisbury Cathedral. The architects of this style carried their ideas of lightness to the utmost limits of prudence; and their successors have been

Early English Capital, Salisbury.

afraid to imitate their example. The abacus of the capitals is generally made up of two bold, round moldings, with a deep hollow between. The foliage is peculiar, generally very gracefully drawn, and thrown into elegant curves; it is usually termed *stiff-leaved*, from the circumstance of its rising with a stiff stem from the neckhold of the capital. The trefoil is commonly imitated, and is very characteristic of the style. The moldings of this style have great boldness, and produce a striking effect of light and shade. They consist chiefly of rounds

separated by deep hollows, in which a peculiar ornament, called the *dog's-tooth*, is used, whenever ornament can be introduced. This ornament is as characteristic of the Early English as the zig-zag is of the Norman. See *Dog's-tooth*.

Earnest (er'nest), in law, any sum paid in advance, to bind parties to the performance of a verbal agreement, or something given by a buyer to a seller as a pledge of adherence to a bargain. The party is then obliged to abide by his bargain, and is not discharged upon forfeiting his earnest. In the United States the general view is, that the sum paid as earnest, however small, is part of the price.

Ear-ring, an ornament for the ear, consisting of a ring or hook passing through the lobe, with a pendant of diamonds, pearls, or other jewels frequently attached. Ear-rings have been commonly worn among the oriental nations, and by both sexes, from the earliest times. Many Egyptian ear-rings of beautiful device have been found. Among the Greeks and Romans they were not so commonly worn by men as by women. They were somewhat generally worn during mediæval and modern times, though the use of them has now greatly decreased and in the United States has practically vanished. Among savage tribes enormous weights are often carried in the ears, their lobes being greatly distended.

Ear-shell, a name given to certain univalve molluscs of the genus *Haliotis* (which see).

Earth (erth), the planet which we inhabit, a nearly spherical body which every twenty-four hours rotates from west to east around an imaginary line called its axis—this axis having as its extremities the north and south poles respectively—while in the course of a year it completes a revolution around the sun. To an observer whose view is not obstructed, any part of the earth presents itself as a circular and horizontal expanse, on the circumference of which the heavens appear to rest. Accordingly, in remote antiquity, the earth was regarded as a flat, circular body, floating on the water. But even in antiquity the spherical form of the earth began to be suspected. It is only on this supposition that we can explain how the horizon of vision grows wider and wider the higher the position we choose, how the tops of towers and mountains at a distance become visible before the bases, how the hull of a ship disappears first as she sails away, and how, as we go from the poles towards the equator, new

stars become visible. Besides these proofs, there are many others, such as the circular shadow of the earth seen on the moon during an eclipse, the gradual appearance and disappearance of the sun, and especially the fact that since 1519 the earth has been regularly circumnavigated.

The earth is not, however, an exact sphere, but is very slightly flattened at the poles, so as to have the form known as an *oblate spheroid*. In this way the *polar diameter*, or diameter from pole to pole, is shorter than the diameter at right angles to this—the *equatorial diameter*. The most accurate measurements make the polar diameter about 27 miles less than the equatorial, the equatorial diameter being found to be 7925.6 miles, and the polar 7899.14. The earth is regarded as divided into two halves—the northern and the southern hemisphere—by the *equator*, an imaginary line going right around it midway between the poles. In order to indicate with precision the position of places on the earth, additional circles are imagined to intersect one another on the surface in such a manner that those of the one set all pass through both poles, while those of the other are drawn parallel to the equator. The former are called *meridians*, the latter *parallels of latitude*, and by them we can tell the latitude and longitude, and thus the exact position of any place.

Many experiments by various methods have been made in order to determine the average density of the earth, that is, the quantity of matter it contains. Among these methods may be mentioned: (1) that of determining the attraction of a mountain on the direction of a plumb-line and calculating from thence the density of the earth; (2) that founded on the difference of oscillation in a pendulum when placed at the summit of a mountain and when at the sea-level; (3) the converse of the preceding method, by the determination of the difference of gravity at the top and the bottom of a deep mine, by pendulum experiments; (4) Cavendish's experiment with the torsion balance, which attempts to compare the attractive force of two large lead balls over other two small lead balls, with that exercised by the earth. From these and other experiments it has been calculated, taking the mean of all results, that the density of the earth is to that of water as 5.639 to 1.

The earth, in common with the other planets, moves around the sun, completing its revolution in about 365 days and six hours, and thus forming our common

year. The orbit of the earth is an ellipse, with the sun in one of its foci. Hence the earth is not equally distant from the sun in all parts of the year; being about 3,000,000 miles nearer at one time than another, its least distance (*perihelion* distance) according to recent calculations about 91,300,000 miles, its greatest (*aphelion* distance) 94,300,000, and the mean distance, or half the length of the long axis of the orbit, 92,800,000 miles. From this it may be calculated that the velocity of the earth in its orbit is about 17 miles a second. In winter (speaking of the northern hemisphere) the earth is nearest the sun and in summer farthest from it; for the difference in the summer and winter temperature is not occasioned by the greater or less distance of the earth from the sun, but by the more or less oblique direction of the sun's rays. The passage of the earth round its orbit causes the sun to appear as if it described a similar orbit in the heavens; and hence it is that at one time of the year one group of stars is seen in the neighborhood of the sun at sunrise and sunset and at another time another group. This apparent path of the sun is the *ecliptic*, and corresponds with what would be the path of the earth as seen from the sun; and the groups of stars through which the sun successively passes from the zodiac.

The earth's daily motion about its own axis takes place, according to mean time, in twenty-three hours, fifty-six minutes and four seconds. The diurnal revolution is the occasion of the alternation of day and night. As the axis on which the earth performs its diurnal rotation forms with the plane of its path about the sun an angle of $23\frac{1}{2}^{\circ}$ (which angle also represents that between the plane of the ecliptic and the plane of the earth's equator), the sun ascends in the heavens, from March 21 to June 21 (the summer *solstice*), about $23\frac{1}{2}^{\circ}$ above the equator towards the north pole, and descends again towards the equator from June 21 to September 23; it then sinks till December 21 (the winter *solstice*), about $23\frac{1}{2}^{\circ}$ below the equator, towards the south pole, and returns again to the equator by March 21. This arrangement is the cause of the seasons, and the inequality of day and night attending them. For all countries lying beyond the equator, day and night are equal only twice in the year (at the *equinoxes*). At the summer solstice the north pole of the earth is turned towards the sun, and the south pole away from it, and for $23\frac{1}{2}^{\circ}$ round the former there is a

period of longer or shorter duration during which the sun is continually above the horizon for more than 24 hours, while round the latter there is an equal extent of surface within which the sun for similar periods is below the horizon. (See *Day*.) The reverse state of matters occurs at the winter solstice. The circles bounding these regions are called respectively, the *arctic* and the *antarctic* circle, and the regions themselves the *polar* or *frigid zones*. Throughout a region extending to $23\frac{1}{2}^{\circ}$ on each side of the equator the sun is directly overhead at every point in succession twice in the year. The circles which bound this region are called the *tropics*, that in the northern hemisphere being the tropic of *Cancer*, that in the southern the tropic of *Capricorn*, while the region between is the *torrid zone*. The regions between the tropics and the polar circles are, respectively, the *north* and *south temperate zones*.

From the evidence furnished by volcanoes, hot springs, sinking of mines, etc., it is known that the earth has a high internal temperature of its own. Taking the average of the various observed rates of increase, this temperature seems to increase 1° Fahr. for every 60 feet of descent. Assuming this to continue, the rocks at a depth of 2 miles would be as hot as boiling water, and at a depth of 50 miles the heat would equal that which at the surface would melt every known solid. This being so, various theories as to the internal condition of the earth have been proposed: (1) That a thin envelope or crust surrounds a molten interior. It can be shown, however, that as tides must be produced in such a molten mass the cool outer crust would be unable to withstand the enormous force of these unless it were about 2000 miles thick. (2) That the interior is solid, with spaces here and there filled with liquid or gaseous material. This theory assumes that there are within the earth enormous cavities filled with molten rock, which escapes when local pressure is removed in the form of volcanic outbursts. (3) That the earth consists of a thin crust, a large solid nucleus and a liquid film between the nucleus and the crust; the temperature at the center being not much greater than comparatively near the surface. (4) That the earth is solid to the center, but any part may become liquid if local pressure is removed. We know that if the pressure on a solid be increased the melting point is correspondingly raised; now the pressure at the center of the earth, or even at the depth

of 50 or 100 miles, must be something enormous, and probably is so great as to keep the rocks there permanently in a solid condition, notwithstanding the heat. This last theory is considered the most probable. On the supposition of its correctness volcanoes might be explained by supposing that at certain points here and there pressure is removed by the elevations of portions of the earth's surface which are constantly taking place, and that this allows the rocks to liquefy. Water may then percolate down to these liquid rocks, and there being converted into steam, produce the various volcanic phenomena.

The earth (like the other planets) is believed to have condensed and solidified from a gaseous or nebular condition, and to have once had a far higher temperature than now. If such were the case the outer surface, losing heat by radiation, would be the first part to cool quickly; while the interior, losing its heat by conduction, would not cool so rapidly, and therefore would naturally have a higher temperature than the portion at the surface. This is what all observations indicate the condition of the earth to be, and the shape of the earth also indicates that it must once have been in a fluid state. Even the time at which it was in the fluid state has been roughly calculated by Sir W. Thomson, whose estimate makes it about 200,000,000 years ago. But all such calculations are very doubtful in view of the paucity of known facts bearing on the situation. See *Nebular Hypothesis*.

Another feature that the earth as a whole presents is its magnetism. When a magnetic needle is balanced on a point it remains at rest in one position only, pointing then nearly due north and south. This can be explained only on the supposition that the earth acts as a great magnet. It has, in fact, two poles—a north and a south magnetic pole—which are not very far from, but by no means coincident with, the geographical poles. There is also a neutral line or magnetic equator, which does not greatly diverge from the geographical equator. The earth acts upon all magnets as they act upon each other, and it is for this reason that they point north and south.

The surface of the earth contains over 196,000,000 square miles, of which scarcely a third part is dry land, the remaining two-thirds being water. The land is arranged into masses of irregular shape and size, the greatest connected mass being in the eastern hemisphere. The chief masses receive the name of continents, detached masses of smaller

size forming islands. The surface of the land is variously diversified, exhibiting mountains, valleys, plains, plateaus, deserts, etc. The water area of the earth is divided into oceans, seas, bays, gulfs, etc., while rivers and lakes may be regarded as features of the land surface. The great phenomena of the oceans are currents and tides. The population of the whole earth is estimated at about 1,500,000,000. The earth is attended by the moon as a subordinate or subsidiary planet. See also such articles as *Climate*, *Currents*, *Ocean*, *Earthquake*, *Seasons*, etc.

Earth-closet, a place in which the fæces from the human body are received in a quantity of earth. The advantages of the earth-closet system are due to the fact that dry earth is one of the best disinfectants and deodorizers, and that the compound formed by the combination of the fæcal matter and the earth is valuable and easily applied as manure. In large cities the earth-closet system would hardly be practicable on account of the expense of preparing and storing large quantities of earth, but in agricultural districts the system might be employed with great advantage.

Earth-currents, violent electrical disturbances of the nature of transient currents, which rush in one direction or the other, and by which telegraph lines, and particularly long submarine lines, are constantly troubled. Their origin and nature are not thoroughly understood, but they are found to be very intimately connected with the perturbations of terrestrial magnetism called *magnetic storms*, and these, it is well known, are closely connected both with the appearance of the *aurora borealis* and with the occurrence of the sun's spots.

Earthenware (er'thn-wār), a name applied to the commoner sorts of pottery ware. See *Pottery*.) Some of the varieties of earthenware, such as Majolica, Delft ware, Faïence and Palissy ware, are not only glazed, but are elaborately colored and enameled and ornamented with raised figures of various kinds.

Earth-houses, a name generally given throughout Scotland to underground buildings, also known as 'Picts' houses' or 'Picts' dwellings.' The earth-house in its simplest form consists of a single irregular-shaped chamber, formed of unhewn stones, the side walls gradually converging towards the top until they can be roofed by stones of 4 to 5 feet in width,

all covered in by a mound of earth rising slightly above the level of the surrounding district. In the more advanced form of these structures two or three chambers are found. Earth-houses are frequent in the northeast of Scotland, occasionally thirty or forty being found in the same locality. Querns, bones, deers' horns, earthen vessels, cups and implements of bone, stone celts, bronze swords, and the like, are occasionally found in connection with them. Very similar structures, known as beehive houses, occur also in Ireland.

Earthnut, the *Bunium flexuosum*, an unbelliferous plant common in woods and fields in Britain. The leaves are ternately divided, and the small, white flowers are in terminal umbels. The tuber or nut is about 4 or 6 inches below the surface, at the termination of a long, slender root. It is brown, the size of a chestnut, of a sweetish, farinaceous nature, resembling in taste the common chestnut. Swine are very fond of the nuts, and fatten rapidly where they are abundant. The name is frequently applied to *Bunium Bulbocastanum*, which has a similar tuber. The earthnut of Egypt is the tuber of *Cyperus rotundus* and other species of the same genus, that of China the subterranean pods of *Arachis hypogæa*, a leguminous plant.

Earthquake (erth'kwāk), a shaking of certain parts of the earth's surface, produced by causes not perceivable by our senses. This motion occurs in very different ways, having sometimes a perpendicular, sometimes a horizontally undulating, and sometimes a whirling motion. It also varies much in degrees of violence, from a shock which is hardly perceptible to one which leaves wide chasms and changes the appearance of the ground itself. During these shocks sometimes smoke and flames, but more frequently stones and torrents of water, are discharged. There is little doubt that earthquakes and volcanic eruptions are kindred phenomena, the latter differing from the former principally in proceeding from a permanent crater. All observations go to prove that both are due to disruptions produced by internal heat at a great depth beneath the surface of the earth. Of the particular way in which this force works, however, there are various theories. It has been thought by some that the center of earthquakes and volcanic disturbances is always near the sea or other large supplies of water, and that the disturbances are directly caused by the filtration of the water down to igneous matter, and

the consequent generation of vast quantities of steam, which frees itself by explosion. (See *Earth*.) Others have sought to explain earthquakes as part of the phenomena of a planet cooling at the surface or to the yielding of strata so as to slip downward upon each other. The most remarkable earthquakes of modern times are those which destroyed Lima in 1746, and Lisbon in 1755; others more recent are the earthquakes that visited Calabria in 1857, Peru and Ecuador in 1868, Java and Sumatra in 1883, Charleston in 1886 and Japan in 1901. The twentieth century has been notable for several earthquakes of exceptional severity, including those which largely destroyed the cities of San Francisco and Valparaiso in 1906 and Kingston, Jamaica, in 1907, and that which destroyed Messina, Sicily, with exceptional loss of life, in December, 1908.

Earths, a term applied to certain tasteless, inodorous, dry, un-inflammable, nonvolatile, insoluble substances, not easily fusible, and of a moderate specific gravity, which constitute by far the greatest part of the gravel and soil that go to make up the mountains, valleys and plains of our globe. They include *lime*, *baryta*, *strontia*, *magnesia*, *alumina*, etc. The earths were regarded as simple bodies until Sir H. Davy proved them to be compounds of oxygen with metals.

Earth-shine, in astronomy, a name given to the faint light visible on the part of the moon not illuminated by the sun, due to the illumination of that portion by the light which the earth reflects on her. It is most conspicuous when the illuminated part of the disc is at its smallest, as soon after new moon. This phenomenon is popularly described as 'the old moon in the new moon's arms.'

Earth-tongue, the popular name given to club-shaped fungi of the genus *Geoglossum*, found in lawns and grassy pastures.

Earth-tremors, slight vibrations of portions of the earth's surface, which may be noted by means of special instruments, their cause not being known.

Earthworks (in fortification) are military works formed chiefly of earth and designed either as permanent or temporary defenses. They are cheaper, more easily repaired, and expose their defenders to less risk from broken stone than stoneworks.

Earthworm (*Lumbricus terrestris*), a genus of common worms, order Oligochæta, belonging to

the abbranchiate (having no branchiæ or external respiratory organs) section of the class Annelida. They have a long, cylindrical body, divided by transverse furrows into numerous rings. The mouth is destitute of teeth, and they have no eyes, tentacles or cirrhi. They are hermaphrodite. The common earthworm may grow to be nearly a foot in length. It subsists on roots, woody fibers, animal matter, etc. It moves by the contractions of successive parts of the body aided by a double row of bristles. Worms are of great service to the agriculturist by loosening the soil and increasing its depth. This is chiefly the result of their mode of nourishment, since they deposit the soil they have swallowed, after digestion, in heaps called *worm castings*, which bring up rich, fine soil to the surface, gradually covering the upper layer, sometimes to the extent of several inches.

Ear-trumpet, an artificial instrument for aiding the collection of the vibrations or waves of sound, and carrying them in an intensified form to the internal parts of the ear. They are generally made of tin, vulcanite, gutta-percha, etc., and are of various forms. A small kind known as ear-cornets or acoustic auricles, attached to the ear by a spring, are sometimes used in slight cases of deafness.

Earwig (ēr'wig; *Forficula*), a common orthopterous insect

whose name is derived from its supposed habit of insinuating itself into the ears of persons. This is practically impossible, yet the notion is widely spread, as appears from the names given to the earwig in different languages, as in French *perce-oreille* (pierce-ear), in German *ohrenhöbler* (ear-borer). Much damage is sustained by gardeners from the depredations of these insects among fruit and tender vegetables, which constitute their proper food. The earwig is about three-quarters of an inch in length, having the wings folded under very short and truncate elytra or wingcases, and the extremity of the abdomen armed with a horny forceps.

Easel (ē'zel), the frame on which an artist supports his canvas. It is usually made to fold up after use.

Easement (ēz'ment), in law, a right or privilege which one proprietor may have to use the land of another in connection with the needs of his own land, as the use of a way, a

Earwig
(*Forficula auricularis*).

water-course, etc. The right to an easement may be acquired either by grant or by uninterrupted enjoyment for a period of years.

East (ēst), one of the four cardinal points, being the point in the heavens where the sun is seen to rise at the equinox, or the corresponding point on the earth; that point of the horizon lying on the right hand when one's face is turned towards the north pole. By *the East*, in an indefinite sense, is often meant Asia Minor, Syria, Arabia, Persia, India, China, etc.

Eastbourne (ēst'burn), a watering place of England, county of Sussex, situated on the English Channel, near Beachy Head. The town is handsomely built, having fine parades and well-planted walks and drives. Pop. 52,544.

East Cape, the most easterly point of Asia, projecting into Bering Strait nearly opposite Cape Prince of Wales in Alaska.

East Chicago, a city of Lake Co., Indiana, 23 miles S. E. of Chicago. It has bridge, steel, iron and chemical works, lumber factories, etc. Pop. 19,098.

East Cleveland, a village of Cuyahoga Co., Ohio, 8 miles E. N. E. of Cleveland, with electric railway connection. Pop. 9179.

East Conemaugh, a borough of Cambria Co., Pennsylvania, near Johnstown. It has iron furnaces. Pop. 5046.

Easter (ēs'ter), the festival commemorating the resurrection of Christ, observed in the Roman Catholic, the Greek, Anglican, Lutheran and other branches of the Christian church. By the first Christians it was considered to continue the feast of the *passover*, at which the paschal lamb, a type of Christ, was sacrificed. Hence its name in Greek (*pascha*), French (*pâques*), and other Romance languages, is taken from the Hebrew *pesach*, *passover*. The English name comes from the Anglo-Saxon *Eostre*, a goddess of light or spring, whose festival was celebrated in April. There was long a dispute in the Christian church as to the proper time for holding Easter, the Christians of the East celebrating it on the same day as that on which the Jewish *passover* fell, that is, the fourteenth of Nisan (hence they were called *quarto decimani*), while the majority of the church celebrated it on the Sunday next after this day. The controversy was decided by the Council of Nice (Nicæa) in 325, which settled that it was to be reckoned as at present,

namely, that Easter is the first Sunday after the full moon which happens upon or next after the 21st of March, and if the full moon happens on a Sunday, Easter-day is the Sunday after, but, properly speaking, for the 'full moon' in the above the 'fourteenth day of the moon' should be substituted.

Easter Egg, a colored or decorated egg, or something of egg shape, as candy, used as a gift at Easter. The custom is an ancient one, antedating Christianity. As the egg is looked upon as a symbol of life, it may have originated to signify the birth of the year or of the spring. When adopted by the Church Fathers for the Easter festival, it was looked upon as symbolizing the birth into a new life. The coloring of the egg was probably adopted simply to please children.

Easter Island, an island in the South Pacific Ocean, lon. 109° 17' W.; 27° 6' S. It is of a triangular form, one side about 12 miles long, the other two about 9 each; highest point, 1200 feet. The soil is fertile, but is little cultivated. There are some remarkable sculptures on this island, consisting of gigantic stone images, of unknown origin, in great numbers. The greater part of the island belongs to an Englishman, and is utilized as a grazing farm for sheep and cattle. The inhabitants now number only about 150, the bulk of them having recently been transported elsewhere.

Eastern Archipelago. See *Malay Archipelago*.

Eastern Churches, a collective term for the Greek, Armenian, Coptic, Abyssinian, Syrian and other kindred churches.

Eastern Empire. See *Byzantine Empire*.

Eastern Question, the name formerly applied to the diplomatic and national interests affected by the gradual retrocession of the Turkish Empire in Europe, and the problem of disposing of the territory thus left, or presumably to be left. Bulgaria, Roumania, Servia and Greece are the new states which have naturally arisen on the withdrawal of the Turkish power, and their history in connection with the respective policies of England, France, Austria and Russia towards them is the history of the phases of the 'Eastern Question' so far. The Crimean war of 1854-56, with the Treaty of Paris which followed after it, and the Russo-Turkish war of 1877-78, with the Treaty of Berlin, are among the events connected

therewith. As an international problem it has largely lost its importance, and the term is now rarely used.

Eastern Roumelia, a former portion of the Turkish dominions in Europe lying on the south of Bulgaria, from which it is separated by the Balkan Mountains; area, 13,500 sq. miles. The country is fertile, but agriculture is backward; wheat, wine, tobacco, etc., are produced; timber is abundant. The chief town is Philippopolis. East Roumelia was constituted an autonomous province of Turkey by the Treaty of Berlin in 1878, but in 1885 a revolution occurred and the province was proclaimed a part of Bulgaria. (See *Bulgaria*.)

Eastern Shore, a section of Maryland, the eastern of the two districts into which the State is divided by the Susquehanna River and Chesapeake Bay. It contains about one-third of the area of the State, and is a level and sandy region, with some rounded hills in the north. In the south are swampy tracts and patches of woodland. The soil is in general fertile, the streams deep and navigable.

Eastern States. The New England States of the American Union. They are often thus called from their geographical position, in distinction from the Middle, Southern and Western States.

East Ham, a town of Essex Co., England, adjacent to Barking and constituting an eastern suburb of London. Pop. (1911) 133,504.

Easthampton, a town of Hampshire Co., Massachusetts, 4 miles from Northampton. It has manufactures of buttons, rubber goods, cotton yarns, etc. Pop. 8524.

East Hartford, a village in East Hartford township (town), Hartford Co., Connecticut, on the Connecticut River, opposite Hartford. It has paper works and tobacco interests. Pop. of town 8138.

East India Company, a great company, originally simply a trading association, which played an important part in the history of Hindustan. It was formed in 1599 in London, with a subscribed capital of about £30,000, for the purpose of trading with the East Indies. A charter was granted to it by Queen Elizabeth on December 31, 1600, for fifteen years, renewable for a similar period. In this charter the company is styled, 'The Governor and Company of the Merchants of London trading into the East Indies.' The first

voyages resulted in large profits. The illustration represents what is believed to have been the original headquarters of the Company, from a unique engraving in the British Museum. In 1609 the charter was renewed by James I, and made perpetual, reserving power to the crown to recall it at three years' notice. Additional power was granted to the Company of seizing and confiscating

The Old East India House, Leadenhall Street (1650).

ships and goods of contraband traders, either in the British dominions or in any of the places where they were authorized to trade. Among the motives which had induced the Company to press for this renewal of their charter was the necessity they had experienced from the jealousy of the Dutch and Portuguese to send out vessels fitted not only for trade, but for defense and indeed attack. Accordingly, Captain Best, who commanded the eighth expedition, attacked four Portuguese war galleons, convoying 200 sail of merchantmen, off Surat, and gained a complete victory, which so impressed the Great Mogul that he immediately made a treaty with Captain Best, giving the English full liberty to trade in his dominions. This treaty was concluded on February 6, 1613. In 1619 a treaty was made with the Dutch, by which the two companies were to work in harmony for twenty years but in

1629 the Dutch massacred the leading members of the English factory at Amboyna. In the feeble reigns of James and Charles I, however, the outrage remained unredressed, and the English Company, ill supported by the crown, was often reduced to great straits. Their trade, impeded by the Dutch, became unprofitable, and, to add to their difficulties, Charles I in 1635, gave a license to a rival company. At length, under Cromwell, the Company received a new charter. A territorial footing had been acquired in Madras in 1640, to which settlement was given the control of all the factories in Bengal and the Coromandel coast, the supreme council in India still remaining at Surat. A new charter, granted by Charles II in 1660, enlarged the powers of the Company, giving it political and judicial authority in the factories and colonies established by it, with the right to appoint governors. On the Revolution of 1688 the Company was involved in new difficulties, and in 1692 the Commons presented an address to the crown praying for their dissolution. At this time, by an accidental failure to pay a tax upon their stock, the Company formally forfeited their charter, and were compelled to accept its renewal with the important proviso of a reservation to the crown of the right to alter or modify its conditions. The misconduct of the English Company so strengthened its enemies that, in spite of all its opposition, a resolution in favor of the formation of a new company passed the House of Commons on May 4, 1698. This act provided for the extinction of the old company, but an amalgamation was eventually arranged in 1708. The possessions of the old company at the time of amalgamation, upon which the valuation of £330,000 was placed in 1700, included a large number of places in India, a footing having been by this time acquired in each of the three presidencies, besides possessions in Persia, Cochin-China, Sumatra, etc. The dividends of the Company rose rapidly after the amalgamation, and finally settled at 8 per cent.; and it procured without difficulty, at various periods, a prolongation of its exclusive privileges until 1780, still with three years' notice. In the meantime the French possessions had, as well as the English, been growing in power and importance in the East, and on the outbreak of the war of the Austrian Succession, in 1741, commenced those struggles (Clive being the first great English leader) by which a mercantile company was led on to establish

British supremacy over nearly the whole of India. (See *India*.) In 1766 the right of the Company to acquire territorial possessions formed a subject of parliamentary inquiry; and the question of the political rights of the Company being thus opened up, the ministry began to act on their view of it by sending out a crown plenipotentiary to India. A regulating act was passed in 1773 remodeling the powers of the Company, and placing it completely under the control of parliament, providing for the establishment by the crown of courts of judicature in India. The charter, which expired in 1780, was renewed till 1791. The renewal act provided that the Company, which was already bound to submit to the government all despatches received from India, should submit for approval all despatches proposed to be transmitted thither. In 1784 another act established a board, afterwards known as the board of control, to superintend, direct and control all acts, operations and concerns relating to the civil and military government or revenues of India. The board was to consist of a principal secretary of state, the chancellor of the exchequer and four privy-councilors nominated by the crown. The directors of the Company were bound to submit all their papers except those referring to commercial matters to this board, and obey its instructions. From this time the political power of the Company was little more than nominal. While the right of nominating the servants of the Company was still left to the directors, the absolute right of recall was vested in the crown. A subsequent declaratory bill regulated the power of the board of control to send out troops at the expense of the Company. In 1813 the charter was renewed on condition that the right of exclusive trade should be restricted to China, while the India trade should be thrown open to all British subjects. A church establishment for India was also provided by this act. The appointment of governors-general, governors and commanders-in-chief was no longer to be valid without the direct sanction of the crown. The renewal of the Company's charter in 1834 took place amid continued opposition to their mercantile and even to their legislative privileges. It continued them in all their possessions except the island of St. Helena, put an end to the exclusive right of trade with China, and enacted that the Company should with all convenient speed close their commercial business, and make sale of all their property not retained for govern-

ment purposes; all their other property was to be held in trust for the crown, which was to take over their debts and guarantee their dividend out of the revenues of India. The stock was valued at £6,000,000, which was to bear interest at 10 per cent., and be redeemable after April 30, 1874, on payment of £12,000,000. The Company was now fairly in liquidation, and on the outbreak of the mutiny of 1857 it was felt indispensable to vest the government of India directly in the crown, and this was accordingly done in 1858. Thenceforth the Company existed only for the purpose of receiving payment of its capital, and of the dividends due upon capital until its repayment.

East Indies, the name loosely applied to Hindustan, the Indo-Chinese peninsula, and a portion of the Eastern Archipelago, but excluding the Philippine Islands, New Guinea and Australia.

Eastlake (ēst'lāk), SIR CHARLES LOCK, an English painter, president of the Royal Academy, born at Plymouth in 1793; died in 1865. He studied at the Royal Academy, London, and at Paris. In 1817 he visited Italy and Greece, and painted his *Pilgrims arriving in sight of Rome* and other pictures. In 1830 he was elected member of the Royal Academy, and in 1850 became its president, receiving at the same time the honor of knighthood. In 1843-47 he was keeper of the National Gallery, of which he was latterly director for about ten years. He also became known as a writer on art by his *Materials for a History of Oil-painting*.

East Liverpool, a city of Columbiana Co., Ohio, 44 miles w. n. w. of Pittsburgh, on the Ohio River. It has extensive porcelain, earthenware, terra-cotta and flint works. Pop. 20,387.

East London, a seaport of Cape Colony, on the s. e. coast, at the mouth of Buffalo River. It is the third port for export trade in the colony. Pop. about 13,000.

Easton, a city, capital of Northampton Co., Pennsylvania, on the Delaware River, at the mouth of the Lehigh, 65 miles n. of Philadelphia. It is built in a hilly country and is surrounded by picturesque scenery. Bridges connect it with Phillipsburg, New Jersey, and with South Easton. Here is Lafayette College, founded in 1826. Easton has iron furnaces, silk, flour and planing mills, and various other industries, and is at the junction of the Delaware, Lehigh and Morris canals, which convey large

quantities of coal, iron, grain, etc. Pop. 28,523.

Easton, a village and township (town) of Bristol Co., Massachusetts, 25 miles s. of Boston. It produces shovels, wire goods, automobiles, etc. Pop. of town, 5139.

East Orange, a city of Essex Co., New Jersey, adjoining Newark. It has manufactures of dynamos, electrical appliances, etc., and contains the residences of many business men of New York. Pop. 34,371.

East Pittsburgh, a borough of Allegheny Co., Pennsylvania. It has large electric and other industrial plants. Pop. 5615.

Eastport, a seaport of Maine, on Moose Island, in Passamaquoddy Bay. The tide here rises about 25 feet, and prevents the harbor from being obstructed with ice. The city is a fishing port and is the center of the sardine canning industry in the United States. It has also an extensive lumber trade and various manufactures. Fort Sullivan defends the harbor. Pop. 4961.

East Providence, a township of Rhode Island, separated from Providence by the Seekonk River. It has chemical, electrical and wire works. Pop. 15,808.

East River, a strait in the s. e. corner of New York, separating Manhattan Island from Long Island, and dividing the two principal sections of New York city. It connects Long Island Sound with New York Bay and is crossed by a number of great suspensions bridges, while railroad and trolley car tunnels run beneath its waters. It is about 10 miles long and ½ mile wide at its narrowest part, and contains Blackwell's, Ward's and Randall's islands.

East St. Louis, a city of St. Clair Co., Illinois, opposite St. Louis, Missouri, with which it is connected by a great steel railroad bridge. It is a terminus of 18 railroads, and contains stockyards which are among the largest in the United States, and extensive packing houses. Its mule market is the leading one in the country. Its manufactures include extensive breweries, rolling mills and other ironworks, and large coaling and coking industries. Pop. 58,547.

Eau (ō), a French word signifying *water*, and used in English with some other words for several spirituous waters, particularly perfumes, as *eau de Cologne*, *eau de Luce*, etc.—*Eau de Cologne* is a fragrant water, made originally and in most perfection in Cologne by a manufacturer named Farina,

by whose successors the only genuine water is said still to be manufactured. It consists of spirits of wine flavored by different essential oils blended so as to yield a fine, fragrant scent.—*Eau Créole*, a highly esteemed liqueur made in Martinique by distilling the flowers of the mammee apple with spirit of wine.—*Eau de Luce* ('water of Luce'), so called from the name of its inventor, is made by dissolving white soap in spirit of wine, and adding oil of amber and sal ammoniac. It is a milky fluid, antispasmodic and stimulant.—*Eau de Vie* ('water of life'), a term used by the French for the coarser kinds of brandy, *cognac* being the name of the best.

Eau Claire (ō klār), a city of Wisconsin, capital of a county of the same name, at the junction of the Eau Claire and Chippewa rivers at the head of navigation. Several railroads center here, and its lumber business is very large and important. Its other industries are varied. Pop. 18,310.

Eaux-bonnes (ō-bon), a watering place of France, department Basses Pyrénées, about 25 miles south of Pau. The hot sulphur springs are said to have great efficacy in affections of the chest. Pop. (1906) 610. Near it is *Eaux Chaudes*, also with warm springs.

Eavesdropper (ē v s-d r o p' e r), one who stands under the eaves or near the window or door of a house to listen and hear what is said within doors. In English law an eavesdropper is considered as a common nuisance and is punishable by fine.

Ebal (ē'bal), a mountain of Western Palestine, about half-way between Jerusalem and Nazareth, on the north side of a narrow valley, on the south side of which and directly opposite stands Mt. Gerizim with Nablous almost between. Here the Israelites set up an altar on their entrance into the Holy Land and had the law solemnly read to them by Joshua (Josh., viii, 30-35). At the east end of the valley are Jacob's well and Joseph's tomb.

Ebb. See *Tide*.

Ebbsfleet (ebs'flēt), a hamlet in the Isle of Thanet, County Kent, memorable as the place where the first Anglo-Saxon invaders landed.

Ebbw-vale (eb-bō'vāl), a town of England, in Monmouthshire, with ironworks, steelworks and collieries. Pop. (1911) 30,559.

Ebelians (e-bē'li-ans), a German religious sect originating at Königsberg in 1836, under the leadership

of Archdeacon Ebel. They professed what they called spiritual marriage. In 1839 their leaders were condemned for unsound doctrine and impure lives.

Ebenaceæ (e-be-nā'se-ē), a natural order of exogenous plants, consisting of trees and shrubs, of which the wood is very hard, and frequently of very dark color in the center, as ebony. The leaves are alternate, and generally coriaceous and shining; calyx monosepalous and persistent, with three or six equal divisions; corolla monopetalous, with imbricated divisions. The fruit is a globular berry containing a small number of compressed seeds. The principal genus is *Diospyros*, which yields ebony and ironwood. See *Ebony*.

Ebers (ā'bérz), GEORG MORITZ, a German Egyptologist and novelist, born in 1837 at Berlin; studied at Göttingen, and afterwards at Berlin, where he devoted himself to Egyptology. In 1870 he was made professor at the University of Leipzig. He made more than one visit to Egypt. His most important works have been translated into English, such as *Egypt, Descriptive, Historical and Picturesque*, and the novels, *An Egyptian Princess*, *Uarda*, *Homo Sum*, *The Emperor*, *The Sisters*, all dealing with old Egyptian life; *The Burgomaster's Wife*, *Only a Word*, etc. Died in 1898.

Ebionites (eb'i-on-its), a sect of the first century, so called from their leader, Ebion. They held several dogmas in common with the Nazarenes, united the ceremonies of the Mosaic institution with the precepts of the gospel, and observed both the Jewish Sabbath and Christian Sunday. They denied the divinity of Christ and rejected parts of the New Testament.

Eblis (eb'lis), in Mohammedan mythology, the chief of the evil spirits.

Eboli (eb'ō-lē), a town of Southern Italy, province of Salerno. Here is an old castle, commanding a splendid view. Pop. of town 9642; of commune 12,423.

Ebonite (eb'on-īt). See *Vulcanite*.

Ebony (eb'un-i), the popular name of various plants of different genera, agreeing in having wood of a dark color. The best-known ebony is derived from plants of the genus *Diospyros*, nat. order Ebenaceæ. The most valuable is the heart-wood of *D. Ebēnus*, which grows in great abundance in the flat parts of Ceylon, and is of such size that logs of its heart-wood 2 feet in

diameter and from 10 to 15 feet long are easily procured. Other varieties of valuable ebony are obtained from *D.*

Ebony (*Diospyros Ebenus*).

Ebenaster of the East Indies and *D. melanoxylon* of Coromandel. Ebony is hard, heavy and durable, and admits of a fine polish or gloss. The most usual color is black, red, or green. The best is jet black, free from veins, very heavy, astringent, and of an acrid, pungent taste. On burning coals it yields an agreeable

perfume, and when green it readily takes fire from its abundance of fat. It is wrought into toys, and used for mosaic and inlaid work.

Ebro (ē'brō; Latin, *Ibērus*), a river in Spain, which has its source in the province of Santander, about 25 miles s. of the Bay of Biscay, and after a southeasterly course of about 500 miles enters the Mediterranean. Its navigation is much interrupted by rapids and shoals, to avoid which a canal about 100 miles long has been constructed nearly parallel to its course.

Ebullition (ē'bul-ish'un), the boiling of a fluid. See *Boil*.

Ecarté (ā-kār'tā), a game at cards for two persons, played with thirty-two cards, the small cards from two to six being excluded. In the English mode of playing the game the players cut for the deal, which is decided by the lowest card. The dealer gives five cards to either player, three and two at a time, and turns up the eleventh card for trump. If he turns up a king he scores one, and if a king occurs in the hand of either player he may score one by announcing it before the first trick. The cards rank as follows: king (highest), queen, knave, ace, ten, etc. The non-dealer leads; trumps take all other suits, but the players must follow suit if they can. Three tricks count one point, five tricks, two points; five points make game. Before play begins the non-dealer may claim to discard (*écarter*) any of the cards in his hand, and have them replaced with fresh ones from the pack. This claim the dealer may or may not allow. Should he allow he can discard as many as he pleases. Sometimes only one discard is allowed, sometimes more.

Ecbatana (ek-bat'a-na), the chief city or ancient metropolis

of Media, the summer residence of the Median and Persian and afterwards of the Parthian kings. It was a place of great splendor at an early period. Its site can no longer be fixed with certainty, though many explorers agree in identifying it with the modern Hamadan.

Ecce Homo (ek'sē hō'mō; Latin, 'Behold the man!'), a name often given to crucifixes and pictures which represent Christ bound and crowned with thorns.

Eccentric (ek-sen'trik), a term in mechanics applied to contrivances for converting circular into reciprocating (backwards and forwards) rectilinear motion, consisting of vari-

ECCENTRIC OF STEAM ENGINE.
a, Eccentric wheel; b, eccentric strap; c, eccentric rod.

ously shaped discs attached to a revolving shaft not in their center. An *eccentric wheel* is a wheel fixed on an axis that does not pass through the center. Its action is that of a crank of the same length as the eccentricity.

Ecchymosis (ek-kī-mō'sis) is the medical term applied to the extravasation of blood beneath the skin, or in the tissues of the body, whether resulting from a bruise or any other cause.

Eccles (ek'ls), a town of England, in Lancashire, 4 miles from Manchester, of which it may be considered a suburb. Pop. (1911) 41,946.

Ecclesiastes (e-klē-si-as'tēz), the title by which the Septuagint translators rendered the Hebrew *Cohēleth* ('the gatherer of the people'), a symbolic name explained by the design of the book and the dramatic position occupied by Solomon in it, one of the canonical books of the Old Testament. According to Jewish tradition, it was written by Solomon; but the best modern criticism has decided that its style and language, no less than its thought, belong to a much later writer.

Ecclesiastical Courts, courts in which the canon law is administered and in which ecclesiastical causes are determined. In England they are the *Archdeacon's Court*, the *Consistory Courts*, the *Court of Arches*, the *Court of Peculiars*, the *Prerogative Courts* of the two arch-

bishops, the Faculty Court, and the Privy-council, which is the court of appeal, though its jurisdiction may by order in council be transferred to the new Court of Appeal. In Scotland the ecclesiastical courts are the *Kirk-session*, *Presbytery*, *Synod*, *General Assembly* (which is the supreme tribunal as regards doctrine and discipline), and the *Teind Court*, consisting of the judges of the Court of Session, which has jurisdiction in all matters affecting the teinds of a parish.

Ecclesiasticus (e-klē-si-as'ti-kus), the title of a book placed by Protestants and Jews among the apocryphal writings. The author calls himself Jesus the son of Sirach. Originally composed in Aramaic, the book was translated into Greek by the grandson of the original author about the third century B.C.

Ecclesiology (e-kle-si-ol'ō-jī), the science or branch of knowledge which deals with ecclesiastical antiquities, such as buildings, rites, vestments, etc.

Echalot (esh'a-lot). See *Shallot*.

Echelles, LES (lā-zā-shel; 'the Ladders'), a village of France, dep. Savoie, 12 miles southwest of Chambéry, in a valley from which egress at one end was formerly by means of ladders, but is now by a tunnel. Pop. 798.

Echelon (esh'e-lon), the position of an army when its different positions are somewhat in the form of steps, or with one division more advanced than another, being parallel and none of them in line.

Echeneis (ek-e-nē'is), a genus of fishes, family Scomberidæ or mackerels, having a disc on the head by which the fish can attach itself firmly to a solid object. *E. Remora* is abundant in the Mediterranean. See *Remora*.

Echeveria (ech-e-vē'ri-a), a genus of succulent plants, order Crassulaceæ (house-leek), chiefly natives of Mexico, but now cultivated in European and other gardens and greenhouses, some for their flowers, others for their foliage.

Echidna (e-kid'na), a genus of Australian monotrematous, toothless mammals, in size and general appearance resembling a large hedgehog, excepting that the spines are longer, and the muzzle is protracted and slender, with a small aperture at the extremity for the protrusion of a long flexible tongue. The habits of the echidna are nocturnal; it burrows, having short, strong legs with

five toes, and feeds on insects, which it catches by protruding its long, sticky tongue. It is nearly allied to the Ornithorhynchus, the two forming a peculiar class of animals, having in their structure some peculiarities at once of mammals, birds and reptiles. In 1884 it was found that, as Geoffroy St. Hilaire had suspected, the echidna and ornithorhynchus, although essentially mammals, were yet oviparous, producing their young from eggs. One species (*E. hystrix*), from its appearance, is popularly known as the *porcupine ant-cater*.

Echimys (ek'i-mis), a genus of South American rodent quadrupeds corresponding in some of their characters with dormice, but having the tail scaly and the fur coarse and mingled with flattened spines.

Echinite (e-kī'nīt), a fossil sea-urchin.

Echinocactus (e-kī-nō-kak'tus), a genus of cactaceous plants inhabiting Mexico and South America, and remarkable for their peculiar forms, being globular, oblong, or cylindrical, and without leaves, fluted and ribbed, with stiff spines clustered on woolly cushions. Some of them are very bulky. The flowers are large and showy. See *Cactus*.

Echinococcus (e-kī-nō-kok'us), one of the larval forms (*scolicēs*) of the tapeworm of the dog (*Tænia Echinococcus*), which may occur in man and cause serious disease.

Echinodermata (e-kī-nō-dēr'ma-ta), a class or subkingdom of invertebrate animals characterized by having a tough integument in which lime is deposited in granules (as in the starfish and sea-cucumber), or so as to form a rigid test or shell like that of the sea-urchin; and by the radial arrangement of many of the parts of the adult, though this is not necessarily carried out in the digestive and reproductive systems. They are provided with an apparatus for water circulation opening into the *ambulacra* or tubular feet, which are put into use by being distended with fluid. Some of them, as the encrinites or sea-lilies, are permanently fixed by a stalk when adult. Their development is accompanied with metamorphosis, and the embryo shows a distinctly bilateral aspect, though the radiate arrangement prevails in the adult. By some they are classed with the Scolecida in the subkingdom Annuloida. The sexes are distinct. The class is divided into seven orders: the Echinoidea (sea-urchins), Asteroidea (starfishes), Ophiuroidea

(sand-stars and brittle-stars), Crinoidea (feather-stars, encrinites, etc.), Cystidea (extinct), Blastoidea (extinct), and Holothuroidea (sea-cucumbers). All are marine.

Echinus (e-kī'nus), SEA-URCHIN, or SEA-EGG, a genus of marine animals, the type of an order (Echinoidea) of the class Echinodermata (see above). The body is more or less globular and covered with a test or shell, often beset with movable spines. Locomotion is effected by a singular system of ambulacra or 'tube-feet,' which are distended with water, protruded through pores, and again retracted. The mouth is situated on the inferior surface, generally in the center, is armed with calcareous teeth, and opens into a gullet conducting to a distinct stomach. The stomach has issue into a convoluted intestine which winds round the interior of the shell and terminates in a distinct anus. The anus varies in position, being sometimes on the apical disc and sometimes marginal. The *E. esculentus* and some other species are edible.

Echinus (e-kī'nus), in architecture, the *ovolo* or quarter-round convex molding, seen in capitals of the Doric order. It is especially frequently found carved with the egg-and-dart ornament.

Echo (ek'ō), the repetition of a sound caused by the reflection of sound-waves at some moderately even surface, as the wall of a building. The waves of sound on meeting the surface are turned back in their course according to the same laws that hold for reflection of light. In order that the echo may return to the place from which the sound proceeds, the reflection must be direct, and not at an angle to the line of transmission, otherwise the echo may be heard by others, but not by the transmitter of the sound. This may be effected either by a reflecting surface at right angles to the line of transmission or by several reflecting surfaces which end in bringing the sound back to the point of issue. Sound travels about 1125 feet in a second; consequently, an observer standing at half that distance from the reflecting object would hear the echo a second later than the sound. Such an echo would repeat as many words and syllables as could be heard in a second. As the distance decreases the echo repeats fewer syllables till it becomes monosyllabic. The most practiced ear cannot distinguish in a second more than from nine to twelve successive sounds, so that a distance of not

less than 60 feet is needed to enable a common ear to distinguish between the echo and the original sounds. At a near distance the echo only clouds the original sounds, and this often interferes with the hearing in churches and other large buildings. Woods, rocks and mountains produce natural echoes in every variety, for which particular localities have become famous.—In Greek mythology Echo was a nymph (one of the Oreads) who fell in love with Narcissus, and because he did not reciprocate her affection she pined away until nothing was left but her voice.

Echuca (e-chō'ka), an Australian town, colony of Victoria, on the Murray, over which is an iron railway and roadway bridge, connecting it with Moama in New South Wales; trade (partly by the river) in timber, wool, etc. Pop. 4789.

Ecija (ā'thē-hā), an ancient town of Southern Spain, province of Seville, on the Genil, with manufactures of textile fabrics and a good trade. It is one of the hottest places in Spain. Pop. 24,372.

Eck (ek), JOHANN MAYR VON, the celebrated opponent of Luther, born in 1486. Having obtained a reputation for learning and skill in disputation he was made doctor of theology, canon in Eichstädt, and pro-chancellor of the University of Ingolstadt. He went to Rome in 1520 and returned with a papal bull against Luther, in attempting to publish which he met with violent popular opposition. In 1530, while at the diet of Augsburg, he made the remarkable admission that he could confute the Augsburg Confession by the fathers but not by the Scriptures. Eck was present also at the diets of Worms (1540) and Ratibon (1541). He died in 1543.

Eckermann (e k' é r-m ā n), JOHANN PETER, a German writer, born in 1792. In 1813 he served in the army against the French, and was afterwards appointed to a small governmental post. He finally settled in Weimar, where he became private secretary to Goethe. After Goethe's death he published his conversations with Goethe. He died in 1854.

Eckert (ek'ert), THOMAS THOMPSON, telegraphist, born at St. Clairsville, Ohio, in 1825. He became a telegraph superintendent in 1852; was subsequently put in charge of the military telegraph of the army of the Potomac, and later of the whole army, developing a system which was ultimately extended over the whole country. He

was assistant secretary of war in 1864-66, and successively president of the Atlantic and Pacific, American Union and Western Union telegraph companies, obtaining the latter position in 1892. He still holds this position and is chairman of the board of directors of the Western Union and its associated telegraph and railway companies.

Eclectic (ek-lek'tik), or **NEW SCHOOL OF MEDICINE**, as distinguished from the 'regulars,' originated about 1825 in New York. It rejects mercury and most other minerals in medicine, practicing simple hygienic treatment, and adding largely to the list of vegetable medicines. The school numbers over 15,000 physicians in the United States.

the personality of the Deity, etc., his extant writings being sermons and tracts in Latin and German.

Eclipse (e-klips'; Greek *ekleipsis*, a failing, *ekleipō*, to fail), an interception or obscuration of the light of the sun, moon, or other heavenly body by the intervention of another and non-luminous heavenly body. Stars and planets may suffer eclipse, but the principal eclipses are those of the sun and the moon.

An *Eclipse of the Moon* is an obscuration of the light of the moon occasioned by the interposition of the earth between the sun and the moon; consequently all eclipses of the moon happen at full moon; for it is only when the moon is

Fig. 1.

Fig. 2.

Fig. 3.

Diagrams Illustrating the Theory of Eclipses.

Eclectics (Greek, *eklektikos*, select) is a name given to all those philosophers who do not follow one system entirely, but select what they think the best parts of all systems. In this century the eclectic method found a notable supporter in the French philosopher Victor Cousin.

Eckhart (ek'hart), MEISTER, one of the profoundest speculative thinkers, among the German mystics. Little is known of his personal history, except that he was born in Strasburg or Saxony in the latter part of the thirteenth century, became a Dominican monk, was appointed vicar general of Bohemia in 1307, held some other pastoral positions and died in 1327. He speculated deeply on the subject of *Being*,

on that side of the earth which is turned away from the sun, and directly opposite, that it can come within the earth's shadow. Further, the moon must at that time be in the same plane as the earth's shadow; that is, the plane of the ecliptic in which the latter always moves. But as the moon's orbit makes an angle of more than 5° with the plane of the ecliptic, it frequently happens that though the moon is in opposition it does not come within the shadow of the earth. The theory of lunar eclipses will be understood from Fig. 1, where S represents the sun, E the earth, and M the moon. If the sun were a point of light there would be a sharply outlined shadow or *umbra* only, but since the luminous surface is so large there is always a region

in which the light of the sun is only partially cut off by the earth, which region is known as the *penumbra* (P P). Hence during a lunar eclipse the moon first enters the penumbra, then is totally eclipsed by the umbra, then emerges through the penumbra again.

An *Eclipse of the Sun* is an occultation of the whole or part of the face of the sun occasioned by an interposition of the moon between the earth and the sun; thus all eclipses of the sun happen at the time of new moon. Fig. 2 is a diagram showing the principle of a solar eclipse. The dark or central part of the moon's shadow, where the sun's rays are wholly intercepted, is here the *umbra*, and the light part, where only a part of them are intercepted, is the *penumbra*; and it is evident that if a spectator be situated on that part of the earth where the umbra falls there will be a total eclipse of the sun at that place; in the penumbra there will be a partial eclipse, and beyond the penumbra there will be no eclipse. As the earth is not always at the same distance from the moon, and as the moon is a comparatively small body, if an eclipse should happen when the earth is so far from the moon that the moon's shadow falls short of the earth, a spectator situated on the earth in a direct line between the centers of the sun and moon, would see a ring of light round the dark body of the moon; such an eclipse is called *annular*, as shown in Fig. 3; when this happens there can be no total eclipse anywhere, because the moon's umbra does not reach the earth. An eclipse can never be annular longer than 12 minutes 24 seconds, nor total longer than 7 minutes 58 seconds; nor can the entire duration of an eclipse of the sun ever exceed 2 hours.

An eclipse of the sun begins on the western side of his disc and ends on the eastern; and an eclipse of the moon begins on the eastern side of her disc and ends on the western. The average number of eclipses in a year is four, two of the sun and two of the moon; and as the sun and moon are as long below the horizon of any particular place as they are above it, the average number of visible eclipses in a year is two, one of the sun and one of the moon.

Ecliptic (e-klip'tik), the sun's path, the great circle of the celestial sphere, in which the sun appears to described his annual course from west to east—really corresponding to the path which the earth describes. (See *Earth*.) The Greeks observed that eclipses of the sun and moon took place near this cir-

cle; whence they called in the *ecliptic*. The ecliptic has been divided into twelve equal parts, each of which contains 30 degrees, and which are occupied by the twelve celestial signs or constellations, viz.:

Aries (the Ram), March 20.
Taurus (the Bull), April 20.
Gemini (the Twins), May 21.
Cancer (the Crab), June 21.
Leo (the Lion), June 22.
Virgo (the Virgin), August 23.
Libra (the Balance), Sept. 23.
Scorpio (the Scorpion), Oct. 23.
Sagittarius (the Archer), Nov. 22.
Capricornus (the Goat), Dec. 21.
Aquarius (the Water-carrier), Jan. 19.
Pisces (the Fishes), Feb. 18.

These are also called signs of the *zodiac*, the zodiac being a belt of the heavens extending 9 degrees on each side of the ecliptic. The days of the month annexed show when the sun, in its annual revolution, enters each of the signs of the zodiac. From the first point of Aries, or the place of the sun at the vernal equinox, the degrees of the ecliptic are counted from west to east. The plane of the ecliptic is that by which the position of the planets and the latitude and longitude of the stars are reckoned. The points at which the equator and ecliptic intersect are subject to a continual variation, receding westward at the rate of about 50 seconds a year. The angle at which the ecliptic stands to the equator is also variable, and has been diminishing for about 4000 years at the rate of about 50 seconds in a century. Laplace showed, however, that this variation has certain fixed limits, and that after a certain time the angle will begin to increase again. The combined result of these two changes is to cause the pole of the earth not to point constantly to the same spot in the heavens, but to describe an undulating circle around a certain point; but this movement is so slow that it takes many thousand years to complete it. See *Nutation* and *Precession*.

Eclogue (ek'log), a term usually applied to what Theocritus called *idyls*—short, highly finished poems, principally of a descriptive or pastoral kind. See *Idyl*.

Ecole des Beaux Arts ('School of Fine Arts'), the French government school of fine arts at Paris, founded by Mazarin in 1648, and provided with an extensive staff of teachers. The competitions for the *grands prix de Rome* take place at

this school. All artists between the ages of fifteen and twenty-five, whether pupils of this school or not, may compete, after passing two preliminary examinations. The successful competitors receive an annual allowance from the state for three or four years, two of which must be passed at Rome.

Ecole Normale Supérieure

(‘Superior Normal School’), a school at Paris for the training of those teachers who have the charge of the secondary education in France, founded by decree of the Convention in 1794, reorganized by Napoleon in 1808, and again in 1830 by the government of Louis Philippe. It maintains a hundred students and has a course of three years’ duration.

Ecole Polytechnique

(‘Polytechnic School’), a school in Paris established with the purpose of giving instruction in matters connected with the various branches of the public service, such as mines, roads and bridges, engineering, the army and the navy, government manufactures, etc. It was founded in 1794, and is under the direction of the minister of war. Candidates are admitted only by competitive examination, and have to pay for their board 1000 francs a year. The pupils who pass satisfactory examinations at the end of their course are admitted to that branch of public service which they select.

Ecraseur (ā’krā-zeur), in surgery, an instrument that consisted of a fine chain which was placed round the base of a growth or a tumor and gradually tightened by a screw till it passed through the structure. It was used in cases of cancer of the tongue, polypi, etc.

Ectozoa (ek’tō-zō-a), a term which has been introduced, in contradistinction to Entozoa, to designate those parasites, as lice, ticks, etc., which infest the external parts of other animals.

Ecuador (ek-wā-dōr’), a republic of South America, situated under the equator, whence it takes its name, between Peru and Colombia. It is of triangular shape, its base resting mainly on the Pacific, between lat. 1° 20’ N. and 4° 50’ S., its apex extending to about 71° 30’ W. lon.; area, about 180,000 square miles, or including the Galapagos Islands, 182,950 square miles. The country is divided into a number of provinces, and falls, as regards the surface, into three sections: the comparatively narrow and low-lying coast regions, the mountain region, and the extensive plains on the east. The mountain region is

formed by a double range of snow-clad mountains—several of them active volcanoes—which enclose a longitudinal valley or tableland, with a breadth of 20 to 40 miles, and varying in elevation from 8500 to 13,900 feet. The most elevated of these mountains are, in the western range, Chimborazo, Pichincha, and Cotacachi, Chimborazo being 20,703 feet high. In the eastern range are Cayambe, Antisana and Cotopaxi (19,500). The cultivated land and the population of Ecuador lie chiefly in this elevated region, which extends along between the summits of the Cordillera, and may be considered as divided by transverse ridges or dikes into the valleys of Quito, Hambato and Cuenca. The chief towns here are Quito, the capital, with a pop. of 80,000; Riobamba and Cuenca, all situated at a height of 9000 feet or more above the sea. The chief ports of Ecuador are Guayaquil and Esmeraldas. The most considerable rivers, the Tigre, Napo, Pastaza, etc., belong to the basin of the Amazon; and some of them, notably the Napo, are navigable for long distances. On the western slope of the Andes the chief rivers are the Esmeraldas and the Guayaquil. Ecuador is comparatively poor in mammalia, although various kinds of deer as well as tapirs and peccaries are found in the forests. Parrots and humming-birds are also numerous, but perhaps the most remarkable of the birds in Ecuador is the condor, which dwells on the slopes of the Andes. Reptiles, including serpents, are numerous. The forests yield cinchona bark, caoutchouc, sarsaparilla, vegetable ivory, etc. The climate on the plains both in the east and the west, is moist, hot and unhealthy. In the higher regions the climate is rough and cold, but in great part the elevated valleys, as that of Quito, enjoy a delightful climate. Here the chief productions are potatoes, barley, wheat and European fruits. In the lower regions are grown all the food products of tropical climates, cacao, coffee, sugar, etc. The foreign commerce is not large, the exports and imports being annually about \$7,500,000 each. Cacao forms three-fourths (or more) of the whole export; the remainder is made up of coffee, hides, vegetable ivory, caoutchouc, etc. The mining and manufactures of Ecuador are insignificant. The people are poorly educated. The religion is exclusively Roman Catholic. The executive government is vested in a president elected for four years, who is assisted by a council of state. The congress is the legislative body, and consists

Ecumenical Council

of two houses, one formed of senators, two for each province, the other of deputies, one for every 30,000 inhabitants, both elected by universal suffrage. The congress has extensive privileges, and cannot be dissolved by the president. The seat of government is at Quito. In recent years the revenue and expenditure have been about \$6,000,000 each. The total debt amounts to about \$15,000,000. The money unit is the *sucre*, equivalent to a 5-franc piece, but the coins of the United States, France and Britain circulate. Railways and telegraphs have made very little progress.—Ecuador, at the time of the conquest of Peru by the Spaniards, formed part of the great empire of the Incas. It was erected first into a vice-royalty of Peru, then (from 1564 to 1718) into an independent presidency. From 1718 it became part of the presidency of New Granada. In the revolutionary war against Spain, Ecuador, along with the neighboring territories, secured its independence in 1822, and was ultimately erected into a separate republic in 1831. Of the present population, the aboriginal red race form more than half; the rest are negroes, mulattoes, mestizoes, a degenerate breed of mixed negro and Indian blood, and Spanish Creoles or whites. The latter are the chief possessors of the land, but are deficient in energy. Pop. est. 1,500,000.

Ecumenical Council

(e-kū-men'i-
kal), a general ecclesiastical council regarded as representing the whole Roman Catholic Church. The last was held at Rome in 1870. There were present 803 delegates, including cardinals, archbishops, bishops, abbots and generals of orders. After much discussion and the withdrawal of a few bishops, who afterwards submitted, the infallibility of the pope as head of the church was decreed.

Eczema (ek'ze-ma), a disease of the skin, marked by an eruption of small vesicles, preceded by redness, heat and itching of the part. In course of time the minute vesicles burst, and discharge a thin, acrid fluid, which often gives rise to excoriation. The most severe form of this disease arises from constitutional diseases, but purely local attacks are likewise caused by exposure of the skin to irritating substances.

Edam (ā-dām'), a town of North Holland, near the Zuider Zee, 12 miles N. N. E. of Amsterdam. This place is chiefly noted for its trade in cheese and wood. Pop. 6444.

Eddystone Lighthouse

Edda (ed'a; meaning 'great-grand-mother'), the name given to two ancient Icelandic works, the one consisting of mythological poems, the other being mainly in prose. The first of these collections, called the *Older* or *Poetic Edda*, was compiled in the thirteenth century. For a long time an earlier date was given, the compiler being erroneously believed to have been Sæmund Sigfusson, a learned Icelandic clergyman, who lived from about 1056 to 1133. It consists of thirty-three pieces, written in alliterative verse, and comprising epic tales of the Scandinavian gods and goddesses, and narratives dealing with the Scandinavian heroes. These poems are now assigned to a period extending from the ninth to the eleventh century. The prose *Edda*, or *Younger Edda*, presents a kind of prose synopsis of the Northern mythology; a treatise on the Scaldic poetry and versification, with rules and examples; and lastly a poem (with a commentary) in honor of Haco of Norway (died in 1263). In its earliest form this collection is ascribed to Snorri Sturluson, who was born in Iceland in 1178, and was assassinated there in 1241 on his return from Norway, where he had been scald or court poet.

Eddy, MARY BAKER GLOVER, Christian Scientist, was born at Baw, New Hampshire, was twice married and began to advocate the doctrine of Christian Science in 1867. In 1879 she organized the Church of Christ, Scientist, at Boston, was ordained to the ministry in 1881, founded the Massachusetts Metaphysical College at Boston, and in 1883 issued the *Christian Science Journal*. The sect originated by her has had a remarkable growth, largely due to her able leadership. It has numerous churches, in which her *Science and Health, with Key to the Scriptures* is read as the main feature of the services. The date of her birth is not known. She died December 3, 1910. See *Christian Science*.

Eddystone Lighthouse (ed'i-stōn), a lighthouse in the English Channel, erected to mark a group of rocks lying in the fair way from the Start to the Lizard. The rocks are covered only at the flood. The first lighthouse was of wood, and built by Henry Winstanley in 1696. It was carried away in the storm of 1703. Another lighthouse, also of wood, was built in 1706 by Mr. Rudyerd, but was burned down in 1755. It was succeeded by one built by Mr. Smeaton in 1757-59,

a circular tower 85 feet high; but as the foundations on which it stood became much weakened, a new structure, designed by Sir J. N. Douglass, was built in 1879-82 on the neighboring reef. Its light is visible $17\frac{1}{2}$ miles.

Edelweiss (ā'dél-vīs; Ger. 'noble white'), *Gnaphalium Leontopodium* (or *Leontopodium Alpinum*), a composite plant inhabiting the Alps, and often growing in the most inaccessible places. Its flower-heads are surrounded by a spreading, foliaceous, woolly involucre, and its foliage is also of the same woolly character. It is not difficult to cultivate, but is apt to lose its peculiar woolly appearance.

Eden (ē'den), the original residence of the first human pair. It is said to have had a garden in the eastern part of it, and we are told that a river went out of Eden to water this garden, and from thence it was parted into four heads, which were called respectively Pison, Gihon, Hiddekel and Euphrates (Phrat), but this does not enable us to identify the locality. It was not the whole of Eden that was assigned to man for his first habitation, but the part towards the east, to which the translators of the Authorized Version have given the name of the Garden of Eden, and which Milton, in *Paradise Lost*, calls Paradise, that word (originally Persian) having in its Greek form (*paradeisos*) been applied to the Garden of Eden by the translators of the Septuagint.

Eden, a river in England, in Westmoreland and Cumberland, falling into the Solway Firth after a course of 65 miles.—Also, a river in Fifeshire, Scotland.

Edentata (ē-den-tā'ta), or TOOTHLESS ANIMALS, the name of an order of Mammalia, though only two genera of the order want teeth, the ant-

1, Skull and (3) Tooth of *Chlamyphorus truncatus* (a small species of armadillo). 2, Skull of *Myrmecophaga jubata* (Great Ant-eater).

eaters and the pangolins. The remainder are merely destitute of teeth in the front of the jaws. The teeth they possess, however, are destitute of enamel, do not

have complete roots, and are not replaced by a second set. This order is also characterized by the presence of great claws surrounding the ends of the toes, and more or less approximating to the nature of hoofs. It is divided into two sections, the first comprehending the sloths, which subsist on vegetable food, and the gigantic fossil animals, the Megatherium and the Megalonyx; and the second including the armadillos and the ant-eaters, which live mainly on insects, though some of the armadillos eat other sorts of animal food and also vegetables.

Edessa (ē-des'sa), the name of two ancient cities.—1. The ancient capital of Macedonia, and the burial place of its kings, now *Vodhena*. It is probably the same with the still more ancient Aegæ.—2. An important city in the north of Mesopotamia, which, subsequent to the establishment of Christianity, became celebrated for its theological schools. In 1098, in the first Crusade, Edessa came into the hands of Baldwin, but ultimately became part of the Turkish Empire. It is thought to be the modern Urfah or Orfa.

Edfu (ed-foo; ancient, *Apollinopolis*), a village in Upper Egypt, on the left bank of the Nile, 54 miles S. S. E. of Luxor. It is now a poor place, but its ancient magnificence is attested by several remains, especially a temple, founded by Ptolemy Philopator (B.C. 181-145), the largest in Egypt after those of Karnak and Luxor.

Edgar (ed'gar; THE PEACEABLE), one of the most distinguished of the Saxon kings of England, was the son of King Edmund I. He succeeded to the throne in 959, and managed the civil and military affairs of his kingdom with great vigor and success. In ecclesiastical affairs he was guided by Dunstan, and was a great patron of the monks. He died in 975, and was succeeded by his son Edward the Martyr.

Edgar Atheling, grandson of Edmund Ironside and son of Edward the Outlaw, was born in Hungary, where his father had been conveyed in infancy to escape the designs of Canute. After the battle of Hastings, Edgar (who had been brought to England in 1057) was proclaimed king of England by the Saxons, but made peace with William and accepted the Earldom of Oxford. Having been engaged in some conspiracy against the king he was forced to seek refuge in Scotland, where his sister Margaret became the wife of Malcolm Canmore. Edgar subsequently

EDINBURGH CASTLE

was reconciled with William and was allowed to live at Rouen, where a pension was assigned to him. Afterwards, with the sanction of William Rufus, he undertook an expedition to Scotland for the purpose of displacing the usurper Donald Bane, in favor of his nephew Edgar, son of Malcolm Canmore, and in this object he succeeded. He afterwards took part in Duke Robert's unsuccessful struggle with Henry I, but was allowed to spend the remainder of his life quietly in England.

Edgehill (edj'hil), an eminence in Warwickshire, England, where was fought a bloody but indecisive battle, October 23, 1642, between the Royalists under Charles I and the forces of the Parliament under the Earl of Essex.

Edgeworth (edj'wurth), MARIA, authoress, was born at Hare Hatch, near Reading, Berkshire, in 1767; died in 1849. Her first novel, *Castle Rackrent*, a tale of Irish life, published in 1801, immediately established her reputation. This was followed by a long series of novels, moral tales, popular tales, etc., among which may be mentioned *Belinda*, *Leonora*, *Ennui*, *The Absentee*, *Helen*, etc. Deserving of mention also are Miss Edgeworth's collection of *Tales for Children* and the *Series of Early Lessons*.

Edgewater (edj'wa-ter), a former village of Staten Island, New York, on New York Bay, adjoining the village of Stapleton. It is now part of New York city. See *Richmond, Borough of*.

Edhem Pasha, a Turkish soldier and statesman, was born at Scio in 1823; died in 1905. He was sold in boyhood as a slave and educated by his master in Paris. Returning to Turkey, he was made a captain in the army, and in time rose to the rank of captain-general of the imperial guard and general of division. Then entering civil life, he became successively minister of foreign affairs, ambassador to several European courts, and in 1877 grand vizier. In the war with Russia he returned to the army and distinguished himself at Plevna. He was commander-in-chief in the 1897 war with Greece and brought the war to an end by the utter defeat of the Greek army.

Edible Birds' Nests. See *Birds' nests*, *Edible*.

Edict (ē'dikt), a public proclamation by a sovereign, a governor, or other competent official.

Edict of Nantes. See *Nantes*.

Edinburgh (ed'in-bur-o), the metropolis of Scotland, and one of the finest as well as most ancient cities in the British Empire, lies within 2 miles of the south shore of the Firth of Forth. It is picturesquely situated, being built on three eminences which run in a direction from east to west, and surrounded on all sides by lofty hills except on the north, where the ground slopes gently towards the Firth of Forth. The central ridge, which constituted the site of the ancient city, is terminated by the castle on the west, situated on a high rock, and by Holyrood House on the east, not far from which rise the lofty elevations of Salisbury Crags, Arthur's Seat (822 feet high), and the Calton Hill overlooking the city. The valley to the north, once the North Loch, but now drained and traversed by the North British Railway, leads to the New Town on the rising ground beyond, a splendid assemblage of streets, squares and gardens. The principal street of the Old Town is that which occupies the crest of the ridge on which the latter is built, and which bears at different points the names of Canongate, High Street, Lawnmarket and Castle Hill. This ancient and very remarkable street is upwards of one mile in length, rising gradually with a regular incline from a small plain at the east end of the town, on which stands the palace of Holyrood, and terminating in the huge rock on which the castle is built, 383 feet above sea-level. The houses are lofty and of antique appearance. Among the notable buildings are the ancient Parliament House, now the seat of the supreme courts of Scotland; St. Giles' Church or Cathedral, an imposing edifice in the later Gothic style, recently carefully restored; the Tron Church; Victoria Hall (where the General Assembly of the Established Church meets), with a fine spire; the Bank of Scotland, etc., besides some of the old family houses of the Scottish nobility and other buildings of antiquarian interest. From this main street descend laterally in regular rows numerous narrow lanes called *closes*, many of them extremely steep, and very few at their entrances more than 6 feet wide; those which are broader, and admit of the passage of carriages, are called *wynds*. In these and the adjacent streets the houses are frequently more than 120 feet in height, and divided into from six to ten stories, or *flats*, the communication between which is maintained by broad, stone stairs, winding from the lowest part of the building to the top. In the Old Town the most remarkable

public building is the castle. This fortress contains accommodation for 2000 soldiers, and the armory space for 30,000 stand of arms. In an apartment here is kept the ancient regalia of Scotland. The palace of Holyrood, or Holyrood House, as it is more generally called, stands, as already mentioned, at the lower or eastern extremity of the street leading to the castle. No part of the present palace is older than the time of James V (1528), while the greater portion of it dates only from the time of Charles II. In the northwest angle of the building are the apartments which were occupied by Queen Mary, nearly in the same state in which they were left by that unfortunate princess. Adjoining the palace are the ruins of the chapel belonging to the Abbey of Holyrood, founded in 1128 by David I. The Advocates' Library, the largest library in Scotland, contains upwards of 250,000 printed volumes and 2000 MSS.

Printing, coachbuilding, type founding, machine-making, furniture-making, ale-brewing and distilling are the principal industries. Edinburgh is the headquarters of the book trade in Scotland, and the seat of the chief government departments. The origin of Edinburgh is uncertain. Its name is thought to be derived from Eadwinsburgh, the Burgh of Edwin, a powerful Northumbrian king, who absorbed the Lothians in his rule. The town was made a royal burgh in the time of David I; but it was not till the fifteenth century that it became the recognized capital of Scotland. Population 355,366. The county of EDINBURGH or MIDLOTHIAN is bounded N. by the Firth of Forth, along which it extends 11 or 12 miles; area, 366 sq. miles, over half of which is arable or under permanent pasture. The S., S. E. and S. W. parts of the county are diversified with hills, of which the two principal ranges are the Pentlands and Moorfoots, the former stretching across the county to within 4 miles of Edinburgh. The principal rivers are the North and South Esks and the Water of Leith, all running into the Forth. The Lowlands towards the Forth are the most fertile; the farms are of considerable size, and the most approved methods of agriculture are in use. The hilly parts are chiefly under pasturage and dairy farming. The chief crops are oats, barley, turnips and potatoes. The manufactures of the county are comparatively limited, but include ale, whiskey, gunpowder, paper, tiles, etc. The fisheries on the Forth are valuable. The chief towns are: Edinburgh, capital of Scotland, Leith, Dal-

keith, Musselburgh and Portobello. The county returns one member to the House of Commons. Pop. 355,366.

Edinburgh, DUKE OF, Prince Alfred Ernest Albert, Duke of Saxony and Prince of Saxe-Coburg-Gotha, the second son of Queen Victoria, was born at Windsor Castle in 1844. At the age of fourteen he joined the steam frigate *Euryalus* as naval cadet, and served on various foreign stations. In 1862 he declined the offer of the throne of Greece. On his majority he was created Duke of Edinburgh, Earl of Kent and Earl of Ulster, and in 1867 was appointed to the command of the frigate *Galatea*, in which he visited Australia and other countries. In 1874, he married the Grand-duchess Marie, only daughter of the Emperor of Russia. In August, 1893, he became reigning Duke of Saxe-Coburg-Gotha. Died July 31, 1900.

Edinburgh University, the latest of the Scottish universities, was founded in 1582 by a charter granted by James VI. Originally there were only four regents (or professors), besides a principal, but the number of chairs is now about forty, besides assistants. There are four faculties, viz., arts, divinity, law and medicine. Some of the professors are appointed by the crown, others are elected by the university court and by special electors, and a considerable number by the curators, who also elect the principal. The number of matriculated students has recently been about 3500 each winter, the greater number in medicine. The degrees of Bachelor of Divinity (B.D.) and Doctor of Divinity (D.D.) the latter honorary, are bestowed in the faculty of divinity. Degrees in science are also conferred. The present university buildings were begun in 1789. The library of the university contains about 170,000 printed volumes, besides 2000 manuscripts. There is also a separate theological library containing about 10,000 volumes. There are various bursaries, scholarships and fellowships, amounting annually to about £10,000.

Edison (ed'i-son). THOMAS ALVA, an American inventor, born at Milan, Erie Co., Ohio, in 1847, of a mother of Scotch and a father of Dutch extraction. He was poorly educated, but in some measure supplied the defect by assiduous reading. He became a newsboy on the Grand Trunk Railway, and afterwards, becoming possessed of some type, issued a small sheet of his own on the train. He then set himself to learn telegraph work, and in a short time became

THOMAS A. EDISON AND THE PHONOGRAPH

an expert operator. In 1863, while at Indianapolis, he invented an automatic telegraph repeater. This was the first of a long series of improvements and inventions. He opened an extensive establishment at Newark for the manufacture of electrical, printing, automatic and other apparatus. In 1876 he gave up manufacturing and removed to Menlo Park, New Jersey. Here, as later at Ilewllyn Park, Orange, he devoted himself to investigation. His inventions have been very numerous, among the most important of them being the quadruplex telegraph, the carbon telephone, the 'Edison' system of lighting, the electric fire-alarm, the phonograph, the kinetoscope and the photometer. His most recent invention of importance is an electric storage battery, small in size, but remarkable in power. He has received patents for more than 900 inventions.

Edition (ē-di'shun), the number of copies of a book printed at one impression, or the aggregate copies of a literary work regarded as bearing a special character, either when first published or subsequently.

Edmonton (ed'mun-tun), a town in England, county of Middlesex, 7½ miles north of London, with an extensive trade in timber, carried on by the Lea River navigation. The 'Bell at Edmunton' has become famous by association with the amusing adventures of Cowper's John Gilpin. Pop. (1911) 64,820.

Edmonton, a town of Alberta, Canada, 180 miles N. of Calgary. Coal, gold, etc., are found in the vicinity. Pop. 24,900.

Edmund (ed'mund), St., King of the East Angles, began to reign in 855; died in 870. He was revered by his subjects for his justice and piety. In 870 his kingdom was invaded, and he himself slain, by the Danes. The church made him a martyr, and a town (Bury St. Edmunds) grew up round the place of his sepulture.

Edmund I, King of England, an able and spirited prince, succeeded his brother Athelstan in 940. He conquered Cumbria, which he bestowed on Malcolm, king of Scotland, on condition of the latter doing homage for it. He was slain at a banquet, May 26, 946.

Edmund II, surnamed *Ironsides*, King of England, was the eldest son of Ethelred II, and was born in 989. He was chosen king in 1016, Canute having been already elected king by another party. He won several victories over Canute, but was defeated at Assandun in Essex, and

forced to surrender the midland and northern counties to Canute. He died after a reign of only seven months.

Edmunds, GEORGE FRANKLIN, statesman, born at Richmond, Vermont, in 1828. He studied law, became active and prominent in politics, and was elected United States Senator from Vermont in 1866. He was one of the leaders of the Republican party in that body, was president *pro tempore* of the Senate during Arthur's term as President, and resigned in 1891. He was the author of the anti-polygamy act of 1882 and the anti-trust law of 1890.

Edom (ē'dom), in the New Testament *Idumaea*, in ancient times a country lying to the south of Palestine. The Edomites are said in Genesis to be the descendants of Esau, who was also called Edom (a word signifying 'red'), and who dwelt in Mount Seir, the mountain range now called *Jebel Shera*, stretching between the Dead Sea and the Gulf of Akabah. The Edomites were subdued by King David, and after the separation of the ten tribes remained subject to the Kingdom of Judah until the reign of Jehoram, when they revolted and secured their independence for a time. They were again subdued about half a century later by Amaziah, and again, in the reign of Ahaz, recovered their independence, which they maintained till the time of the invasion of Judea by Nebuchadnezzar. They fell under the rule of the Persians, and later their fortunes were merged in those of Arabia. The chief city in this region was Petra, which now presents remarkable ruins, rock-cut temples, etc.

Edred (ed'red), King of England, son of Edward the Elder, succeeded to the throne on the murder of his brother, Edmund I, in May, 946. He quelled a rebellion of the Northumbrian Danes, and died in 955.

Edriophthalmata (e-dri-op-thal'mata), one of the

EDRIOPHTHALMATA.

1. Fresh-water shrimp (*Gummarus pulex*). a, single eye.

2, Head of *Cymothoa*. b, Clusters of simple eyes. great divisions of the Crustacea, including all those genera which have their eyes

sessile, or embedded in the head, and not fixed on a peduncle or stalk as in the crabs, lobsters, etc. It is divided into three orders, viz., *Læmodipoda*, *Amphipoda*, *Isopoda*, and includes slaters, sandhoppers, woodlice, etc. Some are parasitic on fishes, and of the others some live in the sea and some on land, as the common louse and the sea woodlouse.

Edrisi (ed-rē'sē), ABU-ABDALLAH MOHAMMED, a famous Arabian geographer, a descendant of the ancient princely family of the Edrisites, born about 1100 A.D.; died about 1180. He studied at the Moorish University of Cordova, after which he traveled through various countries. At the request of King Roger II of Sicily he constructed a globe with a map of the earth, which represented all the geographical knowledge of the age. He accompanied this with a descriptive treatise completed about 1150, and still extant.

Education (ed-ū-kā'shun; ultimately from *L. e*, out, and *duco*, to draw), in the widest sense, all that course of instruction and discipline which is intended to enlighten the understanding, correct the temper, cultivate the taste and form the manners and habits of youth, and fit them for usefulness in their future stations. Or it may be defined as the art or scientifically matured system of developing and cultivating the various physical, intellectual, æsthetic and moral faculties; and may thence be divided into four branches—physical, intellectual, æsthetic and moral education. Under physical education is included all that relates to the healthy development of the organs of sensation and the muscular and nervous system. Intellectual education comprehends the means by which the powers of the understanding are to be developed and improved, and the imparting of instruction in the various branches of knowledge. Æsthetic education comprehends the agencies which purify and refine the mind by training it to perceive and take delight in what is beautiful, true and pure in nature, literature and art. Moral education (in which may or may not be included religious education) embraces the various methods of cultivating and regulating the affections of the heart. In the popular view education is much the same as instruction, and is regarded as consisting simply in the lessons and discipline learned in connection with attendance at school. So far as governments or other public bodies have interested themselves in the education of youth this view is tolerably correct; but

probably the most perfect system of education would be one in which schools formed no part whatever. Schools, however, seem to have been established at a very early period in the history of all civilized communities, though not necessarily in connection with any system of national education. Indeed, a thoroughly organized system of national education exists in but few states, Germany being the most conspicuous example of such. In England no national system existed till the passing of the Education Act of 1870, and in Britain it is only elementary education that can be said to be established on a satisfactory footing. (See *Britain*, and articles on other countries.) A complete system of national education ought to make satisfactory provision for primary or elementary education, secondary education, and higher or university education, besides providing for the due education of teachers, and for technical education, commercial education, artistic education, etc.; but how far education in any department should be free (or at the expense of the state) is a question on which authorities are not agreed. Elementary education is, generally speaking, free in France, Italy, Germany, the United States, Canada, several of the Australian colonies, and elsewhere. In a properly organized system the three great classes of educational institutions would be interdependent, the primary schools supplying pupils satisfactorily equipped for passing into the secondary schools, and these again passing on a certain number of their pupils to the university sufficiently equipped for entering on their more advanced studies. It is generally agreed that elementary education should be compulsory, and this is now the law in Britain, Germany, France, Italy, Denmark, many of the United States, etc.; but the law may exist with more or less laxity in the enforcement of it. The elementary schools have, as their special province, the teaching of those branches of education that everyone ought to be instructed in, such as reading, writing, arithmetic, grammar, geography, etc.; but they usually teach also a number of other subjects. The secondary schools include institutions known as high schools, academies, grammar schools, colleges, etc. The subjects taught in them are such as ancient and modern languages, mathematics, science, history, geography, etc., and they may prepare pupils who intend to engage in commerce or other business, and those who intend to proceed

to the university. Thus in some secondary schools there is a *modern side* and a *classical side* (or similar divisions); while in Germany there are the two distinct classes of schools, the 'real schools' (for modern subjects), and the gymnasia. The universities provide an education for the so-called 'learned professions,' as well as for all who appreciate the advantages of a university training. Their most characteristic feature is the privilege of granting university degrees. Systems of manual training schools are becoming common in the larger cities of the United States, and trade schools have recently been instituted, in which special trades are taught. There are also schools for the blind, and deaf and dumb, and others who need special methods of training. The kindergarten schools are primary institutions in which young children are given their first ideas of mental discipline.

Edward (ed'ward), known as *the Elder*, King of England, son of Alfred the Great, born about 870, succeeded his father in 901. His reign was distinguished by successes over the Danes. He fortified many inland towns, acquired dominion over Northumbria and East Anglia, and subdued several of the Welsh tribes. He died in 925.

Edward, surnamed the *Martyr*, King of England, succeeded his father, Edgar, at the age of fifteen, in 975. His reign of four years was chiefly distinguished by ecclesiastical disputes. He was treacherously slain in 979 by a servant of his stepmother, at her residence, Corfe Castle. The pity caused by his innocence and misfortune induced the people to regard him as a martyr.

Edward, King of England, surnamed the *Confessor*, younger son of Ethelred II. On the death of his maternal brother, Hardicanute the Dane, in 1041, he was called to the throne, and thus renewed the Saxon line. Edward was a weak and superstitious, but well-intentioned prince, who acquired the love of his subjects by his monkish sanctity and care in the administration of justice. His queen was the daughter of Godwin, Earl of Kent. He died in 1066, and was succeeded by Harold, the son of Godwin. He caused a body of laws to be compiled from those of Ethelbert, Ina and Alfred, to which the nation was long fondly attached. He was canonized by Pope Alexander III in 1166.

Edward I (Plantagenet line) King of England, son of Henry III, was born at Winchester in 1239. The contests between his father and the

barons called him early into active life, and he finally quelled all resistance to the royal authority by the decisive defeat of Leicester at the battle of Evesham, in 1265. He then proceeded to Palestine, where he showed signal proofs of valor, although, owing to the death of the French king, no conquest of any importance was achieved. On his return home he showed great vigor as well as a degree of severity in his administration. He commenced a war with Llewellyn, Prince of Wales, which ended in the annexation of that principality to the English crown in 1283. His next attempt was on the independence of Scotland. John Baliol, having been induced to do homage for his crown to Edward, was forced by the indignation of the Scottish people into war with England. Edward entered Scotland in 1296, devastated it with fire and sword, and placed the administration of the country in the hands of officers of his own. But next summer a new rising took place under the celebrated William Wallace. Wallace's successes recalled Edward to Scotland with an army of 100,000 men. Wallace was at length betrayed into his hands and executed as a traitor. But Edward's efforts to reduce the country to obedience were unavailing, and with the flight of Robert Bruce, Earl of Carrick, to Scotland, the banner of Scottish independence was again unfurled. Edward assembled another army and marched against Bruce, but lived only to reach Burgh-on-Sands, a village near Carlisle, where he died July 7, 1307. Edward I was wise in council and vigorous in action. During his reign great progress was made in the establishment of law and order throughout the land.

Edward II, King of England, born 1284, and the first English Prince of Wales, succeeded his father, Edward I, in 1307. He was of an agreeable figure and mild disposition, but indolent and fond of pleasure. After marching as far as Cumnock, in Ayrshire, with the army collected by his father, he returned, dismissed his troops, and abandoned himself entirely to amusements. His weakness for a clever but dissolute young Gascon, Piers Gaveston, on whom he heaped honors without limit, roused the nobles to rebellion. Gaveston was captured and executed as a public enemy. Two years after, in 1314, Edward assembled an immense army to check the progress of Robert Bruce, but was completely defeated at Bannockburn. In 1322 he made another expedition against Scot-

Edward III

land, but without achieving anything important. The king's fondness for another favorite, Hugh le Despenser, had made a number of malcontents, and Queen Isabella, making a visit to France, entered into a correspondence with the exiles there, and formed an association of all hostile to the king. Aided with a force from the Count of Hainault she landed in Suffolk in 1326. Her army was completely successful. The Despensers were captured and executed, and the king was taken prisoner and confined in Kenilworth, and ultimately in Berkeley Castle, where Mortimer, the paramour of the queen, sent two ruffians, who murdered the unhappy monarch, September 21, 1327.

Edward III, King of England, son of King Edward II, by Isabella of France, was born in 1313. On his father's deposition in 1327 he was proclaimed king under a council of regency while his mother's paramour, Mortimer, really possessed the principal power in the state.

The pride and oppression of Mortimer now became so intolerable that a general confederacy was formed against him. The result was the seizure of Mortimer, October 10, 1330, and his execution. Edward now turned his attention to Scotland, and having levied a well-appointed army, defeated the regent, Douglas, at Halidon Hill, in July, 1333. This victory produced the restoration of Edward Baliol, who was, however, again expelled, and again restored, until the ambition of the English king was diverted by the prospect of succeeding to the throne of France. Other claims were superior, but Edward, collecting an army and

Edward III.—From the Effigy on his tomb in Westminster Abbey.

Crécy followed, August 25, 1346, which was succeeded by the siege of Calais. In the meantime David II, having recovered the throne of Scotland, invaded England with a large army, but was defeated and taken prisoner by a much

Edward IV

inferior force under Lord Percy. In 1348 a truce was concluded with France; but on the death of King Philip, in 1350, Edward again invaded France, plundering and devastating. Recalled home by a Scottish inroad, he retaliated by carrying fire and sword from Berwick to Edinburgh. In the meantime the Black Prince had penetrated from Guienne to the heart of France, fought the famous battle of Poitiers, and taken King John prisoner. A truce was then made, at the expiration of which (1359) Edward again crossed over to France and laid waste the provinces of Picardy and Champagne, but at length consented to a peace. This confirmed him in the possession of several provinces and districts of France which were entrusted to the Prince of Wales (the Black Prince), but gradually all the English possessions in France, with the exception of Bordeaux, Bayonne and Calais, were lost. King Edward died a year after his heroic son, June 21, 1377.

Edward IV, King of England, was born in 1441. His father, Richard, Duke of York, was grandson of Edward, Earl of Cambridge and Duke of York, fourth son of Edward III, while the rival line of Lancaster descended from John of Gaunt, the third son. The York line had intermarried with the female descendants of Lionel,

Edward IV.

the second son, which gave it the preferable right to the crown. Edward, on the defeat and death of his father at the battle of Wakefield, assumed his title, and having entered London after his splendid victory over the troops of Henry VI and Queen Margaret at Mortimer's Cross, in February, 1461, was declared king by acclamation. The victory of Towton, soon after his accession, con-

firmed his title, and three years after, on May 4, 1464, the battle of Hexham completely overthrew the party of Henry VI. The king now made an imprudent marriage with Elizabeth, widow of Sir John Grey, at the very time when he had despatched the Earl of Warwick to negotiate a marriage for him with the sister of the French king. He thus alienated powerful friends, and Warwick, passing over to the Lancastrian cause, gathered a large army, and compelled Edward to flee from the country. Henry's title was once more recognized by parliament. But in 1471 Edward, at the head of a small force given him by the Duke of Burgundy, landed at Ravenspur in Yorkshire, and his army, being quickly increased by partisans, marched swiftly on London and took the unfortunate Henry prisoner. Warwick now advanced with an army to Barnet, where a battle was fought, April 4, 1471, which ended in the death of Warwick, and a decisive victory on the part of Edward. Shortly afterwards Edward also met and defeated a Lancastrian army, headed by Queen Margaret and her son Edward, at Tewkesbury. The prince was murdered the day after the battle, and the queen was thrown into the Tower, where her husband Henry soon after died. Edward was preparing for another expedition against France when he was taken off by sickness in April, 1483, in the forty-second year of his age, and twenty-third year of his reign.

Edward V, King of England, the eldest son of Edward IV, was in his thirteenth year when he succeeded his father in 1483. He fell into the hands of his uncle, the Duke of Gloucester, who made himself king as Richard III, and caused the young king and his brother to be sent to the Tower, where, it is said, he had them smothered by ruffians.

Edward VI, King of England, son of Henry VIII, by Jane Seymour, was born in 1537. At his father's death he was only ten years of age. His education was entrusted to men of the first character for learning, under whose training he made great progress and grew up with a rooted zeal for the doctrines of the Reformation. His reign was, on the whole, tumultuous and unsettled. In October, 1551, the Protector Somerset, who had hitherto governed the kingdom with energy and ability, was deposed by the intrigues of Dudley, duke of Northumberland, who became all-powerful and induced the dying Edward to set aside the succession of his sisters, Mary and Elizabeth, and

settle the crown upon Lady Jane Grey, to whom he had married his son Lord Guildford Dudley. He died in 1553.

Edward VII, King of England, eldest son of Queen Victoria and Prince Albert, was born at Buckingham Palace in 1841 and christened Albert Edward. After a careful education under private tutors and at the universities of Edinburgh, Oxford and Cambridge, he traveled in America in 1860 and in the East in 1862, and in 1863 married Princess Alexandra, eldest daughter of Christian IX, of Denmark. From this marriage were born three daughters and two sons,—Albert Victor, duke of Clarence (died in 1892), and George, duke of York. During his long period of life as Prince of Wales, he bore much of the burden of court ceremony and public function for the Queen, and in addition took an active part in promoting exhibitions, charitable enterprises, the housing of the poor, etc. He aided in the founding of the Royal College of Music, and to him was due the organization of the Imperial Institute. He visited India in 1875 and was enthusiastically received. In the same year he was appointed a Field Marshal in the British army and in 1883 in the German, and from 1874 to 1901 he was grand-master of the Masons. On January 22, 1901, he succeeded his mother on the throne, assuming the title of Edward VII. His coronation, fixed for June 26, 1902, was prepared for on a scale of great magnificence, but a severe illness, rendering necessary a surgical operation, caused its postponement to August 9, when he was solemnly crowned in Westminster Abbey. The early events of note in his reign were the closing of the South African war, the adding to the British colonial area of the Transvaal Republic and the Orange Free State, and the retirement of Lord Salisbury from his long service as premier. A later one was the alliance between Great Britain and Japan, followed by the more complete alliance of 1905. Friendly relations with France, and with other nations of Europe, were fostered by King Edward, who personally did much in bringing them about, but a commercial rivalry arose with Germany, accompanied by a naval one, in which Great Britain strove energetically to retain its supremacy in ships of war. A later event was the coming into power of the Liberals, after the Conservatives had retained almost unbroken rule for twenty years. Under this new administration the principle of old-age pensions was adopted, a vigorous and riotous contest for woman suffrage arose, and the

opposition of the House of Lords to the financial and other measures of the administration led to serious threats of abolishing or greatly curbing the power of this upper house of the British Parliament. Through all these dissensions and political changes Edward showed great discretion and won the reputation of a wise and able ruler. His astute policy in foreign matters aided in bringing about a number of important understandings and agreements with the powers of the world, and he came to be looked upon as the safety valve of European politics and the mentor of European monarchs. The dissension between the Lords and Commons weighed much on his mind, and while anxiously awaiting the course of events, he suddenly sickened and died, April 6, 1300. He was succeeded by his surviving son as George V.

Edward, Prince of Wales, surnamed the *Black Prince*, born June 15, 1330, the eldest son of Edward III and Philippa of Hainault. In 1346 he commanded part of the forces at the battle of Crécy, and earned the praise of his warlike father. It was on this occasion that he adopted the motto *Ich dien* (I serve), used by all succeeding Princes of Wales. In 1355 he commanded the army which invaded France from Gascony, and distinguished himself

Edward the Black Prince—Effigy at Canterbury.

the following year at the great battle of Poitiers. By the Peace of Brétigny the provinces of Poitou, Saintonge, Périgord, Limousin were annexed to Guienne and formed into a sovereignty for the prince under the title of the Principality of Aquitaine. A campaign in Castile, on behalf of Pedro the Cruel, and the heavy taxes laid on Aquitaine to

meet the expenses, caused a rebellion, and ultimately involved him in a war with the French king. His own health did not allow him to take the field, and having seen his generals defeated he withdrew into England, and after lingering some time died (1376), leaving an only son, afterwards Richard II.

Edward, THOMAS, a Scottish naturalist, born in 1814; died in 1886. The son of poor parents, he was apprenticed to a shoemaker and continued to work as such till nearly the end of his life, having on his scant earnings to support a wife and eleven children. Under such hard conditions of life he succeeded, by indomitable perseverance, in acquiring much knowledge of natural history and some fame as a naturalist. A biography of Edward, written by Mr. Smiles, appeared in 1876 (*Life of a Scotch Naturalist*), and being thus brought prominently before the public, a pension of £50 a year was shortly afterwards conferred on him by the queen.

Edwards (ed'ward), AMELIA BLAND-FORD, an English novelist, born in 1831. As far back as 1853 she began to contribute to periodicals. Among her best-known novels are *Hand and Glove* (1859); *Half a Million of Money* (1865); *Lord Brackenbury* (1880). Besides novels Miss Edwards had written ballads and books of travel, and later devoted herself to Egyptology. She died in 1892.

Edwards, BRYAN, an English writer, born in Wiltshire in 1743. He inherited a large fortune from an uncle in Jamaica, where he long resided. His *History, Civil and Commercial, of the British Colonies in the West Indies* appeared in 1793. He died in 1800.

Edwards, JONATHAN, a celebrated American theologian and metaphysician, born at East Windsor, Connecticut, October 5, 1703. He entered Yale College in 1716, and studied till 1720; in 1722 received a license as preacher. In 1723 he was elected a tutor in Yale College, but resigned in 1726 to be ordained as minister at Northampton, Massachusetts. After more than twenty-three years of zealous service here he was dismissed by the congregation owing to the severity with which he sought to exercise church discipline. He then went as a missionary among the Indians at Stockbridge, in Massachusetts. Here he composed his famous work on *The Freedom of the Will*, a masterpiece of metaphysical argument. It appeared in 1754, and was completed within four months and a half. In 1758 he was chosen president of the college

at Princeton, New Jersey. He died in 1758.

Edwards, OLIVER, soldier, born at Springfield, Massachusetts, in 1835; entered the Union army in the Civil war and rose to the rank of brigadier-general in 1865. He rendered conspicuous service at the battles of the Wilderness and Spotsylvania, and at Sailor's Creek captured Generals Custis Lee and Ewell. He engaged in mercantile pursuits after the war.

Edwardsville, a city, capital of Madison Co., Illinois, on Cahokia Creek, 18 miles N. E. of St. Louis, Missouri. It has carriage and plow factories and other industries. Pop. 5014.

Edwardsville, a borough of Luzerne Co., Pennsylvania. It has brewing establishments and other industries. Pop. 8407.

Edwy (ed'wi), King of England, son of Edmund I, succeeded his uncle Edred in 955. Taking part with the secular clergy against the monks, he incurred the confirmed enmity of the latter. The papal party, headed by Dunstan, was strong enough to excite a rebellion, by which Edwy was driven from the throne to make way for his brother Edgar. He died in 959, being probably not more than eighteen or nineteen years old.

Eecloo (āk-lō'), a town of Belgium, province of East Flanders, 11 miles northwest from Ghent, the seat of various manufactures. Pop. 12,897.

Eel (ēl), the general name of a family of teleostean fishes belonging to the apodal section of the Malacopterygii. They belong to various genera. The genus *Anguilla* is characterized by its serpent-like, elongated body, by the absence of ventral fins, and the continuity of the dorsal and anal fins round the extremity of the tail. The dorsal fin commences half-way between the head and the anal fin, and the lower jaw projects beyond the upper. In the genus *Conger*, which is exclusively marine, the dorsal fin commences above the pectoral, and the upper jaw is the longer. The smoothness of the body—the scales being inconspicuous—and the serpentine movements of eels are proverbial. The species of the genus *Anguilla*, which are both fresh-water and marine, seldom exceed 30 inches in length. River eels are caught in great numbers by means of eel-bucks or eel-pots, traps consisting of a kind of basket with a funnel-shaped entrance composed of willow rods converging towards a point, so that the eels can easily force their way in, but

cannot return. A stocking or tube of coarse cloth hanging from an aperture of a box down into the interior is also used. A kind of trident is used also for taking them, called an *ell-spear*. A fisherman wades to the shallows, and, striking his spear in the mud in every direction around him, the eels reposing on the bottom are caught between the prongs. They are also taken by hooks and lines and in other ways. Eels avoid cold, and frequently migrate in winter to the mud or brackish water of estuaries where the temperature is higher. They have even been met with in large numbers performing migrations on land, mostly intervening necks of soil covered with damp grass. Some eels spawn in the estuaries of rivers, and immense numbers of the young eels pass up the streams in spring, their passage in England being called the *eel-fare*. Eels are considered excellent food. See *Conger-eel*, *Electric Eel*.

Eel-pout. See *Burbot*.

Effendi (e-fen'di), a Turkish title which signifies lord or master. It is particularly applied to the civil, as *aga* is to the military officers of the sultan. Thus the sultan's first physician is called *Hakim effendi*, the priest in the seraglio *Iman effendi*, etc.

Effervescence (ef-er-ves'ens), the rapid escape of a gas from a liquid, producing a turbulent motion in it, and causing it to boil up. It is produced by the actual formation of a gas in the liquid, as in fermentation, or by the liberation of a gas which has been forced into it, as in aerated beverages.

Effigy (ef'i-ji), an image or portrait, most frequently applied to the figures on sepulchral monuments.—*To burn or hang in effigy* is to burn or hang an image or picture of a person, a mode in which the populace sometimes expresses its feelings respecting an obnoxious personage.

Efflorescence (ef-lo-res'ens), the fine, white, feathery crystallization of sulphate and carbonate of sodium which appears on walls, or similar crystallizations on the surface of the earth, in decomposing rocks, etc. In medicine the term is applied to an eruption or rash, as in measles, etc.

Effluvium (e-flō'vi-um; pl. EFFLUVIA), a noxious or disagreeable exhalation.

Effodientia (e-fō-di-en'ti-a) digging animals), a term applied sometimes to the division of the Edeutates which comprises the insect-eating

forms, as the hairy ant-eater of South America, the armadillo, etc.

Eft. See *Newt*.

Egalité (ā-gal-i-tā), PHILIPPE. See *Orleans, Louis Philippe Joseph*.

Egbert (eg'bert), considered the first king of all England, was of the royal family of Wessex. He succeeded Brihtric in 802 as king of Wessex. He reduced the other kingdoms and rendered them dependent on him in 829, thus becoming their overlord. He died in 839.

Egede (eg'e-de), HANS, the apostle of Greenland, was born in 1686 in Norway. In 1721 Egede set sail for Greenland with the intention of converting the natives to Christianity, and for fifteen years performed the most arduous duties as missionary, winning by his persevering kindness the confidence of the natives. In 1736 he returned to Copenhagen, where he was made a bishop and director of the Greenland Missions. He died in 1758.—His son, PAUL EGEDE, born in 1708, followed in his father's footsteps, became Bishop of Greenland, and died in 1789.

Eger (ā'gār), a town of Bohemia, on a rocky eminence above the Eger, 91 miles west of Prague; once an important fortress, though now quite dismantled. It has manufactures of woolens, cottons, leather, soap, etc. Wallenstein was assassinated here (1634). Pop. 23,665. For another Eger see *Erlau*.

Egeria (ē-jē'ri-a), a nymph who received divine honors among the Romans. Numa is said to have received from her the laws which he gave to the Romans.

Egerton, FRANCIS. See *Bridgewater, Duke of*.

Egg, a small spherical or oval mass of the females of animals, and in which, by impregnation, the development of the young animal takes place. Birds, reptiles, fishes, insects and worms are oviparous, i.e., bring forth eggs or ova, as do also, among mammalia, the ornithorhynchus and echidna. The egg contains the germ of the young animal, as well as the substance which serves for its nourishment. All it needs for its development is external heat. (See *Incubation*.) The eggs of animals lower than the birds have usually only three parts, viz. the germinal spot or dot, the germinal vesicle, and the vitellus or yolk; the first being contained in the vesicle, and that again in the yolk. Besides these parts the eggs of

birds have the white or albumen, and the shell, which consists of a membrane coated with carbonate of lime. The eggs of birds, especially of fowls, are a pleasant and nutritive food. The common domestic fowl, the turkey, the pea-hen, and the common duck produce the eggs which are commonest in the market. Among reptiles, the turtles produce eggs which are good for eating. The eggs of fishes are their roe or spawn. A hen's egg of good size weighs about 1000 grains, of which the white constitutes 600, the yolk 300, and the shell 100. When the white of an egg is warmed it coagulates to a firm, opaque mass.

Egg, an island of Scotland. See *Eigg*.

Egga (eg'ga), a town of West Africa, on the right bank of the Niger, about 70 miles above the junction of the Binue. Pop. about 10,000.

Eggar (eg'gar), or EGGER, a name given to moths of the family Pombycidae. *Lasiocampa trifolii*, a well-known British moth, is called the grass-egger, and the *L. roboris* the oak-egger, from the food of their caterpillars.

Egg-bird, *Hydrochelidon fuliginōsum*, a species of tern, a bird of considerable commercial importance in the West Indies, as its eggs, in common with those of two other species of tern, form an object of profitable adventure to the crews of numerous small vessels.

Egg-flip, a drink made of warmed beer, flavored with a little sugar, spirit, spices and eggs beaten with it.

Eggnog, a drink consisting of the yolk of eggs beaten up with sugar, and the white of eggs whipped, with the addition of wine or spirits.

Eggplant (*Solanum melongēna*), nat. order Solanaceæ, a herbaceous plant, from 1 foot to 18 inches high, with large white or purplish flowers. The fruit is a sphere of considerable size, and generally yellow, white, or violet, and baked or fried in slices, is used as an article of food. It is cultivated in In-

Eggplant (*Solanum melongēna*).

dia, the United States, etc., and in European hothouses. There are several other species of eggplants, as *S. Indicum*, *S. sodomcum*, etc.

Egil Skallagrim (eg'il), an Icelandic bard or poet of the tenth century, who distinguished himself by his warlike exploits in predatory invasions of Scotland and Northumberland. Having fallen into the hands of a hostile Norwegian prince, he procured his freedom by the composition and recitation of a poem called *Egil's Ransom*, which is still extant.

Eggleston (eg'gelz-ton), EDWARD, an American novelist and historian, born at Vevay, Indiana, in 1837; died in 1902. He was a Methodist preacher in early manhood, and in 1874 founded the creedless church of Christian Endeavor. He wrote several popular novels, including *The Hoosier Schoolmaster*, *The Faith Doctor*, etc., also works on colonial history.

Eggleston, GEORGE CARY, author, brother of the preceding, was born at Vevay, Indiana, in 1830. He became a journalist in New York and wrote a large number of books, including several tales for the young. He died in 1911.

Eginhard (eg'in-ard), or EINARD, a Frankish writer, born about 1771, studied at Aix-la-Chapelle, under Alcuin. His talents and learning gained him the confidence of Charlemagne, who made him his private secretary and chaplain, and gave him his daughter Emma in marriage. On the death of the emperor, Eginhard took the cowl and became first abbot of the monastery at Seligenstadt, in Darmstadt, where he died in 844. Eginhard is the oldest German historian, and has left us a life of Charlemagne (*Vita Caroli Magni*), and *Annals of the Franks*, from 741 to 829. His letters, still extant, are also an important contribution to the history of the age.

Eglantine (eg'lan-tin), one of the names of the sweetbrier (*Rosa rubiginosa*), a kind of wild rose. The name has sometimes been erroneously used for other species of the rose and for the honeysuckle.

Egmont (eg'mont), LAMORAL, COUNT, was born in 1522, of an illustrious family of Holland. He entered the military service, accompanied Charles V in his African expeditions, and distinguished himself under Philip II in the battles of St. Quentin (1557) and Gravelines (1558). Philip having gone to Spain, Egmont soon became involved in the political and religious disputes

which arose between the Netherlands and their Spanish rulers. He tried to adjust the difficulties between both parties, and in 1565 went to Spain to arrange matters with Philip. He was well received, sent back with honor, but quite deceived as to the king's real intentions. In 1567 the Duke of Alva was sent with an army to the Netherlands to reduce the insurgents. One of his first measures was to seize Count Egmont and Count Horn. After a trial before a tribunal instituted by Alva himself they were executed at Brussels, June 5, 1568. A well-known drama of Goethe's is founded on the story of Egmont.

Egoism (eg'ō-izm), as a philosophical doctrine, the view that the elements of all knowledge and the reality of the things known are dependent on the personal existence of the knower. Hence the logical position of the egoist is to doubt the substantial reality of everything except his own existence.

Egret (eg'ret), a name given to those species of white herons which have the feathers of the lower part of the back elongated and their webs disunited, reaching to the tail or beyond it at certain seasons of the year. Their forms are more graceful than those of common herons. The American egret (*Ardēa egretta*) is about 37 inches long to the end of the tail; plumage soft and blended; head not crested; wings moderate; the tail short, of twelve weak feathers. The European egret (*A. alba*) is about 40 inches long, of a pure white plumage; the bill is black or dark brown, yellow at the base and about the nostrils, and the legs are almost black. The little egret (*A. garzetta*) is about 22 inches long from bill to end of tail, the plumage is white.

Egriipo (eg'ri-pō), a name of Chalcis (which see).

Egypt (ē'jipt; Greek, *Aiguptos*; Hebrew, *Misr* or *Misraim*; ancient Egyptian, *Chem* or *Chemi*, 'the black land'; Arabic, *Misr* or *Musr*), a country in the northeastern part of Africa, governed by a ruler (the *khedive* or viceroy) who pays tribute to the sultan of Turkey, but is virtually independent. Egypt is bounded on the N. by the Mediterranean Sea, on the E. by Arabia and the Red Sea, and on the W. by the Libyan Desert. Its natural southern frontier may be placed about Assouan (about 500 miles south of the Mediterranean), near which cultivated land almost disappears and the country begins to assume the features of the Nubian Desert. The authority of the khedive extends far southward over what is known as the

Egyptian Soudan, up to a few degrees from the equator, including Kordofan, Darfur, Barel-Ghasal, etc. This territory, acquired by conquest and known by the general name of the Soudan, was evacuated in 1885, as a result of a revolt of the people, under the Arab leader known as El Mahdi, against Egyptian authority. Wady Halfi about 670 miles south of the Mediterranean, remained the southern limit of Egypt from this date to 1896, when a new advance began, ending in the defeat of the Arabs at Omderman, near Khartoum, in 1898, the death in battle of the Khalifa, successor to the Mahdi, in 1899, and the recovery of the Soudan for Egypt by the Anglo-Egyptian army. (See *Soudan*.) A small strip of N. W. Arabia on the east of the Red Sea belongs to Egypt, as also the Sinaitic peninsula and the Isthmus of Suez. While the authority of Egypt thus extends over a great territory, the area of the inhabitable section of Egypt proper, that irrigated by the Nile, is only about 11,000 sq. miles. It has a population of 11,287,359, according to the census of 1907. The capital and largest town is Cairo, the next largest and chief seaport is Alexandria.

The inhabited portion of Egypt is mainly confined to the valley of the Nile, which, where widest (at the Delta), does not exceed 80 miles, and narrows steadily as we ascend its stream till, at the southern frontier, it is only 2 miles wide. The Nile has no tides, but runs constantly towards the sea at the rate of $2\frac{1}{2}$ to 3 miles an hour. After it enters Egypt it flows in a northward direction, but with considerable bends till it reaches lat. $30^{\circ} 15'$, a little beyond Cairo, where it divides into two main streams, the Rosetta and Damietta branches, which enclose that portion of land known as the Delta and formed by deposits of alluvial matter. Bordering on the Mediterranean are several salt lakes or lagoons, Menzaleh being the largest, through which is carried the Suez Canal, connecting the Mediterranean and the Red Sea, and also passing through other salt lakes. About 150 miles south of the Mediterranean is the lake Birket-el-Kurun, fed by the Nile. As very little rain falls in Egypt, the prosperity of the country entirely depends upon the Nile, and especially upon the yearly overthrow of the river, which so fertilizes the soil with a brown slimy deposit that it produces two crops a year. Beyond the limits of the inundation and of irrigation there is no cultivation whatsoever. The Nile begins to rise in June, and continues to increase

until September, overflowing the low lands along its course, the waters being conveyed by canals where natural channels fail. The Delta then looks like an immense marsh interspersed with islands, villages, towns and plantations, just above the level of the water. After a few days the water begins to subside, and leaves the land again dry about the end of October. The seed is then sown, and artificial irrigation is maintained by water raised from the river, and distributed by means of channels throughout the fields. The appliances for raising water are simple and primitive; chiefly the *shadoof* worked by two men, and the *sakieh* driven by a donkey or an ox. (See *Shadoof*.) The land is soon covered with green crops, and the first harvest is in March.

At Cairo the valley of the Nile becomes well defined. It is bordered on the east by what are called the Arabian hills, and on the west by the Libyan ranges. Beyond the limits of the valley on the Libyan sides are five oases at intervals—those of Khârgah, Dâkhel, Farâfra, Siwa and Bahriyeh—islands of verdure and cultivation, in some of which artesian wells are numerous. The great oasis Wah-el-Khârgah extends south for 100 miles. These oases are also dependent on the Nile like the rest of habitable Egypt, for the water to which they owe their existence is partly derived from the subterraneous percolation from that river. The territory to the east of the Nile is mainly a bare, rocky region, mountainous towards the coast, maintaining a small nomadic population. The broad plains of the Delta and the comparatively narrow valley of the river higher up make two natural divisions of Egypt, Upper and Lower. These were anciently regarded as separate kingdoms. The lower part of the valley, however, which includes the fertile tract adjoining lake Birket-el-Kurun, known as the Fayoum, differs so much from the higher part as to give rise to the division into Lower, Middle and Upper Egypt. The country is now divided into governorates and mudirichs.

The atmosphere in Egypt is extremely clear and dry, the temperature regular and exceedingly hot. The winter months are the most delightful part of the year; later, the ground becomes parched and dry; and in May the suffocating khamseen, or simoon, begins to blow from the desert plains. Rain is scanty except near the seashore; but at night the dews are heavy in Lower Egypt, and the air cool and refreshing. Egypt is not remarkably healthy, as, in addition to visi-

tations of plague and cholera, ophthalmia, diarrhœa, dysentery and boils are very prevalent.

The rock formations of Egypt consist largely of nummulite limestone, especially at the Nile and in the Libyan Desert, and of granite, syenite, porphyry and other crystalline rocks in the Arabian Desert (between the Nile and Red Sea), with sandstone in the south. Over a great extent of Egypt the rocks are covered with shifting sands, and in the lands bordering on the Nile by the alluvium deposited during the inundations, and which consists of an argillaceous earth or loam, more or less mixed with sand. Among the useful minerals found in the country are granite, syenite, basalt, porphyry, limestone, alabaster, natron, bitumen, salt and sulphur.

Now as formerly there is little timber, the principal trees, besides the date-palm and tamarisk, being the sycamore fig and acacia or gum-arabic tree, which last does not attain to any size north of Wady Halfa. The papyrus plant, once so important, is now to be found only in one or two spots. Of it was manufactured a paper which was supplied to all the ancient world. Besides the lotus or water-lily of the Nile, Egypt has always been celebrated for its production of corn, barley, a great variety of the bean class, leeks, garlic, onions, flax and for plants of the cucumber tribe. To the products of ancient times have been added the sugar-cane, cotton plant, indigo and tobacco.

Egyptian oxen were celebrated in the ancient world. The camel was early introduced; horses and asses have always abounded; sheep and goats are numerous; the cat is universal as a domestic animal. Wild animals include the hyena, jackal, fox, lynx, genet, ichneumon, jerboa, wild goat, gazelle and one or two other antelopes, hare, etc. The crocodile formerly reached the Delta, but is now seldom seen below Assouan. Water-fowl are plentiful; so are vultures and other birds of prey. The sacred ibis is still found in the south and the pelican in the northern lagoons. Among the countless insects are the sacred beetle, the locust and mosquito.

In spite of the fact that at least two and sometimes three successive crops may be gathered in a year, agriculture in Egypt is at present in a low state; and the poverty and generally wretched condition of the cultivators render improvement difficult. There are few trades which have attained a development of any importance. The tanning and

pottery-making, however, deserve praise; coarse cotton cloths are made; silk is cultivated; and the sugar-cane is grown to a considerable extent. The commerce of Egypt is considerable, and has greatly increased since the construction of the Suez Canal and the railways. The railways have a length of about 1500 miles. The total value of exports in 1910 amounted to \$130,000,000, that of imports to \$110,000,000. About 50 or 60 per cent. of the commerce is with Britain. Accounts are kept in Egyptian pounds, each containing 100 piastres, and equivalent to \$5.12.

Of the inhabitants of Egypt, those of the peasant class, or Fellahs, as they are called, appear to be descendants of the ancient Egyptians mixed with Arab blood. Having embraced Mohammedanism, they are often denominated Arabs, though regarded by the true Arab with contempt. The Copts are the descendants of the ancient Egyptians who embraced and still cling to the Christian religion. Though comparatively few in number, their education and useful talents enable them to hold a respectable position in society, as clerks, accountants, etc. With those aboriginal inhabitants are mingled, in various proportions, Turks, Arabs (chiefly Bedouins), Armenians, Berbers, negroes and a considerable number of Europeans, especially Greeks and Levantines.

The government of Egypt is in the hands of the khedive or viceroy, who is assisted by a ministry formed on the model of those of Western Europe. The title and government are hereditary, but the khedive, as a Turkish vassal, has to pay an annual tribute to the sultan of \$3,500,000. For some years previous to 1882 two controllers-general, appointed respectively by France and Britain, had extensive powers of control in the administration of the country; but in that year, the French having refused to lend assistance in putting down the rebellion of Arabi Pasha, a British army occupied Egypt, and the government has since been carried under the supervision of Britain, various reforms having been introduced. Egypt is much burdened with its large public debt, which amounts to the sum of \$465,000,000. The chief items of revenue are the land-tax, producing over \$25,000,000 a year, indirect taxes and railways. The annual revenue is about \$75,000,000; expenditure nearly the same.

History.—The Egyptians are the earliest people known to us as a nation. When Abraham entered the Delta from Canaan they had been long enjoying the

advantages of a settled government. They had built cities, invented hieroglyphic signs, and improved them into syllabic writing, and almost into an alphabet. They had invented records, and wrote their king's names and actions on the massive temples which they raised. The arrangement of Egyptian chronology is still a much-disputed point among scholars. A list of the kings of Egypt, arranged in thirty dynasties, was given by the priest Manetho (about 250 B.C.), and this division is still used. His list, however, is in a very corrupt condition and his method is not strictly chronological. Hence in the various systems of chronology adopted by Egyptologists the dates assigned to Mena (or Menes) vary from 5702 to 2440 B.C. According to tradition, Mena formed the old empire of Egypt and founded its capital Memphis. The IVth Dynasty is distinguished as the 'Pyramid Dynasty.' Three of its kings, Khufu, Khafra and Menkaura (according to Herodotus, *Cheops*, *Chephren* and *Mykerinos*), built the largest pyramids. The date assigned to these kings in the chronology of Lepsius is 2800-2700, but these dates are very problematical. About 2400 the government of the empire seems to have been transferred from Memphis to Thebes, and with the beginning of Dynasty XII the Theban line was firmly established. The chief princes of this dynasty are Amenemhat I (2380), who seems to have extended the power of Egypt over a part of Nubia; Usurtasan I, who made further conquests in this direction; and Amenemhat III (2179), who constructed Lake Meri (Mœris), a large reservoir for regulating the water supply of the Nile. About 2100 Egypt was conquered by the Hyksos, a nomadic tribe that, its leaders being known in history as shepherd kings, invaded Egypt from the east and established its capital at Tanis (Zoan). The Theban princes seem, however, to have preserved a state of semi-independence, and at last a revolt commenced which ended by the shepherd kings being completely driven out of Egypt by King Aahmes (Amāsis) of Thebes (about 1600), the first of the XVIIIth Dynasty. With Aahmes and the expulsion of the Hyksos began the reigns of those great Theban kings who built the magnificent temples and palaces at Thebes. The kings of the other parts of Egypt sank to the rank of sovereign priests. Thutmes (or Thothmosis II) added Memphis to his dominion by his marriage with Queen Nitocris. Under Thutmes III and his successors there were successful expeditions against the Syrians and the Ethio-

pians. Amenhotep III set up his two gigantic statues in the plain of Thebes, one of which the Greeks called the musical statue of Memnon. The Ramessides form the XIXth Dynasty. They commence with Rameses I, who seems to have been of Lower Egyptian extraction. His grandson, the Great Rameses II, or Sesostris, was successful against the neighboring Arabs and covered Egypt with magnificent buildings. Rameses II was probably the Pharaoh who oppressed the Hebrews, and the exodus may have occurred under his successor Meneptah or Merenptah. Under the later Ramessides the Egyptian empire began to decay. A new dynasty, XXI, came to the throne with King Hirhor. The seat of their power was Tanis in the Delta. During this period a great number of foreigners, Libyans as well as Asiatics, established themselves in Egypt. About 961 Sheshenk I, the Shishak of the Bible, of a Shemite family from Bubastis, established a new dynasty (XXII). He attempted to restore Egyptian rule in the East, and conquered and plundered Jerusalem. After his death Egypt was torn by civil wars, and eventually the Ethiopians under Shabak (Sabako) conquered it (XXVth Dynasty). For a time it was subject alternately to Ethiopian and Assyrian princes, but in the seventh century the kings of Saïs once more restored its independence and prosperity to Egypt. Psamethik I (Psammetichus) warred successfully in Syria and Palestine. King Nekho (610-594) defeated Josiah, king of Judah, but his further progress was checked by Nebuchadnezzar. His sailors circumnavigated Africa. Uahbra (the Greek Apries, the Hophrah of the Bible) and Aahmes II (Greek Amāsis) followed. About 523 Cambyses, king of Persia, overran Egypt and made it a Persian province. During the reign of Cambyses the Egyptians suffered much oppression. After the Persian defeat at Marathon the Egyptians rose and recovered their independence for a short time, but were again subdued, and, in spite of two other revolts, Egypt remained a Persian province till Persia itself was conquered by Alexander the Great, B.C. 332.

Egypt now became a Greek state, many Greeks having been already settled in the country, and the Egyptians were treated as an inferior race. Alexandria was founded as the new Greek capital. On Alexander's death his general, Ptolemy, took possession of the throne and became the first of a Greek dynasty that for three hundred years made Egypt one of the chief kingdoms of the world.

The Ptolemies were magnificent patrons of letters and arts. Theocritus, Callimachus, Euclid the geometrician, the astronomers Eratosthenes and Aratus, etc., flourished under their rule. But while the Alexandrian Greeks managed to keep down the native Egyptians, they were themselves sinking under the Romans. Ptolemy Auletes went to Rome to ask help against his subjects, and the famous Cleopatra maintained her power only through her personal influence with Julius Cæsar and Mark Antony. On the defeat of Mark Antony by Augustus, B.C. 30, Egypt became a province of Rome. It was still largely inhabited by Greeks, and Alexandria became the chief seat of Greek learning and science. On the spread of Christianity the old Egyptian doctrines lost their sway. Now arose in Alexandria the Christian catechetical school, which produced Clemens and Origen. The sects of Gnostics united astrology and magic with religion. The school of Alexandrian Platonics produced Plotinus and Proclus. Monasteries were built all over Egypt; Christian monks took the place of the pagan hermits, and the Bible was translated into Coptic.

On the division of the great Roman Empire (A.D. 337), in the time of Theodosius, into the Western and Eastern empires, Egypt became a province of the latter, and sank deeper and deeper in barbarism and weakness. It was conquered in 640 A.D. by the Saracens under Caliph Omar. As a province of the caliphs it was under the government of the two celebrated Abbasides—Harun-al-Rashid and Al-Mamun—and that of the heroic Sultan Saladin. The last dynasty was, however, overthrown by the Mamelukes (1250); and the Mamelukes in their turn were conquered by the Turks (1516-17). The Mamelukes made repeated attempts to cast off the Turkish yoke, and had virtually done so by the end of last century, when the French conquered Egypt and held it till 1801; they were then driven out by the British under Abercromby and Hutchinson.

On the expulsion of the French a Turkish force under Mehemet Ali Bey took possession of the country. Mehemet Ali was made pasha, and, being a man of great ability, administered the country vigorously and greatly extended the Egyptian territories. At length he broke with the Porte, and after gaining a decisive victory over the Ottoman troops in Syria in 1839, he was acknowledged by the sultan as viceroy of Egypt, with the right of succession in his family.

He was succeeded by his grandson Abbas, Mehemet Ali died in 1849, having survived his son Ibrahim, who died in 1848. who, dying in 1854, was succeeded by his uncle Said, son of Mehemet. After Said's death Ismail Pasha, a grandson of Mehemet Ali, obtained the government in 1863. His administration was vigorous but exceedingly extravagant, and brought the finances of the country into disorder. In 1866 he obtained a firman from the sultan granting him the title of khedive. In 1879 he was forced to abdicate under pressure of the British and French governments, and was replaced by his son Tewfik. In 1882 the 'national party' under Arabi Pasha revolted and forced the khedive to flee. On July 11 a British fleet bombarded Alexandria and restored the khedive, and at Tel-el-Kebir the forces of Arabi were totally crushed on September 13. British influence now became dominant in Egypt. A rebellion in the Soudan under the leadership of Mohammed Ahmed, the so-called mahdi, now gave the government trouble. In 1883 the forces of the Mahid annihilated an Egyptian force under Hicks Pasha in Kordofan. British troops were now dispatched to Suakin and inflicted two severe defeats on the mahdi's followers there. But the British cabinet had resolved to abandon the Soudan; and General Gordon, already famous for his work in this district, was sent to effect the safe withdrawal of the garrisons (1884). By this time, however, the mahdi's forces were strong enough to shut the general up in Khartoum, and to take that place in January, 1885, Gordon being slain. Abbas Pasha succeeded as khedive in 1892, and in 1898 Khartoum was retaken by an Anglo-Egyptian army and the Soudan regained. The British, by large reservoirs on the Nile, have added largely to the irrigable area.

Ancient Civilization.—The civilization of the Egyptians had reached a high pitch from the earliest period to which we can trace their history. The masonry of the passages in the great pyramid has not been surpassed at any age. More than 2000 B.C. the Egyptians had duodecimal as well as decimal numbers; weights and measures adjusted to a pound of 1400 grains. In mechanical arts the carpenter, boatbuilder, potter, leather-cutter, glassblower and others are frequently represented on their ancient monuments, and we see the blow-pipe, bellows and siphons; the press, balance, lever; the saw, the adze, the chisel, the forceps, the syringe, harpoon, razors; we have also glazed pottery, the

potter's wheel, and the kiln; and dated specimens of glass of the time of Thothmes III, 1445 B.C. Gold-beating, damascening, engraving, casting, inlaying, wire-drawing and other processes were practiced. The processes of growing and preparing flax, as well as the looms employed, are all depicted. The social and domestic life of the ancient Egyptians is pictured for us on the walls of their temples and tombs. The rich spent much of their time in hospitality and entertainments, especially of a musical kind. In the country districts the superintendence of the agricultural works or the fisheries on their estates was varied by the sports and pleasures of a country life. The lower orders were poor and uneducated, scantily fed and clothed, and held in contempt by the higher classes. But there was no strict separation into caste; and although the priests formed a ruling bureaucracy, the highest posts were open to the successful scholar. Next to the priesthood in importance was the military class or order, who were all landholders and bound to serve in time of war. Below these were the husbandmen, who paid a small rent to the king. Egyptian custom seems to have allowed but one wife, who occupied an honorable and well-established position as the 'lady of the house.'

The two main principles on which the religion of Egypt was based appear to have been the existence of an omnipotent Being, whose various attributes, being deified, formed a series of divinities; and the deification of the sun and moon. Each group of divinities formed a triad composed of a chief male deity, with a wife or sister and a son: as Osiris, Isis and Horus, or Amun, Maut and Khonso. Among the other gods of the Egyptian Pantheon are Ra, the sun, usually represented as a hawk-headed man. Mentu and Atmu are merely two phases of Ra, the rising and the setting sun. The worship of the bull Apis is connected with Osiris. Serapis is the defunct Apis, who has become Osiris. Seth or Set represents the power of evil. Ammon (Egyptian Amen), originally a local god, owed his importance to the greatness of his city, Thebes. Thoth was the chief moon-god, and is generally represented as ibis-headed. Anubis, the jackal-headed, belonged to the family of Osiris, and presided over mummification. Besides these deities the Egyptians worshiped beasts, reptiles and even vegetables, probably as symbols. The Egyptians believed in the transmigration of souls and in the existence of a future state, in which mankind would be rewarded or

punished according to their actions while on earth.

Fig. 1.—Plan of the Memnonium, Thebes.

Ancient Architecture and Sculptures.—The monuments we have left to us in Egypt are of two main periods—those built in the times of the Pharaohs or native kings, and those built during the rule of the Greeks and Romans (subsequent to 330 B.C.). The former period was by far the longer and more important, and to it belong the most characteristic examples of Egyptian architecture and sculpture, such as pyramids, vast temples, some of them cut in the solid rock (as at Ipsambul), rock-cut tombs, gigantic monolithic obelisks and colossal statues.

The characteristic features of the style are solidity, boldness and originality. Among its peculiar characteristics may be noted—symmetry of structure; the gradual converging of the walls of some of its edifices, especially of the propylæa or tower gateways of its temples; roofs and covered ways being flat, and composed of immense blocks of stone reaching from one wall or column to another, the arch not being employed nor yet timber; columns numerous, close and

Fig. 2.—Types of Egyptian Columns.

massive, generally without bases, and exhibiting great variety in their capitals, from a simple square block to an elaborate composition of palm-leaves or other forms suggested by vegetation (Fig. 2); the employment of a large concave molding in the entablature, decorated with vertical fluting or leaves; walls and columns

decorated with a profusion of sculptures than the rest of the hall, and consisted in outline or low relief representing divinities, men and animals, with innumerable hieroglyphics, brilliant coloring being often superadded. One remarkable feature of this elevated portion. To the Hall

Fig. 3.—Restoration of the Propylon or Gate of the Temple of Luxor.

feature associated with this style is the grandeur of its mechanical operations in cutting, polishing, sculpturing and transporting vast blocks of limestone and of granite. The pyramid is one of the

of Columns succeeded a series of smaller chambers, the roofs of which were generally supported by six or four columns. These apartments frequently surrounded a dark chamber—the most sacred in the temple—the holy of holies. The surface of each architectural feature was engraved with its particular ornament appropriately colored. In the *cavetto*, or hollow molding of the cornice, it was customary to place the name and titles of the Pharaoh or king; the architrave stone was symbolically ornamented with the names and divinities to whom the temple was dedicated, and of the sovereign in whose time it was built. The abacus of the column was invariably decorated with the royal titles. The capitals were painted in accordance with

Fig. 4.—Hall of Columns in the Memnonium—Time of the Pharaohs.

best-known forms of Egyptian art, and there is little doubt that these structures were intended as the tombs of kings. The leading features of the Egyptian temples were these: a gateway flanked by two lofty *pylons* (Fig. 3) formed the entrance to a square court (see Fig. 1, *a* entrance, *b b* pylons, *c* court). From this court the way leads through a second gateway to an inner court (*d*), surrounded by a colonnade. Beyond this is the chamber of the temple known as the Hall of Columns (Fig. 1 *e*, and Fig. 4), the center avenue of which was higher

the intention of the form; if, for instance, the expanded papyrus was shown, the leaves of the calyx would be yellow and the filaments green. Beneath were horizontal bands of blue and white, and then a representation of the king offering gifts to the gods of the temple; and, finally, the yellow and red lines at the base of the shaft signified the brown leaves that envelop the base of the stalk of the natural plant. The Egyptian temple was invariably rectangular, with its walls inclining inwards, and never more than one story high, and the approach to it

was frequently through an avenue of sphinxes (Fig. 3). The temples built north. It is one of the smaller vultures, about the size of a raven. The general

Fig. 5.—Side Elevation of Ptolemaic Temple at Edfoo.

during the sway of the Greeks and Romans, though having a general resemblance to the earlier ones, differed in

Fig. 6.—Plan of Ptolemaic Temple at Edfoo

some respects, as in the use of more elaborate capitals, more salient forms in the architectural and sculptural decorations, etc. (The side elevation of a Ptolemaic temple is shown in Fig. 5, the plan in Fig. 6.) A peculiar kind of mural sculpture was practiced among the Egyptians, the outline of the object to be represented being cut into the surface, while the minor forms and rotundity are shown with-

Egyptian Bean, a name sometimes given to the bean-like fruits of the *Nelumbium speciosum*, or sacred lotus, found in China, India, Australia, but no longer on the Nile.

Egyptian Blue, a brilliant pigment consisting of the hydrated protoxide of copper mixed with a minute quantity of iron.

Egyptian Vulture (*Neophron percnopterus*), a bird that frequents both shores of the Mediterranean, but rarely passes farther

color is white, the quill feathers of the wing being dark brown. It frequents the streets of eastern towns, where it is protected on account of its services as a scavenger.

Egyptology (ē-jip-tol'ō-ji), the science of Egyptian antiquities, or that branch of knowledge which deals with the language, history, etc., of ancient Egypt.

Ehrenberg (ā'rèn-berh), CHRISTIAN GOTTFRIED, a German scientist, born in 1795; died in 1876. After studying theology, medicine and natural history, he joined in 1820 an expedition to Palestine, Egypt and Abyssinia, returning to Berlin in 1825. In 1829 he accompanied Humboldt to the Ural and Altai ranges and to Central Siberia. His great work on *Infusoria* appeared in 1838, and was at once recognized as the highest authority on the subject. It was followed in 1854 by his *Microgeology*.

Ehrenbreitstein (ā'ren-brīt-stīn), a Prussian fortress of great strength situated opposite the confluence of the Moselle with the Rhine, on a precipitous rock 387 feet above the river, and inaccessible on three sides. It is connected with Coblenz on the opposite shore by a bridge of boats. The fortifications, which were erected in 1816-26 at a cost of \$6,000,000, can accommodate a garrison of 14,000 men, and possess room for stores to last an army of 60,000 for a year.

Eibenstock (ī'ben-stok), a town in the southeast of Saxony, with important manufactures of lace. Pop. (1905) 7460.

Eichhorn (ih'horn), JOHANN GOTTFRIED, a German orientalist, historian, etc., born in 1752. He became professor of oriental languages at Jena, and then at Göttingen. He died in 1827. Among his works are the *Hebrew Prophets*, *History of Literature*, *History*

of the Three Last Centuries, Introductions to the Old and New Testaments and to the Apocrypha.

Eichstätt (ih'stet), an old town of Bavaria, in a deep valley of the Altnühl, 67 miles N. N. W. of Munich. Its principal edifice is a fine Gothic cathedral, founded in 1259. Pop. (1905) 7703.

Eider (ī-dēr), a river of Prussia, which rises in Holstein, and forms the boundary between Schleswig and Holstein, falling into the North Sea at Tönning after a course of 92 miles. By its junction with the Schleswig-Holstein Canal it gives communication between the North Sea and the Baltic.

Eider Duck (*Somateria mollissima*), a species of duck found from 45° north to the highest latitudes yet visited, both in Europe and America. Its favorite haunts are solitary rocky shores and islands. In Greenland and Iceland it occurs in great numbers, and also breeds on the western islands of Scotland. The eider duck is about twice

Eider Duck (*Somateria mollissima*).

the size of the common duck, being about 2 feet 3 inches in length, 3 feet in breadth of wing, and from 6 to 7 pounds in weight. The male is black, head and back white, with a black crown. The female is reddish drab spotted with black, and with two white bands on the wings. They feed largely on shellfish, crustaceans, etc. Their nests are usually formed of drift grass, dry sea-weed, etc., lined with a large quantity of down, which the female plucks from her own breast. In this soft bed she lays five eggs, which she covers over with a layer of down. If this, with the eggs, is removed the bird repeats the process. One female generally furnishes about ½ lb. of down, but the quantity is reduced by cleaning. This down, from its superior warmth, lightness and elasticity, is in great demand for beds and coverlets; and the districts in Norway and Iceland where these birds abound are guarded with the greatest vigilance as a most valuable property.

As found in commerce this down is in balls of the size of a man's fist, and weighing from 3 to 4 lbs. It is so fine and elastic that 5 lbs. of the best quality is sufficient for a whole bed. The down from dead birds is little esteemed, having lost its elasticity. The king eider duck (*Somateria spectabilis*) is another species resembling the preceding and inhabiting the same coasts.

Eigg (eg), an island on the west coast of Scotland, county of Inverness, about 10 miles from the mainland, and 5 miles long and about 3 broad. It has bold, rocky shores, and terminates to the south in a lofty promontory called the Scur of Eigg, with a peak of columnar pitchstone porphyry 1339 feet above the sea, and on one side perpendicular as a wall. It is the scene of the massacre, towards the end of the sixteenth century, of the Macdonalds by the Macleods of Skye, who suffocated them in a cave where they had taken refuge. Pop. 291.

Eight-Hour Law, an act adopted in 1868, by the United States Congress, and afterward by a number of the State legislatures, providing that in all government employment eight hours shall constitute a day's work. Eight hours as the limit of a regular day's labor has since been adopted in a number of industries and is being demanded in others.

Eikon Basiliké (ī'kon ba-sil'ikē; Greek, 'the royal image'), the name of a book published shortly after the execution of Charles I, in January, 1649, and supposed by some to have been written by the king himself. At the Restoration, Gauden, afterwards Bishop of Worcester, laid claim to the authorship, and a memorandum in the copy of the Earl of Anglesea, lord privy-seal under Charles II, affirms his claim with the authority of Charles II and the Duke of York. Forty-eight thousand copies were sold within a year of its publication, and the republicans put forward Milton to answer it, his *Eikonastes* (that is, 'image-breaker') appearing the same year, by order of Parliament. The *Eikon Basiliké* professes to be a sort of private journal of the king, written in an affectedly dignified strain, and containing numerous assertions of love for his misguided and ungrateful people.

Eildon Hills (ēl'don), three picturesque, conical shaped hills, south of Melrose, Roxburghshire, Scotland, reaching a height of about 1400 feet, said to have been cleft in three by Thomas the Rhymer.

Eileithyia (ī-lī-thī'ya), an ancient Egyptian city, on the

Nile, some distance above Esneh. Important remains have been obtained from rock tombs in the neighborhood, and there are several ruined temples. Modern name, El Kab.

Eilenburg (i'lên-burh), a town of Prussian Saxony, 26 miles N. N. E. of Merseburg, on an island of the Mulde. It has manufactures of calico, etc. Pop. (1905) 15,147.

Eimbeck (im'bek), or EINBECK, a town of Prussia, province of Hanover, on the Ilme, near its junction with the Leine, 40 miles south of Hanover. Pop. (1905) 8709.

Einsiedeln (in'zê-dêln), a village and district of Switzerland, in the canton of and 9 miles north by east of Schwyz, 3000 feet above the sea, celebrated for its Benedictine abbey. An image of the Virgin, alleged to possess miraculous powers, annually attracts immense numbers of pilgrims. Pop. 8496.

Eirenikon (i-rê'ni-kon), a name given to works having as their object the reconciliation of opposite schools in politics or theology.

Eisenach (i'zên-âh), a town of Germany, in the grand-duchy of Saxe-Weimar, near the mountains of Thuringia, at the junction of the Nesse and Hôrsel. It is an attractive town, and contains a grand-ducal castle. It has manufactures of pottery, leather, woolen yarn, etc. Sebastian Bach was born here in 1682. Near it lies the Wartburg, where Luther was kept for safety in 1521-22. Pop. (1905) 35,123.

Eisenberg (i'zên-berh), a town of Germany, duchy of Saxe-Altenburg, with a ducal palace and various manufactures. Pop. (1905) 8824.

Eisk. See *Ieisk*.

Eisleben (is'lâ-bên), a town of Prussian Saxony, 25 miles northwest of Merseburg, celebrated as the place where Luther was born and where he died. There are many memorials of Luther, and also a bronze statue of the reformer erected in 1883. Copper is extensively worked in the neighborhood. Pop. (1905) 23,898.

Eisteddfod (i'steth-vôd), an ancient assembly of Welsh bards for the purpose of musical and poetical contests, the judges being originally appointed by commissioners from the native princes, and after the conquest from the English kings. The last was issued in 1568, but the ancient custom was revived in 1798 by the Gwynnedigion Society, and on a more elaborate scale by the Cambrian Society, which grew out of

the Gwynnedigion. Eisteddfods are now held annually.

Ejectment (ē-ject'ment), in law, an action wherein the title to lands and tenements may be tried and the possession recovered. It is commenced by a writ addressed to the tenant in possession and all entitled to defend the possession, bearing that the plaintiff lays claim to the property in question, and calling upon all interested to appear within a certain time to defend their right, failing which the tenant in possession will be ejected. In its older form the action was remarkable for certain curious legal fictions on which procedure was based; and the names of John Doe, an imaginary plaintiff, and of Richard Roe, an equally imaginary defendant, were long familiar in cases of this kind in the English courts.

Ejoo, a kind of fiber. See *Gomuti*.

Ekaterinburg (ye-kâ-tye-ren-börk'), a town of Russia, in the government of, and 170 miles S. E. of the city of Perm, founded in 1723 by Peter the Great. It is the center of the mining and metallurgy of the Ural region; and gem-cutting, the making of machinery, cloth, candles, etc., are industries. Pop. 55,488.

Ekaterinodar (ye-kâ-tye-rê-nâ-där'), a town of Russia in the Caucasus, chief town of the Kuban territory, on the river Kuban, a poorly built place with a considerable trade. Pop. 65,697.

Ekaterinoslav (ye-kâ-tye-rê-nâ-slâf'), a town of southern Russia, capital of a government of the same name, on the right bank of the Dnieper, 250 miles N. E. of Odessa. It was founded in 1787 by Prince Potemkin, and consists of a number of long, broad and dirty streets. Pop. 135,552. The government which is intersected by the Dnieper and at one point reaches the Sea of Azov, mostly consists of steppes; area, 24,478 square miles; pop. est. (1906) 2,708,700.

Elæagnaceæ (el-ē-ag-nâ'se-ē), the oleaster family of plants, a small nat. order of apetalous exogens found in every part of the northern hemisphere, but comparatively rare south of the equator. It includes 4 genera and 30 species.

Elæis (el-ē'is), a genus of palms of which the African oil-palm (*Elæis quineënsis*) is one of the most important.

Elæocarpus (el-ē-ō-kâr'pus), a genus of trees, nat. order Tiliaceæ, natives of India and Australia and

the isles between. The fruit is used in curries or pickled like olives.

Elæodendron (el-ē-ō-den'dron), a genus of Asiatic and African trees, order Celastraceæ, some of which yield useful oils and timber.

Elæometer (el-ē-om'e-tēr), a hydrometer for testing the purity of olive and almond oils, by determining their densities.

Elæoptene (el-ē-op'tēn), the liquid portion of volatile oils, as distinguished from the concrete or crystallizable portion called *stearoptene*.

Elagabalus (el-a-gab'a-lus). See *Heliogabalus*.

Elain (e-lā'in), the oily principle of fat obtained by submitting fat to the action of boiling alcohol, allowing the stearin to crystallize, and then evaporating the alcoholic solution. It possesses much the appearance and properties of vegetable oil, and forms soaps with alkalies.

Elam (ē'lam), the ancient name of a country or region in Asia, east of the Lower Tigris. A king of Elam is said in the cuneiform inscriptions to have conquered Babylonia and Assyria about 2300 B.C. It was latterly incorporated in the Persian Empire.

Eland (ē'land), *Oreas Canina*, a species of antelope inhabiting Africa, the largest of all the antelopes,

Eland (*Oreas Canina*), male, female and young. being about the size of an ox. Its flesh, especially that of the thighs, which is

dried and used in this state, is highly prized, and consequently the animal is now nearly exterminated in the neighborhood of Cape Colony, where it was once common. The color is a light or grayish brown, and it possesses a short mane. The horns, which are about 18 inches long and nearly straight, are spirally keeled.

Elanet (el'a-net), the name of certain species of raptorial birds of the genus *Elānus*, and nearly allied to the kites. Such are the black-winged falcon (*E. melanopterus*) of Africa, Asia and New Zealand, and the black-shouldered hawk (*E. dispar*) of America.

Elaps (ē'laps), a genus of poisonous snakes, the type of the family Elapidæ, to which belongs the cobra di capello.

Elasmobranchii (el-as-mō-bran-g'ki-ī), an order of fishes, including the sharks, dogfishes, rays and chimæra, in which the skull is not composed of distinct bones, but simply forms a kind of cartilaginous box, the vertebral column sometimes cartilaginous, sometimes consisting of distinct vertebræ, the integumentary skelton in the form of placoid scales, the intestine being very short, and provided with a spiral valve. They have two pairs of fins (pectorals and ventrals), corresponding to the fore and hind limbs, and the ventral fins are close to the anus. The heart consists of an auricle, a ventricle and a muscular arterial bulb. The gills are fixed, and form a number of pouches, which open internally into the pharynx, communicating outwardly by a series of apertures placed on the side of the neck.

Elasmodon (e-las'mo-don), a subgenus of the genus *Elephant*, under which are included the mammoth and Asiatic species, the African elephant belonging to the subgenus *Loxodon*.

Elasmotherium (e-las-mo-thē'ri-um), an extinct genus of mammalia, found in the post-pliocene strata of Europe, comprising animals of great size allied to the rhinoceros, and having two horns the one behind the other.

Elastic Bitumen, ELATERITE or MINERAL CAOUTCHOUC, an elastic mineral resin of a blackish-brown color, and subtranslucent.

Elasticity (e-las-tis'i-ti), the property in virtue of which bodies resist change of volume and change of shape, and recover their for-

mer figure or state after external pressure, tension, or distortion. The former is called elasticity of volume, the latter elasticity of shape. The name *Compressibility* is also used in connection with the elasticity of volume; and *Rigidity*, or resistance to change of shape, in connection with that of shape. Fluids possess no rigidity whatever; they offer no *permanent* resistance to change of shape; while a solid body, unless it is distorted beyond certain limits, called the *limits of elasticity*, tends to return to its original form. Both fluids and solids possess elasticity of volume, and tend to resume their original volume after compression. The elasticity of volume of the former is perfect; whatever compression they have been subjected to, they return under the same conditions of temperature to precisely their original volumes when the forces of compression are removed. In the case of solids there are limits to their elasticity of volume as well as to their elasticity of form; thus, gold may be made permanently denser by hammering. There is one law of elasticity, the celebrated law of Hooke—*Ut tensio sic vis*, which translated into the modern language of elasticity stands—*Strain is proportional to stress*; or, in other words, whatever be the nature of the distortion the amount of it is proportional to the stress that produces it. This law is only considered applicable so long as we do not go beyond the limits of elasticity. See also *Boyle's Law*.

Elater (el'a-tēr), the name of a family (Elateridæ) of beetles, remarkable for their ability to throw themselves to a considerable height in the air, when placed on their back, by a vigorous muscular movement. Hence their names of springing-beetles, click-beetles, skip-jacks, etc. When alarmed, the elater counterfeits death. Flowers, grass and decaying wood are the habitations of these animals, which are almost always found singly. The larvæ are often very injurious to vegetation, especially those which devour the roots of herbaceous plants (as in the genus *Agriotes*), and are known from their slenderness and hardness as wire-worms. The fireflies of America belong to the family. They possess luminous properties, which are unlike those of the glow-worm, etc., being seated near the head. The *Pyrophorus noctilucus*, called *cocuyo* in Brazil, is used as a personal ornament by ladies. The largest species of the genus *Elater*, the *Elater flabellicornis*, is 2½ inches in length.

Elaterium (e-la-tē'ri-um), a substance obtained from the fruit of the squirting or wild cucumber (*Ecbalium aareste*). The juice of the unripe fruit when expressed and allowed to stand deposits elaterium as a green sediment with an acrid taste, a faint odor, and powerful cathartic properties. It is a violent purgative, and is poisonous, but its action is not constant. The active principle in it is called *elaterin*.

Elatinaceæ (e-la-ti-nā'se-ē), the water-pepper family, a nat. order of herbaceous annuals found in marshy places in all quarters of the globe.

Elba (elba; Lat. *Ilva*), a small island in the Mediterranean, in the province of Livorno (Leghorn), Italy, separated from the mainland by the Strait of Piombino, about 6 miles wide. The island is 18 miles long and from 2½ to 10½ miles broad, and is traversed by mountains rising to a height of over 3000 feet. It is rich in iron, marble, granite, salt, etc.; and iron ore is exported. Excellent wine and fruits are produced. It has two seaports—Porto Ferrajo (the capital) and Porto Longone. The Treaty of Paris in 1814 erected Elba into a sovereignty for Napoleon, who resided in it from May 4, 1814, to February 26, 1815. Pop. 25,043.

Elbe (elb; Ger. pron. el'be; Lat. *Albis*; Bohemian, *Labe*), a river of Germany, one of the largest in Europe. It rises on the s. w. slopes of the Schneekoppe or Snowcap, one of the Riesengebirge, between Bohemia and Silesia. From this point it flows nearly due s. into Bohemia for about 50 miles, when it turns to the w., and after about 40 miles takes a general n. n. w. direction till it falls into the North Sea, intersecting Saxony, a considerable portion of Prussia, and in the latter part of its course separating Holstein on its right from Hanover on the left. The length, including windings, is upwards of 780 miles. The principal affluents are, on the right, the Iser, Schwarz-Elster and Havel; on the left, the Alder, Moldau, Eger, Mulda and Saal. In the lower part of its course the river is divided by five large and seven small islands into several arms, which unite again about 5 miles below Hamburg. The mean depth is 10 feet, average breadth 900 feet. It is more or less navigable for about 470 miles, but its estuary at Cuxhaven is much encumbered with sandbanks. It is well stocked with fish. On July 1, 1870, the navigation of the Elbe was declared free from Hamburg to Melnik in Bohemia.

Elberfeld (el'bër-feit), a town of Rhenish Prussia, in the government of and 15 miles E. of Düsseldorf, on both sides of the Wupper, enclosed by lofty hills. Taken with Barmen it stretches along the Wupper Valley for about 6 miles. It has no historical or antiquarian importance, its prosperity, which is of recent date, being largely due to the cotton manufacture, of which it is the center in Rhenish Prussia. Linen, woolen, silk and mixed silk goods, ribbons and velvet are extensively made and exported. There are numerous mills for spinning cotton twist, linen yarn and worsted, and numerous dyeworks, and miscellaneous industrial establishments. The environs are mostly taken up with bleach-fields. Pop. (1910) 170,118.

Elberton (el'ber-tun), a city, capital of Elbert Co., Georgia, 34 miles E. by N. of Athens. It has cotton mills, fertilizer works, etc. Pop. 6483.

Elbeuf (el-beuf), a town of France, dep. Seine-Inférieure, 11 miles s. s. w. of Rouen, in a valley on the left bank of the Seine. It is well built, and has eight artesian wells. It has spinning-mills, dyeworks and is an important center for the production of woolen manufactures, chiefly of lighter cloths and fancy goods. It is also an entrepôt for the finer and heavier cloths of Louviers and Sedan. It communicates by steamers with Paris, Rouen and Havre. Pop. (1906) 17,800.

Elbing (el-bing), seaport town of West Prussia, on the Elbing, near its entrance into the Frische-Haff. It was once a flourishing Hanse town, and is still a place of considerable industry and trade, the manufactures including iron goods, machinery, brass and tinplate goods. It has also shipbuilding yards. Pop. (1905) 55,627.

Elbruz (el'bröz), a mountain summit of the Caucasus (which see).

Elburz (el'börz), a lofty mountain range extending over Northern Persia, parallel with and overlooking the Caspian. Highest peak, Mt. Demavend, 19,400 feet; average height, 6000 to 8000 feet.

Elcaja (el'cā'jä), an Arabian tree (*Trichilia emetica*), the fruit of which is used as an emetic, and to compose an ointment to cure the itch.

Elcesaites (el-se'sā-its), a sect of Gnostics which arose in the reign of Trajan about the beginning of the second century. They were a branch of the Essenes and resembled the Ebionites. A Jew, named Elxai, or Elkesai, is their reputed founder.

Elche (el'chā), a town of Spain, in the province of and 14 miles w. s. w. of Alicante, on the left bank of the Vinalopo, surrounded by palm trees. It contains various Roman remains, a fine church, and a town house of the fifteenth century. Chief industry, the culture of dates. Pop. 27,308.

Elchingen (el'hingen), Ober and Unter, two villages of Bavaria, on the left bank of the Danube, about 3 miles apart and 8 northeast of Ulm. In 1805 Marshal Ney defeated the Austrians at Ober Elchingen, and won for himself the title of Duke of Elchingen.

Elder (el'dër), a name given to different species of the genus *Sambucus*, nat. order Caprifoliaceæ. These are small trees or shrubs, with opposite and pinnated leaves, bearing small, white flowers in large and conspicuous corymbs, small berries of a black or red color, and bitter and nauseous leaves possessing purgative and emetic properties. The wood of the young shoots contains a very large proportion of pith. The common elder of Europe (*S. nigra*) is a wild shrub or small tree, distinguishable by its winged leaves; its clusters of small, cream-white flowers, and the small black berries by which these are succeeded, and from which a kind of wine is sometimes made. The dwarf elder or danewort (*S. Ebulus*) is found in many parts of Britain, and was vulgarly supposed to have sprung from the blood of the Danes. Two species are native to North America; *S. Canadensis*, a common plant from the forty-ninth to the thirtieth parallel of latitude, the berries of which are black and have a sweet taste; and *S. pubescens*, which bears red berries, and inhabits Canada, the northern parts of New England and the Alleghany Mountains. Elder wood is yellow, and in old trees becomes so hard that it is often substituted for boxwood. Its toughness also is such that it is made into skewers, tops for fishing-rods, etc. The light pith is utilized for balls for electric experiments, and various ointments, drinks and medicinal decoctions are made from the bark, leaves, flowers and berries.

Elders (el'dërz), persons who, on account of their age, experience and wisdom, are selected for office, as among the Jews, the seventy men associated with Moses in the government of the people. In the modern Presbyterian churches elders are officers who, with the pastors or ministers, compose the consistories or kirk-sessions, with authority to inspect and regulate matters of religion and discipline in the congrega-

tion. As a member of the kirk-session the elder has an equal vote with his minister, and as a member of the higher church courts, when delegated thereto, he has a right to reason and vote on all matters under discussion in the same manner as the clergy themselves.

Eldon (el'don), JOHN SCOTT, EARL OF, lord-chancellor of England, was born in 1751 at Newcastle-on-Tyne, where his father was a coal dealer and public-house keeper of means. He was educated with his brother William (afterwards Lord Stowell) at Newcastle, and at Oxford, where he obtained a fellowship. He was called to the bar in 1776, and in 1782 was made king's counsel. Next year he entered parliament, supported Pitt, and was made solicitor-general, and knighted. In 1792 he purchased the estate of Eldon. In 1793 he became attorney-general, and in 1799 was created chief-justice of the Court of Common Pleas, and raised to the peerage and the House of Lords by the title of Baron Eldon. On the accession of the Addington ministry he became lord-chancellor (1801), and retained this post under the subsequent administration of Pitt until the death of the latter in 1806. A year later, however, he resumed the chancellorship under Liverpool, and held it without break for twenty years. In 1821 he was created an earl by George IV. On the accession of the Canning ministry in 1827 he resigned the chancellorship, and never again held office. He died in London in 1838 at the age of eighty-six. As a lawyer he was a master of English jurisprudence; as a politician, he was opposed to reform, and by no means free from the charge of servility and intrigue.

El Dorado (el dō-rā'dō) a country that Orellana, the lieutenant of Pizarro, pretended he had discovered in South America, between the Orinoco and Amazon rivers; and which he named thus on account of the immense quantities of gold and precious metals which, he asserted, he had seen in Manoa, the capital of the country.

Eleanor Crosses (el'i-nor), memorial crosses erected on the spots where the bier of Eleanor, the wife of Edward I, rested on its way from Grantham to Westminster. Thirteen were erected, but only three, those of Northampton, Geddington and Waltham, remain.

Eleatic School (el-ē-at'ik), a Grecian philosophical sect, so called because it originated in Elea (Latin, *Velia*), town of Magna Græcia (Southern Italy), of which also three

of its most celebrated teachers, Parmenides, Zeno and Leucippus, were natives. The founder was Xenophanes of Colophon, who came to Elea late in life, bringing with him the physical theories of the Ionian school, to which he added a metaphysic. The two schools soon drifted widely apart, especially in respect of method. Starting from the observation of external nature, the Ionians endeavored to discover some elementary principle, as water, air, fire, or a combination of elements, by the action of which the phenomena they observed might be accounted for. The Eleans made the abstract idea of Being or God, deduced from the contemplation of the universe as a whole, their starting point; and their reasonings sometimes led them to deny the reality of external phenomena altogether.

Elecampane (el-i-kam-pān'; *Inula Helēnium*), a plant of the nat. order Compositæ, found in the United States and Europe, also in Asia. It is 3 or 4 feet high; the radical leaves are often 2 feet and more in length; the flowers are large and yellow; the root, which is perennial, possesses a bitter, camphor-like taste. It was formerly much used as a stimulant for all the secreting organs.

Election (el-ek'shun), in theology, the doctrine that God has from the beginning elected a portion of mankind to eternal life, passing by the remainder. It is founded on the literal sense of certain passages of Scripture, and has been amplified by the labors of systematic theologians into a complete and logical system. It dates in ecclesiastical history from the time of Augustine; but Calvin has stated it so strongly and clearly in his Institutes that it is generally associated with his name.

Election, in politics, the selection by voting of a person or persons to occupy some post or office. The most important elections are those of the members of the legislative assemblies of the different countries, and as to the manner in which these are carried out strict laws are in force. In such elections voting by ballot (see *Ballot*) is now general. The chief forms of election in Britain are parliamentary and municipal elections, in both of which the basis of the suffrage (or right of voting) is the payment of poor-rates. Jurisdiction of election laws of the United States extends to such officers of Federal Government as are elective, viz., the president, vice-president and members of the House of Representatives. The election

Elector

of officers of the State governments is regulated by the several State codes. The president and vice-president are elected by a college of electors, which college is composed of as many electors as there shall be senators and representatives in Congress at the time of the appointment of such electors. The people vote directly for these electors. Members of Congress are elected as follows: each State is entitled to two senators in Congress, who are elected by the legislatures of the several States; members of the House of Representatives are elected directly by the people. All citizens of the United States are entitled to vote except citizens of the District of Columbia. In 1870 persons of African descent were given the right to participate in elections. The States of the Union from time to time enact laws for the regulation and management of their local elections, embracing the choice of the officers of the State, city and county. The constitutions of the several States secure to citizens the right of suffrage. The laws of each State provide the means of effecting the ends of the constitution, and prescribe the qualifications of voters, which vary somewhat in the different States. The length of residence in the State previous to an election is fixed by the State law and varies in the different States. Property qualification is required only in Rhode Island. Some of the States require an ability to read and write. In the States of Wyoming, Utah, Idaho, Colorado, Washington and California, the full right of suffrage is extended to women, while partial suffrage exists in many States. Vigorous efforts are being made by women to win full suffrage in the United States and Britain.

Elector (e-lek'tur; German, *Kurfürst*, 'electoral prince'), the title of certain princes of the old German Empire who had the right of electing the emperors. There were ten in 1806, when the old empire was dissolved. Also the title given to those chosen to elect the president of the United States. (See *Election*.)

Electoral College (e-lek'tur-al), in the United States, the body of men elected in each State to cast the vote of the people of the State for presidential candidates. The State conventions of the various parties nominate the electors, one for each representative, and one for each senator in Congress. These persons are voted for on the general election day. Those elected are required to meet on the first Wednesday in December in the year in which they are elected, in such places as the legis-

lature of each State may direct. The governor is to give them three certified lists of those chosen to be electors; the electors are to make three lists of the persons balloted for by them for the presidency and vice-presidency, and to the certified lists annex the certificates furnished by the governor. They are to appoint one of their number to carry one of the certificates to the president of the Senate before the first Wednesday in January, and to send to the president of the Senate, by mail, another copy of the certificates; and the third they are to give to the judge of the district wherein they assemble.

Electoral Commission, a commission provided for by act of Congress, January 29, 1877, to settle disputed questions in regard to the electoral votes of several States in the presidential election of 1876. It was composed of five senators, chosen by the Senate; five members of the House of Representatives, chosen by the House; and five associate justices of the supreme court, four of whom were designated by the act of Congress, and the fifth selected by the four. It was found, on counting the electoral votes in the presence of the two houses of Congress, that there were conflicting certificates from four States—Louisiana, Florida, Oregon and South Carolina. These certificates were referred to the commission, which by a vote of eight to seven—following the line of party division in the commission—decided that the certificate of electoral votes cast for Hayes and Wheeler, the Republican candidates, was the legal certificate. The decision of the commission, according to the terms of the statute, became irrevocable; the disputed votes were counted accordingly; and Hayes and Wheeler were found duly elected, by a majority of one electoral vote. The important question before the commission was whether an electoral certificate being in form confessedly according to law, it was competent for Congress or the commission to go behind the same and take evidence *aliunde* in support of alleged irregularities committed before such certificate was issued. The majority of the commission took the negative. The decision was bitterly resented by the Democratic party, which maintained that its candidates had been rightfully elected and had been deprived of their just rights.

Electric Battery (e-lek'trik), the original name of what is now more commonly called a battery of Leyden jars, the old name hav-

Electric Battery

Electric Chair

ing been given before galvanic batteries were invented. See *Leyden jar*.

Electric Chair, an apparatus used in performing an electrocution. It consists of a strong chair, to which are attached straps for holding the body of the subject in position and electrodes through which the heavy electric current used to extinguish life passes.

Electric Clock, a clock driven or controlled by electricity, the latter being the ordinary meaning of the term. One clock driven in the ordinary way can be made to control by electric currents another clock (or clocks) also driven in the ordinary way so as to make it keep accurate time. The method of R. L. Jones, more or less modified, is now in very extensive use. By means of it one high-class clock (usually in an astronomical observatory) compels a number of other clocks at considerable distances to keep time with it. The clocks thus controlled ought to be so regulated that if left to themselves they would always gain a little, but not more than a few minutes per day. The pendulum of the controlling clock, in swinging to either side, makes a brief contact, which completes the circuit of a galvanic battery, and thus sends a current to the controlled clock. The currents pass through a coil in the bob of the pendulum of the controlled clock, and the action between these currents and a pair of fixed magnets urges the pendulum to one side and to the other alternately. The effect is that, though the controlled clock may permanently continue to be a fraction of a second in advance of the controlling clock, it can never be so much as half a second in advance. An electrically controlled clock usually contains a small magnetic needle, which shows from which direction the currents are coming. The arrangements are usually such that at every sixtieth second no current is sent, and the needle stands still. Any small error is thus at once detected. The term is also frequently applied to clocks containing a small battery which are self winding.

Electric Car. See *Trolley*.

Electric Eel (*Gymnōtus*), an eel abundant in the fresh waters of Brazil and the Guianas, which possesses organs capable of developing a strong electric current and thus of giving a violent shock to any one touching the eels. These organs replace the lower muscles along the sides of the tail. The eels can be taken by driving horses into the water to be shocked and seizing them

Electric Furnace

when thus weakened. Other electric fishes are *Torpedo*, or electric ray, and the African catfish. The origin and mode of operation of these organs are unknown.

Electric Furnace, a device or receptacle in which a high temperature is produced by means of the electric current for the purpose of effecting a chemical reaction or change of state in the substance to be treated, such as the reduction of an ore, the formation or breaking down of a compound, or the fusion or volatilization of a metal or compound. Since the heat developed in any given portion of an electric circuit is proportionate to the resistance offered to the passage of the current, that portion of the circuit which is outside the furnace is composed of metals such as copper or aluminium, while the resistance of the portion or portions of the circuit in which it is desired to localize the heat is relatively high. There are three forms of electric furnace, the chief points of difference being in the character of that portion of the circuit in which the heat is desired.

The Arc Furnace.—The first consists of an arc, in which the incandescent gases produce an extreme degree of heat between carbon terminals. With this type of furnace it is possible to produce a temperature of 4500 degrees centigrade in a small furnace charge. Since it is impossible to place more than a small quantity of the charge within the arc it is necessary in commercial work either to establish a number of arcs or move the arcs relatively to the charge or move the charge relatively to the arcs. The high temperatures made possible by the use of the electric furnace have opened a new field to chemistry, but careful regulation of the heat is essential. This may be obtained by moving the charge or moving the arc, adjusting the duration of contact to the quantity of the charge. Generally speaking, the arc is both wasteful and inefficient as a source of heat.

The Electrolytic Furnace.—A molten salt may not only be kept in a state of fusion by the heat developed by its own resistance to the passage of a direct current of sufficient volume, but it will be 'electrolyzed' or decomposed so that one of its parts, which may be a metal, will accumulate at the positive electrode known as the 'cathode' and another part will accumulate at the negative electrode or 'anode.' This process is extremely useful in breaking down certain compounds, but the heat regulation must be very exact.

The Incandescent Furnace.—This term is used to designate furnaces in which

the heat is developed by the passage of the current through a body which is solid initially, such as a core of carbon; a granular bed of coke; retort carbon or graphite; the charge itself when mixed

deflection of magnetic needles, the production of heat and light in certain circumstances, the separation of certain chemical compounds into their constituents, and spasmodic actions on

the nervous and muscular systems of animals. The name is derived from the Greek *ēlectron*, amber, the fact that amber when rubbed attracts light particles, such as small pieces of paper, having been known to the ancient Greeks. Friction was the only artificial source of electricity employed until Galvani, near the close of the eighteenth century, accidentally obtained it by the contact of two metals with the limbs of a frog; and Volta, developing Galvani's discovery, invented the first galvanic or voltaic battery. Electricity produced by friction is called *frictional electricity*; that produced by chemical action on metals, *voltaic electricity*.

Conductors and Non-conductors.—All substances which, like amber, could be made to show electrical attraction by rubbing them, were called *electrics* by early writers on electricity. They included glass, amber, sulphur, shellac, rosin, silk, flannel, etc. The name *non-electrics* was given to other bodies which were supposed not to be susceptible of excitation by friction. The bodies called non-electrics were also called *conductors*, from the power

Stassano Electric Revolving Furnace (Vertical Section).

with carbon; or a pyro-electrolyte, an oxide which becomes capable at high temperatures of carrying the current. In a furnace of this type it is possible to obtain a very accurate adjustment of the temperature by the regulation of the current applied.

Electricity (e-lek-tris'i-ti), the name given to the unknown cause of certain effects of varied kinds which are found to be closely connected one with another. They include two distinct kinds of attraction and repulsion (*electrostatic* and *electrodynamic*), the magnetization of iron, the

which they exhibited of allowing electricity to pass through them, while electrics were called *non-conductors*. The names conductor and non-conductor are still retained, but the names electric and non-electric are discarded as being founded on a mistake. Electricity can be excited by the friction of a conductor against a non-conductor, and is, in fact, so excited in the ordinary electrical machine, in which glass rubs against an amalgam spread on a cushion. (See *Electric Machine*.) A metallic rod furnished with a glass handle can be electrified by rubbing it with flannel, the glass

preventing the electricity from being conducted away through the hand. Substances thus electrified exhibit two opposite kinds of electricity, known, respectively, as *positive* and *negative*. Bodies charged with the same kind of electricity repel each other; those charged with opposite kinds attract each other. An instrument for indicating the presence of electricity is called an *electroscope* (which see).

Stassano Electric Revolving Furnace (Horizontal Section).

Electric Conduction.—All solid and liquid substances allow electricity to pass through them to some extent, but the differences of degree are enormous. The best conductors are the metals, especially gold, silver and copper. Perfectly pure copper conducts about seven times as well as iron. Substances which have extremely small conducting power are not called conductors, but *insulators*, so that a good insulator is another name for an extremely bad conductor. Among the best insulators may be mentioned glass, paraffin (the wax, not the oil), ebonite, shellac, mica, India rubber and gutta percha. The ratio of the conducting power of a metal to that of one of these substances is about a thousand million billions to one. Water occupies an intermediate position between these two extremes. In experiments with frictional or influence machines it behaves as a conductor, but in experiments with galvanic batteries, it behaves as an insulator. The word *resistance* is used in the opposite sense to conducting power; a good insulator is said to have high resist-

ance, and a good conductor to have low resistance.

Electrostatics is that branch of the general science of electricity which treats of the repulsions between like and the attractions between unlike kinds of electricity. The fundamental law of electrostatics is that if e and e' denote two quantities of electricity collected in two spaces very small in comparison with the distance between them, the mutual force

which they exert upon each other is directly as the product $e e'$, and inversely as the square of the distance. If the two quantities $e e'$ are both positive or both negative, the force is a repulsion; but if one is positive and the other negative, it is an attraction. Electrostatic attractions and repulsions manifest themselves in two distinct ways, namely, (1) as attractions and repulsions between electrified bodies; (2) as producing changes in the distribution of electricity on conductors. This second effect is called *electrostatic induction*. The different portions of the charge of one and the same conductor act upon one another according to the general law of repulsion, and thus produce the actual distribu-

tion, which is entirely on the surface, all electricity being repelled from the interior. The interposition of an insulating substance between two quantities of electricity alters the amount of the forces which they exert upon each other. In a broad sense electrostatics may be held to include within its range all the phenomena of frictional electricity and of the electricity produced by influence machines, such as those of Holtz, Voss and Wimshurst. (See *Electric Machine*.)

Electric Discharge.—The rapid escape of electricity from a charged body is an electric discharge. When the discharge takes place through a conductor it is called *continuous*, and when it takes place through a non-conductor (for example through air) it is called a *disruptive discharge*. The name 'electric discharge' is especially applied to cases in which the escaping electricity produces luminosity. Three kinds of such discharge have been distinguished—the *spark*, the *brush* and the *glow*. The spark is accompanied by a sound which varies from a faint crack to a loud bang. In nature

it is seen on the largest scale in the case of lightning, which is a discharge of atmospheric electricity. In many cases the electric spark presents no definite shape, but looks like a mere point of fire, or, if very bright, is enlarged by its dazzling effect on the retina; but when it leaps across a space of several inches of air it assumes a crooked shape bearing a remarkable resemblance to a flash of lightning. The *brush* discharge is only faintly luminous. It occurs especially at sharp points and edges of highly charged bodies. It is barely visible by daylight, and its appearance in the dark is that of a luminous halo. It projects only a small distance into the air surrounding the body from which the charge is escaping. The *glow* discharge simply renders the surface of the body luminous, and does not extend into the air at all. In some modern electric apparatus beautiful effects of electric discharge are shown. Thus by causing a discharge to take place in highly rarefied air or gas it is made to jump across a considerable interval, and the whole intervening space is filled with a beautiful nebulous luminosity, the color of which depends on the nature of the gas. If the vacuum is sufficiently good the luminosity is seen to be disposed in transverse stripes, technically called *striæ*.

Dissipation of Electricity.—An electrified body left to itself gradually loses its electricity. This effect is due to more causes than one. If the body is a conductor and has any sharp points or edges, these afford a ready channel for the escape of the charge into the air. Some loss occurs by particles of dust in the air being attracted to the body and then repelled after coming in contact with it. But the chief loss in the case of a smooth conductor on insulating supports usually occurs by leakage over the surface of the supports, owing to a thin film of moisture from which it is difficult to keep them free. This is especially the case with glass supports. Dissipation can be almost completely prevented by surrounding the electrified body with an artificially dried atmosphere. The usual means of doing this is to place a shallow dish of sulphuric acid or calcium chloride in the closed vessel in which the body is contained. The loss by dissipation can thus be reduced to one or two per cent. of the entire charge per diem.

Distribution of Electricity.—When a conductor has a permanent charge, there

is no electricity in its interior. The charge resides entirely at the surface, and is not *distributed* equally over the whole surface, but is thickest (so to speak) at those parts which project most. The dotted lines in the figures below illustrate, by their distances from the conductor, the thickness (technically called *density*) of the electricity at the different parts of the surface. At sharp edges, and still more at sharp points, the density is exceedingly great, and

Distribution of Electricity—Relative Amounts on Curved Surfaces.

hence, owing to this density, the electricity has a strong tendency to leak away.

Electric Currents.—What is known as an electric current is a peculiar condition of a wire or other conductor of electricity, in virtue of which it deflects magnetic needles in its neighborhood, magnetizes a piece of soft iron round which it is coiled, has its own temperature raised, and exhibits various other effects. This condition of a wire occurs both in connection with frictional and voltaic electricity, and can be produced by attaching its ends to the two terminals of a galvanic battery, or to the two terminals of a magneto-electric machine, and in various other ways. An electric current may be regarded at pleasure as consisting in the flow of positive electricity in one direction through the wire in question, or of negative electricity in the opposite direction, or of both electricities simultaneously one in each direction. What is conventionally called the direction of the current is the direction in which the positive electricity may be regarded as flowing. The 'strength' of a current denotes the quantity of electricity that passes through the wire in the unit of time. The deflecting force which a current exerts on a magnetic needle—other things being equal—is proportional to the strength of a current; but the quantity of heat which it generates in a given time is proportional to the square of its strength. One effect of currents is the decomposition of certain chemical compounds (see *Electrolysis*), and this effect, like that first mentioned, is simply proportional to the strength of the current. Instruments for measuring the strengths of currents by chemical decomposition are called *voltameters*, and instruments for measuring

them by the deflection of magnetic needles are called *galvanometers*. (See these articles.) The currents by which telegraphs are worked are usually obtained from galvanic batteries; but the far stronger currents required for electric lighting are usually produced by machines called *dynamoes* driven by steam or water power. (See *Dynamo*.) The currents in such machines are due to magneto-electric induction. (See *Induction*.)

Electrodynamics is that branch of electrical science which treats of the attractions and repulsions exhibited between wires or other conductors through which currents are passing. If two wires are parallel, they will attract each other when currents are passing the same way through them both, and will repel each other when the currents are opposite. If the wires are inclined to each other at any angle, there is not only an attraction or repulsion, but a still more marked tendency to rotation, which is not satisfied till the wires have become parallel and the currents flow in the same direction through them both. When there are only two straight wires these forces are feeble, and require delicate apparatus for their exhibition; but by employing coils of wire the forces are multiplied, and an instrument constructed on this principle called the *electrodynamometer* (which see) has been much employed for the measurement of currents. The whole science of electrodynamics is due to Ampère, who discovered its main facts, and reduced them by ingenious experiments, combined with very abstruse reasoning, to a single mathematical formula which includes them all.

Velocity of Electricity.—Daily experience with the electric telegraph shows that electrical action is propagated with great rapidity. The time that intervenes between the sending of a signal from one station and its visible effect at another depends on a variety of circumstances. The time is notably longer for underground or submarine wires than for wires suspended in the air on poles. When one end of a long submarine or subterranean telegraph wire is suddenly put in connection with a galvanic battery or other source of electricity, the current which flows out of the other end into the earth does not begin sharply but gradually, and takes a measurable time to attain its full strength. Hence an instrument which is delicate enough to react to a very feeble current will show the effect earlier than one which requires a strong current to move it. An instrument in which the moving parts are small and light has also an advantage

over one in which they are large and heavy. Something, too, depends on the nature of the source of electricity employed. A source which acts with sudden violence, like the discharge of a Leyden jar or an induction coil, will make the effect appear earlier than a comparatively gentle source, such as an ordinary galvanic battery. Electricity has not a definite velocity like light or sound. It is rather comparable to waves on water, which travel with very various speeds according to their length and the depth of the water. The highest speed ever observed in the transmission of electric effects was that obtained by Wheatstone in his celebrated experiment with a rotating mirror. In this experiment a Leyden jar was discharged through half a mile of wire with three interruptions in it, at each of which a spark was formed by the electricity leaping across. One interruption was in the middle, and the other two were at the ends, one end being close to the knob of the jar, and the other end close to its outer coating. The wire was so arranged that all three interruptions were near together; and by observing the reflections of the three sparks in a rotating mirror, he was able to discover that the middle spark occurred sensibly later than those at the two ends, these latter being simultaneous. The lagging of the middle spark behind the other two was regarded as the time that electricity took to travel through a quarter of a mile of wire, and the velocity thus found for electricity was 230,000 miles per second, a velocity greater than that of light, which is between 185,000 and 186,000 miles per second. Observations made in connection with the use of the electric telegraph for determining longitudes have shown that the time which intervenes between the sending and receiving of a signal was about four-tenths of a second between Aden and Bombay, two-tenths of a second between Alexandria and Malta, two-tenths between Malta and Berlin, and about one-eighth of a second between Greenwich and Valentia.

Electrical Theories.—If we endeavor to explain electrical phenomena by regarding electricity as a substance, we are met by two difficulties: one is that electricity adds nothing to the weight of a body; the other is that electrical phenomena are dual, as if there were two opposite kinds of electricity which destroy each other when they unite. Du Faye maintained the existence of two electrical fluids endowed with opposite qualities, and called them the *vitreous* and the *resinous* fluid. Franklin en-

deavored to account for the same phenomena by assuming the existence of a single electric fluid, and supposing an electrified body to be a body which possesses either more or less than the normal quantity of this fluid. If more, it was said to be positively, and if less, negatively electrified. Franklin's *positive* and *negative* correspond with Du Faye's *vitreous* and *resinous*. Whenever electricity is generated the two opposite kinds are always produced, and produced in exactly equal quantity. Modern theories favor the idea that electricity is not a substance or a pair of substances, but a special kind of motion, and that the two opposite electricities are two opposite states of motion of the particles of a medium which is believed to pervade all bodies and all space; the same medium whose vibrations constitute light.

Applications of Electricity.—The various methods of employing the electric current have become enormously important in commerce and industry. The telegraph and telephone rapidly follow civilization to every part of the globe. Recent developments in electric lighting and heating, together with the wide range of adaptability of the electric current as a source of power, due to its flexibility and economy, make it a factor of great and rapidly increasing importance throughout all civilization. The electrical operation of railways has been enormously developed and it seems only a matter of a few years until all trains will be moved by this motive power. The use of electricity in chemistry and metallurgy has led to many important discoveries and new processes in manufacturing. (See separate articles.)

The Electric Transmission of Power is effected by employing the source of power to drive a machine called a *dynamo* which generates an electric current. This current is conveyed by a copper conductor insulated from the earth to the distant station, where it passes through a machine called an *electromotor*, one part of which is thereby made to revolve, and imparts its motion to the machinery which is to be driven. (See *Dynamo* and *Electromotor*.)

This is the simplest arrangement, and is that which is commonly employed when the original currents are not of such high tension as to be dangerous to life in the case of accidental shocks. There is, however, a great waste of power in employing low-tension currents when the distance is great; hence it is becoming a common practice to employ high-tension currents for transmission through the long conductor which connects the

two stations, and to convert these into low-tension currents before they reach the houses or workshops where they are to be used. This is done sometimes by employing the high-tension currents to drive a local dynamo which generates low-tension currents. The discovery that a Gramme machine is reversible—that is to say, when two Gramme machines are coupled together and one is operated as a generator, the other will act as a motor—was an important step taken in the transmission of power. Numerous efforts, since then, have been made to utilize electricity for the transmission of power over a long range. For this purpose the alternating current seems eminently adapted as transformers only are needed to raise the line to high transmission voltage and to lower it again for use. The possibilities offered by electrical transmission of water-power for sections of country favored with waterfalls are numerous and have been extensively developed, which should result in making them great industrial centers. In this direction much has been done in utilizing the immense power of the Niagara Falls by electrical transmission, works having been built for this purpose both in New York and Canada, and several hundred thousand horse-power developed. The application of the power of waterfalls to the generation of electricity is rapidly extending, and promises to become a great source of mechanical power in the future.

The phrase, '*distribution of electricity*,' has been used during the last few years to denote the supplying of strong currents of electricity from central stations, where they are generated, to houses, street lamps, etc., in their vicinity. The central station contains a few powerful dynamo machines, driven usually by steam-power. The positive and negative terminals of the dynamo are put in connection with the positive and negative main conductors which are to supply the district, and from these mains smaller conductors branch off to the houses or lamps. All these conductors are of copper, that metal when pure having seven times the conductivity of iron. Different methods are in use for keeping the supply of electricity steady in spite of the varying demands made upon it. In some systems of distribution, instead of the two main conductors being one positive and the other negative, each is positive and negative alternately, the reversals taking place some hundreds of times per second. The currents are then said to be *alternating*. When such reversals do not take place, the currents are said to be *direct*.

NIAGARA ELECTRIC TRANSMISSION LINE

Tower supporting high tension transmission cables of long span crossing of Niagara River between Buffalo and Fort Erie, Canada.

Electric Light (e-lek'trik), a light obtained through heating a suitable body to incandescence by causing a current of electricity to pass through the body. The substance usually employed for this purpose is carbon, which has two recommendations: first, its power of bearing a very high temperature without melting; and, secondly, its high emissive power, which is the source of most of the light in the flame of a candle, an oil lamp, or a jet of gas.

Until within recent years the only kind of electric lamps in practical use was what is now called the *arc lamp*. The arc light is obtained by causing two sticks of carbon, one of them in connection with the positive and the other with the negative terminal of a battery or dynamo, to touch each other for an instant so as to complete the circuit, and then separating them and keeping them steadily at a small distance apart. Before the carbons have touched, the cold air between them prevents the current from passing, but as soon as they touch they become intensely heated and if they are not separated too far the air between them is hot enough to serve as a conductor. The light is emitted partly by the ends of the carbons, especially of the positive carbon, and partly by the gaseous matter (containing also fine particles of solid carbon) which occupies the intervening space and forms the *arc* or streak of light joining the two carbon points. When the source of electricity is an alternating current machine, each carbon is alternately positive and negative many times in a second, and the two points behave alike. When the source is a direct current machine or a galvanic battery the positive carbon wears away about twice as fast as the negative, and the positive carbon becomes hollow at the end, while the negative remains pointed. The hollow in

Fig. 1.—Arc Lamp Carbons. contains a representation of the two carbons of the arc lamp as they appear when cold, the positive

carbon being marked + and the negative —. Also a magnified representation such as can be obtained by throwing an image of the burning carbons on a screen by means of a lens.

To keep the carbons at the proper distance apart a special contrivance called a 'regulator' is employed. There are many varieties of regulator, but they all depend on the principle that increase of distance between the carbons causes increase of resistance. They usually contain an electro-magnet through which either the whole or a portion of the current passes, and the variations in the strength of this magnet arising from change of resistance are taken advantage of to cause the motion, in one direction or the opposite, of a piece of iron which locks and unlocks the mechanism.

Tungsten Incandescent Lamp

Arc lamps give the largest amount of light for a given amount of horse-power expended; but incandescent lamps, pos-

sess several advantages. Owing to the absence of oxygen, there is no combustion in an incandescent lamp, and hence the carbon does not waste away. The want of means to obtain a sufficiently good vacuum was the chief cause which prevented the earlier introduction of such lamps. Sprengel's mercurial pump, with Crookes' improvements, has supplied this want. All the incandescent lamps agree in having a filament suspended *in vacuo*, but they differ in the material and mode of preparation of the filaments and in other details. A great improvement came with the invention of the tantalum incandescent lamp in 1904. There are certain metals known to have a melting point upwards of 2000° C. and of these tantalum is one. By using this metal for the filament a gain in efficiency of over one watt per candle-power is secured. Filaments of molybdenum and tungsten are also used. The latter with good success and are

view by opal globes, and instead of single points of dazzling brightness presented an appearance like a row of full

Mercury Lamps.

Fig. 3.

The two sticks of carbon (A A) are side by side at distance of $\frac{1}{4}$ inch or $\frac{1}{2}$ inch. The lower ends of the carbons are inserted in copper or brass tubes (C C).

The introduction of electric lights for commercial uses may be said to date from the lighting of the Avenue de l'Opéra at Paris by Jablochhoff lamps, a few years previous to the Paris Electrical Exhibition of 1881. The electric light, as previously known, was considered too dazzling for street purposes, but the Jablochhoff 'candles,' which even when naked are far less dazzling than 'arc' lights, were concealed from direct

capable of giving light with a useful commercial life at an efficiency of about one watt per candle-power. The light of an incandescent lamp is extremely steady, affording a great contrast to the flickering which is never altogether absent from arc lights. Its temperature is lower, and hence its color is not blue or violet, like that of most arc lights, but slightly yellow, though whiter than gas. It is superior both to gas and to the arc light in giving off no products of combustion to vitiate the air of an apartment. The Jablochhoff light, which is represented in Fig. 3, occupies an intermediate place, but more nearly resembles the arc lamps. The passage of the current vaporizes the mercury and the vapor becomes incandescent, producing a powerful greenish light superior to the arc light, in places where considerable illumination is required, because of its freedom from shadows and from the annoying flicker of the arc light. It is widely used in industrial establishments because of its low cost per candle power. It is also of great value in photography, since the light is widely diffused and is composed of the 'actinic' or chemically active rays, making it a perfect substitute for daylight. Inventive ingenuity has been largely extended upon the details of electric lighting, as the records of the Patent Office will testify—for cutouts, arc-

moons. A novel form of electric light known as the *Hewitt Mercury Vapor Lamp* was invented by Peter Cooper Hewitt of New York, in 1902. It is the only form of artificial light in practical use which does not depend on the incandescence of a solid substance—usually carbon—for its lighting property. The mercury vapor lamp, as its name suggests, derives its light from the gas or vapor of mercury in which the passage of an electric current causes a high state of incandescence. The lamp consists of a glass tube partially filled with mercury, in each end of which is sealed a metal conductor. The tubes are exhausted to a high degree by a vacuum pump before sealing to prevent any escape of the vapor. In operation, after the current is turned on, the tube is tilted until the mercury connects both conductors. The passage of the current vaporizes the mercury and the vapor becomes incandescent, producing a powerful greenish light superior to the arc light, in places where considerable illumination is required, because of its freedom from shadows and from the annoying flicker of the arc light. It is widely used in industrial establishments because of its low cost per candle power. It is also of great value in photography, since the light is widely diffused and is composed of the 'actinic' or chemically active rays, making it a perfect substitute for daylight. Inventive ingenuity has been largely extended upon the details of electric lighting, as the records of the Patent Office will testify—for cutouts, arc-

lamp regulators, sockets and keys, dynamo regulation, systems of distribution, etc. The generator has attained an unrivaled degree of perfection, almost 95 per cent. of the power obtained being yielded as electric energy. The continuous current-dynamo is now a work of art. The various steps of its construction are operations of peculiar skill. The electric light has been applied to a great many special uses; for instance, in dentistry and surgery the incandescent lamp is used to explore hidden recesses of the human frame, and on ships the arc lamp as a searchlight. In submarine work electric lighting has proven of great value. Street lighting with arc lamps has had an enormous development and nearly all towns of any progress in the United States have their streets electrically lighted. The extraordinary development in the application of alternating currents is specially notable. This system of lighting has spread with such rapidity that it is now in general use all over the United States. The meter has received its due share of attention from the unwearying inventor, more than 200 patents, from the United States Patent Office, having been issued for direct and alternating currents.

Electric Machine, any machine for producing powerful electrical effects. The name is, however, seldom applied to machines depending on magneto-electric principles, and is practically confined to two classes

Fig. 1.—Cylinder Electric Machine.

of machines—those which act by friction, and those which act by electrostatic induction. The former are called friction machines, and the latter influence machines. For many years the former were the only kind known, but they have now been almost superseded by the latter. In friction machines the electricity is generated by the friction of either a glass cylinder or a circular glass plate against cushions covered with an amalgam of zinc and tin. The positive electricity which is thus developed on the

surface of the glass is given off to an insulated brass conductor furnished with teeth like those of a comb, the sharp points of which are nearly in contact with the glass. The negative electricity which is at the same time generated on the cushion must be provided with some means of escaping, or the action of the machine would soon stop. It is usually allowed to escape to the earth by a brass chain connected with the cushions; but in some machines a negative conductor connected with the cushions is insulated like the positive conductor by a glass support. Negative sparks can then be drawn from this conductor at the same time that positive sparks are drawn from the other. A cylinder machine having both a positive and a negative conductor is shown in Fig. 1, and a plate machine in Fig. 2.

Fig. 2.—Plate Electric Machine.

An influence machine (that of Voss) is exhibited in Fig. 3. Of the two glass plates which it contains, the larger is stationary, and has two patches of tinfoil on its back, one of which has a positive and the other a negative charge. One of them covers the left hand and

Fig. 3.—Voss' Influence Machine.

upper portion of the back, and the other the right hand and lower portion. The revolving plate has six metallic studs like that seen at D set in it at equal distances. The sloping bar seen in front of it is of brass and carries two little

Electric Railway

brushes, A A, of thin brass wire, against which the studs rub as they pass by, and this happens at the same moment for both brushes. When the studs have advanced about a quarter of a revolution, they come in contact with another pair of brushes, B B, which are in connection with the two patches of tinfoil, and serve to replenish their charges.

There are also two brass combs fixed opposite the two horizontal radii of the plate, one row collecting positive and the other negative electricity. They are in connection with the two knobs, C, and a brilliant discharge of electricity takes place between these knobs. The first influence machine that came into extensive use was that of Holtz, and the latest (and probably the best) is that of Wimshurst, in which both the plates revolve, their directions of rotation being opposite. The machine of Holtz is started by holding a flat piece of vulcanite, which has been excited by friction, at the back of the fixed plate. The machines of Voss and Wimshurst, if kept dry, will usually work without such assistance, their action being such as rapidly to increase any casual charge possessed by the plates. For other kinds of machine by which electric shocks can be obtained, see *Electro-medical Machines*.

Electric Railway. The enormous development of the electric railway in the United States can be appreciated from the fact that

Protected Third Rail.

there are now in operation in this country many thousands of railways, nearly all of which are moved by electric power. These are not only surface roads, there being also many miles of elevated and subway track. They have spread rapidly through every section, and have shown themselves fully able to handle travel in the busiest city as well as in the rural

Electric Storage Battery

district. The overhead system of supply, from its cheapness of equipment and reliability, commends itself most emphatically to operators of street cars. The voltage generally employed is less than 500, and it has been repeatedly shown that from such an electromotive force no danger to human life can result. In New York city, where the law forbids

Direct Current Iron-clad Railway Motor.

the employment of the overhead system, an underground system has been adopted, the wires being carried through conduits. For subway, elevated and high speed interurban electric railways, the third rail supply system, is preferred, as the contact shoe forms a better conductor for the powerful currents necessary to operate heavy trains than a trolley wheel. In many localities the steam railroad has been paralleled by electric railroads. In this direction the use of electricity is rapidly growing, and the indications are that it will eventually largely or wholly replace steam as a propelling agent. The storage-battery system of applying electric power has been experimented with, and a new one, invented by Edison, is promising.

Electric Storage Battery,

the term applied to an unstable chemical compound, which, in its change to a more stable condition, emits electric energy. In this protoxide of lead is usually employed. In charging a storage cell a dilute acid, with lead electrodes, is employed. When a current of sufficient strength is sent through this the positive electrode becomes covered with peroxide of lead, while spongy lead gathers on the negative electrode. After the cell is fully

charged in this way, it acts like a galvanic cell of low resistance and considerable electromotive force. If the circuit be now closed a reverse chemical effect takes place, the peroxide of lead becoming reduced to the protoxide, while the spongy lead is oxidized, electric energy being given off as a consequence of the chemical change. When this is com-

PENNSYLVANIA RAILROAD ELECTRIC LOCOMOTIVE

Two of the best known types of electric locomotive. The New York Central type is 43 feet long, 14 feet 9½ inches high, and weighs 230,000 pounds. It is equipped with four 550 horsepower motors and has a maximum speed of 60 miles per hour. The Pennsylvania type is the latest development. It is built in two halves for flexibility and either half may be replaced during repairs. The complete unit weighs 157 tons, is 64 feet 11 inches long, and the motors have combined horsepower of 4000, giving a draw bar pull of 79,200 pounds, and a speed of 60 miles per hour.

pleted the cell may be recharged as before, when it is ready to repeat the same process. As part of the recent development in electric lighting the efficiency of accumulators or storage batteries has been greatly increased, they being now largely used as a source of electric power. The need of some such direct source of electric energy, for the movement of trolley cars and automobiles, has led to much experiment with storage batteries, which have come into considerable use as power agents, central stations for re-storage of the battery cells being provided. The weight of the cells is against them and Edison has recently been experimenting with the view of overcoming this defect. As a result, he has produced a storage battery of small size and weight and one capable of being very quickly charged. In this lead is replaced by iron and nickel, the negative pole being oxide of iron, the positive oxide of nickel. It is stated that a battery can be charged in a very few minutes which will run a trolley car for several hours. About 160 cells are needed to run an automobile or a trolley car, but the weight is much less than that of the lead batteries.

Electro-chemistry, the branch of chemistry in which the reactions that occur are either directly or indirectly due to electrical agencies. Among the direct applications of the electric current may be noted: the action of gases which ordinarily show no tendency to combine with each other often will do so readily under certain conditions of electrical influence; electrolysis of dissolved salts has proved of great value in the commercial production of chemical substances (see *article*), practically all the commercially pure copper and aluminium produced being refined by this process as well as the following: Caustic soda, bleaching powder, barium hydrate, coal-tar dyes, pure iron and many others. The electric furnace (see *article*) furnishes an example of the indirect method of utilizing the electric current in the manufacture of chemical substances. The application is indirect because the current does not perform the chemical work, but merely serves to produce the high temperatures necessary to bring about the chemical reactions desired. As an instance of the importance of this industry it may be noted that the annual output of electro-chemical products in the United States alone exceeds \$100,000,000. (See also *Electro-Metallurgy*.)

Electrocution (e-lek-trō-kū'shun), a word indicating exe-

cution by electricity, a powerful current being passed through the body of the condemned criminal. This system, first adopted in New York, is now in use as a substitute for hanging, also, in the States of New Jersey, Ohio, Massachusetts, North Carolina and Virginia.

Electro-dynamometer, an instrument used for the measurement of electric currents by means of the mechanical forces which they exert upon each other. It contains two coils of wire, one fixed and the other movable; the latter being either larger or smaller than the other so as to be able to pass either outside it or through it. Both coils are in vertical planes and have the same vertical diameter, round which the movable one can revolve so as to set its own plane at any angle with the plane of the other. The terminals of the movable coil dip in cups of mercury, one of which is in connection with one end of the fixed coil, and the other with one of the binding screws of the instrument. The other binding screw is in connection with the other end of the fixed coil. Hence when the two binding screws are connected with a battery or other source of electricity, the current has to pass through both coils. Its effect is exhibited by a tendency in the movable coil to set its plane in coincidence with that of the fixed coil, and in such a manner that the current will circulate the same way round both coils. This tendency is resisted by mechanical means provided for the purpose—usually by the torsion of a wire from the end of which the movable coil hangs and the measurement is usually made by applying torsion until the planes of the two coils are at right angles. The amount of torsion thus applied is proportional to the mutual forces exerted by the two coils.

Electrolysis (e-lek-trol'i-sis; Greek, *lysis*, loosening) is the chemical decomposition of certain compound bodies under the action of a current of electricity. The following are the main facts to be mentioned. When an *electrolyte* (as a body capable of electrolytic decomposition is called) is subjected to a current of electricity of sufficient intensity, it is broken up into two elements, which appear one of them at one electrode and the other at the other electrode; thus, if two platinum plates connected with the first and last plates of a battery be plunged in a trough containing a solution of chloride of silver, the chlorine is given off at the plate by which positive electricity enters—that is, at the plate which is connected with the copper plate of the battery—and the

silver is deposited at the plate connected with the zinc plate of the battery. The two elements are liberated at these places in quantities chemically equivalent. Thus for every 108 grammes of silver deposited at one side of the vessel 35.5 grammes of chlorine are given off at the other side. When a compound consisting of a metallic and a non-metallic part is decomposed the non-metallic part is set free at the electrode at which the current enters and the metallic part at the opposite electrode. Hydrogen acts as a metal. Electrolysis takes place only when the electrolyte is in a liquid state, and involves a transfer of the materials of which the compound is composed from one part of the vessel to another. (See *Electro-metallurgy*.)

The electrolytic action of the current is the same at all parts of the circuit. If the current is made to traverse several vessels, each containing the same substance, all *in series* (that is, the current that leaves the first entering the second, and so on), it will be found that in each of the cells precisely the same amount of decomposition goes on. There will be the same weight of silver deposited at one side, and the same weight of chlorine set free at the other.

The same quantity of electricity decomposes chemically equivalent quantities of different electrolytes. If we pass the current through a series of cells containing different electrolytes, for example, water, chloride of silver, sulphate of soda, and collect the products of decomposition we find that the quantities of hydrogen, silver and sodium set free are strictly proportional to the chemical equivalents of these bodies. Further, in the battery which gives rise to the electric current, if precautions are taken to avoid disturbance by local action on the plates, it is found that the action which goes on in each of its cells is chemically equivalent to that in each of the decomposing cells.

The quantity of the electrolyte decomposed in a given time is proportional to the strength of the current. Currents are often measured in practice by observing the weight of copper deposited in a given time from a solution of sulphate of copper.

Electrolyte (e-lek'trō-līt). See previous article.

Electro-magnet, a piece of iron temporarily converted into a magnet by means of a current of electricity sent through a wire which is coiled round it. The wire is usually covered with silk, cotton, gutta percha, or some other insulator, to prevent the

current from leaping across, and compel it to travel through the whole length of the wire. The more pure and soft the iron is, the stronger will its magnetism be while it lasts, and the more completely will it disappear when the current stops. Steel is less affected than soft iron for the time, but remains permanently magnetized after the current ceases. Electro-magnets are usually much more powerful than other magnets of the same size. The iron which is magnetized by the current passing around it is called the *core*. It is frequently straight, the wire being wound upon it like thread upon a reel; but very frequently it has the shape of a U or horseshoe, the wire being coiled round the two ends and the bend of the U left uncovered.

To predict which end will be the north pole, the following rule may be employed: Let the core be a straight bar of iron held in front of you pointing left and right, then if the current ascends on the side next you, and descends on the further side, the north pole is to your left hand and the south pole to your right. If the straight bar is then bent into horseshoe shape, its poles will not be changed. There is no necessity to inquire whether the wire forms a right-handed or a left-handed helix, this circumstance having no influence on the question of poles. Indeed, in most cases (just as in the case of thread on a reel) the helices are some right-handed and some left-handed.

An electro-magnet is said to be *made* when the current is sent through its coil, and *unmade* when the current is stopped. In some applications of electro-magnets it is necessary to make and unmake them in rapid succession. It is then preferable for the core to consist of a bundle of iron wires rather than of a solid bar.

Electro-magnetism, a term that in its broadest sense denotes the science which treats of the relations between magnetism and electricity. In a narrower sense a magnetic effect produced by electricity is said to be *electro-magnetic*, while an electrical effect produced by the agency of magnets is called *magneto-electric*. In the preceding article we have described one electro-magnetic effect—the making of an electro-magnet by means of a current. Another important electro-magnetic effect is the deflection of a magnetic needle by a current of electricity passing near it. The simplest experiment to illustrate this action is to take an ordinary mariner's compass, hold just above it a copper wire parallel to the needle of the compass, and then, while the wire is in this posi-

tion, let its two ends be connected with the two poles of a galvanic battery. The needle will instantly turn away from its north and south position, and will remain deflected as long as the current continues to pass over it. If the current flows from south to north, the north end of the needle is turned to the west; and if the current is in the opposite direction, the needle turns the other way. This is the easiest test for determining the direction in which a current is flowing through a wire; and it is the basis of the construction of *galvanometers*, which are the instruments chiefly employed for the measurement of currents. The current tends to make the needle take a position at right angles to the direction of the current; but as the earth tends to make the needle point north and south, the position actually taken is between the two. The fact that a current deflects a needle was discovered by Ørsted of Copenhagen, and the general rule for the direction of the deflection was thrown into the following form by Ampère; *Imagine the current to enter at your feet and come out at your head, then the north pole of a needle in front of you will be deflected to your left.* This rule holds good whether the current is above the needle, below it, or in any other position. The rule may also be put in the following form: Imagine an ordinary screw placed so that the current is in its axis; the north pole of the needle will turn to the same side to which that part of the circumference which is next it turns when the screw advances in the direction of the current.

The leading fact of *magneto-electricity* is that when a magnet is moved in the neighborhood of a wire or other conductor, the motion causes a current of electricity in the conductor; and a similar effect occurs if the wire is moved while the magnet remains at rest. In the experiment, above described, of making a magnetic needle turn on its pivot by sending a current through a wire held above it, the motion of the needle produces for the time being a weakening of the current. If the needle were made by mechanical means to turn the contrary way, it would strengthen the current for the time being. If there were no original current, the turning of the needle to either side by mechanical means would produce a current in the wire. The current thus produced is always opposite in direction to that which would aid the motion.

Electro-medical Machines, machines intended for producing stimula-

tion for medical purposes. They are of various kinds, but they all produce their effects by a rapid succession of either interruptions or reversals of an electric current. Such interruptions or reversals are al-

Electro-medical Machine.

ways accompanied by the action called *self-induction*, especially when the original current flows through a coil of many convolutions, and still more if these convolutions encircle an iron core. Self-induction in such cases shows itself as a sudden and violent action, having the same sort of relation to a steady current that a blow has to a steady pressure. One form of electro-medical machine is shown above. At the top of the figure are shown two small galvanic cells, in which for greater portability materials of pasty consistency are used instead of liquids. The bottle shown below is for replenishing them. In the center of the figure are seen two cylindrical coils, through which the current from the two cells passes. They have cores of soft iron to strengthen their action, and they have also sliding covers of copper for mitigating their action. These are shown in the figure as pulled out a short distance so as to uncover a small portion of the coils. The shocks become stronger as these covers are drawn farther out. The action of the covers may be described as a muffling or cushioning of the sudden violence of self-induction. Some of the commonest forms of electro-medical machine are magneto-electric, their currents being produced by making a coil of copper wire rotate rapidly between the poles of a strong magnet. The employment of such a machine for administering shocks to patients is called *faradization*, from Faraday, the discoverer of magneto-electricity.

Electro-metallurgy, the art of depositing metals from solutions of their salts upon metallic or other conducting surfaces by the agency of an electric current. Its operations may be classified under three heads: the making of facsimiles, the formation of permanent coatings, and the

obtaining of a pure metal from an impure. In every instance the current enters the solution by a plate of the metal in question, which is immersed in it, and leaves the solution by the conducting surface on which the deposit is formed. The plate at which the current enters (called the *anode*) is gradually dissolved, and an equal quantity of the metal is at the same time deposited on the surface by which the current leaves the solution (called the *cathode*). The source employed for giving the current was formerly a galvanic battery, but is now more frequently a dynamo machine, in which the armature is constructed of much stouter wire than is used in dynamos intended for other purposes. Copper lends itself with special readiness to electrical deposition, and the solution employed for the purpose is usually a saturated solution of sulphate of copper; but if the surface to be coated is of iron, steel or zinc, it is necessary to employ an alkaline solution, in which cyanide of potassium and carbonate of soda are usually the chief ingredients, a salt of copper being present in a comparatively small quantity. For electro-gilding, a solution containing cyanide of potassium and cyanide of gold is employed; and for electro-plating, a solution of cyanide of potassium and cyanide of silver. It so happens that the impurities which usually occur in copper roughly smelted from the ore consist of substances which either cannot be dissolved in a solution of sulphate of copper or cannot be deposited on a copper surface from such a solution. Hence when a plate of crude copper is used as the anode, pure copper is deposited on the cathode, and most of the impurities fall to the bottom of the vessel. Pure copper is now produced in enormous quantities by this method, purity being an essential requisite in copper wire for electrical purposes.

The most important instance of the deposition of a permanent coating is electro-plating. To insure good adhesion it is necessary to remove every particle of grease and oxide from the surface (usually German silver) on which the silver is to be deposited. With this view the article to be plated, after being well scoured, is boiled in a strong ley of caustic potash or soda, and dipped in dilute acid, technically called *pickle*; after which it is washed in distilled water, and then quickly dipped in a solution of nitrate of mercury until it appears white on the surface. Finally it is suspended in the silver solution, when it is immediately coated with a thin film of silver. This operation is called *striking*.

After a few seconds it is taken out and well brushed, generally with bundles of brass wire attached to a lathe; it is then washed and replaced in the plating solution, where it is allowed to remain for a longer or shorter period according to the thickness of deposit required. An immersion of a few hours is generally sufficient. To ascertain the amount of metal deposited it is only necessary to weigh the articles from time to time. One and a quarter or one and a half ounces of silver to the square foot gives an excellent plate about the thickness of common writing-paper. In ordinary circumstances the coating of deposited silver is chalk-white, and has a dead or matted appearance, which is much esteemed for medals. Sometimes the operator is desirous of having his object bright, either entirely or partially. In this case the object is brushed over with old beer or dipped into a solution of soft soap, and is then submitted to the burnisher. Certain chemicals added to the solution will cause the original deposit to have a metallic luster.

The production of copper facsimiles by the electric current is called *electrotype*, and is the oldest branch of electro-metallurgy. One of its most important applications is the copying of type set up for printing, and of wood blocks for wood-cuts. A mold is first obtained in gutta percha or some similar material. This, being a non-conductor, is brushed over with plumbago in its interior, so as to give it a conducting surface to receive the deposit. After several hours the deposit is detached from the *mold* and backed by pouring in melted solder, the surface being first moistened with chloride of zinc to make the solder adhere. In the copying of steel engravings the mold is obtained by electro-deposition of copper on the steel, the surface of which must first be specially prepared to prevent adhesion; and a second electro-deposition of copper, on the mold thus obtained, gives the required copy, from which impressions can be printed.

Electrometer (e-lek-trom'e-tér), an instrument intended for accurate electro-static measurements. Stated in precise technical language, its purpose is to measure the *difference of potential* between two conductors. Most of the electrometers in actual use are inventions of Sir William Thomson, who was the first to give accuracy to this branch of electrical measurement. His quadrant electrometer is the instrument chiefly used, and its indications are usually given by means of a small movable mirror which reflects a

spot of light from a lamp on to a paper scale. When the two conductors which are tested have the same *potential* the spot of light stands in the middle of the scale, and its movement to either side indicates the difference of their potentials. The instrument is sufficiently delicate to give a sensible displacement when the two conductors are the two plates of single galvanic cell; and a displacement twice as great will be obtained by combining two such cells.

Electromotive Force, ^{a phrase} (c o m -

monly abbreviated into the three initial letters, e.m.f.) which is of very frequent use in modern electrical literature, especially in connection with electric currents. The e.m.f. in a wire through which a current is flowing may be compared to the difference of pressures in a long, narrow, horizontal pipe, through which water is flowing. As the difference of the pressure at the two ends of the pipe forces the water through in spite of frictional resistance, so the difference of the *potentials* at the two ends of the wire forces the current through in spite of the electrical resistance of the wire. This *difference of potentials* is another name for *electromotive force*. Each cell of a battery is a source of e.m.f., and when the cells are connected in the usual way (technically called *in series*) their e.m.f.'s are added together, so that, for example, the e.m.f. of a battery of ten cells is ten times the e.m.f. of one cell. E.m.f. can also be produced in a wire by moving a magnet in its neighborhood, and this e.m.f. will be exactly proportional (other things being equal) to the velocity of the motion. The commercial unit of e.m.f. is the *volt*. Its magnitude may be inferred from the statement that the e.m.f. of a single cell is usually more than one volt, and less than $2\frac{1}{2}$ volts.

Electro-motors, are, fundamentally, electric generators reversed in function, they transform into mechanical energy the continued stresses between two electromagnetic fields relatively movable. Just as generators convert into electromagnetic stresses the mechanical energy applied to them. The torque of the motor is the dynamical result of the electromagnetic stresses between the magnetic field of the motor and that due to the armature currents. There are various types of motors. The first broad distinction is between direct current and alternating current motors, made chiefly for the purpose of classification since both depend upon the same broad principles.

Direct Current Motors. The feature

distinguishing direct from alternating current motor is the use of a *commutator* which consists of a number of copper bars, corresponding to the number of coils in the armature, insulated from each other by mica, and turned to the shape of a

INDUCTION MOTOR.

a, bed-plate; b, foot; c, belt-tightening bolt; d, frame; e, end-plate; f, bearing; g, pulley; h, shaft; i, key; k, leads; l, primary or stator winding; m, secondary or rotor bars; n, rotor end-ring; o, rotor ventilator.

sleeve which is carried upon the armature shaft or on an extension of the armature spider. The ends of the corresponding coils are soldered into slots at the ends of the commutator bars. From the commutator the current is collected by brushes, two sets of which are used for every pair of poles, but in multipolars if commutator segments to be at the same potential are connected together a single pair of brushes may be used.

Alternating Current Motors. There are two principle types of alternating current motors, *induction* and *synchronous*. The induction motor was developed from the fact that a copper disc can be made to revolve by rotating a horse-shoe magnet so that the lines of force cut the disc. It is somewhat similar to the dynamotors have field and armature windings. rect current shunt wound motor. Both In both cases all the field is connected directly across the mains. In the shunt wound motor the armature current is supplied through brushes and a commutator to the winding, while in the induction motor the armature current is an indirect current, the field acting as the primary of which the armature is the secondary. In practice either the field

or the armature may be the one to revolve. The rotation is produced by the reaction of the armature, or indirect current, on the revolving magnetic field, which results in dragging the moving part around in order to keep up with the field flux as it passes around the face of the primary windings. This field being the resultant of two or more alternating fields of different phases, rotates with the polar frequency of supplied voltage. The secondary. In practice either the field bars set in slots in a laminated iron core and running across the armature parallel with the axis of rotation. Sometimes the secondary windings are joined to heavy, short circuiting rings at both ends resulting in the squirrel cage type of motor, and in other cases the secondary windings are taken out through collector rings if the secondary be the rotating element. The *synchronous* motor consists merely of an alternating current generator of special design. Both motors and generators have a direct current field and an alternating current armature. The operation of a synchronous motor is the same as that of an alternating current generator in parallel with one or more other alternators. When the back pressure of the motor is equal and directly opposed to that of the line no current can flow. The friction, however, causes the revolving element to lag slightly between the line pressure and a current is driven through the motor by the generator. The great advantage of a synchronous over an induction motor is that the power factor can be raised or lowered at will. By raising the field strength of a synchronous motor the current taken by the motor may be made leading and hence help to keep up the line voltage on a heavy inductive load. Another advantage of the synchronous motor is that it can easily be built for very high voltage. Motors of this type have been built to run on a current of upwards of 12,000 volts, thus dispensing with the use of a transformer. See *Electric Railway, Electricity*.

Electron (e-lek'tron), the hypothetical basis of the atom, of such minuteness that it is believed that about 1000 electrons make up the atom of hydrogen, with a larger number in others in proportion to their weight. It is given off by radium, and appears to be the carrier of negative electricity. This doctrine of the electron is the existing hypothesis of the composition of the atom, replacing the vortex theory of Lord Kelvin, and was developed as a result of investigation of the cathode electric ray, as observed in a Crookes vacuum tube. This ray is apparently made up of ex-

ceedingly minute corpuscles, which there is considerable reason to believe form the basis of the atom. Thus, the electron theory is founded on investigation, not on pure conjecture, like the former atom theories.

Electrophorus (e-lek-trof'o-rus), an electrical instrument consisting of two plates, the lower of vulcanite or shellac, with tinfoil or other metal at the bottom, and the upper of brass, with a glass handle. The operator begins by applying friction with a catskin

Electrophorus.

or flannel to the upper surface of the lower plate, which thus acquires a negative charge. The upper plate is then placed upon it and pressed closely down. In this process the upper plate, being in connection with the earth through the body of the operator, acquires a positive charge by induction; and if the upper plate be now lifted off by its glass handle, a good spark can be obtained from it. It may then be pressed down again, removed again, and another spark obtained, and so on, time after time.

Electroplate (e-lek'trō-plāt). See *Electro-metallurgy*.

Electroscope (e-lek'trō-skōp), any apparatus for showing the

presence of electricity without giving quantitative measurements. A sensitive instrument is the goldleaf electroscope, which is represented in the adjoining figure. Here the two

gold leaves are shown diverging under the influence of an electrified body held over the instrument. The gold leaves are attached to the lower end of a short rod of brass, whose upper end carries the brass knob which forms the top of the instrument. These metal parts are supported by the

Gold-leaf Electroscope.

glass shade which insulates them from the earth, and the upper part of which is represented in the figure as coated with varnish, but this is not essential. The two gold leaves originally hang down parallel, and nearly touching each other. When an electrified body is slowly brought down over the knob from a good height above it, the unlike electricity is attracted to the knob,

HUNTING WITH ELEPHANTS
A favorite sport in India.

and the like electricity is repelled into the gold leaves, which, in consequence of being thus electrified, repel each other. The two little brass columns standing up from the base are in connection with the earth, and their presence increases the divergence of the leaves.

Electrotype (e-lek'trō-tīp), that branch of electro-metallurgy which deals with the production of facsimiles. See *Electro-metallurgy*.

Electrum (e-lek'trum; Gr. *ēlektron*), in antiquity, a term applied originally to native gold, which frequently contains notable quantities of silver, copper and other metals; hence latterly it was transferred from this native alloy to the artificial alloy of gold and silver, and was also applied to amber on account of its color and inferior luster.

Electuary (e-lek'tū-a-ri), the name given to medical preparations of a pasty consistency, made by thoroughly mixing some kind of fine powder with syrup, honey or sugar, for internal use.

Elegit (e-lē'jit), in English law, a writ by which a creditor who has obtained a judgment against a debtor, and is hence called the *judgment-creditor*, may be put in possession of the lands and tenements of the person against whom the judgment is obtained, called the *judgment-debtor*, until the debt is fully paid. The writ is addressed to the sheriff. It is still in use in the United States.

Elegy (el'e-gi; Gr. *elegos*), a mournful and plaintive poem of funeral song, or any serious poem of a melancholy contemplative kind. In classic poetry what is known as *elegiac verse* is composed of couplets consisting of alternative hexameter and pentameter lines.

Elemental Spirits (e l-e-m e n'tal), according to a belief common in the middle ages, spirits proper to and partaking of the four so-called elements, viz., salamanders or fire spirits, sylphs or aerial spirits, gnomes or earth spirits, and undines or water spirits.

Elements (el'e-ments), the simplest constituent principles or parts of anything; in a special sense, the ultimate indecomposable constituents of any kind of matter. In ancient philosophies the term was applied to fire, air, earth and water. The mediæval chemists, however, absorbed in the study of metals and mineral substances, supposed that the metals consisted of an

elemental sulphur and an elemental mercury mixed together more or less perfectly and in different proportions. To these were subsequently added salt and some others, so that about the middle of the seventeenth century the first principles amounted to five, divided into two classes: the active, consisting of mercury or spirit, sulphur or oil, and salt; and the passive, consisting of water or phlegm, and earth or the terrestrial part. The names remained, not so much as denoting substances or ultimate principles, as gradually coming to denote functions, the first great modification being the expansion of the idea of elemental sulphur into phlogiston by Stahl, as the result of which the adherents of the phlogistic theory applied the term to phlogiston, to the gases then discovered, the mineral, vegetable and animal acids, the alkalies, earths and metallic calces, oil, alcohol and water. The substances considered as simple naturally changed with the change of theory introduced by Lavoisier, who considered as elements oxygen, nitrogen, hydrogen, sulphur, phosphorus and carbon, the metals and the earths, and, as Boyle had already suggested, practically defined an element as a body not yet decomposed, the definition now commonly adopted. For list of known elements see *Chemistry*.

Elemi (el'e-mi), the resinous exudation from various trees, such as the *Canarium commune*, from which the Eastern or Manila elemi is obtained; the *Icica Icicariba*, the source of the American or Brazilian elemi; and the *Elaphrium elemifœrum*, from which the Mexican elemi comes. It is a regular constituent of spirit varnishes, and is used in medicine, mixed with simple ointment, as a plaster.

Elephant (el'e-fant), the popular name of a genus or subfamily of five-toed proboscidian mammals, usually regarded as comprehending two species, the Asiatic (*Elephas Indicus*) and the African (*E. Africānus*). From a difference in the teeth, however, the African species is sometimes treated as a distinct genus (*Lorodon*), and some authors divide the Asiatic elephants into several species, such as the Indian elephant (*Elcphas Indicus*), the Ceylon elephant (*E. Cingalensis*), and the Sumatra elephant (*E. Sumatrānus*). The so-called white elephants are merely albinos. The African elephant is distinguished from the Asiatic species by its greater height, its larger ears, its less elevated head and bulging or convex forehead, the closer

approximation of the roots of the tusks, and the greater density of the bone. It has also only three external hoofs on the hind-feet, while the Asiatic has four. All

Head of African Elephant (*Elephas Africānus*).

elephants are remarkable for their large, heavy, short bodies supported on columnar limbs, a very short neck, a skull with lofty crown and short face-bones, with the exception of the premaxillaries, which are enlarged to form tusk sockets. To compensate for the short neck, they have the long proboscis, often 4 or 5 feet in length, produced by the union and development of the nose and upper lip. It is made up of muscular and membranous tissue, the only cartilages being the valves at the entrance of the nares. The trunk is of great strength and sensibility, and serves alike for respiration,

Skull of Indian Elephant (*Elephas Indicus*),
i, incisor tusks; m, molars; n, nostrils.

smell, taste, suction, touch and prehension. The tusks, which are enormously developed upper incisor teeth, are not visible in young animals, but in a state of maturity they project, in some instances 7 or 8 feet. The largest on record (possibly that of an extinct species)

weighed 350 lbs. Elephants sometimes attain the height of 15 feet, but their general height is about 9 or 10. Their weight ranges from 4000 to 9000 lbs. The female is gravid twenty months, and seldom produces more than one at a birth; this, when first born, is about 3 feet high, and continues to grow till it is sixteen or eighteen years of age. It is said they live to the age of 100 years and upwards. They feed on vegetables, the young shoots of trees, grain and fruit. They are polygamous, associating in herds of a considerable size under the guidance of a single leader. An elephant leaving or driven from a herd is not allowed to join another, but leads a solitary, morose and destructive life. These are popularly known as 'rogues.' Elephants are caught either singly or in herds. In the former case it is necessary to catch adroitly one of the elephant's legs in the noose of a strong rope, which is then quickly attached to a tree; another leg is then caught until all are securely fastened. His captors then encamp beside him, until under their treatment he becomes tractable. When a number are to be caught a strong enclosure is constructed, and into this the elephants are gradually driven by fires, noise, etc. With the aid of tame elephants the wild ones are tied to trees and subjected to the taming process. The domesticated elephant requires much care, and a plentiful supply of food, being liable to many ailments. The daily consumption of a working elephant is, according to Sir J. E. Tennent, 2 cwts. of green food, about half a bushel of grain and about 40 gallons of water. Their enormous strength, docility and sagacity make them of great value in the East for road-making, building and transport. They are used by the great on occasions of pomp and show, being often richly caparisoned, and bearing on their back a howdah containing one or more riders, besides the mahout or driver sitting on the animal's neck. Tiger shooting is often practiced from an elephant's back. The fossil remains of the genus *Elephas* indicate the former existence of at least fourteen species; and a still larger number of species belonging to the allied genus *Mastodon*.

Elephant, ORDER OF THE, an ancient Danish order of chivalry, said to have been instituted about the end of the twelfth century by Canute VI to perpetuate the memory of a Danish Crusader who had killed an elephant in the Holy Land. It was renewed by Christian I in 1462, in 1693 by Chris-

EVOLUTION OF THE ELEPHANT FAMILY.

a, *Elephas columbi*. b, *Mammut Americanum*. c, *Tetrahelodon angustidens*.
d, *Palæomastodon*. e, *Mocritherium*.

tian V, and again in 1808. It is the highest of the Danish orders. The number of members, not counting those of the royal family, is restricted to thirty. The badge of the order is an enameled white elephant, bearing on a blue housing, bordered with gold and crossed with white, a sculptured tower. The device is *Magni animi pretium*.

Elephanta (el-e-fan'ta), a small island in the Bay of Bombay, between Bombay and the mainland, 7 miles northeast of the former; circumference about 5 miles. It consists of two long hills chiefly overgrown with wood. It has a few inhabitants, who rear sheep and poultry for the Bombay market. It is celebrated for its rock temples or caves, the chief of which is a cave-temple supposed by Mr. Ferguson to belong to the tenth century, 130 feet long, 123 broad and 18 high, supported by pillars cut out in the rock, and containing a colossal figure of the trimurti or Hindu trinity Brahma, Vishnu and Siva. This temple is still used at certain Hindu festivals.

Elephant-apple, an East Indian tree (*Feronia Elephantum*) producing an edible fruit not unlike an orange, and belonging to the same natural order, Aurantiaceæ.

Elephant Bay, an excellent anchorage on the coast of Benguela, S. W. Africa.

Elephant-beetle, the Goliath beetle.

Elephant-fish (*Callorhynchus Antarcticus*), a fish of the order Elasmobranchii (rays and sharks), so named from a proboscis-like structure on the nose; called also southern chimera. It inhabits the Antarctic seas, and is palatable eating.

Elephant-grass (*Typha elephantina*), a large kind of bulrush growing in India.

Elephantiasis (el-e-fan-tī'a-sis), a disease chiefly occurring in tropical climates, characterized by a peculiar overgrowth of the skin and sub-jacent textures, and attacking especially the legs, which become enlarged and elephantine. It appears to arise from repeated inflammation of the skin and a concurrent obstruction of the veins and lymphatic glands of the inflamed part. The disease occasionally affects the scrotum, enlarging it to enormous dimensions. In general it is attended with little pain, and the health may remain otherwise unaffected for many years. In the early stages wet bandaging or ligation of the main artery has been found

serviceable, but amputation may be necessary.

Elephantine (el-ē-fän'tē-nā), a small island of Egypt, in the Nile, opposite Assouan (Syene). It is covered with ruins piled upon each other—Egyptian, Roman, Saracen and Arabic, the most important being a gateway of the time of Alexander, a small temple dedicated to Khnum and founded by Amenophis III, and the ancient Nilometer mentioned by Strabo. The island gave the fifth dynasty to Egypt.

Elephant River, a river of Cape Colony, running into the Atlantic after a course of 140 miles.

Elephant-seal, the Proboscis Seal, or Sea-elephant, the largest of the seal family (Phocidæ). There are probably two species, one (*Macrorhinus angustirostris*) found only on the coast of California and Western Mexico, the other (*Macrorhinus leoninus*) found in Patagonia, Kerguelen Island, Heard's Island and other parts of the Southern Seas. They vary in length from 12 to 30 feet, and in girth at the chest from 8 to 18 feet. The proboscis of the male is about 15 inches long when the creature is at rest, but elongates under excitement. The females have no proboscis, and are considerably smaller than the male. Both species are becoming rare from continued slaughter.

Elephant's-ear, a name sometimes given to plants of the genus *Begonia*.

Elephant's-foot, the popular name of *Tesudinaria elephantipes*, a plant of the nat. order Dioscoreaceæ (yams, etc.), distinguished by the shape of its root-stock, which forms a nearly hemispherical mass rising a little above the ground, covered with a thick, corky bark. It has a slender, climbing stem growing to a length of 30 or 40 feet, with small, heart-shaped leaves and greenish-yellow flowers. It is known in the Cape Colony as Hottentots' bread. Some botanists still class it with the very similar species of the genus *Tamus*.

Elephant's-tusk Shell, a name given to shells of the genus *Dentalium* (which see).

Eleusine (el-ū-sī'nē), a genus of grasses, several of which are cultivated as grain plants in India, Japan, Tibet, etc.

Eleusinian Mysteries (el-ū-sin'-i-an), the sacred rites anciently observed in Greece at the annual festival of Dēmētēr or Ceres, so named from their original seat,

Eleusis. As a preparation for the greater mysteries celebrated at Athens and Eleusis, lesser Eleusinia were celebrated at Agræ on the Ilissus. The greater Eleusinia were celebrated in the month Boedromion (September—October), beginning on the 15th of the month and lasting nine days. The celebrations, which were varied each day, consisted in processions between Athens and Eleusis, torch-bearing and mystic ceremonies attended with oaths of secrecy. They appear to have symbolized the old conceptions of death and reproduction, and to have been allied to the orgiastic worship of Dionysus (Bacchus). They are supposed to have continued down to the time of Theodosius I.

Eleusis (e-lū'sis), in ancient geography, a small city of Attica, about 14 miles from Athens, near the shore opposite the island of Salamis. Its temple of Dēmētēr was one of the most beautiful buildings of Greece. (See *Eleusinian Mysteries*.) There is now a large straggling village here.

Eleuthera (e-lū'ther-a), one of the largest of the Bahama Islands. It is of very irregular shape, its length being about 70 miles, and its breadth in general from 2 to 4 miles, though in one part 10. Pop. about 7500.

Eleutheria Bark (e-lū-thē'ri-a), a name for cascarilla bark.

Elevation (el-e-vā'shun), in architecture, a geometrical delineation of the front or any face of a building in which all the parts are drawn according to scale, and not shown as they would appear in perspective.—In astronomy, it is the height of a celestial object above the horizon.

Elevation of the Host, in the ritual of the mass, is the lifting up of the elements immediately after consecration, to be worshiped by the people. It was introduced into the Latin church in the eleventh century, in consequence of the denial by Berengarius of the real presence in the sacrament. The Council of Trent ordered that the host should be worshiped with the highest adoration, that of *latria*, which is offered to God only.

Elevator (el'e-vā-tur), (1) a mechanical contrivance consisting of a series of boxes or buckets attached to a belt traveling round two drums, one above and one below, for hoisting grain, meal, etc. In the United States large buildings containing such contrivances, and in which grain is stored, receive the same name. (2) An apparatus for rais-

ing or lowering persons or goods to or from different levels in warehouses, hotels,

PLUNGER ELEVATOR.

A, diagram of parts; B, general view; a, overhead pulley; b, counterweight; c, cage; d, plunger; e, hydraulic cylinder; f, equalizing or auxiliary discharge tank; g, exhaust or discharge-pipe; h, i, controlling valves; j, receiving water-tank from pump; k, receiving tank for discharge or exhaust water; l, delivery pipe from pressure-pump; m, suction-pipe to pump; n, by-pass pipe from pressure to exhaust sides; o, thoroughfare pipe between valves and pressure cylinder; p, pit below floor-level, to act also as air-cushion.

etc., consisting usually of a cage or movable platform worked by hydraulic power; also called a *lift* or *hoist*.

Elf. See *Fairy*.

Elf-arrows, **ELF-BOLTS**, **ELF-SHOT**, popular names in Britain for stone arrowheads, and other similar ancient barbarian weapons. They are superstitiously worn as charms against lightning; cattle and men are said to have been struck and wounded by them; and they are said to appear in great quantities where the day before there were none.

Elgin (el'gin), a royal and parliamentary burgh of Scotland, capital of Elgin county, finely situated on the Lossie, about 5 miles from its influx into the Moray Firth, 70 miles N. W. of Aberdeen. The town largely consists of mansions and villas. The most interesting edifice is the cathedral, founded in 1224, now in ruins, but once the most magnificent in Scotland. Pop. 8460.—The COUNTY OF ELGIN, also called Morayshire, is a maritime county, bounded by the Moray

Firth, Banffshire, Inverness-shire and Nairnshire; area, 476 sq. miles. Along the sea-coast, which extends for more than 30 miles, the surface is flat, but inland it rises into hills of moderate elevation, intersected by fine and fertile valleys. Inexhaustible quarries of free-stone (rich in fossils) are worked. The climate is noted for its general mildness, dryness and salubrity. The lower tracts of land are fertile and highly cultivated, the principal crops being wheat, oats, potatoes and turnips. The great majority of farms are small. A portion of the surface is still covered with native forests. Pop. 44,868.

Elgin, a city of Kane and Cook counties, Illinois, on Fox River, 36 miles N. W. of Chicago. It has a watch factory and various flourishing industries, and an extensive trade in dairy and farm products. The river here affords extensive water-power. Pop. 25,976.

Elgin, JAMES BRUCE, EIGHTH EARL OF, and twelfth Earl of Kincardine, governor-general of India, born in 1811; educated at Eton and Christ Church; he entered parliament in 1841 as member for Southampton, and in the same year succeeded to the earldom. He was appointed governor-general of Jamaica in 1842, and in 1846 governor-general of Canada. In 1849 he was raised to the British peerage as Baron Elgin of Elgin. In 1857 he went as special ambassador to China, and was successful in concluding the Treaty of Tientsin early in 1858. In 1859 he became postmaster-general in Palmerston's cabinet, but in the following year was sent on a special mission to Peking, and afterwards appointed to succeed Canning as governor-general of India. He died in 1863 while inspecting the Himalayan passes.

Elgin Marbles, the splendid collection of antique sculptures brought chiefly from the Parthenon of Athens to England by the seventh Earl of Elgin (1766-1841) in 1814, and afterwards purchased by parliament for the British Museum at a cost of £35,000 (less than half the sum expended on them). They consist of figures in low and high relief and in the round, representing gods, goddesses and heroes; the combats of the Centaurs and Lapithæ; the Panathenæic procession, etc. They exhibit Greek sculpture at its highest stage, and were partly the work of Phidias.

El Hasa (el hâ'sâ), a fertile district of Eastern Arabia, on the Persian Gulf. It produces dates, wheat, millet, rice, etc. Pop. estimated at 160,000.

Eli (ē'lī), one of the Hebrew judges. the predecessor of Samuel. He was high priest and judge for forty years, but was less successful as head of his own household. His two sons having been slain and the ark taken in battle by the Philistines, the news proved so severe a shock that he fell and broke his neck, at the age of ninety-eight.

Elias (e-lī'as). See ELIJAH.

Elias, MOUNT ST., one of the highest peaks of North America, near the line of demarkation between the British territory and Alaska, but a little within the former; height, 19,500 feet.

Elijah (e-lē'ja), the most distinguished of the prophets of Israel, who flourished in the ninth century B.C., during the reigns of Ahab and Ahaziah, and until the beginning of the reign of Jehoram, and denounced vengeance on the kings of Israel for their apostasy. He incurred the anger of Jezebel, wife of Ahab, for slaying the prophets of Baal, but escaped to Horeb, afterwards returning to Samaria to denounce Ahab for the murder of Naboth. The Biblical narrative tells us that Elijah finally ascends to heaven in a chariot of fire, Elisha, his successor, being witness. See I Kings, xvii to xxi, and II Kings, i and ii.

Eliot (el'i-ot), CHARLES WILLIAM, educator, born at Boston, Massachusetts, in 1834. Graduating at Harvard College in 1853, he was an assistant there in mathematics and chemistry, 1858-63. He became professor of chemistry at the Massachusetts Institute of Technology in 1865 and in 1869 became president of Harvard University. This post he held for forty years, resigning in 1909 and becoming president emeritus. He is the author of various chemical and other works.

Eliot, GEORGE, the assumed literary name of Mary Ann, or, as she preferred to write the name in later years, Marian Evans, a prominent English novelist. She was the daughter of a Warwickshire land agent and surveyor, and was born at Griff, near Nuneaton, on November 22, 1820. She received at Coventry an excellent education, comprising the classical and modern languages, and shortly after her twenty-first year became a convert to Rationalism. Her first literary undertaking was the completion of Mrs. Hennell's translation of Strauss' *Life of Jesus* (1846). After spending two years abroad she boarded at the house of John Chapman, editor of the *Westminster Review*, of which she became subeditor. It was

not, however, until January, 1857, that she came prominently into public notice, when the first of a series of tales entitled *Scenes from Clerical Life* appeared in *Blackwood's Magazine*. The series came to an end in November, 1857, and in the following year the publication of *Adam Bede* placed her in the first rank of writers of fiction. It was succeeded by the *Mill on the Floss* (1860), *Silas Marner* (1861), *Romola* (1863), *Felix Holt* (1866), *Middlemarch* (1872), and *Daniel Deronda* (1876). In addition to those prose works she published three volumes of poems, *The Spanish Gypsy* (1868), *Agatha* (1869), and the *Legend of Jubal* (1874). Her last work published during her life was the series of essays entitled *The Impressions of Theophrastus Such* (1879), but a volume of mixed essays was issued posthumously. For many years she was happily associated both in life and work with George Henry Lewes, though a legal union was impossible during the lifetime of Mrs. Lewes. In May, 1880, after Mr. Lewes' death, she married Mr. John Cross, who did not survive the marriage many months, dying rather suddenly at Chelsea on December 22d of that year.

Eliot, JOHN, missionary, born in England in 1604, emigrated to Boston in 1631, and became minister of the Roxbury church. He learned the language of the Indians and began to preach to them in their own tongue. He traveled widely among them as a missionary, suffered many hardships, and acquired great influence over the aborigines. He translated the Bible into the Indian language and became known as the 'Apostle of the Indians.' Died in 1690.

Eliot, SIR JOHN, one of the ablest of I's reign, of an old Cornwall family, born in 1570. He entered parliament in 1614 as member of St. Germans, winning immediate reputation as an orator. As vice-admiral of Devon he was energetic in suppressing piracy. In the three parliaments of 1623, 1625, 1626, he made his way to the front of the constitutional party, joined Hampden and the rest in refusing contributions to the forced loan, and took a prominent share in drawing up the Remonstrance and Petition of Right. He was imprisoned in the Tower in 1629, and died, still in confinement, in 1632. During his imprisonment he wrote a work on constitutional monarchy entitled the *Monarchy of Man*.

Elis (ē'lis), a maritime state of ancient Greece, in the west of the

Peloponnesus, bordering on Achaia, Arcadia and Messenia, and watered by the rivers Alphēsus and Penēus. Of its capital Elis (now Kaloskopi) there are few traces. Olympia, where the famous games were held, was near the Alpheus. Elis and Achaia now form a monarchy of Greece.

Elisha (e-li'sha), a Hebrew prophet, the disciple and successor of Elijah. Many miracles of prediction and cure, and even of raising the dead, are ascribed to him, but his figure is less original and heroic than that of his master. His period of prophecy extended for fully sixty-five years, from the reign of Ahab to that of Joash (latter half of the ninth century B.C.).

Elixir (e-lik'sér), a word of Arabic origin, applied by the alchemists to a number of solutions employed in attempting the transmutation of metals into gold, and also to a potion, the *elixir vitæ*, or elixir of life, is supposed to confer immortality. It is still used for various popular remedies, for the most part composed of various aromatic and stimulative substances held in solution by alcohol.

Elizabeth (e-liz'a-beth), Queen of England, daughter of Henry VIII and of Anne Boleyn, was born at Greenwich, September 7, 1533, and almost immediately declared heiress to the crown. After her mother had been be-

Queen Elizabeth.

headed (1536) both she and her sister Mary were declared bastards, and she was finally placed after Prince Edward and the Lady Mary in the order of succession. On the accession of Edward VI, Elizabeth was committed to the care of the

queen-dowager Catherine; and after the death of Catherine and the execution of her consort Thomas Seymour she was kept under close supervision at Hatfield, where she received a classical education under William Grindal and Roger Ascham. After the death of Edward, Elizabeth vigorously supported the title of Mary against the pretensions of Lady Jane Grey, but continued throughout the whole reign an object of suspicion and surveillance. In self-defense she made every demonstration of zealous adherence to the Roman Catholic faith, but her inclinations were well known. On November 17, 1558, Mary's reign came to a close, and Elizabeth was immediately recognized queen by parliament. The accuracy of her judgment showed itself in her choice of advisers. Parker, a moderate divine (Archbishop of Canterbury, 1559), aiding her in ecclesiastical policy; while William Cecil, Lord Burleigh, assisted her in foreign affairs. The first great object of her reign was the settlement of religion, to effect which a parliament was called on January 25, and dissolved on May 8, its object having been accomplished. The nation was prepared for a return to the reformed faith, and the parliament was at the bidding of the court. The ecclesiastical system devised in her father's reign was reestablished, the royal supremacy asserted, and the revised prayer book enforced by the Act of Uniformity. While, however, the formal establishment of the reformed religion was easily completed, the security and defense of the settlement was the main object of the policy and the chief source of all the struggles and contentions of her reign. Freed from the tyranny of Mary's reign, the Puritans began to claim predominance for their own dogmas, while the supporters of the Established Church were unwilling to grant them even liberty of worship. The Puritans, therefore, like the Catholics, were made irreconcilable enemies of the existing order, and increasingly stringent measures were adopted against them. But the struggle against the Catholics was the most severe, chiefly because they were supported by foreign powers; so that while their religion was wholly prohibited, even exile was forbidden them, in order to prevent their intrigues abroad. Many Catholics, particularly priests, suffered death during this reign; but simple non-conformity, from whatever cause, was pursued with the severest penalties, and many more clergymen were driven out of the church by differences about the position of altars, the wearing of caps

and such like matters, than were forced to resign by the change from Rome to Reformation. Elizabeth's first parliament approached her on a subject which, next to religion, was the chief trouble of her reign, the succession of the crown. They requested her to marry, but she declared her intention to live and die a virgin; and she consistently declined in the course of her life such suitors as the Duc d'Alençon, Prince Erik of Sweden, the Archduke Charles of Austria and Philip of Spain. While, however, she felt that she could best maintain her power by remaining unmarried, she knew how to temporize with suitors for political ends, and showed the greatest jealousy of all pretenders to the English succession. With the unfortunate Mary, Queen of Scots, were connected many of the political events of Elizabeth's reign. On her accession the country was at war with France. Peace was easily concluded (1559); but the assumption of Francis and Mary of the royal arms and titles of England led to an immediate interference on the part of Elizabeth in the affairs of Scotland. She entered into a league with the Lords of the Congregation, or leaders of the Reformed party; and throughout her reign this party was frequently serviceable in furthering her policy. She also gave early support to the Huguenot party in France, and to the Protestants in the Netherlands, so that throughout Europe she was looked on as the head of the Protestant party. This policy roused the implacable resentment of Philip, who strove in turn to excite the Catholics against her, both in her own dominions and in Scotland. The detention of Mary in England (1568-87), whither she fled to the protection of Elizabeth, led to a series of conspiracies, beginning with that under the earls of Northumberland and Westmoreland, and ending with the plot of Babington, which finally determined Elizabeth to make away with her captive. The execution of Queen Mary (1587), though it has stained her name to posterity, tended to confirm her power among her contemporaries. The state of France consequent on the accession of Henry IV, who was assisted by Elizabeth, obviated any danger from the indignation which the deed had caused in that country; and the awe in which King James stood of Elizabeth, and his dread of interfering with his own right of succession to England, made him powerless. But Philip was not to be so appeased, the execution of Mary lending edge to other grievances. The fleets of Elizabeth had galled

him in the West Indies, her arms and subsidies had helped to deprive him of the Netherlands; the Armada was already in preparation. Accordingly he called the Queen of England a murderess, and refused to be satisfied even with the sacrifice she seemed prepared to make of her Dutch allies. The Armada sailed on May 29, 1588. Its fate is too well known to need recapitulation. (See *Armada*.) The war with Spain dragged on till the close of Elizabeth's long reign. During her reign the splendor of her government at home and abroad was sustained by such men as Burleigh, Bacon, Walsingham and Throgmorton; but she had personal favorites of less merit who were often more brilliantly rewarded. Chief of these were Dudley, whom she created Earl of Leicester, and whom she was disposed to marry, and Essex, whose violent passions brought about his ruin. He was beheaded in 1601, but Elizabeth never forgave herself his death. Her own health soon after gave way, and she died on March 24, 1603, naming James VI of Scotland as her successor.

Elizabeth, a city of New Jersey, capital of Union Co., 4 miles s. w. of Newark and 12 miles from New York, with which it has ample communication by railway and steamer. It is a favorite residence of New York business men. The Singer Sewing Machine Co. has a large factory here, and there are various other industries. It has a trade in iron and coal. Its edifices include a courthouse, city hall, Elizabeth Institute and other academic institutions. Pop. 73,409.

Elizabeth City, capital of Pasquotank county, North Carolina. 40 miles s. of Norfolk, with which it is connected by rail and by the dismal Swamp Canal. It has cotton, hosiery and other industries, and a large oyster trade. Here is the Atlantic Collegiate Institute and a State normal school for colored pupils. Pop. 8412.

Elizabeth, St., of Thuringia, daughter of Andreas II, king of Hungary, was born at Pressburg in 1207, and in 1221 was married to Ludwig, landgrave of Thuringia. She erected hospitals, fed a multitude of poor from her own table, and wandered about in a humble dress, relieving the wretched. Louis died on a crusade, and her own life terminated November 19, 1231, in a hospital which she had herself established. The church over her tomb at Marburg is one of the most splendid Gothic edifices in Germany.

Elizabethan Architecture (e-liz'-a-beth-an), a style of architecture which prevailed in England during the reigns of Elizabeth and James I. It succeeded to the Tudor style, properly so called, with which it is sometimes confounded. The Elizabethan is a mixture of inferior

Elizabethan Window, Rushton Hall.

Gothic and debased Italian, producing a singular heterogeneousness in detail, with, however, wonderful picturesqueness in general effect, and domestic accommodation more in accordance with the wants of an advancing civilization than was afforded by the styles which preceded it. The chief characteristics of Elizabethan architecture are: windows of great size both in the plane of the wall and deeply embayed, ceilings very richly decorated in relief, galleries of great length, very tall and highly decorated chimneys, as well as a profuse use of ornamental strap-work in the parapets, window-heads, etc. The Elizabethan style is the last stage of the Tudor or Perpendicular, and from its corresponding in point of period with the Renaissance of the continent has sometimes been called the English Renaissance. The epithet Jacobean has sometimes been given to the very latest stage of the Elizabethan, differing from the Elizabethan proper in showing a greater admixture of debased Italian forms. The princely houses which arose during the reign of Elizabeth are numerous, and many even yet remain to attest the

splendor of the time. Of these may be mentioned Burghley House, Hardwick Hall and Bramhall Hall.

and Alfieri.

Elizabeth Petrowna, Empress of Russia,

Drawing-room of Bramhall Hall, Cheshire. Time of Elizabeth.

Elizabeth Farnese (fā-r-nā'zā), daughter of Peter the Great and Catharine, born in 1709 or 1710, ascended the throne December 7, 1741, as the result of a conspiracy, in which Ivan VI, a minor, was deposed. Elizabeth is said to have rivaled her mother in beauty, and to have surpassed her in her love of pleasure, and her government was largely conducted by favorites. She was a patron of literature, founded the University of Moscow, and corresponded with Voltaire. A war with Sweden, in 1743, was advantageously concluded by the peace of Abo. She sent an army, in 1748, to assist Maria Theresa in the war of the Succession, and joined in the Seven Years' war against Prussia. She died in 1762, before this war was concluded.

Elizabethgrad (ye-lyē-zā-vet-grät'), a town of Southern Russia, on the Ingul, with an imperial palace, a theater, manufactures of soap, candles, etc., and several great fairs. Pop. 61,800.

Elizabeth Islands, a group of sixteen American islands in Buzzards Bay, south of Cape Cod, frequented as a summer resort, and with a permanent pop. of about 200.

Elizabeth of Valois, or ISABELLA, Queen of Spain, was born in 1545, daughter of Henry II of France, and Catharine de Medici. She was destined by the Treaty of Cateau-Cambrésis to be the wife of the infante, Don Carlos, but his father, Philip II, being left a widower, became fascinated and married her himself. She died in 1568. The stories of a romantic relationship existing between Elizabeth and Don Carlos are entirely groundless, but have furnished tragic subjects to Otway, Campistron, Chénier, Schiller

Elizabethpol (ye-lyē-zā-vet-pol'), a town of Russia, in the Caucasus, capital of the government of same name, covering a great space of ground from the gardens and open areas it contains, but very unhealthy. Pop. 33,090.—The GOVERNMENT has an area of 16,721 sq. miles. It is partly mountainous, partly steppes, and produces grain, cotton, tobacco, wine, etc. Pop. (1906) 953,300.

Elizabeth Stuart, Queen of Bohemia, daughter of James I of England, and VI of Scotland. She was born in 1596, and died in 1662.

Elk, MOOSE, or MOOSE DEER (*Cervus alces* or *Alces Malchis*), the larg-

ELK ATTACKED BY WOLVES

The elk is the largest existing European and Asiatic species of the deer family. When attacked or driven by hunger it is a most courageous fighter.

est of the deer family, a native of northern Europe, Asia and America. The American form (to which the name moose is usually given) is sometimes separated from the European as *Alces Americānus*, but most naturalists find no specific difference between them. The elk or moose has a short, compact body, standing about 6 feet in height at the shoul-

Head of Elk (*Cervus alces*).

ders, a thick neck; large, clumsy head, and horns which flatten out almost from the base into a broad, palmate form with numerous snags. In color the elk is grayish brown, the limbs, sides of head and coarse mane being, however, of a lighter hue. Their flesh resembles beef rather than venison. For the most they are inoffensive, and so exceedingly wary that they are approached only with difficulty. In America the Indians and half-breeds are the most skilful moose hunters. The moose has a wide range in Canada, extending from the Arctic Ocean and British Columbia to New Brunswick and Nova Scotia; and it is found also in Maine. It feeds largely on the shoots of trees or shrubs, such as the willow and maple, and on bark, etc. In Sweden its destruction is illegal, and in Norway there are many restrictions.

Elk, IRISH (*Megaceros hibernicus*), a large fossil deer found in the Pleistocene strata, and distinguished by its enormous antlers, the tips of which are sometimes 11 feet apart. Though a true deer, its antlers differ from those of living species in that the beam is flattened into a palm. To sustain the great weight, unusually large and strong limbs and neck vertebrae were required. Its remains are found not only in Ireland but in Scotland and England, and on the continent, where they occur in lacustrine deposits, brick clay and ossiferous caves.

El Kalif. See *Caliph*.

Elkhart (elk'hart), a town of Indiana, on the Elkhart River, 15 miles E. of South Bend. It has railroad

works, paper mills and many other industries. Pop 19,282.

Elkins, a town of Randolph County, West Virginia, 7 miles N. of Beverly. It has coal, coke and tanning industries. Pop. 5260.

Elkins, STEPHEN B., an American statesman, was born in Ohio, in 1841; died in 1911. He was admitted to the bar in 1864 and went to New Mexico, where he became prominent in business and politics, representing that territory in Congress, 1873-77. He afterwards removed to West Virginia, became largely interested in coal mines and railroads, founded the town of Elkins, and in 1890 became Secretary of War in Harrison's cabinet. From 1895 to 1911 he was United States Senator from West Virginia.

Elks, BENEVOLENT AND PROTECTIVE ORDER OF, an association organized in New York, Feb. 16, 1868, by members of the dramatic profession for social purposes. Meetings are held on Sunday evenings, the business meeting being followed by a social session, which includes the drinking of a toast at precisely 11 o'clock: 'To our absent brothers.' In 1878 a charter was obtained for The Elks Mutual Benefit Association; 'for the relief of the sick and needy and the burial of the dead.' There is a ritual, grips and passwords as in the other secret benevolent societies. The order is rapidly growing, not now being confined to its former clientage, many other professional and business men being found in its ranks. The order is based upon the Constitution of the United States and is distinctively American.

Ellenborough (el'en-bu-ru), EDWARD LAW, LORD, an English lawyer, born in 1750 at Great Salkeld, Cumberland; educated at the Charter House and at Cambridge, and called to the bar in 1780. At the trial of Warren Hastings, in 1785, he acted as leading counsel. The defense did not come on until the fifth year of the trial, but after eight years Hastings was acquitted and Law's success assured. In 1801 he was made attorney-general, and in 1802 became Lord Chief-justice of the King's-bench, and was created baron. He held the office of chief-justice for fifteen years, resigning in 1818 in which year he died.

Ellenborough, EDWARD LAW, FIRST EARL OF, son of Lord Chief-justice Ellenborough (see above), born in 1790. He was educated at Eton and Cambridge, and in 1818, having succeeded his father as second baron, he entered the House of Lords. He took office in 1818 as lord privy-seal, and became president of the board of control in

1828-30, and again in 1834. In 1841 he accepted the governor-generalship of India, and arrived in Calcutta in 1842, in time to bring the Afghan war to a successful issue. The annexation of Scinde in 1843 was followed by the conquest of Gwalior, but the conduct of the governor-general gave dissatisfaction at home, and he was recalled early in 1844. On his return, however, he was defended by Wellington, and received the thanks of parliament, an earldom and the Grand Cross of the Bath. He then held the post of first lord of the admiralty (1845-46), and was president of the board of control from February to June, 1858. His despatch censuring the policy of Lord Canning as governor-general of India led to his resignation, and he never resumed office. He died in 1871.

Ellet (el'et), CHARLES, engineer, born at Penn's Manor, Pennsylvania, in 1810. His notable achievements were the construction of the wire suspension bridge over the Schuylkill, at Fairmount, Philadelphia (the first in America), and one over the Niagara River below the Falls. During the Civil war he became a colonel of engineers and built several steamers to use as rams on the Mississippi. He died in 1862, of a wound received in a naval battle at Memphis.

Ellichpur (el-ich-pör'), a town of India, in Ellichpur district, Berar, once a large and prosperous town. There is a military cantonment within to miles. Pop. 26,082.

Ellicott (el'i-kot), CHARLES JOHN, an English divine, born in 1819; educated at Cambridge. After being professor of divinity in King's College, London, Hulsean lecturer and Hulsean professor of divinity at Cambridge, and dean of Exeter, he was appointed bishop of Gloucester and Bristol in 1863. He was for eleven years chairman of the scholars engaged on the revision of the New Testament translation, and published commentaries on the Old and the New Testament, as well as numerous sermons, addresses, lectures, etc. He died in 1905.

Elliot, GEORGE AUGUSTUS. See *Heathfield*.

Elliott (el'i-ot), EBENEZER, an English poet, known as the 'Corn-law Rhymer' was born in 1781 near Rotherham, Yorkshire. At the age of seventeen he published his first poem, the *Vernal Walk*, which was soon followed by others. In 1829 the *Village Patriarch*, the best of Elliott's larger pieces, was published. From 1831 to 1837 he carried on business as an iron

merchant, in Sheffield. His *Corn-law Rhymes*, periodically contributed to a local paper on behalf of the repeal of these laws, attracted attention and were afterwards collected and published with a longer poem entitled *The Ranter*. Commercial losses compelled him in 1837 to contract his business, and in 1841 he retired from it altogether, and died in 1849. In 1850 two posthumous volumes appeared, entitled *More Prose and Verse by the Corn-law Rhymer*.

Ellipse (e-lips'), a figure in geometry ranking next in importance to the circle, and produced when any cone is cut by a plane which passes through it not parallel to nor cutting the base. Kepler discovered that the paths described by the planets in their revolutions round the sun are ellipses, the sun being placed in one of the foci. To describe an ellipse:—At a given distance on the

Ellipse.

surface on which the ellipse is to be described fix two pins, A and B, and pass a looped string round them. Keep the string stretched by a pencil C, and

move the pencil round, keeping the string at the same tension, then the ellipse EG FH will be described. F and G are the foci, D the center, EF the major axis, and GH the minor axis. DA or DB is the eccentricity of the ellipse. A line drawn from any point in the curve perpendicular to the axis is an ordinate to the axis. Any straight line drawn through the center and terminated both ways by the curve is called a diameter.

Ellipsis (e-lip'sis), in grammar, the omission of one or more words, which may be easily supplied by the connection.

Ellipticity (el-ip-tis'i-ti), OF THE EARTH, the deviation of the form of the earth from that of a sphere. See *Earth*, *Degree*.

Ellis (el'is), ALEXANDER JOHN, an English philologist, born in 1814 (name originally Sharpe). He was a distinguished graduate of Trinity College, Cambridge, was elected to the Royal Society in 1864, and became an influential member of the Philological Society, being more than once its president. Though phonetics was the subject in which he most highly distinguished himself, he was equally at home in mathematical and musical subjects. His chief published work was *Early English*

Pronunciation (parts i-iv, 1869-75); but his publications in the form of books, pamphlets, papers and articles on phonetics, music, mathematics, etc., were numerous. He died in 1890.

Ellis, GEORGE, an English man of letters, born in 1753, and educated at Westminster School and Trinity College, Cambridge. He was one of the junta of wits concerned in the well-known political satire, *The Rolliad*, contributed to the *Anti-Jacobin*, wrote a preface, notes and appendix to Way's translation of *Le Grand's Fabliaux* and published *Specimens of the Early English Poets, with an Historical Sketch* (1790), and *Specimens of Early English Metrical Romances* (1805). He died in 1815. He was an intimate friend of Sir Walter Scott.

Ellis, WILLIAM, an English missionary born in 1794; died in 1872. He was sent out to the South Sea Islands in 1816 by the London Missionary Society, and returned in 1825, one result of his labors being *Polynesian Researches* (1829). In 1830-44 he was secretary to the society, and afterwards on its behalf made several visits to Madagascar, the longest being in 1861-65. These visits led him to publish *Three Visits to Madagascar* (1858), *Madagascar Revisited* (1867), and *The Martyr Church of Madagascar* (1870).

Ellora (el-ō'ra), or ELO'RA, a ruinous village of Hindustan, Deccan, Nizam's dominions, 13 miles northwest of Aurangabad, famous for its rock and cave temples excavated in the crescent-

caves towards the north, seventeen Brahmanical caves at the center, and towards the south twelve Buddhistic caves. Of the temples some are cut down through the rock, and left open above like isolated buildings, others are excavated under the hill in the manner of caves properly so called. The interior walls are often richly carved with mythological designs. The most magnificent of the whole is the Hindu temple called Kailas or Cailas, the central portion of which forms an isolated excavated mass or immense block 500 feet in circumference and 100 feet high. It is surrounded by galleries or colonnades at the distance of 150 feet in which the whole Hindu pantheon is cut in the perpendicular rock. Another fine temple, much smaller, but cut under the hill, is the Buddhist cave of Visvakarma, the only one excavated with a curved roof. The date of the caves is not certainly known, but they were probably the work of the reigning families at the neighboring Deoghir. The amount of labor involved in their construction must have been enormous.

Ellsworth (els'wurth), OLIVER, jurist, was born in Windsor, Connecticut, in 1745; died in 1807. He was a member of the Constitutional Convention of 1787 and was elected to the U. S. Senate in 1789. John Adams styled him 'the finest pillar of Washington's administration.' In 1796 he was appointed Chief Justice of the Supreme Court of the United States.

Ellwood (el'wöd), THOMAS, an early writer among the Quakers, born in England in 1639. About 1660 he was induced to join the Society of Friends, and soon after published *An Alarm to the Priests*. He was imprisoned on account of his religion, but subsequently became reader to Milton, and is said to have suggested to him the idea of writing the *Paradise Regained*. In 1705 and 1709 he published the two parts of his *Sacred History*. His works include a poetical life of King David, the *Davidicis*. He died in 1713.

Elm, a genus of trees (*Ulmus*; nat. order, *Ulmaceæ*), consisting of thirteen species, all natives of the northern temperate zone. They have bisexual flowers with a companulate calyx, as many stamens as there are divisions in the limb of the calyx, and two styles. The *U. campestris*, or common elm, is a fine tree, of rapid and erect growth, and yielding a tall stem, remarkable for the uniformity of its diameter throughout. It is a native of the south and middle of Europe and the west of Asia. The average height of a mature tree is 70

Kylas, Ellora.

shaped scarp of a large plateau. They run from north to south for about a mile and a quarter, and consist of five Jain

or 80 feet, but some reach 150 feet. The wood is brown, hard, of fine grain, not apt to crack, and is used for many purposes. The tree generally attains maturity in seventy or eighty years. *U. montana* (the mountain or *wych elm*), a native of Scotland, is of slower growth, and yields a much shorter bole, but it is far bolder in its ramification and more hardy. It usually attains to the height of about 50 feet. The most ornamental tree of the genus is *U. pendula*, the weeping elm. The American or white elm (*U. Americāna*) is abundant in the Western States, attaining its loftiest stature between lat. 42° and 46°; here it reaches the height of 100 feet, with a trunk 4 or 5 feet in diameter, rising sometimes 60 or 70 feet before it separates into a few primary limbs. Its wood is not much esteemed. The red or slippery elm (*U. fulva*) is found over a great extent of country in Canada, and the United States, as far south as lat. 31°; it attains the height of 50 or 60 feet, with a trunk 15 or 20 inches in diameter; the wood is of better quality than that of the white elm. The leaves and bark yield an abundant mucilage. The wahoo (*U. alata*), inhabiting from lat. 37° to Florida, Louisiana and Arkansas, is a small tree, 30 feet high. The branches are furnished on two opposite sides with wings of cork 2 or 3 lines wide; the wood is finely grained and heavy.

Elmina (el-mē'na), a British town and seaport on the west coast of Africa, 5 or 6 miles west of Cape Coast Castle. It was acquired by Britain in 1872 along with the other Dutch possessions here. Pop. about 4000.

Elmira (el-mī'ra), a city of New York, capital of Chemung Co., on the Chemung River; with a college for women, the State reformatory, fine courthouse, etc. Its industrial establishments comprise a rolling-mill, blast-furnace, foundries, machine-works and various others. It has also extensive railroad car shops. Pop. 37,176.

Elmo's Fire (el'mōs), ST., a meteoric appearance often seen playing about the masts and rigging of ships. If two flames are visible (Castor and Pollux) the sailors consider it a good omen; if only one (Helen), they regard it as a bad one.

Elmshorn (elms'horn), a town of Prussia, Holstein, 20 miles northwest of Hamburg, on the Krückau, a navigable stream. It has trading interests and various manufactures. Pop. (1905) 13,640.

Elmsley (elms'li), PETER, an English scholar, born in 1773, and

educated at Oxford. He was one of the original contributors to the *Edinburgh Review*, and wrote occasionally, at a subsequent period, in the *Quarterly*. He finally settled at Oxford, where he held the headship of St. Alban Hall and the Camden professorship of ancient history in 1823. He died in 1825. He published editions of the *Œdipus Tyrannus* (1811), *Heraclidæ* (1815), *Medea* (1818), *Bacchæ* (1821), and *Œdipus Coloneus* (1823).

El Obeid. See *Obeid*.

Elocution (el-u-kū'-shun), the art by which, in delivering a discourse before an audience, the speaker is enabled, with greatest ease and certainty, to render it effective and impressive. The value of an elocutionary training is very great, as well in sparing the voice as in overcoming natural defects or provincialisms in delivery, and in cultivating and developing the natural taste.

Eloge (ā-lōzh; French, eulogy), a discourse pronounced in public in honor of an illustrious person recently deceased, peculiarly a French institution.

Elohim (el-ō'him; plural of *Eloah*), one of the Hebrew names for God, of frequent occurrence in the Bible. Elohim is used in speaking both of the true God and of false gods, while Jehovah is confined to the true God. The plural form of Elohim has caused a good deal of controversy, some considering it as containing an illusion to the doctrine of the Trinity, others regarding it as the plural of excellence, others holding it as establishing the fact of a primitive polytheism. The Elohist passages in the Pentateuch, or, in other words, the passages in which the Almighty is always spoken of as Elohim, are supposed to have been written at an earlier period than those in which he is spoken of as Jehovah. The Elohist passages are simpler and more primitive in character than the Jehovistic; thus Gen., i, 27, is Elohist; Gen., ii, 21-24, is Jehovistic.

Elopura (el-o-pū'ra), a seaport of British North Borneo, on Sandakan Bay. Pop. 8000.

El Paso (el-pá'so), a city, capital of El Paso County, Texas, on the Rio Grande, near the border of Mexico. It has smelters and foundries, cigar factories, etc., extensive cattle industries and wine exports. Pop., including Fort Bliss, 39,279.

Elphinstone (el'fin-stōn), MOUNT-STUART, son of the eleventh Lord Elphinstone, born in Scotland in 1778. He joined the Bengal

Elphinstone

civil service in 1795, was ambassador to the Afghan court in 1808, was resident at the court of Poonah from 1810 to 1817, and was British commissioner to that province from 1817 to 1819, when he became governor of Bombay. During a government of seven years he es-

Mountstuart Elphinstone.

established a code of laws, lightened taxes, and paid great attention to schools and public institutions. He resigned in 1827. A college established by the natives was called after him Elphinstone College. He was the author of an *Account of the Kingdom of Cabul and its Dependencies* (1815) and a *History of India* (1841). He was offered the governor-generalship of India in 1835, and afterwards that of Canada, both of which he declined. He died in 1859.

Elphinstone, WILLIAM, a Scottish prelate, founder of King's College and University, Aberdeen, born at Glasgow in 1431. He was educated at Glasgow College, and served four years as priest of St. Michael's in that city. He then went to France and became professor of law, first at Paris and subsequently at Orleans, but about 1471-74 he returned home at the request of Muirhead, Bishop of Glasgow, who made him commissary of the diocese. In 1478 he was made commissary of the Lothians, and in 1479 Archdeacon of Argyle. Soon after he was made Bishop of Ross; and in 1483 was transferred to the see of Aberdeen. In 1484 and 1486 he was commissioned to negotiate truces with England, and in 1488 was lord high-chancellor of the kingdom for several months. He was

next sent on a mission to Germany, and after his return held the office of lord privy-seal till his death in 1514. In 1494 he obtained a papal bull for the erection of the university of King's College at Aberdeen.

El Reno, a city, capital of Canadian County, Oklahoma, 30 miles N. W. of Oklahoma City. It has large roller mills and other factories, and ships produce and lumber. Pop. 7872.

Elsass. See *Alsace*.

Elsass-Lothringen (lôt' ring-èn). See *Alsace-Lorraine*.

Elsinore (el-si-nör'; Danish *Helsingør*), a seaport of Denmark, in the island of Seeland, at the narrowest part of the Sound, here only 3½ miles broad, 24 miles north by east of Copenhagen, opposite Helsingborg in Sweden. Elsinore is defended by the castle of Kronborg, a Gothic-Byzantine edifice built about 1580, and commanding the Sound. It is now chiefly used as a prison. Before the abolition of the Sound dues in 1857 all merchant ships passing through were bound to pay toll here. Elsinore is the assumed scene of Shakespeare's tragedy of *Hamlet*. Pop. 13,902.

Elster (el'ster), two German rivers, the White or Great Elster, a tributary of the Saale; the Black Elster, a tributary of the Elbe.

Elswick (els'ik), a suburb of Newcastle, England, containing the great ordnance works of Armstrong & Co. Pop. 35,000.

Elutriation (e-lū'tri-ā-shun), the process of separating the finer particles of a clay, earth, or similar mass from the coarser, consisting in stirring up the substance in water, letting the coarser particles subside, running off the liquid containing the finer particles, and then waiting till they subside.

Elvas (āl'vash), a town of Portugal, province of Alemtejo, near the Spanish frontier, 12 miles northwest of Badajoz, on a height flanked by two others, each crowned by a castle. It has a cathedral, partly Moorish and partly Gothic, and a Moorish aqueduct, a magnificent work which brings water from a distance of 15 miles. Pop. 14,018.

Elves. See *Fairies*.

Elwes (el'wes), JOHN, an English miser, born about 1712. His own name was Meggot, but he changed it on succeeding to an estate left him

Elwood

by his uncle, Sir Harvey Elwes. He was educated at Westminster School, and in his younger days was noted for his skill in horsemanship and love of the chase. He was elected member for Berks in 1774. His fortune and parsimonious habits increased in equal ratio, and at his death in 1789 he left half a million to his two natural sons.

Elwood (el'wood), formerly Quincy, a city of Madison Co., Indiana, 44 miles S. E. of Logansport. It is a shipping point for grain and live stock, and has glass and tin works, brick yards, planing mills, etc. Pop. 11,028.

Ely (ē'li), an episcopal city of England, in the county of Isle of Ely, on an eminence on the left bank of the Ouse. The ecclesiastical structures comprise the cathedral and the churches of St. Mary, and the Holy Trinity, the last, belonging to the time of Edward II, and one of the most perfect buildings of that age. The superb cathedral occupies the site of a monastery founded about the year 673 by Etheldreda, daughter of the king of East Anglia. Its entire length, east to west, is 517 feet, and its west tower is 270 feet high. A fine gateway, built in the reign of Richard II, forms the principal entrance to the cathedral precincts. There are few manufactures, most of the inhabitants being engaged in agricultural labor. Pop. (1911) 7917.

Ely, ISLE OF, a district in England, in the county of Cambridge, separated on the south by the Ouse from the remaining portion of the county. It is about 28 miles long by 25 miles broad; area, 355 square miles.

Ely, RICHARD THEODORE, economist, born at Ripley, New York, in 1854. He became professor of political economy at Johns Hopkins University in 1881 and at the University of Wisconsin, in 1892. He has written *French and German Socialism*, *Taxation in American States and Cities*, *Trusts and Monopolies*, etc.

Elyria (e-lir'e-a), a city, capital of Lorain Co., Ohio, 25 miles W. of Cleveland, and 7 miles S. of Lake Erie, on Black River. It has good water power and varied manufactures. Pop. 14,825.

Elysium (e-liz'h'i-um), ELYSIAN FIELDS, among the Greeks and Romans the regions inhabited by the blessed after death. They are placed by Homer at the extremities of the earth, by Plato at the antipodes, and by others in the Fortunate Islands (the Canaries). They were at last transferred to the interior of the earth, which is Virgil's

Emancipation Proclamation

notion. The happiness of the blessed consisted in a life of tranquil enjoyment in a perfect summer land, where the heroes, freed from all care and infirmities, renewed their favorite sports.

Elytra (el'i-tra), the hard, bony cases which enclose the wings of coleopterous insects, or beetles. They are themselves wings, but are less important for flight than for protecting the true wings when folded beneath them in a state of repose.

Elze (el'tse), KARL, a German writer, distinguished for his studies in English literature, born in 1821; died in 1889. He studied at Leipzig and Berlin, was long a teacher in the gymnasium of his birthplace, Dessau, and in 1875 was appointed to the chair of the English language and literature at Halle. Among his writings were valuable biographies of Sir Walter Scott and Lord Byron (the latter translated into English), and a biographical and critical work on Shakespeare, also translated into English (1888).

Elzevir (el'ze-vir), or ELZEVIER, the name of a family of publishers and printers, residing at Amsterdam and Leyden, celebrated for the beauty of the editions of various works published by them, principally from 1595 to 1680. LOUIS, the founder of the family (born in 1540; died in 1617), settled in Leyden, and between 1583 and his death produced about 150 works. Five of his seven sons followed his business:—MATTHÆUS at Leyden; LOUIS (II) at The Hague; GILLES at The Hague and afterwards at Leyden; JOOST in Utrecht; and BONAVENTURE, who in 1626 associated himself with ABRAHAM, the son of Matthæus. From the press of Abraham and Bonaventure issued the exquisite editions of the classics, etc., which have made the name of Elzevir famous. Of these the *Livy* and *Tacitus* of 1634, the *Pliny* of 1635, the *Virgil* of 1636 and the *Cicero* of 1642 are perhaps the most beautiful.

Emanation (em-a-nā'shun), in a specific sense, an idea at the center of many philosophic systems which seek to explain the universe as an eternal efflux or emanation from the Supreme Being, comparable with the efflux of light from the sun. Traces of the doctrine are found in the system of Zoroaster. It had a powerful influence on the ancient Egyptian and Greek philosophy.

Emancipation Proclamation

(e-man-si-pā'shun), THE, a state paper issued by President Lincoln, January 1,

FIRST READING OF THE EMANCIPATION PROCLAMATION TO THE CABINET

From left to right—Edward M. Stanton, Secretary of War (seated); Salmon P. Chase, Secretary of the Treasury (standing); President Lincoln and Gideon Welles, Secretary of the Navy (seated); Caleb B. Smith, Secretary of the Interior (standing); William H. Seward, Secretary of State (seated); Montgomery Blair, Postmaster-General (standing); and Edward Bates, Attorney-General (seated).

1863, 'as a fit and necessary war measure for suppressing rebellion.' It freed all slaves in any states and portions of states actually in rebellion, and which were unrepresented in Congress, or not in possession of the Union armies. Its practical result was the abolition of the system of slavery in the United States, since there were few slaves in the excepted areas. The whole of these were manumitted by subsequent legislation.

Emanuel (e-man'u-el), king of Portugal, ascended the throne in 1495. During his reign were performed the voyages of discovery of Vasco da Gama, Cabral and Vespuceius, and the exploits of Albuquerque, by whose exertions a passage was found to the East Indies, the Portuguese dominion in Goa was established, and Brazil, the Moluccas, etc., were discovered. The commerce of Portugal, under Emanuel, was more prosperous than at any former period. The treasures of America flowed into Lisbon, and the reign of Emanuel was justly called 'the golden age of Portugal.' He died in 1521, aged fifty-two, deeply lamented by his subjects, but hated by the Moors and the Jews, whom he had expelled. He was a patron of learned men, and himself left memoirs on the Indies. He married three times: in 1497 Isabella, daughter of Ferdinand and Isabella, heiress of Castile; in 1500 her sister Maria; and in 1519 Eleonora of Austria, sister of Charles V.

Embalming (em-bäm'ing), the process of filling and surrounding with aromatic and antiseptic substances any bodies, particularly corpses, in order to preserve them from corruption. The ancient Egyptians employed the art on a great scale, and other peoples, for example the Assyrians and Persians followed them, but by no means equaled them in it. The ancient Peruvians appear to have injected and washed the corpses with the fluid that flows from imperfectly burned wood, which would of course contain pyroligneous acid, creasote and other antiseptics. Pliny alludes to the use of a similar fluid by the Egyptians for embalming. In later times, bodies have been preserved a long time by embalming, especially when they have remained at a low and uniform temperature, and have been protected from the air. The body of Edward I was buried in Westminster Abbey, in 1307, and in 1770 was found entire. Canute died in 1036; his body was found very fresh in 1776 in Winchester Cathedral. The bodies of William the Conqueror and Matilda his wife were found entire at Caen in the sixteenth century. That of

Paul Jones, buried at Paris in 1792, was found in a state of excellent preservation and brought to America in 1905. Of the various modern artificial means of preserving bodies, impregnation with corrosive sublimate appears to be one of the most effective, next to immersion in spirits. An injection of sulphate of zinc into the blood-vessels is said to be very effective.

Embankment (e m-b a n k' ment), a mound of earth, etc., thrown up either for the purpose of forming a roadway at a level different from that of the natural surface of the ground, or for keeping a large body of water within certain limits. The slopes should be adapted to the material, so as to secure permanence. Thus, the slope of loose rubble, chalk, stone, loamy sand or gravel, requires about $1\frac{1}{2}$ base to 1 vertical; dry, loose and ordinary clay, 2 horizontal to 1 vertical, while some clays require a much wider base. To prevent subsidence on marshy or peaty soils, either the weight of the heart of the embankment is diminished, as in Holland, by introducing layers of reeds or fascines, or artificial foundations are prepared. The embankment may be prevented from slipping laterally by forming steps in the earth of the subsoil, or by cutting deep trenches at the feet of the slopes. In cases where embankments are raised for the storage of water, a 'puddle-dike,' that is, a water-tight wall, must be inserted through the whole depth of the bank down to the impermeable strata beneath. To resist the action of wind and rain, or of the waters of a slow-flowing stream, the banks should, in all possible cases, be covered with turf.

Embargo Act (em-bär'go), a measure adopted by the Congress of the United States in 1807, as a reprisal for England's prohibition of all commerce with France, a similar prohibition by France, blockades by each, and searches of neutrals by both. The act prohibited American vessels sailing from foreign ports, and foreign vessels taking cargoes from American ports. It was enforced until March 5, 1809, but proved unsuccessful, causing more distress in America than in the countries aimed at.

Embassy (em'b-a-si), in its strict sense, signifies a mission presided over by an ambassador, as distinguished from a legation or mission entrusted to an envoy. An ambassador, as the representative of the person of his sovereign, can demand a private audience of the sovereign to whom he is accredited, while an envoy must communicate with the minister for foreign affairs.

Embattled (em-bat'tld), in architecture and heraldry, having a form or outline like the battlements of a castle.

Ember-days (em'ber), in the Anglican and Roman Catholic churches, fast days occurring at the times in the year appointed for ordinations. As now observed, they are the Wednesday, Friday and Saturday after the first Sunday in Lent, after the feast of Pentecost or Whitsunday, after the festival of the Holy Cross (September 14), and after the festival of St. Lucia (December 13). The weeks in which these days fall are called *Ember-weeks*.

Ember-goose, a bird, known also as the great northern diver and loon. See *Divers*.

Emberizidæ (em-ber-iz'i-dē), a family of small birds belonging to the order Insectivores and tribe Conirostres, typical genus *Emberiza*. It includes the buntings, the snow-flake, the yellow-hammer and reed sparrow. The ortolan belongs to this family. By some naturalists they are classified as a subfamily of the finches.

Embezzlement (em-bez'l-ment), in criminal law, consists in fraudulently removing and secreting personal property, with which the party has been entrusted, for the purpose of applying it to his own use. The moral guilt of embezzlement is often greater than that of larceny, and the laws against it are therefore justly severe.

Emblem (em'blem), specifically a picture representing one thing to the eye and another to the understanding. The most common emblems are such as a balance, which represents justice; a crown, an emblem of royalty; the serpent, of cunning, etc.

Emblements (em'ble-mentz), in law, the crops actually growing at any time upon land. They are considered in law as personal property, and pass as such to the executor or administrator of the occupier, if the latter die before he has actually cut, or reaped, or gathered the same.

Embolism (em'bu-lizm), the blocking up of a blood-vessel by a clot of blood that comes from some distance, till it reaches a vessel too small to permit its onward progress, often the cause of sudden paralysis and death, or of gangrene and pyæmia. See *Thrombosis*.

Embossing (em-bos'ing), the art of producing raised figures upon plane surfaces, such as on leather

for bookbinding, etc.; on paper for envelopes, etc.; on wood or bronze, in architecture or sculpture.

Embracery (em-brā'ser-i), an attempt to corrupt or influence a jury by money, promises, letters, entertainments, persuasions, or the like.

Embrasure (em-brā'zhur), in fortification, an opening in the breastwork or parapet of a battery or fortress, to admit of a gun being fired through it.

Embrocation (em-bro-kā'shun), a lotion or combination of medicinal liquids, with which any diseased part is rubbed or washed.

Embroidery (em-broi'dèr-i), raised figured work in gold, silver, silk, cotton or thread, wrought by the needle, upon linen or other cloths. In embroidering a kind of stretching frame is used, because the more the piece is stretched the more easily it is worked. The art was common in the East in very ancient times. The Jews appear to have acquired it from the Egyptians; Homer makes frequent allusion to it; and Phrygia was celebrated for its embroidery, which was in great demand at Rome. The Anglo-Saxons had a continental reputation, and from the eleventh to the sixteenth century the art of pictorial needlework was of the highest importance both as a recreation and as an industry. Embroidery is commonly divided into two classes: white embroidery applied to dress and furniture, in which the French and the Swiss excel; and embroidery in silk, gold and silver, chiefly in demand for ecclesiastical vestments, etc. The Chinese, Hindus, Persians and Turks excel in work of this kind.

Embrun (ân-brûn), a picturesque walled town of France, dep. Hautes-Alpes, on a rocky eminence on the Durance. It was sacked successively by Vandals, Huns, Saxons and Moors, by the Protestants in 1573, and by the Duke of Savoy in 1692. It has a fine cathedral. Pop. of commune 3752.

Embryo (em'bri-ō), (1) in zoology, the earliest and rudimentary form in which any young animal appears, it may be the first rudiments of the animal in the womb, before the several members are distinctly formed, after which it is called the *fœtus*. (See next article.) (2) In plants the embryo is the rudimentary organism contained in the seed.

Embryology (em-bri-ol'o-ji), the branch of biology comprising the history of animals from the first appearance of organization in the

egg or ovum (the embryo stage) up to the attainment of the perfect form. The importance of the study partly depends upon the fact that the history of animals thus traced reveals the existence of structures which disappear at a later period, or become obscured by arrest of their development or by union with other parts, and permits us to follow the steps by which complex organs arise by the combination of simpler parts. Thus, points of affinity are detected between species and orders whose adult aspect is very unlike. As a systematic study embryology dates only from the nineteenth century, though Aristotle and Galen had considered the subject, and though Harvey and other later physiologists did much in the way of direct observation to lay the foundations of higher work.

Emden (em'den), a town of Prussia, province of Hanover, near the mouth of the Ems, occupying a low flat intersected by numerous canals. The principal building is the great church, built in 1455. The harbors, connected with the town by canals, are shallow. It exports grain, dairy produce, gin, etc., and has shipbuilding yards, and manufactures hosiery, leather, etc. Pop. (1905) 20,754.

Emerald (em'er-ald), a well-known gem of pure green color, somewhat harder than quartz specific gravity 2.67 to 2.73. It is a silicate of aluminium and the rare element glucinum or beryllium, which was detected in it by Vauquelin after it had been discovered by the same chemist in the beryl. Its color is due to the presence of chromium. Its natural form is either rounded or that of a short, six-sided prism. It is one of the softest of the precious stones, but is not acted on by acids. Emeralds of large size and at the same time free from flaws are rare; the largest on record is said to have been possessed by the inhabitants of the valley of Manta in Peru when the Spaniards first arrived there. It was as big as an ostrich egg, and was worshiped as the *mother of emeralds*. The ancients, who valued them, especially for engraving, are said to have procured them from Ethiopia and Egypt. The finest are now obtained from Colombia. The oriental emerald is a variety of the ruby, of a green color, and is an extremely rare gem. See *Beryl*.

Emerald Green, known also as SCHWEINFURTH GREEN, and by other names, a vivid light-green pigment, prepared from arsenate of copper, and used both in oil and

water-color painting. It is extremely poisonous.

Emeritus (e-mer'i-tus), a term applied to a Roman soldier who had served out his time and been discharged on something resembling the modern pension. It is now applied to professors and others who have been relieved of the duties of their office on account of infirmity or long service and to whom is usually paid a retiring allowance.

Emerson (em'er-son), RALPH WALDO, poet and prose writer, born at Boston in 1803; died in 1882. He was graduated at Harvard in 1821, for five years taught in a school, and in 1829 became minister to a Unitarian church in Boston, but in 1832 resigned his charge. He spent the greater part of 1833 in Europe, and on his return began his career as a lecturer on various subjects,

Ralph Waldo Emerson.

in which capacity he acted for a long series of years. In 1835 he took up his permanent residence at Concord, Massachusetts, and in 1836 published a small volume called *Nature*. He was one of the original editors of the *Dial*, a transcendental magazine begun in 1840. Two volumes of his essays were published in 1841 and 1844, and his poems in 1846. His miscellaneous addresses had been published in England in 1844, and on visiting Great Britain in 1847 he was welcomed by a large circle of admirers. In 1850 he published *Representative Men*; in 1856, *English Traits*; in 1860, *The Conduct of Life*; in 1869, *May Day and Other Poems* and *Society and Solitude*; in 1871, *Parnassus*, a collection of poems; in 1876, *Letters and Social Aims*. Emerson showed certain similarities with Carlyle, of whom he was

a friend and correspondent. Their correspondence was published in 1883. He was one of the most original and influential writers that the United States has produced and is very highly regarded as the chief modern exponent of optimistic philosophy.

Emery (em'e-ri), an impure variety of corundum, of blackish or bluish-gray color, chiefly found in shapeless masses and mixed with other minerals. It contains about 82 per cent. of alumina, and a small portion of iron; is very hard; is infusible, and is not attacked by acids. The best emery is brought from the Levant, chiefly from Cape Emeri in Naxos. It also occurs in Spain, and in a few iron mines in Great Britain. It is employed in cutting and polishing precious stones; in smoothing the surface of the finer kinds of lenses preparatory to their being polished; in the polishing of marble; by cutlers, locksmiths, glaziers and other artisans. For all these purposes it is pulverized in large iron mortars or in steel mills, and the powder, which is rough and sharp, is carefully washed and sifted into eight or ten degrees of fineness. Emery-paper and emery-cloth are made by laying a thin coat of glue upon the fabric, and dusting the emery from a sieve of the required size.

Emesa (em'e-sa), an ancient town, now called *Hems* (which see).

Emetic (e-met'ik), any substance administered to induce vomiting.

Emetics are most commonly administered to remove poisonous or indigestible substances from the stomach, or to clear the air passages of obstructive morbid material in cases of bronchitis, croup, etc. Ipecacuanha and sulphate of zinc are frequently given for these purposes, or, as a readily obtainable substitute, mustard stirred into water. They should, however, always be administered with caution, or serious injury to the system may result.

Emetine (em'e-tin), a peculiar vegetable principle obtained from ipecacuanha root. In a dose of 1-6 grain it acts as a powerful emetic, followed by sleep; in a dose of 1-200 to 1-507 grain it stimulates expectoration from the bronchial tubes.

Emeu, EMU (ē'mū), a large cursorial bird, *Dromaius Novæ Hollandiæ*, formerly dispersed over the whole Australian continent, but now almost extirpated in many districts. It is allied to the cassowary, but is distinguished by the absence of a 'helmet' on the top of the head. It nearly equals the ostrich in

bulk, being thicker in the body, though its legs and neck are shorter. Its feet are three-toed (the ostrich has two toes), and dull, sooty-brown color, those about the

Emeu (*Dromaius Novæ Hollandiæ*).

neck and head being of a hairy texture. The wings are small and useless for flight but the bird can run with great speed, and emeu coursing as a sport is said to surpass that of the hare. The flesh of the young emeu is by some considered a delicacy. The emeu is a bird of the plain, the cassowary of the forest. It is easily tamed, and may be kept out of doors in temperate climates. It feeds on vegetable matter, fruits, roots, etc.

Emeu Wren (*Stipiturus malachurus*), a small Australian bird allied to the warblers, somewhat similar to a wren, but having the tail-feathers long, stiff and thinly barbed, similar to emeu feathers.

Emigration (em-i-grā'shun), the departure of inhabitants from one country or state to another for the purpose of residence. The prime cause of such removal is overpopulation, though it is often influenced by particular and temporary incidents, such as an industrial crisis, a religious or political movement, the creation of a new colony, the desire to escape from laws regarded as oppressive or from compulsory military service. In barbarous times a tribe having exhausted the tract on which it had established itself, naturally migrated to more tempting territory. In Greece the limited territories of the states rendered the occasional deportation of part of the inhabitants to form new colonies a necessity; while at Rome, where the land was held by a few proprietors, and the trades and professions mainly exercised by slaves, the larger part of the free population had few sources of income apart from the occupation of portions of conquered territory in Italy and elsewhere. During the middle ages emigration was to some extent stayed by the fact that

the feudal system confined the mass of the people to the soil or within the insuperable limits of a corporation. Emigration to America commenced with the settlement of Spanish America and of the English in Virginia and New England; after which the Dutch colonized New York, the Swedes Delaware, the Quakers and Germans Pennsylvania, the French Canada and Louisiana. (See *Colony*.) Emigration from Britain was slow until 1815, when its rapid increase at first occasioned some alarm. The annual emigration, only 2081 in 1815, rose in 1847 to over a quarter of a million, while in the five years 1849-53 the average annual emigration was not less than 323,000. Since then the number has diminished, though not greatly, but it is nearly balanced by the number of immigrants. Other European countries have sent out large numbers of emigrants, especially Germany, the Scandinavian countries and Italy, Germany being second in numbers only to the United Kingdom. More recently the people of Austria-Hungary, Russia and Italy have become very active in emigration, each numbering several hundred thousand yearly. See *Immigration*.

Emigrés (ā-mi-graz), a name given more particularly to those persons who left France at the commencement of the first French revolution. At the head of these emigrants stood the royal princes of Condé, Provence and Artois, the first of whom collected a part of the fugitives to coöperate with the allied armies in Germany for the restoration of the monarchy. At Coblenz a particular court of justice was established to settle causes relating to the French émigrés. The corps of Condé was finally taken into the Russian service, and was disbanded in the Russian-Austrian campaign of 1799. When Napoleon became emperor he granted permission to all but a few of the emigrants to return to their country; but many declined to return until after his downfall. By the charter of 1814 they were shut out from the recovery of their estates and privileges.

Eminent Domain, the original ownership retained by the state, by which land or other private property may be taken for public use or benefit. If the authorities propose to set apart land for any lawful purpose, and the owner refuses to sell, or ask an unreasonable price, process may be issued from court to compel the surrender of the property. The constitution of the United States limits the exercise of this right to cases where the

public good demands it, and requires compensation to those from whom the property is taken.

Emin Pasha. See *Schnitzer, Edward*.

Emir (em'ēr), the title given by Mohammedans to independent chiefs or princes, *Amir* or *Ameer* being the same word. When associated with other words it denotes the heads of certain departments in Turkey. Thus the caliphs style themselves *Emir-al Mumenin*, Prince of the Faithful. *Emir-al Omrah*, Prince of Princes, is the title of the governors of the different provinces. The title is also given in Turkey to all the real or supposed descendants of Mohammed, through his daughter Fatimah.

Emmenagogues (em-men'a-gogz), medicines tending to promote menstruation.

Emmerich (em'e-rih), a walled town of Rhenish Prussia, on the right bank of the Rhine, 5 miles N. E. of Cleves. It carries on an active trade chiefly with Holland. Pop. (1905) 12,578.

Emmet (em'et), ROBERT, an Irish patriot, born at Cork in 1778. He was expelled from Trinity College, Dublin, in 1798, on the ground of exciting disaffection and rebellion, and having become an object of suspicion to the government, quitted Ireland. He returned there on the repeal of the suspension of the Habeas Corpus Act, and became a member of the Society of United Irishmen for the establishment of the independence of Ireland. In July, 1803, he was the ringleader in the hopeless rebellion in which Lord Kilwarden and others perished. He was arrested a few days afterwards, tried and executed. His fate excited special interest from his attachment to Miss Sarah Curran, daughter of the celebrated barrister.

Emmons, SAMUEL FRANKLIN, geologist, was born at Boston, Massachusetts, in 1841. He became geologist on the United States Geology Survey in 1867 and long retained that position. He wrote numerous works on the geology and metallic deposits of the West, and also many papers on this and cognate subjects. He died March 28, 1911.

Emollients (e-mol'i-ents), medicines of an oleaginous, saponaceous, or emulsive character, applied to surfaces, generally external, to soothe and allay any tendencies to irritation or inflammation, etc.

Emotion (e-mō'shun), a term variously used by psychologists; sometimes as one of the divisions of feeling, the other being sensation; some-

times as opposed to feeling when the latter is identified with sensation, and sometimes as distinct from both sensation and feeling, when the last term is rigidly confined to the sense of pleasure or pain. In any of these uses, however, emotions are distinguished from sensations in that sensations are primary forms of consciousness arising by external excitation, are comparatively simple and immediately presentative phenomena, and are definite in character and capable of localization; while emotions are secondary or derived forms of consciousness, are complex and representative, and are vague and diffused. Sensations are said to be 'peripherally initiated,' while emotions are centrally initiated. When, in addition to its being distinguished from sensation, it is also distinguished from feeling, emotion is applied to the whole psychical condition accompanying the sense of pleasure or pain (feeling). The muscles of the body and the organic functions of the system are often considerably influenced by emotion, which naturally seeks an outward expression unless held in check by what Darwin has called serviceable associated habits.

Empannel (em-pan'el), to enter the names of the jurors into a schedule, roll, or page of a book, called the panel.

Empedocles (em-ped'o-klēz), a Greek philosopher of Agrigentum, in Sicily, born about 460 B.C. He is said to have introduced the democratic form of government in his native city, and the Agrigentines regarded him with the highest veneration as public benefactor, poet, orator, physician, prophet and magician. Aristotle states that he died in obscurity at the age of sixty years, in the Peloponnesus; but he is also said to have thrown himself into the crater of Mount Etna, in order to make it be believed, by his sudden disappearance, that he was of divine origin. According to Lucian, however, his sandals were thrown out from the volcano, and the manner of his death revealed. Empedocles holds earth, water, fire, air, as the four fundamental and indestructible elements from whose union and separation everything that exists is formed. To these material elements are added the two moving or operative principles of love and hatred, or attraction and repulsion.

Emperor (em'pēr-ur; from the Latin *imperātor*; in German, *Kaiser*, from *Cæsar*), the title of the highest rank of sovereigns. The word *imperātor*,

from *imperāre*, to command, in its most general sense signified the commander of an army. After the overthrow of the Roman republic, *imperator* became the title of the rulers or emperors, and indicated their supreme power. Victorious generals were still, however, sometimes saluted with the title *imperator*, in its original sense. With the fall of Rome the title was lost in the West, but was kept up in the Eastern or Byzantine Empire for nearly ten centuries. In 800 it was renewed in the West when Charlemagne was crowned, by Leo III, as 'Carolus Augustus, the God-sent pious and great emperor of Rome.' It was however, for many centuries considered necessary to be crowned at Rome in order to be formally invested with the title of *emperor*. The imperial dignity became extinct in the East after the conquest of Constantinople in 1453, but the title was adopted by Peter I of Russia in 1721. Napoleon I adopted the old idea of an empire as a general union of states under the protection, or at least political preponderance, of one powerful state; and he was followed in this by his nephew, Napoleon III. In 1806 the first German Empire, 1000 years old, became extinct, and the German Emperor, Francis II, adopted the title of Francis I, emperor of Austria. In December 1870, the second German Empire was formed, King William of Prussia having accepted the imperial office and title offered him at Versailles while engaged in the siege of Paris. Britain is considered as an empire, the crown as imperial, and the parliament is styled the *Imperial Parliament of Great Britain and Ireland*; but the sovereign has not the imperial title in reference to the home dominions, though he bears the title of Emperor of India. The sovereigns of China, Japan and Morocco are often though with little propriety, called *emperors*.

Emperor Moth (*Saturnia pavonia minor*), a British moth of the silkworm family. The color is grayish brown, with a faint purple tinge. The wings are about 3 inches in expanse, and in the center of each is a large eye-like spot. The larva is of a green color, with a black band on each segment.

Empetraceæ (em-pe-trā'se-ē), a small nat. order of heath-like exogenous plants, of which the type is the crowberry.

Emphasis (em'fa-sis), in rhetoric, a special stress or force given to some syllable, word or words

in speaking, in order to impress the hearers in some desired manner, thus differing from *accent*, the position of which is fixed.

Emphysema (em-fi-sē'ma), in medicine, an inflation of some part of the body by the introduction of air into the cellular tissue, as from an injury to the trachea or lungs.

Empire (em'pīr), the dominions of an emperor (which see).—*Empire State*, a name given to New York State, New York city being occasionally called the *Empire City*.

Empiric (em-pir'ik), in medical history (from the Greek word *empeiria*, experience), an appellation assumed by a sect of physicians who contended that observation and experience alone were the foundation of the art of medicine. An empiric, in modern medicine, is a physician who has no regular professional education, but who relies on what is frequently a very crude experience.

Employer's Liability. A British act of Parliament, passed in 1880, prescribes that, within certain limits an injured workman or, in event of his death, his relatives or representatives may claim from the employer compensation for injuries received in his service. In most of the United States this liability is not statutory, but is determined by a suit for damages under the law of negligence. If the employer can show contributory negligence on the part of the workmen, he is exempt from liability in a damage suit. The labor unions of the United States, and especially the American Federation of Labor, urged in 1899 the passage by Congress of a new general law on the subject, and such a law was before Congress for action in the session of 1912. By that time ten States had passed laws making employers liable for certain classes of accidents, and others were considering the subject.

Empoli (ām'po-lē), a town in North Italy, on the left bank of the Arno, 16 miles w. s. w. of Florence; has an old collegiate church with good paintings, and manufactures of straw bonnets, etc. Pop. 7005.

Emporia (em-pō'ri-a), a city, capital of Lyon Co., Kansas, 61 miles s. s. w. of Topeka. It is the center of a fine agricultural district, and has iron, lumber and flour mills. It contains a State normal school. Pop. 9058.

Emporium (em-pō'ri-um; Greek, *emporion*, a mart, from *emporos*, a merchant), a center of exten-

sive commerce, a trading town or city.

Empyema (em-pi-e'ma), in medicine, a collection of pus or morbid matter in some cavity of the body, especially in the cavity of the pleura or chest.

Empyreuma (em-pi-rö'ma), the smell arising from organic matter when subjected to the action of fire, but not enough to carbonize it entirely. The products of imperfect combustion, as from wood heated in heaps or distilled in closed vessels, are frequently distinguished as empyreumatic.

Ems (āms, or emz), a beautiful watering place in the Prussian province of Hesse-Nassau, on the river Lahn, not far from its confluence with the Rhine. Its mineral waters are warm—from 70° to 118° Fahr., contain large quantities of carbonic acid gas, and are used in chronic catarrhs, pulmonary complaints, diseases of the stomach, gout and some diseases of the urinary vessels. There are about 8000 visitors each season. Pop. 6500.

Ems, a river of Northwest Germany, which flows northwest through Rhenish Prussia and Hanover, and falls into the Dollart Estuary near Emden; length 230 miles.

Emu. See *Emeu*.

Emulsin (e-mul'sin), or SYNAPTASE, an albuminous or caseous substance of which the white part of both sweet and bitter almonds chiefly consists; discovered by Liebig and Wölder.

Emulsion (e-mul'shun), a medical preparation, consisting of an oily or resinous substance made to combine with water by some substance that itself has the property of combining with both, such as gum arabic, the yolk of eggs, almonds, etc.

Emys (e'mis), a genus of tortoises, type of the family Emydidæ, which includes the terrapins of America and others.

Enaliosaurians (en-a-li-ō-sā'ri-anz; 'sea-lizards'), the group of gigantic extinct reptiles of which the ichthyosaurus and plesiosaurus were the chief.

Enamel (en-am'el), a vitreous glaze of various colors fused to the surface of gold, silver, copper and other substances. The art of enameling, which is of great antiquity, was practiced by both the Assyrians and the Egyptians, from whom it may have passed into Greece, and thence into Rome and its

Enamel

provinces, including Great Britain, where various Roman antiquities with enameled ornamentation have been discovered. The enameled gold cup given by King John to the corporation of Lynn, in Norfolk, proves that the art was known among the Normans. The Byzantines of the tenth century produced excellent *cloisonné* enamels on a gold base, the *cloisonné* process consisting in tracing the design in fillets of gold upon the gold plate and filling up the small molds thus formed with enamels, the design appearing in colored enamels, separated by thin gold partitions or *cloisons*. In some cases, however, the enamels were filled into hollows beaten out in the gold plate, which formed part of the field. In the twelfth century the town of Limoges acquired the high reputation for inlaid enamels which it held till the fourteenth century, and reacquired in the sixteenth for its painted enamels. The costliness of the sculptured ground had led the Italians early in the fourteenth century to substitute the practice of incising the design on the face of the plate, and then covering it with a transparent enamel. The further step, which made the Limousin workshops famous, consisted in the method of superficial enameling, in which opaque colors, or colors laid on a white, opaque ground, were used. The Limoges school degenerated greatly in the seventeenth century, but its method with certain modifications in detail is still employed. The basis of all kinds of enamel is a perfectly transparent and fusible glass, which is rendered either semitransparent or opaque by the admixture of metallic oxides. White enamels are composed by melting the oxide of tin with glass, and adding a small quantity of manganese or phosphate of calcium to increase the brilliancy of the color. The addition of the oxide of lead, or antimony, or oxide of silver, produces a yellow enamel. Reds are formed by copper, and by an intermixture of the oxides of gold and iron. Greens, violets and blues are formed from the oxides of copper, cobalt and iron. In the middle of the last century enameling was largely applied to the decoration of snuff-boxes, tea-canisters, candlesticks and other small articles. Of late years it has been extensively applied to the coating of iron vessels for domestic purposes, the protection of the insides of baths, cisterns and boilers, and the like. Enameling in colors upon iron is now common, iron plates being thus treated by means of various mixtures, and words

Encaustic Painting

and designs of various kinds being permanently fixed upon them by stenciling, for advertising, sign boards, etc.

Enara (e-nä're), a lake of Russia, in the north of Finland, about 50 miles long by 30 miles broad. It is studded by innumerable islets, receives several streams, and is connected by the Patsjoki with the Arctic Ocean. At its southwest extremity is a small fishing town of the same name, with an annual fair.

Enarea (en-a-rē'a), a region belonging to the country of the Gallas, south from Abyssinia. Sakha is the chief town. Coffee and ivory are the chief exports. The inhabitants are the most civilized of the Gallas.

Enarthrosis (en-ar-thrō'sis), a ball-and-socket joint.

Encampment (en-kamp'ment). See *Camp*.

Encarpus (en-kā'r'pus), in architecture, a sculptured ornament in imitation of a garland of fruits, leaves or flowers, suspended between two points. The garland is of greatest size in the middle, and diminishes grad-

ually to the points of suspension, from which the ends generally hang down. The encarpus is sometimes composed of an imitation of drapery similarly disposed, and sometimes of an assemblage of musical instruments, implements of war or of the chase.

Encaustic Painting (en-kas'tik), a kind of painting practiced by the ancients, for the perfecting of which heating or burning in was required. Pliny distinguishes three species, in all of which wax was used along with colors. The art has been revived in modern times, but has not been greatly employed. As the thing chiefly regarded in encaustic painting was the securing of permanence and durability by the application of heat, the word *encaustic* has been applied to other and widely different processes.

Encaustic Tiles

Thus it has been used for painting on earthen vessels, for painting on porcelain and work in enamel; and in the same way it was given to the painting on glass of the middle ages. (See next article.)

Encaustic Tiles, ornamental paving tiles of baked pottery, much used during the middle ages in the pavements of churches and other ecclesiastical edifices. The encaustic tile, strictly so called, was decorated with patterns formed by different colored clays inlaid in the tile and fired with it. The art appears to have originated in the latter part of the twelfth century, to have attained its highest per-

fection during the thirteenth, and to have sunk into disuse in the fifteenth. During the whole of this period it was principally carried on in England and Normandy. After a long lapse the art was revived in England in 1830 by Wright, a Shelton potter. In modern manufacture two methods are employed, the 'plastic' and the 'semi-dry' or 'dust' method. The first is, in all essentials, that used in the middle ages, except, perhaps, in the perfection of modern molding appliances; the second consists in ramming pulverized clay with a minimum of moisture into metal dies, the subsequent firing of tiles thus consolidated being attended with less risk from shrinkage.
